

## Galena GWD 2022 Groundwater Reductions Summary

Updated Report: March 23, 2023

The BWRGWMA Management Plan requires the Galena and South Valley Ground Water Districts to implement additional ground water consumptive use reductions through voluntary cuts in ground water pumping based on the April-September water supply forecasts for the Big Wood River at Hailey reported on April 1 by the Natural Resources Conservation Service and the Northwest River Forecast Center. See *Ground Water Management Plan*, p. 11. In 2022, the April 1 forecasts were less than 155,000 Acre-Feet (AF), which triggered a recommended ground water pumping reduction of 11,260 AF within the ground water districts.

Groundwater flow meter readings in Galena GWD (GGWD) are collected annually by Water District 37 (WD37) staff and entered into the Idaho Department of Water Resources (IDWR) Water Measurement Information System (WMIS). WD37 staff collected flow meter data for 2022 and entered those data to WMIS as of December 12, 2022. The 2022 GGWD total annual diversion volumes were compared to annual volumes as reported in WMIS for a five-year average baseline period that includes 2015, 2016, and 2018 through 2020. IDWR prepared a report on December 13, 2022 comparing 2022 ground water pumping to the five-year average baseline period and presented that report to the BWRGWMA Advisory Committee on December 15, 2022. That report raised questions about the accuracy of the five-year average baseline and potential errors or omissions in the 2022 data. Since December 2022, WD37 made some corrections and updates to 2022 volume records.

The report attached to the following pages shows water use in GGWD by each diversion, as reported in WMIS, for 2022 and the five baseline years, plus the five-year baseline average. Note that some wells have a five-year average, but no use reported for 2022. In these cases, well volumes were removed from the calculations in the attached report due to concern that the unreported use would artificially inflate reduction volume. The total 2022 volume reduction may be revised based on additional information or data collected for 2022.

Some notes regarding the attached report/spreadsheet:

- 2022 annual diversion volume (**2022 AF** column) = 5,299 AF
  - There are cells or records in this column with no 2022 volume data or values.
  - Green highlighted cells are unused wells.
  - Blue highlighted cells have 2022 volume but no 5-year average.
  
- **5-Year Baseline Average (AF)** = 6,145 AF
  - Highlighted cells in this column do not have a 5-year baseline average.
  
- The column **ALL DATA: Baseline Avg. minus 2022 Usage (AF)** is the result of subtracting the **2022 AF** column from the **5-Year Baseline Average** column.
  - Negative values in these cells represent usage in excess of the 5-year baseline average.

- NOTE: the total in this column is misleading because there are some records with a baseline average volume but no 2022 volume. It is not appropriate to assume zero usage in 2022 where data are missing or not reported for 2022.
  - The total in this column is further misleading because there are 24 WMIS records with a 2022 annual total, but no 5-year average. These records are highlighted in this column and total 203 AF. These are calculated as “usage above the baseline” and count against the reductions. These records are retained in the calculations to be conservative.
  - This column shows reductions of 846 AF.
- The column **REMOVED RECORDS WITH 5-YEAR AVG. BUT NO 2022 DATA: Baseline Avg. minus 2022 Usage (AF)**, is the result of subtracting the **2022 AF** column from the **5-Year Baseline Average (AF)** column. However, 32 records that have a 5-year baseline average, but no 2022 use volume have been removed. These records were removed to derive a conservative estimate for 2022 volume reductions, based on available data. The removed records in this column are highlighted and total 866 AF.
    - Negative values in these cells represent usage in excess of the 5-year baseline total.
    - NOTE: This column is calculated as “usage below the baseline” and counted as reductions. This column shows total reductions of -20 AF.

The following table summarizes GGWD’s 2022 volume reductions based on a five-year average baseline volume, adjusted for missing 2022 diversion volume records. Groundwater reduction volume for 2022 is the difference between the adjusted five-year baseline average and the 2022 total annual diversion volume.

<b>South Valley Ground Water District 2022 Use &amp; Reductions</b>	
5-Year Baseline Volume (AF) 2015, 2016, 2018-2020	6,145
Total 5-Yr Baseline Volume removed due to records with no 2022 volume data (AF)	866
Adjusted 5-Yr Baseline Volume (AF)	<b>5,279</b>
2022 Annual Diversion Volume (AF)	5,299
2022 Volume Reductions (AF)	<b>-20</b>
