Subject: Online ESPAM 2 Model Output Review Tool

Rick,

Wayne Courtney at Rangen has generously encouraged us (Leonard Rice Engineers) to offer our online ESPAM 2 model output viewing and analysis tool to interested ESHMC members.

We use it to review and compare key model outputs between model versions, and have found that it is useful and a time saver. We are offering it in the hope that it will encourage more review and feedback in a timely manner during this key final phase of the ESPAM 2.0 calibration and validation process.

It is a simple page containing an interactive time series graphing tool, a download button (CSV file format), and a simple form for choosing which model version(s) and output location(s) to output to the time series graph. The graph labels are long, constructed of the appropriate file and folder names, but should be decipherable to anyone who works with ESPAM 2.

It only requires a modern browser that supports the Adobe flash plug-in.

It requires a login, which I can create for anyone on the ESHMC (or IDWR) that requests it. They should send an email to me (Jim.Brannon@LREwater.com), preferably with the words "Online ESPAM 2 Model Output Review Tool" in the subject line.

I will update the underlying databases with the new ESPAM model version output data as soon as Allan releases it.

Here is the link to the online site: http://www.lre-projects.net/rangen_espam2/

Would you please for this information to anyone within the ESHMC or IDWR that you think would benefit from this tool, and also to Director Spackman?

Thank you. And feel free to let Dave (who will be there next week) demo the tool during the ESHMC meeting if you think that would be helpful.

Jim
