

BEFORE THE DIRECTOR
OF THE DEPARTMENT OF WATER RESOURCES
OF THE STATE OF IDAHO

IN THE MATTER OF THE APPLICATION OF THE UPPER BIG LOST RIVER GROUNDWATER
DISTRICT FOR APPROVAL OF A MITIGATION PLAN

Docket No. CM-MP-2026-001

The Upper Big Lost River Ground Water District (UBLRGWD), a ground water district organized under Chapter 52 of Title 42 of the Idaho Code hereby submits Upper Big Lost River Ground Water District's Mitigation Plan in response to the Surface Water Coalition's (SWC) call which was initially filed in January of 2005 and is ongoing. The SWC Call has resulted in certain administrative orders from the Director of the Idaho Department of Water Resources ("IDWR" or "Department") which quantifies material injury to the SWC's senior surface water rights resulting from junior ground water diversions from the Eastern Snake Plain Aquifer ("ESPA") Area of Common Ground Water Supply. The most recent iteration of methodology to determine and quantify material injury to each individual member of the SWC is now described in the Director's Sixth Amended Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover dated July 19, 2023 (the "Methodology Order"). The Plan is submitted pursuant to Rule 43 of the Idaho Department of Water Resources' Rules for Conjunctive Management of Surface and Ground Water Resources found at IDAPA2 37.03.11 (hereinafter, the "CM Rules"). Rule 43 of the CM Rules is hereafter referred to as "CM Rule 43."

Members of UBLRGWD divert ground water from wells almost exclusively for agricultural irrigation purposes.

Properties owned by UBLRGWD'S members are located within the Big Lost River tributary.

As set forth below, diversion of ground water under the water rights of UBLRGWD's members, subject to any future curtailment orders under the Methodology Order, can be fully mitigated with various actions undertaken by UBLRGWD. This Plan is being submitted to mitigate the UBLRGWD's members impact on the SWC's senior water rights and to avoid any disruption in the operations of UBLRGWD's members.

I. MITIGATION PLAN CM Rule 43 describes the information that must be contained in a mitigation plan. In accordance with CM Rule 43, UBLRGWD submits the following information.

A. Name and Mailing Address the Person or Persons Submitting the Plan. The names and mailing address of the Ground Water District who is submitting the Plan, and who is to receive correspondence regarding this Plan, are as follows:

**Upper Big Lost River Ground Water District
P.O. Box 122
Mackay, Idaho 83251**

B. Identification of the Water Rights for Which Benefit the Mitigation Plan is Proposed.

Through submission of this plan, it is UBLRGWD's intent to mitigate all the water rights identified in Exhibit A attached.

C. Description of the Plan.

- **Plan Structure.** UBLRGWD's proposed mitigation plan is structurally consistent with the pumping reductions associated with the approved mitigation plan between IGWA and the SWC. There are 6,453.9 water right acres currently owned by participating members of UBLRGWD. UBLRGWD, under this Plan, proposes for a one (1) year period subject to renewal or modification based on updated ESPA modeling, tributary integration, and administrative requirements established by IDWR. Then renewable with consideration of additional data or requirements beginning with the 2026 irrigation season:

(a) perform groundwater conservation equivalent to that of the IGWA ground water districts;

(b) lease/rent storage water as an additional supply of water to be specified and delivered as described in Exhibit B, attached.

(c) may also perform ground water recharge within Water District 34 in which case, UBLRGWD will receive 12.2% of a 1:1 credit for each acre-foot of recharge that occurs in the Big Lost River Tributary. Recharge sites would be approved by IDWR and appropriate measurement devices be in place to measure recharge managed by Water District 34 Recharge Committee. Recharge crediting shall be applied as approved by IDWR based on verified measurement, location, timing, and demonstrated hydrologic benefit, consistent with CM Rule 43 and the Methodology Order.

(d) The SWC right to reasonable carryover storage will be addressed, if necessary, if the IDWR Director issues a Final Order Establishing Reasonable Carryover, (methodology step 9) in any given year finding and establishing a reasonable carryover shortfall. Junior ground water users holding consumptive ground water rights within the ESPA ACGWS bearing priority dates junior to a determined priority date, must mitigate for the reasonable carryover shortfall in accordance with an approved mitigation plan, or be subject to curtailment. Any unused pumping volume or recharge credit during an annual season may be used as credit toward carryover shortfall in whole or part.

UBLRGWD proposes to perform ground water conservation equivalent to the IGWA participating ground water districts by reducing groundwater diversion by 11.4%, the average pumping reduction required of signatory ground water districts in the IGWA-SWC mitigation plan. The calculated baseline for this reduction will be based on District groundwater diversion amounts from 2013-2015. These years are close to the 2010-2014 baseline used by IGWA and the SWC. While ground water usage data has been collected within Water District 34 for many years, ground water diversion measurements were incomplete before 2013, which is the year when IDWR first required measuring devices on every ground water diversion in this basin. Therefore, records of ground water use prior to 2013 do not provide a reliable representative baseline. Additionally, the 2013 irrigation season was exceptionally dry, the 2014 season was exceptionally wet at the end of the season, and the 2015 season was above average with a wet spring. Collectively, these years adequately represent average climatic conditions and, therefore, average ground water diversions. The following numbers represent the most accurate data available at this point. From 2013-2015, average groundwater diversions for UBLRGWD members totaled 9,449 acre-feet +/-, equivalent to roughly 1.9 acre-feet of ground water pumping per ground water right acre. The proposed 11.4% reduction equates to a ground water diversion reduction of 1,077.2 acre-feet. This results in a total annual allocation of groundwater diversion volume to District patrons of 8,371.8 acre-feet +/- . As additional water users join the District, the additional user's historic pumping (2013-2015) will be added into both the baseline and reduction calculations, which the District will update each year. Any unused pumping volume will carry over to the following one-year compliance period. The following year, District will further provide any and all data and information of the type required by the settlement agreement between IGWA and the SWC.

In addition to the pumping reductions described above, as a component to the Plan, UBLRGWD proposes to provide to the SWC, delivered as they require, every year this Plan is in effect, 231 +/- Acre feet of 'Wet Water' or \$16,170 for the SWC to utilize for their desired purposes. Any cash payment made in lieu of direct wet-water delivery shall be used by the SWC solely for leasing storage water capable of delivery in a manner and timeframe that offsets material injury as determined under the Methodology Order.

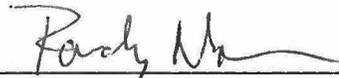

UBLRGWD shall provide annual accounting and verification of conservation, mitigation payments, and any supplemental water actions to IDWR and the SWC.

II. REQUEST FOR RELIEF

UBLRGWD hereby requests that the Director:

1. Advertise the Plan as required under the CM Rules;
2. If necessary, hold a hearing regarding this Plan pursuant to CM Rule 43.02; and
3. Enter an order approving the Plan upon such terms and conditions as may be reasonable and necessary to comply with CMR 43.

RESPECTFULLY SUBMITTED BY:

Randy Nelson-Chairman of the Board
Upper Big Lost River Ground Water District
