

Concepts for BWRGWMA Management Plan Response Form

Concept	Agree	Disagree	Maybe	Reason (Optional)
Plan Goal Item # 1		X		I thought we had agreed that Cooper and Sharon would work on revisions to the goals and present them at the next meeting
Plan Goal Item # 2		X		See Goal1
Plan Goal Item # 3		X		This could be a commentary but not a goal
Flow Targets Item # 1		X		We need to know more about what combination of sw and storage we are going to supply before we agree or disagree with this revised wording.
Flow Targets Item # 2		X		Mike McVay's report shows very little impact of pumping on the flows at Stanton and Willow Creek (see Figure 4)
Flow Targets Item # 3			X	Change maintain to benefit
Flow Targets Item # 4			X	Same as Flow Target Item #3
Flow Targets Item # 5		X		I do not remember anyone agreeing to removing to maintain flows in the Big Wood River. This plan MUST put wet water in the Big Wood above Magic. I also know that the cities object to 'concrete actions' but if not concrete actions, what do they propose to mitigate their effects on BWR flows above the reservoir?
Flow Targets Item # 6	X			This is fine but I think the request was for participants to be able to off ramp if they can mitigate the effects of their use.
Management Actions Item # 1		X		We did not agree to this.
Management Actions Item # 2	X			
Management Actions Item # 3			X	I think the overall principle might be ok but once again, we have not agreed to include ground water levels and other specifics included in this action.
Management Actions Item # 4			X	We need to agree on a date. Leave it blank rather than saying 'perhaps on June 1'

Concepts for BWRGWMA Management Plan Response Form

CIEF Item # 1	X			
CIEF Item # 2	X			
CIEF Item # 3		X		We have not discussed this. I cannot see the benefit of dividing the money into funds.
CIEF Item # 4	X			I agree with this item but point out that it necessitates including protecting senior surface water users above Magic Reservoir in the goals.
CIEF Item # 5	X			I agree with this and also believe that the contributions should be increased at the outset of this plan after the period of inflation we have already had.
Storage Water Item # 1				Having reviewed the delivery charts available, it looks like we are delivering too much water between the target flow at Station 10 and storage water when it is acquired. We need to review those actions more carefully and transparently establish targets for the delivery of both sw and storage water.
Storage Water Item # 2			X	This looks like it could be included in Storage Water Item #1.
Irrigation Season Item # 1		X		Why has this been changed? We have discussed assigning a total volume allowed and allowing each gw user to determine when he or she will use it.
Irrigation Season Item # 2		X		See #1
Irrigation Season Item # 3	X			
Fallowing Item # 1	X			
Enforcement Item # 1		X		We need to define 'certain dry years'.
