RE: Telephonic Conversation—Roger Hoffman
Dept. Letter Requesting-information large diversion

Mr. Hoffman called concerning a recent letter from Steve Lester requesting additional information under Appropriation Rule 40 large diversion > 5cfs. He indicated, thru calculations they were intending to reduce the flow rate on their application to 3.7 cfs. That should make them exempt from providing large diversion data. I explained that residential development projects thru that area (I-84 corridor) were all being asked to provide the additional information. Rule 40 also allows the director to ask for additional information on any application. They would need to submit the information.

Mr. Hoffman felt the request to provide detailed financial information was unfair as specified. I told him, that general information would be fine, and that we do not scrutinize an applicant's finances. He also expressed concerns about the submittal of construction plans. Here again, I suggested general water system information. His consultant/engineer would know what would be required for the information requests. I stated, that we would work with his consultant if additional information was needed.

Mr. Hoffman was satisfied with the discussion, and said he would be working with his consultant.
