RE: Members Big Wood & Little Wood Water Users Association, Diverting from the Little Wood River, Request for Administration of Water Rights under the Prior Appropriation Doctrine.

Dear Director Spackman:

This Firm represents the members of the Big Wood & Little Wood Water Users Association. The members of the Association, set forth in Exhibit "A" attached hereto, hereinafter "Petitioners," are entitled to delivery of water from the Little Wood River below its confluence with Silver Creek. All the surface water rights listed in Exhibit "A" are all located in Water District 37, and are hydrologically connected to ground water rights in the Wood River Valley aquifer system.

Some background information may be helpful. In 1980, your predecessor issued a policy memorandum declaring surface water in the Big Wood River basin upstream from Magic Reservoir was fully appropriated. Following the issuance of the policy memorandum, no new water permits for consumptive purposes were issued for diversion of surface water from the Big Wood River, or its tributaries, above Magic Reservoir. However, the Department continued to issue water permits for the consumptive use of groundwater within the Wood River Valley aquifer system.

On June 28, 1991, your predecessor issued an order creating the Big Wood River Ground Water Management Area. The management area included ground water located within the Wood River Valley and the Camas Creek drainage above Magic Reservoir, and the Silver Creek/Bellevue triangle area. The June 1991 order included a finding that the surface and ground waters of the Big Wood River drainage are interconnected, and that diversion of ground water from wells can deplete the surface water flow in streams and rivers.

On the September 17, 2013, after obtaining approval for interim administration, a preliminary order was issued which became final. The September 2013 order combined Water District No. 37 and Water District No. 37M under the designation of Water District No. 37. The order provided for the inclusion of both surface and groundwater in the Big Wood River and Little Wood River drainages, excepting Camas Creek and other named tributaries. The September 2013 order also created Water District No. 37-B to include the surface and ground water rights in the Camas Creek drainage.

The past and present failure of the Idaho Department of Water Resources to administer the subject surface and hydrologically connected ground water rights under the prior appropriation doctrine has resulted in material injury to Petitioners. The Little Wood River below its confluence with Silver Creek is hydrologically connected to the Wood River Valley aquifer system. Ground water use from the Wood River Valley aquifer has increased. The accompanying downward trend in ground-water levels has resulted in significantly lower flows in Silver Creek which is largely fed by ground water.

Ground water use in the Bellevue Triangle, for pumped irrigation, almost doubled during the period of 1975 to 1993.¹ A comparison of depth to groundwater measurements on selected wells, during the period of 1970 to 1993, showed a general declining trend in ground water levels.² In 2007, a significantly declining trend in ground water levels was confirmed by utilizing certain wells having more than 50 years of measurement data.³

“Because Silver Creek and its tributaries are fed primarily by ground water discharging through seeps and springs, and because irrigation diversions and returns to and from Silver Creek are minimal, seasonal fluctuations in streamflow are directly related to water levels in the Wood River Valley aquifer system.”⁴ After 1930, the average annual flow in Silver Creek below Picabo was reasonably constant at approximately 160 cfs.⁵ After 1987, average annual flow in Silver Creek decreased markedly with levels averaging below 120 cfs from 1988 through 1993.⁶ During the period of 1975 through 2005, annual discharge via Silver Creek near Picabo decreased, and the mean monthly discharge for July through February and April also decreased.⁷ It should be

noted that discharge from the Wood River Valley aquifer system via Silver Creek has continued to decline. On February 2, 2015, the Sportsman Access gauging Station on Silver Creek near Picabo (USGS 13150430) recorded a record low flow for the date of 64 cfs. The old record low flow for February 2nd was recorded in 2014 with a flow of 104 cfs.

Due to the failure of the Idaho Department of Water Resources to administer the subject water rights under the prior appropriation doctrine, the Petitioners have suffered from premature curtailment of delivery of their surface water rights, along with the accompanying material injury. Any future delay in the requested administration will result in further injury. Accordingly, Petitioners hereby demand that you direct the Watermaster for Water District No. 37 to administer Petitioners' surface water rights, and hydrologically connected to ground water rights within the district in accordance with the prior appropriation doctrine.

Sincerely,
BROWN & JAMES

Joseph F. James
