C.L. "BUTCH" OTTER
Governor

GARY SPACKMAN
Director

September 28, 2018

RE: Order Requiring Controlling Works and Measuring Devices on Surface and Ground Water Diversions in Administrative Basin 74

Dear Water User,

The Idaho Department of Water Resources ("Department") has issued the enclosed Final Order ("Order") requiring installation of controlling works and measuring devices on certain surface and ground water diversions in Administrative Basin 74. **The Order requires non-irrigation diversions be controlled and measured by January 1, 2019, and irrigation diversions by the start of the 2019 irrigation season.**

The Order waives the measurement requirement for diversions authorized to irrigate less than or equal to five (5) acres and non-irrigation uses authorized to divert less than or equal to 0.24 cubic feet per second. Shared diversions with multiple water rights are subject to the requirements of the Order if the sum of the acres authorized by water rights exceeds five (5), or the sum of diversion rates authorized for non-irrigation water rights exceeds 0.24 cubic feet per second.

Pursuant to Idaho Code § 42-1701A(3), any person aggrieved by the Order may, within fifteen (15) days after receipt of written notice of the Order or receipt of actual notice, file with the Director of the Department a written petition stating the grounds for contesting the Order and requesting a hearing.

Enclosed is the Department's *Minimum Acceptable Standards and Requirements for Open Channel and Closed Conduit Measuring Devices*. This document and related information about acceptable measuring devices is available on the Department's web site at the following address: <https://idwr.idaho.gov/water-data/water-measurement/>

If you have questions concerning this Order, please contact the Department's State Office (208-287-4800) or the WD170 watermaster, Cindy Yenter (208-742-0655).

Respectfully,

A handwritten signature in black ink, appearing to read "Tim Luke".

Tim Luke
Chief, Water Compliance Bureau

**BEFORE THE DEPARTMENT OF WATER RESOURCES
OF THE STATE OF IDAHO**

**IN THE MATTER OF REQUIRING CONTROLLING)
WORKS AND MEASURING DEVICES ON)
SURFACE AND GROUND WATER DIVERSIONS) **FINAL ORDER**
IN ADMINISTRATIVE BASIN 74)**

BACKGROUND

On April 6, 2006, the Director (“Director”) of the Idaho Department of Water Resources (“Department”) issued a final order creating Water District No. 170 (“WD170”) to include specific surface water and ground water rights in Administrative Basins 71 and 72.¹ The Director stated he would “issue separate orders, as necessary, requiring the installation of measuring devices and lockable controlling works for diversions within Water District No. 170.” On February 20, 2007, the Department issued an order requiring installation of measuring devices and controlling works for diversions of surface water and ground water in Administrative Basins 71 and 72.²

On December 10, 2012, the Department issued an order expanding WD170 to include specific surface water and ground water rights in Administrative Basin 73.³ On March 3, 2014, the Department issued an order requiring installation of measuring devices for diversions of ground water rights within Water District No. 73.⁴

On April 10, 2018, the Department issued an order expanding WD170 to include specific surface water and ground water rights in Administrative Basin 74 (“Basin 74”).⁵ This order designated existing water districts within Basin 74 as sub-districts of WD170, modified sub-districts to include ground water diversions, and combined certain sub-districts within Basin 74. The April 10, 2018, order excluded domestic and stockwater rights as defined by Idaho Code §§ 42-111 and 42-1401A(11), and rights for in-stream watering of livestock as defined by Idaho Code § 42-113.

¹ *Amended Final Order in the Matter of Creating the Upper Salmon River Basin Water District for Administration of Rights to the use of Surface Water and Ground Water in Administrative Basins 71 and 72* (Apr. 6, 2006).

² *See Preliminary Order in the Matter of Requiring Measuring Devices and Controlling Works on Diversions from the Salmon River and Tributaries in Water District No. 170* (Feb. 20, 2007).

³ *Preliminary Order in the Matter of the Proposed Revision of Water District Nos. 73 and 170 by Including Administrative Basin 73 Ground Water Rights in in Water District No. 73 and Designating Water District No. 73 as a Sub-District of Water District No. 170* (Dec. 10, 2012).

⁴ *See Final Order in the Matter of Requiring Measuring Devices on Ground Water Diversions in Water District No. 73, the Pahsimeroi River and Tributaries* (Mar. 3, 2014). The Department had previously issued an order requiring installation of measuring devices and headgates for all diversions of water from the Pahsimeroi River and tributaries. *See Order in the Matter of Requiring Measuring Devices and Controlling Works on the Pahsimeroi River and Tributaries, Water District 73* (Nov. 18, 2002).

⁵ *Preliminary Order in the Matter of the Proposed Expansion of Water District 170, the Proposed Modification of all Water Districts within Administrative Basin 74 to Include Ground Water Diversions and the Proposed Combination of Water Districts 74, 74K, 74U and 74Y* (Apr. 10, 2018).

LEGAL PROVISIONS

Section 42-701, Idaho Code, states, in pertinent part:

42-701. INSTALLATION AND MAINTENANCE OF CONTROLLING WORKS AND MEASURING DEVICES BY WATER APPROPRIATORS – PROCEDURE UPON FAILURE TO INSTALL AND MAINTAIN – MEASURING AND REPORTING OF DIVERSIONS – PENALTY FOR FAILURE TO COMPLY – REPORT FILING FEE.

- (1) The appropriators or users of any public waters of the state of Idaho shall maintain to the satisfaction of the director of the department of water resources suitable headgates and controlling works at the point where the water is diverted. Each device shall be of such construction that it can be locked and kept closed by the watermaster or other officer in charge, and shall also be of such construction as to regulate the flow of water at the diversion point. Each such appropriator shall construct and maintain, when required by the director of the department of water resources, a rating flume or other measuring device at such point as is most practical in such canal, ditch, wellhead or pipeline for the purpose of assisting the watermaster or department in determining the amount of water that may be diverted into said canal, ditch, wellhead or pipeline from the stream, well or other source of public water. . . .
- (2) [T]he appropriator may, upon approval of the director, execute an agreement with the director and submit to the director such information and technical data concerning the diversion and pumping facilities as the director determines necessary to establish the relationship of power usage to water withdrawal by any pump used to divert public water.
- (3) Any appropriator or user of the public waters of the state of Idaho that neglects or refuses to construct or maintain such headgates, controlling works, or measuring devices, or has not executed an agreement in lieu of a measuring device as provided in subsection (2) of this section, upon receiving ten (10) days' notice from the director of the department of water resources within which to begin and diligently pursue to completion the construction or installation of the required device or devices or to begin and diligently pursue to completion a remedy to such defects as exist in accordance with said notice, then the director of the department of water resources may order the duly qualified and acting watermaster of the water district to shut off and refuse to deliver at the point of diversion, the water owned by such appropriator or user until the user does construct and maintain such headgates, controlling works or measuring devices or remedy the defects which exist or the director may take action pursuant to section 42-1701B, Idaho Code, to enforce the requirement to construct, install or maintain such devices.
- (4) The appropriators or users of the public waters of the state of Idaho shall be given a reasonable time within which to complete construction of such headgates, controlling works or measuring devices, depending upon the size and extent thereof, when due diligence has been used in the prosecution of such work.

CONCLUSIONS OF LAW

1. Idaho Code § 42-701(1) authorizes the Director to require installation and maintenance of suitable, lockable headgates and controlling works, and measuring devices at the point where the water is diverted.
2. The Director has a “clear legal duty to distribute water” according to the partial decrees issued by the Snake River Basin Adjudication (“SRBA”) District Court. *City of Blackfoot v. Spackman*, 162 Idaho 302, 309 (2017). The SRBA District Court issued the *Final Unified Decree* on August 26, 2014. *Final Unified Decree*, In re SRBA, Case No. 39576 (Fifth Jud. Dist. Ct. Aug. 26, 2014).
3. The control and measurement of diversions in Basin 74 is necessary for the Director to comply with his “clear legal duty to distribute water” according to decreed water rights. Adequate control and measurement of diversions ensures:
 - a. The regulation of diversions within the water district or sub-district is consistent with the legal requirements of the prior appropriation doctrine, thereby protecting senior priority rights during times of water scarcity;
 - b. The diversion of water associated with a decreed water right does not exceed the legal limits of the decree; and
 - c. The assessments of individual water users within the water district are calculated based on the amount of water delivered, consistent with Idaho Code §§ 42-612(3) and 42-615.
4. The Director should require the installation of suitable, lockable headgates and controlling works and measuring devices within Basin 74.

ORDER

IT IS HEREBY ORDERED AS FOLLOWS:

1. This order applies to all surface and ground water rights within Basin 74, except domestic and stockwater rights or uses defined by Idaho Code §§ 42-111 and 42-1401A(11), and rights or uses for in-stream watering of livestock as defined by Idaho Code § 42-113.
2. The owners of all affected surface and ground water rights within Basin 74 shall install and maintain on each point of diversion lockable headgates and controlling works.
3. The owners of all affected surface and ground water rights within Basin 74, except those water rights, uses and diversions identified in item 4 below, shall install and maintain on each point of diversion a measuring device of a type acceptable to the Department.
Owners of non-irrigation rights shall comply with this order by January 1, 2019, and owners of irrigation rights shall comply with this order by the start of the 2019 irrigation season.

4. The installation of measuring devices required by this order is waived until further notification by the Department for the following water uses and diversions:
 - a. Surface or ground water diversions authorized to irrigate less than or equal to five acres⁶; and
 - b. Surface or ground water diversions for any purpose other than irrigation authorized to divert less than or equal to 0.24 cfs (approximately 108 gallons per minute).⁷
5. Measuring devices acceptable to the Department are devices identified in the Department's *Minimum Acceptable Standards and Requirements for Open Channel and Closed Conduit Measuring Devices* ("Minimum Acceptable Standards," enclosed).
6. Controlling works and measuring devices must be properly maintained, repaired or replaced if determined inaccurate or inoperable by the Department, the WD170 watermaster or the presiding sub-district watermaster.
7. The Department will consider a request for variance from the requirement to install measuring devices listed in the Minimum Acceptable Standards upon submittal of a written request to the watermaster of WD170. Acceptable variances are limited to the following methods or devices:
 - a. Use of an hour meter (time clock) for open discharge wells with electric pumps that operate at a constant rate of flow; or
 - b. Use of an acceptable closed conduit flow meter installed prior to the date of this order; or
 - c. Use of power consumption coefficient for irrigation wells with a single operating condition and an electric pump connected to a dedicated demand meter; or
 - d. Rated sections or non-standard devices in open channels with approved measurement plans satisfying the requirements of the Minimum Acceptable Standards.
8. All requests for variance must be received by the WD170 watermaster by **December 1, 2018**. The watermaster and the Department will consider requests on a case-by-case basis. Variance requests proposing use of an existing flow meter will be denied unless the existing meter is tested and satisfies the Department's established standards for accuracy and the manufacturer installation specifications. Existing meters that do not satisfy the established standard for accuracy and the manufacturer specifications must be replaced with a meter from the Department's *List of Approved Closed Conduit Flow Meters* (most

⁶ A common point of diversion used for multiple irrigation rights where each individual right is five acres or less must be measured if the sum of the irrigated acres pursuant to the authorized rights exceeds five acres.

⁷ A common point of diversion serving multiple non-irrigation uses must be measured if the total diversion rate pursuant to the authorized right(s) is greater than 0.24 cfs.

current version), which is available at <https://idwr.idaho.gov/files/water-measurement/approved-flow-meter-list.pdf>.

9. If a user cannot comply with the deadlines in item 3 of this order, the Department may grant an extension. An extension request for each diversion must be submitted to the WD170 watermaster by **December 1, 2018**. Extension requests will be considered on a case-by-case basis. Conditions that may result in the Department granting an extension include, but are not limited to, the following:
 - a. The diversion is unused; or
 - b. Unique site specific condition(s) prevent accurate water measurement; or
 - c. Delays caused by requirements of other government entities.
10. This order shall become effective immediately for any new diversion(s) authorized after the date of this order, except water right diversions described in item 4 of this order.
11. If a water user fails to comply with the requirements of this order, the Director may issue an order instructing the WD170 watermaster and presiding Basin 74 sub-district watermaster to shut off and refuse delivery of water at any non-compliant diversion.
12. Pursuant to Idaho Code § 42-1701A(3), any person aggrieved by this order may, within fifteen (15) days after receipt of written notice of the order or receipt of actual notice, file with the Director a written petition stating the grounds for contesting the order and requesting a hearing.

Dated this 28th day of September 2018.

GARY SPACKMAN
DIRECTOR

CERTIFICATE OF SERVICE

I HEREBY CERTIFY that on this 28th day of September 2018, the above and foregoing document was served on each individual or entity on the service list for this matter on file at the Idaho Department of Water Resources, 322 East Front Street, Boise, Idaho and www.idwr.idaho.gov. Each individual or entity on the service list was served by placing a copy of the above and foregoing document in the United States mail, postage prepaid and properly addressed.

STATE OF IDAHO
DEPARTMENT OF WATER RESOURCES (IDWR)

MINIMUM ACCEPTABLE STANDARDS AND REQUIREMENTS
FOR OPEN CHANNEL AND CLOSED CONDUIT
MEASURING DEVICES

The water source, diversion structure and conveyance system must be adequately evaluated prior to selection of a measuring device. Surface water sources such as streams, springs and drains are commonly diverted into open channels, ditches or canals. Closed conduits such as pipes or culverts are also used to convey surface water. Ground water is more commonly diverted into pipes (closed conduits) which convey water from the well to system discharge points such as irrigation sprinkler systems. Ground water may also discharge from a well through a short section of pipe to open channels, ditches or ponds. When required by IDWR, measuring devices must be installed at or very near the point of diversion to ensure the watermaster can accurately determine the amount of water diverted from the public water source. The standards below are intended to qualify measuring devices that are “acceptable to the Department”, and to assist water users and watermasters in the proper selection and installation of such devices when required pursuant to Section 42-701, Idaho Code.

I. MEASUREMENT IN OPEN CHANNELS

The following requirements are applicable to diversions from surface water sources. Measurement of a ground water diversion with an open channel measuring device must be specifically approved by IDWR.

A. Industry Standard Open Channel Measuring Devices

All open channel surface water diversions must be measured using one of the following industry standard (standard) open channel flow measuring devices:

- **Weirs:** contracted or suppressed rectangular weirs, Cipolletti weir, 90 degree V-notch weir
- **Flumes:** Parshall flume, trapezoidal flume, ramped flume (ramped, broad-crested weir)
- **Submerged Orifices:** submerged rectangular orifice, constant head orifice
- **Current Meter/Acoustic Profiler:** acoustic Doppler flow meter (ADFM), acoustic Doppler current profiler

Construction, installation and operation of these devices must be consistent with water measurement guidelines, published by the United States Bureau of Reclamation¹ or the United States Geological Survey². Measuring devices, associated rating tables and specifications contained in these publications are considered by IDWR to be industry standard.

B. Non-Standard Open Channel Devices Including Rated Structures or Rated Sections

Any weir, flume or other measuring device that has not been constructed, installed or maintained to measure flow consistent with industry standard rating tables or curves shall be considered non-standard. IDWR may authorize the use of non-standard devices or rated channel sections on a case by case basis, upon the submittal and approval of a measurement plan. A measurement plan must contain an acceptable proposal, using industry standard procedures for developing a rating curve, or document that a rating curve has been fully developed for the device or section. Proposed rating plans must include provisions for periodic re-measurement and maintenance of the rating. The established rating must achieve the desired accuracy standard of plus or minus ten percent ($\pm 10\%$), the equivalent accuracy of a standard open channel device. All rating measurements must be conducted by a qualified individual (eg. engineer, hydrologist, certified examiner), using a standard portable open channel measuring device. If a measurement plan is not approved by IDWR, a standard device must be installed and maintained.

¹ The BOR guidelines can be found at: <https://idwr.idaho.gov/files/water-measurement/2001-Bureau-of-Reclamation-Water-Measurement-Manual.pdf>

² The USGS guidelines can be found at: <https://pubs.er.usgs.gov/>

II. CLOSED CONDUIT MEASURING DEVICES

The following requirements are applicable to measurement of diversions from any water source that conveys water through a full pipe or conduit. Full pipe means that water within the pipe is under at least some positive pressure and contains insignificant amounts of air or gas.

A. Standard Closed Conduit Measuring Devices

Standard closed conduit measuring devices are flow meters that have been approved for use by IDWR based on independent third party testing. IDWR has developed and published a list of meters that have been tested and approved for use³. Tests were conducted for both accuracy and repeatability on all submitted models. The lab tested accuracy standard for flow rate is plus or minus two percent ($\pm 2\%$). The *IDWR List of Approved Closed Conduit Flow Meters* (approved list) may be found at: <https://idwr.idaho.gov/files/water-measurement/approved-flow-meter-list.pdf>

Approved full profile magnetic flow meters and spooled ultrasonic flow meters must be installed with a minimum straight pipe length equivalent of three (3) pipe diameters upstream and two (2) pipe diameters downstream measured from the center of the meter spool. Approved clamp-on and wetted ultrasonic flow meter transducers must be located with a minimum straight pipe equivalent of ten (10) pipe diameters upstream and five (5) pipe diameters downstream of the nearest transducer. All other manufacturer installation specifications (excepting up and down spacing) must be met. *Installation of an approved meter inconsistent with the requirements noted above, may be cause for IDWR to require reinstallation of the meter.*

B. Requests for Variance to Use Power Consumption, Hour Meter or Existing Meter

Requests for variance will be considered for qualifying diversions on a case by case basis only upon submittal of the appropriate "Request for Variance" form. If a water user can demonstrate that an existing flow meter or other method of measurement meets an equal standard of accuracy when compared to meters on the approved list, a variance may be granted. If a variance request is not granted, an approved meter will be required.

The following alternate measurement methods may be considered:

- Development of a Power Consumption Coefficient (PCC), which is a ratio of power usage to water withdrawal,
- Use of an hour meter (time clock), or
- Use of a flow meter that was *installed prior* to the date a measurement order was issued and *is not* on the IDWR approved list.

Any alternate measurement method will require field testing using a portable ultrasonic flow meter or other meter tested and accepted by IDWR (testing meter). Field testing may be performed by any of the following:

- IDWR staff,
- a water district watermaster,
- a ground water district hydrographer,
- an irrigation district hydrographer,
- a certified field examiner, or
- as otherwise approved by IDWR

Existing flow meters must be operational and installed consistent with applicable specifications. If the testing margin of error of an installed meter when compared to the testing meter exceeds plus or minus ten percent ($\pm 10\%$) for mechanical type meters, or plus or minus five percent ($\pm 5\%$) for magnetic or ultrasonic type meters, the installed meter must be replaced with a new meter from the approved list. The owner or operator of any diversion system which requires a field measurement must provide a testing section of unobstructed straight pipe 15 pipe diameters in length.

³ Testing was conducted at the Utah Water Research Laboratory (UWRL), a National Institute of Standards and Technology (NIST) traceable lab in Logan, Utah.
