Docket No. CM-DC-2010-001

**SIXTH FINAL ORDER
REGARDING METHODOLOGY
FOR DETERMINING MATERIAL
INJURY TO REASONABLE
IN-SEASON DEMAND AND
REASONABLE CARRYOVER**

BACKGROUND

On April 19, 2016, the Director (“Director”) of the Idaho Department of Water Resources (“Department”) issued his *Fourth Amended Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* (“Fourth Methodology Order”). The Fourth Methodology Order: (1) explained how the Director would determine material injury to storage and natural flow water rights of members of the Surface Water Coalition (“SWC”)¹; (2) established methods for quantifying material injury to SWC storage and natural flow water rights as predictive and actual demand shortfalls; (3) established methods for quantifying mitigation obligations by holders of junior priority ground water rights for shortfalls in predictive and actual SWC water demands; and (4) established a method for determining a priority date for curtailment if mitigation obligations are not satisfied.

The processes established in the Fourth Methodology Order for determining material injury are not immutable. Updates to the methodology order based on additional data and analyses were always anticipated:

Recognizing his ongoing duty to administer the State’s water resources, the Director should use available data, and consider new analytical methods or modeling concepts, to evaluate the methodology. As more data is gathered and analyzed, the Director will review and refine the process of predicting and evaluating material injury. The methodology will be adjusted if the data supports a change.

¹ The SWC is comprised of A&B District, American Falls Reservoir District #2, Burley Irrigation District, Milner Irrigation District, Minidoka Irrigation District, North Side Canal Company, and Twin Falls Canal Company. Each entity holds separate senior surface natural flow water rights and has separate storage contracts for storage water space in the reservoirs.

Fourth Methodology Order, Conclusion of Law 17; see also *In Matter of Distribution of Water to Various Water Rts. Held By or For Ben. of A & B Irrigation Dist.*, 155 Idaho 640, 645, 315 P.3d 828, 833 (2013) (“[t]he concept of a baseline is that it is adjustable . . .”). The prediction and determination of rights and obligations of the holders of senior priority and junior priority water rights respectively must: (1) apply the best available science and underlying water data; (2) consider changing climatic and cropping patterns; and (3) adhere to the most recent decisions of the courts related to water administration.

Many of the data sets the Department relied upon in the *Fourth Methodology Order* have been expanded and now include additional years. Furthermore, the Director has had time to review and consider the implications of court decisions that require the Director to address a mitigation deficiency in the year it occurs. As a result, the director issued the *Fifth Amended Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* (“*Fifth Methodology Order*”) on April 21, 2023. The purpose of the *Fifth Methodology Order* was to update the Director’s methodology for determining material injury to storage and natural flow water rights either held by or committed to members of the SWC consistent with the Director’s ongoing obligation to use the best available science and information.

On April 21, 2023, the Director also issued his (1) *Final Order Regarding April 2023 Forecast Supply* (“*April 2023 As-Applied Order*”), as well as a (2) *Notice of Hearing, Notice of Prehearing Conference, and Order Authorizing Discovery* (“*Notice of Hearing*”), which set a hearing on the *Fifth Methodology* and *As-Applied Orders* for June 6–10, 2023 (“*June 6 Hearing*”). During the *June 6 Hearing*, the parties proffered testimony and evidence regarding the *Fifth Methodology Order* and the *April 2023 As-Applied order*.

The purpose of issuing this *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* (“*Sixth Methodology Order*”) is to correct data in the *Fifth Methodology Order* found to be in error during the *June 6 Hearing*. This *Sixth Methodology Order* also edits a few other non-substantive matters in the *Fifth Methodology Order*.

FINDINGS OF FACT

I. Overview of the Methodology for Determining Material Injury to Water Rights by Determining Reasonable In-Season Demand and Reasonable Carryover

This methodology is based on the selection of a recent analogous, baseline year to predict reasonable in-season demand (“*RISD*”) for the senior priority surface water rights during the upcoming irrigation season.

1. The method for determining material injury to water rights by determining *RISD* and reasonable carryover should be based on updated data, the best available science, analytical methods, and the Director’s professional judgment as manager of the state’s water resources. In the future, climate may vary and conditions may change; therefore, the methodology may need to

be adjusted to consider a different baseline year or years (“BLY”) or changes to other components.

2. In-season demand shortfall (“IDS”) will be computed by subtracting RISD from the forecast supply (“FS”). In-season demand shortfall is computed using the following equation:

$$IDS = FS - RISD$$

3. If the FS is greater than the RISD, there is no demand shortfall. If the FS is less than the RISD, the negative difference is the demand shortfall. Initially, RISD is equal to the historic demands associated with a BLY as selected by the Director, but will be corrected during the season to account for variations in climate and water supply between the BLY and actual conditions.

4. Reasonable carryover shortfall will be computed by subtracting reasonable carryover from actual carryover, where reasonable carryover is defined as the difference between a baseline year demand (“BD”) and projected typical dry year supply. Reasonable carryover shortfall will be computed using the following equation:

$$\text{Reasonable Carryover Shortfall} = \text{Actual Carryover} - \text{Reasonable Carryover}$$

5. If actual carryover exceeds the reasonable carryover, there is no reasonable carryover shortfall. In contrast, if reasonable carryover exceeds the actual carryover, the negative difference is the reasonable carryover shortfall.

6. The concepts underlying the selection of the BLY, determination of in-season demand shortfall, and reasonable carryover shortfall will be discussed in detail below.

II. In-Season Demand Shortfall

A. Considerations for the Selection of a Baseline Year

7. A BLY is a year or average of years when irrigation demand represents conditions that can predict need in the current year of irrigation at the start of the irrigation season. The purpose of predicting need is to estimate material injury.

8. A BLY is selected by analyzing three factors: (1) climate; (2) available water supply; and (3) irrigation practices. R. vol. 37, at 7098.² To capture current irrigation practices, identification of a BLY is limited to years subsequent to 1999. *Id.* at 7096.

9. The historic diversion volumes from the BLY and the predicted supply forecast at the start of the irrigation season are inputs to predict the initial IDS, where a demand shortfall is the difference after subtracting BD from the FS. When the difference is a positive number, the IDS is zero. When the difference is negative, the negative value equals the in-season demand shortfall. IDS increases with increases in BD, decreases in FS, or both. Assuming constant irrigation practices, crop distributions, and total irrigated acres, demand for irrigation water typically increases in years of higher temperature, higher reference evapotranspiration (“ET”), and lower precipitation. If water demand data is averaged for several years and these averages are the basis to predict demand shortfall at the start of the season, in a high-water demand year, these averages may often under-predict the demand shortfall. In a high-water demand year, under-prediction of IDS might be acceptable if the junior priority ground water right holders and the senior priority surface water right holders shared equally in the risk of water shortages. Equality in sharing the risk will not adequately protect the senior priority surface water right holder from injury. Actual demand shortfalls to a senior surface water right holder resulting from predictions at the start of the irrigation season based on average data unreasonably shifts the risk of shortage to the senior surface water right holder. Therefore, a BLY should represent a year(s) of above average diversions and should not represent a year(s) of average or below average diversions. An above average diversion year(s) selected as the BLY should also represent a year(s) of above average temperatures and reference ET, and below average precipitation to ensure that increased diversions were a function of crop water need and not other factors. In addition, actual supply should be analyzed to assure that the BLY is not a year of limited supply.

i. Climate

10. For the methods outlined herein, climate is represented by precipitation, reference ET, and growing degree days.

² All citations to “Ex”, “Tr.”, or “R. vol.” in this Order are to material that was admitted during the original January 18–February 5, 2008 Hearing in the Matter of Distribution of Water to Various Water Rights Held by or for the Benefit of [the SWC] (“2008 Hearing”) and is part of the final agency record on appeal in Gooding County Case No. CV-2008-551, which was lodged with the Fifth Judicial District Court on February 6, 2009.

11. Precipitation. Water, in all phases, introduced to Idaho from the atmosphere is termed precipitation. During the growing season, precipitation reduces the irrigation water needed for growing crops. Ex. 3024, at 19. The figure below shows the precipitation recorded during the growing season at the National Weather Service’s Twin Falls weather station.

Growing Season Precipitation at National Weather Service’s Twin Falls Weather Station 1992–2021.³

³ The Fourth Methodology Order included data for the period 1990 through 2014. This Fifth Methodology Order updated this chart with data for the period 1992 to 2021. This Sixth Methodology Order relies on the same data included in the Fifth Methodology Order. The chart is created from NOAA National Weather Service total precipitation data obtained from the NCDC’s Climatological Data Annual Summary Idaho report series for the Twin Falls 6 E and Twin Falls Sun Valley Regional Airport weather stations.

12. Evapotranspiration. ET is a variable representing both the amount of water that transpires from vegetation and the amount of water that evaporates from the underlying soil. ET is an important factor for properly estimating RISD. In its water budget calculations, the SWC proposed the use of ET values from the USBR as part of their Pacific Northwest Cooperative Agricultural Network, i.e., AgriMet. Ex. 8000, vol. II, ch. 9; Ex. 8000, vol. IV, app. AU. The ground water users proposed the use of ET values from Richard G. Allen and Clarence W. Robison 2007, *Evapotranspiration and Consumptive Irrigation Water Requirements for Idaho*, i.e., ETIdaho. Ex. 3007A, at 21; Ex. 3024, at 1–58.

13. Reference ET is a standardized index that approximates the climatic demand for water vapor (i.e., ET). Both ETIdaho and AgriMet calculate and publish reference ET data. The Department will identify potential BLYs by consulting both ETIdaho reference ET and AgriMet reference ET.

14. Neither ETIdaho reference ET data nor AgriMet reference ET data span the entire period of analysis (1992–2021). ETIdaho reference ET data are currently available from 1990 through 2016.⁴ AgriMet reference ET data are available from 2000 to 2021.⁵ Ideal BLY candidates are years in which reference ET exceeds average reference ET values. Candidate baseline years are compared using both AgriMet and ETIdaho reference ET data for those years in which both data are available and only AgriMet data in those years where there is no ETIdaho data.

⁴ The Fourth Methodology Order included ETIdaho reference ET data for the period 1991 to 2011. ETIdaho reference ET data is now available through 2016. The Fifth Methodology Order updated this chart with data for the period 1992 to 2016. This Sixth Methodology Order relies on the same data included in the Fifth Methodology Order.

⁵ The Fourth Methodology Order included AgriMet reference ET data for the period 2000 to 2014. AgriMet reference ET data is now available through 2021. The Fifth Methodology Order updated this chart with data for the period 2000 to 2021. This Sixth Methodology Order relies on the same data included in the Fifth Methodology Order.

15. Years of above average values of reference ET are appropriate BLY candidates.⁶ Total April through October reference ET for the period of record from the Twin Falls (Kimberly) AgriMet site is shown below.

Reference ET for Twin Falls (Kimberly) with both AgriMet and ETIdaho data 1992–2021.⁷

⁶ Values for reference ET between ETIdaho and AgriMet do not match because they are derived differently. The relevant information for identifying a potential BLY is the relationship between the year under consideration and the average for the data sets.

⁷ The Fourth Methodology Order included data only through 2014. The Fifth Methodology Order updated this chart with combined data for the period 1992 to 2021, establishing a 30-year record which is the professional standard of practice for calculating climatic and hydrologic normals. This Sixth Methodology Order relies on the same data used in the Fifth Methodology Order.

16. Growing Degree Days. Growing degree days define the length and type of growing season. Growing degree days are an arithmetic accumulation of daily mean temperature above a certain base temperature. Ex. 3024, at 10, 117–21. These growth units are a simple method of relating plant growth and development to air temperatures. Different plant species have different base temperatures below which they do not grow. At temperatures above this base, the amount of plant growth is approximately proportional to the amount of heat or temperature accumulated. A higher annual growing degree day value correlates to a higher potential rate of plant growth. The table below shows growing degree days accumulated for April through September for the Twin Falls (Kimberly) AgriMet site.

Growing Degree Days (“GDD”) for Twin Falls (Kimberly) AgriMet Site 1992–2021.⁸

⁸ The Fourth Methodology Order included data only through 2014. The Fifth Methodology Order updated this chart with data for the period 1992 to 2021. This Sixth Methodology Order relies on the same data included in the Fifth Methodology Order.

ii. Available Water Supply

17. The April through July Heise runoff volume represents the volume of water available for diversion into storage reservoirs and is an indicator of natural flow supplies. The graph below shows actual unregulated flow volumes at Heise for 1992 through 2021. The 1992 to 2021 average (3,284,000 acre-feet) is displayed by the dashed line.

April through July Unregulated Flow Volume at Heise, 1992–2021.⁹

⁹ The Fourth Methodology Order included data only through 2014. The Fifth Methodology Order updated this chart with data for the period 1992 to 2021. This Sixth Methodology Order relies on the same data included in the Fifth Methodology Order.

18. The sum of the Heise natural flow and the reservoir storage allocations is an indicator of the total supply of the Snake River. The sum of the Heise natural flow and reservoir storage allocations for each year from 1992–2021 is represented in the graph below.

The sum of the Heise natural flow and the storage allocation for the Snake River above Milner 1992–2021.¹⁰

iii. Irrigation Practices

19. A baseline year (“BLY”) must be recent enough to represent current irrigation practices. R. vol. 37, at 7099–7100. Current conditions should be represented by: (a) the net area of the irrigated crops, (b) farm application methods (flood/furrow or sprinkler irrigation), and (c) the conveyance system from the river to the farm. The type of sprinkler systems should be similar between the BLY and the current year.

20. Sprinkler systems are currently the predominant application system. *Id.* at 7101–02. To ensure that current irrigation practices are captured, selection of a BLY for the SWC should be limited to years subsequent to 1999. *Id.* at 7096; 7099–7100.

¹⁰ The Fourth Methodology Order included data for the period 1990 to 2014. The Fifth Methodology Order updated this chart with data for the period 1992 to 2021. This Sixth Methodology Order relies on the same data included in the Fifth Methodology Order.

21. According to the Hearing Officer at the 2008 Hearing, Gerald Schroeder (“Hearing Officer”), beneficial use cannot occur on acres that have been hardened or are otherwise not irrigated. R. vol. 37, at 7100.

22. The following table summarizes: a) SWC entities; b) shapefile source of reported irrigated acres; c) year shapefile created; d) decreed irrigated acres; (e) number of reported acres in shapefile; and f) irrigated acres used in this methodology order for the 2023 irrigation season. The number of irrigated acres used in this methodology order is the number of reported acres unless that number is larger than the decreed irrigated acres, and if so, then the decreed acres were used. This table will be updated annually based on the reported number of irrigated acres by each SWC entity in Step 1 of the Methodology Order.

Entity	Shapefile Source	Shapefile Year	Partial Decree Acres	Shapefile Acres	Acres Used in Methodology
A&B	PPU ¹	2010	15,924	21,972	15,924
AFRD2	PPU	2010	62,361	69,077	62,361
BID	SWC	2013	47,643	46,035	46,035
Milner	PPU	2010	13,335	13,264	13,264
Minidoka	SWC	2023	75,093	77,176	75,093
NSCC	PPU	2010	154,067	224,463	154,067
TFCC	SWC	2013	196,162	194,732	194,732
¹ IDWR permissible place of use.					

Acres used in the methodology.

23. There are lands within the service areas of SWC entities that are irrigated with supplemental groundwater. Ex. 3007. Supplemental groundwater is a factor the Director can consider in the context of a delivery call. *Memorandum Decision and Order on Petitions for Judicial Review* (“Methodology Remand Order”) in Gooding County Consolidated Case No. CV-2010-382, at 18–19. At this time, the information submitted or available to the Department is insufficient to determine the extent of supplemental irrigation on lands within the service areas of SWC entities.

iv. Diversions

24. The following figure summarizes the annual measured diversions by the combined SWC members from 2000–2021. Diversions for a baseline year should exceed the average diversions.

Total April–October Diversions by SWC Members.¹¹

B. Selection of the Initial Baseline Year

25. When selecting the BLY, the Director must evaluate recent data to determine whether the BLY section criteria are satisfied.

26. In the Fourth Methodology Order, the Department considered the years 2000–2014 when deciding the BLY. Ultimately, the Department chose an average of the years 2006, 2008, and 2012 for the BLY (“BLY 06/08/12”). For this Sixth Methodology Order, the years 2000–2021 were considered for the BLY selection. With the addition of new data from 2014 to 2021, the total diversions by the SWC for the previous BLY 06/08/12 are 100% of the average SWC diversions for the years 2000–2021. As a result of adding the new data, BLY 06/08/12 no longer satisfies the presumption criteria that total diversions in the BLY should exceed the average annual diversions. Mem. Decision & Order on Pets. for Jud. Rev., at 34, *IGWA v. Idaho Dep’t of Water Res.*, No. CV-2010-382 (Gooding Cnty. Dist. Ct. Idaho Sept. 26, 2014).

¹¹ The Fourth Methodology Order did not include this chart. It was added to the Fifth Methodology Order to demonstrate that the baseline year is a year of above average total diversions. As discussed in footnote 12, during the June 2023 Hearing the Department identified an error in AFRD#2’s 2018 diversion data. Hr’g Tr. vol. IV, at 173–74. This correction was resolved in this Sixth Methodology Order, which relies on the updated data. The updated data did not result in an appreciable increase in 2018’s diversion value.

27. Years 2018 and 2020 satisfy all the BLY selection criteria discussed above. Each of these years had (1) total diversions above the average diversions for the years 2000–2021, (2) total growing degree days above the average for the years 1992–2021, and (3) reference ET values above the average for the years 1992–2021. The years 2018 and 2020 also had total precipitation values below the average precipitation for the years 1992–2021 and were not water supply limited years. The Department has reviewed the SWC’s diversion data for the 2020 irrigation season. The Department finds that 2020 ranks as the second-highest year of total diversions for the SWC and is more than one standard deviation above the average for the years 2000–2021. In comparison, 2018 ranks as the fourth-highest year of total diversions for the SWC and is less than one standard deviation above the average for the years 2000–2021. Choosing a BLY with above average diversions but within one standard deviation, ensures that a conservative year is selected that protects the senior while excluding extreme years from consideration. The Director concludes that total diversions for 2018 adequately protect senior water rights when predicting the demand shortfall at the start of the irrigation season and selects 2018 as the BLY.

Entity	2000–2021 Avg. Total Diversions (Acre-Feet)	06/08/12 Avg. Total Diversions (Acre-Feet)	06/08/12 % of Avg.	2018 Total Diversions (Acre-Feet)	2018 % of Avg.
A&B	59,474	59,993	101%	64,192	108%
AFRD2	427,978	427,672	100%	458,890	106%
BID	247,049	251,531	102%	262,211	106%
Milner	53,343	47,135	88%	58,417	110%
Minidoka	354,181	369,492	104%	354,851	100%
NSCC	996,267	978,888	98%	1,026,661	103%
TFCC	1,062,098	1,060,011	100%	1,121,717	106%
Total	3,200,617	3,194,722	100%	3,346,939	105%

Average SWC Diversions (acre-feet) for 2000–2021, 2006/2008/2012 BLY, and 2018 BLY.¹²

C. Calculation of Reasonable In-Season Demand

28. Prior to the irrigation season, reasonable in-season demand (“RISD”) is the projected annual diversion volume for each SWC entity during the year of evaluation that is attributable to the projected beneficial use of growing crops within the service area of the entity. Given that climate and system operations for the year being evaluated will likely be different from the BLY, the RISD must be adjusted for those differences. As stated by the Hearing Officer, “The concept of a baseline is that it is adjustable as weather conditions or practices

¹² In this Sixth Methodology Order, AFRD2’s 2018 diversion value has been increased by 5,000 acre-feet. This increase was necessary to remedy the error committed by Department staff in calculating AFRD2’s 2018 adjusted diversion value for the Fifth Methodology Order, which was identified during the June 6 Hearing. Hr’g Tr. vol. IV, at 173–74. The error is minor, accounting for approximately 1% of AFRD2’s 2018 diversions. The Director concludes that the error had no appreciable impact on any calculations in the Fifth Methodology Order that relied on AFRD2’s 2018 diversion volume.

change, and that those adjustments will occur in an orderly, understood protocol.” R. vol. 37, at 7098.

i. Project Efficiency

29. Project efficiency (“ E_p ”) is the ratio of total volumetric crop water needs within a SWC entity’s boundary and the total volume of water diverted by that entity to satisfy its crop needs. It is the same concept as system efficiency, which was presented at the 2008 Hearing. Ex. 3007, at 28–29. Implicit in this relationship are the components of seepage loss (conveyance loss), on-farm application losses (deep percolation, field runoff), and system operational losses (return flows) for which data is not obtainable by the Department. By utilizing project efficiency and its input parameters of crop water need and total diversions, the influence of the unknown components for which data is not obtainable can be captured and described without quantifying each of the components. Project efficiency is derived by dividing crop water need by total diversions as depicted in the algorithm below:

$$E_p = \frac{CWN}{Q_D}$$

Where:

E_p = project efficiency,

CWN = crop water need, and

Q_D = irrigation entity diversion of water specifically put to beneficial use for the growing of crops within the irrigation entity.

30. Monthly SWC entity diversions (“ Q_D ”) will be obtained from Water District 01’s diversion records. Ex. 8000, vol. II, at 8-4, 8-5. Raw monthly diversion values will then be adjusted to remove any water diversions that can be identified to not directly support the beneficial use of crop development within the irrigation entity. Examples of adjustments include the removal of diversions associated with in-season recharge and diversion of irrigation water on the behalf of another irrigation entity. Adjustments are unique to each SWC member and each irrigation season and will be evaluated each year. Any natural flow or storage water deliveries to entities other than the SWC for purposes unrelated to the original right will not be included as a part of the SWC water supply or carryover volume. Water that is purchased or leased by a SWC member may become part of the shortfall obligation to the extent that member has been found to have been materially injured. *See e.g.*, R. vol. 38, at 7201 n.11 (Eighth Supplemental Order). Conversely, water supplied to private leases or to the rental pool by a SWC member will be included as a part of the SWC supply for that member because non-inclusion would unjustifiably increase the shortfall obligation.

31. Monthly project efficiencies will be computed for the entire irrigation season. Project efficiency varies from month-to-month during the season and will typically be lower during the beginning and ending of the season. Monthly project efficiencies will be divided into actual monthly crop water need (“CWN”) values to determine RISD during the year of evaluation.

32. In the Fourth Methodology Order, project efficiencies for each SWC member were initially averaged over an eight-year period (2007–2014) and project efficiency greater or less than two standard deviations were excluded from the calculation. By including only those values within two standard deviations, extreme values from the data set are removed. Under the Fourth Methodology Order, an updated 8-year rolling average of project efficiencies was calculated each year the methodology was implemented. The Director now finds that averaging over a rolling period of 15 years results in project efficiency values that are more consistent from year-to-year, reducing the impact of short-term trends. The Director finds that it is still appropriate to remove project efficiencies greater or less than two standard deviations from the average.

The following is a table of efficiency values averaged over the most recent fifteen-year period of record.

Month	A&B	AFRD2	BID	Milner	Minidoka	NSCC	TFCC	Monthly Avg.
4	0.98	0.33	0.45	0.87	0.43	0.24	0.31	0.51
5	0.47	0.22	0.32	0.39	0.35	0.24	0.30	0.33
6	0.66	0.40	0.49	0.60	0.56	0.41	0.51	0.52
7	0.74	0.44	0.52	0.67	0.63	0.48	0.58	0.58
8	0.58	0.41	0.42	0.55	0.52	0.43	0.46	0.48
9	0.45	0.27	0.32	0.45	0.38	0.32	0.27	0.35
10	0.18	0.16	0.09	0.14	0.11	0.06	0.04	0.11
Season Avg.	0.58	0.32	0.37	0.52	0.43	0.31	0.35	

SWC Member Average Monthly Project Efficiencies from 2007–2021.¹³

ii. Crop Water Need

33. CWN is the volume of irrigation water required for crop growth within a SWC entity boundary, such that crop growth is not limited by water availability. CWN only applies to crops irrigated with surface water. CWN is the difference between the fully realizable consumptive use associated with crop growth, or ET, and effective precipitation (W_e) and is synonymous with the terms irrigation water requirement and precipitation deficit. Ex. 3024. For the purposes of the methodology, CWN is calculated as set forth below:

$$CWN = \sum_{i=1}^n (ET_i - W_e) A_i$$

¹³ In the Fourth Methodology Order, this table summarized average E_p data for the period 2007 to 2014. The Fifth Methodology Order updated this table with average E_p data for the period 2007 to 2021. This Sixth Methodology Order relies on the same data included in the Fifth Methodology Order.

Where:

CWN = crop water need

ET_i = consumptive use of specific crop type,

W_e = effective precipitation,

A_i = total irrigated area of specific crop type,

i = index variable representing the different specific crop types grown within the irrigation entity, and

n = upper bound of summation equal to the total number of different specific crop types grown within the irrigation entity.

iii. Evapotranspiration

34. ET can be estimated with theoretically based equations that calculate ET for an individual crop, necessitating crop distribution maps for each year. Ex. 3007A, at 21, fig. 3, tbls. 6–12; Ex. 3024, at 1–58; Ex. 8000, vol. II, ch. 9; Ex. 8000, vol. IV, app. AU.

35. At the 2008 Hearing, values of ET were estimated by the SWC from AgriMet, Ex. 8000, vol. IV, at AU-1, and by the ground water users from ETIdaho, Ex. 3007A, at 21; Ex. 3024, at 1–58. At this time, the Director finds that the use of AgriMet is more appropriate for determining ET than ETIdaho because AgriMet is available to all parties in real-time without the need for advanced programming. Accordingly, the methodology will rely on AgriMet derived ET values in the calculations of project efficiency, CWN, and RISD. In the future, with the development of additional enhancements, ETIdaho may become a more appropriate analytical tool for determining ET.¹⁴

36. CWN is derived by multiplying crop specific ET values, adjusted for estimated effective precipitation, by the total irrigated area of individual crop types, and summing the CWN for each crop type. The areas for individual crop types will be derived from published crop distributions from the United States Department of Agriculture's National Agricultural Statistics Service ("NASS"). Ex. 1005, at 1. NASS annually creates a crop-specific land cover digital dataset from satellite imagery and field checks. The dataset is called the Cropland Data Layer ("CDL"). Each year, the Department will calculate acreage by crop type for each SWC entity using NASS CDL data. In the future, the NASS data may not be the most accurate source of data. The Department prefers to rely on data from the current season if and when it becomes usable.

37. AgriMet ET and precipitation data are gathered at the Rupert and Twin Falls (Kimberly) stations. Both stations are in the vicinity of the SWC entities. A&B Irrigation District ("A&B"), Burley Irrigation District ("BID"), and Minidoka Irrigation District ("Minidoka") are nearest to the Rupert AgriMet station. ET data gathered at the Rupert station reasonably represents the climate conditions for A&B, BID, and Minidoka. American Falls Reservoir District No. 2 ("AFRD2"), Milner Irrigation District ("Milner"), North Side Canal

¹⁴ IDWR held a series of meetings in the winter of 2022–23 with the parties' technical consultants to discuss potential updates to the methodology order. During the meetings, IDWR discussed alternative methods of determining ET values, such as METRIC. However, the Director finds that the methods considered are not yet ready for incorporation into the administration of the SWC Delivery Call and will continue to rely on AgriMet ET data.

Company (“NSCC”), and Twin Falls Canal Company (“TFCC”) are nearest to the Twin Falls (Kimberly) AgriMet station. ET data gathered at the Twin Falls (Kimberly) station reasonably represents the climate conditions for AFRD2, Milner, NSCC, and TFCC. Ex. 8000, vol. IV, at AU-2, AU-8.

iv. Effective Precipitation

38. Effective precipitation (“ W_e ”) is the amount of total precipitation held in the soil horizon available for crop root uptake. Effective precipitation will be estimated from total precipitation (W) employing the methodology presented in the USDA Technical Bulletin 1275. Ex. 8000, vol. IV, at AU-3, AU-8. Total precipitation (W) data is published by the USBR as part of its Pacific Northwest Cooperative Agricultural Network, i.e., AgriMet.¹⁵ Ex. 8000, vol. IV, at AU-3. W_e values derived from AgriMet based precipitation values are independent of crop type.

39. AgriMet precipitation (W) values are easy to understand and regularly used by the farming, water supply, and water management communities. Accordingly, the methodology will rely on AgriMet derived W values in the calculations of CWN and RISD.

40. As with ET data, AgriMet precipitation data are available from the Rupert and Twin Falls (Kimberly) stations. AgriMet data from the Rupert station reasonably represents climate conditions for A&B, BID, and Minidoka. AgriMet data from Twin Falls (Kimberly) reasonably represents climate conditions for AFRD2, Milner, NSCC, and TFCC. Ex. 8000, vol. IV, at AU-2, AU-8.

v. Summary of Reasonable In-Season Demand Calculation

41. At the start of the irrigation season, RISD is equal to the BD, or total season adjusted diversions for the BLY. When calculated in-season, RISD is calculated below.

$$RISD_{milestonex_x} = \sum_{j=1}^m \left(\frac{CWN_j}{E_{p,j}} \right) + \sum_{j=m+1}^7 BD_j$$

Where:

$RISD_{milestone_x}$ = reasonable in season demand at specified evaluation milestones during the irrigation season,

CWN = crop water need for month j,

E_p = baseline project efficiency for month j,

BD = baseline demand for month j,

j = index variable, and

m = upper bound of summation, equal to the month calculation occurs, where April = 1, May =2, ... October = 7.

¹⁵ IDWR held a series of meetings in the winter of 2022–23 with the parties' technical consultants to discuss potential updates to the methodology order. During the meeting, IDWR discussed alternative methods to determine W values, such as PRISM. However, the Director finds that the methods considered are not yet ready for incorporation into the administration of the SWC Delivery Call and will continue to rely on AgriMet precipitation data.

42. April RISD Adjustment: In April, the calculated RISD, which is the quotient of CWN and Ep, can underestimate actual canal operation diversions. Under-estimation occurs when the actual CWN value for April is much smaller than the diversion of water into the canal system necessary to effectively operate the irrigation delivery system. Often, CWN in April is small due to precipitation, cool temperatures, and/or the immaturity of the crop. The diversion rate at the head gate necessary to push water into all laterals and field head gates throughout the delivery system often dwarfs the water necessary to strictly satisfy CWN. In addition, it is difficult for canal systems to be dynamically operated to match the frequent precipitation events in April, which also contributes to a diversion of water at the canal head gate that exceeds the diversion of water necessary to strictly satisfy CWN. To account for the conditions affecting the usability of the calculated RISD value for April, the values may be adjusted for each individual irrigation delivery entity in the SWC as described below.

43. When the calculation of CWN/Ep results in a value for the month of April less than the average April diversion volume over a record of representative years in the recent past, the April RISD is set equal to the average April diversion volume. When the calculation of CWN/Ep results in a value greater than the average April diversion volume, the April RISD is equal to the calculated CWN/Ep volume.

44. October RISD Adjustment: In October, the calculated RISD, which is equal to the CWN divided by Ep, can both under-estimate and over-estimate actual canal operation diversions. The RISD may be underestimated when the actual CWN value for October is much smaller than the diversion of water into the canal system necessary to effectively operate the irrigation delivery system. The diversion rate at the head gate necessary to push water into all laterals and field head gates throughout the delivery system often dwarfs the water necessary to strictly satisfy CWN. In addition, it is difficult for canal systems to be dynamically operated to match the frequent precipitation events in October, which also contributes to a diversion of water at the canal head gate that exceeds the diversion of water necessary to strictly satisfy CWN. Furthermore, RISD may be underestimated in October when a farmer diverts water at the field head gate for farming practices other than strictly satisfying CWN. Examples of water diversion practices at the field head gate that sometimes occur in October include diverting water for soil salt leaching, diverting water to build up the soil moisture profile for the following irrigation season, and/or diverting water to wet-up bare soil to prevent wind-driven topsoil erosion.

45. Unlike the month of April, RISD can be over-estimated in October. RISD may be over-estimated in years when actual CWN in October is much greater than typical CWN over a record of representative years in the recent past due to low precipitation and/or warm temperatures. To account for the conditions affecting the usability of the RISD value calculated for October, the values may be adjusted for each individual irrigation delivery entity in the SWC as described below.

46. When the calculation of CWN/Ep results in a value for the month of October greater than the maximum October diversion volume from a record of recent representative years, or less than the minimum October diversion volume from the same record of recent representative years, the October RISD is set equal to the average October diversion volume over

the same period of recent representative years. When the calculation of CWN/Ep results in a value between the maximum and minimum October diversion volumes from a record of recent representative years, the October RISD is equal to the calculated CWN/Ep volume.

D. Adjustment of Forecast Supply

47. As stated by the Hearing Officer, “There must be adjustments as conditions develop if any baseline supply concept is to be used.” R. vol. 37, at 7093. A prediction of the upcoming season’s supply and demand is calculated at the beginning of the irrigation season and adjusted at specified milestones during the irrigation season to address changes in water supply and demand conditions in response to actual climatic and water supply conditions.

i. April Forecast Supply

48. The FS is comprised of natural flow and stored water.

49. Typically, within the first week of April, the USBR and the USACE issue their Joint Forecast that predicts an unregulated inflow volume at the Heise Gage from April 1 to July 31 for the forthcoming year. The joint forecast (“Joint Forecast”) issued by the United States Bureau of Reclamation (“USBR”) and the United States Army Corp of Engineers (“USACE”) for the period April 1 through July 31 “is generally as accurate a forecast as is possible using current data gathering and forecasting techniques.” R. vol. 8, ¶ 98, at 1379. Given current forecasting techniques, the earliest the Director can predict material injury “with reasonable certainty” is soon after the Joint Forecast is issued. R. vol. 2, at 226. With data from 1990 through the irrigation year previous to the current year, a regression equation will be developed for each SWC member.¹⁶ The regression equations for A&B and Milner will be developed by comparing the actual Heise natural flow to the natural flow diverted. *See e.g.*, R. vol. 8, at 1416–22. For AFRD2, BID, Minidoka, NSCC, and TFCC, multi-linear regression equations will be developed by comparing the actual Snake River near Heise natural flow and the flows at Box Canyon to the natural flow diverted. The regression equations will be used to predict the natural flow diverted for the upcoming irrigation season. *Id.* at 1380. The actual natural flow volume predicted in the Director’s April FS for each SWC entity will be one standard error below the regression line, which underestimates the available supply. *Id.*; Tr., at. 65:6–25, 66:1–2. The purpose of the shift to one standard error below the regression line is to ensure senior water right holders do not bear the risk of under-prediction of supply. The forecasting techniques will be revised based on updated data and the forecasting techniques may be revised when improvements to the forecasting tools occur.

50. The storage allocation for each member of the SWC will be estimated by the Department following issuance of the Joint Forecast. The Department will forecast reservoir fill and storage allocation consistent with the methods established in the *Fifth Supplemental Order Amending Replacement Water Requirements Final 2006 & Estimated 2007*. R. vol. 23, at 4294–

¹⁶ IDWR held a series of meetings in the winter of 2022–23 with the parties’ technical consultants to discuss potential updates to the methodology order. During the meetings, IDWR discussed updating the regression models used to forecast the SWC’s water supplies in April. However, the Director finds that the current models still adequately forecast water supplies in April and will continue to rely on the existing regression models.

97 as explained below. The Department will evaluate the current reservoir conditions and the current water supply outlook to determine a historical analogous year or years to predict reservoir fill. The Department may identify and use a combination of different analogous years to predict individual reservoir fill. Input variables for determining the individual storage water allocation for each SWC member are: (a) the analogous year's or years' total reservoir fill volume; (b) an estimated evaporation volume; and (c) the previous year's carryover volume. The FS (the combination of the forecast of natural flow supply and the storage allocation) for each SWC member will be determined by the Director shortly after the date of the Joint Forecast.

51. Any time prior to the Director's final determination of the April FS, if the Director can determine with certainty that any member of the SWC has diverted more natural flow than predicted, or has accrued more storage than predicted, the Director will revise his initial, projected shortfall determination.

ii. July Forecast Supply

52. Approximately halfway through the irrigation season, the FS will be adjusted. When adjusting the natural flow component of the FS, the Department's water rights accounting program will compute the year-to-date natural flow diverted by each member of the SWC. The natural flow diversion for the remainder of the irrigation season will be estimated based on the regression analyses.

53. The natural flow supplies for each SWC member are comprised of natural flow in the Snake River passing the near Blackfoot gage and gains that occur in the Snake River between the Blackfoot to Milner reach. Many different predictor variables were considered when developing the models used to predict the natural flow supplies for the remainder of the season, including those variables used in the April FS.¹⁷ A step-wise statistical analysis was employed to help select the variables for each model. The following variables were selected to forecast water supplies halfway through the irrigation season: natural flow in the Snake River near Heise as reported by the U.S. Bureau of Reclamation; snow water equivalent (SWE) data at the Two Ocean Plateau SNOTEL site; Spring Creek discharge; and groundwater levels near American Falls Reservoir. The model predictors were optimized for each SWC member and are summarized in the sections below.

54. Linear regression equations for AFRD2, A&B, and Milner, will be developed by comparing the July 1 snow water equivalent (inches) at the Two Ocean Plateau SNOTEL site to the natural flow diversions. The regression equations for AFRD2, A&B, and Milner will be applied only in those years when the snow water equivalent at the Two Ocean Plateau SNOTEL site is greater than zero (0). Years when the snow water equivalent equals zero, the total natural flow prediction for the period July 1 to October 31 will be zero (0) AF.

¹⁷ IDWR held a series of meetings in the winter of 2022–23 with the parties' technical consultants to discuss potential updates to the methodology order. IDWR discussed updating the regression models used to forecast the SWC's water supplies in July. However, the Director finds that the current models still adequately forecast water supplies in July and will continue to rely on the existing regression models.

55. Multiple linear regression equations for BID, Minidoka, and NSCC will be developed to predict natural flow diversions employing the following predictor variables: (1) Snake River near Heise natural flow (April – June), (2) March depth to water at well 05S 31E 27ABA1 and (3) the snow water equivalent at the Two Ocean Plateau SNOTEL site on June 15.

56. The multiple linear regression model for TFCC will be based on the following predictor variables: (1) Snake River near Heise natural flow (April – June), (2) Spring Creek total discharge (January – May) and (3) the snow water equivalent at the Two Ocean Plateau SNOTEL site on June 15.

57. When adjusting the storage component of the FS, the Department must consider whether stored water has been allocated. In normal to dry years, the reservoirs will typically have filled to their peak capacity for the season and the storage water will have been allocated. If the BOR and Water District 01 have allocated stored water to spaceholders, the Department will use the actual preliminary storage allocations to the SWC. If the BOR and Water District 01 have not yet allocated stored water to spaceholders, the Department will predict the storage allocations based on the storage allocations from an analogous year or years.

iii. Time of Need

58. The FS will again be adjusted shortly before the Time of Need. The Time of Need is established by predicting the day in which the remaining storage allocation will be equal to reasonable carryover. The Time of Need will not be earlier than the Day of Allocation.

59. When adjusting the natural flow component of the FS, the Department's water rights accounting program will compute the natural flow diverted by each member of the SWC as of the new forecast date. The natural flow diversion for the remainder of the irrigation season will be estimated based on a historical year with similar reach gains in the Blackfoot to Milner reach. The following is an example of estimating reach gains from an analysis of historical years. Reach gains for the years 2000 – 2003 and a portion of year 2004 are graphed below. Considering 2004 as an example of a current year and comparing 2004 to the hydrographs for 2000 – 2003, year 2003 has similar reach gains and is appropriately conservative. Therefore, the natural flow diverted in 2003 would be used to predict the natural flow diversions for the remainder of the 2004 season.

Example Reach Gain Analysis for 2004.

60. When adjusting the storage component of the FS, the Department will use the actual preliminary storage allocations to the SWC.

61. The adjusted FS is the sum of the year-to-date natural flow diversions, the predicted natural flow diversions for the remainder of the season, and the storage allocation.

E. Calculation of In-Season Demand Shortfall

62. The equation below determines the amount of predicted demand shortfall during the irrigation season.

$$IDS = FS - RISD$$

Where:

IDS = demand shortfall for specified evaluation points throughout the season,

FS = forecasted supply adjusted for specified evaluation point during the season, and

RISD = reasonable in-season demand from above.

63. The amount calculated represents the volume that junior ground water users with approved mitigation plans for delivery of water will be required to have available for delivery to members of the SWC found to be materially injured by the Director to avoid curtailment. The amounts will be calculated in April, at the middle of the season, and at the Time of Need.

III. Methodology for Determining Material Injury to Reasonable Carryover

64. Conjunctive Management (“CM”) Rule 42.01.g states the following guidance for determining reasonable carryover: “In determining a reasonable amount of carry-over storage water, the Director shall consider average annual rate of fill of storage reservoirs and the average annual carry-over for prior comparable water conditions and the projected water supply for the system.” Carryover shortfall will be determined following the completion of the irrigation season.

A. Projected Water Supply

65. CM Rule 42.01.g states that the Director “shall consider . . . the projected water supply for the system.” Because it is not possible to adequately forecast the irrigation supply or demand for the following irrigation season at the end of the current irrigation season, the Director must estimate the carryover water needed in future dry years when demand exceeds supply, creating a need for carryover storage. The Director projected the water supply using typical dry years and subtracted it from a projected future demand to determine a projected carryover need.

66. The Heise natural flow is a predictive indicator of total water supply. For the years 2002 and 2004, the Heise natural flows were well below the long term average (1992–2021), but were not the lowest years on record.¹⁸ The average of the 2002 and 2004 supply will be the projected supply, representing a typical dry year. The 2002 and 2004 supply is computed as follows:

- 2002 supply = natural flow diverted + new storage fill
- 2004 supply = natural flow diverted + new storage fill
- Projected supply = average of 2002 supply and 2004 supply

Carryover from previous years is not included in the 2002 and 2004 new storage fill because it was not new water supplied during the 2002 or 2004 irrigation year.

	2002 Natural Flow Diverted	2002 New Storage Fill	2002 Total Supply	2004 Natural Flow Diverted	2004 New Storage Fill	2004 Total Supply	Projected Supply (Average 02/04)
	-----Acre-Feet-----

SWC water supplies 2002, 2004, and 2002/2004 average (acre-feet).

67. Similar to projecting supply, the Director must also project demand. Because it is not possible to adequately forecast the irrigation demand for the following irrigation season at the end of the current irrigation season, the Director must project demand. R. vol. 37, at 7109. The 2018 BLY will be the projected demand.

¹⁸ The Fourth Methodology Order included data for the period 1991 to 2014. The Fifth Methodology Order updated this chart with data for the period 1992 to 2021. This Sixth Methodology Order relies on the same data included in the Fifth Methodology Order.

68. The maximum projected carryover need is defined as the difference between a BLY demand and projected typical dry year supply. The following equation computes the maximum projected carryover need:

$$\text{Maximum Projected Carryover Need} = \text{Projected Demand (2018 BLY)} - \text{Projected Supply (Average 02/04)}$$

	Projected Demand (2018 BLY)	Projected Supply (average 02/04)	Maximum Projected Carryover Need
	-----Acre-Feet-----		
A&B	64,192	41,496	22,696
AFRD2	458,890	360,730	98,160

TFCC	1,121,717	1,034,883	86,834

SWC Projected Demand, Projected Supply and Maximum Projected Carryover Need (acre-feet).¹⁹

B. Average Annual Rate of Fill

69. CM Rule 42.01.g states that the Director “shall consider the average annual rate of fill of storage reservoirs” The average annual rate of fill of the storage reservoirs is the average of annual percentages of fill of each entity’s reservoir space. The average annual reservoir storage fill is a benchmark that can be compared to projected carryover need. For purposes of the table below, any water contributed to the rental pool from the previous year was added to the next year’s fill volume so that it does not artificially lower the percent fill. R. vol. 37, at 7108. Water that is supplied to the rental pool lowers carryover and could impact the following year’s fill. The percent fill does not include water deducted for reservoir evaporation.

¹⁹ The Fifth Methodology Order updated this chart with the new baseline year and calculated new maximum projected carryover need values. This Sixth Methodology Order relies on the same data included and calculated in the Fifth Methodology Order with one exception. As described in footnote 12, AFRD2’s 2018 diversion value has been increased by 5,000 acre-feet to remedy an error committed by Department staff in calculating AFRD2’s 2018 adjusted diversion value for the Fifth Methodology Order. Hr’g Tr. vol. IV, at 173–74.

The annual percent fill of storage volume by SWC entity is shown below:

Year	A&B	AFRD2	BID	Milner	Minidoka	NSCC	TFCC

Annual Percent Fill of Storage Volume by Entity (1992–2021).²⁰

²⁰ The Fourth Methodology Order included data from 1995 through 2014. The Fifth Methodology Order updated this chart with data from 1992 through 2021. The Sixth Methodology Order relies on the same data included in the Fifth Methodology Order.

C. Average Annual Carryover

70. CM Rule 42.01.g states that the Director “shall consider the . . . average annual carry-over for prior comparable water conditions” Actual carryover volumes are from annual storage reports published by Water District 1. Actual carryover from 1992 through 2021 are sorted into two categories – below average (dry) and above average (wet). The categories are based on Heise natural flow volumes from April through September.

The 1992 to 2021 average natural flow volume is 3,827 thousand acre-feet (“KAF”).

Cat.	Year	Heise Apr–Sept (KAF)	A&B	AFRD2	BID	Milner	MID	NSCC	TFCC
		-----Acre-Feet-----							
Below Avg (Dry)	2001	1,968	9,902	4,217	37,430	26,854	55,132	42,421	26,917

	Avg.	4,890	97,453	128,021	134,778	62,492	220,533	434,659	110,560

Actual Carryover Volumes by Entity, Sorted by Heise Natural Flow (1992–2021).²¹

²¹ In the Fourth Methodology Order, this table summarized data for the period 1994 to 2014 and adjusted WD 01 carryover values to remove water received for mitigation or water rented by the SWC entity to augment their supplies. The Fifth Methodology Order updated this chart with data for the period 1992 to 2021 and used raw carryover values reported by WD 01. Raw numbers were used because adjusted numbers reduced the SWC’s

71. In considering the principles articulated in CM Rule 42.01.g, the Director will project reasonable carryover shortfalls for members of the SWC. The following table represents the 2018 BLY diversion volumes and total reservoir storage space by entity. By dividing the total reservoir space by the 2018 diversion volume, a metric is established that describes the total number of seasons the entity's reservoir space can supply water.

	A&B	AFRD2	BID	Milner	Minidoka	NSCC	TFCC
	-----Acre-Feet-----						
Projected Demand (2018 BLY)	64,192	458,890	262,211	58,417	354,851	1,026,661	1,121,717
Total Reservoir Space	137,626	393,550	226,487	90,591	366,554	859,898	245,930
Number of Seasons of Reservoir Space	2.1	0.9	0.9	1.6	1.0	0.8	0.2

Total Reservoir Space²² in Comparison to Demand.²³

D. Reasonable Carryover

i. A&B

72. A&B's reservoir space has the lowest average annual rate of fill with the highest variability in fill. *See* Finding of Fact 69. In dry years, the potential exists that A&B's actual carryover will be less than the maximum projected carryover need. *See* Finding of Fact 68, 70. A&B has an approximate two-year water supply provided by its total available storage space. *See* Finding of Fact 71. Because of its lower rate of fill, it is likely A&B will experience carryover shortfalls in consecutive dry years. Based on the evaluation criteria in CM Rule 42.01.g, A&B's reasonable carryover should be the maximum projected carryover need of 22,700 AF. *See* Finding of Fact 78.

ii. AFRD2

73. AFRD2 has the highest and most consistent reservoir rate of fill of any member of the SWC. AFRD2's storage space fills 99% of the time and has a fill variability of 3%. As

potential entitlement to reasonable carryover. This Sixth Methodology Order relies on the same data included in the Fifth Methodology Order.

²² *See* R. vol. 8, at 1373–74.

²³ This Fifth Methodology Order updated this chart with a new baseline year and calculated a new number of seasons of reservoir space values. This Sixth Methodology Order relies on the same data included and calculated in the Fifth Methodology Order with the single exception discussed in footnote 12.

shown in the Annual Percent Fill table in Finding of Fact 69 above, its space only failed to fill in 2004 (82%) and 2000 (99%). AFRD2 has a high likelihood of filling during multi-year droughts and after a dry year. *See* Finding of Fact 69. Therefore, any unfilled space in the fall will most likely fill. AFRD2 has an approximate one-year supply available in storage. *See* Finding of Fact 71. AFRD2's storage space only failed to fill in years when the natural flow volume at Heise was less than 3,100 KAF. In a dry year, AFRD2's historical carryover volume is often less than the maximum projected carryover need using the equation set forth in Finding of Fact 68 and 70. Based on the evaluation criteria for reasonable carryover in CM Rule 42.01.g, the reasonable carryover can be adjusted from the maximum projected carryover need without shifting the risk of shortage to the senior right holder. The historical average carryover of 16,700 AF in years when the natural flow volume at Heise was less than 3,100 KAF is the reasonable carryover for AFRD2. *See* Finding of Fact 78.

iii. BID & Minidoka

74. Historically, in dry years, BID's and Minidoka's carryover volumes have been well above the maximum projected carryover need and it is unlikely that they will have reasonable carryover shortfalls in the future. *See* Finding of Fact 68, 70; *see also* R. vol. 37, at 7105. Based on the evaluation criteria for reasonable carryover in CM Rule 42.01.g, the reasonable carryover can be adjusted downward from the maximum projected carryover need without shifting the risk of shortage to the senior right holder. The reasonable carryover for BID and Minidoka is 0 AF. *See* Finding of Fact 78; *see also* R. vol. 37, at 7105.

iv. Milner

75. Similar to A&B, Milner's reservoir space has the second lowest average annual rate of fill of all entities and has a high degree of variability in fill. *See* Finding of Fact 69. In dry years, the potential exists that Milner's actual carryover will be less than the maximum projected carryover need. *See* Finding of Fact 68, 70. Milner has an approximate one and one half water supply available in storage. *See* Finding of Fact 71. Because of its rate of fill, it is likely Milner will experience carryover shortfalls in consecutive dry years. Based on the evaluation criteria for reasonable carryover in CM Rule 42.01.g, the maximum projected carryover need of 16,100 AF is the reasonable carryover for Milner. *See* Finding of Fact 78.

v. NSCC

76. NSCC has a near-average annual rate of fill in comparison to all entities and an approximate one-year water supply available in storage. *See* Findings of Fact 69 & 71. In dry years, the potential exists that its maximum projected carryover need will be less than its actual carryover. *See* Finding of Fact 68, 70. Based on the evaluation criteria in CM Rule 42.01.g, the reasonable carryover for NSCC is 113,300 AF. *See* Finding of Fact 78.

vi. TFCC

77. TFCC has a near average annual rate of fill in comparison to all entities, but only 20% of a single year's water supply is available in storage. TFCC's storage space fills 97% of

the time and has a fill variability of 8%. *See* Findings of Fact 69 & 71. In dry years, the potential exists that its maximum projected carryover need will be less than its actual carryover. *See* Finding of Fact 68, 70. Based on the evaluation of the criteria in CM Rule 42.01.g, the reasonable carryover can be adjusted from the maximum projected carryover need without shifting the risk of shortage to the senior right holder. The historical average carryover in dry years of 37,400 AF is the reasonable carryover for TFCC. *See* Finding of Fact 78.

78. Reasonable carryover values for the SWC members are as follows:

	Reasonable Carryover (Acre-Feet)
A&B	22,700
AFRD2	16,700
BID	0
Milner	16,100
Minidoka	0
NSCC	113,300
TFCC	37,400

E. Reasonable Carryover Shortfall

79. Reasonable carryover shortfall is the numerical difference between reasonable carryover and actual carryover, calculated at the conclusion of the irrigation season. Actual carryover is defined as the storage allocation minus the total storage use plus or minus any adjustments. Examples of adjustments include SWC water placed in the rental pool and SWC private leases. Adjustments are unique to each irrigation season and will be evaluated each year. Any storage water deliveries to entities other than the SWC for purposes unrelated to the original right will be adjusted so that the water is not included as a part of the SWC carryover volume. Water that is purchased or leased by an SWC member may become part of the carryover shortfall obligation. *See e.g.*, R. vol. 38, at 7201 n.11 (Eighth Supplemental Order). Conversely, actual carryover must be adjusted to assure that water supplied by a SWC member to private leases or to the rental pool will not increase the reasonable carryover shortfall obligation to the same SWC member.

80. Reasonable carryover shortfall is calculated as follows:

$$\text{Reasonable Carryover Shortfall} = \text{Actual Carryover} - \text{Reasonable Carryover}$$

F. Determination of Curtailment Date

81. The Eastern Snake Plain Aquifer Model (“ESPAM”) is the best scientific tool available to simulate aquifer and Snake River responses to stresses applied to the aquifer, such as ground water pumping from a well. Curtailment of junior ground water pumpers in response to the SWC Delivery Call would result in a reduction in the withdrawal of groundwater and a corresponding reduction in aquifer stress. ESPAM simulates the effects of the reduction in

aquifer stress and calculates predicted increases in aquifer discharge to the Snake River resulting from the curtailment of ground water pumping from the ESPA.

82. ESPAM simulations can be either steady-state or transient.

83. Merriam-Webster's Dictionary defines steady-state as "a state or condition of a system or process . . . that does not change in time." *Steady state*, Merriam-Webster.com, <https://www.merriam-webster.com/dictionary/steady-state> (April 19, 2023). A steady-state ESPAM simulation can only model increases in aquifer discharge to the Snake River resulting from continuous curtailments of an identical magnitude and location until the impacts of curtailment are fully realized. For example, a steady-state analysis of the curtailment of 1,000 acres, assumes that irrigation of the same 1,000 acres is curtailed every year at the same rate of consumptive use, until the impacts of that curtailment reach a steady state, or no longer change from year to year.

84. Steady-state analysis does not calculate the time to reach steady-state conditions nor describe the seasonal timing of the impacts. For the benefits of curtailment predicted by steady-state analysis to be realized by the river, the curtailment must occur continuously until steady-state is achieved. The assumption of continuous curtailment does not reflect reality in the SWC Delivery Call. Curtailments ordered as prescribed in the methodology are neither continuous nor long-term. Irrigation with ground water does not occur at a constant rate throughout the year nor from year to year. It is important to predict what benefits to the river are realized during the irrigation season in which injury has been determined. A steady-state ESPAM simulation cannot predict what benefits are realized during the irrigation season. In contrast, a transient ESPAM simulation will predict the timing of changes in river reach gains.

85. ESPAM was calibrated using one-month stress periods and can simulate a single (or partial) irrigation season of curtailment and predict the resulting increase in aquifer discharge to the Snake River during the same irrigation season using a transient simulation. In the context of this proceeding, the transient approach identifies the junior ground water rights that must be curtailed to produce increases in Snake River flows sufficient to offset material injury in the current irrigation season.

86. Only 9% to 15% of the steady state response is predicted to accrue to the near Blackfoot to Minidoka reach between May 1 and September 30 of the same year.²⁴ Fifty percent of the steady-state response is predicted to accrue at the near Blackfoot to Minidoka reach within approximately four years. Ninety percent of the steady-state response is predicted to accrue at the near Blackfoot to Minidoka reach within approximately 24 years.

87. A curtailment to a priority date calculated by the steady state analysis method used in the Fourth Methodology Order will only offset 9% to 15% of the predicted IDS. In contrast, curtailment to a priority date calculated with a transient simulation of a single season curtailment will offset the full predicted IDS unless the shortfall exceeds the accruals to the near

²⁴ The near Blackfoot to Minidoka reach is the reach of the Snake River from which the SWC diverts its water supplies.

Blackfoot to Minidoka reach by the end of the irrigation season with curtailment of all junior ground water rights.

88. Steady-state simulations are appropriate for evaluating the average annual impact of aquifer stresses that have been, or will be, applied for decades (i.e., ground water pumping year after year, or continuous curtailment to the same date every year). The steady-state simulation of continuous curtailment applied in the Fourth Amended Methodology Order does not simulate the short-term curtailments prescribed in the methodology. The methodology prescribes curtailment only in years with a predicted IDS or carryover shortfall and prescribes the determination of a curtailment priority date that varies with the magnitude of the predicted shortfall.

89. Transient simulations are necessary to evaluate the impacts of aquifer stresses applied for short periods of time (i.e., short-term curtailments with varying priority dates). Transient simulations are necessary to simulate the short-term curtailments prescribed in the methodology.

CONCLUSIONS OF LAW

1. This order contains the methodology by which the Director will determine material injury to RISD and reasonable carryover to members of the SWC.

2. “The agency’s experience, technical competence, and specialized knowledge may be utilized in the evaluation of the evidence.” Idaho Code § 67-5251(5); IDAPA 37.01.01.600.

3. Idaho Code § 42-602 states that, “The director of the department of water resources shall have discretion and control of the distribution of water from all natural sources . . . The director of the department of water resources shall distribute water . . . in accordance with the prior appropriation doctrine.” According to the Hearing Officer, “It is clear that the Legislature did not intend to grant the Director broad powers to do whatever the Director might think right. However, it is clear also that the Legislature [in Idaho Code § 42-602] did not intend to sum up water law in a single sentence of the Director’s authority.” R. vol. 37, at 7085. “Given the nature of the decisions which must be made in determining how to respond to a delivery call, there must be some exercise of discretion by the Director.” *American Falls Res. Dist. No. 2 v. Idaho Dept. Water Resources*, 143 Idaho 862, 875, 154 P.3d 433, 446 (2007).

4. “The prior appropriation doctrine is comprised of two bedrock principles—that the first appropriator in time is the first in right and that water must be placed to a beneficial use.” *In Matter of Distribution of Water to Various Water Rights Held by or for the Benefit of A & B Irrigation Dist.*, 155 Idaho 640, 650, 315 P.3d 828, 838 (2012). “The concept that beneficial use acts as a measure and limit upon the extent of a water right is a consistent theme in Idaho water law.” *Id.*; *American Falls*, 143 Idaho at 879, 154 P.3d at 450 (stating that while an appropriation for a beneficial use is “a valuable right entitled to protection . . . Nevertheless, that property right is still subject to other requirements of the prior appropriation doctrine.”); *Idaho Ground Water Assoc. v. Idaho Dep’t of Water Res.*, 160 Idaho 119, 131, 369 P.3d 897, 909

(2016) (explaining the “policy of beneficial use” serves as a “limit on the prior appropriation doctrine.”).

5. “Concurrent with the right to use water in Idaho ‘first in time,’ is the obligation to put that water to beneficial use.” *American Falls*, 143 Idaho at 880, 154 P.3d at 451; see *In re Distribution of Water to Various Water Rights Held by or for the Ben. of A&B Irr. Dist.*, 155 Idaho at 652, 315 P.3d at 840 (quoting *American Falls*, 143 Idaho at 876, 154 P.3d at 447) (referring to “the constitutional requirement that priority over water be extended only to those using the water”). “It is the settled law of this state that no person can, by virtue of a prior appropriation, claim or hold more water than is necessary for the purpose of the appropriation, and the amount of water necessary for the purpose of irrigation of the lands in question and the condition of the land to be irrigated should be taken into account.” *In re Distribution of Water to Various Water Rights Held by or for the Ben. of A&B Irr. Dist.*, 155 Idaho at 650, 315 P.3d at 838 (quoting *Washington State Sugar v. Goodrich*, 27 Idaho 26, 44, 147 P. 1073, 1079 (1915)).

6. “[T]he policy of securing the maximum use and benefit, and least wasteful use of Idaho’s water resources, has long been the policy in Idaho.” *Idaho Ground Water Assoc.*, 160 Idaho at 131, 369 P.3d at 909 (citing *Clear Springs Foods, Inc. v. Spackman*, 150 Idaho 790, 808, 252 P.3d 71, 89 (2011)). The Idaho Constitution enunciates a policy of promoting “optimum development of water resources in the public interest.” Idaho Const. Art. XV, § 7; *Baker v. Ore-Ida Foods, Inc.*, 95 Idaho 575, 584, 513 P.2d 627, 636 (1973). “There is no difference between securing the maximum use and benefit and least wasteful use of this State’s water resources and the optimum development of water resources in the public interest. Likewise, there is no material difference between ‘full economic development’ and the ‘optimum development of water resources in the public interest.’ They are two sides of the same coin. Full economic development is the result of the optimum development of water resources in the public interest.” *Clear Springs*, 150 Idaho at 809, 252 P.3d at 90. “The policy of securing the maximum use and benefit, and least wasteful use, of the State’s water resources applies to both surface and ground waters, and it requires that they be managed conjunctively.” *Id.*

7. “Conjunctive administration ‘requires knowledge by the [Department] of the relative priorities of the ground and surface water rights, how the various ground and surface water sources are interconnected, and how, when, where and to what extent the diversion and use of water from one source impacts the water flows in that source and other sources.’ That is precisely the reason for the CM Rules and the need for analysis and administration by the Director.” *American Falls*, 143 Idaho at 877, 154 P.3d at 448.

8. The CM Rules incorporate all principles of the prior appropriation doctrine as established by Idaho law. *American Falls*, 143 Idaho at 873, 154 P.3d at 444; CM Rule 20.02, 10.12.

9. While the presumption under Idaho law is that an appropriator is entitled to his decreed water right and the CM Rules may not be applied to require a senior appropriator to demonstrate an entitlement to the water in the first place, there may be post-adjudication factors relevant to the determination of how much water is actually needed in responding to a delivery call. *American Falls*, 143 Idaho at 877–78, 154 P.3d at 448–49. Under the CM Rules and Idaho law, the Director has the “authority and responsibility to investigate claims when delivery calls

are made,” and the “authority to evaluate the issue of beneficial use in the administration context.” *In re Distribution of Water to Various Water Rights Held by or for the Ben. of A&B Irr. Dist.*, 155 Idaho at 652, 315 P.3d at 840. As the Idaho Supreme Court stated, “[w]hile the prior appropriation doctrine certainly gives pre-eminent rights to those who put water to beneficial use first in time, this is not an absolute rule without exception . . . the Idaho Constitution and statutes do not permit waste and require water to be put to beneficial use or be lost.” *Idaho Ground Water Assoc.*, 160 Idaho at 131, 369 P.3d at 909 (quoting *American Falls*, 143 Idaho at 880, 154 P.3d at 433). “[T]he Director must have some discretion to balance these countervailing considerations in a delivery call.” *Id.* “If this Court were to rule the Director lacks the power in a delivery call to evaluate whether the senior is putting the water to beneficial use, we would be ignoring the constitutional requirement that priority over water be extended only to those using the water.” *In re Distribution of Water to Various Water Rights Held by or for the Ben. of A&B Irr. Dist.*, 155 Idaho at 652, 315 P.3d at 840 (quoting *American Falls*, 143 Idaho at 876, 154 P.3d at 447).

10. In responding to a delivery call under the CM Rules, the Director “may employ a baseline methodology as a starting point for considering material injury,” provided the baseline methodology otherwise comports with the prior appropriation doctrine as established by Idaho law. *In re Distribution of Water to Various Water Rights Held by or for the Ben. of A&B Irr. Dist.*, 155 Idaho at 653, 315 P.3d at 841; see *Methodology Remand Order* at 17.

11. Once the Director determines “that material injury is occurring or will occur,” junior appropriators subject to the delivery call bear “the burden of proving that the call would be futile or to challenge, in some other constitutionally permissible way, the senior’s call.” *American Falls*, 143 Idaho at 878, 154 P.3d at 449; *Methodology Remand Order* at 31. Junior appropriators have the burden of proving by clear and convincing evidence that the delivery call is futile or otherwise unfounded. *In re Distribution of Water to Various Water Rights Held by or for the Ben. of A&B Irr. Dist.*, 155 Idaho at 653, 315 P.3d at 841.

12. “This case illustrates the tension between the first in time and beneficial use aspects of the prior appropriation doctrine.” *In re Distribution of Water to Various Water Rights Held by or for the Ben. of A&B Irr. Dist.*, 155 Idaho at 650, 315 P.3d at 838. The Idaho Supreme Court has in this case “recognized the critical role of the Director in managing the water resources to accommodate both first in time and beneficial use aspects: ‘Somewhere between the absolute right to use a decreed water right and an obligation not to waste it and to protect the public’s interest in this valuable commodity, lies an area for the exercise of discretion by the Director.’” *Id.* at 651, 315 P.3d at 839 (quoting *American Falls*, 143 Idaho at 880, 154 P.3d at 451). Thus, in this case the Director may use “a baseline methodology, both as a starting point for consideration of the Coalition’s call and in determining the issue of material injury.” *Id.* at 650–51, 315 P.3d at 838–39. However, “[i]f changing conditions establish that material injury is greater than originally determined pursuant to the baseline analysis, then adjustments to the mitigation obligation of the juniors must be made when the Director undertakes his mid-season calculations.” *Methodology Remand Order* at 18.

13. In the context of conjunctive administration, the Director’s methodology for projecting material injury does not impose an obligation upon members of the SWC to reprove

SIXTH FINAL ORDER REGARDING METHODOLOGY FOR DETERMINING MATERIAL INJURY TO REASONABLE IN-SEASON DEMAND AND REASONABLE CARRYOVER—
Page 35

their water rights. To the extent water is available, members of the SWC are authorized to divert and store water in accordance with the terms of their licenses or decrees. Nothing established herein reduces that authorization. The question that the CM Rules require the Director to answer in this proceeding is, when water is not available to fill the water rights of the SWC, how much water is reasonably necessary for the SWC to accomplish the beneficial purpose of raising crops; because what is needed to irrigate crops may be less than the decreed or licensed quantities. *American Falls*, 143 Idaho at 880, 154 P.3d at 451; see *In re Distribution of Water to Various Water Rights Held by or for the Ben. of A&B Irr. Dist.*, 155 Idaho at 650, 315 P.3d at 838 (quoting *Washington State Sugar*, 27 Idaho at 44, 147 P. at 1079) (“[i]t is the settled law of this state that no person can, by virtue of a prior appropriation, claim or hold more water than is necessary for the purpose of the appropriation”). Again, “[t]he concept that beneficial use acts as a measure and limit upon the extent of a water right is a consistent theme in Idaho water law.” *Id.*

14. Holders of senior-priority water rights may receive less than their licensed or decreed quantities and not suffer material injury within the meaning of the CM Rules. As a result, in-season demand should be viewed in light of reasonableness and optimum development of water resources in the public interest. CM Rules 20 and 42; *American Falls*, 143 Idaho at 876–80, 154 P.3d at 447–51; *In re Distribution of Water to Various Water Rights Held by or for the Ben. of A&B Irr. Dist.*, 155 Idaho at 650–52, 315 P.3d at 838–40.

15. Here, the Director has established a methodology for determining material injury to members of the SWC. The methodology predicts material injury to RISD by taking the difference between RISD and the FS. The years 2000 through 2021 were analyzed to select the BLY because the period of years captured current irrigation practices in a dry climate. Based upon evaluation of the record, members of the SWC were exercising more reasonable efficiencies during this time period than during the 1990s when supplies were more plentiful. During periods of drought when junior ground water users are subject to curtailment, members of the SWC should exercise reasonable efficiencies to promote the optimum utilization of the State’s water resources. CM Rules 20 and 42; *American Falls*, 143 Idaho at 876–80, 154 P.3d at 447–51; *Clear Springs*, 150 Idaho at 807–10; 252 P.3d at 88–91; *In re Distribution of Water to Various Water Rights Held by or for the Ben. of A&B Irr. Dist.*, 155 Idaho at 650–52, 315 P.3d at 838–40.

16. At this time, with the recognition that the methodology is subject to adjustment and refinement, RISD will be equal to the historic demands associated with the BLY (2018) and will be corrected during the season to account for variations in climate and water supply between the BLY and actual conditions.

17. Recognizing that climate and surface water supplies (natural flow and storage) are inherently variable, the Director’s predictions of material injury to RISD and reasonable carryover are based upon the best available information and the best available science, in conjunction with the Director’s professional judgment as the manager of the State’s water resources. Recognizing his ongoing duty to administer the State’s water resources, the Director should use available data, and consider new analytical methods or modeling concepts, to evaluate the methodology. As more data is gathered and analyzed, the Director will continue to

review and refine the process of predicting and evaluating material injury. The methodology will continue to be adjusted if the data supports a change.

18. If the Director predicts that the SWC will be materially injured because of a demand shortfall prediction, either in the preseason or in the midseason, the demand shortfall represents a mitigation obligation that must be borne by junior ground water users. If mitigation water in the amount of the projected RISD shortfall cannot be secured or optioned by junior ground water users to the satisfaction of the Director, the Director will curtail junior ground water users to make up any deficit. *See Order on Pet. for Jud. Rev.*, at 19, *A&B Irrigation District v. Idaho Dairymen's Association, Inc.*, No. 2008-0000551 (Gooding Cnty. Dist. Ct. Idaho July 24, 2009),

19. In previous years, the Director used steady-state modeling when determining the curtailment priority date. As part of the Director's ongoing obligation to evaluate the methodology, the Director must evaluate whether the use of steady-state continues to be supportable.

20. In surface water administration, uses by holders of junior priority surface water rights are curtailed until the senior surface water rights are fully satisfied, absent a futile call and if the senior surface water users need the water to accomplish a beneficial use. In other words, under surface water administration, junior surface water rights are generally curtailed unless the senior gets water in the quantity and at the time and place required.

21. Rule 43 of the CM Rules mandates that when the Director evaluates a mitigation plan, the mitigation plan must ensure that water is delivered to holders of senior priority surface water rights in both the quantity and at the time and place required by the senior. In considering a proposed mitigation plan pursuant to Rule 43, the Director must evaluate:

b. Whether the mitigation plan will provide replacement water, *at the time and place required by the senior-priority water right*, sufficient to offset the depletive effect of ground water withdrawal on the water available in the surface or ground water source *at such time and place as necessary* to satisfy the rights of diversion from the surface or ground water source. Consideration will be given to the history and seasonal availability of water for diversion so as not to require replacement water at times when the surface right historically has not received a full supply, such as during annual low-flow periods and extended drought periods.

c. Whether the mitigation plan provides replacement water supplies or other appropriate compensation to the senior-priority water right *when needed during a time of shortage* even if the effect of pumping is spread over many years and will continue for years after pumping is curtailed. A mitigation plan may allow for multi-season accounting of ground water withdrawals and provide for replacement water to take advantage of variability in seasonal water supply. The mitigation plan must include contingency provisions to assure protection of the senior-priority right in the event the mitigation water source becomes unavailable.

IDAPA 37.01.03.11.043.b–c (emphasis added). In other words, there is an assumption that senior water right holders calling for delivery of water under the CM Rules will receive, by curtailment or by mitigation, “replacement water at the time and place required by the senior-priority water right, sufficient to offset the depletive effect of ground water withdrawal” Only in a mitigation plan can “multi-season accounting of ground water withdrawals” be employed, and even then, the plan must “assure protection of the senior-priority right in the event the mitigation water source becomes unavailable.”

22. The Director has an obligation to address a mitigation deficiency in the year it occurs. Mem. Decision & Order on Pet. for Jud. Rev., at 10, *Rangen, Inc. v. Idaho Dep’t of Water Res.*, No. CV-2014-2446 (Twin Falls Cnty. Dist. Ct. Idaho Dec. 3, 2014); Mem. Decision & Order, at 8–9, *Rangen, Inc. v. Idaho Dep’t of Water Res.*, No. CV-2014-4970 (Twin Falls Cnty. Dist. Ct. Idaho June 1, 2015).

23. The Director is also obligated to administer consistent with the guidance from the Courts. The Director concludes that any IDS determined by this methodology must be replaced by curtailment in time, place, and quantity unless mitigation allows for out-of-priority diversion of ground water.

24. As described in Finding of Fact 87, curtailment to a priority date calculated by the steady state analysis method used in the Fourth Methodology Order will only offset 9% to 15% of the predicted IDS. In contrast, curtailment to a priority date calculated with a transient simulation of a single season curtailment will offset the *full* predicted IDS unless the shortfall exceeds the accruals to the near Blackfoot to Minidoka reach by the end of the irrigation season with curtailment of all junior ground water rights. This methodology order depends on an annual evaluation of material injury and should also employ curtailment and or mitigation that supplies replacement water at the time and place required by the senior-priority water right in a quantity sufficient to offset the depletive effect of ground water withdrawal and to assure protection of the senior-priority right. Curtailment dates, periodically determined at time of recalculating in-season demand shortfall (IDS), should be calculated by a transient model simulation that will return the full quantity of water to the senior priority rights at the time and place required.

25. As described in Conclusion of Law 18, junior ground water users with approved mitigation plans to deliver storage water as mitigation must, to the satisfaction of the Director, secure or option mitigation water to avoid curtailment. By requiring that junior ground water users secure mitigation water or have options to acquire water in place during the season of need, the Director ensures that the SWC does not carry the risk of shortage to their supply. By not requiring junior ground water users to deliver or assign mitigation water until the Time of Need, the Director ensures that junior ground water users supply only the amount of mitigation water necessary to satisfy the RISD. All approved methods of mitigation shall be considered in the Director’s review of projected RISD shortfall.

26. Unless there is reasonable certainty that junior ground water users can secure the predicted volume of water and provide that water at the Time of Need, the protection afforded to the senior water right holders is compromised. The risk of shortage is then impermissibly shouldered by the SWC. Members of the SWC should have certainty entering the irrigation

season and at midseason that mitigation water will be delivered or assigned at the Time of Need, or curtailment of junior ground water rights will be ordered.

27. Because climate and the supply that the SWC appropriated (natural flow and storage) are inherently variable, the Director cannot and should not insulate the SWC against all shortages. The Director can, however, protect the SWC against reasonably predicted shortages to RISD.

28. Currently, the USBR and USACE's Joint Forecast is an indispensable predictive tool at the Director's disposal for predicting material injury to RISD. Given current forecasting techniques, the earliest the Director can predict material injury to RISD with reasonable certainty is soon after the Joint Forecast is issued in early April. The pre-irrigation season supply forecast for A&B and Milner can be predicted solely from the Joint Forecast. To improve the accuracy of prediction, the pre-irrigation season supply forecast for AFRD2, BID, Minidoka, NSCC, and TFCC will currently be predicted from both the Joint Forecast and from flow data at Box Canyon.²⁵

29. By shifting the April Forecast Supply prediction curve down one standard error of estimate, the Director purposely underestimates the water supply that is predicted. The Director further guards against RISD shortage by using the 2018 BLY, which has above average diversions, above average ET, below average in-season precipitation, and above average growing degree days. The 2018 BLY represents a year in which water supply did not limit diversions. The Director's prediction of material injury to RISD is purposely conservative. While it may ultimately be determined after final accounting that less mitigation water was owed than was provided, this is an appropriate burden for junior appropriators to carry. Idaho Cost. Art. XV, § 3; Idaho Code § 42-106. Shifting the prediction curve down one standard error of estimate and adoption of a BLY that uses above average diversions, above average temperatures and ET and below average precipitation is necessary to protect senior rights if the Director administers to an amount less than the full decreed quantity of the SWC's rights. *Methodology Remand Order* at 33, 35.

30. The Director will review, at the end of the season, the volume and efficiencies of application of surface water, the amount of mitigation water provided by junior ground water users, and may, in the exercise of his professional judgment, readjust the reasonable carryover shortfalls to reflect these considerations.

31. "Storage water is water held in a reservoir and is intended to assist the holder of the water right in meeting their decreed needs." *American Falls*, 143 Idaho at 878, 154 P.3d at 449. "Carryover is the unused water in a reservoir at the end of the irrigation year which is retained or stored for future use in years of drought or low-water." *Id.* Under Idaho Code, "[o]ne may acquire storage water rights and receive a vested priority date and quantity, just as with any other water right," but "[t]here is no statutory provision for obtaining a decreed right to 'carryover' water." *Id.* Rather, carryover is a "component of the storage right." Order on Pet. for Jud. Rev., at 20, *A&B Irrigation District v. Idaho Dairymen's Association, Inc.*, No. 2008-

²⁵ The method for predicting the natural flow supply may be subject change based upon improved predictive models. SIXTH FINAL ORDER REGARDING METHODOLOGY FOR DETERMINING MATERIAL INJURY TO REASONABLE IN-SEASON DEMAND AND REASONABLE CARRYOVER—Page 39

0000551 (Gooding Cnty. Dist. Ct. Idaho July 24, 2009). Storage carryover is “permissible . . . absent abuse.” *American Falls*, 143 Idaho at 880, 154 P.3d at 451.

32. The storage reservoirs implicated in this proceeding were intended to provide supplemental supplies of water “to create a buffer against the uncertainty of the weather.” *Opinion Constituting Findings of Fact, Conclusions of Law and Recommendation* (April 29, 2008) at 6. “The history of the development of the reservoir system, most recently Palisades, makes it clear that storage of water was a primary purpose to prevent disaster during periods of shortage as have been experienced in the recent past.” *Id.* at 60. The purpose of carryover also is “insurance against the risk of future shortage.” Order on Pet. for Jud. Rev., at 20, *A&B Irrigation District v. Idaho Dairymen’s Association, Inc.*, No. 2008-0000551 (Gooding Cnty. Dist. Ct. Idaho July 24, 2009).

33. CM Rule 42.01 sets forth factors the Director “may consider in determining whether the holders of water rights are suffering material injury and using water efficiently and without waste.” CM Rule 42.01 does not limit the Director’s determination of reasonable carryover to consideration of the factors enumerated in CM Rule 42.01g, but only requires that the Director consider those enumerated factors. One such factor is “[t]he extent to which the requirements of the holder of a senior priority water right could be met with the user’s existing facilities and water supplies.” CM Rule 42.01g. This factor is qualified, however, by the provision that “the holder of a surface water storage right shall be entitled to maintain a reasonable amount of carry-over storage to assure water supplies for future dry years.” CM Rule 42.01g. Thus, CM Rule 42.01g does not require water right holders to exhaust their storage water supplies prior to making a delivery call under the CM Rules. This is consistent with the purposes of the storage reservoirs and the carryover components of the storage water rights.

34. In considering CM Rule 42.01g in *American Falls*, the Idaho Supreme Court framed the SWC’s challenge to the “reasonable carryover” provision as presenting the question of whether the holders of storage water rights are “entitled to insist on all available water to carryover for future years in order to assure that their full storage water is met (regardless of need),” *American Falls*, 143 Idaho at 879, 154 P.3d at 450, and answered this question in the negative:

At oral argument, one of the irrigation district attorneys candidly admitted that their position was that they should be permitted to fill their entire storage water right, regardless of whether there was any indication that it was necessary to fulfill current or future needs and even though the irrigation districts routinely sell or lease the water for uses unrelated to the original rights. This is simply not the law of Idaho. While the prior appropriation doctrine certainly gives pre-eminent rights to those who put water to beneficial use first in time, this is not an absolute rule without exception. As previously discussed, the Idaho Constitution and statutes do not permit waste and require water to be put to beneficial use or be lost. *Supra*, paragraph 11.

Id. at 880, 154 P.3d at 451.

35. As discussed in the Findings of Fact, reasonable carryover is determined by projecting the water supply for the system. This is accomplished by projecting the 2002/2004 natural flow and average annual storage fill and the 2018 demand. Next, the Director examines the average annual rate of fill of each SWC entity's reservoir space to determine each entity's relative probability of fill. Finally, the Director examines the average annual carryover for prior comparable water conditions by reviewing Heise natural flow.

36. On or before November 30, the Department will issue estimates of actual carryover and reasonable carryover shortfall volumes for all members of the SWC. These estimates will establish the obligation of junior ground water users in providing water to the SWC for reasonable carryover shortfall. Fourteen (14) days following the issuance by the Department of reasonable carryover short fall obligations, junior ground water users will be required to establish, to the satisfaction of the Director, their ability to supply a volume of storage water or to conduct other approved mitigation activities that will provide water to the injured members of the SWC equal to the reasonable carryover shortfall for all injured members of the SWC. If junior ground water users cannot provide this information, the Director will issue an order curtailing junior ground water rights.

37. Recognizing that reservoir space held by members of the SWC may fill, and to prevent the waste of water, junior ground water users are not required to deliver or assign the volume of reasonable carryover until after the Day of Allocation (defined in footnote 11, *infra*). Junior ground water users are obligated to hold the secured or optioned mitigation water until reservoir space held by the SWC fills. If the reservoir space does not fill, junior ground water right holders must deliver or assign the secured or optioned mitigation water to the senior water right holders up to the amount of storage space that did not fill.

ORDER

Consistent with the forgoing, the Director HEREBY ORDERS that, for purposes of determining material injury to RISD and reasonable carryover, the following steps will be taken:

1. Step 1: By April 1, members of the SWC will submit electronic shape files to the Department delineating the total anticipated irrigated acres for the upcoming year within their water delivery boundary or confirm in writing that the existing electronic shape file submitted by SWC has not varied by more than five percent. Department staff will review submitted shapefiles and modify them as necessary to ensure that: (1) the total acreage count does not exceed the decreed number of acres; (2) all of the irrigated land is located within the decreed place of use; and (3) acres are not counted more than once due to overlapping polygons within a shape file or between shape files submitted by different SWC members. Because the SWC members can best determine the irrigated acres within their service area, the SWC should be responsible for submitting the information to the Department. If this information is not timely submitted, the Department will determine the total irrigated acres based upon past cropping patterns and current satellite and/or aerial imagery. If a SWC member fails or refuses to identify the number of irrigated acres within its service area by April 1, the Department will be cautious about recognizing acres as being irrigated if there is uncertainty about whether the acres are or will be irrigated during the upcoming irrigation season. The Department will electronically post

electronic shape files for each member of the SWC for the current water year for review by the parties. In determining the total irrigated acreage, the Department may account for supplemental ground water use. The Department currently does not have sufficient information to accurately determine the contribution of supplemental ground water to lands irrigated with surface water by the SWC. If and when reliable data is available to the Department, the methodology will be amended to account for the supplemental ground water use.

2. If the acreage count is under reported by more than five percent of the irrigated acreage limit of the water right, then the Department will assess the impact of this reduction in use of the water right on any mitigation requirement.

3. Step 2: Typically within the first two weeks of April, the USBR and USACE issue their Joint Forecast that predicts an unregulated inflow volume at the Heise Gage for the period April 1 through July 31. Within fourteen (14) days after issuance of the Joint Forecast, the Director will issue a final order predicting the April FS for the water year for each SWC entity. The Director will compare the April FS for each SWC entity to the BD for each SWC entity to determine if an in-season demand shortfall (“IDS”) is anticipated for the upcoming irrigation season. The April FS for each SWC entity is the sum of the forecasted natural flow supply and the forecasted storage allocation for each SWC entity. The forecasted natural flow supply will be computed with regression algorithms. The forecasted storage allocation will be determined by comparing storage accruals in an analogous year(s). A transient ESPAM simulation will be run to calculate the curtailment priority date predicted to produce a volume of water equal to the IDS in the near Blackfoot to Minidoka reach between May 1 and September 30 of the current year. Curtailment will be simulated within the area of common ground water supply as described by CM Rule 50.01.

4. Step 3: By May 1, or within fourteen (14) days from issuance of the final order predicting the April FS, whichever is later in time, junior ground water users with approved mitigation plans for delivery of water must secure, to the satisfaction of the Director, a volume of water equal to their proportionate share of the April IDS unless the April IDS is revised as explained below in paragraph 6. If junior ground water users secured water for a reasonable carryover shortfall to an individual SWC member in the previous year, the current-year mitigation obligation to the individual SWC member will be reduced by the quantity of water secured for the reasonable carryover shortfall. The secured water will not be required to be delivered to the injured members of the SWC until the Time of Need.

5. Step 4: As soon as practical after the deadline for junior ground water users with approved mitigation plans to provide notice of secured water, the Director will issue an order curtailing junior ground water users who: (1) do not have approved mitigation plans; (2) fail to secure the required water consistent with their approved mitigation plans; or (3) otherwise fail to comply with their approved mitigation plans.²⁶

²⁶ This presumes that any reasonable carryover obligation has been met, and that junior ground water users are not already under prior curtailment from deficiencies in meeting the previous year’s obligation.

6. If, at any time prior to the Director's final determination of the April FS, the Director can determine with certainty that any member of the SWC has diverted more natural flow than predicted, or has accrued more storage than predicted, the Director will revise his initial, projected demand shortfall determination.

7. Step 5: If the storage allocations held by members of the SWC fill, there is no reasonable carryover shortfall. If the storage allocations held by members of the SWC do not fill, within fourteen (14) days following the publication of Water District 01's initial storage report, which typically occurs soon after the Day of Allocation,²⁷ the volume of water secured by junior ground water users to fulfill the reasonable carryover shortfall shall be made available to injured members of the SWC. The amount of reasonable carryover to be provided shall not exceed the empty storage space on the Day of Allocation for that entity. If water is owed in addition to the reasonable carryover shortfall volume, this water shall be delivered or assigned to members of the SWC at the Time of Need, described below. The Time of Need will be no earlier than the Day of Allocation.

8. Step 6: Approximately halfway through the irrigation season, but following the events described in Step 5, the Director will, for each member of the SWC: (1) recalculate RISD; (2) issue a revised FS; and (3) estimate the Time of Need date.²⁸

9. RISD will be calculated utilizing the project efficiency, BD, and the cumulative actual CWN determined up to that point in the irrigation season. The cumulative CWN volume will be calculated for all land irrigated with surface water within the boundaries of each member of the SWC. Volumetric values of CWN will be calculated using ET and precipitation values from the USBR's AgriMet program, irrigated areas provided by each entity, and crop distributions based on NASS data.

10. The FS for each SWC is the sum of the year-to-date actual natural flow diversions, the forecasted natural flow supply for the remainder of the season, and the storage allocation for each member of the SWC. The forecasted natural flow supply for the remainder of the season will be based on regression analysis. The storage allocation will be based on the actual preliminary storage allocations issued by the BOR and Water District 01. If the BOR and Water District 01 have not yet allocated stored water to spaceholders, the Department will predict the storage allocations based on an analogous year(s).

11. The calendar day determined to be the Time of Need is established by predicting the day in which the remaining storage allocation will be equal to reasonable carryover. The Time of Need will not be earlier than the Day of Allocation.

²⁷ The Day of Allocation is the time in the irrigation season when the Water District 01 watermaster can issue allocations to storage space holders after the reservoir system has achieved its maximum physical fill, maximum water right accrual, and any excess spill past Milner Dam has ceased. Tr., at 902:7-25, 903:1-10.

²⁸ At the earliest established Time of Need for any member of the SWC, junior ground water users are required to provide remaining mitigation to all materially injured members of the SWC.

12. This information will be used to recalculate RISD and adjust the projected IDS for each member of the SWC. The Director will then issue revised RISD and DS values. Any increase to the projected IDS for each SWC entity is an additional mitigation obligation of the junior ground water users.

13. Upon a determination of an additional mitigation obligation, junior ground water users will be required to establish, to the satisfaction of the Director, their ability to secure a volume of storage water or to conduct other approved activities pursuant to an approved mitigation plan that will deliver the additional mitigation obligation water to the injured members of the SWC at the Time of Need. If junior ground water users fail or refuse to submit this information within fourteen (14) days from issuance of a Step 6 order, the Director will issue an order curtailing junior ground water users.²⁹ A transient ESPAM simulation will be run to determine the priority date to produce the necessary additional mitigation obligation volume by September 30 of the same year. Curtailment will be simulated within the area of common ground water supply, as described by CM Rule 50.01.

14. Step 7: Shortly before the estimated Time of Need, but following the events described in Steps 5 and 6, the Director will, for each member of the SWC: (1) recalculate RISD; (2) issue a revised FS; and (3) establish the Time of Need. The revised FS for each SWC entity is the sum of the year-to-date actual natural flow diversions, the forecasted natural flow supply for the remainder of the season, and the storage allocation for each member of the SWC. The forecasted natural flow supply for the remainder of the season will be based on analogous year(s) with similar Blackfoot to Milner reach gains. The storage allocation will be based on the actual preliminary storage allocations issued by the BOR and Water District 01.

15. This information will be used to recalculate RISD and adjust the projected IDS for each member of the SWC. RISD will be calculated utilizing the project efficiency, BD, and the cumulative actual CWN determined up to that point in the irrigation season. The Director will then issue revised RISD and IDS values.

16. A transient ESPAM simulation will be run to determine the priority date of water rights that must be curtailed to produce the demand shortfall volume by September 30 of the same year. Curtailment will be simulated within the area of common ground water supply, as described by CM Rule 50.01.

17. Step 8: At the Time of Need, junior ground water users are required to deliver to each injured member of the SWC the Step 7 revised IDS calculated at the Time of Need. Alternatively, any additional mitigation obligation calculated in Step 6 and Step 7 can be satisfied from each SWC member's reasonable carryover if (a) the reasonable carryover exceeds the additional mitigation obligation, and (b) the junior ground water users secure sufficient water to replace the reasonable carryover pursuant to an approved mitigation plan.

²⁹ This presumes that any reasonable carryover obligation has been met, and that junior ground water users are not already under prior curtailment from deficiencies in meeting the previous year's obligation.

18. The Director will review, at the end of the season, the volume and efficiencies of application of surface water, the amount of mitigation water delivered by junior ground water users, and may, in the exercise of his professional judgment, readjust the reasonable carryover shortfalls to reflect these considerations.

19. Step 9: Following the end of the irrigation season (on or before November 30), the Department will determine the total actual volumetric demand and total actual CWN for the entire irrigation season. This information will be used for the analysis of reasonable carryover shortfall, selection of future BLY, and for the refinement and continuing improvement of the method for future use.

20. On or before November 30, the Department will issue estimates of actual carryover and reasonable carryover shortfall volumes for all members of SWC. These estimates will be based on, but not limited to, the consideration of the best available water diversion and storage data from Water District 01, return flow monitoring, comparative years, and RISD. These estimates will establish the obligation of junior ground water users in providing water to the SWC for reasonable carryover shortfall. Fourteen (14) days following the issuance by the Department of reasonable carryover short fall obligations, junior ground water users will be required to establish, to the satisfaction of the Director, their ability to supply a volume of storage water or to conduct other approved mitigation activities that will provide water to the injured members of the SWC equal to the reasonable carryover shortfall for all injured members of the SWC. If junior ground water users cannot provide this information, the Director will issue an order curtailing junior ground water rights. A transient ESPAM simulation will be run to determine the priority date of water rights that must be curtailed to produce the reasonable carryover shortfall volume by September 30 of the following year. Curtailment will be simulated within the area of common ground water supply, as described by CM Rule 50.01.

IT IS FURTHER ORDERED that this Sixth Methodology Order supersedes all previously issued methodology orders in this matter.

Dated this 19th day of July 2023.

GARY SPACKMAN
Director

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(Required by Rule of Procedure 740.02)

The accompanying order is a "Final Order" issued by the department pursuant to section 67-5246 or 67-5247, Idaho Code.

Section 67-5246 provides as follows:

- (1) If the presiding officer is the agency head, the presiding officer shall issue a final order.
- (2) If the presiding officer issued a recommended order, the agency head shall issue a final order following review of that recommended order.
- (3) If the presiding officer issued a preliminary order, that order becomes a final order unless it is reviewed as required in section 67-5245, Idaho Code. If the preliminary order is reviewed, the agency head shall issue a final order.
- (4) Unless otherwise provided by statute or rule, any party may file a petition for reconsideration of any order issued by the agency head within fourteen (14) days of the service date of that order. The agency head shall issue a written order disposing of the petition. The petition is deemed denied if the agency head does not dispose of it within twenty-one (21) days after the filing of the petition.
- (5) Unless a different date is stated in a final order, the order is effective fourteen (14) days after its service date if a party has not filed a petition for reconsideration. If a party has filed a petition for reconsideration with the agency head, the final order becomes effective when:
 - (a) The petition for reconsideration is disposed of; or
 - (b) The petition is deemed denied because the agency head did not dispose of the petition within twenty-one (21) days.
- (6) A party may not be required to comply with a final order unless the party has been served with or has actual knowledge of the order. If the order is mailed to the last known address of a party, the service is deemed to be sufficient.
- (7) A non-party shall not be required to comply with a final order unless the agency has made the order available for public inspection or the nonparty has actual knowledge of the order.

(8) The provisions of this section do not preclude an agency from taking immediate action to protect the public interest in accordance with the provisions of section 67-5247, Idaho Code.

PETITION FOR RECONSIDERATION

Any party may file a petition for reconsideration of a final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: the petition must be received by the Department within this fourteen (14) day period.** The department will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law. See section 67-5246(4) Idaho Code.

APPEAL OF FINAL ORDER TO DISTRICT COURT

Pursuant to sections 67-5270 and 67-5272, Idaho Code, any party aggrieved by a final order or orders previously issued in a matter before the department may appeal the final order and all previously issued orders in the matter to district court by filing a petition in the district court of the county in which:

- i. A hearing was held,
- ii. The final agency action was taken,
- iii. The party seeking review of the order resides, or
- iv. The real property or personal property that was the subject of the agency action is located.

The appeal must be filed within twenty-eight (28) days: a) of the service date of the final order, b) the service date of an order denying petition for reconsideration, or c) the failure within twenty-one (21) days to grant or deny a petition for reconsideration, whichever is later. See section 67-5273, Idaho Code. The filing of an appeal to district court does not in itself stay the effectiveness or enforcement of the order under appeal.

**BEFORE THE DEPARTMENT OF WATER RESOURCES
OF THE STATE OF IDAHO**

IN THE MATTER OF DISTRIBUTION OF
WATER TO VARIOUS WATER RIGHTS HELD
BY OR FOR THE BENEFIT OF A&B
IRRIGATION DISTRICT, AMERICAN FALLS
RESERVOIR DISTRICT #2, BURLEY
IRRIGATION DISTRICT, MILNER IRRIGATION
DISTRICT, MINIDOKA IRRIGATION
DISTRICT, NORTH SIDE CANAL COMPANY,
AND TWIN FALLS CANAL COMPANY

Docket No. CM-DC-2010-001

**FINAL ORDER CURTAILING
GROUND WATER RIGHTS
JUNIOR TO OCTOBER 11, 1900**

The Director of the Idaho Department of Water Resources (“Department”) finds, concludes, and orders as follows:

FINDINGS OF FACT

1. On July 19, 2023, the Director issued the *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover (“Methodology Order”)*.¹ The *Methodology Order* established nine steps for determining material injury to members of the Surface Water Coalition (“SWC”).²

2. On April 16, 2025, the Director issued his *Final Order Regarding April 2025 Forecast Supply (Methodology Steps 1–3) (“April Forecast Supply Order”)*. The *April Forecast Supply Order* predicted an in-season demand shortfall (“IDS”) to the SWC of 63,000 acre-feet for the 2025 irrigation season. *April Forecast Supply Order*, at 3. At that time, the only member of the SWC predicted to experience material injury during the 2025 irrigation season was Twin Falls Canal Company (“TFCC”). *Id.* at 3–4.

3. As a result, the Director ordered that:

On or before May 1, 2025, ground water users holding consumptive water rights bearing priority dates junior to August 28, 1955, within the Eastern Snake Plain Aquifer area of common ground water supply [(“ESPA ACGWS”)] shall establish, to the satisfaction of the Director, that they can mitigate for their proportionate

¹ Shortly after the *Methodology Order* was issued, the Idaho Ground Water Appropriators, Inc. (“IGWA”) and certain Idaho cities filed petitions for judicial review in Ada County (Nos. CV01-23-13173 and CV01-23-13238). IGWA’s petition for judicial review is stayed until December 31, 2027. The cities’ petition for judicial review is pending before the Idaho Supreme Court. The filing of a petition for judicial review does not stay the effectiveness of an order. I.C. § 67-5274. No party to the judicial review proceedings has requested a stay of the *Methodology Order*.

² The SWC is comprised of A&B Irrigation District, American Falls Reservoir District #2, Burley Irrigation District, Milner Irrigation District, Minidoka Irrigation District, North Side Canal Company, and Twin Falls Canal Company.

share of the predicted April IDS of 63,000 acre-feet in accordance with an approved mitigation plan. If a junior ground water user cannot establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted April IDS in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user.

April Forecast Supply Order, at 6.

4. On May 16, 2025, the Director issued a *Final Order Curtailing Ground Water Rights Junior to August 28, 1955* (“*Curtailment Order*”). The Director ordered that:

[E]ffective May 31, 2025, ground water users holding water rights bearing priority dates junior to August 28, 1955, within the ESPA ACGWS, and listed in Attachment A to this order, shall curtail/refrain from diversion and use of ground water pursuant to those water rights unless notified by the Department that the order of curtailment has been modified or rescinded as to their water rights.

Curtailment Order, at 4.

5. On July 10, 2025, the Director issued the *Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order (Methodology Steps 5 & 6)* (“*July As-Applied Order*”), which applied steps 5 and 6 of the *Methodology Order*. The Director predicted a revised IDS of 75,300 acre-feet. *July As-Applied Order*, at 8. Once again, he found TFCC to be the only member of the SWC predicted to experience material injury during the 2025 irrigation season, with an estimated Time of Need of August 28, 2025. *Id.* at 8–9.

6. Consequently, the Director ordered that by “July 24, 2025, ground water users holding consumptive water rights bearing priority dates junior to October 11, 1900, within the [ESPA ACGWS] shall establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted IDS of 75,300 acre-feet in accordance with an approved mitigation plan.” *Id.* at 12. He ordered that if such a junior ground water user cannot establish that they can mitigate for their proportionate share of the updated predicted IDS “in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user.” *Id.* Additionally, the Director ordered “that the May 16, 2025 *Curtailment Order* remains in full force and effect.” *Id.*

7. There are currently five approved mitigation plans in place responding to the SWC delivery call:

- (1) Docket No. CM-MP-2010-001 for the benefit of the Southwest Irrigation District and Goose Creek Irrigation District (collectively, “SWID”);
- (2) Docket No. CM-MP-2019-001 for the benefit of certain cities commonly referred to as the “Coalition of Cities”;
- (3) Docket No. CM-MP-2015-003 for the benefit of the A&B Irrigation District (“A&B”);

- (4) Docket No. CM-MP-2007-001 for the benefit of certain entities commonly referred to as the “Water Mitigation Coalition”; and
- (5) Docket No. CM-MP-2024-003 for the benefit of certain ground water districts commonly referred to as the “Ground Water Districts.”

8. In both the *April Forecast Supply Order* and *July As-Applied Order*, the Director concluded that due to the nature of the approved mitigation plans for SWID, the Coalition of Cities, the Water Mitigation Coalition, and the Ground Water Districts, these entities do not need to establish they can mitigate for their proportionate share of the predicted IDS. *April Forecast Supply Order*, at 5 n.8; *July As-Applied Order*, at 11 n.6.

9. However, in the *July As-Applied Order* the Director concluded that A&B must mitigate for its proportionate share of the predicted July IDS of 75,300 acre-feet and determined that A&B’s proportionate share is 5,039 acre-feet. *July As-Applied Order*, at 11 n.6. Although, he did note that in response to the *April Forecast Supply Order*, A&B previously demonstrated that it “already secured 164 acre-feet of storage water for the 2025 irrigation season.” *Id.*

10. On July 24, 2025, A&B and the other members of the SWC submitted a *Joint Motion for Order Approving 2025 Stipulation* (“*Joint Motion*”). The motion explains that A&B and the other members of the SWC entered into a stipulation, referred to as the “*2025 Stipulation*,” to “define A&B’s mitigation obligation for the 2025 irrigation season.” *Joint Motion*, at 2. In the stipulation, which is included as Attachment A to the *Joint Motion*, A&B proposes to continue its ground water conversions projects and deliver 1,252 acre-feet of storage water to TFCC (the injured SWC member) in accordance with its approved mitigation plan. *2025 Stipulation*, at 2. A&B and the other members of the SWC request the Director approve the *2025 Stipulation* as “stipulated compliance with [A&B’s] approved mitigation plan for the 2025 irrigation season.” *Joint Motion*, at 2. In an order issued concurrently with this order, the Director issued his *Order Approving 2025 Stipulation as Compliance with Approved Mitigation Plan*.

CONCLUSIONS OF LAW

1. Idaho Code § 42-602 authorizes the Director to supervise water distribution within water districts:

The director of the department of water resources shall have direction and control of the distribution of water from all natural water sources within a water district to the canals, ditches, pumps and other facilities diverting therefrom. Distribution of water within water districts created pursuant to section 42-604, Idaho Code, shall be accomplished by watermasters as provided in this chapter and supervised by the director. The director of the department of water resources shall distribute water in water districts in accordance with the prior appropriation doctrine. The provisions of chapter 6, title 42, Idaho Code, shall apply only to distribution of water within a water district.

2. As explained above, by July 24, 2025, ground water users with consumptive water rights “junior to October 11, 1900, within the [ESPA ACGWS]” had to “establish, to the

satisfaction of the Director, that they can mitigate for their proportionate share of the predicted IDS of 75,300 acre-feet in accordance with an approved mitigation plan.” *July As-Applied Order*, at 12. If a junior ground water user does not establish that they can mitigate for their proportionate share of the predicted July IDS “in accordance with an approved mitigation plan” the ground water user will be subject to this “order curtailing the junior-priority ground water user.” *Id.*

3. Due to the nature of the approved mitigation plans for SWID, the Coalition of Cities, the Water Mitigation Coalition, and the Ground Water Districts, these entities do not need to establish that they can mitigate for their proportionate share of the predicted July IDS. Junior ground water users entitled to the protection of SWID, the Coalition of Cities, the Water Mitigation Coalition, and the Ground Water Districts mitigation plans continue to not be subject to curtailment during the 2025 irrigation season.

4. Under a separate order, the Director approved the *2025 Stipulation* between A&B and the other members of the SWC because it is consistent with A&B’s approved mitigation plan in Docket No. CM-MP-2015-003. Accordingly, A&B’s water rights will not be subject to curtailment during the 2025 irrigation season.

5. Consistent with the *July As-Applied Order*, Idaho Code § 42-602, and decisions of the courts, the Director must order curtailment of junior-priority ground water users that have not established they can mitigate in accordance with an approved mitigation plan. Junior-priority ground water users subject to curtailment are listed in the updated Attachments A to this order.

ORDER

Based upon and consistent with the foregoing, IT IS HEREBY ORDERED that effective July 25, 2025, ground water users holding water rights bearing priority dates junior to October 11, 1900, within the ESPA ACGWS, and listed in Attachment A to this order, shall curtail/refrain from diversion and use of ground water pursuant to those water rights unless notified by the Department that the order of curtailment has been modified or rescinded as to their water rights.

IT IS FURTHER ORDERED that holders of ground water rights listed in Attachment A to this order, who were not previously listed in Attachment A to the May 16, 2025 *Curtailment Order*, may seek to participate in an approved mitigation plan through a ground water district and shall have fifteen days from the date of this order to join, solely for mitigation purposes, the ground water district situated nearest the lands to which the water rights are appurtenant. *See* H.B. 737a, 58th Leg., 2d Reg. Sess. (Idaho 2006) (*Act Relating to the Administration of Ground Water Rights Within the Eastern Snake River Plain*); *see also* I.C. § 42-5259. The water rights that have fifteen days to join a ground water district are identified in Attachment A.

IT IS FURTHER ORDERED that watermasters for the water districts within the ESPA ACGWS who regulate ground water are directed to review the water rights listed in Attachment A to this order and begin the curtailment process.

IT IS FURTHER ORDERED that this order shall apply to consumptive ground water rights, including but not limited to, agricultural, commercial, industrial, and municipal uses. This order excludes ground water rights used for *de minimis* domestic purposes where such domestic use is within the limits of the definition set forth in Idaho Code § 42-111 and ground water rights used for *de minimis* stock watering where such stock watering use is within the limits of the definitions set forth in Idaho Code § 42-1401A(11), pursuant to IDAPA 37.03.11.020.11.

Dated this 25th day of July 2025.

MATHEW WEAVER

**EXPLANATORY INFORMATION TO ACCOMPANY A
FINAL ORDER**

(To be used in connection with actions when a hearing was **not** held)

The accompanying document is a "Final Order" issued by the Idaho Department of Water Resources ("Department") pursuant to Idaho Code § 67-5246.

PETITION FOR RECONSIDERATION

(See Idaho Code § 67-5246(4))

Any party may file a petition for reconsideration of this final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: the petition must be received by the Department within this fourteen (14) day period.** The presiding officer will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law.

REQUEST FOR HEARING

(See Idaho Code § 42-1701A(3))

Unless the right to a hearing before the Department or the Water Resource Board is otherwise provided by statute, any person aggrieved by any final decision, determination, order or action of the Director, and who has not previously been afforded an opportunity for a hearing on the matter may request a hearing pursuant to Idaho Code § 42-1701A(3). A written petition to the Director contesting this final order and requesting a hearing must be filed with the Department by any aggrieved person **within fifteen (15) days after service of this final order.**

CERTIFICATE OF SERVICE

(See IDAPA 37.01.01.053, 37.01.01.202)

All documents filed with the Department in connection with a petition for reconsideration or a request for hearing of this final order shall be served on all other parties to the proceedings in accordance with Rules of Procedure 53 and 202.

BEFORE THE DEPARTMENT OF WATER RESOURCES
OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO
VARIOUS WATER RIGHTS HELD BY OR FOR THE
BENEFIT OF A&B IRRIGATION DISTRICT,
AMERICAN FALLS RESERVOIR DISTRICT #2,
BURLEY IRRIGATION DISTRICT, MILNER
IRRIGATION DISTRICT, MINIDOKA IRRIGATION
DISTRICT, NORTH SIDE CANAL COMPANY, AND
TWIN FALLS CANAL COMPANY

Docket No. CM-DC-2010-001

**ORDER REVISING JULY
2025 FORECAST SUPPLY**

(METHODOLOGY STEPS 7–8)

The Director of the Idaho Department of Water Resources (“Department”) finds, concludes, and orders as follows:

FINDINGS OF FACT

A. Background

1. On July 19, 2023, the Director issued the *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* (“*Methodology Order*”). The *Methodology Order* established nine steps for determining material injury to members of the Surface Water Coalition (“SWC”). This order applies Steps 7 and 8 of the *Methodology Order*.

2. On April 16, 2025, the Director issued the *Final Order Regarding April 2025 Forecast Supply (Methodology Steps 1–3)* (“*April Forecast Supply Order*”). The *April Forecast Supply Order* predicted a demand shortfall to the SWC of 63,000 acre-feet for the 2025 irrigation season. *April Forecast Supply Order* at 3. At that time, the only member of the SWC predicted to experience material injury during the 2025 irrigation season was Twin Falls Canal Company (“TFCC”). The Director ordered that, by May 1, 2025, ground water users with consumptive water rights “junior to August 28, 1955, within the Eastern Snake Plain Aquifer area of common ground water supply shall establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted April IDS [(in-season demand shortfall)] of 63,000 acre-feet in accordance with an approved mitigation plan.” *Id.* at 6. The Director also ordered that, “[i]f a junior ground water user cannot establish . . . that they can mitigate for their proportionate share of the predicted April IDS in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user.” *Id.*

3. On May 16, 2025, the Director issued a *Final Order Curtailing Ground Water Rights Junior to August 28, 1955* (“*First Curtailment Order*”). The Director ordered that:

[E]ffective May 31, 2025, ground water users holding water rights bearing priority dates junior to August 28, 1955, within the ESPA ACGWS, and listed in Attachment A to this order, shall curtail/refrain from diversion and use of ground

water pursuant to those water rights unless notified by the Department that the order of curtailment has been modified or rescinded as to their water rights.

First Curtailment Order at 4.

4. On July 10, 2025, the Director issued the *Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order (Methodology Steps 5 & 6)* (“*July Forecast Supply Order*”), revising the IDS to 75,300 acre-feet. *July Forecast Supply Order* at 8. The Director ordered that:

On or before July 24, 2025, ground water users holding consumptive water rights bearing priority dates junior to October 11, 1900, within the Eastern Snake Plain Aquifer area of common ground water supply shall establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted IDS of 75,300 acre-feet in accordance with an approved mitigation plan. If a junior ground water user cannot establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted IDS of 75,300 acre-feet in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user.

Id. at 12 (footnote omitted).

5. Step 7 of the *Methodology Order* requires:

Shortly before the estimated Time of Need, but following the events described in Steps 5 and 6, the Director will, for each member of the SWC: (1) recalculate RISD [(reasonable in-season demand)]; (2) issue a revised FS [(forecast supply)]; and (3) establish the Time of Need. The revised FS for each SWC entity is the sum of the year-to-date actual natural flow diversions, the forecasted natural flow supply for the remainder of the season, and the storage allocation for each member of the SWC. The forecasted natural flow supply for the remainder of the season will be based on analogous year(s) with similar Blackfoot to Milner reach gains. The storage allocation will be based on the actual preliminary storage allocations issued by the BOR [(United States Bureau of Reclamation)] and Water District 01.

This information will be used to recalculate RISD and adjust the projected IDS for each member of the SWC. RISD will be calculated utilizing the project efficiency, BD [(baseline year demand)], and the cumulative actual CWN [(crop water need)] determined up to that point in the irrigation season. The Director will then issue revised RISD and IDS values.

A transient ESPAM simulation will be run to determine the priority date of water rights that must be curtailed to produce the demand shortfall volume by September 30 of the same year. Curtailment will be simulated within the area of common ground water supply, as described by CM Rule 50.01.

Methodology Order at 44.

6. Effective July 1, 2024, Senate Bill 1341 added a new section to Idaho Code, Idaho Code § 42-233c, which codified the description of the ESPA area of common ground water supply. S.B. 1341, 67th Leg., 2d Reg. Sess. (Idaho 2024). The current area of common ground water supply for the Eastern Snake Plain Aquifer is defined as the aquifer underlying the Eastern Snake River Plain as described in the model calibration report for ESPAM2.2, dated May 2021. I.C. § 42-233c(1).

7. Step 8 of the *Methodology Order* requires:

At the Time of Need, junior ground water users are required to deliver to each injured member of the SWC the Step 7 revised IDS calculated at the Time of Need. Alternatively, any additional mitigation obligation calculated in Step 6 and Step 7 can be satisfied from each SWC member's reasonable carryover if (a) the reasonable carryover exceeds the additional mitigation obligation, and (b) the junior ground water users secure sufficient water to replace the reasonable carryover pursuant to an approved mitigation plan.

The Director will review, at the end of the season, the volume and efficiencies of application of surface water, the amount of mitigation water delivered by junior ground water users, and may, in the exercise of his professional judgment, readjust the reasonable carryover shortfalls to reflect these considerations.

Methodology Order at 44–45.

B. Climate

8. The April 2025 Joint Forecast prepared by the United States Army Corps of Engineers and the United States Bureau of Reclamation (“BOR”) predicted 3,380,000 acre-feet of natural flow at the Heise gage for the period April–July 2025. *April Forecast Supply Order* at 2. The Joint Forecast “is generally as accurate a forecast as is possible using current data gathering and forecasting techniques.” *Methodology Order* at 19.

9. The April through July precipitation was below average, while the April through July temperature was above average.¹ The National Weather Service's Twin Falls weather station reported 9%, 38%, 0%, and 68% of normal precipitation in April, May, June, and July, respectively. Twin Falls temperatures were 2.5, 3.8, 3.4, and 2.2 degrees above normal for April, May, June, and July, respectively. According to data measured at the Natural Resources Conservation Service's SNOTEL sites in the Upper Snake River Basin, the basin received 73%, 74%, 19%, and 66% of average precipitation in April, May, June, and July, respectively.²

¹ Precipitation and temperature data obtained from the NOAA National Weather Service Preliminary Monthly Climate Data for the Twin Falls weather station (Twin Falls Airport).

² Natural Resources Conservation Service's (NRCS) SNOTEL precipitation in the Upper Snake River Basin has been updated by the NRCS since the *Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order* was issued.

C. Reasonable In-Season Demand

10. RISD is the volume of water that would be required to be diverted at the point of diversion during the year of evaluation to grow the specific crops within the service area of the entity. In April, the demand from the 2018 baseline year (BLY) represents the RISD. During the irrigation season, the RISD for the already expired portion of the irrigation season is recalculated by dividing the actual crop water need (CWN) for each entity by the project efficiency for that entity. For the future remainder of the irrigation season, the RISD is the demand predicted from the 2018 BLY. RISD is calculated on a monthly timestep.

i. Crop Water Need

11. CWN is the project wide volume of irrigation water required for crop growth so crop development is not limited by water availability. CWN is the difference between the fully realized consumptive use associated with crop development, or evapotranspiration, and effective precipitation. CWN is an input variable for calculating RISD for those months of the irrigation season that are complete. Actual RISD for the completed portion of the irrigation season is combined with monthly predicted baseline demands for the remaining months of the irrigation season to calculate a season-total RISD volume. Demand shortfall is then calculated as the difference between the adjusted forecast supply and the RISD. For specifics regarding determination of CWN, see page 15 of the *Methodology Order*.

12. As calculated from the beginning of the irrigation season (April 1), the SWC's volumetric CWN for the current water year through August 15 is 1,083,069 acre-feet. This volume is 110% of the April 1 through August 15 ten-year average CWN (2015-2024) and 106% of the CWN for the (2018) BLY. As calculated from April 1 through August 15, from the year 2000 to now, 2025 has the fourth largest CWN volume of any irrigation season. The following graphs summarize monthly volumetric CWN values.

ii. *Extension of BLY*

13. The RISD for the future portion of the irrigation season is the August 16–October 31 demand for (2018) BLY. The numeric August 16–October 31 demand values are shown in the table in Finding of Fact 14 below.

iii. *Calculation of RISD*

14. As calculated from the beginning of the irrigation season (April 1), the SWC’s volumetric RISD for 2025 through August 15 is 2,537,439 acre-feet. This volume is 112% of the April 1–August 15 ten-year average RISD (2015-2024) and 105% of the April 1–August 15 demand for the (2018) BLY. As calculated from April 1 to August 15, from the year 2000 until this year, 2025 has the fifth largest RISD volume of any irrigation season. The recalculated RISD on August 15 of the 2025 irrigation season by entity is summarized in column six of the following table:

	April 1– August 15 CWN (AF)	Range of April 1– August 15 Monthly Project Efficiencies	April 1– August 15 RISD (AF)	August 16– October 31 Demand for 2018 BLY (AF)	Recalculated RISD (AF)
A&B	29,276	0.41-0.92	47,932	16,216	64,148
AFRD2	121,490	0.20-0.44	339,309	138,946	478,255
BID	88,126	0.30-0.52	201,896	63,932	265,828
Milner	25,828	0.36-0.68	45,207	16,031	61,238
Minidoka	159,119	0.36-0.65	307,036	86,518	393,554
NSCC	281,341	0.21-0.48	752,214	276,703	1,028,917
TFCC	377,888	0.27-0.59	843,845	330,074	1,173,919

D. Forecast Supply

15. When determined during the irrigation season, the forecast supply (FS) is the sum of the year-to-date actual natural flow diversions, the forecasted natural flow supply for the remainder of the season, and storage allocations for each member of the SWC. *Methodology Order* at 43. Actual natural flow diversions for the already expired portion of the irrigation season are extracted from the Department’s water rights accounting program. The forecasted natural flow supply for the remainder of the irrigation season is based on the selection of an analogue year with similar Blackfoot to Milner reach gains. *Id.* at 44. Storage allocations are established by the BOR and Water District 01 (“WD1”) after the day of allocation. *Id.*

i. *Sum of Actual Natural Flow Diverted*

16. Actual natural flow diverted for the period April 1 through August 15 for each SWC member are summarized in the table contained within the Summary of Forecast Supply section in Finding of Fact 21.

ii. *Selection of an Analogous Year to Predict Remaining Natural Flow*

17. Natural flow diversions for the remainder of the irrigation season were predicted by choosing an analogue year. The Department used a residual analysis³ completed on a daily time step to compare the reach gains from July 19 to August 18 for the current water year to historical reach gains for the same period for the 1991–2024 water years. Based on its residual analysis and a qualitative review, the Department selected four candidate years: 2005, 2015, 2018, and 2024. These years represent the four years with the most similar reach gains (i.e., the lowest average residual value over a specified range) over the analysis period and the residuals are summarized in the following table:

Summary of Residual Analysis of Candidate Years

Time Period	2005	2015	2018	2024
7-Day (8/12 – 8/18)	0.2%	1.9%	-0.7%	-2.4%
31-Day (7/19 – 8/18)	3.3%	-2.3%	-4.9%	7.9%

18. The following hydrograph compares the current water year to the four candidate years with the most similar reach gains as determined by the residual analysis and qualitative review. The Department examined natural flow diversions for each of the candidate years and selected 2005 as the analogue year used to predict natural flow diversions for the remainder of the irrigation season. The Department chose 2005 because the residual analysis and qualitative review demonstrated 2005 was most like 2025 conditions when considering the reach gains for the most recent 7-day and 31-day periods.

³ The daily residual is expressed as a percentage and defined as the difference between the current water year reach gain (CY) and the historical reach gain (HY) divided by the current water year reach gain: $R = (CY - HY)/CY$.

iii. *Storage Allocations*

19. Preliminary storage allocation values for each member of the SWC were established by the BOR and WD1 and published in WD1's preliminary Storage Report on July 15, 2025.⁴ Storage allocation values for each SWC member are summarized in the table in Finding of Fact 21 below.

iv. *Adjustments to Total Supply*

20. The natural flow and storage water supplies were both adjusted as shown in the table in Finding of Fact 21 below. Adjustments to natural flow include water delivered to Southwest Irrigation District by BID and Milner, 691 acre-feet and 560 acre-feet, respectively. Adjustments to natural flow also include 1,441 acre-feet and 400 acre-feet of recharge water, delivered by the AFRD2 and BID, respectively, for the Idaho Water Resource Board. The only adjustments made to the stored water supply were for the Minidoka Return Flow Credit.⁵ The Department did not adjust SWC water supplies for wheeled storage water published in WD1's weekly reports because wheeled water does not increase the amount of water available for use by the SWC. The Department did not adjust SWC water supplies to account for water supplied to or from the rental pool because these transactions artificially increase or decrease the shortfall obligation.

v. *Summary of Forecast Supply*

21. The table below contains the individual components of the FS for each of the SWC members.

	April 1– August 15 Natural Flow Diverted (AF)	August 16– October 31 Predicted Natural Diversions Flow (AF)	Natural Flow Adjustment (AF)	Preliminary Storage Allocation (AF)	Minidoka Credit Adjustment (AF)	Forecast Supply (AF)
A&B	9,547	0	0	120,473	0	130,020
AFRD2	90,640	0	(1,441)	383,912	1,000	474,111
BID	123,935	8,282	(1,091)	214,990	5,130	351,246
Milner	14,114	305	(560)	80,506	0	94,365
Minidoka	156,842	10,480	0	338,930	8,370	514,622
NSCC	385,639	54,218	0	798,776	(7,750)	1,230,883
TFCC	626,598	261,530	0	232,941	(6,750)	1,114,319

⁴ The preliminary Storage Report may be viewed at: <https://www.waterdistrict1.com/media/yxefjahy/2025-07-15-preliminary-storage-report.pdf>.

⁵ For an explanation of the Minidoka Credit, see pages 126-127 of *Concepts, Practices, and Procedures Used to Distribute Water Within Water District #1*, which can be found at: <https://www.waterdistrict1.com/media/uabos05r/wd01-procedures-manual-4-12-2023.pdf>

E. Revised Shortfall Prediction

22. Demand Shortfall is calculated as the difference between RISD and the FS.

23. Based on the methods described above, and as summarized in the following table, the Director predicts, at this time, that AFRD2 and TFCC will be materially injured by junior ground water pumping.

	Forecast Supply (AF)	RISD (AF)	Shortfall (AF)
A&B	130,020	64,148	0
AFRD2	474,111	478,255	4,100
BID	351,246	265,828	0
Milner	94,365	61,238	0
Minidoka	514,622	393,554	0
NSCC	1,230,883	1,028,917	0
TFCC	1,114,319	1,173,919	59,600
		Total	63,700

24. The current, predicted shortfall to the SWC's RISD is 63,700 acre-feet.

F. Time of Need

25. The Department established the Time of Need by predicting when the remaining storage balance for TFCC was equal to their reasonable carryover volume of 37,400 acre-feet and the remaining storage balance for AFRD2 was equal to their reasonable carryover volume of 16,700 acre-feet. As described above, the Department selected 2005 as the analogue year it used to predict the storage use for TFCC and AFRD2 for the remainder of this season. Anticipating that TFCC's and AFRD2's storage use for the remainder of the 2025 season will be similar to their storage use in 2005, TFCC's Time of Need occurred on August 16, 2025, and AFRD2's Time of Need will occur on September 28, 2025.

G. Priority and Curtailment

26. In April 2025, pursuant to the *Methodology Order*, the Department ran the Eastern Snake Plain Aquifer Model version 2.2 ("ESPAM2.2") to calculate the priority curtailment date, such that the curtailment of all water rights junior to the date within the area of common ground water supply, would produce a volume of water equal to the April IDS in the Snake River between May 1 and September 30. The ESPAM2.2 simulation predicted curtailment of ground water rights bearing priority dates junior to August 28, 1955, would produce the volume of water equal to the predicted April IDS of 63,000 AF in the near Blackfoot to Minidoka reach. *April Forecast Supply Order*, at 4.

27. In the *July Forecast Supply Order*, the Director predicted a demand shortfall to the SWC of 75,300 acre-feet. In July 2025, the Department ran the ESPAM2.2 to simulate the effect of adjusting the curtailment priority date at the end of July. The ESPAM2.2 simulation calculated that the curtailment of ground water rights junior to August 28, 1955, through the end of July followed by curtailment of groundwater rights junior to October 11, 1900,⁶ would produce a volume of water of 58,000 AF in the near Blackfoot to Minidoka reach between July 1 and September 30 of this irrigation season. The following figure summarizes the results of the ESPAM2.2 simulation:

28. The ESPAM2.2 simulation calculated that the curtailment of ground water rights junior to August 28, 1955, through the end of July followed by curtailment of groundwater rights junior to October 11, 1900, will produce a volume of water of 33,500 AF in the near Blackfoot to Minidoka reach between August 16 and September 30 of this irrigation season.

29. The predicted mid-August through September benefits to the near Blackfoot to Minidoka reach from curtailment of ground water rights bearing priority dates junior to August 28, 1955, through the end of July followed by curtailment of groundwater rights junior to October 11, 1900, are less than the August IDS of 63,700 acre-feet. Continuing the curtailment of ground water rights junior to October 11, 1900, will offset as much of the August IDS as possible.

⁶ October 11, 1900, is the priority date equal to TFCC's Water Right No. 1-209, the most senior SWC natural flow water right predicted to be injured.

CONCLUSIONS OF LAW

1. Based on Findings of Fact 8 through 29 above, TFCC and AFRD2 are being materially injured. The updated predicted IDS is 63,700 acre-feet. The predicted shortfall to TFCC is 59,400 acre-feet. The predicted shortfall to AFRD2 is 4,100 acre-feet.

2. Based on current information, the Time of Need for TFCC occurred on August 16, 2025, and the Time of Need for AFRD2 will occur on September 28, 2025.

3. Pursuant to Step 8, at the Time of Need, junior ground water users are required to deliver to each injured member of the SWC the Step 7 revised IDS calculated at the Time of Need. Alternatively, any additional mitigation obligation calculated in Step 6 and Step 7 can be satisfied from each SWC member's reasonable carryover if (a) the reasonable carryover exceeds the additional mitigation obligation, and (b) the junior ground water users secure sufficient water to replace the reasonable carryover pursuant to an approved mitigation plan.

4. Using the ESPAM2.2, the Department has determined that the curtailment of ground water rights bearing priority dates junior to August 28, 1955, through the end of July followed by curtailment of groundwater rights junior to October 11, 1900, would result in a volume of water less than the predicted IDS of 63,700 acre-feet in the near Blackfoot to Minidoka reach between August 16 and September 30 of this irrigation season. Accordingly, continuing the curtailment to include ground water rights junior to October 11, 1900, is necessary for curtailment to offset as much of the IDS as possible.

5. Junior ground water users holding consumptive water rights bearing priority dates junior to October 11, 1900, within the Eastern Snake Plain Aquifer area of common ground water supply must mitigate for their proportionate share of the predicted July IDS in accordance with an approved mitigation plan.⁷ For the 2025 irrigation season, there are no junior ground water users mitigating for their proportionate share of the predicted July IDS with a secured volume of water. Accordingly, no junior ground water users are required to deliver to each injured member of the SWC the Step 7 revised IDS calculated at the Time of Need.

⁷ There are five approved mitigation plans responding to the SWC delivery call, the SWC stipulates to each: (1) No. CM-MP-2015-003 for the benefit of A&B; (2) No. CM-MP-2010-001 for the benefit of Southwest Irrigation District and Goose Creek Irrigation District (collectively, "SWID"); (3) No. CM-MP-2024-003 for the benefit of the Ground Water Districts; (4) No. CM-MP-2019-001 for the benefit of the Coalition of Cities; and (5) No. CM-MP-2007-001 for the benefit of the Water Mitigation Coalition. Given the nature of A&B's mitigation plan, the Department normally calculates A&B's proportionate share of the predicted IDS. However, A&B and the SWC entered into a stipulation to define A&B's mitigation obligation for the 2025 irrigation season. In the stipulation, A&B agreed to continue its ground water conversions projects and assign and deliver 1,252 acre-feet of storage water to TFCC. The Director has confirmed that 1,252 acre-feet of storage water has been assigned to A&B. Because the SWC agreed that the above actions satisfy A&B's obligation to the SWC for the 2025 irrigation season, A&B does not need to establish that they can mitigate for its proportionate share of the predicted IDS. Due to the nature of the mitigation plans for SWID, the Ground Water Districts, the Coalition of Cities, and the Water Mitigation Coalition, these entities do not need to establish that they can mitigate for their proportionate share of the predicted IDS.

ORDER

Based upon and consistent with the foregoing, IT IS HEREBY ORDERED the Director's revised in-season prediction is an in-season demand shortfall of 63,700 acre-feet.

IT IS FURTHER ORDERED that the July 25, 2025 *Curtailment Order* remains in full force and effect. All ground water users holding water rights listed in Attachment A to the July 25, 2025 *Curtailment Order* bearing priority dates junior to October 11, 1900, shall continue to be curtailed from diversion and use of ground water pursuant to those water rights unless they are mitigating in accordance with an approved mitigation plan or are notified by the Department that the order of curtailment has been modified or rescinded as to their water rights.

Dated this 11th day of September 2025.

MATHEW WEAVER
Director

**EXPLANATORY INFORMATION TO ACCOMPANY A
FINAL ORDER**

(To be used in connection with actions when a hearing was **not** held)

The accompanying document is a "Final Order" issued by the Idaho Department of Water Resources ("Department") pursuant to Idaho Code § 67-5246.

PETITION FOR RECONSIDERATION

(See Idaho Code § 67-5246(4))

Any party may file a petition for reconsideration of this final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: the petition must be received by the Department within this fourteen (14) day period.** The presiding officer will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law.

REQUEST FOR HEARING

(See Idaho Code § 42-1701A(3))

Unless the right to a hearing before the Department or the Water Resource Board is otherwise provided by statute, any person aggrieved by any final decision, determination, order or action of the Director, and who has not previously been afforded an opportunity for a hearing on the matter may request a hearing pursuant to Idaho Code § 42-1701A(3). A written petition to the Director contesting this final order and requesting a hearing must be filed with the Department by any aggrieved person **within fifteen (15) days after service of this final order.**

CERTIFICATE OF SERVICE

(See IDAPA 37.01.01.053, 37.01.01.202)

All documents filed with the Department in connection with a petition for reconsideration or a request for hearing of this final order shall be served on all other parties to the proceedings in accordance with Rules of Procedure 53 and 202.

**BEFORE THE DEPARTMENT OF WATER RESOURCES
OF THE STATE OF IDAHO**

IN THE MATTER OF DISTRIBUTION OF
WATER TO VARIOUS WATER RIGHTS HELD
BY OR FOR THE BENEFIT OF A&B
IRRIGATION DISTRICT, AMERICAN FALLS
RESERVOIR DISTRICT #2, BURLEY
IRRIGATION DISTRICT, MILNER IRRIGATION
DISTRICT, MINIDOKA IRRIGATION
DISTRICT, NORTH SIDE CANAL COMPANY,
AND TWIN FALLS CANAL COMPANY

Docket No. CM-DC-2010-001

**FINAL ORDER ESTABLISHING
2025 REASONABLE CARRYOVER**

(METHODOLOGY STEP 9)

FINDINGS OF FACT

1. On July 19, 2023, the Director (“Director”) of the Idaho Department of Water Resources (“Department”) issued the *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* (“*Methodology Order*”). The *Methodology Order* establishes nine steps for determining material injury to members of the Surface Water Coalition (“SWC”). This order applies step nine, the final step of the *Methodology Order*, for the 2025 water year.

2. The *Methodology Order* describes step 9 as follows:

Step 9: Following the end of the irrigation season (on or before November 30), the Department will determine the total actual volumetric demand and total actual [crop water need] for the entire irrigation season. This information will be used for the analysis of reasonable carryover shortfall, selection of future [base line years], and for the refinement and continuing improvement of the method for future use.

On or before November 30, the Department will issue estimates of actual carryover and reasonable carryover shortfall volumes for all members of SWC. These estimates will be based on, but not limited to, the consideration of the best available water diversion and storage data from Water District 01, return flow monitoring, comparative years, and [reasonable in-season demand]. These estimates will establish the obligation of junior ground water users in providing water to the SWC for reasonable carryover shortfall. Fourteen (14) days following the issuance by the Department of reasonable carryover shortfall obligations, junior ground water users will be required to establish, to the satisfaction of the Director, their ability to supply a volume of storage water or to conduct other approved mitigation activities that will provide water to the injured members of the SWC equal to the reasonable carryover shortfall for all injured members of the SWC. If junior ground water users cannot provide this information, the Director will issue an order curtailing junior ground water rights. A transient ESPAM simulation will be run to determine the priority date of water rights that must be curtailed to produce the reasonable

carryover shortfall volume by September 30 of the following year. Curtailment will be simulated within the area of common ground water supply, as described by [Rule 50.01 of the Department’s Rules for Conjunctive Management of Surface and Ground Water Resources].¹

Methodology Order, at 45 (footnote added).

3. The following table summarizes the 2025 irrigation season diversions and crop water need for each SWC entity. All values are reported in acre-feet (“AF”). These values are used to determine entity-specific season-ending reasonable in-season demand (“RISD”) values for the in-season demand shortfall table.

Entity	Demand ²	Crop Water Need
A&B	66,772	33,341
AFRD2	478,369	152,966
BID	282,546	101,624
Milner	68,320	31,448
Minidoka	362,365	188,837
NSCC	1,053,354	353,302
TFCC	1,135,302	462,347

4. The following table summarizes the final calculated 2025 in-season demand shortfall values in AF, if any, for each member of the SWC. The values in this table are different from those in the April 16, 2025 *Final Order Regarding April 2025 Forecast Supply (Methodology Steps 1–3)* (“April Forecast Supply Order”), the July 10, 2025 *Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order (Methodology Steps 5 & 6)* (“July Order”), and the September 11, 2025 *Order Revising July 2025 Forecast Supply (Methodology Steps 7–8)* (“September Order”). The differences are due to changes in total supply and RISD that reflect diversion and ET data not available when the *April Forecast Supply Order*, the *July Order*, and the *September Order* were issued. The second column of the summary table contains the total natural flow diversions from April 1 to October 31 for each SWC member.³ The third column summarizes the natural flow adjustments, which include natural flow delivered for recharge⁴ and natural flow delivered to Southwest Irrigation District

¹ In 2024, the Idaho Legislature established a new area of common ground water supply boundary for the Eastern Snake Plain Aquifer in Idaho Code § 42-233c. The new boundary is currently the ESPAM2.2 model boundary, but the boundary may be expanded by the Director in the future. I.C. § 42-233c(1)–(2). The Department used the ESPAM2.2 model boundary in the model simulation for this order.

² The “Demand” for each SWC entity is equal to each entity’s 2025 April–October diversions.

³ The natural flow diverted was calculated from the preliminary daily water right accounting records located here: <https://research.idwr.idaho.gov/apps/Hydrologic/Accounting/>.

⁴ Natural flow recharge values represent accomplished recharge through the Idaho Water Resource Board’s recharge water rights as of October 31, 2025.

(“SWID”).⁵ The fourth column contains the preliminary storage allocations reported from the July 15, 2025 Water District 01 storage report.⁶ The fifth column summarizes storage adjustments due to the application of the Minidoka Credit.⁷ The sixth column contains the total supply available to each SWC member and is calculated by summing columns two through five. The seventh column contains the calculated RISD. RISD is calculated for each SWC entity using demand, crop water need, and project efficiency. The demand shortfall in the last column is calculated by subtracting the RISD from the total supply. The demand shortfall is zero when the total supply exceeds the RISD. The completed application of the methodology order results in a final net in-season demand shortfall volume of 49,100 AF to TFCC for the 2025 irrigation season.

Entity	Natural Flow Diverted through 10/31	Natural Flow Adjustment	Preliminary Storage Allocation	In-Season Storage Allocation Adjustment	Total Supply	RISD	Demand Shortfall
A&B	9,547	-	120,473	-	130,020	56,868	0
AFRD2	90,666	(1,441)	383,912	1,000	474,137	443,825	0
BID	128,387	(2,197)	214,990	5,130	346,310	240,938	0
Milner	14,687	(1,111)	81,420	-	94,996	57,470	0
Minidoka	162,476	-	338,930	8,370	509,776	376,548	0
NSCC	448,541	(12,466)	798,776	(7,750)	1,227,101	968,232	0
TFCC	880,736	(988)	233,880	(6,750)	1,106,878	1,155,974	49,100

5. The following table summarizes the end of season reasonable carryover shortfall calculation for 2025. All values are reported in AF. The second column of the table contains the preliminary storage allocations reported from the July 15, 2025 Water District 01 storage report. The third column summarizes adjustments for storage water due to the application of the Minidoka Credit. The fourth column contains the total storage water use reported from the October 31, 2025 Water District 01 water right accounting report.⁸ The fifth column summarizes adjustments for water delivered through the SWC member’s canals for use by non-SWC members.⁹ The sixth column contains the actual carryover volumes as defined by the *Methodology Order*, see *Methodology Order*, at 45, and is calculated by subtracting the sum of columns four and five from the sum of columns two and three. The seventh column contains the

⁵ Further information regarding these adjustments is provided in Attachment A. See “Natural Flow Adjustment” column *infra* Attachment A.

⁶ The preliminary storage allocations can be found on Water District 01’s website: <https://www.waterdistrict1.com/current-data/>.

⁷ The Minidoka Credit is a long existing exchange of stored water among AFRD2, BID, MID, NSCC, and TFCC that has been incorporated into an agreement of those entities and accepted by the SRBA district court. Further information regarding these adjustments is provided in Attachment A. See “In-Season Storage Adjustment” column *infra* Attachment A.

⁸ Data retrieved from the preliminary daily water right accounting database between November 5–10, 2025.

⁹ Further information regarding these adjustments is provided in Attachment A. See “Storage Use Adjustment” column *infra* Attachment A (Storage Use Adjustment values include storage assignments reported on the Water District 01 Rental Pool and Adjustment Worksheet as of November 5, 2025).

reasonable carryover volumes established in the *Methodology Order*. *Methodology Order*, at 31. The reasonable carryover shortfall in the last column is zero when the actual carryover is greater than the reasonable carryover, otherwise it is calculated as the difference between reasonable carryover and the actual carryover volume for each member of the SWC. Completed application of the Methodology determines AFRD2 has a reasonable carryover shortfall of 20,932 AF and TFCC has a reasonable carryover shortfall of 65,824 AF. No other members of the SWC have a reasonable carryover shortfall.

Entity	In-Season				Actual Carryover	Reasonable Carryover	Reasonable Carryover Shortfall
	Preliminary Storage Allocation	Storage Allocation Adjustment	Storage Use	Storage Use Adjustment			
A&B	120,473	-	57,225	0	63,248	22,700	0
AFRD2	383,912	1,000	395,244	(6,100)	(4,232)	16,700	20,932
BID	214,990	5,130	157,262	0	62,858	0	0
Milner	81,420	-	55,878	(1,134)	26,676	16,100	0
Minidoka	338,930	8,370	199,017	(35)	148,318	0	0
NSCC	798,776	(7,750)	630,279	(13,000)	173,747	113,300	0
TFCC	233,880	(6,750)	257,166	(1,612)	(28,424)	37,400	65,824

6. The above determinations are based on water diversion and storage data from Water District 01. Although these preliminary numbers are subject to revision by Water District 01 during its final accounting for 2025, revisions will not become available until after issuance of this order. For this reason, these estimates establish the final obligation of junior ground water users in supplying water to the SWC for reasonable carryover shortfall. The above determination of reasonable carryover shortfall is carried forward from the *Methodology Order* and considers the best available water diversion and storage data, comparative water years, and RISD. *Methodology Order*, at 45.

CONCLUSIONS OF LAW

1. The *Methodology Order* states that, on or before November 30, the Director will estimate the SWC’s reasonable carryover shortfall, if any, for 2025. *Id.* If a reasonable carryover shortfall is established, junior-priority ground water users shall have fourteen days to demonstrate, to the satisfaction of the Director, “their ability to supply a volume of storage water or to conduct other approved mitigation activities that will provide water to the injured members of the SWC equal to the reasonable carryover shortfall for all injured members of the SWC.” *Id.*

2. The evidentiary standard to apply in conjunctive administration of hydraulically connected water rights is clear and convincing. *A&B Irr. Dist. v. Idaho Dept. of Water Resources*, 153 Idaho 500, 524, 284 P.3d 225, 249 (2012).

3. “Clear and convincing evidence refers to a degree of proof greater than a mere preponderance.” *Idaho State Bar v. Topp*, 129 Idaho 414, 416, 925 P.2d 1113, 1115 (1996) (internal quotations removed). “Clear and convincing evidence is generally understood to be ‘[e]vidence indicating that the thing to be proved is highly probable or reasonably certain.’” *State*

v. *Kimball*, 145 Idaho 542, 546, 181 P.3d 468, 472 (2008) (citing *In re Adoption of Doe*, 143 Idaho 188, 191, 141 P.3d 1057, 1060 (2006)); see also *Idaho Dept. of Health & Welfare v. Doe*, 150 Idaho 36, 41, 244 P.3d 180, 185 (2010).

4. Consistent with Finding of Fact 5, the Director concludes by clear and convincing evidence there is a 20,932 AF volume of material injury to AFRD2's reasonable carryover and a 65,824 AF volume of material injury to TFCC's reasonable carryover. No other members of the SWC have a reasonable carryover shortfall.

5. Because not all junior ground water users are participants in an approved mitigation plan, the Director must determine a priority date for curtailment that will result in an accumulation of water to the reaches of the Snake River from which the SWC members divert, in an amount equal to the established reasonable carryover shortfall. The water must accrue to the near Blackfoot to Minidoka reach by September 30 of the following year. Using the Eastern Snake Plain Aquifer Model ("ESPAM") Version 2.2, the Director determines curtailment of ground water rights junior to August 15, 1952, is predicted to produce a volume of at least 86,756 AF in the near Blackfoot to Minidoka reach by September 30, 2026.

6. According to the *Methodology Order*, fourteen days following issuance of this order, which establishes the reasonable carryover shortfall obligation, junior ground water users must "establish, to the satisfaction of the Director, their ability to supply a volume of storage water or to conduct other approved mitigation activities that will provide water to the injured members of the SWC equal to the reasonable carryover shortfall for all injured members of the SWC." *Methodology Order*, at 45. Otherwise, "the Director will issue an order curtailing junior ground water rights." *Id.*

ORDER

Based upon the foregoing, IT IS HEREBY ORDERED that, junior ground water users holding consumptive ground water rights within the Eastern Snake Plain Aquifer area of common ground water supply bearing priority dates junior to August 15, 1952, must mitigate for the reasonable carryover shortfall of 86,756 AF in accordance with an approved mitigation plan.¹⁰ If, within fourteen days following issuance of this order, a junior ground water user fails to establish, to the satisfaction of the Director, their ability to mitigate for the reasonable carryover shortfall of 86,756 AF in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water use.

¹⁰ Participants in the mitigation plans approved for the Ground Water Districts, SWID, the Coalition of Cities, and the Water Mitigation Coalition do not need to establish their ability to mitigate for their proportionate share of the reasonable carryover shortfall. However, due to the nature of A&B Irrigation District's approved mitigation plan, A&B must establish to the satisfaction of the Director its ability to mitigate for its proportionate share of the reasonable carryover shortfall, which is 457 AF.

IT IS FURTHER ORDERED that this final order concludes the application of the *Methodology Order* to the climatic, hydrologic, and agronomic facts of the 2025 irrigation season.

DATED this 21st day of November 2025.

MATHEW WEAVER

Director

**EXPLANATORY INFORMATION TO ACCOMPANY A
FINAL ORDER**

(To be used in connection with actions when a hearing was **not** held)

The accompanying document is a "Final Order" issued by the Idaho Department of Water Resources ("Department") pursuant to Idaho Code § 67-5246.

PETITION FOR RECONSIDERATION

(See Idaho Code § 67-5246(4))

Any party may file a petition for reconsideration of this final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: the petition must be received by the Department within this fourteen (14) day period.** The presiding officer will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law.

REQUEST FOR HEARING

(See Idaho Code § 42-1701A(3))

Unless the right to a hearing before the Department or the Water Resource Board is otherwise provided by statute, any person aggrieved by any final decision, determination, order or action of the Director, and who has not previously been afforded an opportunity for a hearing on the matter may request a hearing pursuant to Idaho Code § 42-1701A(3). A written petition to the Director contesting this final order and requesting a hearing must be filed with the Department by any aggrieved person **within fifteen (15) days after service of this final order.**

CERTIFICATE OF SERVICE

(See IDAPA 37.01.01.053, 37.01.01.202)

All documents filed with the Department in connection with a petition for reconsideration or a request for hearing of this final order shall be served on all other parties to the proceedings in accordance with Rules of Procedure 53 and 202.

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER
TO VARIOUS WATER RIGHTS HELD BY OR FOR
THE BENEFIT OF A&B IRRIGATION DISTRICT,
AMERICAN FALLS RESERVOIR DISTRICT #2,
BURLEY IRRIGATION DISTRICT, MILNER
IRRIGATION DISTRICT, MINIDOKA IRRIGATION
DISTRICT, NORTH SIDE CANAL COMPANY,
AND TWIN FALLS CANAL COMPANY

Docket No. CM-DC-2010-001

**FINAL ORDER CURTAILING
GROUND WATER RIGHTS
JUNIOR TO AUGUST 15, 1952**

The Director of the Idaho Department of Water Resources (“Department”) finds, concludes, and orders as follows:

FINDINGS OF FACT

1. On July 19, 2023, the Department issued its *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* (“*Methodology Order*”). The *Methodology Order* established nine steps for determining material injury to members of the Surface Water Coalition (“SWC”).¹

2. On November 21, 2025, the Director issued the *Final Order Establishing 2025 Reasonable Carryover (Methodology Step 9)* (“*Step 9 Order*”). Therein, the Director concluded there is a 65,824-acre-foot (“AF”) volume of material injury to Twin Falls Canal Company’s reasonable carryover and a 20,932 AF volume of material injury to AFRD2. *Step 9 Order*, at 5. The Director concluded no other members of the SWC have a reasonable carryover shortfall. *Id.*

3. The Director ordered that within fourteen days of November 21, 2025, “junior ground water users holding consumptive ground water rights within the Eastern Snake Plain Aquifer area of common ground water supply bearing priority dates junior to August 15, 1952, must mitigate for the reasonable carryover shortfall of 86,756 AF in accordance with an approved mitigation plan.” *Id.* The Director also ordered that, if such junior ground water users cannot establish that they can mitigate for the reasonable carryover shortfall “in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water use.” *Id.*

¹ The SWC is comprised of A&B Irrigation District, American Falls Reservoir District #2, Burley Irrigation District, Milner Irrigation District, Minidoka Irrigation District, North Side Canal Company, and Twin Falls Canal Company.

4. There are currently five approved mitigation plans in place responding to the SWC delivery call:²

- (1) Docket No. CM-MP-2007-001 for the benefit of J.R. Simplot Company, Basic American Foods, and ConAgra Foods Packaged Foods Company, Inc., d/b/a Lamb-Weston (collectively, the “Water Mitigation Coalition”);
- (2) Docket No. CM-MP-2010-001 for the benefit of the Southwest Irrigation and Goose Creek Irrigation Districts (collectively, “SWID”);
- (3) Docket No. CM-MP-2015-003 for the benefit of the A&B Irrigation District (“A&B”);
- (4) Docket No. CM-MP-2019-001 for the benefit of certain cities commonly referred to as the “Coalition of Cities,” the City of Idaho Falls, and the City of Pocatello (collectively, the “Cities”).
- (5) Docket No. CM-MP-2024-003 for the benefit of Aberdeen-American Falls Ground Water District, Bingham Ground Water District, Bonneville-Jefferson Ground Water District, Carey Valley Ground Water District, Henry’s Fork Ground Water District, Jefferson-Clark Ground Water District, Madison Ground Water District, Magic Valley Ground Water District, and North Snake Ground Water District (collectively, the “Ground Water Districts”);

5. In the *Step 9 Order*, the Director found that due to the nature of the approved mitigation plans for the Water Mitigation Coalition, SWID, the Cities, and the Ground Water Districts, these entities do not need to establish that they can mitigate for their proportionate share of the reasonable carryover shortfall. *Step 9 Order*, at 5 n.10. However, the Director found that due to the nature of A&B’s mitigation plan, A&B must establish to the satisfaction of the Director its ability to mitigate for its proportionate share of the reasonable carryover shortfall, which is 457 AF. *Id.*

6. In response to the *Step 9 Order*’s requirement for A&B to establish how it will mitigate its proportionate share of the reasonable carryover shortfall, A&B submitted *A&B Irrigation District’s Request for Hearing/Evidence of Ability to Mitigate* (“*Mitigation Response*”). In the *Mitigation Response*, A&B stated that it does not intend to submit a lease demonstrating that it has secured the required storage for the benefit of the injured SWC members at this time. *Mitigation Response* at 3. A&B acknowledged that this may result in the Director including A&B’s junior priority water rights in the list of water rights subject to this curtailment order. *Id.*

CONCLUSIONS OF LAW

1. Idaho Code § 42-602 authorizes the Director to supervise water distribution within

² In addition, there are currently five mitigation plans pending before the Department that have not been approved: (1) CM-MP-2025-004 (Big Lost River Ground Water District); (2) CM-MP-2025-003 (Bingham); (3) CM-MP-2025-001 (Pancheri); (4) CM-MP-2024-004 (Falls Water Co.); and (5) CM-MP-2024-002 (Falls Irrigation District). Because these plans are unapproved, water users may not rely on them for protection from curtailment at this time. In addition, CM-MP-2025-002 (Simplot) is no longer an effective mitigation plan because it was approved only for the 2025 irrigation season.

water districts:

The director of the department of water resources shall have direction and control of the distribution of water from all natural water sources within a water district to the canals, ditches, pumps and other facilities diverting therefrom. Distribution of water within water districts created pursuant to section 42-604, Idaho Code, shall be accomplished by watermasters as provided in this chapter and supervised by the director.

The director of the department of water resources shall distribute water in water districts in accordance with the prior appropriation doctrine. The provisions of chapter 6, title 42, Idaho Code, shall apply only to distribution of water within a water district.

2. As explained above, within fourteen days of November 21, 2025, “junior ground water users holding consumptive ground water rights within the Eastern Snake Plain Aquifer area of common ground water supply bearing priority dates junior to August 15, 1952, must mitigate for the reasonable carryover shortfall of 86,756 AF in accordance with an approved mitigation plan.” *Step 9 Order*, at 5. If a junior ground water user does not establish that they can mitigate for the reasonable carryover shortfall in accordance with an approved mitigation plan, the ground water user will be subject to this “order curtailing the junior-priority ground water use.” *Id.*

3. Due to the nature of the approved mitigation plans for the Water Mitigation Coalition, SWID, the Cities, and the Ground Water Districts, these entities do not need to establish that they can mitigate for their proportionate share of the reasonable carryover shortfall. Junior ground water users entitled to protection under the Water Mitigation Coalition’s, SWID’s, the Cities’, or the Ground Water Districts’ approved mitigation plans will not be subject to curtailment related to the reasonable carryover shortfall.

4. A&B has failed to provide timely documentation that it has adequately secured the storage water necessary to mitigate fully for its obligation under its approved mitigation plan. Accordingly, to ensure that A&B’s ground water rights junior to August 15, 1952, are curtailed during the 2026 irrigation season, the Director will include A&B’s water rights junior to August 15, 1952, on the curtailment list in Attachment A to this order.

5. The Director concludes that junior-priority ground water users who have not established that they can mitigate for the reasonable carryover shortfall in accordance with an approved mitigation plan should be curtailed. Junior-priority ground water users subject to curtailment are listed in Attachment A to this order.³

³ On November 26, 2025, the Director expanded the ESPA ACGWS to include the Little Lost River Tributary basin. The administration of the newly included area of the Little Lost River Tributary Basin will be phased-in to the SWC delivery call proceeding and junior ground water rights newly included in the ESPA ACGWS are not included in the attached curtailment list. The Director anticipates issuing additional orders related to the expansion of the ESPA ACGWS. After that, the Director will issue an order addressing how the water rights in the newly expanded ESPA ACGWS will be phased-in.

ORDER

Based upon and consistent with the foregoing, IT IS HEREBY ORDERED that effective December 8, 2025, ground water users holding water rights bearing priority dates junior to August 15, 1952, within the Eastern Snake Plain Aquifer area of common ground water supply (“ESPA ACGWS”) and listed in Attachment A to this order, shall curtail/refrain from diversion and use of ground water pursuant to those water rights unless notified by the Department that the curtailment order has been modified or rescinded as to their water rights.

IT IS FURTHER ORDERED that holders of ground water rights listed in Attachment A to this order, who were not previously listed in Attachment A to the July 25, 2025 Curtailment Order, may seek to participate in an approved mitigation plan through a ground water district and shall have fifteen days from the date of this order to join, solely for mitigation purposes, the ground water district situated nearest the lands to which the water rights are appurtenant. *See H.B. 737a, 58th Leg., 2d Reg. Sess. (Idaho 2006) (Act Relating to the Administration of Ground Water Rights Within the Eastern Snake River Plain); see also I.C. § 42-5259.* The water rights that have fifteen days to join a ground water district are identified in Attachment A.

IT IS FURTHER ORDERED that watermasters for the water districts within the ESPA ACGWS who regulate ground water are directed to review the water rights listed in Attachment A to this order and begin the curtailment process.

IT IS FURTHER ORDERED that this order applies to consumptive ground water rights, including but not limited to, agricultural, commercial, industrial, and municipal uses. This order excludes ground water rights used for *de minimis* domestic purposes where such domestic use is within the limits of the definition set forth in Idaho Code § 42-111 and ground water rights used for *de minimis* stock watering where such stock watering use is within the limits of the definitions set forth in Idaho Code § 42-1401A(11), pursuant to IDAPA 37.03.11.020.11.

Dated 8th day of December 2025.

MATHEW WEAVER

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was **not** held)

(Required by Rule of Procedure 740.02)

The accompanying order is a "Final Order" issued by the department pursuant to section 67-5246, Idaho Code.

PETITION FOR RECONSIDERATION

Any party may file a petition for reconsideration of a final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: The petition must be received by the Department within this fourteen (14) day period.** The department will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law. See section 67-5246(4), Idaho Code.

REQUEST FOR HEARING

Unless the right to a hearing before the director or the water resource board is otherwise provided by statute, any person who is aggrieved by the action of the director, and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the director to contest the action. The person shall file with the director, within fifteen (15) days after receipt of written notice of the action issued by the director, or receipt of actual notice, a written petition stating the grounds for contesting the action by the director and requesting a hearing. See section 42-1701A(3), Idaho Code. **Note: The request must be received by the Department within this fifteen (15) day period.**

DISTRICT, MINIDOKA IRRIGATION
DISTRICT, NORTH SIDE CANAL COMPANY,
AND TWIN FALLS CANAL COMPANY

Docket No. CM-DC-2010-001

**ORDER PHASING IN
ADMINISTRATION OF GROUND
WATER RIGHTS RECENTLY
INCLUDED IN THE ESPA
ACGWS**

BACKGROUND

The Eastern Snake Plain Aquifer Area of Common Ground Water Supply (“ESPA ACGWS”) is the administrative boundary for the Surface Water Coalition (“SWC”) delivery call proceeding (Docket No. CM-DC-2010-001), the proceeding in which this order is being issued.

On November 26, 2025, the Director of the Idaho Department of Water Resources (“Department”) expanded the ESPA ACGWS to include the portion of the Little Lost River basin that was not already included within the ESPA ACGWS. *See Order Expanding the Eastern Snake Plain Aquifer Area of Common Ground Water Supply to Include the Little Lost River Tributary Basin* (Nov. 26, 2025).

On December 15, 2025, the Director expanded the ESPA ACGWS to include the Raft River Basin. *See Order Expanding the Eastern Snake Plain Aquifer Area of Common Ground Water Supply to Include the Raft River Tributary Basin* (Dec. 15, 2025).

On January 13, 2026, the Director expanded the ESPA ACGWS to include the portion of the Big Lost River Basin that was not already included within the ESPA ACGWS. *See Order Expanding the Eastern Snake Plain Aquifer Area of Common Ground Water Supply to Include the Big Lost River Tributary Basin* (Jan. 13, 2026).

This order is necessary because the expansion of the ESPA ACGWS subjects previously unadministered ground water rights to administration in the SWC delivery call proceeding. Furthermore, there is currently a curtailment order in effect in the SWC delivery call proceeding, curtailing ground water rights junior to August 15, 1952. *See Final Order Curtailing Ground Water Rights Junior to August 15, 1952* (Dec. 8, 2025).

The Director must decide how to address the inclusion of these ground water rights into the ESPA ACGWS and decide whether the administration of the newly included junior-priority ground water rights should be phased-in pursuant to Rule 40.01.a of the Rules for Conjunctive Management of Surface and Ground Water Resources (“CM Rule”) (IDAPA 37.03.11).

ORDER REGARDING CHANGE TO AREA OF COMMON GROUND WATER SUPPLY FOR THE EASTERN SNAKE PLAIN AQUIFER; PHASING IN ADMINISTRATION Page—1

ANALYSIS

When the Director issued the orders expanding the ESPA ACGWS, 1,005 ground water rights within the expanded area of administration not previously subject to administration were brought into the SWC delivery call and immediately became subject to administration. These water rights are listed in Attachment A to this order.

As discussed above, there is currently a curtailment order in effect in the SWC delivery call proceeding, curtailing ground water rights junior to August 15, 1952. Many of the previously unadministered ground water rights are not currently participating in a Department-approved mitigation plan. Therefore, the newly included water rights junior to August 15, 1952, not currently participating in an approved mitigation plan are subject to immediate curtailment under the current curtailment order. CM Rule 40.

Pursuant to CM Rule 40.01.a, the Director may, by order, phase-in regulation of junior-priority ground water diversions where material injury is delayed or long range to lessen the economic impact of immediate and complete curtailment.

The Director finds that the material injury caused by the diversion and use of water under these newly included ground water rights is delayed or long range. The Director also finds that the economic impact of immediate and complete curtailment would be severe. The Department has observed that the time required to submit, review, publish, and issue an order regarding a mitigation plan can vary greatly. Approval of an unprotested mitigation plan can occur as quickly as several months. Whereas a protested mitigation plan that is subject to a contested case proceeding and appeal process can take more than a year to resolve.

The Director concludes that priority administration of these newly included ground water rights should be phased-in to provide the affected water users a reasonable time to implement a mitigation plan “to lessen the economic impact of immediate and complete curtailment.” CM Rule 40.01.a. Accordingly, the newly included water rights listed in Attachment A will not be subject to administration in the SWC delivery call sooner than April 1, 2027. All water rights that are newly included in the ESPA ACGWS are on notice that they could be subject to a curtailment order in approximately 14 months.

ORDER

Based upon and consistent with the foregoing, IT IS HEREBY ORDERED that ground water rights newly included in the ESPA ACGWS and listed in Attachment A to this order will be phased-in to the SWC delivery call proceeding and will not be subject to administration sooner than April 1, 2027.

Dated this 2th day of February 2026.

MATHEW WEAVER
Director

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was **not** held)

(Required by Rule of Procedure 740.02)

The accompanying order is a "Final Order" issued by the department pursuant to section 67-5246, Idaho Code.

PETITION FOR RECONSIDERATION

Any party may file a petition for reconsideration of a final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: The petition must be received by the Department within this fourteen (14) day period.** The department will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law. See section 67-5246(4), Idaho Code.

REQUEST FOR HEARING

Unless the right to a hearing before the director or the water resource board is otherwise provided by statute, any person who is aggrieved by the action of the director, and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the director to contest the action. The person shall file with the director, within fifteen (15) days after receipt of written notice of the action issued by the director, or receipt of actual notice, a written petition stating the grounds for contesting the action by the director and requesting a hearing. See section 42-1701A(3), Idaho Code. **Note: The request must be received by the Department within this fifteen (15) day period.**

**BEFORE THE DEPARTMENT OF WATER RESOURCES
OF THE STATE OF IDAHO**

IN THE MATTER OF DISTRIBUTION OF WATER
TO VARIOUS WATER RIGHTS HELD BY OR FOR
THE BENEFIT OF A&B IRRIGATION DISTRICT,
AMERICAN FALLS RESERVOIR DISTRICT #2,
BURLEY IRRIGATION DISTRICT, MILNER
IRRIGATION DISTRICT, MINIDOKA IRRIGATION
DISTRICT, NORTH SIDE CANAL COMPANY,
AND TWIN FALLS CANAL COMPANY

Docket No. CM-DC-2010-001

**FINAL ORDER REGARDING
APRIL 2026 FORECAST
SUPPLY**

(METHODOLOGY STEPS 1–3)

FINDINGS OF FACT

1. On July 19, 2023, the Idaho Department of Water Resources (“Department”) issued its *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* (“*Methodology Order*”). The *Methodology Order* established nine steps for determining material injury to members of the Surface Water Coalition (“SWC”). This order applies steps 1, 2, and 3 of the *Methodology Order*.¹

A. Step 1

2. By April 1 of each year, Step 1 requires members of the SWC to submit to the Department electronic shapefiles delineating the total anticipated irrigated acres for the upcoming year “or confirm in writing that the existing electronic shape file submitted by SWC has not varied by more than five percent.” *Methodology Order* ¶ 1, at 41.

3. On February 17, 2026, Minidoka Irrigation District (“Minidoka”) submitted its electronic shapefile delineating its total irrigated acres to the Department.

4. On March 27, 2026, the Department received a letter from A&B Irrigation District (“A&B”), Burley Irrigation District (“BID”), Milner Irrigation District (“Milner”), North Side Canal Company (“NSCC”), and Twin Falls Canal Company (“TFCC”). In the letter, A&B, BID, Milner, and NSCC confirmed that their total number of irrigated acres for 2026 will not vary by more than five percent from the electronic shapefiles submitted in prior years. With the letter, TFCC submitted an electronic shapefile delineating its total irrigated acres.

¹ Shortly after the *Methodology Order* was issued, the City of Pocatello, the City of Idaho Falls, and the Coalition of Cities (collectively “Cities”) and the Idaho Ground Water Appropriators, Inc. (“IGWA”) filed petitions for judicial review in Ada County (Nos. CV01-23-13238 and CV01-23-13173). IGWA’s petition for judicial review is stayed until December 31, 2027. The Idaho Supreme Court dismissed the Cities’ petition for lack of jurisdiction, but the matter is still pending on a petition for rehearing. The filing of a petition for judicial review does not stay the effectiveness of an order. I.C. § 67-5274. No party to the judicial review proceedings has requested a stay of the *Methodology Order*. Accordingly, the Director will apply the *Methodology Order* in this order.

5. On April 8th, 2026, the Department received a letter from American Falls Reservoir District #2 (“AFRD2”), stating that its total number of irrigated acres has not varied by more than five percent.

6. Based on the information submitted by the SWC, the Department will use the following total irrigated acres:

	Total Irrigated Acres ²	Data Source
A&B	14,749 ³	SRBA Partial Decree
AFRD2	62,361	SRBA Partial Decree
BID	46,035	2013 shapefile submitted by BID, reduced by the Department for overlapping acres and acres outside of service area.
Milner	13,264	2010 service area shapefile, reduced by the Department for overlapping acres and acres outside of service area.
Minidoka	73,825	2026 shapefile submitted by Minidoka, reduced by the Department for overlapping acres and acres outside of the service area.
NSCC	154,067	SRBA Partial Decree
TFCC	193,638	2026 shapefile submitted by TFCC, reduced by the Department for overlapping acres and acres outside of service area. ⁴

B. Step 2

7. Step 2 states that, within fourteen days of the issuance of the joint forecast prepared by the United States Bureau of Reclamation (“USBR”) and the United States Army Corps of Engineers (“USACE”), the Director “will issue a final order predicting the April [Forecast Supply] for the water year for each SWC entity. The Director will compare the April [Forecast Supply] for each SWC entity to the [Baseline Demand] for each SWC entity to determine if an in-season demand shortfall (“IDS”) is anticipated for the upcoming irrigation season.” *Methodology Order* ¶ 3, at 42.

² “The number of irrigated acres used in this methodology order is the number of reported acres unless that number is larger than the decreed irrigated acres, and if so, then the decreed acres are used.” *Methodology Order* ¶ 22, at 11.

³ The Department has modified the total A&B irrigated acreage count to 14,749 acres. Based on Judge Wildman’s district court decision, the new acreage count removes A&B’s enlargement acres. *Mem. Decision & Order*, at 8, *City of Idaho Falls v. Idaho Dep’t of Water Res.*, No. CV01-23-13238 (Ada Cnty. Dist. Ct. Idaho May 31, 2024).

⁴ On April 10, 2026, the Cities filed *Cities’ Motion to Consider Information When Determining Surface Water Coalition’s Irrigated Acres Under Methodology Step 1* (“*Motion*”). In that motion, they ask the Director to consider the information contained in a technical memorandum prepared by the Cities’ consultants when determining TFCC’s total irrigated acres in this order. *Motion*, at 2. The motion was filed only days before the deadline for this order, leaving the Department insufficient time to evaluate its merits. The Director may revisit, and if appropriate, modify TFCC’s total irrigated acres in orders issued later this irrigation season.

8. On April 2, 2026, the USBR and USACE issued their joint forecast (“Joint Forecast”), predicting an unregulated inflow of 2,300,000 acre-feet at the Snake River near Heise gage for the period of April through July. The forecasted flow volume equates to 70% percent of the average.⁵ The Joint Forecast “is generally as accurate a forecast as is possible using current data gathering and forecasting techniques.” *Id.* ¶ 49, at 19 (citation omitted).

9. The April–July Heise natural flow data from the years 1990–2025 were data inputs for the development of regression equations for A&B and Milner to predict the natural flow supply.⁶ Data greater or less than two standard deviations from the average were excluded from the regression development.

10. The April–July Heise natural flow data from the years 1990–2025 and Box Canyon November–March total discharge data for the period 1989–2025, were data inputs for the development of multiple linear regression equations to predict the natural flow supplies for AFRD2, BID, Minidoka, NSCC, and TFCC. *Methodology Order* ¶ 49, at 19. The U.S. Geological Survey measures and monitors the flow at the Box Canyon stream flow measurement gage. The Box Canyon November–March total discharge used by the Director in the 2026 regression models totaled 93,824 acre-feet.

11. The storage allocations were predicted for each SWC member. As of April 6, 2026, Water District No. 1’s preliminary water right accounting indicates water rights for Jackson Lake 1906, Lake Walcott, Jackson Lake 1910, Palisades Winter Water Savings, Island Park 1921, American Falls Winter Water Savings, and Henrys Lake 1965 are satisfied. The remaining reservoir rights are 838,546 acre-feet short of satisfaction. Based on a comparison of the current Heise natural flow forecast to the analog years of 2002, 2004, 2013, and 2021, the Director anticipates the remaining reservoir water rights for Jackson Lake and Palisades will be 48-87% satisfied, and each SWC member will receive 90-100% of their allocation. The storage allocations are based on the anticipated allocations minus evaporation charges.

⁵ The average is based on the years 1991–2020. The Joint Forecast relies on a “30-Year Climate Normal” to calculate an average April through July runoff volume.

⁶ Attached hereto, as Attachment A, are the regression analyses for each SWC entity used to predict natural flow supply.

12. Based on the above, the Director projects the following shortfalls:

	Predicted Natural Flow Supply	Predicted Storage Allocation	Minidoka Credit Adjustment	Total Forecast Supply	Baseline Demand (BLY 2018)	In-Season Demand Shortfall
A&B	1,693	120,313		122,006	64,192	0
AFRD2	31,003	383,024	1,000	415,027	458,890	43,900
BID	72,555	217,257	5,130	294,942	262,211	0
Milner	4,568	79,513		84,081	58,417	0
Minidoka	98,553	341,646	8,370	448,569	354,851	0
NSCC	279,289	821,048	-7,750	1,092,587	1,026,661	0
TFCC	757,715	233,029	-6,750	983,994	1,121,717	137,700
Total Predicted April In-Season Demand Shortfall (AF)						181,600

C. Step 3

13. Step 3 requires the following:

Step 3: By May 1, or within fourteen (14) days from issuance of the final order predicting the April [Forecast Supply], whichever is later in time, junior ground water users with approved mitigation plans for delivery of water must secure, to the satisfaction of the Director, a volume of water equal to their proportionate share of the April IDS unless the April IDS is revised as explained below in paragraph 6. If junior ground water users secured water for a reasonable carryover shortfall to an individual SWC member in the previous year, the current-year mitigation obligation to the individual SWC member will be reduced by the quantity of water secured for the reasonable carryover shortfall. The secured water will not be required to be delivered to the injured members of the SWC until the Time of Need.

Methodology Order ¶ 4, at 42.

14. The predicted April IDS for AFRD2 is 43,900 acre-feet and TFCC is 137,700 acre-feet. The total predicted April IDS is 181,600 acre-feet.

15. The Eastern Snake Plain Aquifer Model (“ESPAM”) is used to predict the junior priority water rights that must be curtailed to produce the volume of water equal to the predicted April IDS in the near Blackfoot to Minidoka reach. The ESPAM is updated periodically as new field measurements and advancements in modeling technology become available. ESPAM Version 2.2 (“ESPAM2.2”) is the latest model version.⁷

⁷ The Department finalized ESPAM2.2 model documentation reports (including a model calibration report, a predictive uncertainty analysis, a superposition model scenario, and a curtailment scenario) on May 27, 2021. See Idaho Dep’t of Water Res., *ESPAM2.2 Reports* (2021), [https:// research.idwr.idaho.gov/files/projects/espam/browse/ESPAM22_Reports/](https://research.idwr.idaho.gov/files/projects/espam/browse/ESPAM22_Reports/).

16. The Department ran ESPAM2.2 to predict the junior priority water rights within the area of common ground water supply (“ACGWS”) that must be curtailed to produce the volume of water equal to the predicted April IDS between May 1 and September 30 of this irrigation season pursuant to the *Methodology Order*. The ESPAM2.2 simulation calculated the curtailment of ground water rights bearing priority dates junior to October 11, 1900, will produce a volume of water of 94,000 acre-feet in the near Blackfoot to Minidoka reach between May 1 and September 30 of this irrigation season. The predicted benefit of the curtailment is less than the April IDS of 181,600 acre-feet. Curtailing ground water rights bearing priority dates junior to October 11, 1900, will offset as much of the April IDS as possible.

CONCLUSIONS OF LAW

1. The Fifth Judicial District Court, in and for the County of Minidoka, held that the evidentiary standard of proof to apply in conjunctive administration of hydraulically connected water rights is clear and convincing. *See Mem. Decision & Order on Pets. for Jud. Rev., A&B Irr. Dist., Inc. v. Idaho Dep’t of Water Res.*, No. CV-2009-647 (Minidoka Cnty. Dist. Ct. Idaho May 4, 2010); *Mem. Decision & Order on Pets. for Reh’g, A&B Irr. Dist., Inc. v. Idaho Dep’t of Water Res.*, No. CV-2009-647 (Minidoka Cnty. Dist. Ct. Idaho Nov. 2, 2010).

2. “Clear and convincing evidence refers to a degree of proof greater than a mere preponderance.” *Idaho State Bar v. Topp*, 129 Idaho 414, 416, 925 P.2d 1113, 1115 (1996) (internal quotations omitted). “Clear and convincing evidence is generally understood to be ‘[e]vidence indicating that the thing to be proved is highly probable or reasonably certain.’” *State v. Kimball*, 145 Idaho 542, 546, 181 P.3d 468, 472 (2008) (citing *In re Adoption of Doe*, 143 Idaho 188, 191, 141 P.3d 1057, 1060 (2006)); *see also Idaho Dep’t of Health & Welfare v. Doe*, 150 Idaho 36, 41, 244 P.3d 180, 185 (2010).

3. The Director must utilize the best available technology for determining the impact of junior ground water diversions. *See Clear Springs Foods, Inc. v. Spackman*, 150 Idaho 790, 814, 252 P.3d 71, 95 (2011). ESPAM 1.1 and 2.1 are the model versions utilized previously in the SWC delivery call proceedings. Previously, the Director determined that ESPAM 2.1 was the best available scientific tool for predicting the effects of ground water pumping. *See Idaho Ground Water Assoc. v. Idaho Dep’t of Water Res.*, 160 Idaho 119, 124, 369 P.3d 897, 902 (2016). ESPAM 2.2 is the latest version of the ESPAM model. The improvements incorporated into ESPAM 2.2, as discussed in Finding of Fact 15, make it the best available scientific tool for predicting the effects of ground water pumping in this proceeding.

4. In 2026, the Director has sufficient information to quantify the irrigated areas for each of the SWC members as required by Step 1.

5. The USBR-USACE April Joint Forecast predicts an unregulated inflow of 2,300,000 acre-feet at the Snake River near Heise gage from April to July. The forecasted volume equates to 70% of the average.

6. The predicted April IDS is 181,600 acre-feet. Junior ground water users holding consumptive water rights bearing priority dates junior to October 11, 1900, within the Eastern Snake Plain Aquifer ACGWS must mitigate for their proportionate share of the predicted April IDS in accordance with an approved mitigation plan.⁸ Junior ground water users mitigating for their proportionate share of the predicted April IDS with a secured volume of water pursuant to an approved mitigation plan must, to the satisfaction of the Director, secure their proportionate share for delivery to the injured members of the SWC on or before May 1, 2026. There was a reasonable carryover shortfall of 86,756 acre-feet in the fall of 2025. However, because junior ground water users did not secure any mitigation water for a carryover shortfall, there is no adjustment to the mitigation obligation.

7. If, on or before May 1, 2026, ground water users holding consumptive water rights bearing priority dates junior to October 11, 1900, within the Eastern Snake Plain Aquifer ACGWS⁹ fail to establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted April IDS of 181,600 acre-feet in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user. Junior ground water users who are mitigating with a secured volume of water are not required to assign the secured volume of water until after the Director issues a subsequent order requiring the assignment of the water.

8. If, at any time prior to the Director's final determination of the April Forecast Supply, the Director can determine with certainty that any member of the SWC has diverted more natural flow than predicted, or has accrued more storage than predicted, the Director will revise his initial, predicted IDS determination.

⁸ There are five approved mitigation plans responding to the SWC delivery call, each is stipulated to by the SWC: (1) No. CM-MP-2015-003 for the benefit of A&B; (2) No. CM-MP-2010-001 for the benefit of Southwest Irrigation District and Goose Creek Irrigation District (collectively, "SWID"); (3) No. CM-MP-2024-003 for the benefit of the Ground Water Districts; (4) No. CM-MP-2019-001 for the benefit of the Coalition of Cities; and (5) No. CM-MP-2007-001 for the benefit of the Water Mitigation Coalition. Given the nature of certain plans, the Department must calculate the proportionate share of the predicted IDS. With regard to A&B's mitigation plan, A&B's proportionate share of the predicted April IDS of 181,600 acre-feet is 10,800 acre-feet. Due to the nature of the mitigation plans for SWID, the Ground Water Districts, the Coalition of Cities, and the Water Mitigation Coalition, these entities do not need to establish that they can mitigate for their proportionate share of the predicted IDS.

⁹ On June 28, 2024, the Director issued an order declaring that ground water rights that were to be newly included in the ESPA ACGWS starting July 1, 2024, due to the passage of Senate Bill 1341, would not be subject to administration until November 1, 2025. *Order Re. Mid-Season Change to Area of Common Ground Water Supply for E. Snake Plain Aquifer*; *3d Order Am. Curtailment List*, at 4; see S.B. 1341, 67th Leg., 2d Reg. Sess. (Idaho 2024) (enacted as I.C. § 42-233c). Accordingly, ground water users holding consumptive water rights bearing priority dates junior to October 11, 1900, that were included in the ESPA ACGWS due to the passage of Senate Bill 1341 are subject to administration at this time continuing indefinitely into the future and are required to establish that they can mitigate for their proportionate share of the predicted April IDS. In late 2025 and early 2026, the Director expanded the ESPA ACGWS to include the Raft River tributary basin and the remainder of the Little Lost River and Big Lost River tributary basins not already included in the ACGWS. On February 2, 2026, the Director issued an order declaring that ground water users included in the ESPA ACGWS in late 2025 and early 2026 would not be subject to administration before April 1, 2027. *Order Phasing in Administration of Ground Water Rights Recently Included in the ESPA ACGWS*, at 2. Accordingly, at this time, ground water users in the Raft River tributary basin and the remainder of the Little Lost River and Big Lost River tributary basins who were newly included into the ESPA ACGWS and hold consumptive water rights bearing priority dates junior to October 11, 1900, are not subject to administration.

ORDER

Based upon and consistent with the foregoing, IT IS HEREBY ORDERED as follows:

The Director predicts an April IDS of 181,600 acre-feet. On or before May 1, 2026, ground water users holding consumptive water rights bearing priority dates junior to October 11, 1900, within the Eastern Snake Plain Aquifer ACGWS shall establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted April IDS of 181,600 acre-feet in accordance with an approved mitigation plan. If a junior ground water user cannot establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted April IDS in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user.

Dated this 16th day of April 2026.

MATHEW WEAVER
Director

ATTACHMENT A

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was **not** held)

The accompanying document is a “**Final Order**” issued by the Idaho Department of Water Resources (“Department”) pursuant to Idaho Code § 67-5246. The following statements describe the procedures and time limits for seeking reconsideration or other administrative relief as required by Idaho Code § 67-5248.

PETITION FOR RECONSIDERATION

(See Idaho Code § 67-5246(4))

Any party may file a petition for reconsideration of this final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: the petition must be received by the Department within this fourteen (14) day period.** The presiding officer will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law.

REQUEST FOR HEARING

(See Idaho Code § 42-1701A(3))

Unless the right to a hearing before the Director or the Water Resource Board is otherwise provided by statute, any person aggrieved by any final decision, determination, order, or action of the Director of the Department and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the Director to contest the action. The person shall file with the Director, within fifteen (15) days after receipt of written notice of the action issued by the Director, or receipt of actual notice, a written petition stating the grounds for contesting the action by the Director and requesting a hearing. **Note: The request must be received by the Department within this fifteen (15) day period.**

CERTIFICATE OF SERVICE

(See IDAPA 37.01.01.053, 37.01.01.202)

All documents filed with the Department in connection with a petition for reconsideration or a request for hearing of this final order shall be served on all other parties to the proceeding in accordance with Rules 53 and 202 of the Department’s Rules of Procedure.

**BEFORE THE DEPARTMENT OF WATER RESOURCES
OF THE STATE OF IDAHO**

IN THE MATTER OF DISTRIBUTION OF
WATER TO VARIOUS WATER RIGHTS HELD
BY OR FOR THE BENEFIT OF A&B
IRRIGATION DISTRICT, AMERICAN FALLS
RESERVOIR DISTRICT #2, BURLEY
IRRIGATION DISTRICT, MILNER IRRIGATION
DISTRICT, MINIDOKA IRRIGATION
DISTRICT, NORTH SIDE CANAL COMPANY,
AND TWIN FALLS CANAL COMPANY

Docket No. CM-DC-2010-001

**FINAL ORDER CURTAILING
GROUND WATER RIGHTS
JUNIOR TO OCTOBER 11, 1900**

The Director of the Idaho Department of Water Resources (“Department”) finds, concludes, and orders as follows:

FINDINGS OF FACT

1. On July 19, 2023, the Director issued the *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover (“Methodology Order”)*.¹ The *Methodology Order* established nine steps for determining material injury to members of the Surface Water Coalition (“SWC”).²

2. On April 16, 2026, the Director issued the *Final Order Regarding April 2026 Forecast Supply (Methodology Steps 1–3) (“As-Applied Order”)*, which applied steps 1, 2, and 3 of the *Methodology Order*. The Director predicted an April in-season demand shortfall (“IDS”) of 181,600 acre-feet. *As-Applied Order*, at 4. The Director ordered that, by May 1, 2026, ground water users with consumptive water rights “bearing priority dates junior to October 11, 1900, within the Eastern Snake Plain Aquifer area of common ground water supply [(“ESPA ACGWS”)] shall establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted April IDS of 181,600 acre-feet in accordance with an approved mitigation plan.” *Id.* at 6. The Director also ordered that, if such a junior ground water user cannot establish that they can mitigate for their proportionate share of the predicted IDS “in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user.” *Id.*

¹ Shortly after the *Methodology Order* was issued, the City of Pocatello, the City of Idaho Falls, and the Coalition of Cities (collectively “Cities”) and the Idaho Ground Water Appropriators, Inc. (“IGWA”) filed petitions for judicial review in Ada County (Nos. CV01-23-13238 and CV01-23-13173). IGWA’s petition for judicial review is stayed until December 31, 2027. The Idaho Supreme Court dismissed the Cities’ petition for lack of jurisdiction. The filing of a petition for judicial review does not stay the effectiveness of an order. I.C. § 67-5274. No party to the judicial review proceedings has requested a stay of the *Methodology Order*. Accordingly, the Director will apply the *Methodology Order* in this order.

² The SWC is comprised of A&B Irrigation District, American Falls Reservoir District #2, Burley Irrigation District, Milner Irrigation District, Minidoka Irrigation District, North Side Canal Company, and Twin Falls Canal Company.

3. Prior to May 1, 2026, there were five approved mitigation plans in place responding to the SWC delivery call, each is stipulated to by the SWC:

- (1) Docket No. CM-MP-2010-001 for the benefit of the Southwest Irrigation District and Goose Creek Irrigation District (collectively, “SWID”);
- (2) Docket No. CM-MP-2019-001 for the benefit of certain cities commonly referred to as the “Coalition of Cities”;
- (3) Docket No. CM-MP-2015-003 for the benefit of the A&B Irrigation District (“A&B”);
- (4) Docket No. CM-MP-2007-001 for the benefit of certain entities commonly referred to as the “Water Mitigation Coalition”; and
- (5) Docket No. CM-MP-2024-003 for the benefit of certain ground water districts commonly referred to as the “Ground Water Districts.”

4. In the 2026 *As-Applied Order*, the Director found that due to the nature of the approved mitigation plans for SWID, the Coalition of Cities, the Water Mitigation Coalition and the Ground Water Districts, these entities do not need to establish they can mitigate for their proportionate share of the predicted April IDS. *As-Applied Order*, at 6 n.8. However, the Director found that A&B must mitigate for its proportionate share of the predicted IDS of 181,600 acre-feet and determined that A&B’s proportionate share is 10,800 acre-feet. *Id.*

5. On May 1, 2026, A&B, the other members of the SWC, IGWA, and American Falls-Aberdeen Ground Water District filed a *Joint Motion for Order Approving Amended 2026-2027 Interim Stipulation* (“*Amended Joint Motion*”) requesting approval of A&B’s previously filed *Interim Stipulation* with an amendment to the storage volume of water to be delivered. *Amended Joint Motion*, at 3, No. CM-MP-2026-003. On May 14, 2026, the Director issued an *Order Approving A&B Irrigation District’s Interim Stipulated Plan for 2026 & 2027*. Due to the nature of A&B’s new mitigation plan, it does not need to mitigate for its full proportional share of the predicted IDS.

6. Also on May 1, 2026, the SWC, the Ground Water Districts, the Big Lost River Ground Water District, the Upper Big Lost River Ground Water District, and the Little Lost River Ground Water District filed a *Joint Motion for Approval of First Addendum to 2024 Stipulated Mitigation Plan and for Related Relief* (“*Motion to Approve First Addendum*”). The *Motion to Approve First Addendum* requested the Director approve the First Addendum, which allows the Big Lost River Ground Water District, Upper Big Lost River Ground Water District, and Little Lost River Ground Water District to join the *2024 Stipulated Mitigation Plan* in No. CM-MP-2024-003. On May 7, 2026, the Director issued an *Order Approving First Addendum and Granting Related Relief*.

7. Also on May 1, 2026, Hearing Officer Gerald Schroeder issued a *Preliminary Order Approving Falls Water’s Stipulated Mitigation Plan* in Department Docket No. CM-MP-2026-

002. A petition for reconsideration is pending so the order has not become final yet pursuant to Idaho Code § 67-5245 and IDAPA 37.01.01.730.

CONCLUSIONS OF LAW

1. Idaho Code § 42-602 authorizes the Director to supervise water distribution within water districts:

The director of the department of water resources shall have direction and control of the distribution of water from all natural water sources within a water district to the canals, ditches, pumps and other facilities diverting therefrom. Distribution of water within water districts created pursuant to section 42-604, Idaho Code, shall be accomplished by watermasters as provided in this chapter and supervised by the director. The director of the department of water resources shall distribute water in water districts in accordance with the prior appropriation doctrine. The provisions of chapter 6, title 42, Idaho Code, shall apply only to distribution of water within a water district.

2. As explained above, by May 1, 2026, ground water users with consumptive water rights “junior to October 11, 1900, within the [ESPA ACGWS]” are required to “establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted April IDS of 181,600 acre-feet in accordance with an approved mitigation plan.” *As-Applied Order*, at 7. If a junior ground water user does not establish that they can mitigate for their proportionate share of the predicted April IDS “in accordance with an approved mitigation plan” the ground water user will be subject to this “order curtailing the junior-priority ground water user.” *Id.*

3. Due to the nature of the approved mitigation plans for SWID, the Coalition of Cities, the Water Mitigation Coalition, A&B, and the Ground Water Districts, these entities do not need to establish that they can mitigate for their proportionate share of the predicted April IDS. Junior ground water users entitled to the protection of SWID, the Coalition of Cities, the Water Mitigation Coalition, A&B, and the Ground Water Districts mitigation plans will not be subject to curtailment during the 2026 irrigation season.

4. Consistent with the *As-Applied Order*, Idaho Code § 42-602, and decisions of the courts, the Director must order curtailment of junior-priority ground water users that have not established they can mitigate in accordance with an approved mitigation plan. Junior-priority ground water users subject to curtailment are listed in Attachments A to this order.

ORDER

Based upon and consistent with the foregoing, IT IS HEREBY ORDERED that effective May 14, 2026, ground water users holding water rights bearing priority dates junior to October 11, 1900, within the ESPA ACGWS, and listed in Attachment A to this order, shall curtail/refrain from diversion and use of ground water pursuant to those water rights unless notified by the Department that the order of curtailment has been modified or rescinded as to their water rights.

FINAL ORDER CURTAILING GROUND WATER RIGHTS JUNIOR TO OCTOBER 11, 1900—Page 3

IT IS FURTHER ORDERED that holders of ground water rights identified by the highlighted rows in Attachment A to this order may seek to participate in an approved mitigation plan through a ground water district and shall have fifteen days from the date of this order to join, solely for mitigation purposes, the ground water district situated nearest the lands to which the water rights are appurtenant. *See H.B. 737a, 58th Leg., 2d Reg. Sess. (Idaho 2006) (Act Relating to the Administration of Ground Water Rights Within the Eastern Snake River Plain); see also I.C. § 42-5259.*

IT IS FURTHER ORDERED that watermasters for the water districts within the ESPA ACGWS who regulate ground water are directed to review the water rights listed in Attachment A to this order and begin the curtailment process.

IT IS FURTHER ORDERED that this order shall apply to consumptive ground water rights, including but not limited to, agricultural, commercial, industrial, and municipal uses. This order excludes ground water rights used for *de minimis* domestic purposes where such domestic use is within the limits of the definition set forth in Idaho Code § 42-111 and ground water rights used for *de minimis* stock watering where such stock watering use is within the limits of the definitions set forth in Idaho Code § 42-1401A(11), pursuant to IDAPA 37.03.11.020.11.

Dated this 14th day of May 2026.

MATHEW WEAVER
Director

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was **not** held)

The accompanying document is a “**Final Order**” issued by the Idaho Department of Water Resources (“Department”) pursuant to Idaho Code § 67-5246. The following statements describe the procedures and time limits for seeking reconsideration or other administrative relief as required by Idaho Code § 67-5248.

PETITION FOR RECONSIDERATION

(See Idaho Code § 67-5246(4))

Any party may file a petition for reconsideration of this final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: the petition must be received by the Department within this fourteen (14) day period.** The presiding officer will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law.

REQUEST FOR HEARING

(See Idaho Code § 42-1701A(3))

Unless the right to a hearing before the Director or the Water Resource Board is otherwise provided by statute, any person aggrieved by any final decision, determination, order, or action of the Director of the Department and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the Director to contest the action. The person shall file with the Director, within fifteen (15) days after receipt of written notice of the action issued by the Director, or receipt of actual notice, a written petition stating the grounds for contesting the action by the Director and requesting a hearing. **Note: The request must be received by the Department within this fifteen (15) day period.**

CERTIFICATE OF SERVICE

(See IDAPA 37.01.01.053, 37.01.01.202)

All documents filed with the Department in connection with a petition for reconsideration or a request for hearing of this final order shall be served on all other parties to the proceeding in accordance with Rules 53 and 202 of the Department’s Rules of Procedure.

**BEFORE THE DEPARTMENT OF WATER RESOURCES
OF THE STATE OF IDAHO**

IN THE MATTER OF DISTRIBUTION OF
WATER TO VARIOUS WATER RIGHTS HELD
BY OR FOR THE BENEFIT OF A&B
IRRIGATION DISTRICT, AMERICAN FALLS
RESERVOIR DISTRICT #2, BURLEY
IRRIGATION DISTRICT, MILNER IRRIGATION
DISTRICT, MINIDOKA IRRIGATION
DISTRICT, NORTH SIDE CANAL COMPANY,
AND TWIN FALLS CANAL COMPANY

Docket No. CM-DC-2010-001

**ORDER AMENDING
CURTAILMENT LIST TO
INCLUDE UNMITIGATED
GROUND WATER RIGHTS**

BACKGROUND

On April 16, 2026, the Director issued the *Final Order Regarding April 2026 Forecast Supply (Methodology Steps 1–3)* (“*As-Applied Order*”), which applied steps 1, 2, and 3 of the *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* (“*Methodology Order*”). The Director predicted an April in-season demand shortfall (“IDS”) of 181,600 acre-feet. *As-Applied Order*, at 4. The Director ordered that, by May 1, 2026, ground water users with consumptive water rights “bearing priority dates junior to October 11, 1900, within the Eastern Snake Plain Aquifer area of common ground water supply [“ESPA ACGWS”)] shall establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted April IDS of 181,600 acre-feet in accordance with an approved mitigation plan.” *Id.* at 6. The Director also ordered that, if such a junior ground water user cannot establish that they can mitigate for their proportionate share of the predicted IDS “in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user.” *Id.*

On May 14, 2026, the Director issued a *Final Order Curtailing Ground Water Rights Junior to October 11, 1900* (“*May Curtailment Order*”). The *May Curtailment Order* required holders of ground water rights within the ESPA ACGWS bearing priority dates junior to October 11, 1900, and listed in Attachment A, to “curtail/refrain from diversion and use of ground water pursuant to those water rights unless notified by the Department that the order of curtailment has been modified or rescinded as to their water rights.” *May Curtailment Order*, at 3.

Attachment A excluded certain junior-priority ground water rights bearing a priority date junior to October 11, 1900, that the Department understood to be protected by an approved mitigation plan. Following issuance of the *May Curtailment Order*, the Director became aware of several ground water rights bearing priority dates junior to October 11, 1900, that were not in fact covered by an approved mitigation plan and were incorrectly omitted from on Attachment A to the *May Curtailment Order*.

ORDER AMENDING CURTAILMENT LIST TO INCLUDE UNMITIGATED GROUND
WATER RIGHTS—Page 1

ANALYSIS

Idaho Code § 42-602 authorizes the Director to supervise water distribution within water districts:

The director of the department of water resources shall have direction and control of the distribution of water from all natural water sources within a water district to the canals, ditches, pumps and other facilities diverting therefrom. Distribution of water within water districts created pursuant to section 42-604, Idaho Code, shall be accomplished by watermasters as provided in this chapter and supervised by the director. The director of the department of water resources shall distribute water in water districts in accordance with the prior appropriation doctrine. The provisions of chapter 6, title 42, Idaho Code, shall apply only to distribution of water within a water district.

“[W]hen it is found that junior-priority ground water pumping is causing a senior right holder material injury, the Director must either: (1) curtail junior-priority ground water pumping to satisfy the senior’s right, or (2) ‘[a]llow out-of-priority diversion of water by junior-priority ground water users pursuant to a mitigation plan that has been approved by the Director.’” *Rangen, Inc. v. Idaho Dep’t of Water Res.*, 160 Idaho 251, 256, 371 P.3d 305, 310 (2016), *abrogated in part on other ground by 3G AG LLC v. IDWR*, 170 Idaho 251, 509 P.3d 1180 (2022) (quoting IDAPA 37.03.040.01).

Consistent with the *As-Applied Order*, Idaho Code § 42-602, IDAPA 37.03.040.01, and decisions of the courts, the Director must order curtailment of junior-priority ground water users that have not established they can mitigate in accordance with an approved mitigation plan. Thus, the curtailment list must be supplemented to include those unmitigated junior-priority ground water rights that were not included in Attachment A to the *May Curtailment Order*.

ORDER

Based upon and consistent with the foregoing, IT IS HEREBY ORDERED that effective June 17, 2026, the curtailment list is amended to include the following ground water rights:

Water Right No. 25-7540, Laura Lee Hobbs, Licensed, Priority Date 08/18/1989, 0.10 cfs.

Water Right No. 25-4103, Bill Vaughn, Decreed, Priority Date 12/31/1958, 0.11 cfs.

Water Right No. 35-14613, Western Slope LLC., Decreed, Priority Date 03/05/1948, 0.61 cfs.

Water Right No. 35-14615, Western Slope LLC., Decreed, Priority Date 12/31/1940, 0.88 cfs.

ORDER AMENDING CURTAILMENT LIST TO INCLUDE UNMITIGATED GROUND WATER RIGHTS—Page 2

Water Right No. 35-14617, Western Slope LLC., Decreed, Priority Date 09/28/1981, 0.05 cfs.

Water Right No. 35-7576, Woodland Heights Water Users Association., Decreed, 01/28/1976, 0.38 cfs.

IT IS FURTHER ORDERED that holders of these ground water rights shall immediately curtail/refrain from diversion and use of ground water pursuant to these water rights unless notified by the Department that the order of curtailment has been modified or rescinded as to their water rights. All other ground water rights listed in the Attachment A continue to be curtailed consistent with the *Final Order Curtailing Ground Water Rights Junior to October 11, 1900*.

Dated this 17th day of June 2026

MATHEW WEAVER
Director

CERTIFICATE OF SERVICE

I HEREBY CERTIFY that on this 17th day of June 2026, the above and foregoing, was served by the method indicated below, and addressed to the following:

**BEFORE THE DEPARTMENT OF WATER RESOURCES
OF THE STATE OF IDAHO**

IN THE MATTER OF DISTRIBUTION OF
WATER TO VARIOUS WATER RIGHTS
HELD BY OR FOR THE BENEFIT OF A&B
IRRIGATION DISTRICT, AMERICAN
FALLS RESERVOIR DISTRICT #2,
BURLEY IRRIGATION DISTRICT,
MILNER IRRIGATION DISTRICT,
MINIDOKA IRRIGATION DISTRICT,
NORTH SIDE CANAL COMPANY, AND
TWIN FALLS CANAL COMPANY

Docket No. CM-DC-2010-001

**ORDER REVISING APRIL 2026
FORECAST SUPPLY AND
CONTINUING MAY 14, 2026
CURTAILMENT ORDER**

(METHODOLOGY STEPS 5 & 6)

The Director of the Idaho Department of Water Resources (“Department”) finds, concludes, and orders as follows:

FINDINGS OF FACT

A. Background

1. On July 19, 2023, the Department issued its *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* (“*Methodology Order*”). The *Methodology Order* established nine steps for determining material injury to members of the Surface Water Coalition (“SWC”). This order applies Steps 5 and 6 of the *Methodology Order*.

2. Step 5 of the *Methodology Order* addresses the final injury determination to reasonable carryover for members of the SWC. Step 5 states:

If the storage allocations held by members of the SWC fill, there is no reasonable carryover shortfall. If the storage allocations held by members of the SWC do not fill, within fourteen (14) days following the publication of Water District 01’s initial storage report . . . the volume of water secured by junior ground water users to fulfill the reasonable carryover shortfall shall be made available to injured members of the SWC.

Methodology Order, at 43. On November 21, 2025, the Director issued the *Final Order Establishing 2025 Reasonable Carryover (Methodology Step 9)* (“*2025 Step 9 Order*”) establishing a reasonable carryover shortfall of 86,756 acre-feet. Junior ground water users were given 14 days to provide a volume of water to fulfill the carryover shortfall. No water users secured water. While the SWC’s storage allocation did not fill this year, because no water users secured water in 2025 to fulfill the carryover shortfall, there is no volume of water to be made available to the SWC under Step 5.

ORDER REVISING APRIL 2026 FORECAST SUPPLY AND CONTINUING MAY 14, 2026
CURTAILMENT ORDER (*METHODOLOGY STEPS 5 & 6*)—Page 1

3. Step 6 of the *Methodology Order* states:

Approximately halfway through the irrigation season, but following the events described in Step 5, the Director will, for each member of the SWC: (1) recalculate RISD [Reasonable In-Season Demand]; (2) issue a revised FS [Forecast Supply]; and (3) estimate the Time of Need date.

Methodology Order, at 43 (footnote omitted).

4. On April 16, 2026, the Director issued his *Final Order Regarding April 2026 Forecast Supply (Methodology Steps 1 – 3)* (“*April Forecast Supply Order*”). The *April Forecast Supply Order* predicted a demand shortfall to the SWC of 181,600 acre-feet for the 2026 irrigation season. *April Forecast Supply Order*, at 4. At that time, the members of the SWC predicted to experience material injury during the 2026 irrigation season were Twin Falls Canal Company (“TFCC”) and American Falls Reservoir District #2 (AFRD2). *Id.* The Director ordered that, on or before May 1, 2026, ground water users with consumptive water rights “junior to October 11, 1900, within the Eastern Snake Plain Aquifer ACGWS [area of common ground water supply] shall establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted April IDS [in-season demand shortfall] of 181,600 acre-feet in accordance with an approved mitigation plan.” *Id.* at 7. The Director also ordered that, “[i]f a junior ground water user cannot establish . . . that they can mitigate for their proportionate share of the predicted April IDS in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user.” *Id.*

5. On May 14, 2026, the Director issued a *Final Order Curtailing Ground Water Rights Junior to October 11, 1900* (“*Curtailment Order*”). The Director ordered that:

[E]ffective May 14, 2026, ground water users holding water rights bearing priority dates junior to October 11, 1900, within the ESPA ACGWS, and listed in Attachment A to this order, shall curtail/refrain from diversion and use of ground water pursuant to those water rights unless notified by the Department that the order of curtailment has been modified or rescinded as to their water rights.

Curtailment Order, at 3.

6. On June 17, 2026, the Director issued an *Order Amending Curtailment List to Include Unmitigated Ground Water Rights*, adding six water rights to the list of water rights subject to the *Curtailment Order*.

B. April through June Water Supply Conditions and Climate

7. The April 2026 Joint Forecast prepared by the United States Army Corps of Engineers (“USACE”) and the United States Bureau of Reclamation (“BOR”) predicted 2,300,000 acre-feet of unregulated inflow at the Snake River near Heise gage for the period April–July 2025, which equates to 70% of the 1991–2020 average. *April Forecast Supply Order*,

at 2. The Joint Forecast “is generally as accurate a forecast as is possible using current data gathering and forecasting techniques.” *Methodology Order*, at 19.

8. The June 2026 Joint Forecast prepared by the USACE and the BOR predicted 900,000 acre-feet of unregulated inflow at the Snake River near Heise gage for the period June–July 2025, which equates to 50% of the 1991–2020 average.

9. Over much of the Eastern Snake Plain and its tributary basins, precipitation was above average in April but below average in May and June. For example, according to data measured at all the Natural Resources Conservation Service’s SNOTEL sites in the Upper Snake River Basin, the basin received 110%, 55%, and 63% of average precipitation in April, May, and June, respectively. Similarly, the National Weather Service’s Twin Falls weather station reported 123%, 4%, and 53% of normal precipitation in April, May, and June, respectively. During the same time, temperatures were above average April through June. For example, the average daily temperatures reported by the National Weather Service’s Twin Falls weather station were 1.7, 4.4, and 1.6 degrees above normal for April, May, and June, respectively.

C. Reasonable In-Season Demand

10. RISD “is the projected annual diversion volume for each SWC entity during the year of evaluation that is attributable to the projected beneficial use of growing crops within the service area of the entity.” *Methodology Order*, at 13. In April, the demand from the 2018 baseline year (“BLY”) defines the RISD. *Id.* at 17. During the irrigation season, the RISD for the completed portion of the irrigation season is recalculated by dividing the actual crop water need (“CWN”) for each entity by the project efficiency for that entity. *Id.* at 17, 43. For the remainder of the irrigation season, the RISD is the demand defined by the July–October 2018 BLY. RISD is calculated on a monthly time step.

i. Crop Water Need

11. “CWN is the volume of irrigation water required for crop growth within a SWC entity boundary, such that crop growth is not limited by water availability.” *Methodology Order*, at 15. “CWN is the difference between the fully realizable consumptive use associated with crop growth, or ET [evapotranspiration], and effective precipitation . . .” *Id.*

12. CWN is an input variable for calculating RISD for the completed portion of the irrigation season. *Id.* at 17. Actual RISD for the completed portion of the irrigation season is combined with monthly predicted baseline demands for the remaining months of the irrigation season to calculate a season-total RISD volume. *Id.* at 17–18. In-season demand shortfall is then calculated as the difference between the adjusted FS and the RISD. *Id.* at 23.

13. As calculated from the beginning of the irrigation season (April 1), the SWC’s volumetric CWN for the current water year through June 30, 2026, is 657,039 acre-feet. This volume is 137% of the 2000–2025 average CWN for April 1–June 30 and 142% of the CWN for the 2018 BLY. The following graphs summarize monthly volumetric CWN values:

ORDER REVISING APRIL 2026 FORECAST SUPPLY AND CONTINUING MAY 14, 2026 CURTAILMENT ORDER (*METHODOLOGY STEPS 5 & 6*)—Page 4

ii. *Extension of BLY*

14. The RISD for the remaining portion of the irrigation season (July–October) is the July–October demand for the 2018 BLY. The numeric July–October demand values are shown in the table in Finding of Fact 15 below.

iii. Calculation of RISD

15. As calculated from the beginning of the irrigation season (April 1), the SWC’s volumetric RISD for 2026 through June is 1,907,341 acre-feet. This volume is 142% of the 2000–2025 average demand from April 1–June 30 and 136% of the demand for the 2018 BLY. The recalculated RISD for each entity at this time is:

	April–June CWN (AF)	E _p (April–June)	April–June RISD (AF)	July–October Demand for 2018 BLY (AF)	Recalculated RISD (AF)
A&B	20,016	0.41-0.90	37,219	38,528	75,747 ¹
AFRD2	71,135	0.20-0.38	252,302	274,485	526,787
BID	60,537	0.30-0.46	159,472	145,546	305,019
Milner	15,961	0.35-0.66	34,414	36,432	70,846
Minidoka	103,782	0.37-0.56	223,925	196,968	420,893
NSCC	161,932	0.21-0.40	583,376	594,099	1,177,475
TFCC	223,676	0.28-0.51	616,634	653,473	1,270,107

D. Forecast Supply

16. When calculated during the irrigation season, the FS is the sum of the year-to-date actual natural flow diversions, the forecasted natural flow supply for the remainder of the season, and the storage allocation for each member of the SWC. *Methodology Order*, at 43. For this order, the FS is the sum of the actual natural flow supply from April through June, the predicted natural flow supply from July through October, and the actual storage allocations. Actual natural flow diversions for the completed portion of the irrigation season are extracted from the Department’s water rights accounting program. The natural flow diversions for the remainder of the irrigation season are estimated by regression analysis. *Id.* at 20–21, 43. Storage allocations are determined by Water District 01 after the Day of Allocation. *Id.* at 43.

i. Sum of Actual Natural Flow Diverted

17. Actual natural flow diverted for the period April through June for each SWC member are summarized in the table contained within the Summary of Forecast Supply section in Finding of Fact 25.

ii. Regression Models to Predict Natural Flow (July–October)

18. Natural flow diversions were predicted for the remainder of the irrigation season by regression analysis. The *Methodology Order* established the following predictor variables for the regression models: natural flow in the Snake River near Heise as reported by the BOR, snow water equivalent (“SWE”) data from the Two Ocean Plateau SNOTEL site, Spring Creek discharge, and ground water levels near American Falls Reservoir. *Methodology Order*, at 20.

¹The Department has modified the total A&B irrigated acreage count to 14,749 acres. Based on the decision in CV01-23-13238, the new acreage count removes A&B Irrigation District’s enlargement acres.

Unique regression models with unique predictor variable groups are established in the *Methodology Order* for each SWC member. *Id.* at 20–21.

19. Either June 15 or July 1 SWE values for the Two Ocean Plateau SNOTEL site are used as input variables in each of the regression models developed in the *Methodology Order*. *Id.* Two Ocean Plateau SWE data was selected as a predictor variable in the *Methodology Order* based upon stepwise statistical analysis carried out in the development of each regression model. *Id.* The Two Ocean Plateau SWE data is an optimum predictor variable for several reasons, including: its elevation (the site is located above 9,000 ft and typically still has snow late in the runoff season (June 15 and July 1); its location (the site is in the headwaters of the Snake River above Jackson Reservoir); and its period of record, which is sufficiently long enough to support model development.

20. On July 1, 2026, the Two Ocean Plateau SNOTEL station reported 0.0 inches of SWE. When the snow water equivalent is zero on July 1, the predicted natural flow supplies for the period July 1–October 31 for A&B, AFRD2, and Milner are zero acre-feet. *Methodology Order*, at 20.

21. The input variables used to predict July–October natural flow volumes for BID, Minidoka, and NSCC in 2026 include: (1) 5.3 inches of SWE reported by the Two Ocean Plateau SNOTEL site on June 15, 2026; (2) 1,904,721 acre-feet of natural flow runoff at the Snake River near Heise (April–June) as reported by the BOR; and (3) 27.47 feet depth to water at well 05S 31E 27ABA1 as measured by the Department on March 23, 2026.

22. The variables used to predict the July–October natural flow volume for TFCC in 2026 include: (1) 5.3 inches of the SWE reported by the Two Ocean Plateau SNOTEL Site on June 15; (2) 1,904,721 acre-feet of natural flow runoff at the Snake River near Heise (April–June) as reported by the BOR; and (3) 66,070 acre-feet of discharge (January–May) as measured and reported by the United States Geologic Survey for its Spring Creek at Sheepskin Rd Nr Fort Hall ID Gage (Gage No. 13075983).

iii. Storage Allocations

23. Preliminary storage allocation values for each member of the SWC are summarized in the table in Finding of Fact 25 below. These values are established based on reported storage for each SWC entity in Water District 01’s initial storage report published on July 9, 2026. These values include each entity’s contribution to the Water District 01 Rental Pool flow augmentation program.

iv. Adjustments to Total Supply

24. Natural flow and storage water supplies were both adjusted, as shown in the table in Finding of Fact 25 below. The adjustments to natural flow depicted in the summary table were for water wheeled by BID and Milner for the Southwest Irrigation District. The adjustments to the stored water supply depicted in the summary table were for the Minidoka Credit.

v. *Summary of Forecast Supply*

25. The following table summarizes the calculated FS and its individual components for each of the SWC members.

	Natural Flow Diverted through 6/30 (AF)	Predicted Natural Flow 7/1 to 10/31 (AF)	Natural Flow Adjustment (AF)	Preliminary Storage Allocation (AF)	Minidoka Credit Adjustment (AF)	Forecast Supply (AF)
A&B	936	0	0	106,223	0	107,159
AFRD2	7,749	0	0	363,260	1,000	372,009
BID	59,430	0	(3,714)	197,196	5,130	258,042
Milner	4,976	0	(3,011)	71,870	0	73,835
Minidoka	74,482	0	0	273,676	8,370	356,528
NSCC	163,687	42,317	0	793,715	(7,750)	991,969
TFCC	393,054	367,366	0	227,002	(6,750)	980,672

E. Revised Shortfall Prediction

26. In-season demand shortfall (“IDS”) is calculated as the difference between RISD and the FS.

27. Based on the established values above, and as summarized in the following table, the Director predicts that AFRD2, BID, Minidoka, NSCC, and TFCC will be materially injured by junior ground water pumping.

	Forecast Supply (AF)	RISD (AF)	Shortfall (AF)
A&B	107,159	75,747	0
AFRD2	372,009	526,787	154,800
BID	258,042	305,019	47,000
Milner	73,835	70,846	0
Minidoka	356,528	420,893	64,400
NSCC	991,969	1,177,475	185,500
TFCC	980,672	1,270,107	289,400
		Total	741,100

28. The current predicted shortfall to the SWC’s RISD is 741,100 acre-feet.

29. The Time of Need is used to determine when, during the water year, junior ground water users mitigating for their proportionate share using storage water must deliver that storage water to the SWC. No junior ground water users are mitigating for their proportionate share using storage water this year.

F. Step 6

30. Step 6 requires the following:

Upon a determination of an additional mitigation obligation, junior ground water users will be required to establish, to the satisfaction of the Director, their ability to secure a volume of storage water or to conduct other approved activities pursuant to an approved mitigation plan that will deliver the additional mitigation obligation water to the injured members of the SWC at the Time of Need. If junior ground water users fail or refuse to submit this information within fourteen (14) days from issuance of a Step 6 order, the Director will issue an order curtailing junior ground water users. A transient ESPAM simulation will be run to determine the priority date to produce the necessary additional mitigation obligation volume by September 30 of the same year. Curtailment will be simulated within the area of common ground water supply, as described by CM Rule 50.01.

Methodology Order, at 44 (footnote omitted).

31. The total predicted July IDS for AFRD2, BID, Minidoka, NSCC, and TFCC is 741,100 acre-feet.

32. In April 2026, pursuant to the *Methodology Order*, the Department ran the Eastern Snake Plain Aquifer Model version 2.2 (“ESPAM2.2”) to calculate the priority curtailment date, such that the curtailment of all water rights junior to the date within the ACGWS, would produce a volume of water equal to the April IDS in the Snake River between May 1 and September 30.² The ESPAM2.2 simulation predicted curtailment of ground water rights bearing priority dates junior to October 11, 1900, would produce a volume of water of 94,000 AF in the near Blackfoot to Minidoka reach between May 1 and September 30 of this irrigation season. The predicted benefit was less than the April IDS of 181,600 acre-feet. The Director concluded that curtailing ground water rights bearing priority dates junior to October 11, 1900, would offset as much of the April IDS as possible. *April Forecast Supply Order*, at 5.

33. In July 2026, the Department evaluated the effect of the simulated curtailment of ground water rights bearing priority dates junior to October 11, 1900, on near Blackfoot to Minidoka reach gains during July through September. The ESPAM2.2 simulation calculated that curtailment of ground water rights junior to October 11, 1900, would produce a volume of water

² Effective July 1, 2024, Senate Bill 1341 added a new section to Idaho Code, Idaho Code § 42-233c, which modified the description of the ESPA ACGWS. S.B. 1341, 67th Leg., 2d Reg. Sess. (Idaho 2024). In accordance with S.B. 1341, the Director subsequently expanded the ESPA ACGWS. In late 2025 and early 2026, the Director expanded the ESPA ACGWS to include the Raft River tributary basin and the remainder of the Little Lost River and Big Lost River tributary basins not already included in the ACGWS. On February 2, 2026, the Director issued an order declaring that ground water users included in the ESPA ACGWS in late 2025 and early 2026 would not be subject to administration before April 1, 2027. *Order Phasing in Administration of Ground Water Rights Recently Included in the ESPA ACGWS*, at 2. Accordingly, at this time, ground water users in the Raft River tributary basin and the remainder of the Little Lost River and Big Lost River tributary basins who were newly included into the ESPA ACGWS and hold consumptive water rights bearing priority dates junior to October 11, 1900, are not subject to administration.

of 78,500 AF in the near Blackfoot to Minidoka reach between July 1 and September 30 of this irrigation season. The following figure summarizes the results of the ESPAM2.2 simulation:

34. The predicted July through September benefits to the near Blackfoot to Minidoka reach from curtailment of ground water rights bearing priority dates junior to October 11, 1900, are less than the July IDS of 741,100 acre-feet. Continuing the curtailment of ground water rights junior to October 11, 1900, will offset as much of the July IDS as possible.

CONCLUSIONS OF LAW

1. Idaho Code § 42-602 authorizes the Director to supervise water distribution within water districts:

The director of the department of water resources shall have direction and control of the distribution of water from all natural water sources within a water district to the canals, ditches, pumps and other facilities diverting therefrom. Distribution of water within water districts created pursuant to section 42-604, Idaho Code, shall be accomplished by watermasters as provided in this chapter and supervised by the director. The director of the department of water resources shall distribute water in water districts in accordance with the prior appropriation doctrine. The provisions of chapter 6, title 42, Idaho Code, shall apply only to distribution of water within a water district.

2. Idaho Code § 42-607 states the watermaster, under the direction of the Idaho Department of Water Resources, shall regulate diversions “during times of water scarcity, in order to supply the prior rights of others from such stream or water supply”

3. This year, no water is required to be allocated to the SWC pursuant to Step 5 related to a reasonable carryover shortfall because no junior water users secured water in 2025 to fulfill the carryover shortfall.

4. This year, because no junior ground water users are mitigating for their proportionate share using storage water, the Time of Need as described in Step 6 is not applicable.

5. Based on the Findings of Fact 6 through 27 above, it is reasonably certain AFRD2, BID, Minidoka, NSCC, and TFCC will be materially injured. The calculated shortfall to AFRD2, BID, Minidoka, NSCC, and TFCC is 741,100 acre-feet.

6. The May 14, 2026 *Curtailment Order* curtailed ground water users holding water rights bearing priority dates junior to October 11, 1900, which is the priority date equal to TFCC’s Water Right No. 1-209, the most senior SWC natural flows water right predicted to be injured. Using the ESPAM2.2, the Department has determined that the continued curtailment of ground water rights bearing priority dates junior to October 11, 1900, would produce a volume of water of 78,500 AF in the near Blackfoot to Minidoka reach between July 1 and September 30 of this irrigation season. This would result in a volume of water less than the predicted July IDS of 741,100 acre-feet. Accordingly, continuing the curtailment of ground water rights junior to October 11, 1900, is necessary for curtailment to offset as much of the July IDS as possible.

7. Because the curtailment date remains October 11, 1900, the Director will not issue a new curtailment order under Step 6. The May 14, 2026 *Curtailment Order*, as subsequently modified by the June 17, 2026 *Order Amending Curtailment List to Include Unmitigated Ground Water Rights*, will remain in full force and effect.³

ORDER

Based upon and consistent with the foregoing, IT IS HEREBY ORDERED as follows:

The Director predicts an in-season IDS of 741,100 acre-feet. The May 14, 2026 *Curtailment Order*, as modified by the June 17, 2026 *Order Amending Curtailment List to*

³ There are five approved mitigation plans responding to the SWC delivery call, each is stipulated to by the SWC: (1) No. CM-MP-2015-003 for the benefit of A&B; (2) No. CM-MP-2010-001 for the benefit of Southwest Irrigation District and Goose Creek Irrigation District (collectively, “SWID”); (3) No. CM-MP-2024-003 for the benefit of the Ground Water Districts; (4) No. CM-MP-2019-001 for the benefit of the Coalition of Cities; and (5) No. CM-MP-2007-001 for the benefit of the Water Mitigation Coalition. Due to the nature of the mitigation plans for A&B, SWID, the Ground Water Districts, the Coalition of Cities, and the Water Mitigation Coalition, these entities do not need to establish that they can mitigate for their proportionate share of the predicted IDS. On May 1, 2026, Hearing Officer Gerald Schroeder issued a *Preliminary Order Approving Falls Water’s Stipulated Mitigation Plan* in Department Docket No. CM-MP-2026-002. Exceptions to the *Preliminary Order* are pending so the order has not become final yet pursuant to Idaho Code § 67-5245 and IDAPA 37.01.01.730.

Include Unmitigated Ground Water Rights, remains in full force and effect. All ground water users holding water rights listed in Attachment A to the May 14, 2026 *Curtailment Order* and listed in the June 17, 2026 *Order Amending Curtailment List to Include Unmitigated Ground Water Rights* bearing priority dates junior to October 11, 1900, shall continue to be curtailed from diversion and use of ground water pursuant to those water rights unless they are mitigating in accordance with an approved mitigation plan or are notified by the Department that the order of curtailment has been modified or rescinded as to their water rights.

Dated this 21st day of July 2026.

MATHEW WEAVER
Director

ORDER REVISING APRIL 2026 FORECAST SUPPLY AND CONTINUING MAY 14, 2026
CURTAILMENT ORDER (METHODOLOGY STEPS 5 & 6)—Page 14

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was **not** held)

The accompanying document is a “**Final Order**” issued by the Idaho Department of Water Resources (“Department”) pursuant to Idaho Code § 67-5246. The following statements describe the procedures and time limits for seeking reconsideration or other administrative relief as required by Idaho Code § 67-5248.

PETITION FOR RECONSIDERATION

(See Idaho Code § 67-5246(4))

Any party may file a petition for reconsideration of this final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: the petition must be received by the Department within this fourteen (14) day period.** The presiding officer will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law.

REQUEST FOR HEARING

(See Idaho Code § 42-1701A(3))

Unless the right to a hearing before the Director or the Water Resource Board is otherwise provided by statute, any person aggrieved by any final decision, determination, order, or action of the Director of the Department and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the Director to contest the action. The person shall file with the Director, within fifteen (15) days after receipt of written notice of the action issued by the Director, or receipt of actual notice, a written petition stating the grounds for contesting the action by the Director and requesting a hearing. **Note: The request must be received by the Department within this fifteen (15) day period.**

CERTIFICATE OF SERVICE

(See IDAPA 37.01.01.053, 37.01.01.202)

All documents filed with the Department in connection with a petition for reconsideration or a request for hearing of this final order shall be served on all other parties to the proceeding in accordance with Rules 53 and 202 of the Department’s Rules of Procedure.

Attorney for Jerry D. Bingham and Valerie H. Bingham

BEFORE THE DEPARTMENT OF WATER RESOURCES
OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION	)	Docket No. CM-DC-2010-001
OF WATER TO VARIOUS WATER	)	
RIGHTS HELD BY OR FOR THE	)	
BENEFIT OF A&B IRRIGATION	)	JERRY D. BINGHAM'S AND VALERIE
DISTRICT, AMERICAN FALLS	)	H. BINGHAM'S PETITION FOR
RESERVOIR DISTRICT #2, BURLEY	)	RECONSIDERATION AND REQUEST
IRRIGATION DISTRICT, MILNER	)	FOR HEARING
IRRIGATION DISTRICT, MINIDOKA	)	
IRRIGATION DISTRICT, NORTH SIDE	)	
CANAL COMPANY, AND TWIN FALLS	)	
CANAL COMPANY.	)	

COME NOW Jerry D. Bingham and Valerie H. Bingham ("Binghams"), by and through counsel of record, and hereby petition the Idaho Department of Water Resources ("IDWR") for reconsideration pursuant to Idaho Code § 64-5246(4), and request a hearing in the above-referenced matter pursuant to Idaho Code § 42-1701A(3).

Binghams' water rights have been curtailed under the Director's Order Revising April 2026 Forecast Supply and Continuing May 16, 2026 Curtailment Order issued on July 21, 2026. As an aggrieved party, Binghams submit the following list of issues regarding the Director's order issued on July 21, 2026. These issues do not challenge the Director's authority to administer the Delivery

Call or mitigation requirements for In-Season Demand Shortfalls (“IDS”). Rather, they challenge whether the current methodology allocates mitigation responsibilities in a manner that is consistent, priority-based, and equitable. As currently implemented, the methodology imposes disproportionate obligations on certain groundwater users, including Bingham, while similarly situated water users, or more importantly users that are junior to Bingham, are treated differently or excluded from comparable responsibility. Bingham reserve the right to supplement this request as necessary.

1. Whether the Order Contains a Lack of Priority-Based Allocation Among Groundwater Users.

The Director's Order Revising April 2026 Forecast Supply and Continuing May 16, 2026 Curtailment Order focuses on junior groundwater users continuing to divert out of priority while not being administered on a time-priority basis for IDS responsibility. Specifically, the methodology appears to treat groundwater rights of different priorities as equivalent when assigning IDS responsibility. As a result, certain users, including Bingham, bear a disproportionate share of the mitigation burden while other junior-priority diversions continue to operate without a commensurate obligation.

Priority appears to be recognized for some administrative purposes but disregarded when allocating IDS responsibility. That raises a question of whether the methodology is consistent with the framework of the Idaho Constitution, Idaho statutes, and Conjunctive Management Rules (37.03.11 et seq.) requiring administration according to priority.

2. Whether Allocation of IDS Should be Assigned Only Among Groundwater Rights.

Under the Order Revising April 2026 Forecast Supply and Continuing May 16, 2026 Curtailment Order, the Director is apparently assigning IDS responsibility only among groundwater

users rather than among all water rights according to priority. By limiting responsibility to one category of users, the methodology creates a distinction between groundwater and surface-water rights that is not supported by the doctrine of prior appropriation. The July 21, 2026 Order focuses more on technical accounting than on the unequal treatment of similarly situated appropriators. By assigning IDS responsibility exclusively among groundwater users, the methodology departs from a priority-based administration framework and instead creates a categorical distinction between groundwater and surface-water rights not supported by governing law, including IDAPA 37.03.11, which provides for conjunctive management of surface and ground water resources; Idaho Code §§ 42-101 et. seq., which governs the use of any of the waters of the state to include both ground water and surface water; and Article XV of the Idaho Constitution.

3. Whether the Director's Order Uses Inconsistent Hydrologic Methodology.

The methodology of the Director's Order Revising April 2026 Forecast Supply and Continuing May 16, 2026 Curtailment Order applies different hydrologic assumptions to two mitigation mechanisms intended to address the same water-supply deficiency. This potentially results in disproportionate allocations of responsibility and an inequitable burden on affected water users.

Under the July 21, 2026 Order, storage obligations are allocated using long-term steady-state impacts, while conservation obligations are allocated under a different framework. The obvious question is whether there is a rational basis for valuing these mitigation actions under different hydrologic standards. The current methodology employed by the IDWR moves away from priority administration and instead relies on a series of administrative and methodological distinctions that produce unequal outcomes.

Binghams reserve the right to identify additional issues as necessary in this proceeding.

As previously stated above, Bingham's petition IDWR for reconsideration of the Director's Order Revising April 2026 Forecast Supply and Continuing May 16, 2026 Curtailment Order pursuant to Idaho Code § 64-5246(4); and request a hearing pursuant to Idaho Code § 42-1701A(3). Bingham's are aggrieved under Idaho Code § 42-1701A(3), as they have not been afforded an opportunity for a hearing on the Director's final order, and are entitled to an administrative hearing on the matter pursuant to Idaho law.

Respectfully submitted.

DATED this 3rd day of August, 2026.

COOPER & LARSEN, CHARTERED

By /s/ Reed W. Larsen

IN THE MATTER OF DISTRIBUTION OF
WATER TO VARIOUS WATER RIGHTS
HELD BY OR FOR THE BENEFIT OF
A&B IRRIGATION DISTRICT, AMERI-
CAN FALLS RESERVOIR DISTRICT #2,
BURLEY IRRIGATION DISTRICT,
MILNER IRRIGATION DISTRICT,
MINIDOKA IRRIGATION DISTRICT,
NORTH SIDE CANAL COMPANY, AND
TWIN FALLS CANAL COMPANY

Docket No. CM-DC-2010-001

**IGWA'S RESPONSE TO JERRY D.
BINGHAM'S AND VALERIE H.
BINGHAM'S PETITION FOR
RECONSIDERATION AND REQUEST
FOR HEARING**

Idaho Ground Water Appropriators, Inc. ("IGWA"), through counsel and on behalf of its member ground water districts, submits this response in opposition to Jerry D. Bingham's and Valerie H. Bingham's Petition for Reconsideration and Request for Hearing ("Petition"), filed August 3, 2026, in this matter. As explained below, the Petition does not identify any error in the Order Revising April 2026 Forecast Supply and Continuing May 16, 2026 Curtailment Order issued July 21, 2026 ("July 2026 As-Applied Order") that warrants reconsideration.

The first issue for which the Bingham's seek reconsideration—"whether the order contains a lack of priority-based allocation among groundwater users"—asks the Director to revisit the same proportionate-share theory A&B Irrigation District raised in response to the 2025 As-Applied Orders in this matter. *See A&B Proportionate Share Expert Report* at 4, Docket No. CM-DC-2010-001 (Nov. 7, 2025) ("ESPA methodology calculation of IDS is caused by decades of junior groundwater pumping, and the mitigation responsibility should consider priority. . . . IDWR should explain how the groundwater rights with a priority date senior to the time of over-appropriation are equally responsible for mitigating the IDS as groundwater rights junior to that time"). That case is now pending on appeal in Minidoka County District Court, Case No. CV34-26-462.

Reconsideration is not a vehicle for duplicative litigation of issues already presented in this contested case and now before the district court. *See Losser v. Bradstreet*, 145 Idaho 670, 674 (2008) ("This Court has emphasized the desirability of avoiding piecemeal litigation"). The Petition does not identify a distinct legal theory or materially different factual record that would justify

reopening that issue here. Therefore, the Department should decline to take up the issue again in the interest of orderly administration and judicial economy.

The Bingham's second issue—"whether allocation of IDS should be assigned only among groundwater rights"—misapprehends the scope of this proceeding. This matter involves the administration of groundwater rights under the Conjunctive Management Rules. It does not involve surface-to-surface water-right administration, which occurs within water districts under Idaho Code § 42-602. If the Bingham's disagree with the way water districts are administering surface-water rights, they must challenge those actions in a separate proceeding, not through this conjunctive-management case. Because the Bingham's second issue falls outside the scope of this proceeding, reconsideration is improper.

The Bingham's third issue—"whether the Director's order uses inconsistent hydrologic methodology"—goes beyond the parameters of the July 2026 As-Applied Order. The Petition alleges that "storage obligations are allocated using long-term steady-state impacts, while conservation obligations are allocated under a different framework." Petition at 3. However, the July 2026 As-Applied Order does not allocate storage water or conservation obligations at all.

The Bingham's appear to be conflating the July 2026 As-Applied Order with the mitigation plan approved in Docket No. CM-MP-2024-003 (the "2024 Plan"). Those are separate matters. The July 2026 As-Applied Order applies the Methodology Order to determine material injury under Conjunctive Management Rule 42. The 2024 Plan, by contrast, defines obligations of groundwater users participating in a mitigation plan approved under Conjunctive Management Rule 43. The July 2026 As-Applied Order and the 2024 Plan therefore address different questions under different rules. An alleged inconsistency between those separate administrative decisions is not an error in the July 2026 As-Applied Order and provides no basis for reconsideration.

To the extent the Petition challenges the Department's use of modeling at different steps in the Methodology Order, that issue also overlaps with A&B Irrigation District's challenge to the 2025 As-Applied Orders, which is on appeal. *See A&B Proportionate Share Expert Report* at 3 ("Whether the steady-state use of the ESPAM 2.2 in identifying A&B's proportionate share is consistent with the transient use of the model in identifying ground water rights subject to curtailment as outlined in the *Sixth Methodology Order*"). Accordingly, the Department should decline to take up the issue again in the interest of orderly administration and judicial economy.

For the foregoing reasons, the Department should deny the Petition.

DATED this 12th day of August, 2026.

AND VALERIE H. BINGHAMS’
PETITION FOR
RECONSIDERATION AND
REQUEST FOR HEARING**

BACKGROUND

On July 19, 2023, the Department issued its *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* (“*Methodology Order*”). The *Methodology Order* established nine steps for determining material injury to members of the Surface Water Coalition (“SWC”).

On July 21, 2026, the Director issued the *Order Revising April 2026 Forecast Supply and Continuing May 14, 2026 Curtailment Order (Methodology Steps 5-6)* (“*July As-Applied Order*”). The *July As-Applied Order* applied steps 5 and 6 of the *Methodology Order* and continued the effect of the *Final Order Curtailing Ground Water Rights Junior to October 11, 1900*, issued by the Director on May 14, 2026.

Step 5 of the *Methodology Order* addresses the final injury determination to reasonable carryover for members of the SWC. Step 5 states:

If the storage allocations held by members of the SWC fill, there is no reasonable carryover shortfall. If the storage allocations held by members of the SWC do not fill, within fourteen (14) days following the publication of Water District 01’s initial storage report . . . the volume of water secured by junior ground water users to fulfill the reasonable carryover shortfall shall be made available to injured members of the SWC.

Methodology Order, at 43.

Step 6 of the *Methodology Order* states:

Approximately halfway through the irrigation season, but following the events described in Step 5, the Director will, for each member of the SWC: (1) recalculate RISD [Reasonable In-Season Demand]; (2) issue a revised FS [Forecast Supply]; and (3) estimate the Time of Need date.

Id. (footnote omitted).

ORDER DENYING JERRY D. AND VALERIE H. BINGHAMS’ PETITION FOR
RECONSIDERATION AND REQUEST FOR HEARING—Page 1

Following the application of steps 5 and 6 of the *Methodology Order*, the Director issued the *July As-Applied Order*, predicting a July in-season demand shortfall of 741,100 acre-feet. *July As-Applied Order*, at 11. Due to the predicted shortfall, the Director ordered:

The May 14, 2026 *Curtailment Order*, as modified by the June 17, 2026 *Order Amending Curtailment List to Include Unmitigated Ground Water Rights*, remains in full force and effect. All ground water users holding water rights listed in Attachment A to the May 14, 2026 *Curtailment Order* and listed in the June 17, 2026 *Order Amending Curtailment List to Include Unmitigated Ground Water Rights* bearing priority dates junior to October 11, 1900, shall continue to be curtailed from diversion and use of ground water pursuant to those water rights unless they are mitigating in accordance with an approved mitigation plan or are notified by the Department that the order of curtailment has been modified or rescinded as to their water rights.

Id. at 11–12.

On August 3, 2026, Jerry and Valerie Bingham (“Binghams”) filed with the Department, *Jerry D. Bingham’s and Valerie H. Bingham’s Petition for Reconsideration and Request for Hearing* (“*Petition and Request*”), challenging the *July As-Applied Order*. *Petition and Request*, at 1.

On August 12, 2026, Idaho Ground Water Appropriators, Inc. (“IGWA”) filed *IGWA’s Response to Jerry D. Bingham’s and Valerie H. Bingham’s Petition for Reconsideration and Request for Hearing* (“*Response*”). The *Response* argues the Binghams fail to identify any error in the *July As-Applied Order* that warrants reconsideration. *Response*, at 1.

ANALYSIS

The Binghams’ filing is styled as both a petition for reconsideration and a request for hearing. While the analysis of the petition for reconsideration and the request for hearing is largely similar, the Director will consider the merits of each request separately.

1. The Binghams identify no basis to reconsider the *July As-Applied Order*.

Idaho Code § 67-5246(4) governs petitions for reconsideration of final orders. It states:

Unless otherwise provided by statute or rule, any party may file a motion for reconsideration of any final order issued by the agency head within fourteen (14) days of the service date of that order. The agency head shall issue a written order disposing of the petition. The petition is deemed denied if the agency head does not dispose of it within twenty-one (21) days after the filing of the petition.

The *Petition and Request* filed by the Binghams states that they seek reconsideration of the *July As-Applied Order*. The *July As-Applied Order* applied Steps 5 and 6 of the *Methodology Order*. *July As-Applied Order*, at 1–2, 11. Step 5 addresses the final determination of injury to

reasonable carryover. *July As-Applied Order*, at 1; see also *Methodology Order*, at 43. Step 6 requires the Director to recalculate the reasonable in-season demand and revise the forecast supply. *July As-Applied Order*, at 2; see also *Methodology Order*, at 43. The *July As-Applied Order* made the determinations required by those steps. *July As-Applied Order*, at 11.

The fundamental problem with the Bingham's petition for reconsideration is that the Bingham's do not identify a finding of fact, conclusion of law, calculation, or directive in the *July As-Applied Order* that they contend is erroneous and should be reconsidered. They do not challenge the Director's Step 5 determination, the recalculated reasonable in-season demand, the revised forecast supply, the resulting in-season demand shortfall, or the factual information and calculations underlying those determinations. Instead, the three issues identified in the *Petition and Request* concern the structure of the underlying methodology and the allocation of mitigation responsibilities—matters not determined by the *July As-Applied Order*. See *Petition and Request*, at 2–3.

The Bingham's own description of their challenge confirms this conclusion. They state that their “issues do not challenge the Director's authority to administer the Delivery Call or mitigation requirements for In-Season Demand Shortfalls,” but instead “challenge whether the current methodology allocates mitigation responsibilities in a manner that is consistent, priority-based, and equitable.” *Petition and Request*, at 1–2. Thus, although the Bingham's say they seek reconsideration of the *July As-Applied Order*, the substance of their challenge is directed to the *Methodology Order* and framework for allocating mitigation responsibilities under the SWC Delivery Call.

A petition for reconsideration of the *July As-Applied Order* must identify a basis for the Director to reconsider a determination made in the *July As-Applied Order*. The Bingham's identify none. Their three stated issues instead challenge the *Methodology Order* and the framework for allocating mitigation responsibilities under the SWC Delivery Call—matters that were not established or decided in the *July As-Applied Order*. The methodology underlying the SWC Delivery Call has been the subject of extensive litigation. The Idaho Supreme Court has affirmed that the Director may employ a baseline methodology as a starting point for administration of the interconnected surface and ground water rights at issue in the SWC Delivery Call. *In Matter of Distribution of Water to Various Water Rts. Held By or For Ben. of A & B Irrigation Dist.*, 155 Idaho 640, 650, 315 P.3d 828, 838 (2013). In 2023, following an administrative hearing concerning the revisions to the methodology, the Director issued the current *Methodology Order* as a final order of the Department. Certain aspects of the *Methodology Order* were challenged on judicial review, and Judge Wildman affirmed the Department. *City of Idaho Falls v. Idaho Dep't of Water Res.*, No. CV01-23-13238 (Ada Cnty. Dist. Ct. Idaho 2024); *Memorandum Decision and Order*, at 27, *Idaho Ground Water Appropriators Inc. v. Idaho Dep't of Water Res.*, No. CV01-23-13173 (Ada Cnty. Dist. Ct. Idaho May 31, 2024).¹ The Bingham's cannot use a petition for reconsideration of the *July As-Applied Order* to collaterally challenge determinations made in the *Methodology Order*. Because the

¹ In No. CV01-23-13173, one challenge remains pending because the matter was stayed during proceedings on reconsideration.

Binghams identify no error in the findings, calculations, conclusions, or directives contained in the *July As-Applied Order*, the *Petition for Reconsideration* should be denied.

2. The Binghams' request for hearing does not state grounds for contesting the *July As-Applied Order*.

Idaho Code § 42-1701A(3) governs petitions requesting a hearing before the Department. It states, in pertinent part:

[A]ny person aggrieved by any action of the director, including any decision, determination, order or other action, including action upon any application for a permit, license, certificate, approval, registration, or similar form of permission required by law to be issued by the director, who is aggrieved by the action of the director, and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the director to contest the action. The person shall file with the director, within fifteen (15) days after receipt of written notice of the action issued by the director, or receipt of actual notice, a written petition stating the grounds for contesting the action by the director and requesting a hearing.

Idaho Code § 42-1701A(3) therefore entitles a person aggrieved by an action of the Director, who has not previously been afforded an opportunity for a hearing on the matter, a hearing to contest the action. The petition must state the grounds for contesting the Director's action.

The Binghams request a hearing on the *July As-Applied Order*. As discussed above, however, the *Petition and Request* does not identify a determination made in the *July As-Applied Order* that the Binghams seek to contest. They do not challenge the Director's Step 5 determination, recalculation of reasonable in-season demand, revised forecast supply, resulting in-season demand shortfall, or the factual information and calculations underlying those determinations. Instead, the Binghams expressly state that their issues "challenge whether the current methodology allocates mitigation responsibilities in a manner that is consistent, priority-based, and equitable." *Petition and Request*, at 2. The grounds stated in the *Petition and Request* thus concern the validity and structure of the *Methodology Order* and the framework for allocating mitigation responsibilities under the SWC Delivery Call, not the determinations made in the *July As-Applied Order*. The distinction is significant under Idaho Code § 42-1701A(3). To the extent the Binghams seek a hearing to contest the determinations made in the *July As-Applied Order*, their petition does not state grounds for contesting those determinations. To the extent they instead seek a hearing to challenge the *Methodology Order*, Idaho Code § 42-1701A(3) does not permit the Binghams to obtain a hearing on the *Methodology Order* merely by directing their request at a later as-applied order. The *Methodology Order* was issued in 2023, following an administrative hearing pursuant to Idaho Code § 42-1701A(3), and has already been subject to judicial review. Because the Binghams state no grounds for contesting the determinations made in the *July As-Applied Order*, the request for hearing should be denied.

ORDER

IT IS HEREBY ORDERED that *Jerry D. Bingham's and Valerie H. Bingham's Petition for Reconsideration and Request for Hearing* is DENIED.

Dated this 24th day of August 2026.

MATHEW WEAVER
Director

ORDER DENYING JERRY D. AND VALERIE H. BINGHAMS' PETITION FOR
RECONSIDERATION AND REQUEST FOR HEARING—Page 7

EXPLANATORY INFORMATION TO ACCOMPANY AN ORDER DENYING PETITION FOR RECONSIDERATION OF A FINAL ORDER

(To be used in connection with Final Orders, reconsideration of which is now denied,
issued by the Director or the Board)

The accompanying document is an **Order Denying Petition for Reconsideration** of the "**Final Order**" issued previously in this proceeding by the agency head of the Idaho Department of Water Resources ("Department") or the Idaho Water Resource Board ("Board") pursuant to Idaho Code § 67-5246.

The following statements describe the procedures and time limits for seeking appeal of the final order previously issued in this proceeding:

APPEAL TO DISTRICT COURT

(See Idaho Code §§ 67-5270 through 67-5279)

Within twenty-eight (28) days after the service date of the presiding officer's denial of a petition for reconsideration, any party may file a petition for judicial review of the final order with a district court. Filing an appeal to a district court does not in itself stay the effectiveness or enforcement of the final order appealed.

FILING AND SERVICE

(See I.R.C.P. 84)

Any petition for judicial review filed in connection with an appeal of the final order shall be served on the agency and all parties to the administrative proceeding in accordance with Idaho Rule of Civil Procedure 84.

Case No. CV06-26-1801

**NOTICE OF LODGING THE
AGENCY RECORD AND
TRANSCRIPT WITH THE AGENCY**

TO: THE DISTRICT COURT AND THE PARTIES OF RECORD

In accordance with I.R.C.P. 84(j), YOU ARE HEREBY NOTIFIED that the agency record and transcript, having been prepared pursuant to Idaho Code § 67-5249 and I.R.C.P. 84(f)(1)(A), 84(g), and 84(i), are lodged with the Idaho Department of Water Resources for the purpose of settlement.

A copy of the agency record and transcript filed with the Department have been uploaded to the Department's website. The parties may visit <https://idwr.idaho.gov/court-action/cv06-26-1801/> and follow their browser's document download procedure to obtain a copy of the agency

NOTICE OF LODGING THE AGENCY RECORD AND TRANSCRIPT WITH THE
AGENCY—1

record and transcript after clicking on the PDFs titled “Agency Record on Appeal” and “Agency Transcript on Appeal,” and the zipped data files titled “Agency Record Excel Files.”

The parties have fourteen (14) days from the date of this notice to file any objections to the record or transcript. The agency’s decision on any objection timely filed along with all evidence, exhibits, and written presentations on the objection shall be determined by the agency within fourteen (14) days and included in the record. If no objections are filed within that time, the record and transcript shall be deemed settled. Subsequently, the agency will lodge the settled record and transcript with the District Court pursuant to I.R.C.P. 84(k) and the Court’s September 23, 2026 *Procedural Order*.
