Allan -

I have just uploaded to the IDWR Incoming FTP folder a file "P100527A\_not\_checked.zzz."

If you change it to "\*.zip" and open it, it contains a water budget that ran in MKMOD4. I have not sense checked anything.

It should say so in the \*.mdl file, but this is has only one placeholder, the \*.nir file. It is a pretty good placeholder I think. Everything else is complete, barring additional adjustments from the checking and/or calibration processes.

The returns have been zeroed out as a fail safe for the On-Farm method.

Note that I've had to make a few changes in file format to accommodate MKMOD. This probably means it will not run even with any new version of READINP you might make, unless you can teach FORTRAN to read very long lines.

Tomorrow morning I have to do some hydro/econ work for Reclamation, but I can get Stacey and Greg going on checking some of this.

Bryce
