Dear IDWR,

Each of the water users within Groundwater District 63-S (Stewart Gulch) by execution of this letter have elected to allow the District to go inactive, that is, to not appoint a water master for the indefinite future,

Each of the water users believes that with Quail Hollow and Terteling Trust No, 7 having additional points of diversion which are from cold water sources rather than the low temperature geothermal source, that active management of the District may not be necessary, that is, that the water rights of users using water from the low temperature geothermal source may not be adversely affected.

Each water user within the District reserves the right, at any time the user's water right is being injuriously affected on account of use of water by another water user within the District, to request that the District be reactivated and a water master be appointed.

Very Truly Yours,

Terteling

Lori and I have received the attached letters requesting the Stewart Gulch Water District be allowed to become inactive. The water users would like a response from the Dept. I would assume there needs to be conditions?
