Allan and Rick -

Today I'm wearing my Rocky Mountain Environmental hat.

In the past Roger's clients have requested more careful representation of the Rexburg Bench. Allan's response has been to require field work, which may be currently beyond financial reach. However in working on something else I came across this study which provides geological information. These data ought to at least be given equal consideration to the input of consultants whose clients have larger budgets.

While it is true that geology unconstrained by detailed GW hydrographs is not as good as if we had long time series of water level data on multiple wells, even a crude representation of known geology would be superior to the current assumption of uniform porous media.

Bryce
