Department of Water Resources  
Southern Region

Director IDWR,

As a well water holder in District 130, who is not a member of a water district. I'm petitioning you to allow me to continue to pump from my well for the following reason's.

- 1) My well falls within 25 yards of the District 130 boundary edge on the north west end.
- 2) The boundary for District 130 used Clover Creek for it's north limits only because it made a easy natural border. This well sits not only so close to that border, it also is west or down stream from Hagerman spring area.
- 3) Most important though is that due to farming practice's because of drought years, the well has not been pumped to it's full water right. I do not see this changing this year. This should help supplement ground water from my area.

I would hope the Director will take this into account before shutting down pumping on this well.

Scott Huxhold, manager

Water right # 37-07942
