Attorneys for Byron and Loy Pehrson

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	Docket No. P-DR-2024-001 **PETITION FOR DECLARATORY RULING FOR WATERMASTER INSTRUCTIONS**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	

COMES NOW Byron Pehrson, Loy Pehrson, and Randy Pehrson ("Pehrson" or "Pehrsons"), by and through their attorneys of record, McHugh Bromley, PLLC, and pursuant to IDAPA 37.01.01.300.02.d, hereby file this *Petition for Declaratory Ruling for Watermaster Instructions* regarding delivery of certain water rights from the Big Lost River in Water District No. 34 and releases of storage water from Mackay Reservoir as carriage water to satisfy natural flow rights from the Big Lost River. The *Petition* seeks two forms of relief:

(1) Instruct the Water District No. 34 Watermaster that when the natural flow in the Big Lost River at USGS Gage #13127000 ("2B Gage") located at T07N, R24E, S18, SWNE, B.M. is 187 cfs or less for three (3) consecutive days, water right nos. 34-182 and 34-381A, held by Moss Farms, Inc., shall only be entitled to divert from the 3 in 1 Ditch, located at T06N, R25E, S14, SENWSE, and shall not be entitled to also divert from the Big Lost River at T06N, R26E, S32, SENW, unless and until the natural flow in the Big Lost River exceeds 500 cfs at the 2B Gage for three (3) consecutive days.

(2) Instruct the Water District No. 34 Watermaster to make futile calls on the river as if storage water is not available as carriage water for natural flow water rights. If storage water is added to natural flow, futile call determinations can change to the detriment of natural flow water users. Natural flow water users are entitled to delivery determinations being made in the same manner as when their appropriations were made, prior to the creation of storage.

The Petition is supported by the *Declaration of Chris M. Bromley* ("Bromley Dec.").

I. INTRODUCTION

A. The Moss Water Rights

Water right nos. 34-182 and 34-381A ("Moss Water Rights") were partially decreed on November 20, 1998 by the Snake River Basin Adjudication district court ("SRBA") to Catherine M. and Lee J. Watson with a single point of diversion at what is locally known as the "3 in 1 Ditch." The Moss Water Rights are summarized as follows:

	Water Right No. 34-182	**Water Right No. 34-381A**
Source:	Big Lost River, tributary to Sinks	Big Lost River, tributary to Sinks
Quantity:	1.60 cfs[1]	2.40 cfs
Priority Date:	6/1/1883	9/26/1894
Point of Diversion:	T06N, R25E, S14, SENWSE, Butte County	T06N, R25E, S14, SENWSE, Butte County
Purpose of Use:	Irrigation	Irrigation

[1] Water right nos. 34-182 and 34-381A are limited to a total combined diversion rate of 5.20 cfs.

Place of Use:	T06N, R26E, S31, SWNE (40 ac), SENE (26 ac), NESE (39 ac), NWSE (39 ac), SWSE (25 ac); T06N, R26E, S32, SWNW (8 ac), NWSW (35 ac), totaling 212 acres[2]	T06N, R26E, S31, SWNE (40 ac), SENE (26 ac), NESE (39 ac), NWSE (39 ac), SWSE (25 ac); T06N, R26E, S32, SWNW (8 ac), NWSW (35 ac), totaling 212 acres[3]

On November 13, 2012, Moss filed a *Notice of Change in Water Right Ownership* with IDWR, changing ownership of water right nos. 34-182, 34-381A, and 34-2379F from the Watsons to Moss. On November 16, 2012, IDWR changed ownership of water right nos. 34-182, 34-381A, and 34-2379F from Watsons to Moss. On December 11, 2012, IDWR acknowledged Zions First National Bank's security interest in the water rights.

On April 6, 2015, Moss filed an *Application for Transfer of Water Right* ("Moss Transfer") as to water right nos. 34-182 and 34-381A seeking to: "Add a point of diversion to my Big Lost River rights to allow me to pump directly from the river." *Transfer* at 2, ln. A.2 (emphasis added). According to the Moss Transfer, the existing diversion at the 3 in 1 Ditch would be retained and a new point of diversion would be located downstream at: T06N, R26E, S32, SENW ("River Diversion").

On April 10, 2015, Lucas Yockey, Watermaster for Water District No. 34 ("Watermaster Yockey"), stated he did not oppose the Moss Water Rights listing both the 3 in 1 Ditch and the River Diversion as authorized points of diversion.

On June 15, 2015, IDWR agent Michael Holliday, reviewed the Moss Transfer, finding there would be no injury to existing water rights if it was approved: "The watermaster reviewed

[2] Water right nos. 34-182, 34-381A, and 34-2379F are limited to the irrigation of a combined total of 200 acres in a single irrigation season.

[3] Water right no. 34-381A is limited to the irrigation of 120 acres within the 212 place of use in a single irrigation season.

the application and did not oppose its approval. . . . . The transfer was advertised and no protests were filed." *Memorandum* (6/15/2015).

On June 30, 2015, James Cefalo, Water Resources Program Manager, approved the Moss Transfer, thereby adding the River Diversion to the existing 3 in 1 Ditch as authorized points of diversion for the Moss Water Rights.

B. The Pehrson Water Rights

The Pehrsons are authorized to use water right nos. 34-10236, 34-14189, 34-14193, 34-14207, 34-14209 ("Pehrson Water Rights") for irrigation and stockwater purposes from the Big Lost River, diverted at locations including the 3 in 1 Ditch. The Perhrson Water Rights are summarized as follows:

Water Right No.	**Priority Date**	**Quantity**	**Irrigated Acres**
34-10236	5/30/1885	2.0 cfs	100 acres within a 313-acre PPU
34-14189	6/1/1885	1.54 cfs	77 acres within a 645-acre PPU
34-14193	6/1/1888	0.77 cfs	38.5 acres within a 645-acre PPU
34-14207	6/30/1885	3.08 cfs	154 acres within a 645-acre PPU
34-14209	9/14/1886	2.31 cfs	115.5 acres within a 645-acre PPU

In recent years, the Pehrson Water Rights have been curtailed prior to the historical cutoff dates for two reasons. First, in dry years, water has been delivered to the Moss Water Rights at the River Diversion, as opposed to the historic point of diversion located at the 3 in 1 Ditch, causing an earlier curtailment of the Pehrson Water Rights than normal. Second, storage water releases from Mackay Reservoir have been used as carriage water to shepherd the Moss Water

Rights to the River Diversion, resulting in curtailment of the Pehrson Water Rights earlier than would have occurred without the construction of Mackay Dam.

C. 3 in 1 Ditch Watermaster Instructions

Since approval of the Moss Transfer, water has been delivered to Big Lost River water users in varying water conditions. Watermaster Yockey was the watermaster at the time of the Moss Transfer and resigned his position in 2022. The current watermaster for Water District No. 34, Preston Marcroft ("Watermaster Marcroft"), succeeded Watermaster Yockey. Based on their years of experience delivering water rights in Water District No. 34 in any number of conditions, the current and former watermasters believe the following instruction should be adopted by the Department to address when the Moss Water Rights may be diverted at the 3 in 1 Ditch and/or River Diversion:

> When the natural flow of the river at the 2B gauging station reaches 187 cfs[] or less (inflow in the Mackay Reservoir) for 3 (three) consecutive days, the point of diversion for water right 34-182 [and 34-381A] will move upstream to the original point of diversion, 3 and 1 heading located at the Blaine Diversion. When the natural flow of the river EXCEEDS 500 cfs at the 2B gauging station for 3 (three) consecutive days, then water right 34-182 [and 34-381A] may be moved to the river.

Bromley Dec., Ex. 1 (emphasis in original) (footnote omitted explaining averaging of inflows to Mackay Reservoir).

D. Mackay Reservoir Watermaster Instructions

Mackay Dam was completed in 1918 making storage of water in Mackay Reservoir junior to the Pehrson Water Rights and the Moss Water Rights. Because Mackay Dam was constructed before perfection of the Pehrson Water Rights and the Moss Water Rights, releases of storage water can be used, improperly, to augment or supplement Big Lost River flows when flow in the River would otherwise be insufficient to carry natural flow rights. Current Watermaster Marcroft and past Watermaster Yockey agree that storage releases from Mackay

Reservoir should not be used to augment or supplement flow in the Big Lost River when natural flow would otherwise be insufficient to deliver natural flow water rights. *Bromley Dec., Ex. 2*.

II. ARGUMENT

A. The Department Should Approve Watermaster Instructions for Proper Administration of the Moss Water Rights in Times of Shortage

It is blackletter law that junior water users are entitled to the conditions of the stream as they found them when they perfected their water rights. *Washington State Sugar Co. v. Goodrich*, 27 Idaho 26, 41, 147 P. 1073, 1078 (1915); *Bennett v. Nourse*, 22 Idaho 249, 253, 125 P. 1038, 1039 (1912). When the Moss Water Rights were partially decreed by the SRBA, the sole point of diversion was the 3 in 1 Ditch; thus, the Pehrson Water Rights, which are junior, are entitled to the conditions of the Big Lost River as they existed when their rights were perfected. When the Moss Transfer was approved, it is critical to understand that it did not *omit* the 3 in 1 Ditch as a point of diversion, it instead *added to* the Moss Water Right descriptions by authorizing the River Diversion as a second point of diversion. *Transfer* at 2, ln. A.2 (purpose of the *Transfer* was to "Add a point of diversion to my Big Lost River rights to allow me to pump directly from the river") (emphasis added).

Since the Moss Transfer was approved, watermasters Yockey and Marcroft have delivered water in any number of conditions. Based on their experience, and in order to preserve streamflow conditions for the Pehrsons as they existed when their rights were perfected, the Department should adopt the following watermaster instruction to explain when the Moss Water Rights may use the 3 in 1 Ditch and River Diversion:

> When the natural flow in the Big Lost River at USGS Gage #13127000 ("2B Gage") located in the T07N, R24E, S18, SWNE, B.M. is 187 cfs or less for three (3) consecutive days, water right nos. 34-182 and 34-381A, held by Moss Farms, Inc., shall only be entitled to divert from the 3 in 1 Ditch, located at T06N, R25E, S14, SENWSE, and shall not be entitled to also divert from the Big Lost River at

> T06N, R26E, S32, SENW, unless and until the natural flow in the Big Lost River exceeds 500 cfs at the 2B Gage for three (3) consecutive days

This is particularly important because the River Diversion for the Moss Water Rights is located below the Darlington Sinks, so losses in the Big Lost River downstream from the original point of diversion at the 3 in 1 Ditch are significant.

B. The Department Should Issue Watermaster Instructions Defining When Futile Call Exists for Natural Flow Water Rights But for Storage Water Releases from Mackay Reservoir

Recently, the Idaho Supreme Court had occasion to review watermaster instructions issued by the Department in Basin 95, holding it was proper for the Department to ensure delivery of natural flow rights but for the addition of storage water releases:

> The stored waters are already appropriated, making them unavailable for redistribution to satisfy Sylte's natural flow water right. *See Washington Cnty. Irr. Dist. v. Talboy*, 55 Idaho 382, 389, 43 P.2d 943, 945 (1935) ("After the water was diverted from the natural stream and stored in the reservoir, it was no longer 'public water' subject to diversion and appropriation under the provisions of the Constitution."); *see also Am. Falls Reservoir Dist. No. 2 v. Idaho Dep't of Water Res.*, 143 Idaho 862, 879, 154 P.3d 433, 450 (2007) ("when water is stored, it becomes 'the property of the appropriators ... impressed with the public trust to apply it to a beneficial use.' ") (quoting *Talboy*, 55 Idaho at 389, 43 P.2d at 945).
>
> The Instructions are in harmony with the Final Decree. The Instructions generally prohibit the watermaster from releasing water to satisfy Rathdrum Creek water rights when seepage and evaporation losses exceed the natural tributary inflow, while still upholding the exception carved out for Sylte and giving it priority over junior rights.

Sylte v. Idaho Dept. of Water Res., 165 Idaho 238, 245, 443 P.3d 252, 259 (2019).

Consistent with *Sylte*, natural flow water users are entitled to delivery determinations being made in the same manner as when their rights were first appropriated, which in this case is prior to construction of Mackay Dam. The Department should therefore adopt watermaster instructions explaining that storage releases from Mackay Reservoir cannot be used to augment

or supplement natural flow in the Big Lost River to the detriment of appropriators whose water rights pre-date storage of water in Mackay Reservoir.

III. CONCLUSION

Based on the foregoing, the Department should: (1) adopt watermaster instructions that are substantially similar to the instructions prepared by watermasters Yockey and Marcroft as to use of the 3 in 1 Ditch and River Diversion for the Moss Water Rights; and (2) adopt watermaster instructions explaining that storage releases from Mackay Reservoir cannot be used to augment or supplement natural flow in the Big Lost River to the detriment of appropriators whose water rights pre-date storage of water in Mackay Reservoir.

Pehrsons are interested in having the matter resolved in time for the 2024 irrigation season. The Director has discretion under the Department's Rules of Procedure to begin consideration of this matter with either formal or informal proceedings. IDAPA 37.01.01.100. Based on the Department's procedural rules, Pehrsons respectfully request that informal proceedings be used first to resolve the issues presented in this contested case.

Attorney for Moss Farms, Inc.

RECEIVED
Feb 23, 2024
DEPARTMENT OF
WATER RESOURCES

STATE OF IDAHO
DEPARTMENT OF WATER RESOURCES

In the matter of Water Right Nos. 34-182 and 34-381A (Moss Farms, Inc.)	**OBJECTION TO PETITION FOR DECLARATORY RULING FOR WATERMASTER INSTRUCTIONS**
In the matter of use of natural flow from the Big Lost River and Storage Releases from Mackay Reservoir	Docket No. P-DR-2024-001

Moss Farms, Inc. (hereafter "Moss Farms"), by and through its attorney of record, Skyler C. Johns, of Olsen Taggart PLLC, hereby objects to the *Petition for Declaratory Ruling for Water Master Instructions* (hereafter "Petition") filed by Byron Pehrson and Loy Pehrson (hereafter "Petitioners"). Moss Farms respectfully requests the Director of the Idaho Department of Water Resources (hereafter "Director") reject the petition and not consider it for the following reasons:

1) Idaho Code § 67-5255(1) does not authorize the Director to grant the declaratory relief requested by Petitioners;

2) The Petitioners' time to challenge the Moss Farms' Water Rights has expired pursuant to Idaho Code §§ 42-222 & 42-5246;

3) The relief requested violates legal principles of priority administration and is against public policy; and

4) The doctrine of *res judicata* bars the relief requested by Petitioners.

I.
BACKGROUND OF THE DISPUTE

The instant Petition seeks to limit the use of senior water rights on the Big Lost River. Water Right No. 34-182 bears a priority date of 1883. Water Right No. 34-381A bears a priority date of 1894. Pursuant to Idaho Code § 42-222, Moss Farms filed an application to transfer the point of diversion for both these rights. *See Application for Transfer of Water Rights No. 79972*.

The Watermaster for Basin 34 at the time did not object to the transfer, nor did the Director find that the transfer would injury or otherwise violate requirements set forth in Idaho Code § 42-222. *See record* for Water Right Nos. 34-381A and 34-182. On June 30, 2015, the Idaho Department of Water Resources (hereafter IDWR") approved Moss Farms' application to transfer Water Right No. 34-381A and 34-182. Neither of these applications were protested by the Petitioners, nor was judicial review of the final order of the Director sought by the Petitioners. *Id.*

Relying on this final order, Moss Farms invested hundreds of thousands of dollars in infrastructure to take water from his new point of diversion. Water rights in Basin 34 have been administered for nearly nine years since Moss Farms' transfers were approved.

Having failed to bring an appropriate action in the past, Petitioners are now seeking to place conditions on the water rights of Moss Farms under the guise of "Watermaster Instructions". However, as will be set forth in detail below, Idaho law and public policy do not permit the declaratory relief sought by the Petitioners.

II.
ARGUMENT

1) Idaho Code § 67-5255(1) does not authorize the Director to grant the declaratory relief requested by Petitioners.

The declaratory ruling sought by Petitioners seeks relief unavailable to them under Idaho Code § 67-5255 – Declaratory Ruling by Agencies – because it is not requesting a ruling as to the

applicability of any order. Petitioners cite Rule 300.02.d. as the sole legal basis for their Petition, but this rule does not provide grounds for the declaratory relief they seek. In fact, this section merely states, "Petitions for declaratory orders shall state the declaratory ruling that the petitioner seeks." Thus, the title 67, chapter 5, The Idaho Administrative Procedures Act, must be consulted to determine the Director's authority.

IDWR is an agency within the meaning Idaho Administrative Procedure Act. *See* Idaho Code § 67-5201(3). Therefore, Idaho Code § 67-5255(1) applies to IDWR. This section only permits a person to petition IDWR "for a declaratory ruling as to the applicability of any order issued by the agency." *Id.* at (1).

Here, the Petition does **not** seek a declaratory ruling as to the applicability of any specific order issued by the Department. Rather, Petitioners are requesting the Director provide instructions to the Watermaster for Water District No 34, which amount to nothing more than a collateral attack on adjudicated water rights and the prior order approving transfer of those water rights.

Even if it did, IDAPA Rules do not control over the statute, as the Statute is the governing law. In short, the Petitioners are not challenging any order of the Department, and, therefore, the Director lacks authority to grant the requested declaratory relief under Idaho Code § 67-5255(1).

2) The Petitioners time to challenge the Moss Farms' Water Rights has expired.

The instant Petition seeks to limit the use of the water may be considered the most senior water right on the Big Lost River by making a collateral attack on the rights themselves. It is undisputed that the adjudicated priority dates of these rights are senior to the Protestants. It is also undisputed that the orders approving the transfer applications of Moss Farms for these water rights constituted final orders. *See* Idaho Code §§ 42-222 & 42-5246.

Petitioners were given notice and an opportunity to participate in proceedings and to protest the water right transfer. They did not. They also did not move to reconsider or otherwise seek declaratory relief consistent with the deadlines prescribed in Idaho Code §§ 42-222 or 42-5246. As such, the Orders approving Moss Farms' transfers are final order that Petitioners lack any legal grounds to now modify or undue. The order on the Moss Farms' transfers have been final for nearly nine (9) years.

3) The relief requested violates legal principles of priority administration (e.g., first-in-time-first-in-right), and is against public policy.

There is no dispute that water rights in Idaho are administered on a time priority basis, which give priority to senior water right holders – not juniors. "The prior appropriation doctrine consists of two core principles, 'that the first appropriator in time is the first in right and that water must be placed to a beneficial use.'" S. *Valley Ground Water Dist. v. Idaho Dep't of Water Res., No. 49632*, 2024 WL 136840, at *15 (Idaho Jan. 12, 2024), as amended (Jan. 12, 2024) (*citing A&B v. Spackman*, 155 Idaho 640, 650, 315 P.3d 828, 838 (2013)). Petitioners requested relief artfully attempts to argue for watermaster instructions that ignore this doctrine and allow junior water users to divert out of priority.

Electing to hear this Petition has the potential to open a Pandora's Box of litigation by junior water right holders. If IDWR accepts the premise of this Petition, any junior who is aggrieved by a senior water user may potentially seek declaratory relief declaring new watermaster's instructions limiting the use of senior water users. This would create grave uncertainty in the administration of water rights in the State for years. There is a reason the legislature limited the process and time in which orders of IDWR may be challenged. For these reasons, too, the Department should dismiss and not consider the instant Petition.

4) The doctrine of res judicata bars the relief requested by Petitioners.

The doctrine of res judicata bars the Director from granting the relief sought by Petitioners because the precise subject matter and issues in which they seek review were previously, considered, and adjudicated in the transfer application proceedings. *Sagewillow, Inc. v. Idaho Department of Water Resources* is instructive on the application of the doctrine of res judicata in this case:

> The doctrine of res judicata applies to administrative proceedings. *Hansen v. Estate of Harvey*, 119 Idaho 333, 806 P.2d 426 (1991); *J & J Contractors/O.T. Davis Constr. v. State by Idaho Transp. Bd.*, 118 Idaho 535, 797 P.2d 1383 (1990). In *Joyce v. Murphy Land & Irrigation Company*, 35 Idaho 549, 553, 208 P. 241, 242–43 (1922), this Court stated that the scope of the doctrine of res judicata was as follows:
>
> > We think the correct rule to be that in an action between the same parties upon the same claim or demand, the former adjudication concludes parties and privies not only as to every matter offered and received to sustain or defeat the claim but also as to every matter which might and should have been litigated in the first suit.
>
> The 'sameness' of a cause of action for purposes of application of the doctrine of res judicata is determined by examining the operative facts underlying the two lawsuits. *Houser v. Southern Idaho Pipe & Steel, Inc*., 103 Idaho 441, 649 P.2d 1197 (1982).

Sagewillow, Inc. v. Idaho Dep't of Water Res., 138 Idaho 831, 844, 70 P.3d 669, 682 (2003).

Here, Moss Farms water rights were transferred to a new point of diversion in 2015 and 2016 respectively. In reviewing these applications, IDWR was required to consider recommendations from the watermaster as to whether any injury would occur. Idaho Code § 42-222(1) provides in relevant part that:

> it shall be the duty of the director of the department of water resources to investigate the same and to conduct a hearing thereon. He shall also advise the watermaster of the district in which such water is used of the proposed change and the watermaster shall notify the director of the department of water resources of his recommendation on the application, and the director of the department of water resources shall not finally determine the action on the

> application for change until he has received from such watermaster his recommendation thereof, which action of the watermaster shall be received and considered as other evidence.
>
> ….
>
> The director of the department of water resources shall examine all the evidence and available information and shall approve the change in whole, or in part, or upon conditions, provided no other water rights are injured thereby, the change does not constitute an enlargement in use of the original right, the change is consistent with the conservation of water resources within the state of Idaho and is in the local public interest as defined in section 42-202B, Idaho Code, the change will not adversely affect the local economy of the watershed or local area within which the source of water for the proposed use originates, in the case where the place of use is outside of the watershed or local area where the source of water originates, and the new use is a beneficial use, which in the case of a municipal provider shall be satisfied if the water right is necessary to serve reasonably anticipated future needs as provided in this chapter.

The application for transfer of Moss Farms water rights was approved. Therefore, prior to approving the applications for transfer, the Director reviewed recommendations from the watermaster, determined there was no injury to other water rights, the transfer was consistent with conservation fin the state and was in the public interest, and the change did not adversely affect the local economy of the watershed or local area within Basin 34. These are the very issues that the Petitioners seek to relitigate in front of the Director. Because they were already addressed in the prior proceeding, the Director is barred from relitigating them now under the cloak of them being new instructions for the watermaster.

III.
CONCLUSION

The law simply does not authorize the Director to grant the relief requested, nor does the law permit the Director to relitigate the issues already resolved in the prior transfer proceeding. Allowing this Petition to move forward will also open a Pandora's Box of litigation from junior water right holders against seniors, and is, therefore against public policy. For these reasons, and

others not yet identified, Moss Farms respectfully request the Director reject the petition and not consider it.

Attorneys for Byron and Loy Pehrson

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	Docket No. P-DR-2024-001 **REPLY TO OBJECTION TO PETITION FOR DECLARATORY RULING FOR WATERMASTER INSTRUCTIONS**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	

COMES NOW Byron Pehrson, Loy Pehrson, and Randy Pehrson ("Pehrson" or "Pehrsons"), by and through their attorneys of record, McHugh Bromley, PLLC, and pursuant to IDAPA 37.01.01.300.02.d, hereby reply to the *Objection to Petition for Declaratory Ruling for Watermaster Instructions* ("Objection") filed by Moss Farms, Inc. ("Moss").[1] The *Objection*

[1] Pehrsons filed the *Petition* in accordance with IDAPA 37.01.01.300.02.d. Rule 300 does not provide for an objection or a response; rather, it requires agency notification to "persons likely to be interested in the subject matter of the petition," IDAPA 37.01.01.301. Pehrsons recognize that the Department's Procedural Rules are to be

should be considered untimely because it circumvents the procedures outlined in IDAPA 37.01.01.300.02.d and IDAPA 37.01.01.301. However, if the *Objection* is timely and procedurally proper, the relief requested should be denied because the Pehrsons are asking for watermaster instructions, not to undo the prior Transfer.

I. BECAUSE THE PROCEDURES IN IDAPA 37.01.01.301 HAVE NOT YET BEEN SATISFIED, THE MOSS OBJECTION IS UNTIMELY

On February 14, 2024, Pehrsons filed their *Petition for Declaratory Ruling for Watermaster Instructions*, pursuant to IDAPA 37.01.01.300.02.d, in order to be heard regarding the issues framed, with notice given "to persons likely to be interested in the subject matter of the petition." IDAPA 37.01.01.301. Pehrsons served the *Petition* on Moss's attorney because the request for watermaster instructions does implicate Moss's water rights, nos. 34-182 and 34-381A ("Moss Water Rights").

On February 23, 2024, Moss filed what is styled as an *Objection*, asking the Idaho Department of Water Resources ("IDWR") to "reject the petition and not consider it . . . ." *Objection* at 1. The *Objection* is untimely because the Department has not yet decided if notice of the *Petition* should be given to other water users in Basin 34 who may "be interested in the subject matter of the petition." *Id*. Consistent with IDAPA 37.01.01.301, the *Objection* should not be considered until IDWR has decided if further notice of the *Petition* should be given, with the topic discussed through informal proceedings, IDAPA 37.01.01.101.

"liberally construed to ensure just, speedy and economical determination of all issues presented to the agency." IDAPA 37.01.01.051. To the extent that the *Objection* is treated as a "response," IDAPA 37.01.01.220.02.b, the contents of this filing should be considered a "reply," IDAPA 37.01.01.220.02.c, and is why the pleading is captioned as a reply, and filed within seven (7) days of receiving the objection/response.

II. IF THE MOSS OBJECTION IS TIMELY, IT SHOULD BE DENIED

Turning to the substance of the *Objection*, it wrongly styles the *Petition* as an attempt to circumvent the prior Transfer, with various legal arguments against the relief sought. As explained in the *Petition*, the Transfer added a new point of diversion from the Big Lost River to the existing point of diversion at the 3 in 1 Ditch. *Petition* at 3. Said differently, the Transfer did not remove the existing diversion at the 3 in 1 Ditch from the water right descriptions. Because there are alternate points of diversion, the *Petition* correctly asks the Director to issue watermaster instructions that explain, for purposes of administration, when the points of diversion may be exercised, with the past and current watermasters stating that when "the natural flow at the 2B gauging station reaches 187 cfs or less (inflow in the Mackay Reservoir) for 3 (three) consecutive days, the point of diversion for [the Moss water rights] will move upstream to the original point of diversion, 3 in 1 heading located at the Blaine Diversion." *Id*. at 5.

1. Idaho Code § 67-5255 Supports The *Petition*

Citing Idaho Code § 67-5255(1), Moss claims that the relief sought in the *Petition* is barred because IDWR has not issued an "order" addressing the issue. *Objection* at 3. However, Moss's argument reads subsection (2) out of Idaho Code § 67-5255, with Idaho Code § 67-5255 stating in full:

> (1) Any person may petition an agency for a declaratory ruling as to the applicability of any order issued by the agency.
>
> (2) A petition for a declaratory ruling does not preclude an agency from initiating a contested case in the matter.
>
> (3) A declaratory ruling issued by an agency under this section is a final agency action.

I.C. § 67-5255 (emphasis added).

Principles of statutory construction require that Idaho Code § 67-5255 be read in full, "to give meaning to all of its provisions." *State v. Bever*, 118 Idaho 80, 82, 794 P.2d 1136, 1138 (1990); *see also Smith v. Excel Fabrication, LLC*, 172 Idaho 725, 731, 535 P.3d 1098, 1104 (2023) ("The statute should be considered as a whole."). Idaho Code § 67-5255 provides two pathways for a declaratory ruling: (1) to ask for relief after issuance of an order; and (2) to ask for relief through initiation of a contested case. When Idaho Code § 67-5255 is read in conjunction with IDAPA 37.01.01.300.02.d (contents of a petition for declaratory ruling), IDAPA 37.01.01.301 (notice of petition for declaratory ruling), and IDAPA 37.01.01.051 (liberal construction of the Department's procedural rules "to ensure just, speed and economical determination of all issues presented to the agency"), it is clear that IDWR may accept the *Petition*, decide if further notice of the relief sought to other interested water users is proper, to initiate a contested case, which will result in issuance of a final order. Thus, Idaho Code § 67-5255 supports the *Petition*.

2. The Petition Does Not Challenge The Moss Water Rights, It Asks For Watermaster Instructions To Clarify Administration Of the Moss Water Rights

Moss correctly states that the time to protest the Transfer has expired, with Moss arguing that due to the passage of time, the Transfer cannot be undone. To be clear, the Pehrsons are not asking IDWR to undo or otherwise alter the Transfer. As stated previously, the Transfer added the River Diversion to the Moss water right descriptions as an alternate point of diversion to the existing 3 in 1 Ditch. If the Pehrsons were challenging the Transfer, they would ask IDWR to remove the River Diversion as an authorized point of diversion from the Moss water rights; this is not, however, what the Pehrsons are seeking. The Pehrsons are instead asking the Director to exercise his discretionary authority, for purposes of water rights administration, *see e.g. Black Canyon Irr. Dist. v. State*, 163 Idaho 144, 157, 408 P.3d 899, 912 (2018) (explaining the

Director's discretion in administering water rights); *A&B v. State*, 157 Idaho 385, 394, 336 P.3d 792, 801 (2014) (same), to issue an order explaining when the River Diversion may be exercised, with issuance of watermaster instructions to govern the same.

3. The *Petition* Is Consistent With The Prior Appropriation Doctrine

Moss argues that the principle of "first in time is first in right" controls the outcome, with the Pehrsons unable to ask the Department to explain when the River Diversion may be exercised through watermaster instructions. However, as stated in the *Petition*, it is also blackletter law that junior water users are entitled to the conditions of the stream as they found them when they perfected their water rights. *Washington State Sugar Co. v. Goodrich*, 27 Idaho 26, 41, 147 P. 1073, 1078 (1915); *Bennett v. Nourse*, 22 Idaho 249, 253, 125 P. 1038, 1039 (1912). When the Moss Water Rights were partially decreed by the SRBA, the sole point of diversion was the 3 in 1 Ditch; thus, the Pehrson Water Rights, which are junior, continue to be entitled to the conditions of the Big Lost River as they existed when their rights were perfected.

When the Transfer added the River Diversion it did <u>not</u> omit or otherwise remove the 3 in 1 Ditch as an authorized point of diversion. As explained by the watermasters, there are certain flow regimes when the River Diversion may be exercised and certain flow regimes when the 3 in 1 Ditch should be used. Thus, the Pehrsons are asking for watermaster instructions to explain when the alternate points of diversion may be exercised.

Although not directly on point, asking for watermaster instructions of this nature finds support in the Supreme Court's decision in *City of Pocatello v. State*, wherein the Court held that the City of Pocatello could not exercise its alternate points of diversion to the detriment of junior-priority water rights, with administrative instructions to govern the same:

> IDWR recommended that each well could be an alternate point of diversion for all water rights associated with an interconnected system only if the water rights had

> an attached condition stating, "To the extent necessary for administration between points of diversion for ground water, and between points of diversion for ground water and hydraulically connected surface sources, ground water was first diverted under this right from Pocatello well [description] in the amount of ___ cfs." IDWR asserted that the condition was necessary to avoid injury to other water rights and to assist in the administration of water rights in times of shortage.
>
> The district court agreed, writing:
>
> > Specifically, injury to an existing water right is not limited to the circumstance where immediate physical interference occurs between water rights as of the date of the change. Injury also includes the diminished effect on the priority dates of existing water rights in anticipation of there being insufficient water to satisfy all rights on a source (or in this case a discrete region of the aquifer) and priority administration is sought.
>
> The court also noted, "The very fact that Pocatello contests the condition is an acknowledgment that without the condition the priorities of existing water rights will be diminished in favor of the alternative point of diversion for one of Pocatello's more senior rights. i.e. injury."

City of Pocatello v. State, 152 Idaho 830, 834-35, 275 P.3d 845, 849-850 (2012) (emphasis added).

Like Pocatello, the fact that Moss is contesting the issuance of watermaster instructions demonstrates that he understands that the River Diversion alters administration in a manner against the Pehrsons.[2]

4. The Doctrine Of *Res Judicata* Does Not Bar The *Petition* Because There Is No "Sameness" In The Cause Of Action

As with other arguments, Moss conflates the relief sought in the *Petition* with an attempt to reframe the relief sought as an attack on the prior Transfer, barred by the doctrine of *res judicata*. Again, and as stated previously, the Pehrsons are not attempting to undo or otherwise

[2] The issuance of watermaster instructions is not novel and can be necessary for proper administration of water rights. *See e.g. In the Matter of the Petition Filed by Aberdeen-Springfield Canal Company Regarding Distribution of Natural Flow by Water District 01* (Jan. 18, 2017) (initiation of a contested case by Aberdeen-Springfield Canal Co. regarding inequitable distribution of natural flow in the Shelley to At Blackfoot reach of the Snake River); *Final Order Regarding Instructions to Water District 01 Watermaster, In the Matter of Water Right No. 1-6* (Feb. 11., 2013); *Notice of Contested Case and Formal Proceedings, and Notice of Status Conference In the Matter of Accounting for Distribution of Water to the Federal On-stream Reservoirs in Water District 1* (Oct. 22, 2013).

unravel the Transfer, they are instead asking the Director to exercise his discretionary authority, for purposes of administration, to instruct the watermaster as to when the alternate points of diversion may be exercised. Thus, there is no "sameness" in the cause of action as explained in *Sagewillow, Inc. v. Idaho Dept. of Water Res.*, 138 Idaho 831, 844, 70 P.3d 669, 682 (2003), that would trigger *res judicata*. As stated in *Sagewillow*:

> The "sameness" of a cause of action for purposes of application of the doctrine of res judicata is determined by examining the operative facts underlying the two lawsuits.
>
> . . . .
>
> An application to transfer the point of diversion or place of use of a water right is made by the party claiming the water right. Any claim that the water right had been abandoned or forfeited in whole or in part by nonuse would be an issue raised either by the Department or a third party. Ordinarily, issues of forfeiture or abandonment are not adjudicated in a transfer proceeding, although they can be. It would be a substantial burden upon the Department to require that in response to every transfer application it conduct an investigation into whether the water right(s) involved had been lost or reduced by forfeiture or abandonment. Therefore, we hold that if forfeiture or abandonment is not actually raised as an issue in a proceeding to transfer the point of diversion or place of use of a water right, the final order in the transfer proceeding is not res judicata on the issue of whether the water right at issue had been forfeited or abandoned.

Id. at 844-45, 70 P.3d at 682-83.

Here, asking for watermaster instructions is not the same as what was at issue when the Transfer was filed. Then, Moss was asking for approval to add the River Diversion as a point of diversion to the existing 3 in 1 Ditch. Pehrsons did not protest the Transfer because diverting the Moss water rights at the River Diversion can occur in certain years without altering administration of existing water rights, evidenced by the statements of the watermasters. Today, the Pehrsons are asking the Director to exercise his discretionary authority, for purposes of ongoing administration, to explain under what flow conditions the River Diversion may be used. If every administrative outcome had to be considered during a transfer proceeding, that would

place a "substantial burden upon the Department." *Id*. at 845, 70 P.3d at 683. Thus, the relief requested in the *Petition* is not the same from whether the River Diversion could ever be added as a point of diversion and is not barred by *res judicata*.

III. CONCLUSION

Based on the foregoing, the *Objection* is untimely and should not be considered until at least the procedures outlined in IDAPA 37.01.01.300.02.d, IDAPA 37.01.01.301, and IDAPA 37.01.01.101, have been satisfied. If, however, the *Objection* is timely and procedurally proper, the relief in the *Objection* should be denied because the Pehrsons are not asking to undo the Transfer, instead they are asking for the Director to exercise his discretion, for purposes of ongoing water rights administration, to issue watermaster instructions explaining when the alternate points of diversion may be used.

Attorney for Big Lost River Irrigation District

BEFORE THE DEPARTMENT OF WATER RESOURCES
OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	)	Docket No. P-DR-2024-001
	)	**BLRID'S PETITION TO INTERVENE**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	)	Filing Fee: Exempt I.C. § 67-2301

Big Lost River Irrigation District (BLRID), an irrigation district organized and operating pursuant to the laws of the State of Idaho, petitions the Director pursuant to Rules 350 through 354 of the Rules of Procedure of the Idaho Department of Water Resources (IDWR) and other applicable law to enter an order authorizing BLRID to intervene in the above entitled matter on the following grounds:

1. A Petition for Declaratory Ruling for Watermaster Instructions ("Petition") dated February 14, 2024 was filed on behalf of Byron Pehrson and Loy Pehrson seeking two (2) forms of relief describing two (2) requested watermaster instructions.

2. The Big Lost River is a source of storage water for Mackay Reservoir, which is owned

and operated by BLRID for the benefit of its waterusers. In addition, BLRID delivers storage water and natural flow water to waterusers located within the boundary of BLRID.

3. The manner in which natural flow rights are delivered can materially affect the storage of water, the delivery of storage water and natural flow water and the accounting for the delivery of natural flow and storage rights.

4. BLRID is uniquely situated as the only irrigation district located on and diverting from the Big Lost River.

5. BLRID asserts that it should be allowed to intervene in the proceeding in order to participate in any negotiations and hearings that may affect BLRID and that address the terms of the watermaster instructions.

6. BLRID reserves the right to address any issue raised in this proceeding and at the hearing on this matter that pertains to or affects the delivery of storage water to Mackay Reservoir and the delivery of storage water and natural flow to waterusers located within BLRID.

7. This Petition is timely; this matter has not been given a Docket Number and has not been scheduled for any hearing.

8. For all of the foregoing reasons, BLRID has a direct and substantial interest in the outcome of this proceeding and should be allowed to intervene.

9. For the purposes of this proceeding the name and address of BLRID shall be:

Big Lost River Irrigation District
c/o Fletcher Law Office
P.O. Box 248
Burley, Idaho 83318
208-678-3250
208-878-2548 (fax)
wkf@pmt.org

Wherefore, BLRID requests that the Director enter an order granting this Petition and authorizing the intervention of BLRID into this proceeding.

Dated April 12, 2024

OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	Docket No. P-DR-2024-001 **NON-OPPOSITION TO BIG LOST RIVER IRRIGATION DISTRICT'S PETITION TO INTERVENE; RENEWED REQUEST FOR INFORMAL SETTLEMENT CONFERENCE**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	

COMES NOW Byron Pehrson, Loy Pehrson, and Randy Pehrson ("Pehrsons"), by and through their attorneys of record, McHugh Bromley, PLLC, and hereby notice their non-opposition to the Big Lost River Irrigation District's ("BLRID") *Petition to Intervene* and further renew their request for the Idaho Department of Water Resources ("IDWR") to set an informal settlement conference to discuss the issues raised by the Pehrsons in their February 14, 2024, *Petition for Declaratory Ruling for Watermaster Instructions* ("Petition").

While responsive briefing was filed by Moss Farms, Inc. in opposition to the *Petition*, a decision has not yet been issued by IDWR. With BLRID's recently filed *Petition to Intervene*, and given that a decision has not been issued, Pehrsons' believe it is appropriate to bring the parties together, through an informal settlement conference, to discuss the issues raised in the *Petition* and the parties' positions and interests.

Attorneys for Byron Pehrson, Loy Pehrson, and Randy Pehrson

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	Docket No. P-DR-2024-001 **RENEWED REQUEST FOR INFORMAL SETTLMENT CONFERENCE; REQUEST FOR STATUS CONFERENCE; and FILING OF STATEMENT FROM WATER DISTRICT #34 ADVISORY BOARD**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	

COMES NOW Byron Pehrson, Loy Pehrson, and Randy Pehrson ("Pehrsons"), by and through their attorneys of record, McHugh Bromley, PLLC, and pursuant to IDAPA 37.01.01.300, hereby files this *Renewed Request for Informal Settlement Conference; Request for Status Conference, and Filing of Statement from Water District #34 Advisory Board* for consideration by the Idaho Department of Water Resources ("IDWR" or "Department").

I. BACKGROUND

The above-captioned contested case was initiated by Pehrsons on February 14, 2024 – more than 100 days ago – through the filing of a *Petition for Declaratory Ruling for Watermaster Instructions* ("Petition"). In summary, the *Petition* sought a ruling from IDWR that the Director should:

> (1) adopt watermaster instructions that are substantially similar to the instructions prepared by watermasters Yockey and Marcroft as to the use of the 3 in 1 Ditch and River Diversion for the Moss Water Rights; and (2) adopt watermaster instructions explaining that storage releases from Mackey Reservoir cannot be used to augment or supplement natural flow in the Big Lost River to the detriment of appropriators whose water rights pre-date storage of water in Mackey Reservoir.

Petition at 8.

The *Petition* further requested that, in order to resolve the matter "in time for the 2024 irrigation season . . . Pehrsons respectfully request that . . . [pursuant to] IDAPA 37.01.01.100 . . . informal proceedings be used first to resolve the issues presented in this contested case." *Id*.

On February 23, 2024, Moss Farms, Inc. filed an *Objection to Petition for Declaratory Ruling for Watermaster Instructions* ("Opposition"). For various procedural reasons, the *Opposition* asked the Director to reject the *Petition* out-of-hand.

On March 1, 2024, Pehrsons addressed the *Objection* through their *Reply to Objection to Petition for Declaratory Ruling for Watermaster Instructions*.

On April 12, 2024, the Big Lost River Irrigation District filed a *Petition to Intervene* "BLRID Intervention").

On April 19, 2024, Pehrsons filed a *Notice of Non-Opposition to BLRID's Petition to Intervene; Renewed Request for Informal Settlement Conference*, in which Pehrsons stated they did not oppose the *BLRID Intervention* and further stated, "given that a decision has not been issued, Pehrsons' believe it is appropriate to bring the parties together, through an informal

settlement conference, to discuss the issues raised in the *Petition* and the parties' positions and interests." *Notice of Non-Opposition to BLRID's Petition to Intervene; Renewed Request for Informal Settlement Conference* at 2.

To date, the Department has not issued any orders in the above-captioned matter, nor has it responded to Pehrsons' requests for an informal settlement conference.

II. RENEWED REQUEST FOR INFORMAL SETTLMENT CONFERENCE

Pehrsons hereby renew their request for the Department to set a date and time for an informal, as soon as practicable. The 2024 irrigation season has begun and storage water will begin to be used in approximately 30-45 days. The time is therefore ripe to bring the parties together to discuss the issues without the need for further litigation.

III. REQUEST FOR STATUS CONFERENCE

If IDWR is not inclined to set an informal settlement conference, Pehrsons hereby request that the Department set a date and time for a status conference, as soon as practicable, so the Pehrsons can understand whether or not the *Petition* will be addressed.

IV. FILING OF STATEMENT FROM WATER DISTRICT #34 ADVISORY BOARD

Attached herewith for filing is a statement from the Water District #34 Advisory Board, in support of the recommendations from watermasters Yockey and Marcroft, which were included in the *Petition*.

V. CONCLUSION

Based on the foregoing, Pehrsons respectfully request that, in order to allow the parties to understand where matters stand for the 2024 irrigation season, the Department should either set a date and time for an informal settlement conference or a status conference.

DATED this 29th day of May, 2024.

RE: Water Master Instructions

The Advisory Board of Water District #34 supports the current and past Water Master's recommendations that pertain to Water Rights 34-182 and 34-381A to prevent injury to the Water Rights upstream.

Respectfully,

Water District #34

Advisory Board

Ver Ron Roche Advisory Board Chairman

Cc: Chris M Bromley, ATTY

380 South 4Th Street

Ste #103

Boise, ID 83702

Water Right 34-182 (Moss)

When the natural flow of the river at the 2B gauging station reaches 187 cfs[1] or less (inflow in the Mackay Reservoir) for 3 (three) consecutive days, the point of diversion for water right 34-182 will move upstream to the original point of diversion, 3 in 1 heading located at the Blaine Diversion. When the natural flow of the river EXCEEDS 500 cfs at the 2B gauging station for 3 (three) consecutive days, then water right 34-182 point of diversion may be moved to the river.

Preston Marcroft

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	**Docket No. P-DR-2024-001**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	**NOTICE OF PREHEARING CONFERENCE** **ORDER APPOINTING HEARING OFFICER**

BACKGROUND

On February 14, 2024, Byron Pehrson, Loy Pehrson, and Randy Pehrson ("Pehrsons") submitted a *Petition for Declaratory Ruling for Watermaster Instructions* ("*Petition*") and a supporting *Declaration of Chris M. Bromley* with the Idaho Department of Water Resources ("Department"). The *Petition* asks the Director to issue watermaster instructions to the Water District 34 watermaster "to address when the Moss Water Rights may be diverted" and explain that "storage releases from Mackay Reservoir cannot be used to augment or supplement natural flow in the Big Lost River to the detriment of appropriators whose water rights pre-date storage of water in Mackay Reservoir." *Petition* at 5, 8. The *Petition* also requests the Department to begin consideration of this matter with informal proceedings. *Id.* at 8.

On February 23, 2024, Moss Farms, Inc. ("Moss Farms"), filed an *Objection to Petition for Declaratory Ruling for Watermaster Instructions* ("*Response*") with the Department.[1] In its *Response*, Moss Farms requests the Department not consider the *Petition*, alleging that the Pehrsons' are improperly "seeking to place conditions on the water rights of Moss Farms under the guise of 'Watermaster Instructions'" and asserting that Idaho law does not permit the Department to grant the declaratory relief sought. *Response* at 2.[2] Shortly thereafter, the Department staff contacted counsel for Moss Farms about scheduling informal proceedings.[3] Counsel indicated that the matter should start with formal proceedings so that legal questions about the Department's jurisdiction could be addressed first.

On April 12, 2024, the Big Lost River Irrigation District ("BLRID") filed *BLRID's Petition to Intervene ("Petition to Intervene")*, stating that it owns Mackay Reservoir and that it

[1] Pursuant to the Department's Rules of Procedure (IDAPA 37.010.01), objections are not a form of pleading allowed in contested cases. IDAPA 37.01.01.210. Moss Farm's filing is properly characterized as a response, which is authorized. *Id*.

[2] On March 1, 2024, the Pehrsons filed a *Reply to Objection to Petition for Declaratory Ruling for Watermaster Instructions* ("*Reply*"). Pursuant to the Department's Rules of Procedure, replies are not a form of pleading allowed in contested cases. IDAPA 37.01.01.210. The Pehrsons' *Reply* will not be considered.

[3] Pursuant to Rule 414 of the Department's Rules of Procedure, the Department is authorized to communicate ex parte regarding procedural matters (e.g., scheduling). IDAPA 37.01.01.414.

should be allowed in intervene in the proceeding because the proceeding may affect its delivery of storage water and natural flow to water users located with BLRID. *Petition to Intervene* at 2.

On April 19, 2024, the Pehrsons filed *Non-Opposition to Big Lost River Irrigation District's Petition to Intervene; Renewed Request for Informal Settlement Conference*.

On May 29, 2024, the Pehrsons filed a *Renewed Request for Informal Settlement Conference; Request for Status Conference; and Filing of Statement from Water District #34 Advisory Board*.

CONCLUSIONS OF LAW

The Director, having determined that informal proceedings are unlikely to resolve this contested case and in accordance with IDAPA 37.01.01.102, will set the matter for a prehearing conference and will appoint Roger S. Burdick, former Idaho Supreme Court Justice, to serve as the hearing officer in this matter.

NOTICE OF PREHEARING CONFERENCE

NOTICE IS HEREBY GIVEN that a prehearing conference in this matter will be held on **August 29, 2024 at 10:00 am (MT)**, at the Department's State Office, located at 322 E. Front Street, 6th Floor, Conference Room 648A, Boise, Idaho. All parties must be present at the prehearing conference in person or by video conference. The parties shall come prepared to discuss proposed issues for hearing, any proposed settlement, and any other matters that could aid in the fair and efficient resolution of this contested case.

To join the conference via computer or smartphone, please click the following Webex link and follow the prompts:

https://idahogov.webex.com/idahogov/j.php?MTID=m49515ad39e15d35f95e5eebb4b7c4276

To join the conference via telephone, please dial 1(415) 655-0001 (US Toll) and enter the following meeting access code when prompted: **2630 248 8119**.

The conference will be held in accordance with the provisions of Chapter 17, Title 42, and Chapter 52, Title 67, Idaho Code, and the Department's Rules of Procedure, IDAPA 37.01.01. A copy of the Rules of Procedure may be obtained from the Department upon request or at https://adminrules.idaho.gov/rules/current/37/370101.pdf.

The prehearing conference will be conducted in a facility that meets the accessibility requirements of the Americans with Disabilities Act. If you require reasonable accommodations to attend, participate in, or understand the conference, please advise the Department no later than five (5) days before the conference. Inquiries for reasonable accommodation should be directed to Sarah Tschohl, Idaho Department of Water Resources, PO Box 83720, Boise, Idaho 83720-0098, telephone (208) 287-4815, or email sarah.tschohl@idwr.idaho.gov.

ORDER

IT IS HEREBY ORDERED that Roger S. Burdick is appointed to serve as hearing officer in this matter and is authorized to hear this contested case on behalf of the Department pursuant to IDAPA 37.01.01.410–414 and the provisions of chapter 52, title 67, Idaho Code. Hearing Officer Burdick's contact information is as follows:

Roger S. Burdick
roburd47@gmail.com

DATED this 8th day of August 2024.

Attorneys for Moore Canal Users'

BEFORE THE DEPARTMENT OF WATER RESOURCES
OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	)	**Docket No. P-DR-2024-001**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	)	**MOORE CANAL USERS PETITION TO INTERVENE**

Comes now, Moore Canal Water Users' Association, a water users association formed pursuant to Idaho law, the Timberdome Canal Company, and the Lost River Pipeline, a lateral ditch water users' association, (hereinafter, Moore Canal Users), through its attorney of record, and, pursuant to Procedure Rules 350 through 354 and other applicable law, petitions the Hearing Officer to enter an order authorizing the Moore Canal Users to intervene in the above captioned matter on the following grounds:

1. A Petition for Declaratory Ruling for Watermaster Instructions ("Petition") dated February 14, 2024 was filed on behalf of Byron Pehrson and Loy Pehrson seeking two forms of relief describing two requested watermaster instructions.

2. Moore Canal Users receive natural flow and storage water for irrigation delivered by the Big Lost River Irrigation District (BLRID) from Mackay Reservoir.

3. The manner in which natural flow and storage water rights are delivered from Mackay reservoir materially affects the ability of Moore Canal Users' members to irrigate their land. Any change to the current manner of delivery could have a negative impact.

4. Moore Canal Users assert that it should be allowed to intervene in the proceeding in order to participate in any negotiations and hearings that may affect it and that address the terms of the watermaster instructions regarding deliver of water from Mackay Reservoir.

5. This petition is timely; this matter has been set for a prehearing conference on August 29, 2024.

6. For all the foregoing reasons, Moore has a direct and substantial interest in the outcome of this proceeding and should be allowed to intervene.

7. For the purposes of this proceeding the name and address of Moore shall be:

Moore Canal Users'
c/o Rigby Andrus and Rigby Law
P.O. Box 250
Rexburg, ID 83440
(208) 356-3633

Attorneys for the Big Lost River Ground Water District

BEFORE THE DEPARTMENT OF WATER RESOURCES
OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.) IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	Docket No. P-DR-2024-001 **BIG LOST GROUND WATER DISTRICT'S PETITION TO INTERVENE**

The Big Lost River Ground Water District ("District"), by and through its counsel, Holden, Kidwell, Hahn & Crapo, P.L.L.C., hereby file this *Big Lost River Ground Water District's Petition to Intervene* ("*Petition*"), pursuant to the Rules of Procedure of the Idaho Department of Water Resources (specifically IDAPA 37.01.01.350—37.01.01.354) and other applicable law. This *Petition* requests an order authorizing District to intervene in this contested case before the Idaho Department of Water Resources ("IDWR" or "Department"), which was initiated by the petitioners through counsel with filing of a *Petition of Declaratory Ruling for Watermaster Instructions* filed on February 14, 2024.

I. LEGAL STANDARD

A party may intervene in an IDWR proceeding under certain circumstances. IDAPA 37.01.01.350. IDAPA 37.01.01.353.01 provides:

> Timely-Filed Petitions. If a timely-filed petition to intervene shows direct and substantial interest in any part of the subject matter of a contested case and does not unduly broaden the issues, the agency shall grant intervention, subject to reasonable conditions, unless the applicant's interest is adequately represented by existing parties.

Based on this rule, the analysis of a petition to intervene requires consideration of: (a) whether the *Petition* is timely, (b) whether the potential intervenor shows a "direct and substantial interest in any part of the subject matter of a proceeding," (c) a showing that the intervention would "not unduly broaden the issues," and (d) whether the potential intervenor's "interest is adequately represented by existing parties." *Id*.

II. ARGUMENT

A. The *Petition* is timely.

A petition to intervene is timely filed if it is "filed at least fourteen (14) days before the date set for formal hearing, or by the date of the prehearing conference, whichever is earlier, unless a different time is provided by order or notice." IDAPA 37.01.01.352. This *Petition* is filed before the prehearing conference currently scheduled for August 29, 2024, and is thus timely.

B. District has a direct and substantial interest in subject matter of this proceeding.

District was created on November 14, 2016, pursuant to Idaho Code § 42-5201 *et seq*. The self-stated mission of District is "to protect and stabilize the basin's aquifers while protecting all member's ground water rights which will promote the full economic benefit derived from using Basin 34's ground water resource." https://blrgwd34.com/. District patrons

consist of individuals and entities that utilize ground water for various purposes pursuant to valid ground water rights, a majority of whom also possess and utilize natural flow surface water rights and storage water entitlements (as patrons of the Big Lost River Irrigation District) in conjunction with their ground water use.

As water users, District patrons will be affected by the outcome of the above-entitled action as it implicates issues of water administration and imposition of watermaster instructions in the Big Lost River basin. As water users that are subject to water administration, District patrons have a direct and substantial interest in this matter. Further, part of District's water management plan is to increase surface water use and delivery as part of a ground water pumping reduction plan. The petitioners seek implementation of a type of futile call of the Big Lost River that is detrimental to lower valley water users. The requested type of futile call will diminish the surface water supply and result in increased ground water diversions of District patrons. Accordingly, District has a direct and substantial interest in the subject matter of this proceeding.

C. District's intervention will not unduly broaden the issues involved in this proceeding.

Presently, this proceeding is in its very early stages, as no contested matters have been addressed and no prehearing conferences have been held. District's interests relate to the relief requested by petitioners (the delivery of natural flow and storage water to water users). Thus, District's intervention will not unduly broaden the issues.

D. District's interest is not adequately represented by existing parties.

District's interests are specific in nature to its patrons as water users that either utilize ground water or use surface and storage water along with ground water. District's interests are not adequately represented or protected by any of the existing parties to these proceedings. The intervention of District is necessary to adequately represent and protect its unique interests.

III. CONCLUSION

For the foregoing reasons, District requests an order of the Hearing Officer granting this *Petition* and authorizing District to intervene in this proceeding.

Dated this 26th day of August, 2024.

Attorneys for Byron Pehrson, Loy Pehrson, and Randy Pehrson

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	Docket No. P-DR-2024-001 **OPPOSITION TO PETITIONS TO INTERVENE FILED BY THE MOORE CANAL USERS AND THE BIG LOST GROUND WATER DISTRICT**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	

COMES NOW Byron Pehrson, Loy Pehrson, and Randy Pehrson ("Pehrsons"), by and through their attorneys of record, McHugh Bromley, PLLC, and pursuant to IDAPA 37.01.01.354, hereby files its opposition to the petitions to intervene filed by the Moore Canal Users and the Big Lost River Ground Water District.

I. BACKGROUND

The above-captioned contested case was initiated by Pehrsons on February 14, 2024 through the filing of a *Petition for Declaratory Ruling for Watermaster Instructions* ("Petition").

In summary, the *Petition* sought a ruling from the Idaho Department of Water Resources that the Director should:

> (1) adopt watermaster instructions that are substantially similar to the instructions prepared by watermasters Yockey and Marcroft as to the use of the 3 in 1 Ditch and River Diversion for the Moss Water Rights; and (2) adopt watermaster instructions explaining that storage releases from Mackey Reservoir cannot be used to augment or supplement natural flow in the Big Lost River to the detriment of appropriators whose water rights pre-date storage of water in Mackey Reservoir.

Petition at 8.

On February 23, 2024, Moss Farms, Inc. ("Moss") filed an *Objection to Petition for Declaratory Ruling for Watermaster Instructions* ("Opposition"). For various procedural reasons, the *Opposition* asked the Director to reject the *Petition* out-of-hand.

On March 1, 2024, Pehrsons addressed the *Objection* through their *Reply to Objection to Petition for Declaratory Ruling for Watermaster Instructions*.

On April 12, 2024, the Big Lost River Irrigation District ("BLRID") filed a *Petition to Intervene* "BLRID Intervention").

On April 19, 2024, Pehrsons filed a *Notice of Non-Opposition to BLRID's Petition to Intervene; Renewed Request for Informal Settlement Conference*.

On August 8, 2024, the Director of the Idaho Department of Water Resources issued a *Notice of Prehearing Conference; Order Appointing Hearing Officer*, wherein Roger S. Burdick was appointed hearing officer and a prehearing conference was scheduled for August 29, 2024.

On August 22, 2024, and on August 26, 2024, the Moore Canal Users and the Big Lost River Ground Water District filed petitions to intervene, respectively.

On August 29, 2024, Hearing Officer Burdick stated that any opposition to the petitions to intervene filed by Moore Canal and the Ground Water District must be filed by September 9, 2024, with replies thereto by September 16, 2024.

II. LEGAL STANDARD

A petition to intervene must set forth "the name and address of the potential intervenor and must state the direct and substantial interest of the potential intervenor in the proceeding." IDAPA 37.01.01.351. If a timely filed petition to intervene "shows a direct and substantial interest in any part of the subject matter of a contested case and does not unduly broaden the issues, the agency shall grant intervention, subject to reasonable conditions, unless the applicant's interest is adequate represented by existing parties." IDAPA 37.01.01.353.01. The decision to grant or deny a motion to intervene is a matter of discretion. *See Ellis v. Ellis*, 167 Idaho 1, 7, 467 P.3d 365, 371 (2020).

III. ARGUMENT

Pehrsons acknowledge that the petitions to intervene filed by Moore Canal and the Ground Water District are timely; however, intervention should nonetheless be denied because petitioners have not shown: (1) a direct and substantial interest in the issues that are the subject of the *Petition*; and (2) even if they do, the interests alleged are adequately represented by the existing parties.

A. Moore Canal

Here, the sum total of Moore Canal's interest in the *Petition* is as follows: "The manner in which natural flow and storage water rights are delivered from Mackay Reservoir materially affects the ability of Moore Canal Users' members to irrigate their land. Any change to the current manner of deliver could have a negative impact." *Moore Canal Petition to Intervene* at 2.

First, the statement that the outcome of this case "could" impact Moore Canal lacks specificity, and a cognizable interest as to what will happen to water delivery; therefore, Moore

Canal cannot meet its burden of establishing its direct and substantial interest. Moreover, Moore Canal has not explained how intervention, if it is granted, will not unduly broaden the issues into problems that Moore Canal may have when it comes to how BLRID delivers natural flow and/or storage water into the Moore Canal.

Second, Moore Canal does not explain who its members are, how many of its members have irrigation entitlements/shares through BLRID, and how many – if any – have water rights that are independent of the irrigation entitlements/shares that they hold in BLRID. During the August 29, 2024 pre-hearing conference, counsel for Moore Canal represented to the Hearing Officer that at least some of his client's members are members of BLRID. *See also Moore Canal Petition to Intervene* at 2 ("Moore Canal Users receive natural flow and storage water for irrigation delivered by Big Lost River Irrigation District (BLRID) from Mackay Reservoir."). This statement makes sense because the Moore Canal "is owned by the Big Lost River Irrigation District." *Telford Lands LLC v. Cain*, 154 Idaho 981, 984, 303 P.3d 1237, 1240 (2013) (emphasis added). By not stating who Moore Canal's members are, whether its members have privately owned water rights in the Moore Canal that are independent of BLRID's water rights, and how its interests in the litigation are different than the existing parties, Moore Canal cannot meet its burden of establishing how its interests are not adequately represented.

B. Ground Water District

The Ground Water District states that its purpose is "to protect and stabilize the basin's aquifers while protecting all member's ground water rights which will promote the full economic benefit derived from using Basin 34's ground water resource." *Ground Water District Petition to Intervene* at 2.

First, the issue in the proceeding is delivery of surface water and does not address "full economic development" of Idaho's water resources. *Clear Springs Foods, Inc. v. Spackman*, 150 Idaho 790, 796, 252 P.3d 71, 77 (2011) (discussing whether IDWR's conjunctive administration curtailment orders violated "the full economic development provision of Idaho Code § 42-226"). Moreover, the instant proceeding does not address conjunctive administration, either through the *Rules for Conjunctive Management of Surface and Ground Water Resources*, IDAPA 37.03.11, or the Ground Water Act, Idaho Code § 42-226 *et seq*. Therefore, the Ground Water District has not met its burden of establishing what its direct or substantial interest in the litigation is, much less how intervention will not unduly broaden the issues into the interrelationship between ground water and surface water in Basin 34. *See Ground Water District Petition to Intervene* ("part of the District's [ground] water management plan is to increase surface water use and delivery as part of a ground water pumping reduction plan") (emphasis added).

Second, similar to Moore Canal, the Ground Water District acknowledges that "a majority [of its members] possess and utilize natural flow surface water rights and storage water entitlements (as patrons of the Big Lost River Irrigation District) . . . ." *Ground Water District Petition to Intervene* at 3. Therefore, the Ground Water District cannot meet its burden of establishing how its interests are inadequately represented by the existing parties, and how it will not unduly broaden the issues into problems that the Ground Water District's members have when it comes to how BLRID delivers natural flow and/or storage water.

IV. CONCLUSION

Based on the foregoing, Pehrsons respectfully request that the Hearing Officer deny the petitions to intervene filed by Moore Canal Users and the Big Lost River Ground Water District.

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	**Docket No. P-DR-2024-001**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	**NOTICE OF CONTINUED PREHEARING CONFERENCE** **ORDER GRANTING INTERVENTION: BLRID**

BACKGROUND

On February 14, 2024, Byron Pehrson, Loy Pehrson, and Randy Pehrson ("Pehrsons") submitted a *Petition for Declaratory Ruling for Watermaster Instructions* with the Idaho Department of Water Resources ("Department").

On February 23, 2024, Moss Farms, Inc. filed an *Objection to Petition for Declaratory Ruling for Watermaster Instructions* with the Department.

On April 12, 2024, the Big Lost River Irrigation District ("BLRID") filed *BLRID's Petition to Intervene*. On April 19, 2024, the Pehrsons filed a *Non-Opposition to Big Lost River Irrigation District's Petition to Intervene; Renewed Request for Informal Settlement Conference*.

On August 8, 2024, the Director issued a *Notice of Prehearing Conference; Order Appointing Hearing Officer*, scheduling a prehearing conference for August 29, 2024, and appointing former Idaho Supreme Court Justice Roger S. Burdick as the hearing officer in this matter.

On August 22, 2024, Moore Canal Users filed a petition to intervene. On August 26, 2024, Big Lost River Ground Water District also filed a petition to intervene.

All parties and potential intervenors were represented by counsel during the August 29, 2024 prehearing conference. Hearing Officer Burdick identified a potential conflict of interest and gave counsel time to privately discuss the concern off the record. Counsel for the parties and potential intervenors agreed to Hearing Officer Burdick's continued participation in the case.

During the prehearing conference, Hearing Officer Burdick granted *BLRID's Petition to Intervene*. The hearing officer also extended the time allowed for the Pehrsons to file an objection to the intervention of Moore Canal Users or Big Lost River Ground Water District to September 9, 2024, at 5 p.m. (MT), giving Moore Canal Users and Big Lost River Ground Water District seven days to respond to any objection filed.

The Hearing Officer continued the prehearing conference to October 10, 2024.

NOTICE OF CONTINUED PREHEARING CONFERENCE

NOTICE IS HEREBY GIVEN that a continued prehearing conference in this matter will be held on **October 10, 2024, at 10 a.m. (MT)**, at the Department's State Office, located at 322 E. Front Street, 6th Floor, Conference Room 648A, Boise, Idaho. All parties must be present at the prehearing conference in person or by video conference. The parties shall come prepared to discuss proposed issues for hearing, any proposed settlement, and any other matters that could aid in the fair and efficient resolution of this contested case.

To join the conference via computer or smartphone, please click the following Webex link and follow the prompts: https://idahogov.webex.com/idahogov/j.php?MTID=m3dc5402eaf51cdaae1684b1290df2867.

To join the conference via telephone, please dial 1(415) 655-0001 (US Toll) and enter the following meeting access code when prompted: 2632 700 3521.

The conference will be held in accordance with the provisions of Chapter 17, Title 42, and Chapter 52, Title 67, Idaho Code, and the Department's Rules of Procedure, IDAPA 37.01.01. A copy of the Rules of Procedure may be obtained from the Department upon request or at https://adminrules.idaho.gov/rules/current/37/370101.pdf.

The continued prehearing conference will be conducted in a facility that meets the accessibility requirements of the Americans with Disabilities Act. If you require reasonable accommodations to attend, participate in, or understand the conference, please advise the Department no later than five (5) days before the conference. Inquiries for reasonable accommodation should be directed to Sarah Tschohl, Idaho Department of Water Resources, PO Box 83720, Boise, Idaho 83720-0098, telephone (208) 287-4815, or email sarah.tschohl@idwr.idaho.gov.

ORDER

IT IS HEREBY ORDERED that *BLRID's Petition to Intervene* is GRANTED.

DATED this 10th day of September 2024.

ROGER S. BURDICK
Hearing Officer

Attorneys for the Big Lost River Ground Water District

BEFORE THE DEPARTMENT OF WATER RESOURCES
OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.) IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	Docket No. P-DR-2024-001 **BIG LOST RIVER GROUND WATER DISTRICT'S RESPONSE TO OPPOSITION TO PETITION TO INTERVENE**

The Big Lost River Ground Water District ("District"), by and through its counsel, Holden, Kidwell, Hahn & Crapo, P.L.L.C., hereby files *Big Lost River Ground Water District's Response to Opposition to Petition to Intervene* (the "*Response*") which is submitted in response to the *Pehrsons' Opposition to Petitions to Intervene Filed by the Moore Canal Users and the Big List Ground Water District* filed on September 9, 2024 ("*Opposition*"). The *Notice of Continued Prehearing Conference* dated September 10, 2024, provides District seven (7) days to respond to the *Opposition* (to be filed on or before September 16, 2024). This *Response* is filed pursuant to IDAPA 37.01.01.354 and other applicable law.

The *Opposition* opposes District's request to intervene in the above-entitled matter, which is a contested case before the Idaho Department of Water Resources ("IDWR" or "Department") initiated by the Pehrsons through counsel with filing of a *Petition of Declaratory*

Ruling for Watermaster Instructions filed on February 14, 2024 (the "*Petition*"). The *Petition* is directed at certain surface water rights owned by Moss Farms, Inc. (Water Right Nos. 34-182 and 34-318A).

I. ARGUMENT

A party may intervene in an IDWR contested case proceeding under certain circumstances. IDAPA 37.01.01.350. IDAPA 37.01.01.353.01 provides:

> Timely-Filed Petitions. If a timely-filed petition to intervene shows direct and substantial interest in any part of the subject matter of a contested case and does not unduly broaden the issues, the agency shall grant intervention, subject to reasonable conditions, unless the applicant's interest is adequately represented by existing parties.

Based on this rule, the analysis of a petition to intervene requires consideration of: (a) whether the *Petition* is timely, (b) whether the potential intervenor shows a "direct and substantial interest in any part of the subject matter of a proceeding," (c) a showing that the intervention would "not unduly broaden the issues," and (d) whether the potential intervenor's "interest is adequately represented by existing parties." *Id*.

Pehrsons argue that intervention should be denied because District has not shown a direct and substantial interest in the subject of the *Petition*, and even if District does have a direct and substantial interest, the interests alleged are adequately represented by the existing parties. *Opposition* at 3. Further, the Pehrsons agree that District's petition to intervene was timely filed, *id.* at 3, and only summarily asserts that District cannot meet its burden on how it will not unduly broaden the issues in this proceeding. *Id*. at 5. Each of the Pehrsons arguments are addressed below.

A. District has a direct and substantial interest in subject matter of this proceeding.

The Pehrsons argue that because this contested case is controversy associated with the delivery of surface water and does not address full economic development of Idaho's water resources or conjunctive administration, District does not have a direct or substantial interest in this litigation. *Id*. at 5. Pehrsons base this argument on the apparent belief that because District is a ground water district, whose primary purpose is to protect and stabilize the Big Lost River Basin aquifer, it does not or cannot have a direct or substantial interest in the above-captioned matter. *Id*.

While there are no Idaho cases that specifically address the direct and substantial element interest intervention element in the context of a contested case before IDWR, whether District has a direct or substantial interest in this proceeding is a broader inquiry that the primary focus or objective of the entity seeking intervention. The thrust of this intervention requirement is whether the entity seeking intervention will be directly affected by the outcome. District will be directly affected by the outcome of this proceeding because, as water users within Basin 34, the above-entitled action implicates issues of water administration and imposition of watermaster instructions in the Big Lost River basin. District patrons consist of individuals and entities that utilize ground water for various purposes pursuant to valid ground water rights, but a majority of these users also possess and utilize natural flow surface water rights and storage water entitlements (as patrons of the Big Lost River Irrigation District) in conjunction with their ground water use. As such, District has a "direct" interest as it represents water users in Basin 34 and this matter involves an issue—which District believes is significant—that could affect water delivery and water rights administration in Basin 34 as the *Petition* seeks implementation of a specific watermaster instruction that will have direct ramifications for futile call determinations in Basin 34. *Petition* at 6-7. District should be permitted to intervene in this matter to advocate

for their position and protect their interests concerning these issues.

District's interest in this matter is also "substantial" and more than just one of generalized interest because it involves water. The interaction of surface water and ground water supplies in the Big Lost River basin is extensive and well-known and historically a source of significant conflict and resulting attention from IDWR and the Idaho Water Resource Board. *See, e.g,.* https://idwr.idaho.gov/wp-content/uploads/sites/2/publications/20240301-Big-Lost-Groundwater-Update.pdf; https://idwr.idaho.gov/wp-content/uploads/sites/2/publications/Update-of-Ground-Water-Conditions-in-the-Big-Lost-River-Valley.pdf. In the first linked document provided above, it explains that "[g]roundwater in the Big Lost River valley is recharged by infiltration of precipitation, seepage from streams, seepage from irrigation canals, and infiltration of excess water applied for irrigation." Sukow Jennifer, UPDATE ON GROUNDWATER MONITORING AND HYDROLOGIC INVESTIGATIONS IN THE BIG LOST RIVER VALLEY, March 2024 at 10. Sukow's report also quotes Crosthwaite et al. (1970), who determined: "A distinctive feature of the Big Lost River basin is the large interchange of water from surface streams into the ground and from the ground into surface streams[;]" and further concluded, "[s]urface and groundwater are so closely related that neither can be considered as a separate source of supply." *Id*. at 14 (underling added). And specific to the area of Basin 34 at issue, Sukow notes that "[a]pproximately 95% of groundwater diversions in the Big Lost River basin occur in the valley south of Mackay Dam." *Id*. at 24. The watermaster instruction at issue will implicate futile call determinations for the Big Lost River in the exact same location—below Mackay Dam.

District's interest in this matter is also rooted in important policy considerations. The Pehrsons are effectively attempting to do an end-run around the finality of a final order approving a transfer application. The Idaho Supreme Court has declared that "finality in water

rights is essential." *State v. Nelson*, 131 Idaho 12, 16, 951 P.2d 943, 947 (1998). The order on the Moss Farms transfers have been final for nearly nine (9) years. As part of the transfer review process, even without protests filed, IDWR conducts its own analysis of the transfer review criteria, including injury to other water rights.

District is concerned with the precedent this matter could set in providing parties a second bite at the apple on a water right transfer that was finalized and completed without conditions of approval of the type the Pehrsons are trying to impose through watermaster instructions—effectively an end run around the finalized transfer. The review criteria for an application for transfer is found at Idaho Code § 42-222, which provides:

> The director of the department of water resources shall examine all the evidence and available information and shall approve the change in whole, or in part, or upon conditions, provided no other water rights are injured thereby, the change does not constitute an enlargement in use of the original right, the change is consistent with the conservation of water resources within the state of Idaho and is in the local public interest as defined in section 42-202B, Idaho Code, the change will not adversely affect the local economy of the watershed or local area within which the source of water for the proposed use originates, in the case where the place of use is outside of the watershed or local area where the source of water originates, and the new use is a beneficial use, which in the case of a municipal provider shall be satisfied if the water right is necessary to serve reasonably anticipated future needs as provided in this chapter. The director may consider consumptive use, as defined in section 42-202B, Idaho Code, as a factor in determining whether a proposed change would constitute an enlargement in use of the original water right. The director shall not approve a change in the nature of use from agricultural use where such change would significantly affect the agricultural base of the local area.

(Underlining added). Because the director has an independent duty to analyze the review criteria under Idaho Code § 42-222, even if the transfer is not protested, for the Moss transfers the Department already determined no other water rights would be injured through the transfer approval as evidenced by the lack of conditions that could have been included like the conditions the Pehrsons seek to now add.

The Pehrsons assert language from a 1915 case that junior water users are protected to the conditions of the stream when the juniors perfected their water rights in support of their argument, *Opposition* at 6, but the case offered in support of this argument is distinguishable from the above-entitled matter as the Moss rights were amended pursuant to the provisions of a statute (Idaho Code § 42-222) and were subject to the very injury analysis policy articulated in the 1915 case that protects juniors. IDWR did not find injury, and the Pehrsons did not object to find injury. There is clearly disagreement as to whether the Pehrsons are now being injured as a result of the Moss transfers, but there should be no disagreement that the Moss transfers went through the appropriate legal process and were subject to injury scrutiny. The Pehrsons simply now disagree with the results of that analysis and now effectively argue there is no real finality with a final order of the Department because water users are subject to after-the-fact claims of injury once their water rights are amended. The policy implications of these assertions, if successful, are far reaching, and as the representative of virtually all the ground water users in the Big Lost River basin, District can foresee how these arguments could be asserted in future water right proceedings, evaluation of pumping from a former authorized point of diversion as opposed to a current point of diversion, or other ways that effectively assert that water rights should be evaluated based on past or former conditions rather than current conditions.

In sum, the Pehrsons seek implementation of a type of futile call of the Big Lost River that is detrimental to lower valley water users. The requested type of futile call will establish a precedent which will diminish the surface water supply and necessarily result in increased ground water diversions of District patrons. District represents many water users and is far from a single water user who wants to intervene merely because water is involved, or the issue may be interesting. The outcome of this proceeding will have direct implications on water right

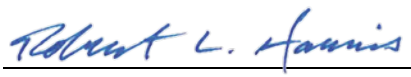
administration in the Big Lost River basin, a basin whose water supply of both surface and ground water are "so closely related that neither can be considered as a separate source of supply." *Id*. at 14. Further, District is concerned with the precedent this matter could set in providing parties a second bite at the apple on a water right transfer that was finalized and completed without conditions of approval of the type the Pehrsons are trying to impose through watermaster instructions—effectively an end run around the finalized transfer approval. For all these reasons, District has a direct and substantial interest in the subject matter of this proceeding and should be permitted to intervene.

B. District's interest is not adequately represented by existing parties.

At this early stage, because District's legal positions primarily align with Mosses in this matter, the Pehrsons appear to assert that District's interest are adequately represented by existing parties. However, the test is not whether the legal positions of an existing party and a proposed intervenor in a contested case are the same or similar, rather, the question is whether their *interests* are adequately represented by existing parties.

District's interests are not adequately represented by Moss or any other party in this matter. District's interests are specific in nature to its patrons as water users that either utilize ground water or use surface and storage water along with ground water. The Moss water rights at issue in this proceeding do not authorize the diversion of ground water. Nevertheless, the implications of the relief the Pehrsons seek in this matter will affect District even though District's interests and Moss's interests are not precisely the same. For these reasons, the intervention of District is necessary to adequately represent and protect its unique interests.

C. District's intervention will not unduly broaden the issues involved in this proceeding.



The Pehrsons do not offer any specific argument as to how District's involvement will unduly broaden the issues, only that District cannot meet their burden that they will not unduly

broaden the issues. *Opposition* at 5. As stated previously, presently, this proceeding is in its very early stages, as no contested matters have been addressed. At this early stage, District seeks to intervene on the issues of water rights administration of surface and storage water, futile call determination, and the finality of approved water right transfers and any subsequent attempt to attack the final order through watermaster instructions. All these issues are presently squarely at issue in this contested case, and District has not asserted any other issues it seeks to be determined or decided in this contested case. Thus, District's intervention will not unduly broaden the issues.

II. CONCLUSION

For the foregoing reasons, District requests an order of the Hearing Officer granting District's petition to intervene.

Dated this 16th day of September, 2024.

Robert L. Harris, Esq.
HOLDEN, KIDWELL, HAHN & CRAPO, P.L.L.C.

Attorneys for Moore Canal Users'

BEFORE THE DEPARTMENT OF WATER RESOURCES
OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	)	**Docket No. P-DR-2024-001**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	)	**MOORE CANAL USERS REPLY TO OPPOSITION TO PETITION TO INTERVENE**

Come now, Moore Canal Water Users' Association Inc., an Idaho non-profit corporation and water users association formed pursuant to Idaho law; the Timberdome Canal Company, Inc., an Idaho non-profit corporation formed pursuant to Idaho law; the Lost River Pipeline, a lateral ditch water users' association, (collectively hereinafter, Moore Canal Users), and pursuant to the Hearing Officer's instructions and Notice of Continued Prehearing Conference respond to Byron Pehrson, Loy Pehrson and Randy Pehrson's (Pehrson's) Opposition to Petition to Intervene.

1. **BLRID does not adequately represent the interests of the Moore Canal Water Users' Association Inc. The Association members have an interest in protecting their individual senior natural flow rights in the Big Lost River which pre-date the Mackay Reservoir and which are separate and distinct from the BLRID storage and irrigation rights.**

   The Moore Canal Water Users' Association Inc. (the Association) oversees improvement

projects related to the Moore Canal and its laterals under a canal modification agreement with BLRID. The Association represents a group of individual water users who have their individual water rights carried through the Moore Canal that are separate from BLRID irrigation rights. The Association's members hold roughly 70% of the total cfs delivered through the Moore Canal for the private water rights. The members of the Association have some of the oldest private natural flow rights in the basin. Their privately owned water rights pre-date storage of water in Mackay Reservoir and the creation of BLRID. The private individual rights are delivered through BLRID's system from the Big Lost River at the Moore Diversion through the Moore Canal. Association members also have shares in BLRID. However, BLRID does not represent the private individual water rights in this matter.

BLRID delivers water to shareholders within its 34,000 acre service area. BLRID's water rights are as follows:

Big Lost River Irrigation District Water Rights				
Water Right #	Priority Date	Div. Rate (cfs)	Source	Water Use
34-12	2/7/1916		BIG LOST RIVER	IRRIGATION FROM STORAGE, IRRIGATION STORAGE
34-13	7/31/1905	100	Antelope Creek	IRRIGATION
34-810	6/1/1888	3.2	BIG LOST RIVER	DIVERSION TO STORAGE, IRRIGATION FROM STORAGE, IRRIGATION STORAGE
34-811	6/30/1881	1.7		DIVERSION TO STORAGE, IRRIGATION FROM STORAGE, IRRIGATION STORAGE
34-817B	3/1/1902	0.8		DIVERSION TO STORAGE, IRRIGATION FROM STORAGE, IRRIGATION STORAGE
34-818	6/30/1880	3.2		DIVERSION TO STORAGE, IRRIGATION FROM STORAGE, IRRIGATION STORAGE
34-2507	9/2/1959			IRRIGATION FROM STORAGE, IRRIGATION STORAGE
34-10873	10/2/1905			IRRIGATION FROM STORAGE, IRRIGATION STORAGE
34-10935	6/1/1896	6.4		DIVERSION TO STORAGE, IRRIGATION FROM STORAGE, IRRIGATION STORAGE

The mainstem of the Moore Canal spans approximately 11 miles and delivers water to laterals that combined span approximately 27 miles. Some laterals are within BLRID boundaries, and some are not. The Moore Canal delivers water to approximately 85 points of delivery to irrigate approximately 9500 acres.

A map depicting the places of use of all the individual natural flow water rights represented by the Association but not owned by BLRID is attached as Exhibit "A."[1]

The Association is operated pursuant to its bylaws and has an established Board of Directors. The current officers are as follows:

President: Travis Andersen
Vice President: Derek Nichols
Secretary: Bill Van Lente
Treasurer: Todd Perkes

The Association has a direct and substantial interest in the proceeding because the instructions to the Water District 34 watermaster regarding the relationship between storage water and natural flow impacts futile call determinations and the ability of the Association's members to receive their pre-storage natural flow rights.

2. **BLRID does not adequately represent the interests of Timberdome Canal Company. The interests of Timberdome are distinct from the interests of BLRID as its members are outside the service area for storage water from BLRID, but they still receive natural flow from Mackay Reservoir.**

The Timberdome Canal Co. Inc. is a non-profit corporation that operates a lateral of the Moore Canal. Many of the water rights of the members of Timberdome Canal Company (Timberdome) are senior natural flow rights delivered through the BLRID system. The farm ground served by Timberdome only receives natural flow. It is outside of the BLRID service area and does not have any storage rights.

Timberdome was formally incorporated in 1976, operates pursuant to its bylaws and has an established Board of Directors. The current officers are as follows:

President: Mark Telford
Vice President: Adam Sorensen
Secretary: Evan Rogers

The private individual water rights within Timberdome's service area are depicted on Exhibit "A."

Timberdome has a direct and substantial interest in the proceeding because the instructions to the Water District 34 watermaster regarding the relationship between storage water and natural flow impacts futile call determinations and the ability of Timberdome to deliver its shareholders pre-storage natural flow rights.

3. **BLRID and the Association do not adequately represent the interests of Lost River as Lost River has a vested interest in protecting its members individual natural flows rights that are separate and distinct from BLIRDs rights and the Association rights.**

The Lost River Pipeline is also a lateral of the Moore Canal. It receives and delivers both individual natural flow rights and storage water from BLRID. The members of the Lost River Pipeline Ditch Users' Association (Lost River) have senior natural flows rights as well as shares in the BLRID.

Lost River is not formally registered with the Idaho Secretary of State and operates pursuant to Idaho Code § 42-1301. It operates pursuant to its bylaws and has an established Board of Directors

President: Seth Beal
Vice President: Keith Waddoups
Secretary: Wade Waddoups

[1] Exhibit A was created to help illustrate all of the private water rights delivered through the Moore Canal to assist the Association in preparation for a piping project. All of the sections, other than the Lost River Pipeline and the Timberdome Canal are represented by the Association.

The individual rights within Lost River's service area are depicted on Exhibit "A."

Lost River Pipeline water users have a direct and substantial interest in the proceeding because the instructions to the Water District 34 watermaster regarding the relationship between storage water and natural flow impacts futile call determinations and the ability of Lost River to deliver its shareholders pre-storage natural flow rights.

4. Allowing Petitioners to intervene in this matter will not unduly broaden the issues.

Petitioners have brought no counterclaims and do not intend to do so. The Association, Timberdome, and Lost River have an interest in this matter as each entity's members hold senior natural flow rights that pre-date the Mackay Reservoir. If the watermaster instructions pertaining to Mackay Reservoir are changed as described in the Petition for Declaratory Ruling for Water Master Instructions filed on February 14, 2024, it will have a serious negative effect on the senior natural flow rights that are delivered through the Moore Canal to the Petitioners' places of use. Petitioners should be allowed to intervene in this matter as they have the right to protect the current delivery method of their respective members' private natural flow rights that are separate and distinct from BLRIDs water rights.

DATED this 16th day of September, 2024.

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	**Docket No. P-DR-2024-001**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	**ORDER ON PETITIONS TO INTERVENE FILED BY THE MOORE CANAL USERS AND THE BIG LOST RIVER GROUND WATER DISTRICT**

BACKGROUND

On February 14, 2024, Byron Pehrson, Loy Pehrson, and Randy Pehrson ("Pehrsons") submitted a *Petition for Declaratory Ruling for Watermaster Instructions* with the Idaho Department of Water Resources ("Department"). The Pehrsons seek two forms of relief:

1. Instruct the Water District No. 34 Watermaster that when the natural flow in the Big Lost River at USGS Gage #13127000 ("2B Gage") located at T07N, R24E, S18, SWNE, B.M. is 187 cfs or less for three (3) consecutive days, water right now. 34-18 and 34-381A, held by Moss Farms, Inc., shall only be entitled to divert from the 3 in 1 Ditch, located at T06N, R25E, S14, SENWSE, and shall not be entitled to also divert from the Big Lost River at T06N, R26E, S32, SENW, unless and until the natural flow in the Big Lost River exceeds 500 cfs at the 2B Gage for three (3) consecutive days.

2. Instruct the Water District No. 34 Watermaster to make futile calls on the river as if storage water is not available as carriage water for natural flow water rights. If storage water is added to natural flow, futile call determinations can change to the detriment of natural flow water users. Natural flow water users are entitled to delivery determinations being made in the same manner as when their appropriations were made, prior to the creation of storage.

Petition for Declaratory Ruling for Watermaster Instructions, at 2.

On February 23, 2024, Moss Farms, Inc. ("Moss Farms") filed an *Objection to Petition for Declaratory Ruling for Watermaster Instructions* ("*Moss Farms' Response*") with the Department. Moss Farms urged the Director to reject the petition and not consider it for four reasons:

1. Idaho Code § 67-5255(1) does not authorize the Director to grant the declaratory relief requested by Petitioners;

2. The Petitioners' time to challenge the Moss Farms' Water Rights has expired pursuant to Idaho Code §§ 42-222 & 42-5246;

3. The relief requested violates legal principles of priority administration and is against public policy; and

4. The doctrine of *res judicata* bars the relief requested by Petitioners.

Moss Farms' Response, at 1.

On April 12, 2024, the Big Lost River Irrigation District ("BLRID") filed a petition to intervene. On August 22, 2024, Moore Canal Users filed a petition to intervene. On August 26, 2024, Big Lost River Ground Water District also filed a petition to intervene. All three petitions to intervene were timely filed.

All parties and potential intervenors were represented by counsel during the August 29, 2024 prehearing conference. During the prehearing conference, Hearing Officer Burdick granted *BLRID's Petition to Intervene* and extended the time allowed for the Pehrsons to file an objection to the intervention of Moore Canal Users or Big Lost River Ground Water District to September 9, 2024, at 5 p.m. (MT), giving Moore Canal Users and Big Lost River Ground Water District seven days to respond to any objection filed.

On September 9, 2024, the Pehrsons timely filed their *Opposition to Petitions to Intervene Filed by the Moore Canal Users and the Big Lost Ground Water District* ("*Pehrsons' Opposition to Petitions to Intervene*"). On September 16, 2024, the proposed intervenors timely filed *Moore Canal Users Reply to Opposition to Petition to Intervene* ("*Moore Canal Users' Response*") and *Big Lost River Ground Water District's Response to Opposition to Petition to Intervene* ("*BLRGWD's Response*").

Having reviewed the record and briefing on this issue, the Hearing Officer decides the matter as follows without oral argument.

STANDARD

The Department's Rules of Procedure allow a hearing officer discretion to grant intervention in contested cases in limited circumstances. *See* IDAPA 37.01.01.350–354. A hearing officer properly exercises his or her discretion when he or she: (1) correctly perceives the issue as one of discretion; (2) acts within the boundaries of such discretion; (3) acts consistently with any legal standards applicable to the specific choices before him or her; and (4) reaches a decision by an exercise of reason. *See Lunneborg v. My Fun Life*, 163 Idaho 856, 863, 421 P.3d 187, 194 (2018).

Department Rule of Procedure 350 provides: "A person who is not already a party to a contested case and who has a direct and substantial interest in the proceeding may petition for an order granting intervention as a party to the contested case." IDAPA 37.01.01.350.

Rule 353 further guides a hearing officer on deciding petitions to intervene: "If a timely-filed petition to intervene shows direct and substantial interest in any part of the subject matter of

a contested case and does not unduly broaden the issues, the agency shall grant intervention, subject to reasonable conditions, unless the applicant's interest is adequately represented by existing parties." IDAPA 37.01.01.353.01.

The moving parties have not requested oral argument; therefore, these motions will be decided on the briefing in this interlocutory order. *See* IDAPA 37.01.01.220.02, 37.01.01.710.

ANALYSIS

A. *Moore Canal Users' Petition to Intervene*

"Moore Canal Users" collectively refers to Moore Canal Water Users' Association, Inc., the Timberdome Canal Company, and the Lost River Pipeline. Moore Canal Users' Water Association Inc. is an Idaho non-profit corporation and water users' association. The Timberdome Canal Company is an Idaho non-profit corporation. The Lost River Pipeline is a lateral ditch water users' association.

In opposition to the *Moore Canal Users' Petition to Intervene*, the Pehrsons allege that the Moore Canal Users' "statement that the outcome of this case 'could' impact Moore Canal lacks specificity, and a cognizable interest as to what will happen to water delivery; therefore, Moore Canal cannot meet its burden of establishing its direct and substantial interest." *Pehrsons' Opposition to Petitions to Intervene*, at 3–4 (emphasis in original).

The Pehrsons further argue that "Moore Canal does not explain who its members are, how many of its members have irrigation entitlements/shares through BLRID, and how many – if any – have water rights that are independent of the irrigation entitlements/shares that they hold in BLRID." *Id.* at 4. The Pehrsons assert that the Moore Canal "is owned by the Big Lost River Irrigation District." *Id.* (emphasis in original). Therefore, the Pehrsons conclude that:

> By not stating who Moore Canal's members are, whether its members have privately owned water rights in the Moore Canal that are independent of BLRID's water rights, and how its interests in the litigation are different than the existing parties, Moore Canal cannot meet its burden of establishing how its interests are not adequately represented.

Id.

In the Moore Canal Users' reply to the *Pehrsons' Opposition to Petitions to Intervene*, the Moore Canal Users argue:

1. BLRID does not adequately represent the interests of the Moore Canal Water Users' Association Inc. The Association members have an interest in protecting their individual senior natural flow rights in the Big Lost River which pre-date the Mackay Reservoir and which are separate and distinct from the BLRID storage and irrigation rights.

2. BLRID does not adequately represent the interests of Timberdome Canal Company. The Interests of Timberdome are distinct from the interests of BLRID as its members are outside the service area for storage water from BLRID, but they still receive natural flow from Mackay Reservoir.

3. BLRID and the Association do not adequately represent the interests of Lost River [Pipeline] as Lost River has a vested interest in protecting its members individual natural flows rights that are separate and distinct from BLRIDs rights and the Association rights.

4. Allowing [Moore Canal Users] to intervene in this matter will not unduly broaden the issues.

Moore Canal Users' Response, at 1, 3, 4, 5 (emphasis omitted).

Moore Canal Users assert that each of its entities have "a direct and substantial interest in the proceeding because the instructions to the Water District 34 watermaster regarding the relationship between storage water and natural flow impacts futile call determinations and the ability of" the entities to receive or deliver to shareholders their "pre-storage natural flow rights." *Id.* at 3, 4, 5.

The Hearing Officer agrees with the Pehrsons that the *Moore Canal Users Petition to Intervene* did not provide sufficient information to show they have a direct and substantial interest in the proceeding to warrant their intervention. However, the additional specificity supplied in the *Moore Canal Users' Response* provides the Hearing Officer with the necessary information to find that Moore Canal Users have shown a direct and substantial interest in this matter, their intervention does not unduly broaden the issues, and their interests are not adequately represented by existing parties.

B. *Big Lost River Ground Water District's Petition to Intervene*

Big Lost River Ground Water District's "patrons consist of individuals and entities that utilize ground water for various purposes pursuant to valid ground water rights, a majority of whom also possess and utilize natural flow surface water rights and storage water entitlements (as patrons of the Big Lost River Irrigation District) in conjunction with their ground water use." *Big Lost River Ground Water District's Petition to Intervene*, at 2–3.

Big Lost River Ground Water District alleges in its petition to intervene that it has a direct and substantial interest in this proceeding because the proceeding "implicates issues of water administration and imposition of watermaster instructions in the Big Lost River basin. As water users that are subject to water administration, District patrons have a direct and substantial interest in the matter." *Id.* at 3. Further, the district claims that part of its internal "water management plan is to increase surface water use and delivery as part of a ground water pumping reduction plan." *Id.* Big Lost River Ground Water District argues that "[t]he petitioners seek implementation of a type of futile call of the Big Lost River that is detrimental to lower valley

water users. The requested type of futile call will diminish the surface water supply and result in increased ground water diversions of District patrons." *Id.*

In opposition, the Pehrsons argue:

> First, the issue in the proceeding is delivery of surface water and does not address "full economic development" of Idaho's water resources. *Clear Springs Foods, Inc. v. Spackman*, 150 Idaho 790, 796, 252 P.3d 71, 77 (2011) (discussing whether IDWR's conjunctive administration curtailment orders violated "the full economic development provision of Idaho Code § 42-226"). Moreover, the instant proceeding does not address conjunctive administration, either through the *Rules for Conjunctive Management of Surface and Ground Water Resources*, IDAPA 37.03.11, or the Ground Water Act, Idaho Code § 42-226 *et seq*. Therefore, the Ground Water District has not met its burden of establishing what its direct [and] substantial interest in the litigation is, much less how intervention will not unduly broaden the issues into the interrelationship between ground water and surface water in Basin 34. *See Ground Water District Petition to Intervene* ("part of the District's [ground] water management plan is to increase surface water use and delivery as part of a ground water pumping reduction plan") (emphasis added).

Pehrsons' Opposition to Petitions to Intervene, at 5.

In its response to the Pehrson's opposition, Big Lost River Ground Water District argues that it has a direct interest "as it represents water users in Basin 34 and this matter involves an issue—which District believes is significant—that could affect water delivery and water rights administration in Basin 34 as the *Petition* seeks implementation of a specific watermaster instruction that will have direct ramifications for futile call determinations in Basin 34." *BLRGWD's Response*, at 3. Big Lost River Ground Water District argues that its interest in this matter is substantial due to the "interaction of surface water and ground water supplies in the Big Lost River basin[.]" *Id.* at 4.

The Big Lost River Ground Water District also makes several policy arguments regarding why it should be allowed to intervene (e.g., its "concern[ ] with the precedent this matter could set in providing parties . . . effectively an end run around [a] finalized transfer"). *Id.* at 5.

With respect to the argument that the Big Lost River Ground Water District has a direct and substantial interest in the proceeding because of its potential impact on water rights administration in the basin and the interaction between surface and ground water supplies in the basin, the Hearing Officer concludes this is essentially the argument that all water is connected and, at some point, any change may affect another's right. This argument would lead to the conclusion that, for example, any water delivery change BLRID makes will affect ground water supplies therefore BLRID cannot run its business without ground water users' intervention. Also, the Big Lost River Ground Water District's ground water management plan is fluid and carries no legal effect on water administration pursuant to the prior appropriation doctrine, but rather is a plan used for the internal operations of the ground water district.

With respect to the argument that the Big Lost River Ground Water District has a direct and substantial interest in the proceeding because of policy concerns, if a general interest in the Department's water rights administration policies and hypothetical precedent setting were enough to warrant intervention, the intervention of water users in any contested case would be limitless.

Additionally, Big Lost River Ground Water District's intervention would expand the issues in this matter to include the interrelationship between ground water and surface water in Basin 34. The Hearing Officer finds this expansion would unduly broaden the issues.

Therefore, the Hearing Officer finds that Big Lost River Ground Water District has not shown a direct and substantial interest in the proceeding and has not shown its intervention would not unduly broaden the issues.

CONCLUSION

In an exercise of his discretion, the Hearing Officer finds that Moore Canal Users have shown a direct and substantial interest affected and should be permitted to intervene, but Big Lost River Ground Water District has not. The Hearing Officer further finds that allowing Big Lost River Ground Water District to intervene would unduly broaden the issues in this matter. Therefore, the Hearing Officer GRANTS Moore Canal Users' petition to intervene and DENIES Big Lost River Ground Water District's petition to intervene.

ORDER

IT IS HEREBY ORDERED that *Moore Canal Users' Petition to Intervene* is GRANTED.

IT IS FURTHER ORDERED that *Big Lost River Ground Water District's Petition to Intervene* is DENIED.

DATED this 9th day of October 2024.

ROGER S. BURDICK
Hearing Officer

Kayleen Richter
Deputy Attorney General

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	**Docket No. P-DR-2024-001**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	**ORDER AUTHORIZING DISCOVERY AND EMAIL SERVICE** **SCHEDULING ORDER** **NOTICE OF HEARING**

BACKGROUND

On February 14, 2024, Byron Pehrson, Loy Pehrson, and Randy Pehrson ("Pehrsons") submitted a *Petition for Declaratory Ruling for Watermaster Instructions* with the Idaho Department of Water Resources ("Department"). The Pehrsons seek two forms of relief:

> 1. Instruct the Water District No. 34 Watermaster that when the natural flow in the Big Lost River at USGS Gage #13127000 ("2B Gage") located at T07N, R24E, S18, SWNE, B.M. is 187 cfs or less for three (3) consecutive days, water right now. 34-18 and 34-381A, held by Moss Farms, Inc., shall only be entitled to divert from the 3 in 1 Ditch, located at T06N, R25E, S14, SENWSE, and shall not be entitled to also divert from the Big Lost River at T06N, R26E, S32, SENW, unless and until the natural flow in the Big Lost River exceeds 500 cfs at the 2B Gage for three (3) consecutive days.
>
> 2. Instruct the Water District No. 34 Watermaster to make futile calls on the river as if storage water is not available as carriage water for natural flow water rights. If storage water is added to natural flow, futile call determinations can change to the detriment of natural flow water users. Natural flow water users are entitled to delivery determinations being made in the same manner as when their appropriations were made, prior to the creation of storage.

Petition for Declaratory Ruling for Watermaster Instructions, at 2.

On February 23, 2024, Moss Farms, Inc. filed an *Objection to Petition for Declaratory Ruling for Watermaster Instructions* with the Department. Additionally, the Big Lost River Irrigation District, Moore Canal Users,[1] and Big Lost River Ground Water District petitioned for intervention in this contested case. The Hearing Officer granted intervention to the Big Lost River Irrigation District and Moore Canal Users and denied Big Lost River Ground Water District.

[1] "Moore Canal Users" collectively refers to Moore Canal Water Users' Association, Inc., the Timberdome Canal Company, and the Lost River Pipeline.

On October 10, 2024, Hearing Officer Burdick held a continued prehearing conference. All parties appeared represented by counsel. The Hearing Officer and the parties discussed authorizing discovery, dates and deadlines for dispositive motions and other prehearing procedures, and a date for the hearing. No party raised any objections to the authorization of discovery, or the dates and deadlines proposed at the prehearing conference. Therefore, the Hearing Officer hereby exercises his discretion to authorize the parties to engage in discovery and to adopt the schedule below. The Hearing Officer also exercises his discretion to authorize the Department and the parties to officially serve documents by email in this contested case.

ORDER

IT IS HEREBY ORDERED that as of October 17, 2024, and pursuant to IDAPA 37.01.01.521, the parties are authorized to conduct and engage in the methods of discovery listed under IDAPA 37.01.01.520.01. Barring any conflicting discovery procedures or limitations set forth in the Department's Rules of Procedure (IDAPA 37.01.01) or an order of the presiding officer, discovery shall conform to Title V of the Idaho Rules of Civil Procedure.

IT IS FURTHER ORDERED that as of October 17, 2024, and pursuant to IDAPA 37.01.01.053.02–03, the Department and the parties are authorized to serve documents by email as an alternative to service by mail or personal service. The emails included in the certificate of service below are to be used as the official service emails, unless a notice instructing otherwise is filed with the Department and properly served on the parties.

IT IS FURTHER ORDERED that the following schedule is ADOPTED:

Nov. 1, 2024	Deadline for the parties to file a list of expert witnesses they intend to rely upon at the hearing, including names, addresses, and updated curricula vitarum. However, a curricula vitarum is not required if the expert identified is an employee of the Department.
Dec. 2, 2024	Deadline for the parties to exchange proposed stipulations of fact and expert reports. Unless the expert identified is an employee of the Department, if a party intends to have an expert testify during the hearing, the expert needs to have authored a disclosed expert report. Deadline for the parties to serve written discovery requests. If a party feels that additional time for written discovery is necessary, the party may move the Hearing Officer for an extension. Such a motion must explain the additional discovery sought and the reason the discovery could not be conducted prior to the deadline. Any response must be filed within 4 days after service of the motion. Replies are not authorized.
Dec. 16, 2024	Deadline for the parties to exchange rebuttal expert reports, if any. If an updated curricula vitarum for the rebuttal expert witness was not previously disclosed, one shall be provided with their report.

Jan. 24, 2025 Deadline for the parties to file dispositive motions, including motions for summary judgment. Any supporting documents or opening briefs must be filed concurrently with the dispositive motion.

Feb. 7, 2025 Deadline for the parties to file a response to a dispositive motion.

Feb. 14, 2025 Deadline for the moving party to file a reply to a dispositive motion response.

Feb. 21, 2025 Date reserved to hear oral argument on dispositive motions. If a dispositive motion is timely filed, a notice of hearing for the motion will be issued by the presiding officer without the need for a request.

Feb. 28, 2025 Deadline for the parties to complete all depositions.

Mar. 25, 2025 Deadline for the parties to file an index of exhibits and a list of the names and addresses of all witnesses that they may call to testify at the hearing. A short summary of the scope of each witnesses' anticipated testimony shall be included and expert witnesses shall be identified as such. The parties shall use the following reserved exhibit numbers and reach out to Paralegal Sarah Tschohl if additional numbers are needed:

Exhibit Nos.	Assigned Party
1–99	Pehrsons
100–199	Moss Farms, Inc.
200–299	Big Lost River Irrigation District
300–399	Moore Canal Users

April 1, 2025 Deadline for the parties to exchange and submit to the Department an electronic copy (via e-file email, USB thumb drive, or disc(s)) of their pre-marked exhibits. Each exhibit must be an independent file, and all file text must be machine readable. Exhibits shall be pre-marked in the bottom right corner of every page and must include the name of the party proposing the exhibit, the exhibit number, and a page number (each exhibit must start with page 1).

April 8, 2025 Prior to the start of the hearing, the parties shall submit to the Department three physical copies of their pre-marked exhibits. Exhibits shall be organized in binders that are labeled with the party's name and include dividers that identify each exhibit by its number.

NOTICE OF HEARING

NOTICE IS HEREBY GIVEN that Hearing Officer Burdick will hold a hearing in this matter on **April 8–11, 2025**. Each hearing day will begin at **9:00 a.m. (MT)**. The hearing will take place at the Department's State Office, located at 322 E. Front Street, 6th Floor, Conference Rooms 602B–D, Boise, Idaho. All parties who wish to participate in the hearing and their witnesses shall be present in person.

The conference will be held in accordance with the provisions of Chapter 17, Title 42, and Chapter 52, Title 67, Idaho Code, and the Department's Rules of Procedure, IDAPA 37.01.01. A copy of the Rules of Procedure may be obtained from the Department upon request or at https://adminrules.idaho.gov/rules/current/37/370101.pdf.

The hearing will be conducted in a facility that meets the accessibility requirements of the Americans with Disabilities Act. If you require reasonable accommodation to attend, participate in, or understand the hearing, please advise the Department no later than five (5) days before the hearing. Inquiries for reasonable accommodations should be directed to Sarah Tschohl, Idaho Department of Water Resources, PO Box 83720, Boise, Idaho 83720-0098, telephone (208) 287-4815, or email sarah.tschohl@idwr.idaho.gov.

DATED this 17th day of October 2024.

Summary Statement

Mr. Contor has worked in the hydrology field since 1996, including ten years with the Idaho Water Resources Research Institute where he served as a research hydrologist, and five years with Idaho Department of Water Resources where he served as a Senior Water Resource Agent. Prior to that he farmed and served on the board of directors of a small canal company.

With the Institute, Mr. Contor served as principal investigator on hydrologic projects as diverse as preparing water budgets for large numerical aquifer models, investigating remote sensing of evapotranspiration on irrigated lands, developing tools to calculate the economic demand for irrigation water, and investigating managed recharge of aquifers. He has published in national peer-reviewed scientific journals and has authored numerous technical completion reports for the Idaho Water Resources Research Institute. At Idaho Department of Water Resource, Mr. Contor measured flow in pipelines and open channels, investigated water-right claims and made water-right recommendations in the Snake River Basin Adjudication.

Mr. Contor holds an M.S. Degree in hydrology from the University of Idaho. His hydrologic specialties include groundwater/surface-water interactions and MODFLOW aquifer modeling, water-budget analysis, pipeline and open-channel flow measurement, and statistics. GIS specialties include aerial land photography interpretation and manipulation of remote-sensing data. Economics specialties are water banking and economic demand for irrigation water. He has extensive experience with water-budget preparation and with collaboration as a member of the development team for Enhanced Snake Plain Aquifer Models (ESPAM) versions 1.0 through 2.1, and the Spokane Valley – Rathdrum Prairie Model. Contor has served as an expert witness in water-related matters.

Education

University of Idaho, Idaho Falls, Idaho, 2005, M.S., Hydrology
Brigham Young University, Provo, Utah, 1994, B.S., Agricultural Economics. Cum Laude.
Ricks College, Rexburg, Idaho, 1980, A.S., Farm Crops Management

Work Experience

Principal Hydrologist at Contor Water LLC, Iona Idaho, January 2024 through present. This is a semi-retirement position primarily supporting Rocky Mountain Environmental Associates in

similar work to that performed previously as an employee.

Senior Hydrologist and then Principal Hydrologist at Rocky Mountain Environmental Associates, Inc., Idaho Falls, Idaho, 2010 through 2023.

Position included aquifer modeling, hydrologic field investigation, hydrologic analysis, GIS and expert-witness work in support of Idaho water-rights transactions, negotiations and proceedings. For approximately two years, Mr. Contor reduced his work at Rocky Mountain Environmental Associates while doing landowner-outreach and technical work for the Henry's Fork Foundation and Friends of the Teton River.

Research Hydrologist of Idaho Water Resources Research Institute, University of Idaho, Idaho Falls, Idaho, 2001-2010

Position included serving as a principle investigator on a ground water banking project in cooperation with U.S. Bureau of Reclamation, as principle investigator in water-budget preparation for aquifer modeling projects, and field investigation in support of managed aquifer recharge. The position included GIS analysis and supervision of hydrologists and data technicians. During this period Mr. Contor sub-contracted field exams for the Snake River Basin Adjudication for Idaho Department of Water Resources.

Senior Water Resource Agent, Idaho Department of Water Resources and North Water Measurement District, 1996-2001

Duties included field and office evaluation of water-right claims, including flow measurements and characterization of conveyance and diversion structures, making water-right recommendations in the Snake River Basin Adjudication, and the measurement of water discharge and power consumption of irrigation wells for documentation of ground water withdrawal volumes.

Worked in irrigated agriculture from 1980 through 1995 as irrigation supervisor, farm manager, tenant farmer, farm owner, seed-company field representative, and Idaho Department of Agriculture chemigation inspector. In the late 1980s through early 1990s served as a board member and then as secretary of a small canal company.

Experience Testifying/Giving Depositions

Circa 2005: Deposed in matters related to the calibration of Enhanced Snake Plain Aquifer Model Version 1.0 and 1.1. This was not in behalf of a client, but in my role as one of the model developers at Idaho Water Resources Research Institute.

Circa 2012: Deposed and testified at hearing in behalf of Fremont Madison Irrigation District and Madison Ground Water District before IDWR regarding aquifer-modeling issues related to the Rangen Aquifer Delivery Call.

2016: Testified in behalf of Gunderson, defendant in a civil case related to filling in of an irrigation ditch in Jefferson County.

Circa 2019: Deposed and testified at hearing in behalf of Fremont Madison Irrigation District, Henry's Fork Ground Water District and Madison Ground Water District before IDWR regarding creation of the Eastern Snake Plain Aquifer Ground Water Management Area.

2021: Testified in behalf of Whittaker, protestant at hearing before IDWR regarding change in Point of Diversion of surface-water rights. The crux of the matter was implications of the abandonment of parts of a historical ditch system, and a water-right transfer seeking to restore a subset of those parts.

2023: Testified in behalf of Nelson, applicant at hearing before IDWR regarding change in Point of Diversion and Place of Use of surface-water rights. An important element of the matter was ditch capacity and conveyance.

2023: Testified in behalf of Bonneville-Jefferson Ground Water District at hearing before IDWR regarding the 5th Methodology Order under the Surface-Water Coalition conjunctive-administration delivery call.

2024: Testified in behalf of Bonneville-Jefferson Ground Water District at hearing before IDWR regarding remedies for the District's alleged breach of a mitigation plan.

Attorneys for Byron Pehrson, Loy Pehrson, and Randy Pehrson

BEFORE THE DEPARTMENT OF WATER RESOURCES OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	Docket No. P-DR-2024-001
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	**PEHRSONS EXPERT WITNESS DISCLOSURE**

COMES NOW Byron Pehrson, Loy Pehrson, and Randy Pehrson ("Pehrsons"), by and through their attorneys of record, McHugh Bromley, PLLC, and hereby disclose their expert witnesses, as required by the Hearing Officer's *Order Authorizing Discovery and Email Service; Scheduling Order; Notice of Hearing* (Oct. 17, 2024).

1. David R. Tuthill, Jr., Ph.D., P.E.

   Dr. Tuthill is expected to testify as to the process by which the Idaho Department of Water Resources ("IDWR") permits, licenses, and approves transfers for water rights, as well as administration of water rights, and his opinions thereto. Dr. Tuthill's CV is attached.

2. Lucas Eli Yockey, Former Watermaster Water District No. 34, Former General Manager of the Big Lost River Irrigation District

Mr. Yockey was born in 1990 and may be contacted at: 4015 W. Houston Road, Mackay, Idaho 83251; (208) 588-2824. Mr. Yockey holds a B.S. from the University of Idaho in Fishery Resources, graduating in 2013. Mr. Yockey was the Watermaster for Water District No. 34 ("WD34") for eight (8) years from 2015-2022; served as the General Manager for the Big Lost River Irrigation District ("BLRID") for five (5) years from 2018-2022; and is presently employed as the Superintendent of the Lost River Highway District from 2022 to present. Mr. Yockey is expected to testify regarding the method in which water is delivered in WD 34 and how BLRID delivers water within said basin, and his opinions thereto.

3. Preston Marcroft, Watermaster, Water District No. 34

   Mr. Marcroft was born in 1963 and may be contacted at: PO Box 534, Mackay, Idaho 83251; (208) 833-6420. Mr. Marcroft graduated from Mackey High School. Mr. Marcroft served as a Ditch Rider for WD 34, above Mackay Reservoir, for 9.5 years from 2013 to 2022. Since Mr. Yockey's resignation in 2022, Mr. Marcroft has served as the Watermaster for WD 34 and is presently employed as the Watermaster. Mr. Marcroft is expected to testify regarding the method in which water is delivered in WD 34, and his opinions thereto.

4. Shelley Keen, IDWR

   Mr. Keen is expected to testify as to the process by which IDWR permits, licenses, and approves transfers for water rights, as well as administration of water rights, and his opinions thereto.

5. James Cefalo, IDWR

   Mr. Cefalo is expected to testify as to the process by which IDWR permits, licenses, and approves transfers for water rights, as well as administration of water rights, and his opinions thereto.

The Pehrsons reserve the right to call the above-disclosed witnesses as expert and/or fact witness.

DATED this 1st day of November, 2024.

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	Docket No. **P-DR-2024-001** **JOINT MOTION TO EXTEND WRITTEN DISCOVERY DEADLINE**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	

Byron Pehrson, Loy Pehrson, and Randy Pehrson, Moss Farms, Inc, the Big Lost Irrigation District and the Moore Canal, ("the Parties") by and through their attorneys of record jointly request that the deadline for written discovery which is currently set for December 2, 2024 be extended to December 13, 2024.

The reason for this request is that the extension will allow the Parties to work on possible stipulated facts which will likely eliminate the need for certain written discovery and will streamline written discovery which will be more cost effective and efficient for the Parties.

The Parties do not expect that moving the written discovery deadline will impact any other remaining deadlines in the case.

Therefore, the Parties ask that the written discovery deadline be moved to December 13, 2024.

Submitted this 2nd day of December, 2024.

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	Docket No. P-DR-2024-001
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	**ORDER GRANTING JOINT MOTION TO EXTEND WRITTEN DISCOVERY DEADLINE**

BACKGROUND

On October 17, 2024, Hearing Officer Burdick issued an *Order Authorizing Discovery and Email Service; Scheduling Order; Notice of Hearing* ("*Order*"). The deadline to serve written discovery requests in this contested case was set for December 2, 2024. *Order*, at 2. However, included in the *Order*: "If a party feels that additional time for written discovery is necessary, the party may move the Hearing Officer for an extension. Such a motion must explain the additional discovery sought and the reason the discovery could not be conducted prior to the deadline." *Id*.

On December 2, 2024, the parties in this matter—the Pehrsons, Moss Farms, Inc, Big Lost River Irrigation District, and Moore Canal Users—filed a *Joint Motion to Extend Written Discovery Deadline* ("*Joint Motion*"). The *Joint Motion* requests the deadline for written discovery be extended to December 13, 2024, to allow the parties additional time to work on a set of stipulated facts to reduce the need for written discovery. *Joint Motion*, at 1–2. The *Joint Motion* does not seek to alter any additional scheduling deadlines. *See id*.

In an exercise of discretion, and on the basis that the parties are moving jointly, the Hearing Officer will grant the parties' *Joint Motion*. *See* IDAPA 37.01.01.412.

ORDER

IT IS HEREBY ORDERED that the parties' *Joint Motion to Extend Written Discovery Deadline* is GRANTED. The deadline for the parties to serve written discovery requests is extended to December 13, 2024.

DATED this 3rd day of December 2024.

ROGER S. BURDICK
Hearing Officer

Attorneys for Moore Canal Users

BEFORE THE DEPARTMENT OF WATER RESOURCES
OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	)	**Docket No. P-DR-2024-001**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	)	**MOORE CANAL USERS MOTION TO DISMISS**

COMES NOW, Moore Canal Users, by and through their attorney of record, Hyrum Erickson of Rigby, Andrus & Rigby Law, *PLLC*, and, pursuant to IDAPA 37.01.01.220 and IRCP Rule 12(b)(6), moves and petitions the Court to dismiss the within action on the basis that these counts fail to state a claim upon which relief can be granted.

BACKGROUND

On February 14, 2024, Byron Pehrson, Loy Pehrson, and Randy Pehrson ("Pehrsons") submitted a Petition for Declaratory Ruling for Watermaster Instructions (Petition) with the Idaho Department of Water Resources ("Department"). The Pehrsons seek two forms of relief:

> 1. Instruct the Water District No. 34 Watermaster that when the natural flow in the Big Lost River at USGS Gage #13127000 ("2B Gage") located at T07N, R24E, S18, SWNE, B.M. is 187 cfs or less for three (3) consecutive days, water right now. 34-18 and 34-381A, held by Moss Farms, Inc., shall only be entitled to divert from the 3 in 1 Ditch, located at T06N, R25E, S14, SENWSE, and shall not be entitled to also divert from the Big Lost River at T06N, R26E, S32, SENW, unless and until the natural flow in the Big Lost River exceeds 500 cfs at the 2B

Gage for three (3) consecutive days.

2. Instruct the Water District No. 34 Watermaster to make futile calls on the river as if storage water is not available as carriage water for natural flow water rights. If storage water is added to natural flow, futile call determinations can change to the detriment of natural flow water users. Natural flow water users are entitled to delivery determinations being made in the same manner as when their appropriations were made, prior to the creation of storage.

Petition for Declaratory Ruling for Watermaster Instructions, at 2.

On February 23, 2024, Moss Farms, Inc. filed an Objection to Petition for Declaratory Ruling for Watermaster Instructions with the Department. Additionally, the Big Lost River Irrigation District (BLRID), and Moore Canal Users (Moore), were admitted as intervenors in this contested case.

STANDARD

Pehrsons cite IDAPA 37.01.01.300.02.d as the authority under which they have filed the above petitions for declaratory ruling. The rule relates to the form and content of pleadings and written motions. Section 2 in its entirety states as follows:

> 02. Content of Pleadings and Written Motions. A pleading or written motion shall fully state:
>
> a. The facts upon which it is based;
> b. The provision of statute, rule, order, or other controlling law upon which it is based; and
> c. The relief sought, including any proposed limitation (or the denial) of any right, license, or permit sought in an application.
> d. Petitions for declaratory orders shall state the declaratory ruling that the petitioner seeks.

Effective date of 3-18-2022 after each part was omitted for clarity.

The Petition does not state any other provision of statute, rule, order, or other controlling law upon which the declaratory ruling is being requested.

Idaho Code § 67-5232 provides,

> **(1)** Any person may petition an agency for a declaratory ruling as to the applicability of any statutory provision or of any rule administered by the agency.
> **(2)** A petition for a declaratory ruling does not preclude an agency from initiating a contested case in the matter.

> **(3)** A declaratory ruling issued by an agency under this section is a final agency action.

Idaho Code §67-5255 provides,

> (1) Any person may petition an agency for a declaratory ruling as to the applicability of any order issued by the agency.
> (2) A petition for a declaratory ruling does not preclude an agency from initiating a contested case in the matter.
> (3) A declaratory ruling issued by an agency under this section is a final agency action.

12(b)(6) Standard

Idaho Rule of Civil Procedure 12(b)(6) states as follows:

> **(b) How to present defenses.** Every defense, in law or fact, to a claim for relief in any pleading, whether a claim, counterclaim, cross-claim or third party claim, must be asserted in the responsive pleading if one is required. But a party may assert the following defenses by motion:
>
> **(6)** failure to state a claim upon which relief can be granted.

The Idaho Supreme Court's standard for a dismissal under IRCP 12(b)(6) is the same as the summary judgment standard. *Tomchak v. Walker*, 108 Idaho 446, 700 P.2d 68 (1985). "The non-moving party is entitled to have all inferences from the record viewed in his favor and only then may the question be asked whether a claim for relief has been stated." *Miles v. Idaho Power Co.*, 116 Idaho 635, 637, 778 P.2d 757, 759 (1989). However, the Supreme Court has also held, "The only facts which a court may properly consider on a motion to dismiss for failure to state a claim are those appearing in the complaint, supplemented by such facts as the court may judicially notice." *See*, *Cohen v. United States*, 129 F.2d 733 (8th Cir. 1942); *Hellickson v. Jenkins*, 118 Idaho 273, 276, 796 P.2d 150, 153 (1990).

ARGUMENT

1. **The Pehrsons' Petition does not comply with the statutory and regulatory authority regarding petitions for declaratory rulings by agencies. The requests for Declaratory Ruling for Watermaster Instructions contained in the Petition must be dismissed.**

Idaho Codes §§ 67-5232 and 67-5255, both relating to "Declaratory rulings by agencies" inform how petitions for declaratory rulings by an agency may be made. Idaho Code § 67-5232 states,

> **(1)** Any person may petition an agency for a declaratory ruling as to the applicability of any statutory provision or of any rule administered by the agency.
> **(2)** A petition for a declaratory ruling does not preclude an agency from initiating a contested case in the matter.
> **(3)** A declaratory ruling issued by an agency under this section is a final agency action.

The Pehrsons' Petition does not contain a cite to any authority that they are asking the Department for a declaratory ruling on. It doesn't request a "declaratory ruling as to the applicability of any statutory provision or of any rule administered by the agency" as required by the above statue. Instead, it seems that they are demanding that the Department issue watermaster instructions that benefit them as a junior water user without any authority at all.

Idaho Code §67-5255 states,

> (1) Any person may petition an agency for a declaratory ruling as to the applicability of any order issued by the agency.
> (2) A petition for a declaratory ruling does not preclude an agency from initiating a contested case in the matter.
> (3) A declaratory ruling issued by an agency under this section is a final agency action.

Idaho Code § 67-5201(15), which is the definitions section of the chapter, defines "order" as follows:

> "Order" means an agency action of particular applicability that determines the legal rights, duties, privileges, immunities, or other legal interests of one (1) or more specific persons.

The Petition does not cite to any order or ask for clarification on the applicability of any order issued by the Department. Even though the 2015 transfer adding a point of diversion to Moss'

water rights is mentioned, the Petition is not requesting the Department issue a declaratory ruling as to the applicability of that transfer.

In fact, if the Petition is granted, multiple orders and rules will be ignored to provide the Pehrsons' requested relief, including IDAPA 37.03.12.040.02.d.iii, part of the Water Distribution Rules for Water District 34 which states as follows:

> If natural flow can not be delivered to a point of diversion at the beginning of the irrigation season and the watermaster determines rotation credit is needed to make possible the delivery of water rights being called for, and there is room in Mackay Reservoir for rotation credit, the watermaster may rotate natural flow rights, which would not otherwise be deliverable to their point of diversion, for credit of up to a combined total of three thousand five hundred (3,500) AF to be released from the reservoir under the control of the watermaster to make natural flow rights deliverable to their point of diversion. *The watermaster may use storage water to assist the delivery of natural flow water rights at the beginning of the irrigation season when requested to do so by the storage holder.*

Emphasis added.

A petition for declaratory rulings by agencies must contain specific elements that are identified in Idaho Code and IDAPA regulations. The Petition does not meet the statutory or regulatory requirements for petitions for declaratory rulings by agencies. On this basis alone, the Petition must be denied.

2. **Alternatively, the requested watermaster instructions incorrectly use the doctrine of Futile Call as a sword to cut off senior water users, rather than as a mechanism to protect the water resources in Basin 34. The Requested relief must be denied.**

Pehrsons' Petition cites to *Sylte v. Idaho Dept. of Water Res.,* 165 Idaho 238, 245, 443 P.3d 252, 259 (2019) as support for their request that "[t]he Department should issue watermaster instructions defining when futile call exists for natural flow water rights but for storage water releases from Mackay Reservoir." (Petition at 7). However, this situation is distinguishable from the situation in *Sylte*. In *Sylte*, releasing storage water from Twin Lakes was expressly barred by the Final Decree. *Id.* Here, Mackay Reservoir is a storage reservoir with the

purpose of storing water for irrigation. There is no general bar on releases of storage water from Mackay Reservoir as there was in *Sylte*.

Futile call is not meant to be used as a sword by junior appropriators against senior appropriators. Futile call is a last resort applied only when water will not make it to a senior's point of diversion and will be wasted if the senior continues to call for its water. No water user has a right to a futile call, it is merely the recognition of a practical reality. The watermaster instructions requested in the Petition will not only affect Moss, but will affect all senior and junior downstream users. If the first requested watermaster instruction is allowed, the trigger at the 2B Gage will effectively shut off the delivery of water for all downstream users, not just Moss.

Idaho Courts have long held that futile call is only to be used in situations where water is short and there is no other option for the senior user to receive its water. The Idaho Supreme Court in *Gilbert v. Smith*, 97 Idaho 735, 739, 552 P.2d 1220, 1224 (1976) held as follows,

> As a rule, the law of water rights in this state embodies a policy against the waste of irrigation water. Such policy is not to be construed, however, so as to permit an upstream junior appropriator to interfere with the water right of a downstream senior appropriator so long as the water flowing in its natural channels would reach the point of downstream diversion. We agree that if due to seepage, evaporation, channel absorption or other conditions beyond the control of the appropriators the water in the stream will not reach the point of the prior appropriator in sufficient quantity for him to apply it to beneficial use, then a junior appropriator whose diversion point is higher on the stream may divert the water.

Internal citations omitted. The Court identifies the reasons that a futile call may exist as "seepage, evaporation, channel absorption or other conditions beyond the control of the appropriators[.]" In other words, geological and hydrological realities. This is consistent with the definition of futile call used in the Conjunctive Management rules.

> 08. Futile Call. A delivery call made by the holder of a senior-priority surface or ground water right that, for physical and hydrologic reasons, cannot be satisfied within a reasonable time of the call by immediately curtailing diversions under junior-priority ground water rights or that would result in waste of the water resource.

IDAPA 37.03.11.010.08. A call becomes futile when it cannot be delivered "for physical or hydrological reasons." Futile call is based on a hydrological and physical reality – it is not a legal right held by any water user. In fact, futile call is generally treated as an affirmative defense used by junior water right holders as a shield to explain their failure to respond to a senior's call for water. *See Montana v. Wyoming*, No. 137, 2014 U.S. LEXIS 8446, at *292-94 (Dec. 29, 2014) (citing to *A&B Irrigation v. Spackman*, 155 Idaho 640, 315 P.3d 828, 835 (Idaho 2013) and *Clear Springs Foods, Inc. v. Spackman*, 150 Idaho 790, 252 P.3d 71, 98 (Idaho 2011) as examples of futile call as an affirmative defense.).

The Pehrsons' petition misapprehends the nature of futile call. Rather than a recognition of a physical reality, they seek to turn futile call into a right by asserting that, although water can be delivered to senior water right holders, it should not be. This is a novel argument and unsupported in Idaho law.

Under IDAPA 37.03.12.040, the rules governing water delivery in Water District 34, the delivery of storage water is under the control of the appropriators. If an appropriator has storage water, they can call for it to be delivered whenever they want. If storage water is available and it can be used, there is no reason it cannot be used to help deliver the natural flow right of the same appropriator if it is in priority.

Pehrsons state, "[i]t is blackletter law that junior water users are entitled to the conditions of the stream as they found them when they perfected their water rights." (Pet. For Decl. Ruling p. 6) Petitioners cite W*ashington State Sugar Co. v. Goodrich*, 27 Idaho 26, 147 P. 1073 (1915)

and *Bennett v. Nourse*, 22 Idaho 249, 125 P. 1038 (1912) as support. However, a brief review of the cases makes clear that they contain no such holding. Both cases describe the injury analysis conducted for water right transfers. The actual holding of both cases is that "a prior appropriator has no right to change the point of diversion when it will in any manner injure a subsequent appropriator." *Bennett v. Nourse*, 22 Idaho 249, 254, 125 P. 1038, 1039-40 (1912). Neither case is relevant to the issues at hand.

Pehrsons misapply the water right transfer injury analysis to argue that because their rights were appropriated before the construction of Mackay Reservoir, they are entitled to delivery determinations as if the reservoir did not exist. However, the construction of Mackay Reservoir changed the delivery of water to the entire basin downstream. The allocation and accounting of water in the basin changed to account for the storage of water in Mackay Reservoir. It would be impossible to do the water right accounting as if Mackay Reservoir did not exist purely to inform futile call decisions that benefit Pehrsons.

Pehrsons' two watermaster instructions would negatively affect delivery of water to all users downstream of the 2B Gage and Moss' point of diversion on the Big Lost River. The Petition should be dismissed in its entirety.

CONCLUSION

Pehrsons' Petition for watermaster instructions should be dismissed in its entirety as it does not comply with statutory or regulatory requirements, improperly asserts a right to a futile call, and if granted would harm all downstream users, not just Moss. No oral argument is requested.

DATED this 13th day of January, 2025.

Attorney for Moss Farms, Inc.

RECEIVED
Jan 24, 2025
DEPARTMENT OF WATER RESOURCES

STATE OF IDAHO

DEPARTMENT OF WATER RESOURCES

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	Docket No. **P-DR-2024-001** **MEMORANDUM IN SUPPORT OF MOTION FORU SUMMARY JUDGMENT**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	

Moss Farms, Inc. (hereafter "Moss Farms"), by and through his attorney of record, Skyler C. Johns, of Olsen Taggart PLLC, provides the following *Memorandum in Support of Motion for Summary Judgment* (hereafter "Memorandum") pursuant to IDAPA 37.01.01.220.03 and Idaho Rules of Civil Procedure 56. This Memorandum is supported by the record and the *Declaration of Skyler Johns in Support of Motion for Summary Judgment* (hereafter "Dec. of Johns").

Moss Farms respectfully requests the Hearing Officer dismiss the *Petition for Declaratory Ruling for Water Master Instructions* (hereafter "Petition") filed by Byron Pehrson and Loy Pehrson (hereafter "Petitioners") and not consider it for the following reasons:

1) The Petitioners' time to challenge the Moss Farms' Water Rights has expired pursuant to Idaho Code §§ 42-222 & 42-5246; and

2) The doctrine of res judicata bars the relief requested by Petitioners.

I.
BACKGROUND

The dispute between Moss Farms and the Petitioners first arose in 2022 when the Petitioners realized they should have protested an Application for Transfer of Water Right (hereafter "Application") filed by Moss Farms clear back in 2015. In 2015, Moss Farms asked the Idaho Department of Water Resources to add a new location for it to divert its senior water rights from the Big Lost River. Even though notice and opportunity to protest the Application was given to the Pehrsons and others potentially affected, not a single person protested the additional point of diversion to Moss Farms water rights. The Idaho Department of Water Resources (hereafter "Department") sought comments from the Basin's Watermaster, conducted an injury analysis of the proposed transfer, and concluded that the transfer did not cause injury to any water right holders.

The Pehrson's instant Petition should be dismissed because it is really just seeking to re-adjudicate the issues that were tackled by the Department during its review and approval of the Application. As will be shown in this memorandum, the time to protest Moss Farms' transfer expired and the issues in their Petition were previously adjudicated. Therefore, the instant Petition must be dismissed.

II.
STATEMENT OF UNDISPUTED FACTS

1. Moss Farms holds water rights 34-182 and 34-381A (hereafter "Water Rights") and uses them for irrigation. Dec. of Johns ¶¶ 4 & 5, Exs. A & B.

2. On October 27, 2015, Moss Farms filed an Application for Transfer of Water Rights (hereafter "Application") with the Department to add a new point of diversion (hereafter the "River Diversion") at T06N, R26E, S32, SENW) to its Water Rights. *Id.* at ¶ 6, Ex. C.

5. Watermaster comments were sought as part of the transfer review process. *Id.* at ¶ 7, Ex., D.

6. The Watermaster approved the Application. *Id.* at ¶ 8, Ex. E.

7. Notice of the Application was published to the public. *Id.* at § 9, Ex. F.

7. There were no protests filed against approval of the Application. *Id.* at ¶ 10.

9. IDWR conducted its own injury analysis of the proposal in the Application. *Id.* at ¶ 11, Ex. G.

10. The transfer was approved by the Idaho Department of Water Resources (IDWR) on December 14, 2015, and the River Diversion was added as an authorized point of diversion to both water rights along with the 3 in 1 Ditch. *Id.* at ¶¶ 11 & 12, Exs. G & H.

11. The Department did not impose any specific conditions on the approval of the Application related to futile call or flow limitations. *Id.*

III.
STANDARD OF REVIEW

The Idaho Rules of Civil Procedure provide that "summary judgment shall be rendered when "the pleadings, depositions, and admissions on file, together with the affidavits, if any, show that there is no genuine issue as to any material fact and that the moving party is entitled to a judgment as a matter of law. If the evidence reveals no disputed issues of material fact, what remains is a question of law, over which this Court exercises free review." *Krinitt v. Idaho Dept of Fish & Game*, 162 Idaho 425, 428–29, 398 P.3d 158, 161–62 (2017) (internal citations omitted).

IV.
ARGUMENT

1) The Petitioners time to challenge the Moss Farms' Water Rights has expired.

Petitioners were already given the opportunity to protest the administration of Moss Farms' Water rights clear back in 2015. But, they failed to act. There is no dispute that no person or entity, including the Petitioners, objected to the Application filed by Moss Farms in 2015 despite notice of the Application being given by the Department pursuant to Idaho Code Idaho Code § 42-222. The preliminary order approving the Application was issued pursuant to Idaho Code § 67-5243.This order became a final order because no motions to reconsider were filed within the 14-day time limit. *See id.* Because no motions to reconsider, nor appeals were filed, the preliminary order became a final order. *See* Idaho Code §§ 67-5245, 67-5270, & 67-5272.

Petitioners were given notice and an opportunity to participate in proceedings and to protest the water right transfer. They did not. They also did not move to reconsider or otherwise seek declaratory relief consistent with the deadlines prescribed in Idaho Code §§ 42-222 or 42-5246. As such, the order on the Moss Farms' transfers have been final for nearly nine (9) years, and there are simply no legal grounds to undue it now.

2) The doctrine of res judicata bars the relief requested by Petitioners.

The doctrine of res judicata bars the Director from granting the relief sought by Petitioners because the precise subject matter and issues in which they seek review were previously, considered, and adjudicated in the transfer application proceedings. *Sagewillow, Inc. v. Idaho Department of Water Resources* is instructive on the application of the doctrine of res judicata in this case:

> The doctrine of res judicata applies to administrative proceedings. *Hansen v. Estate of Harvey*, 119 Idaho 333, 806 P.2d 426 (1991); *J & J Contractors/O.T. Davis*

> *Constr. v. State by Idaho Transp. Bd.*, 118 Idaho 535, 797 P.2d 1383 (1990). In *Joyce v. Murphy Land & Irrigation Company*, 35 Idaho 549, 553, 208 P. 241, 242–43 (1922), this Court stated that the scope of the doctrine of res judicata was as follows:
>
> > We think the correct rule to be that in an action between the same parties upon the same claim or demand, the former adjudication concludes parties and privies not only as to every matter offered and received to sustain or defeat the claim but also as to every matter which might and should have been litigated in the first suit.
>
> The 'sameness' of a cause of action for purposes of application of the doctrine of res judicata is determined by examining the operative facts underlying the two lawsuits. *Houser v. Southern Idaho Pipe & Steel, Inc*., 103 Idaho 441, 649 P.2d 1197 (1982).

Sagewillow, Inc. v. Idaho Dep't of Water Res., 138 Idaho 831, 844, 70 P.3d 669, 682 (2003).

Here, the facts underlying the Application directly involved the Water Rights of Moss Farms. The same issues involving injury to other water right holders, and appropriate conditions for approval of diversions out of the Big Lost River are involved in both cases. The Department sought a recommendation from the Watermaster, Lucas Yockey, who approved of the Application. The same is being sought here. In reviewing the Application, IDWR evaluated whether any injury would occur pursuant to the duties prescribed by Idaho Code. Section 42-222(1) provides in relevant part that:

> it shall be the duty of the director of the department of water resources to investigate the same and to conduct a hearing thereon. He shall also advise the watermaster of the district in which such water is used of the proposed change and the watermaster shall notify the director of the department of water resources of his recommendation on the application, and the director of the department of water resources shall not finally determine the action on the application for change until he has received from such watermaster his recommendation thereof, which action of the watermaster shall be received and considered as other evidence.
> ….
>
> The director of the department of water resources shall examine all the evidence and available information and shall approve the change in whole, or in part, or upon conditions, provided no other water rights are injured thereby, the change

> does not constitute an enlargement in use of the original right, the change is consistent with the conservation of water resources within the state of Idaho and is in the local public interest as defined in section 42-202B, Idaho Code, the change will not adversely affect the local economy of the watershed or local area within which the source of water for the proposed use originates, in the case where the place of use is outside of the watershed or local area where the source of water originates, and the new use is a beneficial use, which in the case of a municipal provider shall be satisfied if the water right is necessary to serve reasonably anticipated future needs as provided in this chapter.

The Argument that Moss Farm's diversion of its Water Rights is injuring the Pehrons' water rights was precisely the same inquiry and determination the Department made regarding the Application. The Pehrsons' instant petition is merely seeking to redo what could have been done in the prior Application proceedings. They are now seeking to impose a condition on the Moss Farms Water Rights by cloaking the request as a routine administrative adjustment. However, the same issues they are raising in their Petition were already presented to the Department in 2015.

The Pehrsons also had the opportunity to be involved in the earlier process but declined to participate. The issues they are raising now, certainly should have been part of the Application proceedings. Public Notice of the Application was given in accordance with Idaho Code § 42-222, and nobody, including the Pehrsons, protested approval of the Application. Because these issues were already addressed in the prior proceeding, the Pehrsons are barred from relitigating them here.

V.
CONCLUSION

The law simply does not authorize the Director to grant the relief requested, nor does the law permit the Director to relitigate the issues already resolved in the prior transfer proceeding. Allowing this Petition to move forward will also open a Pandora's Box of litigation from junior water right holders against seniors, and is, therefore against public policy. For these reasons, and

others not yet identified, Moss Farms respectfully request the Director reject the petition and not consider it.

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	Docket No. **P-DR-2024-001** **DECLARATION OF SKYLER JOHNS IN SUPPORT OF MOTION FOR SUMMARY JUDGMENT**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	

I, Skyler C. Johns, under penalty of perjury make the following declaration:

1. I am over the age of eighteen (18) and competent to testify in this matter. I make this affidavit based upon my own personal knowledge unless otherwise stated, and under penalty of perjury.

2. I am counsel for the Moss Farms, Inc. (hereafter "Moss Farms") in the above-captioned matter.

3. I have personal knowledge of the facts to which I am about to testify.

4. I obtained a true and accurate copy of the Water Right Report for Water Right No.

34-182 from the website for the Idaho Department of Water Resources (hereafter "Department") and attached the same hereafter as "Exhibit A."

5. I obtained a true and accurate copy of the Water Right Report for Water Right No. 34-381A from the Department's website and attached the same hereafter as "Exhibit B."

6. I obtained a true and accurate copy of the Application for Transfer of Water Rights No. 79972 (hereafter "Application") from the Department's website and attached the same hereafter as "Exhibit C."

7. I obtained a true and accurate copy of the Legal Notice Letter from the Department dated April 9, 2015, sent to the basin 35 Watermaster, Lucas Yockey, from Department's website and attached the same hereafter as "Exhibit D."

8. I obtained a true and accurate copy of the Watermaster Recommendation from Lucas Yockey dated April 10, 2015, from Department's website and attached the same hereafter as "Exhibit E."

9. I obtained a true and accurate copy of the Affidavit of Publication dated May 4, 2015, from the Department's website and attached the same hereafter as "Exhibit F."

10. The Department's records for the Application do not show that any person or entity protested or objected to the Application.

11. I obtained a true and accurate copy of the Review & Evaluation of Sufficiency of Information Memorandum by Michael Holliday, dated June 15, 2015, from the Department's website and attached the same hereafter as "Exhibit G."

12. I obtained a true and accurate copy of the Preliminary Order approving the Application dated June 30, 2015, from the website for the Department's website and attached the same hereafter as "Exhibit H."

13. I obtained a true and accurate copy of the Notice of Approval of Transfer dated June 30, 2015, from the Department's website and attached the same hereafter as "Exhibit I."

14. Further, your declarant saith not.

Conditions

Code	Condtions
X27	This right is limited to the irrigation of 80 acres within the authorized place of use in a single irrigation season.
X35	Rights 34-182, 34-381A and 34-2379F when combined shall not exceed a total diversion rate of 5.2 cfs and the irrigation of 200 acres.
X35	Rights 34-182, 34-381A, 34-2379F, and 34-14525 when combined shall not exceed a total diversion rate of 5.2 cfs, and the irrigation of 200 acres.
R63	This right when combined with all other rights shall provide no more than 0.02 cfs per acre nor more than 3.5 afa per acre at the field headgate for irrigation of the place of use.
S34	The period of use for irrigation described above may be extended in seasons of unusual characteristics to a beginning date of 04-20 and an ending date of 10-31 at the discretion of the Director of the Idaho Department of Water Resources.
R05	Use of water under this right will be regulated by a watermaster with responsibility for the distribution of water among appropriators within a water district. At the time of this approval, this water right is within State Water District No. 34.
R43	The right holder shall maintain a measuring device and lockable controlling works of a type approved by the Department in a manner that will provide the watermaster suitable control of the diversion(s).
004	This right does not grant any right-of-way or easement across the land of another.
T07	The right holder shall accomplish the change authorized by this transfer within one year of the date of this approval.
T08	Failure of the right holder to comply with the conditions of this transfer is cause for the Director to rescind approval of the transfer.
T19	Pursuant to Section 42-1412(6), Idaho Code, this water right is subject to such general provisions necessary for the definition of the rights or for the efficient administration of water rights as may be determined by the Snake River Basin Adjudication court at a point in time no later than the entry of the final unified decree.

Rev. 01/15

STATE OF IDAHO
DEPARTMENT OF WATER RESOURCES

Transfer No. 79972

MINIMUM REQUIREMENTS CHECKLIST
TO BE SUBMITTED WITH APPLICATION FOR TRANSFER

RECEIVED
APR 06 2015
Department of Water Resources
Eastern Region

An application for transfer must be prepared in accordance with the minimum requirements listed below to be acceptable for processing by the Department. Incomplete applications will be returned. The instructions, fee schedule, Part 2A reports and additional Part 2B forms are available from any Department office or on the Department's website at www.idwr.idaho.gov.

Name of Applicant(s) Moss Farms Inc.

Check whether each item below is *attached* (Yes) or *not applicable* (N/A) for the proposed transfer.

Yes	N/A	
		* Means the item is always required and must be included with the application.
☑	*	Completed Application for Transfer of Water Right form, Part 1.
☑	*	Signature of applicant(s) or applicant's authorized representative on Application for Transfer Part 1. Include evidence of authority labeled Attachment #3 (see below) if signed by representative.
☑	*	Application for Transfer Part 2A. Attach a Part 2A report describing each water right in the transfer as currently recorded.
☐	☑	Complete and attach an Application for Transfer Part 2B for each water right for which only a portion is proposed to be changed through this transfer application.
☑	*	Application for Transfer Part 3A is always required (see Attachment #7a below); Parts 3B and 3C must be completed for transfer applications proposing to change the nature of use of the water right(s) or proposing changes to supplemental right(s).
☑	*	Correct fee submitted with transfer application form. (Fee schedule is on website and instructions for application for transfer.)

Attachments to Application - Label each attachment with the corresponding number shown below as Attachment #1-10.

☑	☐	#1 If the applicant is a business, partnership, organization, or association, and not currently registered in the State of Idaho as a business entity, attach documentation identifying officers authorized to sign or act on behalf of right holder. (See Part 1.)
☐	☑	#2a Water Right ownership documentation if Dept. records do not show the applicant as the current water right owner. **
☐	☑	#2b If the ownership of the water right will change as a result of the proposed transfer to a new place of use, attach documentation showing land and water right ownership at the new place of use. Include documentation for all affected land and owner(s).** ** Additional fee(s) required for water right ownership changes; see fee schedule.
☐	☑	#3 Documentation of authority to make the change if the applicant is not the water right owner.
☐	☑	#4 Power of Attorney or documentation providing authority to sign or act on the applicant's behalf. (See Part 1.)
☐	☑	#5 If the transfer application proposes to change the point of diversion for a water right affecting the Eastern Snake Plain Aquifer (ESPA), attach the results of an ESPA analysis and a detailed mitigation plan to offset any depletions to hydraulically connected reaches of the Snake River. ESPA transfer spreadsheet and model grid labeled cells are available on the Department's website at www.idwr.idaho.gov/WaterManagement/WaterRights/WaterRightTransfers/resources.htm.
☐	☑	#6 Notarized statement of agreement or a statement on official letterhead signed by an authorized representative from each lien holder or other entity with financial interest in the water right(s) or land affected by the proposed transfer. (See Part 1.5.c.)
☑	*	#7a Attach a map identifying the proposed point(s) of diversion, place(s) of use, and water diversion and distribution system details as described on the application. Include legal description labels. If only a portion of the right is proposed to be changed, identify the current location of the part of the existing right(s) proposed to be changed. (See Part 3A.)
☐	☑	#7b If the transfer application proposes to change the place or purpose of use of an irrigation right attach a Geographic Information System (GIS) shape file, or an aerial photo or other image clearly delineating the location and extent of existing acres and changes to the place of use. If some or all of any right is leased to the Water Supply Bank, you must also show the the specific location and/or acres to be idled at the new, proposed place of use to satisfy lease requirements.
☐	☑	#8a If the transfer application proposes to change the nature of use or period of use for one or more rights, provide documentation describing the extent of historic beneficial use for the water rights proposed to be transferred and document how enlargement will be avoided. (See Part 3B.) Additional fee required for proposed changes to nature of use; see fee schedule.
☐	☑	#8b If the transfer application proposes to change the place of use of a supplemental irrigation right, provide documentation regarding the historic use of the supplemental right(s) and availability or reliability of the primary right(s) being supplemented, both before and after the proposed change. (See Part 3C.)
☐	☑	#9 Water Supply Bank information for all rights proposed for transfer and currently leased to the Bank. (Attachment WSB)
☐	☐	#10 Other. Please describe: _____

Rev. 01/15

STATE OF IDAHO
DEPARTMENT OF WATER RESOURCES

RECEIVED
APR 06 2015
Department of Water Resources
Eastern Region

APPLICATION FOR TRANSFER OF WATER RIGHT
PART 1

Name of Applicant(s) Moss Farms Inc. Phone 208-554-4140

Mailing address 3286 North 3350 West, Moore, ID 83255 Email mx222moss@aol.com

☐ If applicant is not an individual and not registered to do business in the State of Idaho, attach documentation identifying officers authorized to sign or act on behalf of the applicant. Label it **Attachment #1**.

☐ Attach water right ownership documentation if Department records do not show the transfer applicant as the current water right owner. Label it **Attachment #2a**.

☐ If the ownership of the water right will change as a result of the proposed transfer to a new place of use, attach documentation showing land and water right ownership at the new place of use. Include documentation for all affected land and owner(s). Label it **Attachment #2b**.

☐ Attach documentation of authority to make the proposed change if the applicant is not the water right owner. Label it **Attachment #3**.

Provide contact information below if a consultant, attorney, or any other person is representing the applicant in this transfer process.

☐ No Representative

Name of Representative _____ Phone _____

Mailing address _____ Email _____

☐ Send all correspondence for this application to the representative and not to the applicant.
OR
☐ Send original correspondence to the applicant and copies to the representative.

☐ The representative may submit information for the applicant but is not authorized to sign for the applicant.
OR
☐ The representative is authorized to sign for the applicant. Attach a Power of Attorney or other documentation providing authority to sign for the applicant and label it **Attachment #4**.

I hereby assert that no one will be injured by the proposed changes and that the proposed changes do not constitute an enlargement in use of the original right(s). The information contained in this application is true to the best of my knowledge. I understand that any willful misrepresentations made in this application may result in rejection of the application or cancellation of an approval.

_____ — Print Name and Title if applicable

_____ — Date

A. PURPOSE OF TRANSFER

1. ☐ Change point of diversion ☑ Add diversion point(s) ☑ Change place of use
☐ Change nature of use ☐ Change period of use ☐ Other _____

2. Describe your proposal in narrative form, including a detailed description of non-irrigation uses to justify amounts transferred (i.e. number of stock, etc.), and provide additional explanation of any other items on the application. Attach additional pages if necessary and label it **Part 1A.2.**
Add a point of diversion to my Big Lost River rights to allow me to pump directly from the river. Rearrange the place of use to reflect current irrigation system.

APPLICATION FOR TRANSFER OF WATER RIGHT
PART 1 Continued

B. DESCRIPTION OF RIGHTS AFTER THE REQUESTED CHANGES. IF THE RIGHTS ARE BEING SPLIT, DESCRIBE PORTIONS TO BE CHANGED AS THEY WOULD APPEAR AFTER THE REQUESTED CHANGES.

1. All	Part	Right Number	Amount (cfs/ac-ft)	Nature of Use	Period of Use	Source & Tributary
☑	☐	34-182	1.60 cfs	Irrigation	5/1 to 10/15	Big Lost River
☑	☐	34-381A	2.40 cfs	Irrigation	5/1 to 10/15	Big Lost River
☐	☐				to	
☐	☐				to	
☐	☐				to	
☐	☐				to	
☐	☐				to	
☐	☐				to	
☐	☐				to	

Total authorized under rights 4.00 cfs and/or _____ acre-feet.

2. Total amount of water proposed to be transferred or changed 4.00 cubic feet per second and/or _____ acre-feet per year.

3. Point(s) of Diversion:

☐ No changes to point(s) of diversion are proposed - the following chart is therefore not completed. (Proceed to #4.)
☐ Attach Eastern Snake Plain Aquifer analysis if this transfer proposes to change a point of diversion affecting the ESPA. Label it **Attachment #5**.

New ?	Lot	¼	¼	¼	Sec	Twp	Rge	County	Source	Local name or tag #
		SE	NW	SE	14	6N	25E	Custer	Big Lost River	3 in 1 Ditch
Y			SE	NW	32	6N	26E	Custer	Big Lost River	River Pump

4. Place of use: (If irrigation, identify with number of acres irrigated per ¼ ¼ tract.)

☐ No changes to place of use are proposed - the following chart is therefore not completed. (Proceed to #5.)

Twp	Rge	Sec	NE ¼				NW ¼				SW ¼				SE ¼				Acre Totals
			NE	NW	SW	SE	NE	NW	SW	SE	NE	NW	SW	SE	NE	NW	SW	SE

		32							6			22	17						45

STATE OF IDAHO
DEPARTMENT OF WATER RESOURCES

APPLICATION FOR TRANSFER OF WATER RIGHT
PART 1 Continued

5. General Information:

a. Describe the complete diversion system, including how you will accommodate a measuring device and lockable controlling works should they be required now or in the future:
3 in 1 Ditch is measured by the watermaster. New pump on the river will be equipped with a measuring device.

b. Who owns the property at the point(s) of diversion? Robert Moss
If other than the applicant, describe the arrangement enabling the applicant to access the property for the diversion system:
Private agreement.

c. Are the lands from which you propose to transfer the water right subject to any liens, deeds of trust, mortgages, or contracts?
If yes, ☐ attach a notarized statement from the holder of the lien, deed of trust, mortgage or contract agreeing to the proposed changes on official letterhead signed by an authorized representative. Label it **Attachment #6**. List the name of the entity and type of lien: N/A

It is the applicant's responsibility to provide notice to lien holder, trustee, mortgagor, or contract holder of the proposed changes that may impact or change the value of the water rights or affected real property. Any misrepresentation of legal encumbrance on this application may result in rejection of the application or cancellation of an approval.

d. Are any of the water rights proposed for transfer currently leased to the Water Supply Bank?
If yes, ☐ complete Attachment WSB.

e. Describe the effect on the land now irrigated if the place or purpose of use is changed pursuant to this transfer:
Nothing will change. Transfer reflects current irrigation configuration.

f. Describe the use of any other water right(s) for the same purpose or land, or the same diversion system as right(s) proposed to be transferred at both the existing and proposed point(s) of diversion and place(s) use:
Ground water right 34-2379F is also used on the property. The place of use for this right isn't changing so it wasn't included in the transfer.

g. To your knowledge, has/is any portion of the water right(s) proposed to be changed:

Yes	No	
☐	☑	undergone a period of five or more consecutive years of non-use,
☐	☑	currently leased to the Water Supply Bank,
☐	☑	currently used in a mitigation plan limiting the use of water under the right, or
☐	☑	currently enrolled in a Federal set-aside program limiting the use of water under the rights?

If yes, describe:

APPLICATION FOR TRANSFER OF WATER RIGHT
PART 3

A. PLAT MAP (See Part 3A of Instructions for application for transfer for complete requirements.)

☑ Attach a map of the diversion, measurement, control, and distribution system. Label it **Attachment #7a.**
☑ If the transfer application proposes to change the place or purpose of use of an irrigation right attach a Geographic Information System (GIS) shape file, or an aerial photo or other image clearly delineating the location and extent of existing acres and changes to the place of use. Label it **Attachment #7b.**

If the place of use currently consists of a permissible place of use, then the attachment is not required if the application contains a clear statement that the boundaries for the place of use are not proposed to be changed by the transfer and the total number of irrigated acres within the place of use before and after the transfer is clearly stated.

If any part of the irrigation water right is leased to the Water Supply Bank, you must also specify the location and number of acres that will remain idled for the duration of the lease contract at the new, proposed place of use.

B. CHANGES IN NATURE OF USE (Water Balance)

☐ If you propose to change the nature of use or period of use of all or part of the rights(s) listed in this application, attach documentation describing the extent of historic beneficial use of the portion of the right(s) proposed to be changed. Also attach documentation showing that the portion of the right(s) to be changed will not be enlarged in rate, volume, or consumptive use through the proposed change. Label it **Attachment #8a.**

C. PLACE OF USE CHANGES TO SUPPLEMENTAL IRRIGATION RIGHTS

☐ If you propose to change the place of use of a supplemental irrigation right, answer below and attach supporting documentation. Label it **Attachment #8b.**

Describe how the supplemental water rights have been used historically in conjunction with other water rights at the existing place of use. Describe the time during the irrigation season that the supplemental rights have been used. Include information about the availability or reliability of the primary right(s) being supplemented, both before and after the change. If the applicant is proposing to change a supplemental irrigation right to a primary right, provide the information required on Part 3B above:

March 3, 2015

To Whom It May Concern:

This letter is based on the latest information to my knowledge of the present agricultural situation of Dennis Moss residing at 3286N 3350W Moore, Idaho 83255 concerning the water situation in the Big Lost River Irrigation District #34.

Dennis just recently bought an acreage where he has been attempting to get surface water for irrigation. He has been farming this land for over 8 years. The Canal where he gets his water has a high loss rate of water resulting in only getting 10% of the water put in at the head of the canal. Dennis has tried for several years to get water to his crops through the present irrigation system without much success. For example, he attempted several years ago to use this ditch and he put 1200 inches at the heading and got less than 200 at his pump. Dennis has a 6-1-1883 water right of 80 inches and another water right 9-26-1894 for 120 inches as well as 5040 inches of storage right in the Mackay reservoir.

So consequently Dennis is trying to build a better, less shrinking system for water delivery to maximize the water delivery to his pump. Part of the problem is that over the years most of the people in that canal have found other ways to irrigate and do not use that canal for the obvious reason of too high of water losses. In fact that canal is used for aquifer recharge because it does put a significant amount of water in the ground through seepage.

In my opinion, based on information at this time, Dennis needs to find ways to improve this delivery system and to have more water available to have better success at raising crops.

79972

If there are any questions, call Jim at 390-1447

Sincerely,

James Rindfleisch, Manager

RE: Transfer No. 79972
Water Right No(s). 34-182, 34-381A

Dear Applicant(s):

The Department of Water Resources has received your water right transfer application. Please refer to the transfer number referenced above in all future correspondence regarding this transfer.

A legal notice of the application has been prepared and is scheduled for publication in the CHALLIS MESSENGER on April 16 and 23, 2015. Protests to this application may be submitted for a period ending ten (10) days after the second publication (**May 4, 2015 at 5:00 PM**).

If the application is protested, you will be sent a copy of each protest. All protests must be resolved before the application can be considered for approval. If the protest(s) cannot be resolved voluntarily, the Department will conduct a conference and/or hearing on the matter.

If the application is not protested, the Department will process your application and notify you of any action taken on the application. If your application is approved, the Department will send you a copy of the approval document.

Please contact this office if you have any questions regarding the application.

Sincerely,

Sharla Cox

RE: Application for Transfer 79972

Dear Watermaster:

A copy of the above referenced application is enclosed. Please review the application, then complete the enclosed recommendation form and return it to this office within 21 days of the date of this letter.

IDWR's regional offices can finish reviewing an unprotested application as soon as the protest period has past. Your prompt response to this request will ensure that your recommendation can be considered during regional review. If IDWR has not received your written recommendation within 21 days from the date of this letter, IDWR will presume that you do not oppose approval of the application and that you have no comments for IDWR to consider.

Please contact this office if you have any questions regarding the application.

Sincerely,

Sharla Cox
Administrative Assistant

NOTICE OF PROPOSED CHANGE OF WATER RIGHT
TRANSFER NO. 79972

MOSS FARMS INC, 3286 N 3350 W, MOORE, ID 83255; has filed Application No. 79972 for changes to the following water rights within CUSTER County(s): Right No(s). 34-182, 34-381A; to see a full description of these rights and the proposed transfer, please see www.idwr.idaho.gov/apps/wr/QueryNewTransfers/QueryNewTransfers.aspx. The purpose of the transfer is to change a portion of the above rights as follows: The applicant proposes to add a point of diversion and to change the place of use. The points of diversion are in the SENW Sec 32 T6N R26E (new, river pump) and the SENWSE Sec 14 T6N R25E (3 in 1 ditch) for 4.0 cfs from the Big Lost River. The place of use is in Sec 31 and 32 T6N R26E for 200 acres.

For additional information concerning the property location, contact Eastern Region office at (208) 525-7161. Protests may be submitted based on the criteria of Idaho Code Sec. 42-222.

Any protest against the proposed change must be filed with the Department of Water Resources, Eastern Region, 900 N Skyline Dr Ste A, Idaho Falls ID 83402 together with a protest fee of $25.00 for each application on or before May 4, 2015. The protestant must also send a copy of the protest to the applicant.

NOTICE OF PROPOSED CHANGE OF WATER RIGHT TRANSFER NO. 79972

MOSS FARMS INC, 3286 N 3350 W, MOORE, ID 83255; has filed Application No. 79972 for changes to the following water rights within CUSTER County(s): Right No(s). 34-182, 34-381A; to see a full description of these rights and the proposed transfer, please see www.idwr.idaho.gov/apps/wr/QueryNewTransfers/QueryNewTransfers.aspx. The purpose of the transfer is to change a portion of the above rights as follows: The applicant proposes to add a point of diversion and to change the place of use. The points of diversion are in the SENW Sec 32 T6N R26E (new, river pump) and the SENWSE Sec 14 T6N R25E (3 in 1 ditch) for 4.0 cfs from the Big Lost River. The place of use is in Sec 31 and 32 T6N R26E for 200 acres.

For additional information concerning the property location, contact Eastern Region office at (208) 525-7161. Protests may be submitted based on the criteria of Idaho Code Sec. 42-222.

Any protest against the proposed change must be filed with the Department of Water Resources, Eastern Region, 900 N Skyline Dr Ste A, Idaho Falls ID 83402 together with a protest fee of $25.00 for each application on or before May 4, 2015. The protestant must also send a copy of the protest to the applicant.

MEMORANDUM

Date: June 15, 2015

To: Transfer 79972

From: Michael Holliday

Re: Review & Evaluation of Sufficiency of Information

The applicant has difficulty getting water to his property from the current point of diversion. The purpose of this transfer is to add a point of diversion closer to the place of use in order to improve water delivery. The applicant also seeks to rearrange the place of use to reflect the current irrigation system.

Authority to File:
IDWR records show the applicant as the current owner of the rights being transferred. The deed which accompanied the 2012 ownership change for these rights confirms ownership of the proposed place of use. The application was signed by the president, who is authorized to sign on behalf of the corporation.

Water Right Validity:
Rights 34-182 and 34-381A were decreed in the SRBA in 1998. Review of available post-decree imagery shows some years in which the place of use was not irrigated. However, there does not appear to be a consecutive five-year period of non-use. A temporary change application for these rights was approved in 2014. Therefore, the rights included in this transfer are valid.

Injury to Other Water Rights:
Other rights will not be injured by the proposed changes. The watermaster reviewed the application and did not oppose its approval. Although the proposed new point of diversion is located downstream from the current point of diversion on a losing river reach, discussion with the watermaster revealed that conveyance losses are uniformly charged to all diversions between Mackay Dam and Arco, regardless of their location on the river. The quantity authorized to be diverted will not change as a result of the transfer. The transfer application was advertised and no protests were filed.

Enlargement of Use:
The proposed change will not result in enlargement because neither rate nor irrigated acreage will increase as a result of the transfer. Right 34-2379F is currently overlapped by the rights included in this transfer. Although the place of use for the two transferred rights is being rearranged, right 34-2379F will continue to be completely overlapped. Rights 34-182 and 34-381A will retain a condition limiting all three rights to the irrigation of 200 acres. The number of stacked acres will not change.

Local Public Interest:
No issues identified.

Beneficial Use / Conservation of Water Resources:
No issues identified.

Effect on Economy the Local Area:
No issues identified.

Effect on Agricultural Base of the Local Area:
No issues identified.

Review of the application finds there is no clear inconsistency with criteria set forth in Section 42-222 Idaho Code preventing processing of this application.

Right Acre Limit: 120.0
POU Total Acres: 200.0

CONDITIONS OF APPROVAL

1. This right is limited to the irrigation of 120 acres within the authorized place of use in a single irrigation season.
2. Rights 34-182, 34-381A and 34-2379F when combined shall not exceed a total diversion rate of 5.20 cfs and the irrigation of 200 acres.
3. This right when combined with all other rights shall provide no more than 0.02 cfs per acre nor more than 3.5 afa per acre at the field headgate for irrigation of the place of use.
4. The period of use for irrigation described above may be extended in seasons of unusual characteristics to a beginning date of 04-20 and an ending date of 10-31 at the discretion of the Director of the Idaho Department of Water Resources.
5. Use of water under this right will be regulated by a watermaster with responsibility for the distribution of water among appropriators within a water district. At the time of this approval, this water right is within State Water District No. 34.

Transfer No. 79972

WATER RIGHT NO. 34-381A

As Modified by Transfer No. 79972

CONDITIONS OF APPROVAL

6. The right holder shall maintain a measuring device and lockable controlling works of a type approved by the Department in a manner that will provide the watermaster suitable control of the diversion(s).

7. This right does not grant any right-of-way or easement across the land of another.

8. The right holder shall accomplish the change authorized by this transfer within one year of the date of this approval.

9. Failure of the right holder to comply with the conditions of this transfer is cause for the Director to rescind approval of the transfer.

10. Pursuant to Section 42-1412(6), Idaho Code, this water right is subject to such general provisions necessary for the definition of the rights or for the efficient administration of water rights as may be determined by the Snake River Basin Adjudication court at a point in time no later than the entry of the final unified decree.

Transfer Approval Notice

Dear Water Right Holder:

The Department of Water Resources has issued the enclosed approved Transfer of Water Right(s). Please be sure to thoroughly review the conditions of approval and remarks listed on the approval document.

The Transfer of Water Right(s) is a PRELIMINARY ORDER issued by the Department pursuant to section 67-5243, Idaho Code. It can and will become a final order without further action by the Department unless the APPLICANT petitions for reconsideration or files an exception and/or brief within fourteen (14) days of the service date as described in the enclosed information sheet.

ANY PERSON aggrieved by any decision, determination, order or action of the Department and who has not previously been afforded an opportunity for a hearing on the matter may request a hearing pursuant to section 42-1701A(3), Idaho Code. A written petition contesting the action of the Department and requesting a hearing shall be filed within fifteen (15) days after receipt of the denial or conditional approval.

If the transfer approval includes a condition requiring measuring and recording devices, such devices shall comply with specifications established by the Department Detailed specifications are available on the Department's home page on the Internet, or you can request a copy by contacting any office of the Department. Please be sure to thoroughly review the specifications to avoid unnecessary costs for reinstallation or modification due to non-conforming or improperly installed devices.

Please note that water right owners are required to report any change of water right ownership and/or mailing address to the Department within 120 days of the change. Failure to report these changes could result in a $100 late filing fee. Contact any office of the Department or visit the Department's homepage on the Internet to obtain the proper forms and instructions.

If you have any questions, please contact me at (208)525-7161.

Sincerely,

James Cefalo
Water Resources Program Manager

EXPLANATORY INFORMATION TO ACCOMPANY A PRELIMINARY ORDER

(To be used in connection with actions when a hearing was **not** held)

(Required by Rule of Procedure 730.02)

The accompanying order or approved document is a "**Preliminary Order**" issued by the department pursuant to section 67-5243, Idaho Code. **It can and will become a final order without further action of the Department of Water Resources ("department") unless a party petitions for reconsideration, files an exception and brief, or requests a hearing as further described below:**

PETITION FOR RECONSIDERATION

Any party may file a petition for reconsideration of a preliminary order with the department within fourteen (14) days of the service date of this order. **Note: the petition must be received by the department within this fourteen (14) day period.** The department will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law. See Section 67-5243(3) Idaho Code.

EXCEPTIONS AND BRIEFS

Within fourteen (14) days after: (a) the service date of a preliminary order, (b) the service date of a denial of a petition for reconsideration from this preliminary order, or (c) the failure within twenty-one (21) days to grant or deny a petition for reconsideration from this preliminary order, any party may in writing support or take exceptions to any part of a preliminary order and may file briefs in support of the party's position on any issue in the proceeding with the Director. Otherwise, this preliminary order will become a final order of the agency.

REQUEST FOR HEARING

Unless a right to a hearing before the Department or the Water Resource Board is otherwise provided by statute, any person aggrieved by any final decision, determination, order or action of the Director of the Department and who has not previously been afforded an opportunity for a hearing on the matter may request a hearing pursuant to section 42-1701A(3), Idaho Code. A written petition contesting the action of the Director and requesting a hearing shall be filed within fifteen (15) days after receipt of the denial or conditional approval.

ORAL ARGUMENT

If the Director grants a petition to review the preliminary order, the Director shall allow all parties an opportunity to file briefs in support of or taking exceptions to the preliminary order and may schedule oral argument in the matter before issuing a final order. If oral arguments are to be heard, the Director will within a reasonable time period notify each party of the place, date and hour for the argument of the case. Unless the Director orders otherwise, all oral arguments will be heard in Boise, Idaho.

CERTIFICATE OF SERVICE

All exceptions, briefs, requests for oral argument and any other matters filed with the Director in connection with the preliminary order shall be served on all other parties to the proceedings in accordance with IDAPA Rules 37.01.01302 and 37.01.01303 (Rules of Procedure 302 and 303).

FINAL ORDER

The Director will issue a final order within fifty-six (56) days of receipt of the written briefs, oral argument or response to briefs, whichever is later, unless waived by the parties or for good cause shown. The Director may remand the matter for further evidentiary hearings if further factual development of the record is necessary before issuing a final order. The department will serve a copy of the final order on all parties of record.

Section 67-5246(5), Idaho Code, provides as follows:

> Unless a different date is stated in a final order, the order is effective fourteen (14) days after its service date if a party has not filed a petition for reconsideration. If a party has filed a petition for reconsideration with the agency head, the final order becomes effective when:
>
> (a) The petition for reconsideration is disposed of; or
> (b) The petition is deemed denied because the agency head did not dispose of the petition within twenty-one (21) days.

APPEAL OF FINAL ORDER TO DISTRICT COURT

Pursuant to sections 67-5270 and 67-5272, Idaho Code, if this preliminary order becomes final, any party aggrieved by the final order or orders previously issued in this case may appeal the final order and all previously issued orders in this case to district court by filing a petition in the district court of the county in which:

i. A hearing was held,
ii. The final agency action was taken,
iii. The party seeking review of the order resides, or
iv. The real property or personal property that was the subject of the agency action is located.

The appeal must be filed within twenty-eight (28) days of this preliminary order becoming final. See section 67-5273, Idaho Code. The filing of an appeal to district court does not itself stay the effectiveness or enforcement of the order under appeal.

Attorneys for Byron Pehrson, Loy Pehrson, and Randy Pehrson

RECEIVED
Jan 27, 2025
DEPARTMENT OF WATER RESOURCES

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	**Docket No.: P-DR-2024-001**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	**MOTION TO STRIKE BIG LOST RIVER IRRIGATION DISTRICT'S JOINDER; MOTION TO SHORTEN TIME**

COMES NOW Byron Pehrson, Loy Pehrson, and Randy Pehrson ("Pehrsons"), by and through their counsel of record, McHugh Bromley, PLLC, pursuant to IDAPA 37.01.01.220.02 and hereby moves to strike *BLRID's Joinder in Support of Moore Canal Users' Motion to Dismiss* (Jan. 24, 2025), and further requests that the Hearing Officer, pursuant to IDAPA 37.01.01.220.f, and for good cause shown, shorten time to decide this issue before the February 3, 2025 deadline for replies.

I. FACTUAL BACKGROUND

On January 13, 2025, counsel for the Moore Canal Users ("Moore Canal") filed a *Motion to Dismiss*. On January 24, 2025, counsel for Big Lost River Irrigation District ("BLRID") filed

a *Joinder in Support of Moore Canal Users' Motion to Dismiss* ("Joinder"). Therein, BLRID states that it "reserves the right to reply to any response filed in opposition to said motion or to participate in any oral argument on the motion." Emphasis added. On January 27, 2025, counsel for Pehrsons filed a *Response to Moore Canal Users' Motion to Dismiss*.

II. ARGUMENT

Moore Canal filed its *Motion to Dismiss* on January 13, 2025, thereby triggering the date upon which joinders, if any, were required to be filed, with responses to the *Motion to Dismiss* to be filed fourteen days later, by January 27, 2025, pursuant to IDAPA 37.01.01.220.b. BLRID filed its *Joinder* on January 24, 2025, which is eleven days after the *Motion to Dismiss* was filed, and only three days before the response deadline.

In *Ramos v. Dixon*, 144 Idaho 32, 156 P.3d 533 (2007), the Court held that for joinders to be considered timely, they must be filed on the same day when the motion that is being joined was filed:

> The Plaintiff lists as the first issue on appeal, "Timeliness of Filing Motion for Summary Judgment?" In her argument she states, "Dr. Walters' filing of Joinder was filed fifty-five (55) days before trial and only twenty-five (25) days before the scheduled hearing of March 20, 2006, not the sixty days required by the Court Order or the twenty-eight (28) days required by IRCP 56(c). Respondent Walters acted in total derogation of the Court's Order and its rules of procedure, and should not have benefited thereby."
>
> Dr. Dixon's motion for summary judgment and Dr. Walters's motion in limine were timely filed and set for hearing to be held on March 20, 2006. Only Dr. Walters's joinder in Dr. Dixon's motion for summary judgment was untimely.

Id. at 34-35, 156 P.3d at 535-36 (emphasis added).

Here, there is no dispute that BLRID filed its *Joinder* eleven days after Moore Canal's *Motion to Dismiss*, and only three days before Pehrsons filed their *Response to Moore Canal Users' Motion to Dismiss*. There is no indication in the *Joinder* as to what BLRID will be

arguing, thereby preventing Pehrsons from responding and prejudicing their interests. Based on *Ramos*, BLRID's *Joinder* is untimely and should be stricken from the record, with BLRID further prevented from filing a substantive reply to the Pehrsons' *Response to Moore Canal Users' Motion to Dismiss*.

III. CONCLUSION

Based on the foregoing, BLRID's *Joinder* should be stricken from the record with BLRID prevented from filing a reply. For good cause shown, the Hearing Officer should shorten time to decide this matter before the February 3, 2025 reply deadline.

DATED this 27th day of January, 2025.

Attorneys for Byron Pehrson, Loy Pehrson, and Randy Pehrson

RECEIVED
Jan 27, 2025
DEPARTMENT OF WATER RESOURCES

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	**Docket No.: P-DR-2024-001**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	**PEHRSONS' RESOPNSE TO MOORE CANAL USERS' MOTION TO DISMISS**

COMES NOW Byron Pehrson, Loy Pehrson, and Randy Pehrson ("Pehrsons"), by and through their counsel of record, McHugh Bromley, PLLC, pursuant to IDAPA 37.01.01.220. 02.b, and hereby responds to the *Motion to Dismiss* (Jan. 13, 2025), filed by the Moore Canal Users ("Moore Canal"). Pehrsons' response is supported by the *Declaration of Chris M. Bromley*.

I. INTRODUCTION

In summary, Moore Canal argues this matter should be dismissed for two reasons: (1) Pehrsons' failure to cite authority in support of the action; and (2) Pehrsons' use of futile call that somehow violates established principles and implicates diversion of water by Moore Canal's

users. As to these issues, the *Motion* ignores authority cited by Pehrsons and fails to present any reasons as to how futile call has been misapplied as to Moore Canal.

II. ARGUMENT

A. Pehrsons' *Petition* Is Supported By Authority And Cogent Argument

Citing IRCP 12(b)(6) as the standard for review, Moore Canal moves to dismiss the case: "The Pehrsons' Petition does not contain a cite to any authority that they are asking the Department for a declaratory ruling on." *Motion* at 4 (emphasis added). The statement by Moore Canal directly contradicts the record and the requested relief must be denied.

When this matter was originally initiated by Pehrsons, they cited "IDAPA 37.01.01.300. 02.d" as the basis. *Petition for Declaratory Ruling for Watermaster Instructions* at 1 (Feb. 14, 2024) ("Petition"). That Rule states: "Petitions for declaratory orders shall state the declaratory ruling that the petitioner seeks." IDAPA 37.01.01.300.02.d. The *Petition* goes on to explain the two forms of relief that are sought:

> (1) Instruct the Water District No. 34 Watermaster that when the natural flow in the Big Lost River at USGS Gage #13127000 ("2B Gage") located at T07N, R24E, S18, SWNE, B.M. is 187 cfs or less for three (3) consecutive days, water right nos. 34-182 and 34-381A, held by Moss Farms, Inc., shall only be entitled to divert from the 3 in 1 Ditch, located at T06N, R25E, S14, SENWSE, and shall not be entitled to also divert from the Big Lost River at T06N, R26E, S32, SENW, unless and until the natural flow in the Big Lost River exceeds 500 cfs at the 2B Gage for three (3) consecutive days.
>
> (2) Instruct the Water District No. 34 Watermaster to make futile calls on the river as if storage water is not available as carriage water for natural flow water rights. If storage water is added to natural flow, futile call determinations can change to the detriment of natural flow water users. Natural flow water users are entitled to delivery determinations being made in the same manner as when their appropriations were made, prior to the creation of storage.

Petition at 2.

The *Petition* further explains the relationship between the water rights of the Pehrsons and of Moss Farms, Inc. ("Moss"), the reason for the requested watermaster instructions, as supported by the signed statements from Preston Marcroft and Lucas Yockey, the present and immediately past watermasters for Water District No. 34, respectively. *See Declaration of Chris M. Bromley* (Feb. 14, 2024). Clearly, the *Petition* complies with principles of law by citing authority, supported by cogent facts and argument explaining why relief should be granted.

The *Petition* asks for a declaratory ruling as to the Director's duty and authority to deliver water in priority as required by Idaho law and his statutory duty in light of facts that would make such delivery a futile call.[1] Citing I.C. §§ 67-5232 and 67-5255, Moore Canal argues the *Petition* should be dismissed because Pehrsons do not request a "declaratory ruling as to the applicability of any statutory provision or of any rule administered by the agency . . . or ask for clarification on the applicability of any order issued by the Department." *Motion* at 4.

In making this argument, Moore Canal reads subsection (2) out of these code sections, with I.C. § 67-5232 and 67-5255 stating in full:

> (1) Any person may petition an agency for a declaratory ruling as to the applicability of any statutory provision or of any rule administered by the agency.
>
> (2) A petition for a declaratory ruling does not preclude an agency from initiating a contested case in the matter.
>
> (3) A declaratory ruling issued by an agency under this section is a final agency action.

I.C. § 67-5232 (emphasis added).

> (1) Any person may petition an agency for a declaratory ruling as to the applicability of any order issued by the agency.
>
> (2) A petition for a declaratory ruling does not preclude an agency from initiating a contested case in the matter.

[1] Certainly no one is reasonably suggesting that the Director does not have the authority to make such rulings under his duties found in Chapter 6, Title 42, Idaho Code.

> (3) A declaratory ruling issued by an agency under this section is a final agency action.

I.C. § 67-5255 (emphasis added).

Principles of statutory construction requires the statute be read in full, "to give meaning to all of its provisions." *State v. Bever*, 118 Idaho 80, 82, 794 P.2d 1136, 1138 (1990); *see also Smith v. Excel Fabrication, LLC*, 172 Idaho 725, 731, 535 P.3d 1098, 1104 (2023) ("The statute should be considered as a whole."). Idaho Code §§ 67-5232 and 67-5255 provide two pathways for a declaratory ruling: (1) to ask for relief after issuance of an order; and (2) to ask for relief through initiation of a contested case. When these code sections are read in conjunction with IDAPA 37.01.01.300.02.d (contents of a petition for declaratory ruling) and IDAPA 37.01.01.051 (liberal construction of the Department's procedural rules "to ensure just, speed and economical determination of all issues presented to the agency"), it is clear that IDWR may accept the *Petition* to then initiate a contested case that will result in issuance of a final order.

Here, Pehrsons not only requested a declaratory ruling as to the issues cited above through formal proceedings, but also asked IDWR to initiate "informal proceedings" consistent with IDAPA 37.01.01.100: "Pehrsons respectfully request that informal proceedings be used first to resolve the issues presented in this contested case." *Petition* at 8. Throughout the spring and summer of 2024, Pehrsons, through counsel, filed motions with and asked IDWR through email communication, to advance this matter to informal proceedings. *Declaration of Chris M. Bromley, Ex. 1*. As stated in an email response by counsel for IDWR:

> The Department reached out to [counsel for Moss Farms, Inc.] about Moss Farms' interest in informal discussions. [He] indicated that his client opposes informal discussions at this time. <u>The Department has reviewed the filings and has concluded that the matter should move forward to formal proceedings</u>. The Department is in the process of appointing a hearing officer. I expect an order will

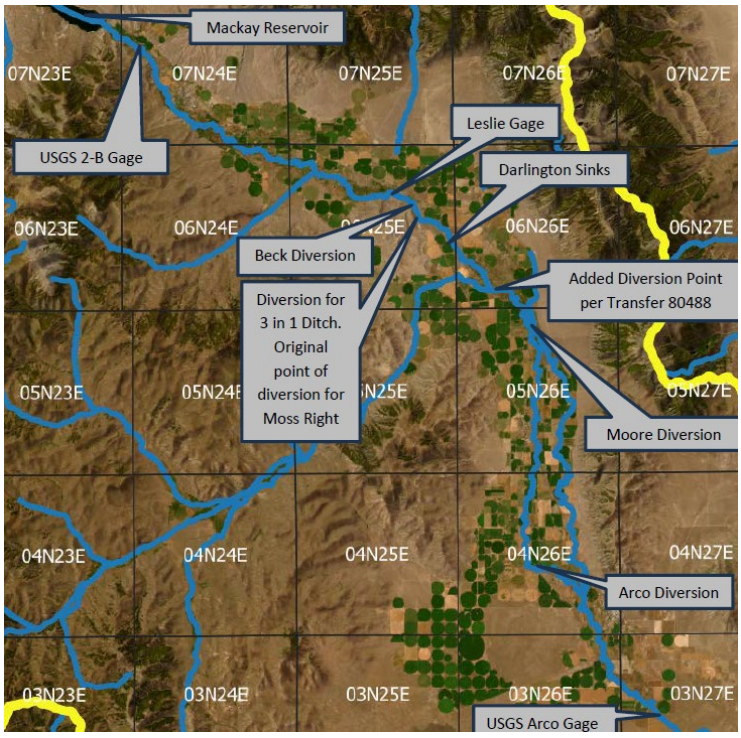
be issued in the next two weeks appointing the hearing officer and setting a pre-hearing conference. Be on the lookout for an order.

Id. (emphasis added).

Therefore, IDWR, in its discretion, has already decided that the matter should move forward, through a contested case, with assignment of a docket number and appointment of the Hearing Officer by the Director, which will then result in issuance of an order. *Notice of Prehearing Conference; Order Appointing Hearing Officer* (Aug. 8, 2024).[2]

B. Futile Call Is Correctly Asserted At This Stage Of The Proceedings With The Petition Not Directed At Moore Canal

While Moore Canal correctly cites the doctrine of futile call, *Motion* at 6 citing *Gilbert v. Smith*, 97 Idaho 735, 739, 5522 P.2d 1220, 1224 (1976), the *Motion* is nonetheless procedurally and substantively deficient because Moore Canal fails to define the priority dates of its members and whether all, some, or any have water rights that are senior to Pehrsons. For this reason alone, the *Motion* should be denied.



Taken more liberally, Moore Canal is understandably concerned about the consequences of this proceeding for its users. To be clear, the *Petition* is <u>not</u> directed at Moore Canal, it is only asserted against Moss and the need for watermaster instructions as to when Moss' new, alternate point of diversion on the Big Lost River, known as the "River Diversion," may be exercised, and whether storage water may be used as carriage water at the River Diversion.

By way of brief background, and as explained in the *Petition*, the original point of diversion for Moss' water right nos. 34-182 (6/1/1883) and 34-381A (9/26/1894) was decreed in

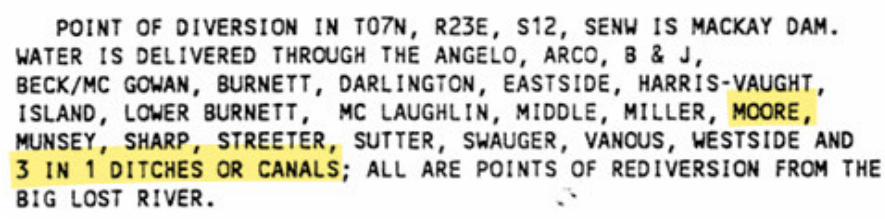
[2] Moore Canal was granted intervention by the Hearing Officer on October 9, 2024; thus, Moore Canal takes the case as it was found. It should not be lost on Moore Canal that Moss Farms, Inc. previously moved IDWR to dismiss this action, also attempting to read subsection (2) out of I.C. § 67-5255, *Objection to Petition for Declaratory Ruling for Watermaster Instructions* (Feb. 23, 2024), with IDWR then initiating the contested case on August 8, 2024.

the Snake River Basin Adjudication ("SRBA") at the 3 in 1 Ditch. *Petition* at 2. Pehrsons' water rights were likewise decreed in the SRBA and divert from the 3 in 1 Ditch, with Moss' water right no. 34-182 senior to the Pehrsons, while water right no. 34-381A is junior. *Petition* at 4. On April 6, 2015, Moss filed an *Application for Transfer of Water Right* ("Application") with IDWR, seeking to "Add" the River Diversion as a second point of diversion, while also retaining the 3 in 1 Ditch. *Petition* at 3 citing *Application* at 2, ln. A.2. On June 30, 2015, IDWR issued a transfer ("Transfer"), approving the *Application*, wherein the River Diversion and the 3 in 1 Ditch are authorized as alternate points of diversion. Nowhere in the *Application* or the *Transfer* are Moore Canal or its users implicated.

As shown in the expert report of David R. Tuthill, Jr., Ph.D., P.E., the Moore Canal diverts from the Big Lost River below both the 3 in 1 Ditch and the River Diversion; thus, what occurs upstream between Pehrsons and Moss is immaterial when it comes to Moore Canal:

David R. Tuthill, Idaho Water Engineering, Expert Report at 5, Fig. 3 (Dec. 2, 2024) ("Tuthill Report").[3]

Speaking to the use of alternate points of diversion, Dr. Tuthill explained that it is not at all unusual for IDWR to issue watermaster instructions when it comes to the exercise of alternate points of diversion:



> Based on my experience, when an alternate point of diversion is added, as Moss did here, the watermasters in the basin exercise their judgment when the water is deliverable to that alternate point of diversion, especially in a case like this where the use of storage water is the only way that water is available in low flow periods to that alternate point of diversion.

Id. at 6; *see also City of Pocatello v. State*, 152 Idaho 830, 275 P.3d 845 (2012) (generally discussing conditions placed by IDWR on water rights with alternate points of diversion to ensure the priority doctrine is not usurped).

It therefore follows, during periods of low flow – as opposed to during times of plenty – that the Watermaster should be instructed to cease deliveries to the River Diversion, including the use of storage water from Mackey Reservoir as carriage water: "Implementation of the solution posed by Watermasters Yockey and Marcroft would have the effect of allowing the new Moss Farms point of diversion to be used consistent with historic delivery patterns . . . ." *Id*.

Lastly, because the *Petition* is only directed at Moss and his use of the River Diversion during certain low flow regimes, natural flow water rights delivered into the Moore Canal must continue to be administered based on their priority. Furthermore, through this proceeding, Pehrsons are not attempting to rewrite the storage water rights of the Big Lost River Irrigation District ("District"). In the SRBA, the District was decreed certain storage water rights, which plainly authorize the District to deliver water from Makey Reservoir into certain named canals and ditches, including but not limited to the Moore Canal and 3 in 1 Ditch:

[3] The *Tuthill Report* was served on the parties and the Hearing Officer in this case on December 2, 2024.

POINT OF DIVERSION IN T07N, R23E, S12, SENW IS MACKAY DAM.
WATER IS DELIVERED THROUGH THE ANGELO, ARCO, B & J,
BECK/MC GOWAN, BURNETT, DARLINGTON, EASTSIDE, HARRIS-VAUGHT,
ISLAND, LOWER BURNETT, MC LAUGHLIN, MIDDLE, MILLER, MOORE,
MUNSEY, SHARP, STREETER, SUTTER, SWAUGER, VANOUS, WESTSIDE AND
3 IN 1 DITCHES OR CANALS; ALL ARE POINTS OF REDIVERSION FROM THE
BIG LOST RIVER.

See e.g. Water Right No. 34-12, Big Lost River Irrigation District (highlighting added).

Nowhere in the *Petition* are Pehrsons attempting to prevent Moore Canal from utilizing storage water, as authorized by the District's decreed storage water rights.

III. CONCLUSION

Based on the foregoing, Moore Canal's *Motion to Dismiss* should be denied because Pehrsons have cited legal authority and argument in support of the *Petition*.

Preston,

Randy Pehrson contacted David Hoekema with concerns about futile calls and delivery of both storage and decreed water to Dennis Moss. Tim and I met with David to discuss Randy's concerns and current water supply conditions on the Big Lost River. On August 15, 2022, IDWR conditionally supported a futile call determination on the Big Lost River at your request. This determination recognized a break in the river immediately below the Beck diversion but noted that *"... this determination does not prevent users on the Moore Canal or other lower valley ditches to call for and receive delivery of storage and decreed rights during the remainder of this irrigation season."* After the August 15, 2022 determination, IDWR was notified that delivery of water right 34-184 (Moss river pump) was affected by breaking the river at the Beck. Because the Moss water right has a 6-1-1883 priority date and an authorized point of diversion below the Beck, you were instructed resume delivery to fill the Moss water right. Currently, delivery to Moss is not futile because he has sufficient storage water to help carry the decreed right. You have reported that about 600 inches (12cfs) of water is currently passing the Moss diversion but there are no calls for delivery below Moss. Without sufficient storage to carry decrees to the Moore diversion, the futile call determination below Moss continues to be justified. It appears appropriate to deliver additional water upstream of Moss by adjusting the decree to deliver more 1884 rights, while maintaining delivery to Moss. Your suggestion to adjust the decree date to 8-31-1884 may be a reasonable place to start, but IDWR will defer to your local knowledge of what the demand might be if a certain decree date is set. As we discussed, please stay in contact with Dennis Moss as you deliver additional decrees. If the demand under a new decree date results in a shortage of

water to satisfy Moss, the date should be adjusted accordingly. Please reach out if you have any questions.

Thanks, RW

USE OF THIS RIGHT WITH THE RIGHTS LISTED BELOW IS LIMITED TO THE IRRIGATION OF 32,000 ACRES WITHIN THE PLACE OF USE DESCRIBED ABOVE IN A SINGLE IRRIGATION SEASON.
COMBINED RIGHT NOS.: 34-00013, 34-00810, 34-00811, 34-00817B, 34-00818, 34-02507, 34-10873 AND 34-10935.

OTHER PROVISIONS NECESSARY FOR DEFINITION OR ADMINISTRATION OF THIS WATER RIGHT:

THIS PARTIAL DECREE IS SUBJECT TO SUCH GENERAL PROVISIONS NECESSARY FOR THE DEFINITION OF THE RIGHTS OR FOR THE EFFICIENT ADMINISTRATION OF THE WATER RIGHTS AS MAY BE ULTIMATELY DETERMINED BY THE COURT AT A POINT IN TIME NO LATER THAN THE ENTRY OF A FINAL UNIFIED DECREE. SECTION 42-1412(6), IDAHO CODE.

RULE 54(b) CERTIFICATE

With respect to the issues determined by the above judgment or order, it is hereby CERTIFIED, in accordance with Rule 54(b), I.R.C.P., that the court has determined that there is no just reason for delay of the entry of a final judgment and that the court has and does hereby direct that the above judgment or order shall be a final judgment upon which execution may issue and an appeal may be taken as provided by the Idaho Appellate Rules.

R Burdick

ROGER BURDICK
Presiding Judge of the
Snake River Basin Adjudication

2001 OCT 15 PM 4:55

DISTRICT COURT-SRBA
TWIN FALLS COUNTY, IDAHO

IN THE DISTRICT COURT OF THE FIFTH JUDICIAL DISTRICT OF THE
STATE OF IDAHO, IN AND FOR THE COUNTY OF TWIN FALLS

In Re SRBA	)	PARTIAL DECREE PURSUANT TO I.R.C.P. 54(b) FOR
Case No. 39576	)	Water Right 34-00810

NAME & ADDRESS: BIG LOST RIVER IRRIGATION DISTRICT
PO BOX 205
MACKAY ID 83251

SOURCE: BIG LOST RIVER TRIBUTARY: SINKS

QUANTITY: 3.2 CFS
556.5 AFY

PRIORITY DATE: 06/01/1888

POINT OF DIVERSION:

T03N R26E S01	NENESW	(REDIVERSION)	Within BUTTE County
S12	NENWSE	(REDIVERSION)	
T04N R26E S26	NWNWNW	(REDIVERSION)	
T05N R26E S04	NWSESE	(REDIVERSION)	
T07N R23E S12	SENW		Within CUSTER County
T06N R24E S01	NENESW	(REDIVERSION)

	NESE	39	NWSE	27			
S09	NENE	32	SENE	39	NWNW	33	
	SWNW	31	NESW	30	NWSW	38	
	SWSW	25					

634.5 ACRES TOTAL

ALSO, HISTORICAL PRACTICE HAS BEEN TO DELIVER STORAGE WATER TO 120 ACRES WITHIN THE LANDS DESCRIBED BELOW IN A SINGLE IRRIGATION SEASON.

T03N R26E S13	NWSW	39	SWSW	33	SESW	39	
	SWSE	40					
S24	NENW	39	NWNW	38	SWNW	39	

267 ACRES TOTAL

RULE 54(b) CERTIFICATE

With respect to the issues determined by the above judgment or order, it is hereby CERTIFIED, in accordance with Rule 54(b), I.R.C.P., that the court has determined that there is no just reason for delay of the entry of a final judgment and that the court has and does hereby direct that the above judgment or order shall be a final judgment upon which execution may issue and an appeal may be taken as provided by the Idaho Appellate Rules.

ROGER BURDICK
Presiding Judge of the
Snake River Basin Adjudication

IN THE DISTRICT COURT OF THE FIFTH JUDICIAL DISTRICT OF THE
STATE OF IDAHO, IN AND FOR THE COUNTY OF TWIN FALLS

USE OF THIS RIGHT WITH THE RIGHTS LISTED BELOW IS LIMITED TO THE IRRIGATION OF 32,000 ACRES WITHIN THE PLACE OF USE DESCRIBED ABOVE IN A SINGLE IRRIGATION SEASON.
COMBINED RIGHT NOS.: 34-00012, 34-00013, 34-00810, 34-00817B, 34-00818, 34-02507, 34-10873 AND 34-10935.

OTHER PROVISIONS NECESSARY FOR DEFINITION OR ADMINISTRATION OF THIS WATER RIGHT:

IN ADDITION TO THE PLACE OF USE DESCRIBED FOR THIS RIGHT, HISTORICAL PRACTICE HAS BEEN TO DELIVER STORAGE WATER TO THE FOLLOWING LANDS:

T03N R27E S03	SWSW	37	SESW	24			
S04	NWSW	37	SWSW	36	SESW	37.5	
	SWSE	37.5	SESE	37.5			
S08	NENE	21	NWNE	38	SENE	35	
	NESE	39	NWSE	27			
S09	NENE	32	SENE	39	NWNW	33	
	SWNW	31	NESW	30	NWSW	38	
	SWSW	25					

634.5 ACRES TOTAL

ALSO, HISTORICAL PRACTICE HAS BEEN TO DELIVER STORAGE WATER TO 120 ACRES WITHIN THE LANDS DESCRIBED BELOW IN A SINGLE IRRIGATION SEASON.

T03N R26E S13	NWSW	39	SWSW	33	SESW	39	
	SWSE	40					
S24	NENW	39	NWNW	38	SWNW	39	

267 ACRES TOTAL

RULE 54(b) CERTIFICATE

With respect to the issues determined by the above judgment or order, it is hereby CERTIFIED, in accordance with Rule 54(b), I.R.C.P., that the court has determined that there is no just reason for delay of the entry of a final judgment and that the court has and does hereby direct that the above judgment or order shall be a final judgment upon which execution may issue and an appeal may be taken as provided by the Idaho Appellate Rules.

R. Burdick

ROGER BURDICK
Presiding Judge of the
Snake River Basin Adjudication

IN THE DISTRICT COURT OF THE FIFTH JUDICIAL DISTRICT OF THE
STATE OF IDAHO, IN AND FOR THE COUNTY OF TWIN FALLS

In Re SRBA)
)
Case No. 39576)
)

PARTIAL DECREE PURSUANT TO
I.R.C.P. 54(b) FOR

Water Right 34-00817B

2001 OCT 15 PM 4:27
DISTRICT COURT-SRBA
TWIN FALLS, IDAHO
FILED

NAME & ADDRESS: BIG LOST RIVER IRRIGATION DISTRICT
PO BOX 205
MACKAY ID 83251

SOURCE: BIG LOST RIVER TRIBUTARY: SINKS

QUANTITY: 0.8 CFS
140.0 AFY

PRIORITY DATE: 03/01/1902

POINT OF DIVERSION:

T03N R26E	S01	NENESW	(REDIVERSION)	Within BUTTE County
	S12	NENWSE	(REDIVERSION)	
T04N R26E	S26	NWNWNW	(REDIVERSION)	
T05N R26E	S04	NWSESE	(REDIVERSION)	
T07N R23E	S12	SENW		Within CUSTER County

USE OF THIS RIGHT WITH THE RIGHTS LISTED BELOW IS LIMITED TO THE IRRIGATION OF 32,000 ACRES WITHIN THE PLACE OF USE DESCRIBED ABOVE IN A SINGLE IRRIGATION SEASON.
COMBINED RIGHT NOS.: 34-00012, 34-00013, 34-00810, 34-00811, 34-00818, 34-02507, 34-10873 AND 34-10935.

OTHER PROVISIONS NECESSARY FOR DEFINITION OR ADMINISTRATION OF THIS WATER RIGHT:

IN ADDITION TO THE PLACE OF USE DESCRIBED FOR THIS RIGHT, HISTORICAL PRACTICE HAS BEEN TO DELIVER STORAGE WATER TO THE FOLLOWING LANDS:

T03N R27E S03	SWSW	37	SESW	24			
S04	NWSW	37	SWSW	36	SESW	37.5	
	SWSE	37.5	SESE	37.5

	NESE	39	NWSE	27			
S09	NENE	32	SENE	39	NWNW	33	
	SWNW	31	NESW	30	NWSW	38	
	SWSW	25					

634.5 ACRES TOTAL

ALSO, HISTORICAL PRACTICE HAS BEEN TO DELIVER STORAGE WATER TO 120 ACRES WITHIN THE LANDS DESCRIBED BELOW IN A SINGLE IRRIGATION SEASON.

T03N R26E S13	NWSW	39	SWSW	33	SESW	39	
	SWSE	40					
S24	NENW	39	NWNW	38	SWNW	39	

267 ACRES TOTAL

RULE 54(b) CERTIFICATE

With respect to the issues determined by the above judgment or order, it is hereby CERTIFIED, in accordance with Rule 54(b), I.R.C.P., that the court has determined that there is no just reason for delay of the entry of a final judgment and that the court has and does hereby direct that the above judgment or order shall be a final judgment upon which execution may issue and an appeal may be taken as provided by the Idaho Appellate Rules.

R Burdick

ROGER BURDICK
Presiding Judge of the
Snake River Basin Adjudication

IN THE DISTRICT COURT OF THE FIFTH JUDICIAL DISTRICT OF THE
STATE OF IDAHO, IN AND FOR THE COUNTY OF TWIN FALLS

2001 SEP 26 AM 11: 16

In Re SRBA	)	PARTIAL DECREE PURSUANT TO
	)	I.R.C.P. 54(b) FOR
Case No. 39576	)	
	)	Water Right 34-00818

NAME & ADDRESS: BIG LOST RIVER IRRIGATION DISTRICT
PO BOX 205
MACKAY ID 83251

SOURCE: BIG LOST RIVER TRIBUTARY: SINKS

QUANTITY: 3.2 CFS
556.5 AFY

PRIORITY DATE: 06/30/1880

POINT OF DIVERSION:

T03N R26E S01	NENESW	(REDIVERSION)	Within BUTTE County
S12	NENWSE	(REDIVERSION)	
T04N R26E S26	NWNWNW	(REDIVERSION)	
T05N R26E S04	NWSESE	(REDIVERSION)	
T07N R23E S12	SENW		Within CUSTER County
T06N R24E S01	NENESW	(REDIVERSION)

USE OF THIS RIGHT WITH THE RIGHTS LISTED BELOW IS LIMITED TO THE IRRIGATION OF 32,000 ACRES WITHIN THE PLACE OF USE DESCRIBED ABOVE IN A SINGLE IRRIGATION SEASON.
COMBINED RIGHT NOS.: 34-00012, 34-00013, 34-00810, 34-00811, 34-00817B, 34-02507, 34-10873 AND 34-10935.

OTHER PROVISIONS NECESSARY FOR DEFINITION OR ADMINISTRATION OF THIS WATER RIGHT:

THIS PARTIAL DECREE IS SUBJECT TO SUCH GENERAL PROVISIONS NECESSARY FOR THE DEFINITION OF THE RIGHTS OR FOR THE EFFICIENT ADMINISTRATION OF THE WATER RIGHTS AS MAY BE ULTIMATELY DETERMINED BY THE COURT AT A POINT IN TIME NO LATER THAN THE ENTRY OF A FINAL UNIFIED DECREE. SECTION 42-1412(6), IDAHO CODE.

RULE 54(b) CERTIFICATE

With respect to the issues determined by the above judgment or order, it is hereby CERTIFIED, in accordance with Rule 54(b), I.R.C.P., that the court has determined that there is no just reason for delay of the entry of a final judgment and that the court has and does hereby direct that the above judgment or order shall be a final judgment upon which execution may issue and an appeal may be taken as provided by the Idaho Appellate Rules.

Roger Burdick

ROGER BURDICK
Presiding Judge of the
Snake River Basin Adjudication

IN THE DISTRICT COURT OF THE FIFTH JUDICIAL DISTRICT OF THE
STATE OF IDAHO, IN AND FOR THE COUNTY OF TWIN FALLS

2001 OCT 15 PM 4:50
DISTRICT COURT-SRBA
TWIN FALLS, IDAHO
FILED

In Re SRBA	)	PARTIAL DECREE PURSUANT TO
	)	I.R.C.P. 54(b) FOR
Case No. 39576	)	
	)	Water Right 34-02507

NAME & ADDRESS: BIG LOST RIVER IRRIGATION DISTRICT
PO BOX 205
MACKAY ID 83251

SOURCE: BIG LOST RIVER TRIBUTARY: SINKS

QUANTITY: 6000.0 AFY

A VOLUME OF WATER IN ADDITION TO THE VOLUME DESCRIBED ABOVE FOR STORAGE PURPOSES MAY BE STORED IN A SINGLE YEAR IF: A) THE ADDITIONAL VOLUME IS STORED USING THE STORAGE CAPACITY OF MACKAY RESERVOIR, AND B) ALL WATER RIGHTS EXISTING AT THE TIME OF STORAGE (INCLUDING WATER RIGHTS WITH JUNIOR PRIORITY AND OTHER RIGHTS FOR STORAGE PURPOSES) THAT ARE WITHIN THEIR PERIOD OF USE ARE SATISFIED.

PRIORITY DATE: 09/02/1959

POINT OF DIVERSION:

T03N R26E S01	NENESW	(REDIVERSION)	Within BUTTE County
S12	NENWSE	(REDIVERSION)	
T04N R26E S26	NWNWNW	(REDIVERSION)	
T05N R26E S04	NWSESE	(REDIVERSION)	
T07N R23E S12	SENW		Within CUSTER County
T06N R24E S01	NENESW	(REDIVERSION)

USE OF THIS RIGHT WITH THE RIGHTS LISTED BELOW IS LIMITED TO THE IRRIGATION OF 32,000 ACRES WITHIN THE PLACE OF USE DESCRIBED ABOVE IN A SINGLE IRRIGATION SEASON.

COMBINED RIGHT NOS. 34-00012, 34-00013, 34-00810, 34-00811, 34-00817B, 34-00818, 34-10873 AND 34-10935.

OTHER PROVISIONS NECESSARY FOR DEFINITION OR ADMINISTRATION OF THIS WATER RIGHT:

THIS PARTIAL DECREE IS SUBJECT TO SUCH GENERAL PROVISIONS NECESSARY FOR THE DEFINITION OF THE RIGHTS OR FOR THE EFFICIENT ADMINISTRATION OF THE WATER RIGHTS AS MAY BE ULTIMATELY DETERMINED BY THE COURT AT A POINT IN TIME NO LATER THAN THE ENTRY OF A FINAL UNIFIED DECREE. SECTION 42-1412(6), IDAHO CODE.

RULE 54(b) CERTIFICATE

With respect to the issues determined by the above judgment or order, it is hereby CERTIFIED, in accordance with Rule 54(b), I.R.C.P., that the court has determined that there is no just reason for delay of the entry of a final judgment and that the court has and does hereby direct that the above judgment or order shall be a final judgment upon which execution may issue and an appeal may be taken as provided by the Idaho Appellate Rules.

R. Burdick

ROGER BURDICK
Presiding Judge of the
Snake River Basin Adjudication

IN THE DISTRICT COURT OF THE FIFTH JUDICIAL DISTRICT OF THE
STATE OF IDAHO, IN AND FOR THE COUNTY OF TWIN FALLS

2001 OCT 15 PM 4:54

USE OF THIS RIGHT WITH THE RIGHTS LISTED BELOW IS LIMITED TO THE IRRIGATION OF 32,000 ACRES WITHIN THE PLACE OF USE DESCRIBED ABOVE IN A SINGLE IRRIGATION SEASON.
COMBINED RIGHT NOS. 34-00012, 34-00013, 34-00810, 34-00811, 34-00817B, 34-00818, 34-02507 AND 34-10935.

OTHER PROVISIONS NECESSARY FOR DEFINITION OR ADMINISTRATION OF THIS WATER RIGHT:

THIS PARTIAL DECREE IS SUBJECT TO SUCH GENERAL PROVISIONS NECESSARY FOR THE DEFINITION OF THE RIGHTS OR FOR THE EFFICIENT ADMINISTRATION OF THE WATER RIGHTS AS MAY BE ULTIMATELY DETERMINED BY THE COURT AT A POINT IN TIME NO LATER THAN THE ENTRY OF A FINAL UNIFIED DECREE. SECTION 42-1412(6), IDAHO CODE.

RULE 54(b) CERTIFICATE

With respect to the issues determined by the above judgment or order, it is hereby CERTIFIED, in accordance with Rule 54(b), I.R.C.P., that the court has determined that there is no just reason for delay of the entry of a final judgment and that the court has and does hereby direct that the above judgment or order shall be a final judgment upon which execution may issue and an appeal may be taken as provided by the Idaho Appellate Rules.

ROGER BURDICK
Presiding Judge of the
Snake River Basin Adjudication

IN THE DISTRICT COURT OF THE FIFTH JUDICIAL DISTRICT
STATE OF IDAHO, IN AND FOR THE COUNTY OF TWIN FALLS

AMENDED **NUNC PRO TUNC**

)
Case No. 39576)
)

PARTIAL DECREE PURSUANT TO I.R.C.P. 54(b) FOR

Water Right 34-10935

DISTRICT COURT - SRBA
Fifth Judicial District
County of Twin Falls - State of Idaho

OCT 15 2001

By _____ Clerk

_____ Deputy Clerk

NAME & ADDRESS: BIG LOST RIVER IRRIGATION DISTRICT
PO BOX 205
MACKAY ID 83251

SOURCE: BIG LOST RIVER TRIBUTARY: SINKS

QUANTITY: 6.4 CFS
1113.0 AFY

PRIORITY DATE: 06/01/1896

POINT OF DIVERSION:

T03N R26E S01	NENESW	(REDIVERSION)	Within BUTTE County
S12	NENWSE	(REDIVERSION)	
T04N R26E S26	NWNWNW	(REDIVERSION)	
T05N R26E S04	NWSESE	(REDIVERSION)	
T07N R23E S12	SENW		Within CUSTER County
T06N R24E S01	NENESW	(REDIVERSION)	
R25E S06	SWNESE	(REDIVERSION)	
S10	NENESW	(REDIVERSION)	
S11	SWSESW	(REDIVERSION)	
S14	SENWSE	(REDIVERSION)	
S24	NWNWNE	(REDIVERSION)	
R26E S32	NWSENW	(REDIVERSION)	
T07N R23E S12	NWNWSE	(REDIVERSION)	
R24E S18	SESWNE	(REDIVERSION)	
S20	SWNESW	(REDIVERSION)	
S33	NWSWNE	(REDIVERSION)	
S34	SENWNW	(REDIVERSION)	

POINT OF DIVERSION IN T07N, R23E, S12, SENW IS MACKAY DAM. WATER IS DELIVERED THROUGH THE ANGELO, ARCO, B & J, BECK/MC GOWAN, BURNETT, DARLINGTON, EASTSIDE, HARRIS-VAUGHT, ISLAND, LOWER BURNETT, MC LOUGHLIN, MIDDLE, MILLER, MOORE, MUNSEY, SHARP, STREETER, SUTTER, SWAUGER, VANOUS, WESTSIDE AND 3 IN 1 DITCHES OR CANALS; ALL ARE POINTS OF REDIVERSION FROM THE BIG LOST RIVER.

PURPOSE AND PERIOD OF USE:

PURPOSE OF USE	PERIOD OF USE	QUANTITY
IRRIGATION STORAGE	05-01 10-15	1113.0 AFY
IRRIGATION FROM STORAGE	05-01 10-15	1113.0 AFY
DIVERSION TO STORAGE	05-01 10-15	6.4 CFS

The period of use for each purpose of use described above may be extended in seasons of unusual characteristics to a beginning date of 4-20 and an ending date of 10-31 at the discretion of the Director.

PLACE OF USE: IRRIGATION FROM STORAGE Within BUTTE and CUSTER Counties

RULE 54(b) CERTIFICATE

With respect to the issues determined by the above judgment or order, it is hereby CERTIFIED, in accordance with Rule 54(b), I.R.C.P., that the court has determined that there is no just reason for delay of the entry of a final judgment and that the court has and does hereby direct that the above judgment or order shall be a final judgment upon which execution may issue and an appeal may be taken as provided by the Idaho Appellate Rules.

Eric J Wildman
Presiding Judge of the
Snake River Basin Adjudication

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	Docket No. P-DR-2024-001
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	**ORDER GRANTING MOTION TO SHORTEN TIME AND DENYING MOTION TO STRIKE**

BACKGROUND

On October 17, 2024, Hearing Officer Burdick issued an *Order Authorizing Discovery and Email Service; Scheduling Order; Notice of Hearing* ("*Order*"). The *Order* set the deadline to file dispositive motions for January 24, 2025. *Order*, at 3.

On January 13, 2025, Moore Canal Users ("Moore") filed a motion to dismiss the subject action.

On January 24, 2025, Big Lost River Irrigation District ("BLRID") filed a joinder in Moore's motion to dismiss, "reserve[ing] the right to reply to any response filed in opposition to said motion or to participate in any oral argument on the motion." *BLRID's Joinder in Supp. Moore's Mot. to Dismiss*, at 1.

On January 27, 2025, Byron Pehrson, Loy Pehrson, and Randy Pehrson (collectively, "Pehrsons") filed a response to Moore's motion to dismiss concurrently with a *Motion to Strike Big Lost River Irrigation District's Joinder; Motion to Shorten Time* ("*Motion to Strike*"). Within the *Motion to Strike*, the Pehrsons request (1) BLRID's joinder be stricken and they be prevented from filing a reply to the Pehrsons' response and (2) the Hearing Officer rule on the *Motion to Strike* before the February 3, 2025 reply deadline. *Motion to Strike*, at 3.

There being no factual issues and only arguments of a legal nature, the Hearing Officer feels no further argument is necessary and renders a decision.

ANALYSIS

With the reply deadline approaching for the Moore's motion to dismiss, the Pehrsons' motion to strike basically seeks to protect the Moore's original motion to dismiss from being morphed to include new issues or expand into other areas. It is a valid concern, from both the standpoint of fairness as well as the efficiency of the administrative proceeding.

The Pehrsons cite to *Ramos v. Dixon*, 144 Idaho 32, 34–35, 156 P.3d 533, 535–36 (2007), to support their assertion that a joinder must be filed contemporaneously with the motion being

joined. *Motion to Strike*, at 2–3. However, because all motions in that case raised identical issues, and counsel opposing the joinder agreed to the motions being heard and then argued the motions during the trial court hearing, the Idaho Supreme Court had no need to address the timeliness issue and did not make a ruling on that requirement. *See Ramos*, 144 Idaho at 34–35, 156 P.3d at 535–36.

In the subject case, BLRID's joinder does not add any additional issues to Moore's original motion to dismiss. Given that, and given the joinder was filed by the dispositive motion deadline set in the *Order* and before the Pehrsons filed their response, the Hearing Officer sees little disadvantage to Phersons' position as a result.

Additionally, the motion to dismiss is a legal argument that seems to need no further factual expansion. Therefore, the motion to strike is denied, however, the joining party is restricted exclusively to the augments raised in Moore's motion to dismiss.

ORDER

IT IS HEREBY ORDERED that Byron Pehrson, Loy Pehrson, and Randy Pehrson's January 27, 2025 motion to shorten time is GRANTED and their motion to strike is DENIED.

DATED this 31st day of January 2025.

ROGER S. BURDICK
Hearing Officer

Attorneys for Moore Canal Users'

RECEIVED
Feb 03, 2025
DEPARTMENT OF
WATER RESOURCES

BEFORE THE DEPARTMENT OF WATER RESOURCES
OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	)	**Docket No. P-DR-2024-001**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	)	**MOORE CANAL USERS REPLY TO PEHRSONS' RESPONSE TO MOTION TO DISMISS**

COMES NOW, Moore Canal Users, by and through their attorney of record, Rigby, Andrus & Rigby Law, *PLLC*, and, pursuant to IDAPA 37.01.01.220 and IRCP Rule 12(b)(6), hereby replies to the *Pehrsons' Response to Moore Canal Users' Motion to Dismiss* (Response) as follows:

ARGUMENT

1. **The Pehrson's Petition Still Lacks an Identifiable Legal Basis Upon Which it is Authorized and Must Be Dismissed.**

The only authority Pehrsons cite in the Petition is IDAPA 37.01.01.300.02.d. (*Response* at 2).The entire IDAPA section is as follows:

> 02. Content of Pleadings and Written Motions. A pleading or written motion *shall fully state*:
> a. The facts upon which it is based;

b. The provision of statute, rule, order, or other controlling law upon which it is based;
c. The relief sought, including any proposed limitation (or the denial) of any right, license, or permit sought in an application.
d. Petitions for declaratory orders shall state the declaratory ruling that the petitioner seeks.

Emphasis Added. However, this rule does not authorize the filing of a petition for a declaratory ruling without further legal basis. (*Id*. at (b)). The *Response* ignores the fact that the Petition does not meet the requirements of this rule. This rule is not made up of separate and distinct segments. It consists of elements that are all required in a pleading or a motion filed with IDWR as evidenced by the use of the words "shall fully state." (*Id*.) A petition for a declaratory order/ruling must include everything described in sections (a), (b), (c), and (d). The Petition completely omits the requirements of section (b) which requires a description of "the provision of statute, rule, order, or other controlling law upon which it based." (*Id*.).

The *Response* alleges that the "Petition asks for a declaratory ruling as to the Director's duty and authority to deliver water in priority as required by Idaho law and his statutory duty." (*Response* at 3). However, Pehrsons cite no statute such as Chapter 6, Title 42, or other statute pertaining to the Director's authority.

Pehrsons fail to provide a legal basis of "any statute, rule, order, or other controlling law" as required by IDAPA 37.01.01.300.02.d. that allows them to seek the requested relief in the Petition. The Petition should be dismissed in its entirety.

2. Pehrsons Intentionally Misinterpret How Idaho Codes §§ 67-5232 and 67-5255 are applied.

Pehrsons should be citing Idaho Codes §§ 67-5232 and 67-5255 as the legal basis for the requested declaratory rulings in the Petition and meeting the requirements of those sections. They do not. The *Response* misconstrues the contents of Idaho Codes §§ 67-5232 and 67-5255

by alleging that the sections in the statues are separate and distinct basis for filing a petition for declaratory ruling. (*Response* at 3). The requirements in the statutes are not different options that can be chosen if the first requirement cannot be complied with. Idaho Code § 67-5232 states,

> (1) Any person may petition an agency for a declaratory ruling as to the applicability of any statutory provision or of any rule administered by the agency.
> (2) A petition for a declaratory ruling does not preclude an agency from initiating a contested case in the matter.
> (3) A declaratory ruling issued by an agency under this section is a final agency action.

Idaho Code §67-5255 states,

> (1) Any person may petition an agency for a declaratory ruling as to the applicability of any order issued by the agency.
> (2) A petition for a declaratory ruling does not preclude an agency from initiating a contested case in the matter.
> (3) A declaratory ruling issued by an agency under this section is a final agency action.

Pursuant to the above statutes, a petitioner may file a petition for a declaratory ruling as to the applicability of any statutory provision, rule, or order administered or issued by an agency. Then, it clarifies that the agency may initiate a contested case in the matter even when a declaratory ruling has been requested. Lastly, it states that if a declaratory ruling is issued, it is classified as a final agency action.

Neither statute says that an agency's decision to initiate a contested case creates a right to a declaratory ruling. Pehrsons have provided no authority under which they ask for the declaratory relief they are seeking. Just because IDWR decided that the matter should move forward to a contested case does not mean that the Petition is not deficient and should not be dismissed. This Petition should be dismissed in its entirety because it fails to cite any legal basis upon which the requested declaratory rulings for watermaster instructions are authorized and because it is inconsistent with Idaho Codes §§ 67-5232 and 67-5255.

3. The Petition does apply to Moore Canal Users.

Pehrsons' assert that the Petition does not apply to Moore Canal Users and is only directed at the delivery of water to Moss' River Diversion. It is clear from the language of the Petition that the second request for relief is general in nature and not just focused on Moss. In the case caption of the Petition, the second matter the Petition seeks a declaratory ruling on is described as "IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR." There is no indication in the case caption or in the body of the Petition that this only applies to Moss and his River Diversion.

The Second form of relief sought in the Petition is described as follows:

> 2. Instruct the Water District No. 34 Watermaster to make futile calls on the river as if storage water is not available as carriage water for natural flow water rights. If storage water is added to natural flow, futile call determinations can change to the detriment of natural flow water users. Natural flow water users are entitled to delivery determinations being made in the same manner as when their appropriations were made, prior to the creation of storage.

Petition for Declaratory Ruling for Watermaster Instructions, at 2.

The Petition continues to assert that "[t]he Department should issue watermaster instructions defining when futile call exists for natural flow water rights but for storage water releases from Mackay Reservoir." (Petition at 7).

It is clear from the language of the Petition that the intent is not to limit this watermaster instruction to Moss' River Diversion only, but generally includes all natural flow and storage diversions from Mackay Reservoir. Moore filed a petition to intervene which was granted because this matter does not only affect Moss and delivery of water to his River Diversion but affects all downstream users.

4. Pehrsons Are Not "Entitled to Same Conditions" and Cannot Preemptively Use Futile Call to Change How Water Is Delivered to Senior Appropriators.

Pehrsons request that the Watermaster of District 34 apply futile call to the detriment of a senior appropriator, even if it were only for delivery of water to Moss' River Diversion, is unsupported in Idaho law. Futile call is a last resort mechanism available to junior appropriators that want to receive water in the event that geological and hydrologic conditions are present that are beyond the control of the senior appropriator that make delivery of water to the senior appropriator impossible. It is not a preemptive tool that can be used to shut off a senior or decide that a senior cannot receive water that is, in reality, deliverable. If futile call is administered in the manner being presented, even if it arguably only applies to Moss, it will still have the effect of shutting off downstream users by reducing the amount of water flowing downstream.

Pehrsons assert that they are entitled to the same conditions that were present when they perfected their water right but provide no authority for this proposition. Pehrsons assertion that junior water right holders are entitled to have the Big Lost River operated consistent with the conditions that existed at the time their water right was perfected is not only unsupported by any authority, but if applied generally in Idaho, would be highly disruptive.

Imagine Water District 01's water master managing the Snake River, not simply by priority, but attempting to ensure that every water right was managed as it would have been before the creation of reservoirs or other alterations to the system that postdate that specific right's priority date. As a brief example only including four reservoirs on the Snake and its tributaries – a 1904 water right would have to be managed as if no reservoirs existed; a 1906 right could be impacted by Milner Dam, but not American Falls, Palisades, or Ririe; a 1960 right by Milner and Palisades, but not American Falls or Ririe; and a 1979 right could be impacted by all four. This is not workable.

Since the Pehrson's water right was perfected, the Mackay Dam was constructed, creating the Mackay Reservoir, and Water District 34 was created. It would be impossible to administer water in Mackay Reservoir as if the reservoir did not exist at all, ignore the IDAPA rules governing Water District 34, and ask the watermaster to apply futile call based on a certain trigger even though in reality, water can still be delivered to a senior appropriator.

Pehrsons' two requested watermaster instructions attempt to incorrectly apply futile call. If granted, the requested relief would negatively affect delivery of water to all users downstream of Moss' River Diversion. The Petition should be dismissed in its entirety.

CONCLUSION

Pehrsons' Petition for Watermaster Instructions should be dismissed in its entirety as it does not provide an identifiable legal basis upon which the requested declaratory rulings are authorized as required, requests an unsupported application of futile call, and if granted, would affect the entire basin and harm all downstream users, not just Moss.

DATED this 3rd day of February, 2025.

Attorneys for Byron Pehrson, Loy Pehrson, and Randy Pehrson

RECEIVED
Feb 07, 2025
DEPARTMENT OF WATER RESOURCES

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	**Docket No.: P-DR-2024-001**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	**PEHRSONS' RESPONSE TO MOSS MOTION FOR SUMMARY JUDGMENT**

COMES NOW Byron Pehrson, Loy Pehrson, and Randy Pehrson ("Pehrsons"), by and through their counsel of record, McHugh Bromley, PLLC, and hereby respond to the *Motion to for Summary Judgment* (Jan. 24, 2025), filed by the Moss Farms, Inc. ("Moss"). Pehrsons' response is supported by the *Declaration of Lucas Yockey* ("Yockey Dec."), the *Declaration of Preston Marcroft* ("Marcroft Dec."), the *Declaration of Byron Pehrson* ("B. Pehrson Dec."), the *Declaration of Loy Pehrson* ("L. Pehrson Dec."), the *Declaration of Randy Pehrson* ("R. Pehrson Dec."), the *Declaration of David R. Tuthill, Jr., Ph.D., P.E.* ("Tuthill Dec."), and the *Declaration of Chris M. Bromley* ("Bromley Dec.").

I. INTRODUCTION

Moss misapprehends the case.[1] Moss incorrectly argues Pehrsons are forever barred from contesting the delivery of his water rights because the Pehrsons did not protest *Application for Transfer No. 79972* (Oct. 27, 2015) ("Application"), which was subsequently approved by the Idaho Department of Water Resources ("IDWR" or "Department") on December 14, 2015 ("Transfer"), thereby adding a second point of diversion on the Big Lost River below the Darlington Sinks to Moss' natural flow water rights. As will be explained, what is actually at issue in this proceeding is whether storage water held by the Big Lost River Irrigation District ("BLRID") may be used by Moss as carriage water to the River Diversion when the Big Lost River is broken at the Darlington Sinks. It is Pehrsons' contention that this practice is unlawful, due to the fact that the *Transfer* never addressed the storage water rights of BLRID, with BLRID's rights preventing Moss from receiving storage water at the River Diversion, regardless as to whether the storage water belongs to him or to other users in the basin.

II. STANDARD OF REVIEW

Summary judgment is proper "if the pleadings, depositions, and admissions on file, together with the affidavits, if any, show that there is no genuine issue of any material fact and that the moving party is entitled to judgment as a matter of law." *Marchand v. Jem Sportswear, Inc.*, 143 Idaho 458, 458, 147 P.3d 90, 90 (2006). The Hearing Officer is to "construe[] the record in the light most favorable to the non-moving party, and draw[] all reasonable inferences in favor of that party. If reasonable minds might come to different conclusions, summary judgment is inappropriate." *Id*. "If the record contains conflicting inferences or reasonable

[1] On February 3, 2025, Big Lost River Irrigation District filed a *Response in Support of Moss Farms' Motion for Summary Judgment*, wherein BLRID stated it "is in full support of Moss Farms, Inc's Motion for Summary Judgment and respectfully requests that the Idaho Department of Water Resources grant the relief requested therein." Given the joinder, it can also be said that BLRID misapprehends the matter.

minds might reach a different conclusion, a summary judgment must be denied." *G&M Farms v. Funk Irr. Co.*, 119 Idaho 514, 517, 808 P.2d 851, 854 (1991). "All doubts are to be resolved against the moving party, and the motion must be denied if the evidence is such that conflicting inferences may be drawn therefrom, and if reasonable people might reach different conclusions." *Id*.

III. STATEMENT OF UNDISPUTED FACTS

Pehrsons generally agree with the numbered paragraphs in Moss' *Statement of Undisputed Facts*.[2] Additional facts that are not contained in the Moss *Statement of Undisputed Facts* and are relevant to the issue at hand are as follows:

A. Moss Water Rights

1. The natural flow water rights that appear in the caption of this case, that are owned today by Moss, were decreed in the Snake River Basin Adjudication ("SRBA") to Catherine M. and Lee J. Watson ("Watson"), for irrigation, with a single point of diversion on the Big Lost River at a location known as the 3 in 1 Ditch, summarized as follows:

	Water Right No. 34-182	**Water Right No. 34-381A**
Quantity:	1.60 cfs	2.40 cfs
Priority Date:	6/1/1883	9/26/1894

Tuthill Dec. at 2-3, Exs. 2-3.

2. On November 16, 2012, IDWR changed ownership of the above-referenced water rights from Watson to Moss. *Id*. at 3, Ex. 5.

[2] It should be noted that there is an error in Moss' *Statement of Undisputed Facts*, found on pages 2-3 of Moss' *Memorandum in Support of Motion for Summary Judgment*, to wit: there is no numbered paragraph 3, 4, or 8, and there is a duplicate paragraph 7.

3. The above-referenced water rights share a 200-acre place of use and a combined diversion rate of 5.2 cfs with water right no. 34-2379F, *Declaration of Skyler Johns in Support of Motion for Summary Judgment, Ex. H* at 2 (Condition of Approval No. 2) ("Johns Dec.").

4. Water right no. 34-2378F is a ground water right with a priority date of August 8, 1960. *Tuthill Dec.* at 3, Ex. 4.

B. Pehrson Water Rights

5. The water rights of Byron Pehrson and Loy Pehrson are summarized as follows:

Water Right No.	Priority Date	Quantity (cfs)	Irrigated Acres	Canal/Ditch Name
34-28G	8/31/1884	0.80	40 acres	3 in 1
34-638A[3]	10/12/1884	0.15	7.5 acres	3 in 1
34-14189	6/1/1885	1.54	77 acres	Burnett, Beck-McGowan, 3 in 1, Lower Burnett
34-14191	4/22/1884	1.92	96.1 acres	Burnett, Beck-McGowan, 3 in 1, Lower Burnett
34-14207	6/30/1885	3.08	154 acres	Burnett, Beck-McGowan, 3 in 1, Lower Burnett
34-14209	9/14/1886	2.31	115.5 acres	Burnett, Beck-McGowan, 3 in 1, Lower Burnett

B. Pehrson Dec. at 2; *L. Pehrson Dec.* at 2.

6. The water rights of Randy Pehrson are summarized as follows:

Water Right No.	Priority Date	Quantity (cfs)	Irrigated Acres	Canal/Ditch Name
34-733	7/21/1886	1.44	72.4 acres	Burnett
34-10236	5/30/1885	2.00	100 acres	Darlington
34-10933	4/22/1884	1.63	81.40 acres	Darlington
34-10950	5/31/1884	0.72	36 acres	Darlington
34-13874	7/21/1886	1.00	50 acres	Burnett

[3] I recently bought a portion of this water right with the records of IDWR not yet showing the updated ownership.

Water Right No.	Priority Date	Quantity (cfs)	Irrigated Acres	Canal/Ditch Name
34-14389	4/22/1884	0.55	27.30 acres	Darlington

R. Pehrson Dec. at 2.

7. The water rights of Byron Pehrson, Loy Pehrson, and Randy Pehrson (collectively the "Pehrson Water Rights") are junior to Moss water right no. 34-182 and senior to Moss water right nos. 34-381A and 34-2379F.

8. The Pehrson Water Rights divert water from the Big Lost River at the ditches and canals that are shown in the tables above, all of which are upstream of the Darlington Sinks. *B. Pehrson Dec.* at 2-3; *L. Pehrson Dec.* at 2-3; *R. Pehrson Dec.* at 2.

C. BLRID Storage Water Rights

9. The BLRID storage water rights were decreed in the SRBA on October 15, 2001, authorize water to be stored in Mackey Reservoir, and consist of the following water right nos.: 34-12, 34-810, 34-811, 34-817B, 34-818, 34-2507, 34-10873, and 34-10935 (collectively the "BLRID Storage Rights"). *Tuthill Dec.* at 3, Ex. 6.

10. The point of diversion element for the BLRID Storage Rights, shown on the following page, explains that water is diverted at and stored behind Mackey Dam, in T07N, R23RE, S12, SENW, and is then diverted and/or rediverted, downstream at twenty-two named ditches and canals, such as the 3 in 1 Ditch and Moore Canal:

POINT OF DIVERSION:	T03N R26E S01	NENESW	(REDIVERSION)	Within BUTTE County
	S12	NENWSE	(REDIVERSION)	
	T04N R26E S26	NWNWNW	(REDIVERSION)	
	T05N R26E S04	NWSESE	(REDIVERSION)	
	T07N R23E S12	SENW		Within CUSTER County
	T06N R24E S01	NENESW	(REDIVERSION)	
	R25E S06	SWNESE	(REDIVERSION)	
	S10	NENESW	(REDIVERSION)	
	S11	SWSESW	(REDIVERSION)	
	S14	SENWSE	(REDIVERSION)	
	S24	NWNWNE	(REDIVERSION)	
	R26E S32	NWSENW	(REDIVERSION)	
	T07N R23E S12	NWNWSE	(REDIVERSION)	
	R24E S18	SESWNE	(REDIVERSION)	
	S20	SWNESW	(REDIVERSION)	
	S33	NWSWNE	(REDIVERSION)	
	S34	SENWNW	(REDIVERSION)	

POINT OF DIVERSION IN T07N, R23E, S12, SENW IS MACKAY DAM. WATER IS DELIVERED THROUGH THE ANGELO, ARCO, B & J, BECK/MC GOWAN, BURNETT, DARLINGTON, EASTSIDE, HARRIS-VAUGHT, ISLAND, LOWER BURNETT, MC LAUGHLIN, MIDDLE, MILLER, MOORE, MUNSEY, SHARP, STREETER, SUTTER, SWAUGER, VANOUS, WESTSIDE AND 3 IN 1 DITCHES OR CANALS; ALL ARE POINTS OF REDIVERSION FROM THE BIG LOST RIVER.

Id., Ex. 6.

11. In the SRBA, BLRID claimed the above-referenced canals and ditches as points of diversion and/or rediversion. *Id*. at 4, Ex. 7.

12. In the SRBA, IDWR recommended the above-referenced canals and ditches as points of diversion and/or rediversion. *Id*. at 4, Ex. 8.

D. The 2015 Moss Transfers

13. On April 6, 2015, Moss filed the *Application* with IDWR. *Johns Dec., Ex. C*, at 1. In the *Application*, Moss did not seek to remove or eliminate the 3 in 1 Ditch as a point of diversion, instead he sought to add the River Diversion as a second point of diversion. *Johns Dec., Ex. C* at 2, ln. A.2; *Tuthill Dec.* at 5; *Yockey Dec.* at 3.

14. The River Diversion would "allow [Moss] to pump directly from the river," *Johns Dec., Ex. C*, at 1, meaning it is not on a canal or ditch that is referenced as a point of diversion and/or rediversion on the BLRID Storage Rights.

15. After Moss filed the *Application*, then-Watermaster Yockey was asked by IDWR to comment as to the *Application*, *Johns Dec., Ex. E*, with then-Watermaster Yockey checking the box that he did not oppose approval. *Yockey Dec.* at 3.

16. When IDWR addressed the *Application* with Watermaster Yockey, BLRID storage water was not discussed as it related to the Moss Water Rights. *Yockey Dec.* at 3.

17. The River Diversion, which is a second point of diversion for the Moss Water Rights, is what is known by IDWR as an "alternate point of diversion." *Tuthill Dec.* at 5.

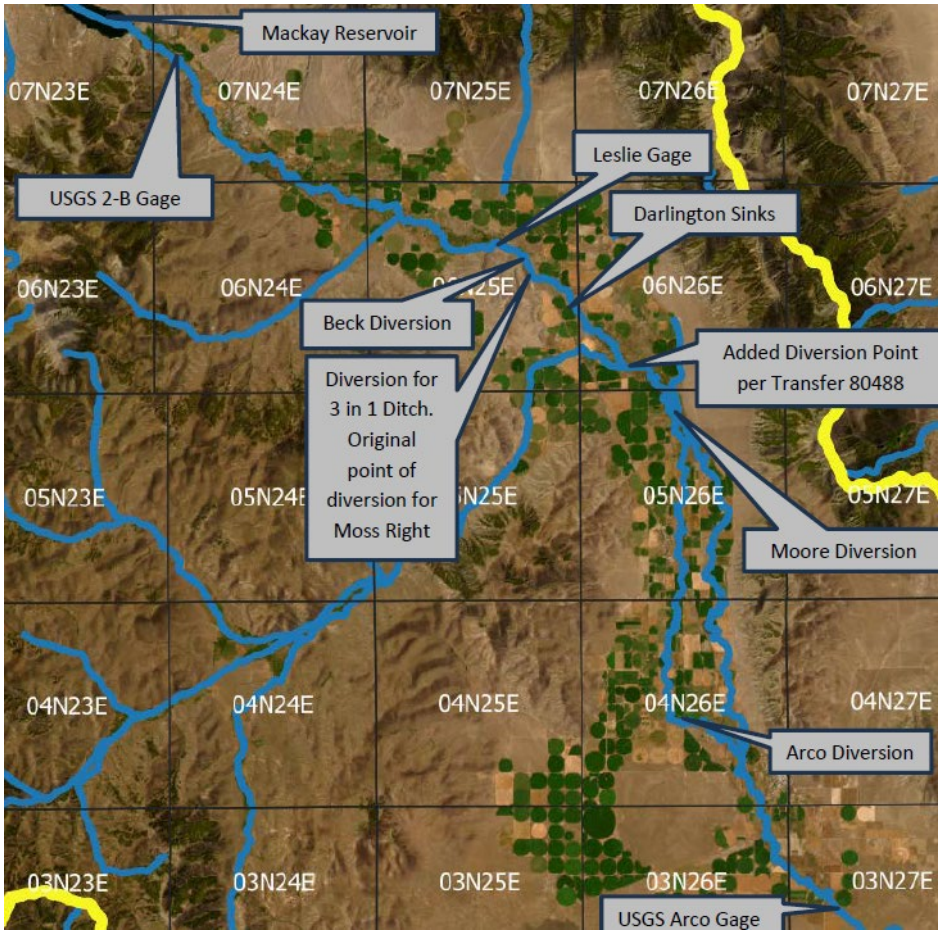
18. Neither the *Application* nor the *Transfer* addressed the storage water rights of BLRID. *Johns Dec., Exs. C & H*; *Tuthill Dec.* at 6; *Yockey Dec.* at 3-4.

19. A condition on the face of the *Transfer* states: "This water right(s) is subject to all prior water rights and shall be administered in accordance with Idaho law and applicable rules of the Department of Water Resources." *Johns Dec., Ex. H* at 1.

20. On December 14, 2015, the Moss Water Rights were subject to a second IDWR transfer. *Tuthill Dec.* at 4, Ex. 9 ("2015 Transfer").

21. The *2015 Transfer* is neither included in the *Johns Dec.* nor discussed in the Moss *Motion* or *Memorandum In Support*.

22. The *2015 Transfer* adds a condition to the Moss Water Rights that was not included in the *Transfer*, explaining the use of water right no. 34-2379F, a ground water right with a priority date of 8/8/1960, when it is used in conjunction with the Moss Water Rights. *Tuthill Dec.* at 4.



E. Physical Relationship Between Pehrsons, Moss, BLRID, And Moore Canal

23. The River Diversion is located approximately 5.9 miles downstream on the Big Lost River from the 3 in 1 Ditch. *Tuthill Dec.* at 5.

24. Between the 3 in 1 Ditch and the River Diversion is what is known as the Darlington Sinks, which, when flows are low, is a losing reach of the Big Lost River. *Johns Dec.*, *Ex. G* ("the proposed new point of diversion is located downstream from the current point of diversion on a losing river reach"); *Yockey Dec.* at 3; *Marcroft Dec.* at 2.

25. The Moore Canal, also known as the Moore Diversion, is located downstream of the River Diversion.[4]

26. The features mentioned above are shown on the following map:

Tuthill Dec. at 2.

[4] It is germane to discuss the Moore Canal because the Moore Canal Users are party to this case.

27. The Pehrson Water Rights, summarized above, divert from the canals and ditches described in the BLRID Storage Rights, with the Pehrsons holding storage water interests in BLRID. *B. Pehrson Dec.* at 2; *L Pehrson Dec.* at 2; *R. Pehrson Dec.* at 2.

28. Moss holds interests in the BLRID Storage Water Rights that are diverted and/or rediverted at the 3 in 1 Ditch and the Moore Canal. *B. Pehrson Dec*. at 3, Ex. 1.

F. IDWR's 2021 Futile Call Determination And Curtailment Of Rights Below The Darlington Sinks

29. On July 22, 2021, Watermaster Yockey contacted IDWR to "express a concern that a futile call determination request was imminent due to the rapidly diminishing water supply in the Big Lost River . . . ." *Bromley Dec., Ex. 1* at 1.

30. On July 23, 2021, Watermaster Yockey reported to IDWR that "delivery calls for decreed [natural flow] water (appx. 12 cfs) at the Moore Diversion were satisfied at the head of the ditch, but were not making it to the first user in a beneficially usable amount." *Id*.

31. On July 24, 2021, Watermaster Yockey "notified the Department that the priority delivery date had changed from 1884 to 1883, and that [he] would attempt to continue to deliver the senior rights to the Moore Diversion for the remainder of the weekend."

32. On July 26, 2021, Watermaster Yockey sent an email to Tim Luke, former IDWR employee, requesting a determination of futile call:

> Currently WD34 is attempting to deliver the 8-10-1883's to the Moore Canal starting on 7-24-2021 and no water is reaching the Diversion. There is no storage water being delivered to any canal. This makes the river shrink 100%. If the futile call is determined the last point of delivery of water on the Big Lost River would be moved up to the Beck Canal Heading which would allow beneficial use again. As watermaster I have the general consent of the [Water District No. 34] advisory board and The Big Lost River Irrigation District approves WD34's request.

Bromley Dec., Ex. 1 at 7.

33. Through July 26, 2021 email communication between IDWR and BLRID, it was established that, while a majority of the WD34 advisory board supported a determination of futile call, two of the advisory board members, Shawn Anderson and Jason Anderson, did not. *Id*. at 6.

34. On July 26, 2021, the BLRID General Manager responded via email to Mr. Luke, stating: "I spoke with Shawn [Anderson] just now and he agreed to support the futile [call] . . . . When I spoke with Jason [Anderson] he was against making the [f]utile call." *Id*.; *see also id.* at 2 ("Shawn Anderson agreed to support the determination and Jason Anderson did not").

35. Jason Anderson is a water user on the Moore Canal. *B. Pehrson Dec.* at 4.

36. In support of the futile call determination, IDWR employee David Hoekema prepared a series of graphs and tables showing the flow of the Big Lost River during the month of July, including at the 2B Gage. *Bromley Dec., Ex. 1* at 3-5.

37. According to Figure 3, prepared by Mr. Hoekema, between July 22 and July 26, the flow at the 2B Gage was approximately between 200 to 150 cfs, as shown below:

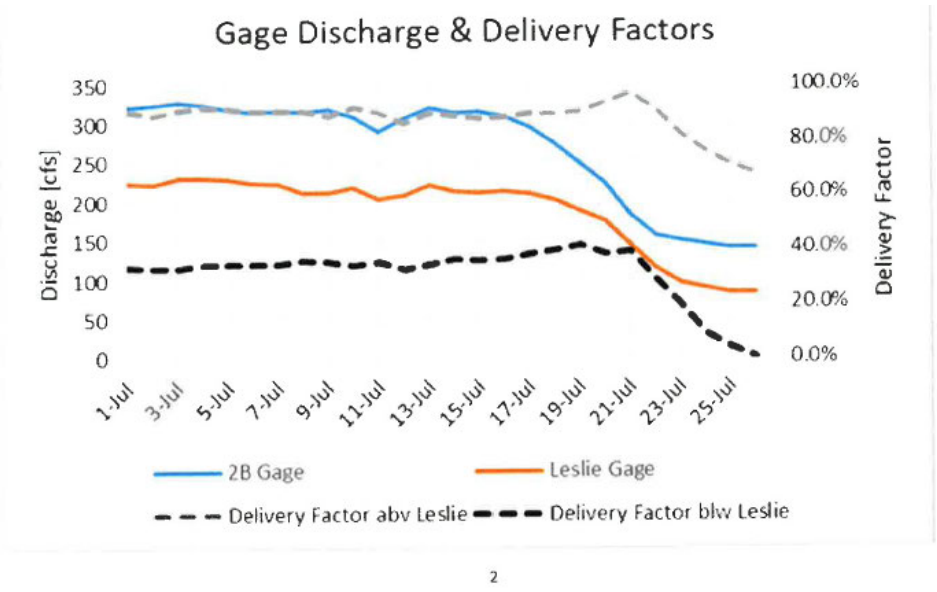


Figure 3 Flow past the 2B Gage is shown by the blue line, flow past the Leslie Gage is shown by the orange line, the delivery factor above the Leslie Gage is shown by the dashed, grey line, and the delivery factor blw Leslie is shown by the dashed, black line.

Id. at 3-4.[5]

38. On July 26, 2021, internal email communication from Mr. Hoekema to fellow IDWR employees, Mr. Luke and Rob Whitney, established: "As the reservoir has been flat-lined, so as to only pass inflows (natural flow), it appears that the natural flow in the river is not adequate to carry water to the Moore Diversion." *Id*. at 3.

39. On July 26, 2021, Mr. Whitney sent a letter to Watermaster Yockey informing him that IDWR supported the determination of futile call:

> It is evident that curtailment of junior surface water rights upstream of the Moore Diversion to satisfy senior surface water rights at the Moore Diversion constitutes a futile call. Therefore, you are instructed to distribute surface water flows of the Big Lost River in the reach from Mackay Dam to the Beck Diversion as a separate

[5] In the *Petition for Declaratory Ruling for Watermaster Instructions* (Feb. 14, 2024), Watermaster Yockey and Watermaster Marcroft opined that futile call should be determined in this reach when flow at the 2B Gage "is 187 cfs or less for three (3) consecutive days . . ." resulting in curtailment of the Moss Water Rights at the River Diversion and Moss able to divert his Water Rights at the 3 in 1 Ditch. *Petition* at 2. The opinion of the Watermasters is consistent with Figure 3.

> source for the remainder of the 2021 irrigation season, unless it is subsequently determined that delivery of the senior water rights at the Moore Diversion is no longer futile.

Id. at 2 (emphasis added).

G. IDWR's 2022 Futile Call Determination, Curtailment Of Rights Below The Darlington Sinks, And Rescission Of The Same Due To Introduction Of Moore Canal Storage Water To The River Diversion

40. On August 15, 2022, Watermaster Marcroft sent an email to IDWR employees Tim Luke and Rob Whitney, wherein he requested that IDWR make a finding of futile call:

> I would like to request that IDWR, please make a futile call for the delivery of water to the Moore Diversion based on the lack of beneficial use of the decreed water. Currently WD34 is attempting to deliver the 8-10-1883's to the Moore Canal starting on 8-12-2022. I called Dave Hokeman and told him that there was no water making it to the Moore Diversion. so we agreed to curtail all of the 1884 decrees in attempt to dilver the 8-10-1883 decree to the Moore Diverson. All of the 1884 decrees where turned off by 11:30 that day.There is no storage waterbeing delivered to any canal. as of this mourning there is no water making it to the Moore Diversion.This makes the river shrink 100%. if the futile call is determined the last point of delivery of water on the Big Lost River would be be moved up to the Beck Canal Heading which would allow beneficial use again. I have been in contact with Vernon Roche Chairman of advisory borad and 5 of the 9 members support this. I also talked to the chairman of Big Lost River Irrigation Distric and they approve WD"34 request.

Bromley Dec., Ex. 2 at 3.

41. On August 15, 2022, Mr. Luke agreed with a determination of futile call and instructed Watermaster Marcroft to "deliver water to more junior priority rights on the river between Mackey Reservoir and the Beck Ditch." *Id*. at 1.

42. Mr. Luke further stated: "Please note that this determination does not prevent users on the Moore Canal or other lower valley ditches to call for and receive delivery of storage and decreed rights during the remainder of this irrigation season. . . . . <u>This guidance is consistent with last year's futile call approval</u> . . . ." *Id*. (emphasis added).

43. On August 18-19, 2022, and inconsistent with the prior year, Jason Anderson, Moore Canal water user, communicated with Mr. Luke regarding the determination of futile call, and particularly the Moss Water Rights and delivery of water to the River Diversion. *Id., Ex. 3* at 1-6.

44. Sometime on or before September 2, 2022, IDWR reversed its finding of futile call, as explained through an email from David Hoekema to Mr. Luke and Rob Whitney, with copies to IDWR employees Matthew Anders and Director Mathew Weaver:

> I had a phone conversation with Randy Pehrson this morning. He is very upset that Dennis Moss is able to call for storage water and receive decree (1883 natural flow) at the same time. After the futile call in mid-August, it was determine[d] that decree water in the river was inadequate to carry water to Moss. . . . . His argument is that without storage water deliveries to Moss, it would be impossible to deliver the decree [natural flow] water to Moss.

Id., Ex. 4 at 1 (emphasis added).

45. According to Mr. Hoekema: "When Moss runs out of storage, though I think a futile call is very appropriate . . . ." *Id*. at 2 (emphasis added).

46. On September 2, 2022, Mr. Luke responded to Mr. Hoekema, stating: "I agree with your explanation and perspective. We should probably meet today to discuss this . . . . Rob [Whitney] was going to call Preston [Marcroft] to get an update. I (and maybe Rob) have a meeting at 10 and Mat W[eaver] is over at Gov's office from 10 to 11 approx." *Id*. at 1.

47. Late in the day on September 2, 2022, Mr. Whitney sent an email to Watermaster Marcroft informing him that the August 15, 2022 futile call decision of Mr. Luke had been rescinded, due to Mr. Whitney's belief that Moss had sufficient storage water to carry the Moss Water Rights to the River Diversion:

> Randy Pehrson contacted David Hoekema with concerns about the futile call, and delivering both storage and decreed water to Dennis Moss. Tim and I met with David to discuss Randy's concerns and current water supply conditions on the Big Lost River. On August 15, 2022, IDWR conditionally supported a futile call determination on the Big Lost River at your request. This determination recognized a break in the river immediately below the Beck diversion but noted that *"... this determination does not prevent users on the Moore Canal or other lower valley ditches to call for and receive delivery of storage and decreed rights during the remainder of this irrigation season."* After the August 15, 2022 determination, IDWR was notified that delivery of water right 34-184 (Moss river pump) was affected by breaking the river at the Beck. Because the Moss water right has a 6-1-

> 1883 priority date and an authorized point of diversion below the Beck, you were instructed resume delivery to fill the Moss water right. Currently, delivery to Moss is not futile because he has sufficient storage water to help carry the decreed right. You have reported this afternoon that about 600 inches (12cfs) of water is passing the Moss diversion but there are no calls for delivery below Moss. Without sufficient storage to carry decrees to the Moore diversion, the futile call determination below Moss continues to be justified. It appears appropriate to deliver additional water upstream of Moss by adjusting the decree to deliver more 1884 rights, while maintaining delivery to Moss. Your suggestion to adjust the decree date to 8-31-1884 may be a reasonable place to start, but IDWR will defer to your local knowledge of what the demand might be if a certain decree date is set. As we discussed, please stay in contact with Dennis Moss as you deliver additional decrees. If the demand under a new decree date results in a shortage of water to satisfy Moss, the date should be adjusted accordingly. Please reach out if you have any questions.

Marcroft Dec., Ex. 1 at 1-2 (italics in original) (emphasis added).

48. While Mr. Whitney believed that Moss had sufficient storage water to help carry the decreed right, this was not correct, as Moss had already exhausted his storage. *B. Pehrson Dec.* at 4.

49. The storage water that was used to carry the Moss Water Rights through the Darlington Sinks and to the River Diversion was the BLRID storage water interests of Moore Canal users, including Jason Anderson. *Id*.

50. The introduction of Moore Canal water users' storage water to carry the Moss Water Rights to the River Diversion resulted in curtailment of the Pehrson Water Rights differently and prior to their historical cutoff dates. *Yockey Dec.* at 4-5; *Marcroft Dec.* at 3-4.

H. BLRID Internal Records Do Not Support Moss' Use Of Storage Water At The River Diversion, Nor Did Moss Assert In The Transfer Process That BLRID Storage Water Was Implicated

51. The records of BLRID establish that Moss is allowed to use storage water at the 3 in 1 Ditch and the Moore Canal but not at the River Diversion, consistent with the BLRID Storage Rights. *B. Pehrson Dec.* at 3.

52. BLRID has not filed a transfer with IDWR to add the River Diversion as a point of diversion and/or rediversion to the BLRID Storage Rights. *Tuthill Dec.* at 6.

53. Throughout the *Application* and *Transfer* proceedings, the only water rights at issue were the Moss Water Rights, with Moss never alleging that BLRID Storage Rights would be used differently or as carriage water. *See Johns Dec*.; *Yockey Dec.* at 3; *B. Pehrson Dec.* at 3; *L. Pehrson Dec.* at 3; *R. Pehrson Dec.* at 3.

54. Throughout the *Application* and *Transfer* proceedings, the Watermaster was never asked to comment on the use of BLRID Storage Rights as carriage water for the Moss Water Rights to the River Diversion. *Yockey Dec.* at 3.

55. Because the BLRID Storage Rights were neither at issue in the *Application* nor amended in the *Transfer*, it was not foreseeable that the BLRID Storage Rights would be effectively altered by the *Transfer* and could be used by Moss at the River Diversion and/or differently than they were used by Moss historically at the 3 in 1 Ditch. *Tuthill Dec.* at 6; *B. Pehrson Dec.* at 3; *L. Pehrson Dec.* at 3; *R. Pehrson Dec.* at 3.

56. The BLRID Storage Rights are not authorized to be delivered by Moss at the River Diversion, making the question at issue in this matter unforeseeable.

57. If it had been foreseeable that BLRID Storage Rights would have been used as carriage water to the River Diversion, then-Watermaster Yockey would have opposed approval of the *Application*, *Yockey Dec.* at 5, and Pehrsons would have protested, *B. Pehrson Dec.* at 3; *L. Pehrson Dec.* at 3; *R. Pehrson Dec.* at 3.

I. Opinions Of The Watermasters Support Futile Call

58. It is not uncommon for IDWR to issue watermaster instructions that establish futile call or when a river breaks. *Tuthill Dec.* at 5.

59. Establishing futile call or when a river breaks is factually specific and made on a case-by-case basis. *Id*.

60. According to the Watermaster, when the Big Lost River is connected between the 3 in 1 Ditch and the Moore Canal, the River Diversion may be used by Moss; therefore, when the River is broken at the Darlington Sinks, use of the River Diversion must cease. *Yockey Dec.* at 4-5; *Marcroft Dec.* at 3-4.

61. It is the opinion of the Watermasters and has been their practice, as evidenced in 2021 and 2022, that the Big Lost River is connected between the 3 in 1 Ditch and the Moore Diversion when flow at the 2B Gage is 500 cfs for three consecutive days, with the River broken at the Darlington Sinks when flow at the 2B Gage is 187 cfs or less for three consecutive days. *Petition for Declaratory Ruling for Watermaster Instructions* at 2 (Feb. 14, 2024); *see also Bromley Dec., Ex. 1* at 3-4, Fig. 3 (July 2021 flow at the 2B Gage as presented by David Hoekema).

IV. ARGUMENT

As will be explained below, there are genuine issues of fact and law in this case concerning Moss' use of the River Diversion as an alternate point of diversion when BLRID Storage Rights are used as carriage water; therefore, in construing the matter in the light most favorable to Pehrsons, the Hearing Officer should deny Moss' motion for summary judgment because the *Transfer* did not and could not have addressed storage water.

A. Pehrsons Are Not Collaterally Attacking The *Transfer* Because The *Transfer* Never Addressed And Could Not Have Addressed The Use Of BLRID Storage Water As Carriage Water

Moss states Pehrsons are attempting to undo the *Transfer*, and without directly saying it, argues that this proceeding is a collateral attack of a final order of the Department. "Generally,

final judgments, *whether right or wrong*, are not subject to collateral attack." *Sheperd v. Sheperd*, 161 Idaho 14, 17, 383 P.3d 693, 696 (2016) (italics in original). Here, there can be no collateral attack. This is because Pehrsons are not contesting the use of the River Diversion as an alternate point of diversion for the Moss Water Rights, with genuine issues of fact and law to be established at hearing concerning when delivery of the Moss Water Rights should considered futile and whether they contain the ability to use BLRID storage water as carriage water to overcome a futile call determination, alter the historic delivery patterns of the river, and effectively change the BLRID Storage Water Rights without notice and due process through a transfer proceeding. *Barron v. Idaho Dept. of Water Res.*, 135 Idaho 414, 417, 18 P.3d 219, 222 (2001).

As explained above, the only water Moss put at issue in the *Application* were the Moss Water Rights. It is undisputed, through the SRBA decrees, that the Moss Water Rights are satisfied by natural flow from the Big Lost River. Said differently, at no point in the *Transfer* proceeding were the water rights of BLRID involved. Understanding that only the Moss Water Rights were at issue in the *Application*, Pehrsons did not protest the addition of the River Diversion and then-Watermaster Yockey did not oppose its approval. As explained above, and evidenced in 2021 and 2022, this is because the River Diversion is located below the Darlington Sinks, and when the Big Lost River is disconnected at that location, it is not possible for the diversion rates associated with the Moss Water Rights to be carried through this losing reach to the River Diversion.

As explained through the above correspondence from IDWR in 2022, the only way the Moss Water Rights are being delivered through the Darlington Sinks to the River Diversion is

with the introduction of BLRID storage water as carriage water. This practice is not lawful for three reasons.

First, the Court has consistently held that the plain language of SRBA decrees controls. *See e.g. City of Blackfoot v. Spackman*, 162 Idaho 302, 306, 396 P.3d 1184, 1188 (2017) ("this Court will determine the meaning and legal effect of a decree from the plain and ordinary meaning of its words"). As explained above, the plain language of the point of diversion element that was decreed in the SRBA to the BLRID Storage Rights allows storage water to be used at particular canals and ditches that are listed as points of diversion and/or rediversion:

POINT OF DIVERSION:	T03N R26E S01	NENESW	(REDIVERSION)	Within BUTTE County
	S12	NENWSE	(REDIVERSION)	
	T04N R26E S26	NWNWNW	(REDIVERSION)	
	T05N R26E S04	NWSESE	(REDIVERSION)	
	T07N R23E S12	SENW		Within CUSTER County
	T06N R24E S01	NENESW	(REDIVERSION)	
	R25E S06	SWNESE	(REDIVERSION)	
	S10	NENESW	(REDIVERSION)	
	S11	SWSESW	(REDIVERSION)	
	S14	SENWSE	(REDIVERSION)	
	S24	NWNWNE	(REDIVERSION)	
	R26E S32	NWSENW	(REDIVERSION)	
	T07N R23E S12	NWNWSE	(REDIVERSION)	
	R24E S18	SESWNE	(REDIVERSION)	
	S20	SWNESW	(REDIVERSION)	
	S33	NWSWNE	(REDIVERSION)	
	S34	SENWNW	(REDIVERSION)	

POINT OF DIVERSION IN T07N, R23E, S12, SENW IS MACKAY DAM. WATER IS DELIVERED THROUGH THE ANGELO, ARCO, B & J, BECK/MC GOWAN, BURNETT, DARLINGTON, EASTSIDE, HARRIS-VAUGHT, ISLAND, LOWER BURNETT, MC LAUGHLIN, MIDDLE, MILLER, MOORE, MUNSEY, SHARP, STREETER, SUTTER, SWAUGER, VANOUS, WESTSIDE AND 3 IN 1 DITCHES OR CANALS; ALL ARE POINTS OF REDIVERSION FROM THE BIG LOST RIVER.

Because the BLRID Storage Rights intentionally limit the location where they can be delivered, and do not list the River Diversion as a point of diversion and/or rediversion, Moss is prevented from using storage water as carriage water at the River Diversion. As to the point of diversion and/or rediversion element, the claim filed by BLRID with IDWR in the SRBA and the recommendation issued by IDWR to the SRBA is consistent with the partial decrees, meaning there is no ambiguity. *Rangen, Inc. v. Idaho Dept. of Water Res.*, 159 Idaho 798, 808, 367 P.3d

193, 203 (2016) (superseded on other grounds) ("Rangen has not presented sufficient evidence to establish the existence of a latent ambiguity in the partial decrees").

Second, with the plain language of the decrees governing, a transfer must be filed with IDWR to add the River Diversion as a point of diversion and/or rediversion to the BLDIR Storage Rights, consistent with I.C. § 42-222(1) (explaining the process for filing a transfer to add a point of diversion and the requirements for published notice). *3G AG LLC v. Idaho Dept. of Water Res.*, 509 P.3d 1180, 1185 (2022) ("Idaho Code section 42-222(1) sets forth the criteria used by IDWR to evaluate applications to transfer water rights whenever a right holder desires to change a water right's 'point of diversion, place of use, period of use or nature of use.'"). Through its actions in 2008, BLRID understood the need to file a transfer with IDWR to add additional points of diversion to its Storage Rights. *Tuthill Dec.* at 5, Ex. 10. Therefore, because the BLRID Storage Rights have not been modified, Moss' practice of using storage water as carriage water must cease.

Third, even if the point of diversion and/or rediversion element in the BLRID Storage Rights can be broadly interpreted to include the River Diversion without the filing of a transfer (it cannot), and as explained above, Moss' interests in the BLRID Storage Rights only allow him to use his storage water at the 3 in 1 Ditch and Moore Canal. As also explained above, Moss has neither requested BLRID to move his storage interests to the River Diversion nor received permission from BLRID to do so.

When the BLRID Storage Rights – which were never at issue in the *Transfer* – are used as carriage water to the River Diversion, natural flow that would otherwise be lost in the Darlington Sinks is delivered to Moss. When this occurs, Moss is able to take delivery ahead of the Pehrson Water Rights, in contravention of the prior appropriation doctrine. The use of

storage water as carriage water therefore allows Moss to realize the benefit of his water rights contrary to the prior appropriation doctrine, which is inconsistent with the *Transfer* itself, wherein it is stated: "This water right(s) is subject to all prior water rights and shall be administered in accordance with Idaho law and applicable rules of the Department of Water Resources." *Johns Dec., Ex. H (Transfer)* at 1 (emphasis added).

The condition in the *Transfer* is consistent with the prior appropriation doctrine and past precedent of the Idaho Supreme Court, wherein it was held that storage water cannot be used as carriage water for natural flow water rights when a decree does not support its use:

> The stored waters are already appropriated, making them unavailable for redistribution to satisfy Sylte's natural flow water right. *See Washington Cnty. Irr. Dist. v. Talboy*, 55 Idaho 382, 389, 43 P.2d 943, 945 (1935) ("After the water was diverted from the natural stream and stored in the reservoir, it was no longer 'public water' subject to diversion and appropriation under the provisions of the Constitution."); *see also Am. Falls Reservoir Dist. No. 2 v. Idaho Dep't of Water Res.*, 143 Idaho 862, 879, 154 P.3d 433, 450 (2007) ("when water is stored, it becomes 'the property of the appropriators . . . impressed with the public trust to apply it to a beneficial use.'") (quoting *Talboy*, 55 Idaho at 389, 43 P.2d at 945).
>
> The Instructions are in harmony with the Final Decree. The Instructions generally prohibit the watermaster from releasing water to satisfy Rathdrum Creek water rights when seepage and evaporation losses exceed the natural tributary inflow, while still upholding the exception carved out for Sylte and giving it priority over junior rights.

Sylte v. Idaho Dept. of Water Res., 165 Idaho 238, 245, 443 P.3d 252, 259 (2019).

Here, as in *Sylte*, the SRBA partial decrees for the BLRID Storage Rights allow storage water to be used at certain canals and ditches, yet not at the River Diversion.[6] Clearly, Pehrsons' request before the Hearing Officer does not involve a collateral attack of the *Transfer*, with the

[6] In this respect, the BLRID Storage Water Rights are quite different from the storage rights in the Upper Snake, Boise, and Payette river systems. For example, the United States' water rights in American Falls Reservoir (water right no. 1-2064), Palisades Reservoir (water right no. 1-2068), Lucky Peak Reservoir (water right no. 63-3618), and Cascade Reservoir (65-2927A) list the dam as the point of diversion and then do not list canals and ditches as points of diversion and/or rediversion, thereby allowing storage water in those federal projects to be used anywhere within the place of use element.

Transfer never addressing use of storage water, and genuine issues of material fact and law left to resolve through the hearing process.

B. The Doctrine Of *Res Judicata* Does Not Prevent The Pehrsons From Challenging The Use Of The River Diversion As An Alternate Point Of Diversion When Storage Water Is Used As Carriage Water

Citing *Sagewillow v. Idaho Dept. of Water Res.*, 138 Idaho 831, 70 P.3d 669 (2003), Moss argues that the doctrine of *res judicata* bars Pehrsons from seeking relief because "the precise subject matter and issues in which they seek review were previously considered, and adjudicated in the transfer application proceedings." *Memo* at 4 (emphasis added). According to *Sagewillow*:

> The doctrine of res judicata applies to administrative proceedings. In *Joyce v. Murphy Land and Irrigation Company*, 35 Idaho 549, 553, 208 P. 241, 242-43 (1922), this Court stated that the scope of the doctrine of res judicata was as follows:
>
> > We think the correct rule to be that in an action between the same parties upon the same claim or demand, the former adjudication concludes parties and privies not only as to every matter offered and received to sustain or defeat the claim but also as to every matter which might and should have been litigated in the first suit.
>
> The "sameness" of a cause of action for purposes of application of the doctrine of res judicata is determined by examining the operative facts underlying the two lawsuits.

Sagewillow at 844, 70 P.3d at 682 (internal citations omitted).

As enumerated more recently by the Court in *First Security Corp. v. Belle Ranch, LLC*, 165 Idaho 733, 451 P.3d 446 (2019), the three elements of *res judicata*, which the moving party "must prove by a preponderance of the evidence" are as follows:

> (1) the original action ended in a final judgment on the merits;
>
> (2) the present claim involves the same parties as the original action; and
>
> (3) the present claim arises out of the same transaction or series of transactions as the original action.

First Security at 740-41, 451 P.3d 446, 453-54.

Here, the elements of *res judicata* are not satisfied. First, as explained in more detail above in the argument concerning collateral attack, the *Application* and *Transfer* never addressed the use of storage water as carriage water, with the *Application* and *Transfer* only addressing the addition of an alternate point of diversion for the Moss Water Rights; thus, the *Transfer* did not end in a final judgment on the merits as to the issue herein. Second, Pehrsons did not protest the *Transfer*, meaning they were not party to the proceeding that Moss claims resulted in a final judgment. Third, because the *Application* and *Transfer* only involved the Moss Water Rights and the addition of an alternate point of diversion, the question here – involving use of BLRID Storage Rights as carriage water through the Darlington Sinks to the River Diversion and whether that is allowed – did not arise out of the same transaction or series of transactions involved in the *Transfer*.

C. There Is A Genuine Issue Of Material Fact As To Whether The Storage Water That Was Used As Carriage Water Belonged To Moss Or To Others

According to the September 2, 2022 email from IDWR employee Rob Whitney to Watermaster Marcroft, which reversed IDWR's August 15, 2022 finding of futile call, the decision was rescinded because of Mr. Whitney's belief that Moss had sufficient storage water of his own to carry the Moss Water Rights to the River Diversion: "Currently, delivery to Moss is not futile because he has sufficient storage water to help carry the decreed right." *Marcroft Dec., Ex. 1* at 1 (italics in original) (emphasis added). The requirement that Moss must use his own storage water was also stated by IDWR David Hoekema: "When Moss runs out of storage, though I think a futile call is very appropriate . . . ." *Bromley Dec., Ex. 4* at 2 (emphasis added).

If Moss' use of storage water as carriage water was somehow permissible (it was not), the emails from Mr. Whitney and Mr. Hoekema make clear that it was IDWR's position that the practice was contingent on Moss having his own storage water. As explained in the *Declaration of Byron Pehrson*, when Mr. Whitney sent his email to Watermaster Marcroft, Moss had exhausted his storage water, meaning Moss had no storage water left to use as carriage water. *B. Pehrson Dec.* at 4. As also explained in the *Declaration of Byron Pehrson*, the storage water that was then used by Moss belonged to Moore Canal users. *Id*. Accordingly, whether the storage water that was used to carry the Moss Water Rights to the River Diversion belonged to Moss or to others is a genuine issue of material fact to establish at hearing.

D. There Is A Genuine Issue Of Material Fact As To What Led IDWR To Change Its Futile Call Determination From 2021 To 2022

As established above, in 2021, IDWR made a futile call determination, resulting in curtailment of water rights below the Darlington Sinks. As also established above, in 2022, after making a futile call determination in the same reach of the Big Lost River, IDWR then rescinded futile call due to the purported existence of BLRID Storage Water held by Moss as carriage water to the River Diversion. Pehrsons should be entitled, through the hearing process, to determine why futile call was found in 2021, then again for approximately two weeks in 2022, with the determination rescinded on September 2, 2022. Pehrsons should be allowed to understand what led to the change, including but not limited to internal policy changes at IDWR policy or external factors from other water users.

E. There Is A Genuine Issue Of Material Fact Concerning Which Transfer Governs

Throughout the *Motion*, *Memorandum in Support*, and the *Johns Dec.*, Moss argues that the transfer at issue is Transfer No. 79972, dated June 30, 2015. As stated above, the records of IDWR establish that it issued a second transfer, No. 80488, on December 14, 2015, involving the

Moss Water Rights. With Moss failing to address the second transfer, there is a genuine issue of material fact to examine at the hearing as to which transfer is at issue in these proceedings.

IV. CONCLUSION

Based on the foregoing, the *Motion for Summary Judgment* should be denied.

DATED this 7th day of February, 2025.

Attorneys for Byron Pehrson, Loy Pehrson, and Randy Pehrson

RECEIVED
Feb 07, 2025
DEPARTMENT OF WATER RESOURCES

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	**Docket No.: P-DR-2024-001**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	**DECLARATION OF BYRON PEHRSON**

BYRON PEHRSON under penalty of perjury states as follows:

1. I am over the age of eighteen and state the following based upon my own personal knowledge.

2. I have irrigated with water from the Big Lost River in Water District No. 34 since 1959.

3. I am co-owner of water right nos. 34-28G, 34-638A, 34-14189, 34-14191, 34-14207, and 34-14209. These water rights are of record with the Idaho Department of Water Resources ("IDWR"), and allow us to divert natural flow from the Big Lost River for irrigation above the Darlington Sinks from certain canals and ditches, summarized as follows:

Water Right No.	Priority Date	Quantity (cfs)	Irrigated Acres	Canal/Ditch Name
34-28G	8/31/1884	0.80	40 acres	3 in 1
34-638A[1]	10/12/1884	0.15	7.5 acres	3 in 1
34-14189	6/1/1885	1.54	77 acres	Burnett, Beck-McGowan, 3 in 1, Lower Burnett
34-14191	4/22/1884	1.92	96.1 acres	Burnett, Beck-McGowan, 3 in 1, Lower Burnett
34-14207	6/30/1885	3.08	154 acres	Burnett, Beck-McGowan, 3 in 1, Lower Burnett
34-14209	9/14/1886	2.31	115.5 acres	Burnett, Beck-McGowan, 3 in 1, Lower Burnett

4. I hold storage water interests in the Big Lost River Irrigation District ("BLRID"). The storage water interests that I have in BLRID allow me to divert and/or redivert storage water into the above-listed canals and ditches, which are listed on the BLRID storage water rights that were partially decreed in the Snake River Basin Adjudication ("BLRID Storage Rights").

5. The BLRID Storage Rights list other named canals and ditches where storage may be diverted and/or rediverted.

6. I served as the chairman of BLRID from 2017 to 2022.

7. I am aware of the water rights owned by Moss Farms, Inc. ("Moss") that are at issue in this proceeding, which I understand to be water right nos. 34-182 and 34-381A ("Moss Water Rights"). Water right no. 34-182 has a priority date of 6/1/1883 and a diversion rate of 1.60 cfs. Water right no. 34-381A has a priority date of 9/26/1894 and a diversion rate of 2.40 cfs. Together, the water rights authorize the irrigation of approximately 200 acres. The Moss Water Rights originally diverted water at the 3 in 1 Ditch and later added a second point of diversion, below the Darlington Sinks, known as the River Diversion.

[1] I recently bought a portion of this water right with the records of IDWR not yet showing the updated ownership.

8. When flows are low in the Big Lost River during certain times of year, the watermaster cannot deliver natural flow through the Darlington Sinks.

9. My water rights are junior to water right no. 34-182 and senior to 34-381A.

10. I am aware that Moss filed an *Application for Transfer of Water Right, Transfer No. 79972* ("Application") that was approved by IDWR on June 30, 2015, which added the River Diversion as a point of diversion for the Moss Water Rights.

11. I did not protest the *Application* because it only involved the Moss Water Rights and did not involve or otherwise suggest that Moss' storage water interests in the BLRID Storage Rights were implicated and could be delivered through the Darlington Sinks to the River Diversion.

12. I am aware that Moss has interests in the BLRID Storage Rights at the 3 in 1 Ditch and the Moore Canal. Attached hereto as **Exhibit 1** is a true and correct copy of a BLRID document summarizing Moss' interests in the BLRID Storage Rights at the 3 in 1 Ditch and Moore Canal.

13. As both a shareholder in BLRID and its past chair, it is my experience that if a water user wanted to move their interests in the BLRID Storage Rights from one of the canals or ditches listed on the BLRID Storage Rights to another of the named canals or ditches, they may do so, but a request must be filed with BLRID to make the change, with BLRID agreeing to make the change.

14. During my time as chairman, I do not recall Moss making a request to BLRID to move his storage water interests from either the 3 in 1 Ditch or the Moore Canal to the River Diversion.

15. I am aware that in 2022, Randy Pehrson contacted David Hoekema with IDWR to discuss his concerns regarding delivery of the Big Lost River breaking at the Darlington Sinks and futile call of water rights below the Darlington Sinks.

16. I am aware that IDWR, through a determination made by Tim Luke, initially stated, on August 15, 2022, that when the Big Lost River was broken at the Darlington Sinks, the Moss Water Rights could not be delivered.

17. On September 2, 2022, IDWR, through an email from Rob Whitney, reversed its decision, instructing Watermaster Preston Marcroft to curtail my water rights that are junior to the Moss Water Rights, as well as the junior rights of others, so that the water I was using would be conveyed through the Darlington Sinks, using BLRID Storage Rights as carriage water to the River Diversion.

18. According to Mr. Whitney's email, it was not futile to curtail the Moss Water Rights because Moss "has sufficient storage water to help carry the decreed right."

19. I disagree with this statement made by Mr. Whitney because Moss was out of storage water.

20. The storage water that was used to carry the Moss Water Rights to the River Diversion was the interests of other water users on the Moore Canal who had BLRID storage interests remaining, namely: Derek Nichols, Jay Jensen, Joel Anderson, Jason Anderson, and Travis Anderson.

21. It is my understanding that it has been estimated that when IDWR instructed the watermaster to curtail my water rights and the water rights of others above the Darlington Sinks, approximately 6,000 – 7,000 miners inches of water (120 cfs – 140 cfs) were curtailed to deliver the Moss Water Rights to the River Diversion.

22. Use of BLRID Storage Rights as carriage water through the Darlington Sinks and to the River Diversion was improper and resulted in curtailments that I have not previously experienced.

23. I certify under penalty of perjury pursuant to the law of the State of Idaho that the foregoing is true and correct.

DATED this 4 day of February, 2025.

BYRON PEHRSON

Attorneys for Byron Pehrson, Loy Pehrson, and Randy Pehrson

RECEIVED
Feb 07, 2025
DEPARTMENT OF WATER RESOURCES

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	**Docket No.: P-DR-2024-001**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	**DECLARATION OF LOY PEHRSON**

LOY PEHRSON under penalty of perjury states as follows:

1. I am over the age of eighteen and state the following based upon my own personal knowledge.

2. I have irrigated with water from the Big Lost River in Water District No. 34 since 1959.

3. I have previously served as the chair for the Water District No. 34 advisory board.

4. I am co-owner of water right nos. 34-28G, 34-638A, 34-14189, 34-14191, 34-14207, and 34-14209. These water rights are of record with the Idaho Department of Water

Resources ("IDWR"), and allow us to divert natural flow from the Big Lost River for irrigation above the Darlington Sinks from certain canals and ditches, summarized as follows:

Water Right No.	Priority Date	Quantity (cfs)	Irrigated Acres	Canal/Ditch Name
34-28G	8/31/1884	0.80	40 acres	3 in 1
34-638A[1]	10/12/1884	0.15	7.5 acres	3 in 1
34-14189	6/1/1885	1.54	77 acres	Burnett, Beck-McGowan, 3 in 1, Lower Burnett
34-14191	4/22/1884	1.92	96.1 acres	Burnett, Beck-McGowan, 3 in 1, Lower Burnett
34-14207	6/30/1885	3.08	154 acres	Burnett, Beck-McGowan, 3 in 1, Lower Burnett
34-14209	9/14/1886	2.31	115.5 acres	Burnett, Beck-McGowan, 3 in 1, Lower Burnett

5. I hold storage water interests in the Big Lost River Irrigation District ("BLRID"). The storage water interests that I have in BLRID allow me to divert and/or redivert storage water into the above-listed canals and ditches, which are listed on the BLRID storage water rights that were partially decreed in the Snake River Basin Adjudication ("BLRID Storage Rights").

6. The BLRID Storage Rights list other named canals and ditches where storage may be diverted and/or rediverted.

7. I am aware of the water rights owned by Moss Farms, Inc. ("Moss") that are at issue in this proceeding, which I understand to be water right nos. 34-182 and 34-381A ("Moss Water Rights"). Water right no. 34-182 has a priority date of 6/1/1883 and a diversion rate of 1.60 cfs. Water right no. 34-381A has a priority date of 9/26/1894 and a diversion rate of 2.40 cfs. Together, the water rights authorize the irrigation of approximately 200 acres. The Moss

[1] I recently bought a portion of this water right with the records of IDWR not yet showing the updated ownership.

Water Rights originally diverted water at the 3 in 1 Ditch and later added a second point of diversion, below the Darlington Sinks, known as the River Diversion.

8. When flows are low in the Big Lost River during certain times of year, the watermaster cannot deliver natural flow through the Darlington Sinks.

9. My water rights are junior to water right no. 34-182 and senior to 34-381A.

10. I am aware that Moss filed an *Application for Transfer of Water Right, Transfer No. 79972* ("Application") that was approved by IDWR on June 30, 2015, which added the River Diversion as a point of diversion for the Moss Water Rights.

11. I did not protest the *Application* because it only involved the Moss Water Rights and did not involve or otherwise suggest that Moss' storage water interests in BLRID were implicated and could be delivered through the Darlington Sinks to the River Diversion

12. I am aware that Moss has interests in the BLRID Storage Rights at the 3 in 1 Ditch and the Moore Canal.

13. As a shareholder in BLRID, it is my experience that if a water user wants to move his interests in the BLRID Storage Rights from one canal or ditch to another canal or ditch, he may do so, but paperwork must be filed with BLRID to make the change, with BLRID agreeing to make the change.

14. I am aware that in 2022, Randy Pehrson contacted David Hoekema with IDWR to discuss his concerns regarding delivery of the Big Lost River breaking at the Darlington Sinks and futile call of water rights below the Darlington Sinks.

15. I am aware that IDWR, through a determination made by Tim Luke, initially stated on August 15, 2022 that when the Big Lost River was broken at the Darlington Sinks, the Moss Water Rights could not be delivered.

16. On September 2, 2022, IDWR, through an email from Rob Whitney, reversed its decision, instructing Watermaster Preston Marcroft to curtail my water rights that are junior to the Moss Water Rights, as well as the junior rights of others, so that the water I was using would be conveyed through the Darlington Sinks, using BLRID Storage Rights as carriage water to the River Diversion.

17. It is my understanding that it has been estimated that when IDWR instructed the watermaster to curtail my water rights and the water rights of others above the Darlington Sinks, approximately 6,000 – 7,000 miners inches of water (120 cfs – 140 cfs) were curtailed to deliver the Moss Water Rights to the River Diversion.

18. Curtailment of upstream junior water rights would have been futile, but for the use of BLRID Storage Rights to Moss because the Big Lost River was broken at the Darlington Sinks.

19. Use of Moss' interests in the BLRID Storage Rights as carriage water through the Darlington Sinks and to the River Diversion resulted in curtailments that I have not previously experienced.

20. I certify under penalty of perjury pursuant to the law of the State of Idaho that the foregoing is true and correct.

DATED this 4 day of February, 2025.

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	**Docket No.: P-DR-2024-001**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	**DECLARATION OF RANDY PEHRSON**

RANDY PEHRSON under penalty of perjury states as follows:

1. I am over the age of eighteen and state the following based upon my own personal knowledge.

2. I have irrigated with water from the Big Lost River in Water District No. 34 since 1963.

3. I am currently on the recharge committee for the advisory board for Water District No. 34 and am the chairman.

4. I own water right nos. 34-733, 34-10236, 34-10933, 34-10950, 34-13874, and 34-14389. These water rights are of record with the Idaho Department of Water Resources

("IDWR"), and allow me to divert natural flow from the Big Lost River for irrigation above the Darlington Sinks from certain canals and ditches, summarized as follows:

Water Right No.	Priority Date	Quantity (cfs)	Irrigated Acres	Canal/Ditch Name
34-733	7/21/1886	1.44	72.4 acres	Burnett
34-10236	5/30/1885	2.00	100 acres	Darlington
34-10933	4/22/1884	1.63	81.40 acres	Darlington
34-10950	5/31/1884	0.72	36 acres	Darlington
34-13874	7/21/1886	1.00	50 acres	Burnett
34-14389	4/22/1884	0.55	27.30 acres	Darlington

5. I hold storage water interests in the Big Lost River Irrigation District ("BLRID"). The storage water interests that I have in BLRID allow me to divert and/or redivert storage water into the above-listed canals and ditches, which are listed on the BLRID storage water rights that were partially decreed in the Snake River Basin Adjudication ("BLRID Storage Rights").

6. I am aware of the water rights owned by Moss Farms, Inc. ("Moss") that are at issue in this proceeding, which I understand to be water right nos. 34-182 and 34-381A ("Moss Water Rights"). Water right no. 34-182 has a priority date of 6/1/1883 and a diversion rate of 1.60 cfs. Water right no. 34-381A has a priority date of 9/26/1894 and a diversion rate of 2.40 cfs. Together, the water rights authorize the irrigation of approximately 200 acres. The Moss Water Rights originally diverted water at the 3 in 1 Ditch and later added a second point of diversion, below the Darlington Sinks, known as the River Diversion.

7. When flows are low in the Big Lost River during certain times of year, the watermaster cannot deliver natural flow through the Darlington Sinks.

8. My water rights are junior to water right no. 34-182 and senior to 34-381A.

9. I am aware that Moss filed an *Application for Transfer of Water Right, Transfer No. 79972* ("Application") that was approved by IDWR on June 30, 2015, which added the River Diversion as a point of diversion for the Moss Water Rights.

10. I did not protest the *Application* because it only involved the Moss Water Rights and did not involve or otherwise suggest that Moss' storage water interests in BLRID were implicated and could be delivered through the Darlington Sinks to the River Diversion.

11. I am aware that Moss has interests in the BLRID Storage Rights at the 3 in 1 Ditch and the Moore Canal.

12. As a shareholder in BLRID, it is my experience that if a water user wants to move his interests in the BLRID Storage Rights from one canal or ditch to another canal or ditch, he may do so, but paperwork must be filed with BLRID to make the change, with BLRID agreeing to make the change.

13. In August of 2022, I contacted IDWR to discuss my concerns regarding delivery of the Big Lost River breaking at the Darlington Sinks and futile call of water rights below the Darlington Sinks.

14. On August 15, 2022, and as summarized in a September 2, 2022 email from Rob Whitney, IDWR determined that there was a break in the Big Lost River "immediately below the Beck diversion but noted that '*. . . this determination does not prevent users on the Moore Canal or other lower valley ditches to call for and receive delivery of storage water and decreed rights during the remainder of this irrigation season.*'"

15. However, after IDWR made this determination, it adjusted its decision on September 2, 2022, and instructed the watermaster to deliver the Moss Water Rights to the River Diversion using BLRID Storage Rights as carriage water, resulting in my water rights being

curtailed when they have not historically been curtailed, and despite the fact that the River Diversion is not listed on the BLRID Storage Rights as a point of diversion and/or rediversion.

16. It is my understanding that it has been estimated that when IDWR instructed the watermaster to curtail my water rights and the water rights of others above the Darlington Sinks, approximately 6,000 – 7,000 miners inches of water (120 cfs – 140 cfs) were curtailed to deliver the Moss Water Rights to the River Diversion.

17. Use of BLRID Storage Rights as carriage water through the Darlington Sinks and to the River Diversion was improper and resulted in curtailments that I have not previously experienced.

18. On September 27, 2022, I sent a letter to IDWR stating that my water rights were curtailed differently than they were in the past. Attached hereto as **Exhibit 1** is a true and correct copy of this letter.

19. I certify under penalty of perjury pursuant to the law of the State of Idaho that the foregoing is true and correct.

DATED this 5 day of February, 2025.

RE: Request to Determine Futile Call – Big Lost River

Dear Mr. Yockey,

On July 26, 2021, the Idaho Department of Water Resources (Department) received your request for a futile call determination on the Big Lost River. Based on the information you have provided, the apparent support by the advisory committee members, and the Department's analysis of the current water supply conditions (email summary by D. Hoekema attached), the Department concludes your request to determine a futile call on the Big Lost River is justified. This letter is to notify you that the futile call determination request is hereby approved considering the information noted below.

Background

- On Thursday July 22, 2021, you contacted the Department to express concern that a futile call determination request was imminent due to the rapidly diminishing water supply in the Big Lost River and the nearly exhausted storage volume (appx. 3%) left in Mackay Reservoir.

- On Friday, July 23, 2021, you reported that the delivery calls for decreed water (appx. 12 cfs) at the Moore Diversion were satisfied at the head of the ditch, but were not making it to the first user in a beneficially usable amount. Further,

- On the morning of July 24, 2021, you notified the Department that the priority delivery date had changed from 1884 to 1883, and that you would attempt to continue to deliver the senior rights to the Moore Diversion for the remainder of the weekend. The majority of the water called for at the Moore Diversion (appx. 12 cfs noted above) have 1883 priority dates.

- As of this morning, you reported that despite your efforts to deliver the senior water rights to the Moore diversion, there is currently no measureable amount of water reaching the Moore Diversion.

- You stated by email that Advisory Committee Chair, VerNon Roche polled the other committee members on Friday July 23rd regarding their support (or not) of the futile call determination. Shawn Anderson and Jason Anderson were not in support at that time. After you contacted them today, Shawn Anderson agreed to support the determination and Jason Anderson did not.

It is evident that curtailment of junior surface water rights upstream of the Moore Diversion to satisfy senior surface water rights at the Moore Diversion constitutes a futile call. Therefore, you are instructed to distribute surface water flows of the Big Lost River in the reach from Mackay Dam to the Beck Diversion as a separate source for the remainder of the 2021 irrigation season, unless it is subsequently determined that delivery of the senior water rights at the Moore Diversion is no longer futile.

Please feel free to contact me with any related questions or concerns you have.

Regards,

Rob Whitney

Manager, Water Distribution Section

Whitney, Rob

From: Hoekema, David
Sent: Monday, July 26, 2021 12:10 PM
To: Luke, Tim; Whitney, Rob
Subject: Response to Rob's Conversation regarding a Futile Call on the Big Lost River
Attachments: Big Lost River & Resreoivr Conditions_20210726.pptx; FutileCallAnalysis.xlsx

Tim and Rob,

Please see the attached analysis showing diversions in the month of July on the Big Lost River. The attachment also shows the calculated inflow into the reservoir throughout July. The reservoir is down to just 1,310 ac-ft of which the PAT indicates (as of Wednesday the 21st) that 118 ac-ft are rotation water held by Mauthe, Nelson, and Pehrson.

Lucas indicated to me that the users on the Moore Canal have stopped calling for storage water. With the canal down to 1,310 ac-ft Lucas is holding the reservoir flat in order to save storage water for users who indicated that they are planning to call for the water in September.

As the reservoir has been flat-lined, so as to only pass inflows (natural flow), it appears that the natural flow in the river is not adequate to carry water to the Moore Diversion. Figure 1 shows reservoir content and Figure 2 shows reservoir outflow. Figure 3 shows how the delivery factor (i.e. the amount of water that is deliverable within the reach = Outflow / Inflow) has dropped significantly as the flow in the river has been reduced to carry only the natural flow. Losses within the reaches are calculated in the attached spreadsheet.

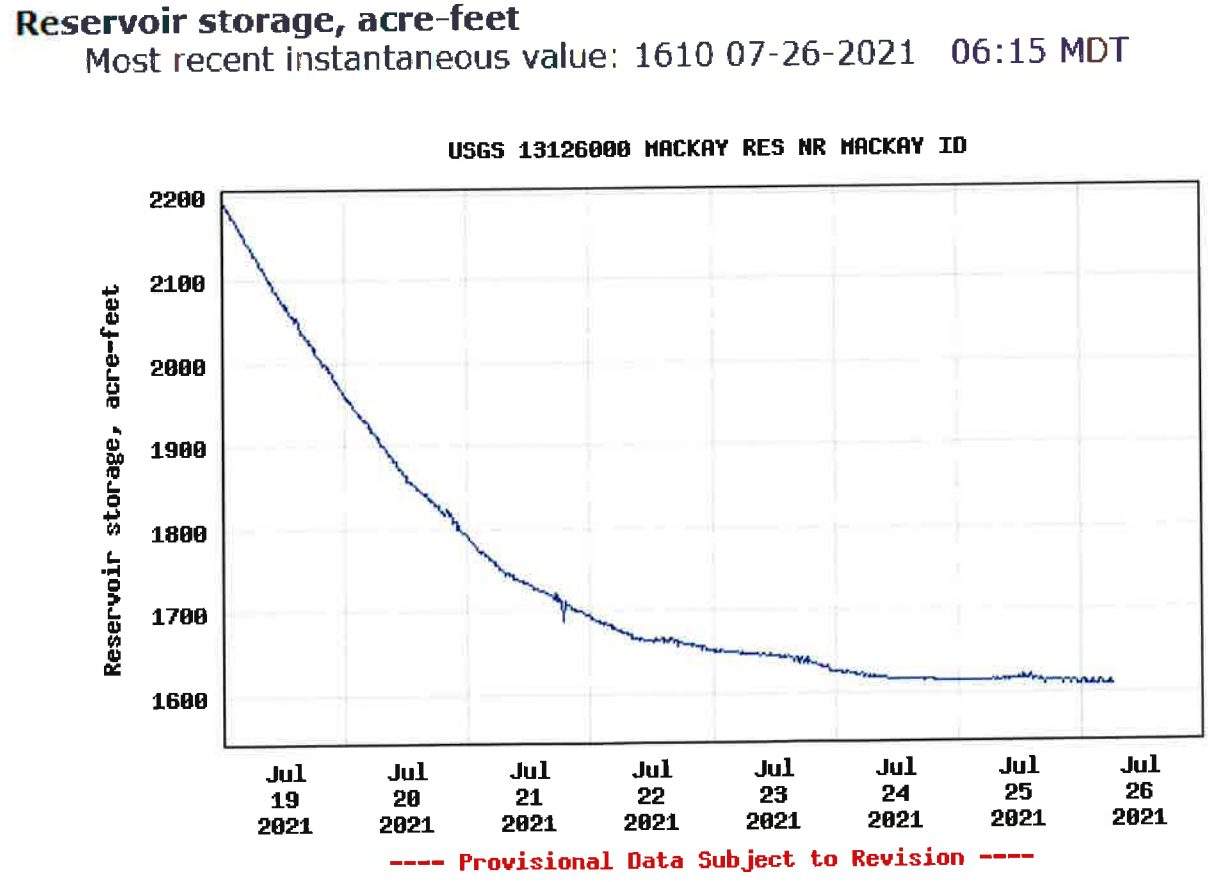

Figure 1 Mackay Reservoir content in the month of July.

Discharge, cubic feet per second
Most recent instantaneous value: 140 07-26-2021 07:45 MDT

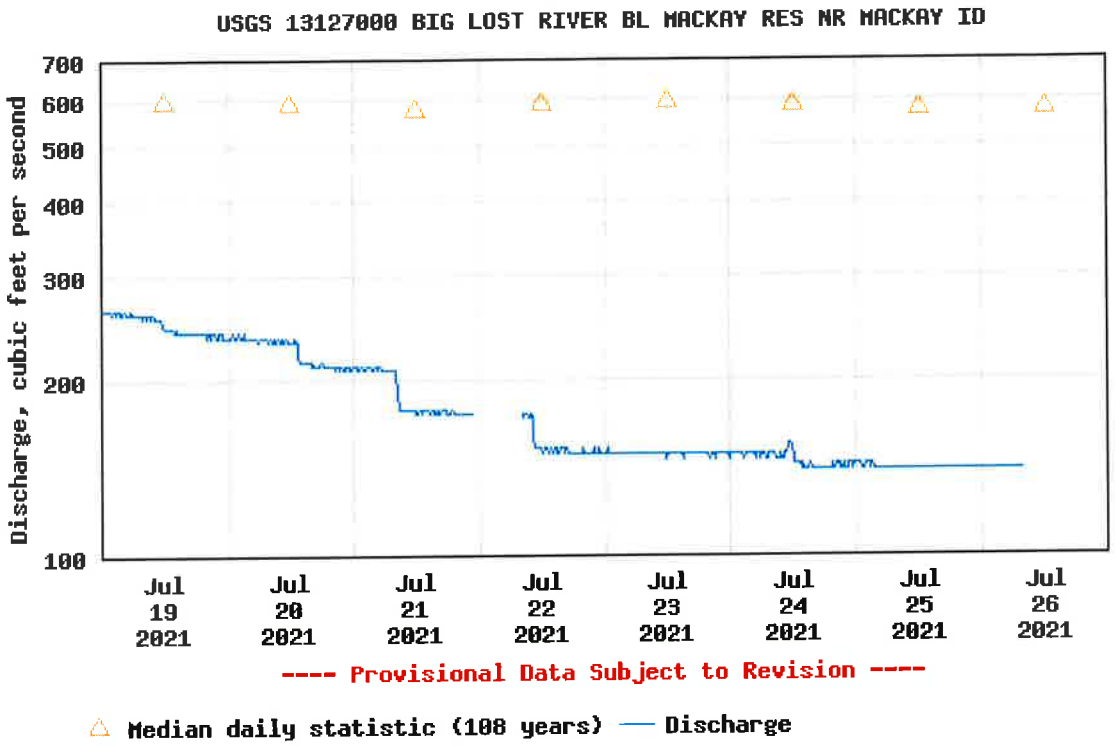

Figure 2 Reservoir outflow as measured at the 2B Gage. With the reservoir flat the natural flow appears to be 140 cfs. This inflow is a close match to the estimated inflow into the reservoir per the attached calculations.

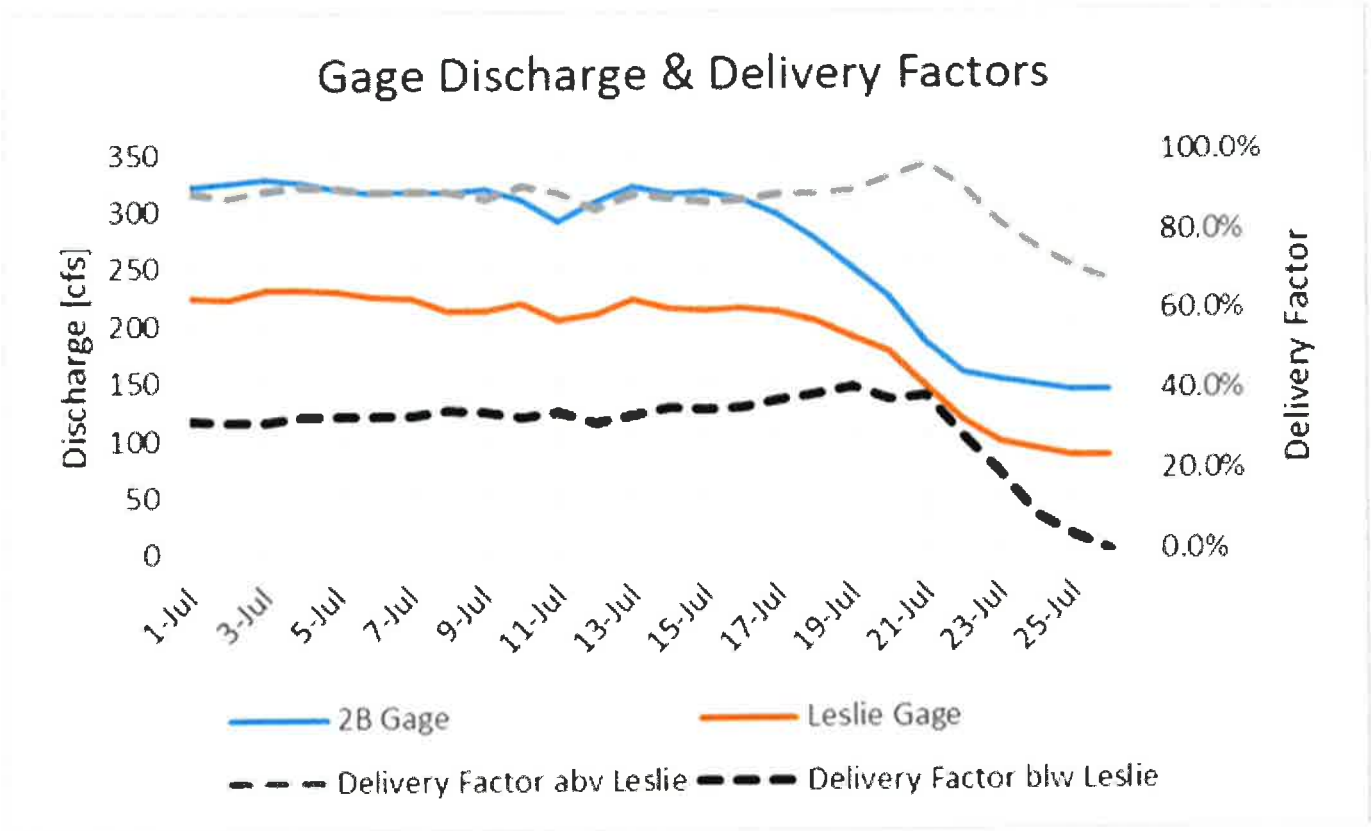

Figure 3 Flow past the 2B Gage is shown by the blue line, flow past the Leslie Gage is shown by the orange line, the delivery factor above the Leslie Gage is shown by the dashed, grey line, and the delivery factor blw Leslie is shown by the dashed, black line.

Subject: RE: WD 34 Futile Call Request

Thanks Lucas. The additional clarification is appreciated. Rob is preparing a letter as we speak. He will get some updated info from David too. Should have something later today. Thanks for making a good faith effort to deliver the 1883 priority rights on the Moore – I think it helps to make that showing among a number of users in the basin.

Tim

Subject: RE: WD 34 Futile Call Request

After speaking with Rob on the phone I would like to answer I few questions he had below.

1) On Friday 7-23-2021 Vernon Roche, chairman of the advisory board contact all the board members polling their support for a futile call on the river. All the advisory board members except two, which wanted to wait until the numbers justified it, supported the futile call.
2) PivoTrac gauges still shows minimal amounts of water at the Sharp, Burnett and Beck heading. These heading were shut of as far as they can go and curtailed for the 1883 decree call.
3) The reduction in the river flow from last week to this week was a result on storage water being cut out of the river either from users accounts running out or no demand. The reservoir is only at 3% (1610 aF) which leaves very little to call for.
4) My secretary is out with the flu today. DWR central will be updated as soon as possible. It is only updated once a week during the season and it is typical for the numbers to be entered on either a Monday or a Tuesday.

Subject: WD 34 Futile Call Request

Tim,
I would like to request that IDWR please make a futile call for the delivery of water to the Moore Diversion based upon the lack of beneficial use of the decree water. Currently WD34 is attempting to deliver the 8-10-1883's to the Moore Canal starting on 7-24-2021 and no water is reaching Diversion. There is no storage water being delivered to any canal. This makes the river shrink 100%. If the futile call is determined the last point of delivery of water on the Big Lost River would be moved up to the Beck Canal Heading which would allow beneficial use again. As watermaster I have the general consent of the advisory board and The Big Lost River Irrigation District approves WD34's request. Please review the supporting information below and if you have any questions or need any additional information, please let me know. Thank you

Lucas Yockey
WD34 Watermaster

Subject: RE: WD 34 Futile Call Request

Preston,

This email confirms IDWR's receipt of your request for a futile call determination on the Big Lost River. The Department has reviewed data documenting a break in the river between the Beck Diversion and the Moore Canal since the morning of August 12, 2022. The Department has confirmed from available data that BLRID has been holding the reservoir flat since August 11. Reservoir releases since this time has been limited to inflows (or natural flow) only. We understand that the reduction in reservoir releases is due to a lack of storage water demand, including very little demand in the lower valley. It appears that the natural flow in the river is not adequate to carry water to the Moore Canal.

Based on the information you provided, data available to us, and the support by advisory committee members, the Department concludes that a futile call on the river is currently justified. Upon this determination and as per our discussion with you this afternoon, you may deliver water to more junior priority rights on the river between Mackay Reservoir and the Beck Ditch. We understand from you that you will immediately call on all the 1884 decreed priority rights in that reach. Please note that this determination does not prevent users on the Moore Canal or other lower valley ditches to call for and receive delivery of storage and decreed rights during the remainder of this irrigation season. We understand that some users in the lower valley may still have significant storage balances and may request delivery of both storage and any deliverable decreed rights over the coming days. Please also note that decreed priorities may need to be adjusted if the requested water supply is adequate to connect the river again and can be put to beneficial use. This guidance is consistent with last year's futile call approval in which we directed the watermaster "to distribute surface water flows of the Big Lost River in the reach from Mackay Dam to the Beck Diversion, unless it is subsequently determined that delivery of the senior water rights at the Moore Diversion is no longer futile."

Please contact me, Rob Whitney, or David Hoekema if you any questions or need assistance regarding this matter. Thank you for documenting the flow conditions on the river and submitting a formal request.
Regards,

Tim Luke

Preston,

Your email did not address any current requests for storage water from users in the lower valley. I spoke this morning with one of the users (Kieth Waddoups) this morning who also called me on Friday regarding their intent to call for storage. Keith said several users on the Moore, including himself, placed orders for delivery of storage with BLRID on Friday. You said you were going to check with BLRID after we spoke this morning. What did they say about the storage delivery requests/orders? IDWR would like to know about the storage water requests/orders before addressing this futile call request.

Jason,

Per your call this morning, I wanted to confirm with you that Moss had two transfers approved in 2015, one of them was did add a river pump station near the heading of the B&J Ditch. That pump and transfer authorizes diversion of right 34-182 plus an 1894 priority right from the river (34-381A). We still show two other pump diversion locations further south on the river for the three rights I described in my prior email. I'm wondering if he has three or just two pumps on the river, and whether diversion for this third pump added in 2015 or 2016 near the B&J is even being recorded by WD34, or maybe it is being recorded under one of the other pump locations.

I'll wait to hear directly from Dennis to clarify these questions. I will be out most of the afternoon.

Subject: RE: [EXTERNAL] Re: WD 34 Futile Call Request

Jason,

Thanks for your identification of that water right number. That right is held in the name of Moss Farms Inc. I would not have known to search under that name based on our conversation. The authorized points of diversion for water right 34-182 are the UC Blaine Canal and the B&J Ditch. Neither of the Moss pumps on the river are authorized points of diversion for this right. As per WD34 delivery records this year, no water has been diverted to either the Blaine Canal or the B&J Ditch.

Dennis can call for delivery of this right (he should contact the watermaster), but it will have to be diverted at the B&J if the right is deliverable to that point. Alternatively, he may be able to file a

temporary change application pursuant to the drought declaration to change the point of diversion to one of his two pumps on the river.

Again, I encourage users with decreed rights and storage balances below Darlington to collectively call for both sources of water if the river is to be connected and have a chance of getting water deliveries to end users.

>
> First, I can't even find any Big Lost River water rights in the name of Dennis Moss. However, I do find several rights in the name of Robert and Carol Moss. Those rights can be diverted from two river pumps near the area you described as well as the 3&1 Ditch. Second, the most senior priority date of these three rights is 5/1/1886. The other two rights have a 6/1/1887 priority. These three rights appear to match the points of diversion we have for the Moss pumps in our water right accounting system. These three priority rights were not deliverable last weekend or the past several weeks as per the watermaster's priority cut determinations. I thought you told me Dennis was

diverting water over the weekend. If so, he may also have diverted out of priority since no storage water was released from the reservoir over the past weekend. Perhaps Dennis has some 1883 or 1884 rights that I am overlooking in this area? I did find one 1884 priority Moss right (for 0.2 cfs) on the Moore Canal only (in the name of Estel and Clea Moss). Maybe Dennis or someone can call me to clarify what 1883 priority rights he has in the area you described to me.

Further, I looked at what was diverted this season at the two Moss pumps from the river. According to Water District 34 records, one of the two pumps has not been used at all this year, and one was used to divert 0.8 cfs (40 inches) from June 4 to July 18. There has been no use after July 18 according to the diversion records entered by Water District 34. The 3&1 Ditch has not been used since July 15.

Please call me if I am overlooking information or if my information is not correct.

Respectively,

Tim Luke

David,

I agree with your explanation and perspective. We should probably meet today to discuss this given the pending long weekend. Rob was planning to call Preston to get an update. I (and maybe Rob) have a meeting at 10 and Mat W is over at Gov's office from 10 to 11 approx.

For reference, attached is a letter we've sent to water districts in the past giving some general guidance on futile call determination. Note that there is a reference to futile call in WD34 rules, but that particular rule and reference was deleted about two years ago following the Governor's red-tape reduction act.

Subject: Randy Pehrson phone call

Tim and Rob,

I had a phone conversation with Randy Pehrson this morning. He is very upset that Dennis Moss is able to call for storage water and receive decree (1883 natural flow) at the same time. After the futile call in mid-August it was determine that decree water in the river was inadequate to carry water to Moss. Because of the amount of water lost in the river to deliver the 1883 priority to Moss, we were not able to deliver the 1885 priority to Randy Pehrson. His argument is that without storage water deliveries to Moss, it would be impossible to deliver the decree water to Moss. He feels that we have taken away his decree and that we are limiting his use of storage water (66% shrink) to get water delivered to Moss. I tried to explain to Randy that under his argument the folks in Arco would never be able to receive water from August onward (even in nears that were wetter than average), because the degree (or natural flow) is never adequate to carry their water without storage added to on top of the decree at the end of the season.

Randy's argument is that without the dam, Randy would be able to receive his priority (1885) and he would be able to get his storage water with 20% shrink. Because of the dam and the delivery to Moss he is unable to divert his 1885 priority and if he uses his storage water, he gets a 66% shrink

charged to that water. He told me that he wants to get an attorney and fight this in court.

He wonders why we can't make a futile call on Dennis Moss. I would like to hear your thoughts on a futile call. While I understand the concept of a futile call, I'm not familiar with the procedures. But it seems to me that if we are able to deliver 20-25 cfs of natural flow to users from Beck upstream and deliver Moss's 1883 priority it would be awful hard to make a futile call. When Moss runs out of storage, though I think a futile call is very appropriate, unless inflow has increased to the reservoir and demand is down.

Sincerely,

David Hoekema

RECEIVED
Feb 07, 2025
DEPARTMENT OF WATER RESOURCES

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	**Docket No.: P-DR-2024-001**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	**DECLARATION OF LUCAS E. YOCKEY**

LUCAS E. YOCKEY under penalty of perjury states as follows:

1. I am over the age of eighteen and state the following based upon my own personal knowledge.

2. I hold a B.S. in Fishery Resources from the University of Idaho (2013).

3. I am the former Watermaster for Water District No. 34 ("WD34") and former General Manager for the Big Lost River Irrigation District ("BLRID"). I served as Watermaster for eight years from 2015-2022, resigning my position in June 2022.

4. I served as General Manager for BLRID for five years from 2018-2022, resigning my position in June 2022.

5. Since August 2022, I have been employed and am currently employed by the Lost River Highway District.

6. Based on my experience, I am familiar with the water rights at issue in this proceeding and the use of BLRID storage water within WD34.

7. I have reviewed *Application for Transfer of Water Right, Transfer No. 79972* ("Application") that was filed by Moss Farms, Inc. ("Moss") with the Idaho Department of Water Resources ("IDWR"), included as Exhibit C to the *Declaration of Sklyer Johns in Support of Motion for Summary Judgment* (Jan. 24, 2025) ("Johns Dec."), the *Transfer of Water Right, Transfer No. 79972* (June 30, 2015), included as Exhibit H to the *Johns Dec.* ("Transfer No. 79972"), as well as all other documents that were attached as exhibits to Mr. Johns' declaration, including Exhibit E, which is the *Recommendation of Watermaster*, dated April 10, 2015, signed by me, and Exhibit G, which is the *Memorandum*, dated June 15, 2015, issued by Michael Holliday, employee of IDWR in Idaho Falls.

8. Prior to the *Application* and the *Transfer*, water right nos. 34-182 and 34-381A ("Moss Water Rights"), held by Moss, were only diverted at the 3 in 1 Ditch.

9. BLRID has storage water rights ("BLRID Storage Rights") that can be delivered to certain canals and ditches, including but not limited to the 3 in 1 Ditch and Moore Canal.

10. Moss has interests in the BLRID Storage Rights that he can have delivered at the 3 in 1 Ditch for irrigation of the land that is associated with the Moss Water Rights.

11. Moss has interests in the BLRID Storage Rights that he can have delivered at the Moore Canal for irrigation of land this is not associated with the Moss Water Rights, the *Application*, or the *Transfer*.

12. Based on my understanding of the *Application*, Moss sought to add a second point of diversion to the Moss Water Rights, thereby retaining and not eliminating the point of diversion at the 3 in 1 Ditch, while adding a new point of diversion some number of miles downstream, through the Darlington Sinks, and directly on the Big Lost River. This second point of diversion has been referred to in this proceeding as the "River Diversion."

13. In certain years and in certain flow regimes, the Darlington Sinks is a losing reach of the Big Lost River. In certain years and in certain flow regimes, the Big Lost River becomes broken at the Darlington Sinks, meaning natural flow water rights that are curtailed above the Darlington Sinks cannot be conveyed below the Darlington Sinks for beneficial use.

14. After the *Application* was filed, and as Watermaster, I was asked by IDWR for my opinion as to whether I opposed the *Application's* approval.

15. As evidenced in Exhibit E to the *Johns Dec.*, I did not oppose approval of the *Application*. I did not oppose the approval because the *Transfer* only involved the Moss Water Rights and did not involve BLRID storage water.

16. As evidenced in Exhibit G to the *Johns Dec.*, I was contacted by IDWR employee, Michael Holliday, regarding the *Application*. I recall discussing the *Application* with Mr. Holliday. I explained to Mr. Holliday how natural flow water rights, like the Moss Water Rights, are delivered in WD34, with conveyance losses charged uniformly to all users. When Mr. Holliday and I spoke, we never discussed the use of BLRID storage water at the River Diversion or the use of BLRID storage water as carriage water for the Moss Water Rights to the River Diversion.

17. I recall reviewing the *Transfer* after it was issued by IDWR, with the *Transfer* only involving the Moss Water Rights and not addressing the use of BLRID storage water rights.

18. Based on my experience as General Manager of BLRID, if a water user wanted to move storage water from one ditch or canal that is listed on the BLRID Storage Rights to another named ditch or canal, he was required to notify BLRID for approval.

19. As I stated, I am familiar with the BLRID Storage Rights, and unlike the 3 in 1 Ditch or the Moore Canal, the River Diversion is not listed as a point of diversion and/or rediversion.

20. The storage water rights of BLRID were not modified by the *Transfer*.

21. I resigned as Watermaster in June of 2022 and did not serve as Watermaster for the rest of the irrigation season.

22. Preston Marcroft was appointed to serve as Watermaster for the remainder of the 2022 irrigation season and was later elected by the WD34 water users to serve as Watermaster and continues to serve in that role.

23. I am aware that during the summer of 2022 issues arose concerning delivery of the Moss Water Rights through the Darlington Sinks to the River Diversion.

24. I am aware that, in the summer of 2022, when the Big Lost River was broken at the Darlington Sinks, Rob Whitney, IDWR, instructed Watermaster Marcroft to curtail natural flow water rights above the Darlington Sinks in order to satisfy the Moss Water Rights. The natural flow water rights that were curtailed were then pushed through the Darlington Sinks with the addition of BLRID storage water as carriage water.

25. Based on my experience, I disagree with the instructions from Mr. Whitney as this practice of using storage water as carriage water to push upstream, curtailed natural flow water rights through the Darlington Sinks when the Big Lost River is broken at that location has

not previously occurred. This practice results in upstream, natural flow water rights being curtailed when they have not been historically curtailed.

26. It is my opinion and belief that without using BLRID Storage Rights as carriage water, the curtailment of upstream junior water rights would have been futile because the Big Lost River was broken at the Darlington Sinks.

27. It is my opinion and belief that use of BLRID Storage Rights as carriage water through the Darlington Sinks and to the River Diversion was improper and resulted in curtailments that I have not previously seen.

28. If I had known in 2015 when I was considering the *Application* that BLRID storage water would be used as carriage water for the Moss Water Rights at the River Diversion when the Big Lost River is broken at the Darlington Sinks, I would have opposed the *Application*.

29. I certify under penalty of perjury pursuant to the law of the State of Idaho that the foregoing is true and correct.

DATED this 4 day of February, 2025.

LUCAS E. YOCKEY

DEPARTMENT OF WATER RESOURCES

BEFORE THE DEPARTMENT OF WATER RESOURCES

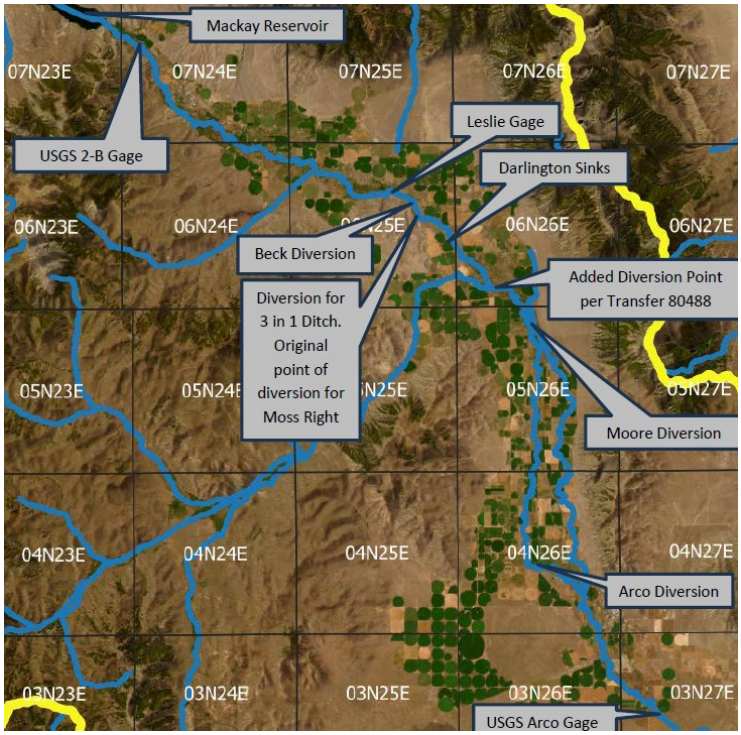
OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	**Docket No.: P-DR-2024-001**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	**DECLARATION OF DAVID R. TUTHILL, JR.**

DAVID R. TUTHILL, JR. under penalty of perjury states as follows:

1. I am over the age of eighteen and state the following based upon my own personal knowledge.

2. My C.V. is attached hereto as **Exhibit 1**.



3. Briefly, I hold a B.S. in Agricultural Engineering from Colorado State University (1974), a M.S. in Civil Engineering from the University of Colorado (1975), and a Ph.D. in Civil Engineering from the University of Idaho (2002).

4. I was employed by the Idaho Department of Water Resources ("IDWR") from 1976 until my retirement from IDWR in 2009. During that time, I was employed in various roles and positions, ultimately serving as Director.

5. I am presently a Founder and Co-Owner of Idaho Water Engineering, LLC.

6. I am experienced with the records of IDWR and the Snake River Basin Adjudication ("SRBA"), having issued recommendations in the SRBA, having testified in the SRBA, having reviewed and approved IDWR water right transfers, as well as having issued orders under my signature in all manner of contested case matters.

7. The relevant features that are at issue in this proceeding are shown on the map below that was included in my expert report, dated December 2, 2024:

8. Attached hereto as **Exhibit 2** is a true and correct copy of the SRBA partial decrees for water right nos. 34-182 and 34-381A, dated January 15, 1998, in the names of Catherine M. and Lee J. Watson ("Watson"). Water right nos. 34-182 and 34-381A are natural

flow water rights from the Big Lost River and were decreed with a point of diversion at the 3 in 1 Ditch.

9. Attached hereto as **Exhibit 3** is a true and correct copy of the SRBA district court's *Order Amending Irrigation Period of Use Element in Partial Decree and Incorporating into Partial Decrees an Express Statement Regarding General Provisions, Nunc Pro Tunc* as to water right nos. 34-182 and 34-381A, dated June 3, 2002.

10. Attached hereto as **Exhibit 4** is a true and correct copy of the SRBA partial decree for water right nos. 34-2379F, dated November 20, 1998, in the name Watson. Water right no. 34-2379F is a ground water right, as amended by the SRBA district court's *Order Amending Irrigation Period of Use Element in Partial Decree and Incorporating into Partial Decrees an Express Statement Regarding General Provisions, Nunc Pro Tunc*, dated July 10, 2002.

11. Attached hereto as **Exhibit 5** is a true and correct copy of IDWR's acknowledgment to Moss Farms, Inc. ("Moss") recognizing that ownership of water right nos. 34-182, 34-381A, and 34-2379F was changed from Watson to Moss, dated November 13, 2012.

12. Attached hereto as **Exhibit 6** are true and correct copies of water right nos. 34-12, 34-810, 34-811, 34-817B, 34-818, 34-2507, 34-10873, and 34-10935, in the name of the Big Lost River Irrigation District ("BLRID"), for storage of water from the Big Lost River behind Mackey Dam, as partially decreed in the SRBA on October 15, 2001, with an *Amended Partial Decree Nunc Pro Tunc* for water right no. 34-10935 issued on May 21, 2014. Among other things, the SRBA partial decrees explain that BLRID storage water is diverted and/or rediverted into named canals and ditches.

13. Attached hereto as **Exhibit 7** is a true and correct copy of the claim BLRID filed with IDWR in the SRBA for water right no. 34-12 in the SRBA, explaining that BLRID storage water is delivered into named canals and ditches.

14. Attached hereto as **Exhibit 8** is a true and correct copy of the recommendation IDWR issued to the SRBA district court regarding the claim BLRID filed for water right no. 34-12 in the SRBA, explaining, consistent with the claim, that BLRID storage water is delivered into named canals and ditches.

15. I have reviewed the *Application for Transfer of Water Right, Transfer No.* ("Application") that was filed by Moss with IDWR, included as Exhibit C to the *Declaration of Sklyer Johns in Support of Motion for Summary Judgment* (Jan. 24, 2025) ("Johns Dec."), the *Transfer of Water Right, Transfer No. 79972* (June 30, 2015), included as Exhibit H to the *Johns Dec.* ("Transfer No. 79972"), as well as all other documents that were attached as exhibits to Mr. Johns' declaration.

16. Based on my review of the records of IDWR, a subsequent transfer was issued on December 14, 2015, *Transfer of Water Right, Transfer No. 80488*, which updated conditions as to water right nos. 34-182, 34-381A, and 34-2379F. Attached hereto as **Exhibit 9** is a true and correct copy of *Transfer of Water Right, Transfer No. 80488* ("Transfer No. 80488").

17. Transfer No. 79972 incorporated ten (10) conditions as to water right nos. 34-182 and 34-381A, whereas Transfer No. 80488 incorporated eleven (11) conditions to those natural flow water rights, as well as to water right nos. 34-2379F and 34-14525, which are sourced from ground water, and share a place of use with water right nos. 34-182 and 34-381A.

18. According to the records of IDWR, Transfer No. 80488 renumbered water right no. 34-14525, with said right originally numbered as water right no. 34-2421.

19. According to Transfer No. 80488, water right no. 34-14525 is owned by Dennis Moss for irrigation of 32 acres, with a diversion rate of 0.64 cfs (112 acre-feet per annum), from ground water, with a priority date of June 6, 1961.

20. The additional condition on Transfer No. 80488, which was not included in Transfer No. 79972, is Condition of Approval 3, stating: "Rights 34-182, 34-381A, 34-2379F, and 34-14525 when combined shall not exceed a total diversion rate of 5.2 cfs, and the irrigation of 200 acres."

21. Attached hereto as **Exhibit 10** is a true and correct copy of Transfer No. 74790, filed by BLRID with IDWR on May 8, 2008, to add two points of diversion to the water right nos. 34-12, 34-810, 34-811, 34-817B, 34-818, 34-2507, 34-10873, and 34-10935.

22. Based on my review of the documents that are included as exhibits to the *Johns Dec.*, which includes the *Application* and *Transfer*, in addition to my review of Transfer No. 80488, and the filings addressed the use of water right nos. 34-182, 34-381A, 34-2379F, and 34-14525, the documents do not address the use of BLRID storage water.

23. The *Application* did not seek to omit the 3 in 1 Ditch as a point of diversion for water right nos. 34-182 and 34-381A; rather, it sought to add a second point of diversion from the Big Lost River, approximately 5.9 miles downstream from the Big Lost River.

24. The *Transfer* approved the River Diversion as a second point of diversion, known as an "alternate point of diversion."

25. Also consistent with the *Application*, the *Transfer* did not omit the 3 in 1 Ditch as a point of diversion.

26. It is not uncommon for IDWR to issue watermaster instructions that establish futile call or when a river breaks, with the instructions oftentimes particular to the facts and circumstances associated with the water right.

27. Based on my experience, it was not necessary for IDWR to add conditions in the *Transfer* concerning the use of BLRID storage water as carriage water for the Moss water rights, because the water rights of BLRID were not at issue.

28. Based on my experience, and because the above-referenced documents never addressed BLRID's storage rights, it was not foreseeable that Moss would use BLRID storage water as carriage water to the new River Diversion, or that IDWR would allow the practice to occur, given that the BLRID's storage rights do not list the River Diversion as a point of diversion and/or rediversion.

29. Because the River Diversion is not listed as a point of diversion and/or rediversion for the BLRID storage rights referenced above in paragraph 13, the correct way to allow Moss to use storage water as carriage water would be for BLRID to file a transfer with IDWR to add the River Diversion as a point of diversion and/or rediversion on the BLRID water rights.

30. I certify under penalty of perjury pursuant to the law of the State of Idaho that the foregoing is true and correct.

DATED this 7th day of February, 2025.

DAVID R. TUTHILL, JR.

TWIN FALLS CO., IDAHO
FILED

IN THE DISTRICT COURT OF THE FIFTH JUDICIAL DISTRICT OF THE STATE OF IDAHO, IN AND FOR THE COUNTY OF TWIN FALLS

In Re SRBA	)	**Water Right 34-182**
	)	**ORDER AMENDING IRRIGATION PERIOD OF USE ELEMENT IN PARTIAL DECREE and INCORPORATING INTO PARTIAL DECREES AN EXPRESS STATEMENT REGARDING GENERAL PROVISIONS, *NUNC PRO TUNC***
Case No. 39576	)	

A ***Partial Decree*** was entered for the above-captioned irrigation water right on November 23, 1998. The period of use element was decreed as "irrigation season." In *A&B Irrigation Dist. v. Idaho Conservation League*, 131 Idaho 411, 423, 958 P.2d 568, 580 (1998), the Idaho Supreme Court remanded with the directive to include specific dates for the period of use element. Following remand, on June 24, 1999, IDWR filed a *Supplemental Director's Report, Reporting Area 1, IDWR Basin 34, Regarding Revision of Period of Use (For Irrigation Water Uses) and Conjunctive Management General Provisions*, which included an irrigation period of use recommendation for this water right. No objections were filed to this *Supplemental Director's Report*

THEREFORE, IT IS ORDERED that the period of use element for the irrigation portion of the above-captioned water right is hereby amended and decreed as:

PERIOD OF USE: 05-01 to 10-15

The period of use for irrigation described above may be extended in seasons of unusual characteristics to a beginning date of 04-20 and an ending date of 10-31 at the discretion of the Director of the Idaho Department of Water Resources.

IT IS FURTHER ORDERED that the ***Partial Decree*** for the above-captioned water right is hereby amended and decreed to contain the following:

This partial decree is subject to such general provisions necessary for the definition of the rights or for the efficient administration of the water rights as may be ultimately determined by the court a point in time no later than the entry of a final unified decree. I.C. section 42-1412(6).

This order is being entered *nunc pro tunc* as of the date the ***Partial Decree*** was issued and is not intended to modify subsequent administrative changes for the water right, if any, which occurred following entry of the ***Partial Decree***.

RULE 54(b) CERTIFICATE

With respect to the issues determined by the above judgment or order, it is hereby CERTIFIED, in accordance with Rule 54(b), I.R.C.P., that the court has determined that there is no just reason for delay of the entry of a final judgment and that the court has and does hereby direct that the above judgment or order shall be a final judgment upon which execution may issue and an appeal may be taken as provided by the Idaho Appellate Rules.

IN THE DISTRICT COURT OF THE FIFTH JUDICIAL DISTRICT OF THE STATE OF IDAHO, IN AND FOR THE COUNTY OF TWIN FALLS

In Re SRBA	**Water Right 34-2379F**
Case No. 39576	**ORDER AMENDING IRRIGATION PERIOD OF USE ELEMENT IN PARTIAL DECREE and INCORPORATING INTO PARTIAL DECREES AN EXPRESS STATEMENT REGARDING GENERAL PROVISIONS, *NUNC PRO TUNC***

A ***Partial Decree*** was entered for the above-captioned irrigation water right on November 23, 1998. The period of use element was decreed as "irrigation season." In *A&B Irrigation Dist. v. Idaho Conservation League*, 131 Idaho 411, 423, 958 P.2d 568, 580 (1998), the Idaho Supreme Court remanded with the directive to include specific dates for the period of use element. Following remand, on June 24, 1999, IDWR filed a *Supplemental Director's Report, Reporting Area 1, IDWR Basin 34, Regarding Revision of Period of Use (For Irrigation Water Uses) and Conjunctive Management General Provisions*, which included an irrigation period of use recommendation for this water right. No objections were filed to this *Supplemental Director's Report*

THEREFORE, IT IS ORDERED that the period of use element for the irrigation portion of the above-captioned water right is hereby amended and decreed as:

PERIOD OF USE: 04-01 to 11-01

IT IS FURTHER ORDERED that the ***Partial Decree*** for the above-captioned water right is hereby amended and decreed to contain the following:

> This partial decree is subject to such general provisions necessary for the definition of the rights or for the efficient administration of the water rights as may be ultimately determined by the court a point in time no later than the entry of a final unified decree. I.C. section 42-1412(6).

This order is being entered *nunc pro tunc* as of the date the ***Partial Decree*** was issued and is not intended to modify subsequent administrative changes for the water right, if any, which occurred following entry of the ***Partial Decree***.

RULE 54(b) CERTIFICATE

With respect to the issues determined by the above judgment or order, it is hereby CERTIFIED, in accordance with Rule 54(b), I.R.C.P., that the court has determined that there is no just reason for delay of the entry of a final judgment and that the court has and does hereby direct that the above judgment or order shall be a final judgment upon which execution may issue and an appeal may be taken as provided by the Idaho Appellate Rules.

Dated July 10, 2002.

Roger Burdick

Notice of Change in Water Right Ownership

1. List the numbers of all water rights and/or adjudication claim records to be changed. If you only acquired a portion of the water right or adjudication claim, check "*Yes*" in the "*Split?*" column.

Water Right/Claim No.	Split?	Water Right/Claim No.	Split?	Water Right/Claim No.	Split?
34-182	Yes ☐		Yes ☐		Yes ☐
34-381A	Yes ☐		Yes ☐		Yes ☐
34-2379F	Yes ☐		Yes ☐		Yes ☐
	Yes ☐		Yes ☐		Yes ☐
	Yes ☐		Yes ☐		Yes ☐

2. Previous Owner's Name: Lee J. & Catherine M. Watson
   Name of current water right holder/claimant

3. New Owner(s)/Claimant(s): MOSS FARMS, INC
   Name of each new owner as listed on the conveyance document

   New owner continued Name connector ☐ **and** ☐ **or** ☐ **and/or**

   3286 N 3350 W
   Mailing address

   Moore | Idaho | 83255
   City | State | ZIP

   208-554-4140
   Telephone Email

4. If the water rights and/or adjudication claims were split, how did the division occur?
   - ☐ The water rights or claims were divided as specifically identified in a deed, contract, or other conveyance document.
   - ☐ The water rights or claims were divided proportionately based on the portion of their place(s) of use acquired by the new owner.

5. Date you acquired the water rights and/or claims listed above: October 23, 2012.

6. This form must be signed and submitted with the following **REQUIRED** items:
   - A copy of the conveyance document – warranty deed, quitclaim deed, court decree, contract of sale, etc. The conveyance document must include a legal description of the property or description of the water right(s) if no land is conveyed.
   - Plat map, survey map or aerial photograph which clearly shows the place of use and point of diversion for each water right and/or claim listed above (if necessary to clarify division of water rights or complex property descriptions).
   - Filing fee (see instructions for further explanation):
     - $25 per *undivided* water right.
     - $100 per *split* water right.
     - No fee is required for pending adjudication claims.

7. Signature: Dennis Mobb - Moss Farms inc. | President | 11-6-2012
   Signature of new owner/claimant | Title, if applicable | Date

   Signature: _____ | _____ | _____
   Signature of new owner/claimant | Title, if applicable | Date

USE OF THIS RIGHT WITH THE RIGHTS LISTED BELOW IS LIMITED TO THE IRRIGATION OF 32,000 ACRES WITHIN THE PLACE OF USE DESCRIBED ABOVE IN A SINGLE IRRIGATION SEASON.
COMBINED RIGHT NOS.: 34-00013, 34-00810, 34-00811, 34-00817B, 34-00818, 34-02507, 34-10873 AND 34-10935.

OTHER PROVISIONS NECESSARY FOR DEFINITION OR ADMINISTRATION OF THIS WATER RIGHT:

THIS PARTIAL DECREE IS SUBJECT TO SUCH GENERAL PROVISIONS NECESSARY FOR THE DEFINITION OF THE RIGHTS OR FOR THE EFFICIENT ADMINISTRATION OF THE WATER RIGHTS AS MAY BE ULTIMATELY DETERMINED BY THE COURT AT A POINT IN TIME NO LATER THAN THE ENTRY OF A FINAL UNIFIED DECREE. SECTION 42-1412(6), IDAHO CODE.

RULE 54(b) CERTIFICATE

With respect to the issues determined by the above judgment or order, it is hereby CERTIFIED, in accordance with Rule 54(b), I.R.C.P., that the court has determined that there is no just reason for delay of the entry of a final judgment and that the court has and does hereby direct that the above judgment or order shall be a final judgment upon which execution may issue and an appeal may be taken as provided by the Idaho Appellate Rules.

R Burdick

ROGER BURDICK
Presiding Judge of the
Snake River Basin Adjudication

2001 OCT 15 PM 4:55

Case No. 39576)
)

PARTIAL DECREE PURSUANT TO
I.R.C.P. 54(b) FOR

Water Right 34-00810

NAME & ADDRESS: BIG LOST RIVER IRRIGATION DISTRICT
PO BOX 205
MACKAY ID 83251

SOURCE: BIG LOST RIVER TRIBUTARY: SINKS

QUANTITY: 3.2 CFS
556.5 AFY

PRIORITY DATE: 06/01/1888

POINT OF DIVERSION:

T03N R26E S01	NENESW	(REDIVERSION)	Within BUTTE County
S12	NENWSE	(REDIVERSION)	
T04N R26E S26	NWNWNW	(REDIVERSION)	
T05N R26E S04	NWSESE	(REDIVERSION)	
T07N R23E S12	SENW		Within CUSTER County
T06N R24E S01	NENESW	(REDIVERSION)	
R25E S06	SWNESE	(REDIVERSION)	
S10	NENESW	(REDIVERSION)

	NESE	39	NWSE	27			
S09	NENE	32	SENE	39	NWNW	33	
	SWNW	31	NESW	30	NWSW	38	
	SWSW	25					

634.5 ACRES TOTAL

ALSO, HISTORICAL PRACTICE HAS BEEN TO DELIVER STORAGE WATER TO 120 ACRES WITHIN THE LANDS DESCRIBED BELOW IN A SINGLE IRRIGATION SEASON.

T03N R26E S13	NWSW	39	SWSW	33	SESW	39	
	SWSE	40					
S24	NENW	39	NWNW	38	SWNW	39	

267 ACRES TOTAL

RULE 54(b) CERTIFICATE

With respect to the issues determined by the above judgment or order, it is hereby CERTIFIED, in accordance with Rule 54(b), I.R.C.P., that the court has determined that there is no just reason for delay of the entry of a final judgment and that the court has and does hereby direct that the above judgment or order shall be a final judgment upon which execution may issue and an appeal may be taken as provided by the Idaho Appellate Rules.

ROGER BURDICK
Presiding Judge of the
Snake River Basin Adjudication

IN THE DISTRICT COURT OF THE FIFTH JUDICIAL DISTRICT OF THE
STATE OF IDAHO, IN AND FOR THE COUNTY OF TWIN FALLS

USE OF THIS RIGHT WITH THE RIGHTS LISTED BELOW IS LIMITED TO THE IRRIGATION OF 32,000 ACRES WITHIN THE PLACE OF USE DESCRIBED ABOVE IN A SINGLE IRRIGATION SEASON.
COMBINED RIGHT NOS.: 34-00012, 34-00013, 34-00810, 34-00817B, 34-00818, 34-02507, 34-10873 AND 34-10935.

OTHER PROVISIONS NECESSARY FOR DEFINITION OR ADMINISTRATION OF THIS WATER RIGHT:

IN ADDITION TO THE PLACE OF USE DESCRIBED FOR THIS RIGHT, HISTORICAL PRACTICE HAS BEEN TO DELIVER STORAGE WATER TO THE FOLLOWING LANDS:

T03N R27E S03	SWSW	37	SESW	24			
S04	NWSW	37	SWSW	36	SESW	37.5	
	SWSE	37.5	SESE	37.5			
S08	NENE	21	NWNE	38	SENE	35	
	NESE	39	NWSE	27			
S09	NENE	32	SENE	39	NWNW	33	
	SWNW	31	NESW	30	NWSW	38	
	SWSW	25					

634.5 ACRES TOTAL

ALSO, HISTORICAL PRACTICE HAS BEEN TO DELIVER STORAGE WATER TO 120 ACRES WITHIN THE LANDS DESCRIBED BELOW IN A SINGLE IRRIGATION SEASON.

T03N R26E S13	NWSW	39	SWSW	33	SESW	39	
	SWSE	40					
S24	NENW	39	NWNW	38	SWNW	39	

267 ACRES TOTAL

RULE 54(b) CERTIFICATE

With respect to the issues determined by the above judgment or order, it is hereby CERTIFIED, in accordance with Rule 54(b), I.R.C.P., that the court has determined that there is no just reason for delay of the entry of a final judgment and that the court has and does hereby direct that the above judgment or order shall be a final judgment upon which execution may issue and an appeal may be taken as provided by the Idaho Appellate Rules.

R. Burdick

ROGER BURDICK
Presiding Judge of the
Snake River Basin Adjudication

IN THE DISTRICT COURT OF THE FIFTH JUDICIAL DISTRICT OF THE
STATE OF IDAHO, IN AND FOR THE COUNTY OF TWIN FALLS

USE OF THIS RIGHT WITH THE RIGHTS LISTED BELOW IS LIMITED TO THE IRRIGATION OF 32,000 ACRES WITHIN THE PLACE OF USE DESCRIBED ABOVE IN A SINGLE IRRIGATION SEASON.
COMBINED RIGHT NOS.: 34-00012, 34-00013, 34-00810, 34-00811, 34-00818, 34-02507, 34-10873 AND 34-10935.

OTHER PROVISIONS NECESSARY FOR DEFINITION OR ADMINISTRATION OF THIS WATER RIGHT:

IN ADDITION TO THE PLACE OF USE DESCRIBED FOR THIS RIGHT, HISTORICAL PRACTICE HAS BEEN TO DELIVER STORAGE WATER TO THE FOLLOWING LANDS:

T03N R27E S03	SWSW	37	SESW	24			
S04	NWSW	37	SWSW	36	SESW	37.5	
	SWSE	37.5	SESE	37.5			
S08	NENE	21	NWNE	38	SENE	35	
	NESE	39	NWSE	27			
S09	NENE	32	SENE	39	NWNW	33	
	SWNW	31	NESW	30	NWSW	38	
	SWSW	25					

634.5 ACRES TOTAL

ALSO, HISTORICAL PRACTICE HAS BEEN TO DELIVER STORAGE WATER TO 120 ACRES WITHIN THE LANDS DESCRIBED BELOW IN A SINGLE IRRIGATION SEASON.

T03N R26E S13	NWSW	39	SWSW	33	SESW	39	
	SWSE	40					
S24	NENW	39	NWNW	38	SWNW	39	

267 ACRES TOTAL

RULE 54(b) CERTIFICATE

With respect to the issues determined by the above judgment or order, it is hereby CERTIFIED, in accordance with Rule 54(b), I.R.C.P., that the court has determined that there is no just reason for delay of the entry of a final judgment and that the court has and does hereby direct that the above judgment or order shall be a final judgment upon which execution may issue and an appeal may be taken as provided by the Idaho Appellate Rules.

R Burdick

ROGER BURDICK
Presiding Judge of the
Snake River Basin Adjudication

IN THE DISTRICT COURT OF THE FIFTH JUDICIAL DISTRICT OF THE
STATE OF IDAHO, IN AND FOR THE COUNTY OF TWIN FALLS

2001 SEP 26 AM 11: 16

In Re SRBA	)	PARTIAL DECREE PURSUANT TO
	)	I.R.C.P. 54(b) FOR
Case No. 39576	)	
	)	Water Right 34-00818

NAME & ADDRESS: BIG LOST RIVER IRRIGATION DISTRICT
PO BOX 205
MACKAY ID 83251

SOURCE: BIG LOST RIVER TRIBUTARY: SINKS

QUANTITY: 3.2 CFS
556.5 AFY

PRIORITY DATE: 06/30/1880

POINT OF DIVERSION:

T03N R26E S01	NENESW	(REDIVERSION)	Within BUTTE County
S12	NENWSE	(REDIVERSION)	
T04N R26E S26	NWNWNW	(REDIVERSION)	
T05N R26E S04	NWSESE	(REDIVERSION)	
T07N R23E S12	SENW		Within CUSTER County
T06N R24E S01	NENESW	(REDIVERSION)

USE OF THIS RIGHT WITH THE RIGHTS LISTED BELOW IS LIMITED TO THE IRRIGATION OF 32,000 ACRES WITHIN THE PLACE OF USE DESCRIBED ABOVE IN A SINGLE IRRIGATION SEASON.
COMBINED RIGHT NOS.: 34-00012, 34-00013, 34-00810, 34-00811, 34-00817B, 34-02507, 34-10873 AND 34-10935.

OTHER PROVISIONS NECESSARY FOR DEFINITION OR ADMINISTRATION OF THIS WATER RIGHT:

THIS PARTIAL DECREE IS SUBJECT TO SUCH GENERAL PROVISIONS NECESSARY FOR THE DEFINITION OF THE RIGHTS OR FOR THE EFFICIENT ADMINISTRATION OF THE WATER RIGHTS AS MAY BE ULTIMATELY DETERMINED BY THE COURT AT A POINT IN TIME NO LATER THAN THE ENTRY OF A FINAL UNIFIED DECREE. SECTION 42-1412(6), IDAHO CODE.

RULE 54(b) CERTIFICATE

With respect to the issues determined by the above judgment or order, it is hereby CERTIFIED, in accordance with Rule 54(b), I.R.C.P., that the court has determined that there is no just reason for delay of the entry of a final judgment and that the court has and does hereby direct that the above judgment or order shall be a final judgment upon which execution may issue and an appeal may be taken as provided by the Idaho Appellate Rules.

Roger Burdick

ROGER BURDICK
Presiding Judge of the
Snake River Basin Adjudication

IN THE DISTRICT COURT OF THE FIFTH JUDICIAL DISTRICT OF THE
STATE OF IDAHO, IN AND FOR THE COUNTY OF TWIN FALLS

DISTRICT COURT-SRBA
TWIN FALLS, IDAHO
FILED

In Re SRBA	)	PARTIAL DECREE PURSUANT TO
	)	I.R.C.P. 54(b) FOR
Case No. 39576	)	
	)	Water Right 34-02507

NAME & ADDRESS: BIG LOST RIVER IRRIGATION DISTRICT
PO BOX 205
MACKAY ID 83251

SOURCE: BIG LOST RIVER TRIBUTARY: SINKS

QUANTITY: 6000.0 AFY

A VOLUME OF WATER IN ADDITION TO THE VOLUME DESCRIBED ABOVE FOR STORAGE PURPOSES MAY BE STORED IN A SINGLE YEAR IF: A) THE ADDITIONAL VOLUME IS STORED USING THE STORAGE CAPACITY OF MACKAY RESERVOIR, AND B) ALL WATER RIGHTS EXISTING AT THE TIME OF STORAGE (INCLUDING WATER RIGHTS WITH JUNIOR PRIORITY AND OTHER RIGHTS FOR STORAGE PURPOSES) THAT ARE WITHIN THEIR PERIOD OF USE ARE SATISFIED.

PRIORITY DATE: 09/02/1959

POINT OF DIVERSION:

T03N R26E S01	NENESW	(REDIVERSION)	Within BUTTE County
S12	NENWSE	(REDIVERSION)	
T04N R26E S26	NWNWNW	(REDIVERSION)	
T05N R26E S04	NWSESE	(REDIVERSION)	
T07N R23E S12	SENW		Within CUSTER County

USE OF THIS RIGHT WITH THE RIGHTS LISTED BELOW IS LIMITED TO THE IRRIGATION OF 32,000 ACRES WITHIN THE PLACE OF USE DESCRIBED ABOVE IN A SINGLE IRRIGATION SEASON.

COMBINED RIGHT NOS. 34-00012, 34-00013, 34-00810, 34-00811, 34-00817B, 34-00818, 34-10873 AND 34-10935.

OTHER PROVISIONS NECESSARY FOR DEFINITION OR ADMINISTRATION OF THIS WATER RIGHT:

THIS PARTIAL DECREE IS SUBJECT TO SUCH GENERAL PROVISIONS NECESSARY FOR THE DEFINITION OF THE RIGHTS OR FOR THE EFFICIENT ADMINISTRATION OF THE WATER RIGHTS AS MAY BE ULTIMATELY DETERMINED BY THE COURT AT A POINT IN TIME NO LATER THAN THE ENTRY OF A FINAL UNIFIED DECREE. SECTION 42-1412(6), IDAHO CODE.

RULE 54(b) CERTIFICATE

With respect to the issues determined by the above judgment or order, it is hereby CERTIFIED, in accordance with Rule 54(b), I.R.C.P., that the court has determined that there is no just reason for delay of the entry of a final judgment and that the court has and does hereby direct that the above judgment or order shall be a final judgment upon which execution may issue and an appeal may be taken as provided by the Idaho Appellate Rules.

R. Burdick

ROGER BURDICK
Presiding Judge of the
Snake River Basin Adjudication

IN THE DISTRICT COURT OF THE FIFTH JUDICIAL DISTRICT OF THE
STATE OF IDAHO, IN AND FOR THE COUNTY OF TWIN FALLS

PARTIAL DECREE PURSUANT TO
I.R.C.P. 54(b) FOR

Water Right 34-10873

NAME & ADDRESS: BIG LOST RIVER IRRIGATION DISTRICT
PO BOX 205
MACKAY ID 83251

SOURCE: BIG LOST RIVER TRIBUTARY: SINKS

QUANTITY: 20646.0 AFY

A VOLUME OF WATER IN ADDITION TO THE VOLUME DESCRIBED ABOVE FOR STORAGE PURPOSES MAY BE STORED IN A SINGLE YEAR IF: A) THE ADDITIONAL VOLUME IS STORED USING THE STORAGE CAPACITY OF MACKAY RESERVIOR, AND B) ALL WATER RIGHTS EXISTING AT THE TIME OF STORAGE (INCLUDING WATER RIGHTS WITH JUNIOR PRIORITY AND OTHER RIGHTS FOR STORAGE PURPOSES) THAT ARE WITHIN THEIR PERIOD OF USE ARE SATISFIED.

PRIORITY DATE: 10/02/1905

POINT OF DIVERSION:

T03N R26E S01	NENESW	(REDIVERSION)	Within BUTTE County
S12	NENWSE	(REDIVERSION)	
T04N R26E S26	NWNWNW	(REDIVERSION)	
T05N R26E S04	NWSESE	(REDIVERSION)	
T07N R23E S12	SENW		Within CUSTER County
T06N R24E S01	NENESW	(REDIVERSION)	
R25E S06	SWNESE	(REDIVERSION)

USE OF THIS RIGHT WITH THE RIGHTS LISTED BELOW IS LIMITED TO THE IRRIGATION OF 32,000 ACRES WITHIN THE PLACE OF USE DESCRIBED ABOVE IN A SINGLE IRRIGATION SEASON.
COMBINED RIGHT NOS. 34-00012, 34-00013, 34-00810, 34-00811, 34-00817B, 34-00818, 34-02507 AND 34-10935.

OTHER PROVISIONS NECESSARY FOR DEFINITION OR ADMINISTRATION OF THIS WATER RIGHT:

THIS PARTIAL DECREE IS SUBJECT TO SUCH GENERAL PROVISIONS NECESSARY FOR THE DEFINITION OF THE RIGHTS OR FOR THE EFFICIENT ADMINISTRATION OF THE WATER RIGHTS AS MAY BE ULTIMATELY DETERMINED BY THE COURT AT A POINT IN TIME NO LATER THAN THE ENTRY OF A FINAL UNIFIED DECREE. SECTION 42-1412(6), IDAHO CODE.

RULE 54(b) CERTIFICATE

With respect to the issues determined by the above judgment or order, it is hereby CERTIFIED, in accordance with Rule 54(b), I.R.C.P., that the court has determined that there is no just reason for delay of the entry of a final judgment and that the court has and does hereby direct that the above judgment or order shall be a final judgment upon which execution may issue and an appeal may be taken as provided by the Idaho Appellate Rules.

ROGER BURDICK
Presiding Judge of the
Snake River Basin Adjudication

IN THE DISTRICT COURT OF THE FIFTH JUDICIAL DISTRICT
STATE OF IDAHO, IN AND FOR THE COUNTY OF TWIN FALLS

PARTIAL DECREE PURSUANT TO I.R.C.P. 54(b) FOR

Water Right 34-10935

DISTRICT COURT - SRBA
Fifth Judicial District
County of Twin Falls - State of Idaho

OCT 15 2001

By _____ Clerk
Deputy Clerk

NAME & ADDRESS: BIG LOST RIVER IRRIGATION DISTRICT
PO BOX 205
MACKAY ID 83251

SOURCE: BIG LOST RIVER TRIBUTARY: SINKS

QUANTITY: 6.4 CFS
1113.0 AFY

PRIORITY DATE: 06/01/1896

POINT OF DIVERSION:

T03N R26E S01	NENESW	(REDIVERSION)	Within BUTTE County
S12	NENWSE	(REDIVERSION)	
T04N R26E S26	NWNWNW	(REDIVERSION)	
T05N R26E S04	NWSESE	(REDIVERSION)	
T07N R23E S12	SENW		Within CUSTER County
T06N R24E S01	NENESW	(REDIVERSION)	
R25E S06	SWNESE	(REDIVERSION)	
S10	NENESW	(REDIVERSION)	
S11	SWSESW	(REDIVERSION)	
S14	SENWSE	(REDIVERSION)	
S24	NWNWNE	(REDIVERSION)	
R26E S32	NWSENW	(REDIVERSION)	
T07N R23E S12	NWNWSE	(REDIVERSION)	
R24E S18	SESWNE	(REDIVERSION)	
S20	SWNESW	(REDIVERSION)	
S33	NWSWNE	(REDIVERSION)	
S34	SENWNW	(REDIVERSION)	

POINT OF DIVERSION IN T07N, R23E, S12, SENW IS MACKAY DAM. WATER IS DELIVERED THROUGH THE ANGELO, ARCO, B & J, BECK/MC GOWAN, BURNETT, DARLINGTON, EASTSIDE, HARRIS-VAUGHT, ISLAND, LOWER BURNETT, MC LOUGHLIN, MIDDLE, MILLER, MOORE, MUNSEY, SHARP, STREETER, SUTTER, SWAUGER, VANOUS, WESTSIDE AND 3 IN 1 DITCHES OR CANALS; ALL ARE POINTS OF REDIVERSION FROM THE BIG LOST RIVER.

PURPOSE AND PERIOD OF USE:

PURPOSE OF USE	PERIOD OF USE	QUANTITY
IRRIGATION STORAGE	05-01 10-15	1113.0 AFY
IRRIGATION FROM STORAGE	05-01 10-15	1113.0 AFY
DIVERSION TO STORAGE	05-01 10-15	6.4 CFS

The period of use for each purpose of use described above may be extended in seasons of unusual characteristics to a beginning date of 4-20 and an ending date of 10-31 at the discretion of the Director.

PLACE OF USE: IRRIGATION FROM STORAGE Within BUTTE and CUSTER Counties

	NESE	NWSE	SWSE	SESE

USE OF THIS RIGHT WITH THE RIGHTS LISTED BELOW IS LIMITED TO THE IRRIGATION OF 32,000 ACRES WITHIN THE PLACE OF USE DESCRIBED ABOVE IN A SINGLE IRRIGATION SEASON.
COMBINED RIGHT NOS.: 34-00012, 34-00013, 34-00810, 34-00811, 34-00817B, 34-00818, 34-02507 AND 34-10873.

OTHER PROVISIONS NECESSARY FOR DEFINITION OR ADMINISTRATION OF THIS WATER RIGHT:

IN ADDITION TO THE PLACE OF USE DESCRIBED FOR THIS RIGHT, HISTORICAL PRACTICE HAS BEEN TO DELIVER STORAGE WATER TO THE FOLLOWING LANDS:

T03N R27E S03	SWSW	37	SESW	24			
S04	NWSW	37	SWSW	36	SESW	37.5	
	SWSE	37.5	SESE	37.5			
S08	NENE	21	NWNE	38	SENE	35	
	NESE	39	NWSE	27			
S09	NENE	32	SENE	39	NWNW	33	
	SWNW	31	NESW	30	NWSW	38	
	SWSW	25					

634.5 ACRES TOTAL

ALSO, HISTORICAL PRACTICE HAS BEEN TO DELIVER STORAGE WATER TO 120 ACRES WITHIN THE LANDS DESCRIBED BELOW IN A SINGLE IRRIGATION SEASON.

T03N R26E S13	NWSW	39	SWSW	33	SESW	39
	SWSE	40				
S24	NENW	39	NWNW	38	SWNW	39

267 ACRES TOTAL

RULE 54(b) CERTIFICATE

With respect to the issues determined by the above judgment or order, it is hereby CERTIFIED, in accordance with Rule 54(b), I.R.C.P., that the court has determined that there is no just reason for delay of the entry of a final judgment and that the court has and does hereby direct that the above judgment or order shall be a final judgment upon which execution may issue and an appeal may be taken as provided by the Idaho Appellate Rules.

Eric J Wildman
Presiding Judge of the
Snake River Basin Adjudication

IN THE DISTRICT COURT OF THE FIFTH JUDICIAL DISTRICT OF THE
STATE OF IDAHO, IN AND FOR THE COUNTY OF TWIN FALLS

PARTIAL DECREE PURSUANT TO
I.R.C.P. 54(b) FOR

Water Right 34-10935

FILE CONFIRMATION DATE 2001 OCT 15 DD

NAME & ADDRESS: BIG LOST RIVER IRRIGATION DISTRICT
PO BOX 205
MACKAY ID 83251

SOURCE: BIG LOST RIVER TRIBUTARY: SINKS

QUANTITY: 6.4 CFS
1113.0 AFY

PRIORITY DATE: 06/01/1896

POINT OF DIVERSION:

T03N R26E	S01	NENESW	(REDIVERSION)	Within BUTTE County
	S12	NENWSE	(REDIVERSION)	
T04N R26E	S26	NWNWNW	(REDIVERSION)	
T05N R26E	S04	NWSESE	(REDIVERSION)	
T07N R23E	S12	SENW		Within CUSTER County
T06N R24E	S01	NENESW	(REDIVERSION)	
R25E	S06	SWNESE	(REDIVERSION)	
	S10	NENESW	(REDIVERSION)	
	S11	SWSESW	(REDIVERSION)	
	S14	SENWSE	(REDIVERSION)	
	S24	NWNWNE	(REDIVERSION)	
R26E	S32	NWSENW	(REDIVERSION)	
T07N R23E	S12	NWNWSE	(REDIVERSION)	
R24E	S18	SESWNE	(REDIVERSION)	
	S20	SWNESW	(REDIVERSION)	
	S33	NWSWNE	(REDIVERSION)	
	S34	SENWNW	(REDIVERSION)	

POINT OF DIVERSION IN T07N, R23E, S12, SENW IS MACKAY DAM. WATER IS DELIVERED THROUGH THE ANGELO, ARCO, B & J, BECK/MC GOWAN, BURNETT, DARLINGTON, EASTSIDE, HARRIS-VAUGHT, ISLAND, LOWER BURNETT, MC LOUGHLIN, MIDDLE, MILLER, MOORE, MUNSEY, SHARP, STREETER, SUTTER, SWAUGER, VANOUS, WESTSIDE AND 3 IN 1 DITCHES OR CANALS; ALL ARE POINTS OF REDIVERSION FROM THE BIG LOST RIVER.

PURPOSE AND PERIOD OF USE:

PURPOSE OF USE	PERIOD OF USE	QUANTITY
IRRIGATION STORAGE	05-01 10-15	1113.0 AFY
IRRIGATION FROM STORAGE	Irrigation Season	1113.0 AFY
DIVERSION TO STORAGE	05-01 10-15	6.4 CFS

The period of use for each purpose of use described above may be extended in seasons of unusual characteristics to a beginning date of 4-20 and an ending date of 10-31 at the discretion of the Director.

PLACE OF USE: IRRIGATION FROM STORAGE Within BUTTE and CUSTER Counties

CIVIL CASE NUMBER: 39356
Ident. Number A34-00012ZO/A34-00012
Date Received 2-19-91
Receipt Number E015704

NOTICE OF CLAIM TO A WATER RIGHT

ACQUIRED UNDER STATE LAW

Please type or print clearly

1. Name of Claimant (s) Big Lost River Irrigation District Phone (208) 588-2231

   Mailing Address P.O.BOX 205 Mackay, Idaho Zip 83251

2. Date of Priority (Only one (1) per claim) 2/7/1916

3. Source of water supply (a) Big Lost River
   which is tributary to (b) _____

4. a. Location of existing point of diversion is: Township 7N Range 23EBM Section 12,
   _____ 1/4 of _____ 1/4 of _____ 1/4, Govt. Lot, _____ B.M., County of Custer

   Additional points of diversion if any: _____

   b. If instream flow, beginning point of claimed instream flow is:

   Township _____ Range _____ Section _____, _____ 1/4 of _____ 1/4 of _____ 1/4,

   Govt. Lot _____ B.M., County of _____

   ending point is: Township _____ Range _____ Section _____, _____ 1/4 of _____ 1/4 of

   _____ 1/4, Govt. Lot _____ B.M., County of _____

5. Description of existing diversion works (Dams, Reservoirs, Ditches, Wells, Pumps, Pipelines, Headgates, Etc), including the dates of any changes or enlargements in use, the dimensions of the diversion works as constructed and as enlarged and the depth of each well.

Mackay Reservoir-ASSV/Burnett/Beck/McGown/Darlington/Harris-Vaught/Lower Burnett/Sharp/Swauger/B & J/Moore/Westside west/westside east/U.C. (Blaine)/Arco/Middle/Eastside/Island/Miller/McLoughlin/Munsey/3 & 1 canals.

Copies: White-State, Yellow-Claimant

6. Water is claimed for the following purposes: (both dates are inclusive) (cfs) (acre feet)

For Irrigation purposes from 5/1 to 10/15 amount 1000 or _____

For Storage purposes from 10/16 to 4/30 amount _____ or _____

For _____ purposes from _____ to _____ amount _____ or _____

For _____ purposes from _____ to _____ amount _____ or _____

7. Total quantity claimed (a) 1000 (cfs) and/or (b) _____ (acre feet)

8. Total consumptive use claimed is _____ acre feet per annum.

9. Non-irrigation uses; describe fully (eg. Domestic: Give number of households served; Stockwater: Type and number of livestock Etc.) _____

10. Description of place of use:
    a. If water is for irrigation, indicate acreage in each subdivision in the tabulation below.
    b. If water is used for other purposes, place a symbol of use (example: D for Domestic) in the corresponding place of use below. See instructions for standard symbols.

TWP	RNG	SEC	NE 1/4				NW 1/4				SW 1/4				SE 1/4				Totals
			NE1/4	NW1/4	SW1/4	SE1/4	NE1/4	NW1/4	SW1/4	SE1/4	NE1/4	NW1/4	SW1/4	SE1/4	NE1/4	NW1/4	SW1/4	SE1/4	

Total number of acres irrigated _____

11. In which county (ies) are lands listed above as place of use located? Butte & Custer

12. Do you own the property listed above as place of use? Yes _____ No xxx
    If your answer is No, describe in Remarks below the authority you have to claim this water right.

13. Describe any other water rights used at the same place and for the same purposes as described above. or None ( )
    _____

14. Remarks:

Big lost River Irrigation District is a conveyance system who owns these and the right to store in the Mackay reservoir, for delivery to valley members.

Last Name _____ Ident No. _____

06N	26E	32											12.0						12.0

POU Total Acres: 32.0

CONDITIONS OF APPROVAL

1. Rights 34-182, 34-381A, 34-2379F, and 34-14525 when combined shall not exceed a total diversion rate of 5.2 cfs, and the irrigation of 200 acres.
2. A lockable device subject to the approval of the Department shall be maintained on the diverting works in a manner that will provide the watermaster suitable control of the diversion.
3. Use of water under this right will be regulated by a watermaster with responsibility for the distribution of water among appropriators within a water district. At the time of this approval, this water right is within State Water District No. 34.
4. This right when combined with all other rights shall provide no more than 0.02 cfs per acre nor more than 3.5 afa per acre at the field headgate for irrigation of the place of use.
5. Upon specific notification of the Department, the right holder shall install and maintain data loggers to record water usage information at the authorized point(s) of diversion in accordance with Department specifications.

Transfer No. 80488

WATER RIGHT NO. 34-14525

As Modified by Transfer No. 80488

CONDITIONS OF APPROVAL

6. Prior to the diversion and use of water under Transfer approval 80488, the right holder shall install and maintain acceptable measuring device(s) at the authorized point(s) of diversion in accordance with Department specifications, or shall obtain an approved variance from the Department to determine the amount of water diverted from power records or to maintain an existing measuring device.

7. The right holder shall accomplish the change authorized by this transfer within one year of the date of this approval.

8. Failure of the right holder to comply with the conditions of this transfer is cause for the Director to rescind approval of the transfer.

9. Pursuant to Section 42-1412(6), Idaho Code, this water right is subject to such general provisions necessary for the definition of the rights or for the efficient administration of water rights as may be determined by the Snake River Basin Adjudication court at a point in time no later than the entry of the final unified decree.

POU Total Acres: 200.0

CONDITIONS OF APPROVAL

1. This right is limited to the irrigation of 120 acres within the authorized place of use in a single irrigation season.
2. Rights 34-182, 34-381A and 34-2379F when combined shall not exceed a total diversion rate of 5.2 cfs and the irrigation of 200 acres.
3. Rights 34-182, 34-381A, 34-2379F, and 34-14525 when combined shall not exceed a total diversion rate of 5.2 cfs, and the irrigation of 200 acres.
4. This right when combined with all other rights shall provide no more than 0.02 cfs per acre nor more than 3.5 afa per acre at the field headgate for irrigation of the place of use.
5. The period of use for irrigation described above may be extended in seasons of unusual characteristics to a beginning date of 04-20 and an ending date of 10-31 at the discretion of the Director of the Idaho Department of Water Resources.

Transfer No. 80488

WATER RIGHT NO. 34-381A

As Modified by Transfer No. 80488

CONDITIONS OF APPROVAL

6. Use of water under this right will be regulated by a watermaster with responsibility for the distribution of water among appropriators within a water district. At the time of this approval, this water right is within State Water District No. 34.

7. The right holder shall maintain a measuring device and lockable controlling works of a type approved by the Department in a manner that will provide the watermaster suitable control of the diversion(s).

8. This right does not grant any right-of-way or easement across the land of another.

9. The right holder shall accomplish the change authorized by this transfer within one year of the date of this approval.

10. Failure of the right holder to comply with the conditions of this transfer is cause for the Director to rescind approval of the transfer.

11. Pursuant to Section 42-1412(6), Idaho Code, this water right is subject to such general provisions necessary for the definition of the rights or for the efficient administration of water rights as may be determined by the Snake River Basin Adjudication court at a point in time no later than the entry of the final unified decree.

WATER RIGHT NO. 34-182

4. A lockable device subject to the approval of the Department shall be maintained on the diverting works in a manner that will provide the watermaster suitable control of the diversion.

5. Prior to the diversion and use of water under Transfer approval 76291, the right holder shall install and maintain acceptable measuring device(s) at the authorized point(s) of diversion in accordance with Department specifications, or shall obtain an approved variance from the Department to determine the amount of water diverted from power records or to maintain an existing measuring device.

Transfer No. 80488

WATER RIGHT NO. 34-2379F

As Modified by Transfer No. 80488

CONDITIONS OF APPROVAL

6. Upon specific notification of the Department, the right holder shall install and maintain data loggers to record water usage information at the authorized point(s) of diversion in accordance with Department specifications.

7. This right when combined with all other rights shall provide no more than 0.02 cfs per acre nor more than 3.5 afa per acre at the field headgate for irrigation of the lands above.

8. The right holder shall make full beneficial use of all surface water rights available to the right holder for irrigation of the lands authorized to be irrigated under this right. The right holder shall limit the diversion of ground water under this right to those times when the surface water supply is not available or the surface water supply is not reasonably sufficient to irrigate the place of use authorized under this right.

9. If the surface water right(s) appurtenant to the place of use is sold, transferred, leased or used on any other place of use, this right to divert groundwater shall not be used without an approved transfer pursuant to Section 42-222, Idaho Code, or approval of the Department if a transfer is not required.

10. The right holder shall accomplish the change authorized by this transfer within one year of the date of this approval.

11. Failure of the right holder to comply with the conditions of this transfer is cause for the Director to rescind approval of the transfer.

12. Pursuant to Section 42-1412(6), Idaho Code, this water right is subject to such general provisions necessary for the definition of the rights or for the efficient administration of water rights as may be determined by the Snake River Basin Adjudication court at a point in time no later than the entry of the final unified decree.

Carlsen, Ernie

From: Big Lost River Irrigation District [blrid@atcnet.net]
Sent: Tuesday, December 16, 2008 9:20 AM
To: Carlsen, Ernie
Subject: Re: test

Ernie
Please send back BLRID's application for the transfer of Point of Diversion of storage water as it pertains to Lower Burnett and Pehrson Ditch. The directors do not want it to go before Pehrson's is approved. And this point I would say refund the funds and we will resubmit new check when we resubmit.

Also could you please enclose a letter that IDWR is reviewing Pehrson's application and while it is not named specificially that IDWR is considering two points of diversion on his application. And whether or not you consider the unanamed item to be the Pehrson ditch. Please enclude any rcomendations that the board should consider based on the interpretation of Pehrson's application.

Please mail back to Big Lost River Irrigation District at POB 205 Mackay, ID. 83251.

Thanks
Dawn

APPLICATION FOR TRANSFER OF WATER RIGHT
PART 1

Name of Applicant Big Lost River Irrigation District Phone 208-588-2231

Mailing address P.O. Box 205, Mackay, Idaho 83251 Email blrid@atcnet.net

A. PURPOSE OF TRANSFER

1. ☐ Change point of diversion ☒ Add diversion point(s) ☐ Change place of use
   ☐ Change nature of use ☐ Change period of use ☐ Other _____

2. Describe the reason for the proposed changes Update the diversions used by Applicant

B. DESCRIPTION OF RIGHT(S) OR PORTION THEREOF, AFTER THE REQUESTED CHANGE

1.

Right Number	Priority	Amount (cfs/ac-ft)	Nature of Use	Period of Use
See attached Exhibit A				to
				to
				to
				to

2. Total amount of water being transferred _____ cubic feet per second and/or _____ acre-feet per annum.

3. Source of water Big Lost River Irrigation District tributary to _____

4. Point(s) of Diversion: New Points

Lot	¼	¼	¼	Sec	Twp	Rge	County	Local name for diversion
	NE	NW	NE	24	06N	25E	Custer	Pehrson Ditch
	NE	NW	NE	24	06N	25E	Custer	Lower Burnett (new)
Plus existing points of diversion set forth on attached water rights								

5. Lands irrigated or place of use: all lands located within boundary of Big Lost River Irrigation Distric

Twp	Rge	Sec	NE ¼				NW ¼				SW ¼				SE ¼				Totals
			NE	NW	SW	SE	NE	NW	SW	SE	NE	NW	SW	SE	NE	NW	SW	SE	

Total Acres _____

PART 1

6. General Information:

a. Description of diversion system headgates, canals, ditches

b. Are the lands from which you propose to transfer the water right subject to any liens, deeds of trust, mortgages, or contracts?

_____ Yes n/a No. If yes, provide a notarized statement from the holder of the lien, deed of trust, mortgage or contract agreeing to the proposed changes.

c. Describe the affect on the land now irrigated if the place of use is changed pursuant to this transfer:

None

d. Remarks:

Total diversions at Pehrson ditch and Lower Burnett (new) shall not exceed 800 af per year.

ACTION OF THE DIRECTOR, DEPARTMENT OF WATER RESOURCES

This is to certify that I have examined Application for Transfer of Water Rights No. _____

And the said application is hereby _____, subject to the following conditions:

APPLICATION FOR TRANSFER OF WATER RIGHT
PART 2

(Attach one copy for each right)

A. DESCRIPTION OF RIGHT AS RECORDED See attached Rights - partially decreed.

1. Right as evidenced by:
   a. Decree No. _____ Decreed to _____
      in case of _____ vs. _____
      dated _____ in _____ county of _____
   b. License No. _____ issued by the Idaho Department of Water Resources.
   c. Claim No. _____ on file with the Idaho Department of Water Resources.
   d. Transfer No. _____ which produced this right.
2. Attach copy of last year's tax notice for the property to which the water right is appurtenant or other documents which show ownership. Label document as attachment A. Check appropriate box below:

   ☐ Tax Notice ☐ Warranty Deed ☐ Other _____

3. Source of water _____ tributary to _____
4. Date or priority _____
5. Water is used for the following purposes:

   amount _____ for _____ purposes from _____ to _____
   (cfs/ac-ft)
   amount _____ for _____ purposes from _____ to _____
   (cfs/ac-ft)
   amount _____ for _____ purposes from _____ to _____
   (cfs/ac-ft)
6. Total amount of water under right _____ cubic feet per second and/or _____ acre-feet per annum.
7. Point(s) of Diversion:

Lot	¼	¼	¼	Sec	Twp	Rge	County	Local name for diversion

8. Lands irrigated or place of use:

Twp	Rge	Sec	NE ¼				NW ¼				SW ¼				SE ¼				Totals
			NE	NW	SW	SE	NE	NW	SW	SE	NE	NW	SW	SE	NE	NW	SW	SE	

Total Acres _____

9. Describe any other water rights used for the same purpose as described above _____

_____

PART 2

10. To your knowledge, has any portion of this water right undergone a period of five or more consecutive years of non-use?

_____ If yes, describe _____

B. DESCRIPTION OF PORTION OF RIGHT BEING TRANSFERRED

(If the entire right is to be changed by the applicant, omit part B and C.)

1. amount_____ for _____purposes from _____ to _____
(cfs/ac-ft)
amount_____ for _____purposes from _____ to _____
(cfs/ac-ft)
amount_____ for _____purposes from _____ to _____
(cfs/ac-ft)

2. Point(s) of Diversion:

Lot	¼	¼	¼	Sec	Twp	Rge	County	Local name for diversion

3. Lands irrigated or place of use:

Twp	Rge	Sec	NE ¼				NW ¼				SW ¼				SE ¼				Totals
			NE	NW	SW	SE	NE	NW	SW	SE	NE	NW	SW	SE	NE	NW	SW	SE	

Total Acres _____

C. DESCRIPTION OF UNCHANGED PORTION OF RIGHT *(omit if there is no change)*

1. amount_____ for _____purposes from _____ to _____
(cfs/ac-ft)
amount_____ for _____purposes from _____ to _____
(cfs/ac-ft)
amount_____ for _____purposes from _____ to _____
(cfs/ac-ft)

2. Point(s) of Diversion:

Lot	¼	¼	¼	Sec	Twp	Rge	County	Local name for diversion

3. Lands irrigated or place of use:

Twp	Rge	Sec	NE ¼				NW ¼				SW ¼				SE ¼				Totals

IRRIGATION FROM STORAGE Use:
Acre Limit: 32

Place(s) of use: Large POU Info

Conditions of Approval:

1.	A VOLUME OF WATER IN ADDITION TO THE VOLUME DESCRIBED ABOVE FOR STORAGE PURPOSES MAY BE STORED IN A SINGLE YEAR IF: A) THE ADDITIONAL VOLUME IS STORED USING THE STORAGE CAPACITY OF MACKAY RESERVIOR, AND B) ALL WATER RIGHTS EXISTING AT THE TIME OF STORAGE (INCLUDING WATER RIGHTS WITH JUNIOR PRIORITY AND OTHER RIGHTS FOR STORAGE PURPOSES) THAT ARE WITHIN THEIR PERIOD OF USE ARE SATISFIED.
2.	POINT OF DIVERSION IN T07N, R23E, S12, SENW IS MACKAY DAM WATER IS DELIVERED THROUGH THE ANGELO, ARCO, B & J, BECK/MC GOWAN, BURNETT, DARLINGTON, EASTSIDE, HARRIS-VAUGHT, ISLAND, LOWER BURNETT, MC LAUGHLIN, MIDDLE, MILLER, MOORE, MUNSEY, SHARP, STREETER, SUTTER, SWAUGER, VANOUS, WESTSIDE AND 3 IN 1 DITCHES OR CANALS; ALL ARE POINTS OF REDIVERSION FROM THE BIG LOST RIVER.
3.	THE PERIOD OF USE FOR IRRIGATION FROM STORAGE DESCRIBED ABOVE MAY BE EXTENDED IN SEASONS OF UNUSUAL CHARACTERISTICS TO A BEGINNING DATE OF 04-20 AND AN ENDING DATE OF 10-31 AT THE DISCRETION OF THE DIRECTOR.
4.	USE OF THIS RIGHT WITH THE RIGHTS LISTED BELOW IS LIMITED TO THE IRRIGATION OF 32,000 ACRES WITHIN THE PLACE OF USE DESCRIBED ABOVE IN A SINGLE IRRIGATION SEASON. COMBINED RIGHT NOS. 34-00012, 34-00013, 34-00810, 34-00811, 34-00817B, 34-00818, 34-02507 AND 34-10935.

5.	C18	THIS PARTIAL DECREE IS SUBJECT TO SUCH GENERAL PROVISIONS NECESSARY FOR THE DEFINITION OF THE RIGHTS OR FOR THE EFFICIENT ADMINISTRATION OF THE WATER RIGHTS AS MAY BE ULTIMATELY DETERMINED BY THE COURT AT A POINT IN TIME NO LATER THAN THE ENTRY OF A FINAL UNIFIED DECREE. SECTION 42-1412(6), IDAHO CODE.
6.		RIGHT NOS. 34-00012, 34-00810, 34-00811, 34-00817B, 34-00818, 34-02507 AND 34-10935 ARE ALSO DIVERTED THROUGH POINTS OF DIVERSION DESCRIBED ABOVE. THIS RIGHT IS A COMBINATION OF OLD RIGHT NOS. 34-00010 AND 34-00011.

DEPARTMENT OF WATER RESOURCES

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	**Docket No.: P-DR-2024-001**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	**DECLARATION OF PRESTON MARCROFT**

PRESTON MARCROFT under penalty of perjury states as follows:

1. I am over the age of eighteen and state the following based upon my own personal knowledge.

2. I am the current Watermaster for Water District No. 34 ("WD34"), having succeeded Lucas E. Yockey, and have held this position since Mr. Yockey resigned his position in June 2022.

3. Prior to becoming Watermaster, I served as a Ditch Rider for WD34 from 2013 until 2022.

4. I am familiar with the water rights at issue in this proceeding and the use of BLRID storage water within WD34.

5. I have reviewed *Application for Transfer of Water Right, Transfer No. 79972* ("Application") that was filed by Moss Farms, Inc. ("Moss") with the Idaho Department of Water Resources ("IDWR"), included as Exhibit C to the *Declaration of Sklyer Johns in Support of Motion for Summary Judgment* (Jan. 24, 2025) ("Johns Dec."), the *Transfer of Water Right, Transfer No. 79972* (June 30, 2015), included as Exhibit H to the *Johns Dec.* ("Transfer No. 79972"), as well as all other documents that were attached as exhibits to Mr. Johns' declaration.

6. Prior to the *Application* and the *Transfer*, water right nos. 34-182 and 34-381A ("Moss Water Rights"), held by Moss, were only diverted at the 3 in 1 Ditch.

7. Based on my experience, BLRID has storage water rights ("BLRID Storage Rights") that can be delivered to certain canals and ditches, including but not limited to the 3 in 1 Ditch and Moore Canal.

8. Moss has interests in the BLRID Storage Rights that he can have delivered at the 3 in 1 Ditch for irrigation of the land that is associated with the Moss Water Rights.

9. Moss has interests in the BLRID Storage Rights that he can have delivered at the Moore Canal for irrigation of land this is not associated with the Moss Water Rights, the *Application*, or the *Transfer*.

10. The *Transfer* approved the addition of the River Diversion as a point of diversion for the Moss Water Rights while maintaining the 3 in 1 Ditch as a point of diversion.

11. In certain years and in certain flow regimes, the Darlington Sinks is a losing reach of the Big Lost River. In certain years and in certain flow regimes, the Big Lost River becomes

broken at the Darlington Sinks, meaning natural flow water rights that are curtailed above the Darlington Sinks cannot be conveyed below the Darlington Sinks for beneficial use.

12. During the summer of 2022 issues arose concerning delivery of the Moss Water Rights through the Darlington Sinks to the River Diversion.

13. On September 2, 2022, when the Big Lost River was broken at the Darlington Sinks, Rob Whitney, IDWR, instructed me to curtail natural flow water rights above the Darlington Sinks in order to satisfy the Moss Water Rights. The natural flow water rights that were curtailed were then pushed through the Darlington Sinks with the addition of BLRID storage water as carriage water. Attached hereto as **Exhibit 1** is a true and correct copy of an email from Mr. Whitney to me explaining his instructions.

14. Due to Mr. Whitney's instructions, upstream water rights that are junior to the Moss Water Rights were curtailed differently than they have been historically, due to the introduction of BLRID storage water as carriage water.

15. I disagree with the instructions from Mr. Whitney as this practice of using storage water as carriage water to push upstream, curtailed natural flow water rights through the Darlington Sinks when the Big Lost River is broken at that location has not previously occurred. This practice results in upstream, natural flow water rights being curtailed when they have not been historically curtailed.

16. It is my opinion and belief that without using BLRID Storage Rights as carriage water, the curtailment of upstream junior water rights would have been futile because the Big Lost River was broken at the Darlington Sinks.

17. It is my opinion and belief that use of BLRID Storage Rights as carriage water through the Darlington Sinks and to the River Diversion was improper and resulted in curtailments that I have not previously seen.

18. I certify under penalty of perjury pursuant to the law of the State of Idaho that the foregoing is true and correct.

DATED this 4th day of February, 2025.

Cc: Weaver, Mathew <Mathew.Weaver@idwr.idaho.gov>, Luke, Tim <Tim.Luke@idwr.idaho.gov>, Hoekema, David <David.Hoekema@idwr.idaho.gov>, Ferguson, Kara <Kara.Ferguson@idwr.idaho.gov>

Preston,

Randy Pehrson contacted David Hoekema with concerns about futile calls and delivery of both storage and decreed water to Dennis Moss. Tim and I met with David to discuss Randy's concerns and current water supply conditions on the Big Lost River. On August 15, 2022, IDWR conditionally supported a futile call determination on the Big Lost River at your request. This determination recognized a break in the river immediately below the Beck diversion but noted that *"... this determination does not prevent users on the Moore Canal or other lower valley ditches to call for and receive delivery of storage and decreed rights during the remainder of this irrigation season."* After the August 15, 2022 determination, IDWR was notified that delivery of water right 34-184 (Moss river pump) was affected by breaking the river at the Beck. Because the Moss water right has a 6-1-1883 priority date and an authorized point of diversion below the Beck, you were instructed resume delivery to fill the Moss water right. Currently, delivery to Moss is not futile because he has sufficient storage water to help carry the decreed right. You have reported that about 600 inches (12cfs) of water is currently passing the Moss diversion but there are no calls for delivery below Moss. Without sufficient storage to carry decrees to the Moore diversion, the futile call determination below Moss continues to be justified. It appears appropriate to deliver additional water upstream of Moss by adjusting the decree to deliver more 1884 rights, while maintaining delivery to Moss. Your suggestion to adjust the decree date to 8-31-1884 may be a reasonable place to start, but IDWR will defer to your local knowledge of what the demand might be if a certain decree date is set. As we discussed, please stay in contact with Dennis Moss as you deliver additional decrees. If the demand under a new decree date results in a shortage of

water to satisfy Moss, the date should be adjusted accordingly. Please reach out if you have any questions.

Thanks, RW

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	**Docket No. P-DR-2024-001**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	**NOTICE OF DISPOSITIVE MOTION HEARING**

NOTICE IS HEREBY GIVEN that Hearing Officer Burdick will hold a hearing in this matter on *Moore Canal Users' Motion to Dismiss*, joined by Big Lost River Irrigation District, and Moss Farms, Inc.'s *Motion for Summary Judgment* on **February 21, 2025, at 9:00 a.m. (MT)**, at the Department's State Office, located at 322 E. Front Street, 6th Floor, Conference Rooms 602B–D, Boise, Idaho. All parties who wish to participate in the hearing shall be present in person.

The hearing will be held in accordance with the provisions of Chapter 17, Title 42, and Chapter 52, Title 67, Idaho Code, and the Department's Rules of Procedure, IDAPA 37.01.01. A copy of the Rules of Procedure may be obtained from the Department upon request or at https://adminrules.idaho.gov/rules/current/37/370101.pdf.

The hearing will be conducted in a facility that meets the accessibility requirements of the Americans with Disabilities Act. If you require reasonable accommodation to attend, participate in, or understand the hearing, please advise the Department no later than five (5) days before the hearing. Inquiries for reasonable accommodations should be directed to Sarah Tschohl, Idaho Department of Water Resources, PO Box 83720, Boise, Idaho 83720-0098, telephone (208) 287-4815, or email sarah.tschohl@idwr.idaho.gov.

DATED this 7th day of February 2025.

ROGER S. BURDICK
Hearing Officer

Attorney for Moss Farms, Inc.

STATE OF IDAHO
DEPARTMENT OF WATER RESOURCES

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	Docket No. **P-DR-2024-001** **REPLY IN SUPPORT OF MOTION FOR SUMMARY JUDGMENT**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	

Moss Farms, Inc., by and through its attorney of record, Skyler C. Johns, of Olsen Taggart PLLC, replies to the *Response to Moss Motion for Summary Judgment* (hereafter "Response") filed by the Petitioners. This Reply is supported by the *Motion to Strike* and the *Declaration of Skyler Johns in Support of Motion to Strike and Reply to Pehrsons' Response* (hereafter "Dec. of Johns II") filed contemporaneously herewith.

I.
OVERVIEW

Moss Farms' request for summary judgment relies on a very narrow set of facts. The Pehrsons Response provides a lot of factual allegations attempting to show that there are many disputes over the material facts. The Response, however, raises issues not in the Petition, states immaterial facts, and at best relies on a mere scintilla of evidence. As will be set forth below, the

numerous declarations, documents, provided by the Pehrsons do not genuinely create a dispute over the narrow facts the Hearing Officer need consider at summary judgment.

II.
STANDARD OF REVIEW

> A party asserting that a fact ... is genuinely disputed must support the assertion by ... citing to particular parts of materials in the record, ... or [by] showing that the materials cited do not establish the absence ... of a genuine dispute. Thus, the party opposing summary judgment must bring to the trial court's attention evidence that may create a genuine issue of material fact .... Mere conclusory allegations will not raise a genuine issue of material fact.

Gordon v. U.S. Bank Nat'l Ass'n, 166 Idaho 105, 119, 455 P.3d 374, 388 (2019) (internal quotations and citations omitted).

> …a mere scintilla of evidence or only a slight doubt as to the facts is insufficient to withstand summary judgment; there must be sufficient evidence upon which a jury could reasonably return a verdict for the party opposing the motion.
>
> The party seeking summary judgment bears the initial burden to show that there is no genuine issue of material fact and that he or she is entitled to judgment as a matter of law. The movant may meet this burden by establishing the absence of evidence on an element that the nonmoving party will be required to prove at trial. This may be accomplished either by an affirmative showing with the moving party's own evidence or by a review of the nonmovant's evidence and the contention that the required proof of an element is lacking. Once such an absence of evidence has been demonstrated, the burden shifts to the party opposing the motion to show through further depositions, discovery responses or affidavits that there is indeed a genuine issue for trial or to show a valid justification for its failure to do so under I.R.C.P. 56(f).

R Homes Corp. v. Herr, 142 Idaho 87, 90, 123 P.3d 720, 723 (Ct. App. 2005) (internal quotations and citations omitted).

III.
ARGUMENT

A. The Pehrsons are collaterally attacking the Transfer Application.

1. Moss Farms' Transfer Application shows that it was taking its BLRID Rights with the Moss Farms Rights from the same point of delivery from the Big Lost.

The Pehrsons knew or should have known that Moss Farms would divert its BLRID Rights at the River Diversion when they reviewed the Transfer Application. Jim Reinflesh provided a letter that was included in the Transfer Application acknowledging that Moss Farms takes its BLRID Rights with the Moss Farms Rights out of the 3-in-1 ditch. Dec. of Johns, Ex. C. Because the 3-in-1 Ditch was unreliable and because others don't use it, the ditch was only used for recharge. *Id.* That is why Reinflesh opined that Moss Farms had to improve his delivery system by taking water from the Big Lost River at the proposed River Diversion. *Id.*

The Pehrsons do not dispute that they reviewed the Transfer Application, so they would have seen Reinflesh's letter discussing the BLRID Rights along with the Moss Farm Rights the need for Moss Farms to improve his delivery system by obtaining the River Diversion. The Pehrsons' claims that the Transfer Application did not "suggest" storage water (i.e.g, the BLRID Rights) would be taken from the River Diversion is refuted by the Transfer Application itself, which is the best evidence to determine what was or wasn't included therein. Again, if the Pehrsons' reviewed the Transfer Application, they would have seen the Reinflesh's letter sent on behalf of BLRID discussing storage water and the need for the River Diversion.

2. Petitioners' argument that BLRID Rights are not divertible from the River Diversion was not an issue raised in their Petition.

Petitioners have not raised any issue with the method of delivery used by BLRID in their Petition. Therefore, that issue is not properly raised at summary judgment. Although the Petition mentioned that Moss Farms used storage water to "shepherd" natural flow, the Petition did not argue that the BLRID Rights are not divertible from the Big Lost River. The Hearing Officer should not permit the Petitioners to raise this argument for the first time in their Response.

3. The BLRID Rights permit Moss Farms and other BLRID Right holders to divert from the Big Lost River.

The Pehrsons argue that the BLRID Rights do not allow Moss Farms to divert its BLRID Rights from the River Diversion. This is contrary to the law and the plain language of the BLRID Rights. Idaho Code title 42 chapter 1. Section 105(1) provides "[t]he water that a person is entitled to divert by reason of a valid water right may be turned into the channel of a natural waterway and mingled with its water, and then reclaimed…" Idaho Code § 42-110 provides that "[w]ater diverted from its source pursuant to a water right is the property of the appropriator while it is lawfully diverted, captured, conveyed, used, or otherwise physically controlled by the appropriator."

It is undisputed that the BLRID Rights are delivered from Mackay Reservoir down the Big Lost River to Moss Farms who is the owner and appropriator. The Big Lost River is a natural waterway. The Big Lost River is a point of diversion. Moss Farms can divert its BLRID Rights from the River Diversion.

Pehrsons claim that the language regarding "points of rediversion" on the BLRID Rights limits Moss Farms from diverting from the River Diversion. This is not so. Although Idaho Code does not define "rediversion" multiple persuasive authorities support Moss Farm's interpretation that the points of rediversion are from the primary point of diversion – the Big Lost River.

The Idaho Department of Water Resources October 2018 *Idaho Statutes Pertaining to Canals and Laterals* manual defines rediversion as:

> a general term used to describe the location of any secondary point of diversion under a water right. For example: consider a storage reservoir on Creek A where storage water is released to Creek A and diverted downstream at Canal #1. The primary point of diversion for a water right with a storage reservoir on Creek A is the impounding dam across Creek A, while the point of re-diversion is Canal #1.

Dec. of Johns II, Ex. B, p. 26.

Idaho legal commentators have also opined that:

> Many Idaho water rights authorize water to be diverted from one stream, "injected" into another stream, and then "rediverted" to a storage facility or other use.49 An example of this is a storage and direct flow right (no. 63-19893) for the Mountain Home Reservoir operated by Mountain Home Irrigation District. Under the "points of diversion" heading, the right lists the original point of diversion from Little Camas Creek, a point of injection into East Fork Long Tom Creek (a tributary of Canyon Creek), and a point of rediversion from Canyon Creek. Thus, where water is injected back into a natural stream (and thus is outside the control of the appropriator) and subsequently rediverted from that natural stream, the injection and rediversion are considered additional points of diversion. (referring to *Rayl v. Salmon River Canal Co.*, 66 Idaho 199, 201, 157 P.2d 76, 77 (1945) (Givens, J.); *American Falls Reservoir District No. 2 v. IDWR ("AFRD")*, 143 Idaho 862, 154 P.3d 433 (2007) (Trout, J.).

Dec. of Johns II, Ex. C.

The Idaho Department of Water Resources stated the followoing in a survey of its employees:

> A special case is where water is diverted from one natural stream into a man-made structure that carries the water to another natural stream. The point of re-diversion if defined as the spot where water flows from the first natural stream into the man-made channel, and the point of re-injection is where the water flows from the man-made structure into the second natural stream.

Dec. of Johns II, Ex. C, pp. 42-44.

Applying these sources into a synthetic definition supports Moss Farms' position that the points of rediversion listed on the BLRID Rights are secondary points of diversion from the primary point of diversion – the Big Lost River. Thus, the plain language of the BLRID Rights does not prohibit Moss Farms from taking its BLRID Rights from the River Diversion, which is located on the natural water waterway – the Big Lost River. So long as Moss Farms applies the BLRID Rights to its authorized places of use, which it does, the BLRID Rights may continue to be diverted from the River Diversion.

4. BLRID is authorized to permit the use of storage water at the River Diversion.

The language of the BLRID storage rights is not the only source of authority showing that Moss Farms use of its various water rights is proper. BLRID is also authorized by the Idaho State Legislature to manage the delivery of storage rights among its members. Idaho Code § 43-304 empowers the board of an irrigation district to:

> manage and conduct the business and affairs of the district, make and execute all necessary contracts, employ and appoint such agents, officers and employees as may be required and prescribe their duties, to establish equitable by-laws, rules and regulations for the distribution and use of water among the owners of such land, as may be necessary and just to secure the just and proper distribution of the same…

Id.

Simply put, BLRID is statutorily empowered to determine how it will distribute the BLRID Rights among its patrons. Given there are no conditions in the BLRID rights limiting diversions from the Big Lost River, the Pehrsons carry the burden to show that Moss Farms, and BLRID for that matter, failed to follow its Bylaws and Polices. The Pehrsons did not provide the Hearing Officer the very document that governs delivery of the BLRID Rights. They only cited inadmissible statements from the Pehrsons as to what they recall was done or not done by the BLRID and what they recall BLRID required to be done. There is no admissible evidence before the Hearing Officer that supports the Pehrsons' argument that Moss Farms cannot take his BLRID Rights from the River Diversion. At best, the Pehrsons have only presented a mere scintilla of evidence that BLRID is not authorized to permit Moss Farms to divert storage rights from the River Diversion.

Per Idaho Code § 43-304, the BLRID Bylaws and Policies control the procedures for delivering storage water rights to its patrons, not the Pehrsons recollections of what those procedures are. The Pehrsons have not provided sufficient evidence that show that delivery of

storage water to the River Diversion is "illegal." Of note, is the fact that the Pehrsons do not dispute that BLRID Rights were delivered to Moss Farms at the River Diversions.

5. A transfer of the point of diversion is not necessary because the Big Lost is a natural waterway and the Moss Farms BLRID storage rights were delivered to an authorized place of use.

The Pehrsons argue that Moss Farms was required to create a new point of diversion to take his BLRID Rights at the River Diversion. As set forth in section A(4) above, no transfer was required because the Big Lost River is already an authorized point of diversion for the BLRID Rights. Also, a transfer is not required based on the language in Idaho Code title 42 chapter 1. Section 105(1) provides "[t]he water that a person is entitled to divert by reason of a valid water right may be turned into the channel of a natural waterway and mingled with its water, and then reclaimed…"

As set forth in section A(4) above, the face of the BLRID Rights shows that the Big Lost River is the primary point of diversion. It is undisputed that the BLRID Rights are delivered from the Big Lost River, which is a natural watercourse. All the ditches and canals referenced by the Pehrsons are "points of rediversion" and are, therefore, alternative points of diversion from the primary point of diversion. None of the declarants for Pehrsons pointed to evidence or law showing that delivery of BLRID Rights from the Big Lost River through the River Diversion is expressly prohibited because they cannot. This is because the Big Lost River is already a point of diversion.

6. *Sylte v. Idaho Dept. of Water Res.*, does not apply.

The Pehrsons rest their legal claims on *Sylte v. Idaho Dept, of Water Res.*, 165 Idaho 238, 245, 443 P.3d 252, 259 (2019) to support their request for futile call. However, as was set forth in the *Moore Canal Users Motion to Dismiss* (hereafter "Motion to Dismiss") the situation in this case:

> is distinguishable from the situation in Sylte. In Sylte, releasing storage water from Twin Lakes was expressly barred by the Final Decree. Here, Mackay Reservoir is a storage reservoir with the purpose of storing water for irrigation. There is no general bar on releases of storage water from Mackay Reservoir as there was in Sylte.

Id. at pp. 5-6. Moss Farms agrees with the arguments raised by the Moore Canal Users, and incorporates and refers to the arguments raised in pages 5 through 8 of the Motion to Dismiss. For the reasons, set forth in the Motion to Dismiss, Sylte does not apply to this case.

7. BLRID does not require storage holders to request that their storage rights be moved or otherwise transferred.

As was set forth in sections A(3) through (5), the Pehrsons did not provide any admissible evidence showing that this is a requirement of the BLRID Bylaws and Policies or that such a request is required by Idaho law.

B. The elements of res judicata have been satisfied.

1. The Transfer Application proceedings addressed the issue that BLRID Rights would be diverted along with the Moss Farms Rights.

The Transfer Application proceeding raised the storage water issues, making storage water use part of that proceeding. BLRID's manager specifically identified how Moss Farms takes the Moss Farms Rights and BLRID Rights together and that it was BLRID's opinion that Moss Farms needed to find a better way to deliver these rights, as other users of the 3-in-1 ditch, including the Pehrsons, had chosen to do. The new delivery system was the proposed River Diversion. Because Moss Farms was trying to fix its transmission loss issues in the 3-in-1 Ditch, it would be unreasonable to assume Moss was only planning on taking the Moss Farms Rights and not the BLRID Rights from the proposed River Diversion on the Big Lost River.

A reasonable and prudent water user in Basin 34, especially persons who were part of BLRID's board, would have deduced this from Reinflesh's letter as discussed above. Given the Pehrsons' knowledge and expertise as BLRID Right owners and their involvement in BLRID, they

could reasonably foresee the issues that arose with Moss Farms continuing to take his BLRID rights and the Moss Farm Rights from the same point of diversion, now the River Diversion, as he had always done.

2. Pehrsons were afforded the opportunity to protest or intervene but declined to be a party.

A person need not be added as a party to the proceeding to meet this requirement. *See Wright v. Par.*, 172 Idaho 218, 224, 531 P.3d 1115, 1121 (2023) ("[f]or issue preclusion to bar additional litigation, the following elements must be present: (1) the party against whom the earlier decision was asserted had a full and fair opportunity to litigate the issue decided in the earlier case…").

Here, the Pehrsons do not dispute that they had received notice and had an opportunity to participate in the proceeding matter. They admit that they were aware of the transfer application and that they decided not to participate. Their claim for declining to participate is irrelevant to this inquiry. Given the nature of the proceedings, and how parties to proceedings are added (i.e., notice and opportunity to protest or intervene), in IDAPA proceedings, a person who is afforded an opportunity to protest and intervene but fails to do so, meets this element.

3. The use of storage water and natural flow rights arose under the same transaction and occurrence.

As set forth above, Moss Farms' historic deliveries of its BLRID Rights along with the Moss Farms Rights and that the River Diversion was intended to adequately deliver these rights was raised in the Transfer Application. Moss Farms' intention to add the River Diversion and take these rights was evident from the letter of Mr. Reinflesh included int the Transfer Application. Moss's need to create a better system for delivering his storage and natural flow rights were inextricably connected. Therefore, the same transaction and occurrence element is met.

C. This proceeding is not the correct forum to address a prior action of IDWR.

The Pehrsons argue that there are genuine issues of fact regarding changes in futile call determinations in 2022. However, any issues with those determinations were required to be raised in 2022 against the watermaster and IDWR 28 days after the decision, not several years later against Moss Farms. *See* Idaho Code § 67-5273. Therefore, any issues of material fact that may exist to this point are irrelevant and immaterial to this summary judgment proceeding.

D. The question of which transfer governs is immaterial to the issues raised at summary judgment and is a question of law, not fact.

This argument is unclear. Which transfer controls is not the issue. The issue is whether Pehrsons time to raise the issues passed when the Pehrsons failed to join the proceedings. References to a second transfer do not create a dispute over the material facts in this case because the Pehrsons did not show that they participated in any transfer proceeding relating to Moss Farms Rights. Even if it was material, the other transfer also occurred long ago and was not protested. Pehrsons still have not shown that genuine disputes exist.

IV.
CONCLUSION

Based on the foregoing, Moss Farms respectfully requests the Hearing Officer grant summary judgment in favor of Moss Farms and dismiss the Petition in its entirety.

DATED: February 14, 2025

OLSEN TAGGART PLLC

/s/ Skyler C. Johns
SKYLER C. JOHNS, Esq.
Attorney for Moss Farms, Inc.

CERTIFICATE OF SERVICE

I HEREBY CERTIFY that on February 14, 2025, I emailed a true and complete copy of the foregoing document in the manner indicated below, to the following:

RECEIVED
Feb 14, 2025
DEPARTMENT OF
WATER RESOURCES

STATE OF IDAHO
DEPARTMENT OF WATER RESOURCES

IN THE MATTER OF WATER RIGHT NOS. 34-182 AND 34-381A (MOSS FARMS, INC.)	Docket No. **P-DR-2024-001** **MOTION TO STRIKE**
IN THE MATTER OF USE OF NATURAL FLOW FROM THE BIG LOST RIVER AND STORAGE RELEASES FROM MACKAY RESERVOIR	

Moss Farms, Inc., by and through its attorney of record, Skyler C. Johns, of Olsen Taggart PLLC, hereby moves the Hearing Offer pursuant to Idaho Rules of Civil Procedure 56(c) and the Idaho Rules of Evidence for an order striking statements and documents from the declarations filed by the Pehrsons referenced below. This Motion is supported by the *Declaration of Skyler Johns in Support of Motion to Strike and Reply to Pehrsons' Response* (hereafter "Dec. of Johns II") filed contemporaneously herewith.

I.
ARGUMENT

A. Declaration of Loy Peherson

Paragraph 8: "When flows are low in the Big Lost River during certain times of year, the watermaster cannot deliver natural flow through the Darlington Sinks." Loy failed to lay foundation to testify as to the watermaster's duties and what he can or cannot do.

Paragraph 11: "I did not protest the Application because it only involved the Moss Water Rights and did not involve or otherwise suggest that Moss' storage water interests in BLRID were implicated and could be delivered through the Darlington Sinks to the River Diversion." (Emphasis added). This contains hearsay statement about the rules governing BLRID offered to prove the truth of the matter asserted. Idaho Code § 43-304 dictates that BLRID Bylaws and Policies control the distribution of water among its patrons. Therefore, the BLRID Bylaws and Policies are the best evidence for determining what actions are required. Therefore, the statement should be struck and not considered.

Paragraph 13: "As a shareholder in BLRID, it is my experience that if a water user wants to move his interests in the BLRID Storage Rights from one canal or ditch to another canal or ditch, he may do so, but paperwork must be filed with BLRID to make the change, with BLRID agreeing to make the change." This contains hearsay statement about the rules governing BLRID offered to prove the truth of the matter asserted. The BLRID Bylaws and Policies are also the best evidence for determining what actions are required. Therefore, the statement should be struck and not considered.

Paragraph 16 contains hearsay statements between Rob Whitney and Reston Macroft. If further contains conclusory statements and legal conclusions regarding "carriage water."

Paragraph 17 is speculative, non-specific because it is unclear whether it is 6000 or 7,000 miner inches were curtailed.

Paragraph 18: Loy lacks foundations to testify to these matters. His statements of "futile" and the river being "broken" are vague, ambiguous, and conclusory.

For the reasons stated above, the Court should strike the foregoing paragraphs from the Declaration of Loy Pehrson.

B. The Declaration of Randy Pehrson

Paragraph 7: "When flows are low in the Big Lost River during certain times of year, the watermaster cannot deliver natural flow through the Darlington Sinks." Randy failed to lay foundation to testify as to the watermaster's duties and what he can or cannot do.

Paragraph 10 "I did not protest the Application because it only involved the Moss Water Rights and did not involve or otherwise suggest that Moss' storage water interests in BLRID were implicated and could be delivered through the Darlington Sinks to the River Diversion." (Emphasis added). This contains hearsay statements regarding the contents of the Transfer Application and is offered to prove the truth of the matter asserted. The Transfer Application, Dec. of Johns, Ex. C, is also the best evidence for determining whether or not the transfer would involve storage water being diverted at the River Diversion – not Randy's testimony. Therefore, the statement should be struck and not considered.

Paragraph 12: "As a shareholder in BLRID, it is my experience that if a water user wants to move his interests in the BLRID Storage Rights from one canal or ditch to another canal or ditch, he may do so, but paperwork must be filed with BLRID to make the change, with BLRID agreeing to make the change." This contains hearsay statement about the rules governing BLRID offered to prove the truth of the matter asserted. Idaho Code § 43-304 dictates that BLRID Bylaws and Policies control the distribution of water among its patrons. Therefore, the BLRID Bylaws and Policies are the best evidence for determining what actions are required. Therefore, the statement should be struck and not considered.

Paragraph 14: "On August 15, 2022, and as summarized in a September 2, 2022 email from Rob Whitney, IDWR determined that there was a break in the Big Lost River "immediately below the Beck diversion but noted that ' . . . this determination does not prevent users on the Moore Canal or other lower valley ditches to call for and receive delivery of storage water and decreed rights during the remainder of this irrigation season.'" This paragraph contains hearsay statements from Rob Whitney.

Randy lacks foundation as to the information in paragraph 16 lacks foundation. The statements are speculative and nonspecific because it is unclear whether 6,000 or 7,000 miner inches were curtailed.

Paragraph 17 and 18 are conclusory as they do not identify any information about past curtailments.

For the reasons stated above, the Court should strike the foregoing paragraphs from the Declaration of Randy Pehrson.

C. Byron Pehrson

Paragraph 8, "When flows are low in the Big Lost River during certain times of year, the watermaster cannot deliver natural flow through the Darlington Sinks." Byron lacks foundation to testify as to what the watermaster can and cannot do and Byron has not established himself as an expert. Although he stated that he was the chair of BLRID, paragraph 6, he did not identify what knowledge or expertise this position gave him.

Paragraph 11 "I did not protest the Application because it only involved the Moss Water Rights and did not involve or otherwise suggest that Moss' storage water interests in the BLRID

Storage Rights were implicated and could be delivered through the Darlington Sinks to the River Diversion." This contains hearsay statements regarding the contents of the Transfer Application and is offered to prove the truth of the matter asserted. The Transfer Application, Dec. of Johns, Ex. C, is also the best evidence for determining whether or not the transfer would involve storage water being diverted at the River Diversion – not Byron's testimony. Therefore, the statement should be struck and not considered.

Paragraph 12 "As a shareholder in BLRID, it is my experience that if a water user wants to move his interests in the BLRID Storage Rights from one canal or ditch to another canal or ditch, he may do so, but paperwork must be filed with BLRID to make the change, with BLRID agreeing to make the change." This contains hearsay statement about the rules governing BLRID offered to prove the truth of the matter asserted. Idaho Code § 43-304 dictates that BLRID Bylaws and Policies control the distribution of water among its patrons. Therefore, the BLRID Bylaws and Policies are the best evidence for determining what actions are required. This should also be struck because due to lack of foundation. Byron did not identify how he came into possession of the document, what the document is, and what it shows.

Paragraphs 13: "As both a shareholder in BLRID and its past chair, it is my experience that if a water user wanted to move their interests in the BLRID Storage Rights from one of the canals or ditches listed on the BLRID Storage Rights to another of the named canals or ditches, they may do so, but a request must be filed with BLRID to make the change, with BLRID agreeing to make the change." This contains hearsay statement about the rules governing BLRID offered to prove the truth of the matter asserted. Idaho Code § 43-304 dictates that BLRID Bylaws and Policies control the distribution of water among its patrons. Therefore, the BLRID Bylaws and Policies are

the best evidence for determining what actions are required. Therefore, the statement should be struck and not considered.

Paragraph 14: "During my time as chairman, I do not recall Moss making a request to BLRID to move his storage water interests from either the 3 in 1 Ditch or the Moore Canal to the River Diversion." This contains hearsay statement about the rules governing BLRID offered to prove the truth of the matter asserted. Idaho Code § 43-304 dictates that BLRID Bylaws and Policies control the distribution of water among its patrons. Therefore, the BLRID Bylaws and Policies are the best evidence for determining what actions are required. Therefore, the statement should be struck and not considered.

Paragraph 15: "I am aware that in 2022, Randy Pehrson contacted David Hoekema with IDWR to discuss his concerns regarding delivery of the Big Lost River breaking at the Darlington Sinks and futile call of water rights below the Darlington Sinks." This statement contains summaries of hearsay statements between Randy Pehrson and David Hoekema regarding Randy's "concerns regarding delivery of the Big Lost River breaking at the Darlington Sinks and futile call of water rights below the Darlington Sinks."

Paragraph 16: "I am aware that IDWR, through a determination made by Tim Luke, initially stated, on August 15, 2022, that when the Big Lost River was broken at the Darlington Sinks, the Moss Water Rights could not be delivered." This statement contains hearsay statements regarding a determination made by Tim Luke…that when the Big Lost River was broken at the Darlington Sinks, the Moss Water Rights could not be delivered.

Paragraph 17: "On September 2, 2022, IDWR, through an email from Rob Whitney, reversed its decision, instructing Watermaster Preston Marcroft to curtail my water rights that are

junior to the Moss Water Rights, as well as the junior rights of others, so that the water I was using would be conveyed through the Darlington Sinks, using BLRID Storage Rights as carriage water to the River Diversion." This statement contains hearsay statements between Rob Whitney and Preston Marcroft whereby Whitney instructed Macroft "to curtail my water rights that are junior to the Moss Water Rights, as well as the junior rights of others, so that the water I was using would be conveyed through the Darlington Sinks, using BLRID Storage Rights as carriage water to the River Diversion."

Paragraph 18 "According to Mr. Whitney's email, it was not futile to curtail the Moss Water Rights because Moss 'has sufficient storage water to help carry the decreed right.'" This statement contains hearsay statements of Rob Whitney that the water call was "not futile to curtail the Moss Water Rights because Moss 'has sufficient storage water to help carry the decreed right.'" The use references to "futile" and "curtail" are vague and ambiguous, and the statement as a whole is conclusory.

Paragraph 19: "I disagree with this statement made by Mr. Whitney because Moss was out of storage water." Byron lacks foundation to testify as to Moss's storage rights and whether he had sufficient rights or not. Furthermore, paragraph 19 is conclusory.

Paragraph 20: "The storage water that was used to carry the Moss Water Rights to the River Diversion was the interests of other water users on the Moore Canal who had BLRID storage interests remaining, namely: Derek Nichols, Jay Jensen, Joel Anderson, Jason Anderson, and Travis Anderson." Byron did not lay foundation qualifying him to testify as to the rights of other water users or other water corporations. Furthermore, the statement is conclusory.

Paragraph 21: "It is my understanding that it has been estimated that when IDWR instructed the watermaster to curtail my water rights and the water rights of others above the Darlington Sinks, approximately 6,000 – 7,000 miners inches of water (120 cfs – 140 cfs) were curtailed to deliver the Moss Water Rights to the River Diversion." This statement lacks foundation, is speculative and nonspecific because it is unclear whether 6,000 or 7,000 miner inches were curtailed.

Paragraph 22: "Use of BLRID Storage Rights as carriage water though the Darlington Sinks and to the River Diversion was improper and resulted in curtailments that I have not previously experience." The statement is vague, conclusory, and non-specific.

For the reasons stated above, the Court should strike the foregoing paragraphs from the Declaration of Byron Pehrson.

D. Declaration of Lucas Yockey

Paragraph 11: "Moss has interests in the BLRID Storage Rights that he can have delivered at the Moore Canal for irrigation of land this is not associated with the Moss Water Rights, the Application, or the Transfer." This contains hearsay statements regarding the contents of the Transfer Application and is offered to prove the truth of the matter asserted. The Transfer Application, Dec. of Johns, Ex. C, is also the best evidence for determining whether or not the transfer would involve storage water being diverted at the River Diversion – not Yockey's testimony. Therefore, the statement should be struck and not considered.

Paragraph 15: "I did not oppose the approval because the Transfer only involved the Moss Water." This contains hearsay statements regarding the contents of the Transfer Application and is offered to prove the truth of the matter asserted. The Transfer Application, Dec. of Johns, Ex.

C, is also the best evidence for determining whether or not the transfer would involve storage water being diverted at the River Diversion – not Yockey's testimony. Therefore, the statement should be struck and not considered.

Paragraph 19: "As I stated, I am familiar with the BLRID Storage Rights, and unlike the 3 in 1 Ditch or the Moore Canal, the River Diversion is not listed as a point of diversion and/or rediversion." The best evidence to determine what the BLRID Right say is the rights themselves which are provided in the Declaration of Declaration of David R Tuthill, Jr. Therefore, the statement should be struck and not considered.

Paragraph 24: "I am aware that, in the summer of 2022, when the Big Lost River was broken at the Darlington Sinks, Rob Whitney, IDWR, instructed Watermaster Marcroft to curtail natural flow water rights above the Darlington Sinks in order to satisfy the Moss Water Rights. The natural flow water rights that were curtailed were then pushed through the Darlington Sinks with the addition of BLRID storage water as carriage water." This statement contains hearsay statements between Rob Whitney and Preston Macroft regarding Whitney instructing Macroft "to curtail natural flow water rights above the Darlington Sinks in order to satisfy the Moss Water Rights.

Yockey lacks foundation to testify as to the remaining portion of the paragraph "The natural flow water rights that were curtailed were then pushed through the Darlington Sinks with the addition of BLRID storage water as carriage water."

Paragraphs 25, 26, 27 are conclusory, as they provide no basis or explanation for the conclusion that storage water was used as "carriage water."

Paragraph 26 is also conclusory, vague, and ambiguous because it no basis or explanation for the what is meant by "Futile."

Paragraph 27 is vague and conclusory.

Paragraph 28 is hypothetical and is therefore speculative. The statement is also immaterial because what Yockey would have done in 2015 is irrelevant at this point.

For the reasons stated above, the Court should strike the foregoing paragraphs from the Declaration of Lucas Yockey.

E. Declaration of David R. Tuthill, Jr.

Paragraph 22: "Based on my review of the documents that are included as exhibits to the Johns Dec., which includes the Application and Transfer, in addition to my review of Transfer No. 80488, and the filings addressed the use of water right nos. 34-182, 34-381A, 34-2379F, and 34-14525, the documents do not address the use of BLRID storage water."

Paragraph 27: "Based on my review of the documents that are included as exhibits to the Johns Dec., which includes the Application and Transfer, in addition to my review of Transfer No. 80488, and the filings addressed the use of water right nos. 34-182, 34-381A, 34-2379F, and 34-14525, the documents do not address the use of BLRID storage water." This contains hearsay statements regarding the contents of the Transfer Application and is offered to prove the truth of the matter asserted. The Transfer Application, Dec. of Johns, Ex. C, is also the best evidence for determining whether or not the transfer would involve storage water being diverted at the River Diversion – not Byron' testimony. Therefore, the statement should be struck and not considered.

Paragraph 28: "Based on my experience, and because the above-referenced documents never addressed BLRID's storage rights, it was not foreseeable that Moss would use BLRID storage water as carriage water to the new River Diversion, or that IDWR would allow the practice to occur, given that the BLRID's storage rights do not list the River Diversion as a point of diversion and/or rediversion." The best evidence to determine what the BLRID rights say is the rights themselves. This statement also is vague and ambiguous because "carriage water" is not defined.

Paragraph 29: "Because the River Diversion is not listed as a point of diversion and/or rediversion for the BLRID storage rights referenced above in paragraph 13, the correct way to allow Moss to use storage water as carriage water would be for BLRID to file a transfer with IDWR to add the River Diversion as a point of diversion and/or rediversion on the BLRID water rights." The best evidence to determine what the BLRID Right say is the rights themselves which are provided in the Declaration of David R Tuthill, Jr. Therefore, the statement should be struck and not considered.

F. Declaration of Preston Macroft.

Paragraph 9: "Moss has interests in the BLRID Storage Rights that he can have delivered at the Moore Canal for irrigation of land this is not associated with the Moss Water Rights, the Application, or the Transfer." This contains hearsay statements regarding the contents of the Transfer Application and is offered to prove the truth of the matter asserted. The Transfer Application, Dec. of Johns, Ex. C, is also the best evidence for determining whether or not the transfer would involve storage water being diverted at the River Diversion – not Macroft's testimony. Therefore, the statement should be struck and not considered.

Paragraph 14: "Due to Mr. Whitney's instructions, upstream water rights that are junior to the Moss Water Rights were curtailed differently than they have been historically, due to the introduction of BLRID storage water as carriage water." This statement is vague, ambiguous, and unspecific because it does not identify how rights were previously curtailed. The statement is also conclusory.

Paragraph 15: "I disagree with the instructions from Mr. Whitney as this practice of using storage water as carriage water to push upstream, curtailed natural flow water rights through the Darlington Sinks when the Big Lost River is broken at that location has not previously occurred. This practice results in upstream, natural flow water rights being curtailed when they have not been historically curtailed." This statement is vague, ambiguous, and unspecific because it does not identify how rights were previously curtailed. The statement is also conclusory.

Paragraph 16: "It is my opinion and belief that without using BLRID Storage Rights as carriage water, the curtailment of upstream junior water rights would have been futile because the Big Lost River was broken at the Darlington Sinks." This statement is vague, ambiguous, and unspecific because it does not define carriage water. The statement is also conclusory.

Paragraph 17: "It is my opinion and belief that use of BLRID Storage Rights as carriage water through the Darlington Sinks and to the River Diversion was improper and resulted in curtailments that I have not previously seen." This statement is vague, ambiguous, and unspecific because it does not identify how rights were previously curtailed nor does it define "futile." The statement is also conclusory.

BIG LOST RIVER IRRIGATION DISTRICT

BY-LAWS AND POLICIES

2010

STATEMENT OF OBJECTIVES

To deliver to landowners the decreed water from the Big Lost River to which they are entitled pursuant to the water rights held by the individual landowner, and to deliver storage water of the Irrigation District to landowners within the district in the amounts to which said storage water has been apportioned to the lands within the district, all in the most efficient manner and consistent with good management practices. It is also an object of the Irrigation District to transport, by agreement, groundwater for use by landowners on lands within the district and for delivery to the outer boundaries of the district for use on lands outside of the district.

It is the further purpose to maintain the total irrigation system to the degree necessary to preserve the capacity and to maintain the condition of the facilities in a manner, which avoids undue depreciation; and to store and deliver irrigation water as required by the landowners within the Irrigation District.

It is also the object of the Irrigation District to maintain sound fiscal policies, including the maintenance of adequate reserves, and to promote the wise and efficient use of available water and the conservation of the lands within the district; and to hold a minimum, system seepage and operational waste, and to be constantly alert to technical advancement and the adoption of new practices which will improve system operating efficiency.

The Irrigation District is a public quasi corporation, organized; however to conduct a business for the private benefit of owners of land within its limits and it holds its property in a proprietary rather than a governmental capacity. Its quasi-municipal character renders Irrigation District subject to the constitutional requirements concerning electors. The Irrigation District is organized for the specific purpose of providing ways and means of irrigating lands with the district and maintaining the irrigation system for that purpose. The Irrigation District is not strictly municipal in the sense of exercising governmental functions other than those connected with raising revenue to defray expenses of irrigation systems. It is a mutual cooperative corporation organized not for a profit, but it is not a public service corporation in its broad sense. The Irrigation District though a quasi municipality corporation is nevertheless liable for negligence of its officers.

CONTROL OF FACILITIES

Ownership, operation and maintenance of the distribution facilities, dam and reservoir of the Irrigation District is vested in the Irrigation District, for the benefit of the landowners owning lands with the Irrigation District. The business and affairs of the Irrigation District shall be managed and conducted by the Board of Directors of the Irrigation District, which will employ and appoint such agents, officers and employees as may be required and prescribe their duties.

MEETINGS OF BOARD OF DIRECTORS

The Board of Directors shall hold a regular monthly meeting in the office of the Irrigation District on the first Tuesday in every month or such date each month as it shall fix by resolution and of business. All special meetings shall be ordered by the President or a majority of the Board, the order must be entered of record and the Secretary must give each member not joining in the order five-(5) days' notice of such special meetings. The order must specify the business to be transacted at such special meeting and none other than that specified shall be transacted, provided, that whenever all members of the Board are present, however called, the same shall be deemed a legal meeting and any lawful business may be transacted.

All meetings of the Board must be public, and a majority shall constitute a quorum for the transaction of business; but on all questions requiring a vote, there shall be concurrence of at least a majority of the members of the Board. All records of the Board shall be open to the inspection of any elector during business hours.

Minute Procedures adopted in minutes of June 1, 1999. Minutes are limited to motions and actions made by the Directors.

Written minutes of all meetings of the Board of Directors shall be taken, but neither a full transcript nor a recording of the meeting is required. Minutes of executive sessions may be limited to material the disclosure of which is not inconsistent with the provisions of 67-2345, Idaho Code, but shall contain sufficient detail to convey the general tenor of the meeting.

EXECUTIVE SESSIONS, IDAHO STATUTES 67-2345

Nothing contained in this act shall be construed to prevent, upon a two-thirds vote recorded in the minutes of the meeting by individual vote, a governing body of a public agency from holding an executive session. An executive session may be held: a) to consider hiring a public officer, employee, staff members or individual agent. This paragraph does not apply to filling a vacancy in an elective office; b) To consider the evaluation, dismissal or disciplining of, or to hear complaints or charges brought against, a public officer, employee, staff member or individual agent, or public school student; c) To conduct deliberations concerning labor negotiations or to acquire an interest in real property which is not owned by a public agency; d) To consider records that are exempt from disclosure as provided in chapter 3, title 9, Idaho Code. 2) Labor negotiations may be conducted in executive session if either side requests closed meetings. Notwithstanding the provisions of section 67-2343, Idaho Code, subsequent sessions of the negotiations may continue without further public notice. 3) No executive session may be held for the purpose of taking any final action or making any final decision.

ROBERTS RULES OF ORDER

Duties of the Chairman are generally as follows: To open the session at the time at which the assembly is to meet, by taking the chair and calling the members to order; to announce the business before the assembly in the order in which it is to be acted upon, to recognize members entitled to the floor, to state and to put to vote all questions which are regularly moved, or necessarily arise in the course of the proceedings, and to announce the result of the vote; to protect the assembly from annoyance from evidently frivolous or dilatory motions by refusing to recognize them; to assist in the expediting of business in every way compatible with the rights of the members, as by allowing brief remarks when undebatable motions are pending, if he thinks it advisable; to restrain the members when engaged in debate, within the rules of order; to enforce on all occasions the observance of order and decorum among the members, deciding all questions of order (subject to an appeal to the assembly by any two members) unless when in doubt he prefers to submit the question for the decision of the assembly; to inform the assembly, when necessary, or when referred to for the purpose, on a point of order or practice pertinent to pending business; to authenticate, by his signature, when necessary, all the acts, orders, and proceedings of the assembly declaring its will and in all things obeying its commands.

OFFICERS AND EMPLOYEES

No individual member of the Board of Directors may, except when authorized by the Board, interfere with the supervisory functions of any appointed or employed personnel, nor with any district employee in the performance of that employee's duties. Individual Directors should refrain from exercising any direct authority over any employee, and the Board shall act, as a unit, pursuant to decisions made in duly called Board meetings.

MACKAY RESERVOIR

The BLRID manages the Mackay Reservoir, which was purchased in 1935 by the bonding of the people of Lost River Valley for $235,000. The reservoir to elevation 6,062 ft. to elevation 6,066 ft. is an "easement only".

In May 1959, this easement was in a court action with Leland Zollinger. This property is now Six X ranches. This extended easement brings the reservoir capacity to 44,505-acre feet. Since the filling of the reservoir is to easement level, any storage water above the noted 44,505 AF whether by flood or otherwise would be constructed as trespass and be subject to legal action by the property owners being trespassed by the said water. In 1990 a survey was performed by Bill Erickson, to establish the boundaries, the crew installed fence posts. At the same time, the surveyor stated that it appeared that the Six X ranches were farming some the reservoir lands belonging to the BLRID. Attorney Roger Ling

stated that there was not any adverse or prescriptive use against a political entity, so this farming was not a problem.

The river has a capacity to carry a maximum of 2700 CFS during flooding, and even that is subject to river bank erosion.

The court judge in the case of Johnson, Donahue vs. BLRID was advised that the BLRID was only a canal company and to "stay out of the river". In that context, our crew must never be in the river unless it is to protect our headings. We have a 400 feet emergency permit for heading protection from the Corp. of Engineers.

The BLRID owns the following properties: the water rights, dam, reservoir and irrigation system of said project, in their entirety. All of the land where the campground and boat landing belongs to the BLRID and is leased with a 99-year lease to the Bureau of Land Management. Since this property, boat dock etc. is leased. Anyone wishing to do any work must obtain a sub-lease from the BLM. 20 acres in the W2SW4NE4 section 12, T7N, R23E.

Acquired as land patent number 11-69-0059 recorded May 13, 1973. This is the 20 acres where the caretaker's dwelling was for many years. 40 acres described as NW4SE4 section 12, T7N, R23E. Quit claim deed to BLRID from William Clark, June 16, 1942. 160 acres in NW4NW4, S2NW4, NE4SW4 section 12, T7N, R23E acquired by the purchase of the Mackay reservoir. Now being leased to Scott McAffee for $10.00 per year and to Idaho Fish and Game for the campground. VERY IMPORTANT that Scott McAffee is not allowed to forfeit payment because although the BLRID is political sub-division its possible it would require court action if Mr. McAffee filed for prescription or adverse use to claim ownership of the property. This same rule applies to the land that the 6X (according to the surveyor) farm that belongs to BLRID. Lots 18-24 in block 11 Mackay Original townsite, according to the official plat on file with the Custer county recorder. These are the lots where our shop and equipment are stored. Lots 1-3 N2 3 Mackay Original townsite block 11, this is the office.

BY-LAWS
OF
BIG LOST RIVER IRRIGATION DISTRICT
Butte and Custer Counties, Idaho

---------oooooBBBBBBooooo---------

ARTICLE I.

NAME, BOUNDARIES AND DIVISIONS.

Sec. 1. The name of this District is BIG LOST RIVER IRRIGATION DISTRICT.

Sec. 2. The boundaries of this District are as shown in the official map thereof and as described in the order of the Board of County Commissioners of Butte County, Idaho, of date July 3, 1920, both of which are on file in the County records of said County, and also in the files and records of said District, reference to which is hereby made for a more complete description thereof. (Together with all additions, changes, and revisions made pursuant to order of the Board and filed in the recorders office of the appropriate county. Reference is made to Idaho Code 43-101 to 43-118.) (Added to By-Laws June 2, 1964)

Sec. 3. The District is divided into five (5) divisions, the boundaries of which have been fixed as provided by law and are as follows: (Changes from three to five divisions made May 10, 1962)

Division No. 1.

All that part of the Irrigation District south and east of the Arco diversion with the District boundaries.

Division No. 2.

All that part of the Irrigation District south and west of the Moore diversion, being west of the Big Lost River and James Creek channels to the Arco diversion.

Division No. 3.

All that part of the Irrigation District east and south from the Moore diversion and east of the Big Lost River and James Creek channels to the Arco diversion.

Division No. 4.

All that part of the Irrigation District east and south of the Pass Creek road between sections 3 & 4, Twp 6N, Rge 25 EBM, across the valley on section lines between sections 5 & 8, sections 4 & 9, and section 3 & 10, all in Twp 5N, Rge 26 EBM to district boundaries.

Division No. 5.

All that part of the District from the Mackay Dam and upper Ceder Creek to the County road running north and south between sections 3 & 4 Twp 6N, Rge 25 EBM (commonly known as Pass Creek road), crossing the railroad from the Leslie store south and following the County road south to the Butte, north and west around the Butte to the Darlington ditch and district boundary.

ARTICLE II.

DISTRICT OFFICE.

Sec.1. The office of the Board shall be located at Mackay, Custer County, Idaho.

ARTICLE III.

BOARD OF DIRECTORS.

Sec. 1. The Board of Directors shall consist of five (5) members, and elected from each division of the District, they shall have the qualifications and exercise the powers conferred upon them by law. (Reference Idaho Code 43-201 & 213)

Sec. 2. The Board of Directors shall meet on the first Tuesday of January following their election and organize as a board, elect a Chairman, and appoint a Secretary and Treasurer and such other officers and employees as they may deem necessary, who shall hold office during the pleasure of the Board and perform such duties as shall be imposed upon them by law. The office of Secretary and Treasurer and that of any other officer may be combined in one person, at the discretion of the Board.

Sec. 3. The Board of Directors shall have power to appoint such agents, or officers or employees as may be required and prescribe their duties and fix their salaries. The Board of Directors shall have such powers as are enumerated in Section 42-304 of the Idaho Code Annotated, 1932, and any acts amendatory thereof, any and all powers which the Statutes of Idaho provide for an Irrigation District.

Sec. 4. The Board of Directors shall hold a regular monthly meeting in their office on the first Tuesday of every month and such special meetings as may be required for the proper transaction of business.

Sec. 5. All special meetings of the Board of Directors shall be ordered by the Chairman or a majority of the Board. The order must be entered of record, and the Secretary must give each member not joining in the order five days' notice of such special meeting. The order must specify the business to be transacted at such special meeting and none other than that specified shall be transacted; provided that all members of the Board are present at a meeting, the same shall be deemed a regular meeting and any lawful business may be transacted. All meetings of the Board must be public and a majority shall constitute a quorum for the transaction of business. On questions requiring a vote, there should be a quorum of at least a majority of all members of the Board. All records of the Board shall be open to the inspection of any elector during business hours.

Sec. 6. The members of the Board of Directors shall each receive a minimum sum per day spent attending meetings of the Board, or while engaged in official business under order of the Board, and actual and necessary expenses. Such actual and necessary expenses shall include all traveling and hotel expenses necessary to be incurred by any Director when absent from his residence in the performance of the duties of his office.

ARTICLE IV.

ELECTIONS.

Sec. 1. Elections shall be held in the District as provided by existing law of the State of Idaho and amendments thereto, The person receiving the highest number of votes for any office to be filled at such election shall be declared elected thereto, and shall hold said office for the time prescribed by the laws of the State of Idaho, and until his successor is elected and qualified. (Per Idaho Code 34-106, if the only petition received is

from the incumbent, there will not be an election and the incumbent shall be sworn in at the next regular meeting.

Sec. 2. Within ten days after receiving certificates of election as provided by law, the officer so elected shall take and subscribe an official oath and file the same in the office of the Board of Directors and execute an official bond in the form prescribed by law in the sum of not less than $1000.00, nor more than $5000.00, for the faithful performance of his duties as such officer the amount of such bond to be determined and approved by the Judge of the Probate Court of Butte county, Idaho, (when required) and recorded in the office of the County recorder of said County and filed in the office of the Board of Directors.

Sec. 3. Any other officers or employees of the District shall furnish bonds at the discretion of the Board and if required by it and in such an amount as the Board may determine.

ARTICLE V.

OFFICERS, THEIR DUTIES AND COMPENSTION.

Sec. 1. The officers of the District shall consist of a Chairman (President), Secretary and Treasurer. The Chairman shall be chosen by the Directors from among themselves. The Secretary and Treasurer shall be appointed by the Board of Directors and they shall serve during the pleasure of the Board of Directors.

Sec. 2. The Chairman of the Board of Directors shall preside at all meetings of the Board of Directors and shall sign, as Chairman, all instruments in writing which have first been approved by the said Board of Directors. He or she shall call meetings of the Board of Directors wherever he deem it necessary, or when requested so to do by any other member of the Board.

Sec. 3. It shall be the duty if the Assistant Secretary-Treasurer to keep accurate records of the business transacted by the Board of Directors at their meetings. The Secretary-Treasurer shall countersign all the warrants drawn upon the treasury of the District, and with the assistance of the Assistant Secretary-Treasurer shall keep proper account books and discharge such other duties as pertain to his office and as shall be prescribed by the Board of Directors and the laws the State of Idaho.

Sec. 4. It shall be the further duty of the Secretary to give notice at the time prescribed by law of all elections held within the District, and of all meetings of the Board of Directors which are held to correct assessments, and shall give all other notices that may be required by the statutes of Idaho.

Sec. 5. The Treasurer shall on his appointment execute and file with the Secretary an official bond in a lawfully qualified Surety Company in such amount as may be fixed by the Board of Directors of the District, which shall not be less than $5000.00, and he shall thereafter from time to time execute and file such further bonds as may be required by said Board in amounts fixed by it, which amounts shall be of at least fifty percent of the maximum amount of money in the Treasurer's hands at any one time.

Sec. 6. It shall be the duty of the Assistant Secretary-Treasurer to safely keep all moneys belonging to the District, making a deposit thereof in such Bank or Banks as may from time to time be directed by the Board of Directors. The Treasurer shall disburse moneys belonging to the District under direct authority of the Board of Directors.

Sec. 7. Representing the Secretary-Treasurer, the Assistant Secretary-Treasurer is hereby required to be in attendance at the time and place specified by the Board of Directors and as provided by law, to receive assessments and tolls, which must be paid in lawful money of the United States or by labor or services performed as may be authorized by said Board. The Assistant Secretary-Treasurer must make the date of payment of any assessments in the assessment book at the proper place, giving a receipt to the person paying, specifying the amount of the assessment, and if delinquent, the amount of costs and penalties thereon.

ARTICLE VI.

GENERAL MANAGER.

Sec. 1. It shall be the duty of the Board of Directors to appoint a General Manager of the District.

Sec. 2. It shall be the duty of the General Manager of the District to take an oath of office and file the same with the Board, to take charge of all property belonging to the District, rendering an account thereof to the Board of Directors from time to time as required; to make returns to the Board of all persons employed by the District and

statement of all expenditures accompanying the same, with the necessary vouchers, and he shall make such reports to the Board as may be from time to time required. The General Manager shall not, however, have the power to sign notes or contracts for the District; neither shall he have power to incur any indebtedness unless authorized by the Board of Directors. He shall have general charge of the distribution of water furnished by the District to consumers, and also general charge of the canals and laterals belonging to the District, and the care and maintenance of the same.

ARTICLE VII.

CONTROL OF DISTRICT'S IRRIGATION SYSTEM AND DISTRIBUTION OF WATER TO CONSUMERS.

Sec. 1. The Mackay Dam and Reservoir, and the control and diversion gates at said Mackay Dam and Reservoir, and all main canals and laterals and all diversion and distribution of water, and all storage and natural flow rights owned by Big Lost River Irrigation District, shall be under the direction and supervision of the General Manager, whose duty it shall be to distribute water to the consumer thereof according to their rights under these By-Laws and the laws of the State of Idaho, and under such special rules as may be from time to time made by the Board of Directors in any emergency.

Sec. 2. It shall be the duty of all consumers of water supplied by the District to build and maintain laterals and measuring headgates whereby water is drawn from main canals or laterals of the District.

Sec. 3. All the headgates or measuring devices shall be built and placed in position under the direction of the general manager, and shall be removed and replaced from time to time if considered necessary by the General Manager. The expense of removing and replacing headgates or measuring devices in main canals owned or operated by the District shall be borne by the District. The General Manager shall have authority, in the event that any headgate or measuring device on any lateral of any consumer of water shall not be in proper condition to have water diverted therefrom, either to construct a new headgate or measuring device and the cost thereof shall be charged to the said water consumer, or to refuse to deliver water to said consumer, or to

refuse to deliver water to said consumer, first serving five (5) days written notice thereof upon said water consumer.

Sec. 4. All measuring devices shall be constructed in accordance with rules of the Department of Reclamation and irrigation practice. Any person desiring to use water upon land owned or controlled by him, must make application therefor at least forty-eight (48) hours before such water is to be turned on or off. [*Nothing herein contained shall be construed to mean that more than one inch of water to the acre, measured on an acre foot basis, shall be used by any consumer unless there is a surplus of water in the canals and storage reservoir of the District.*] **(This paragraph was deleted from By-Laws June 2, 1964).**

Sec. 5. Any water consumer who has a water right under the Assessment and Apportionment of Benefits under the District's bond issue voted May 18, 1935, and approved and confirmed by the District Court of the Sixth Judicial District of the State of Idaho in and for the County of Custer, on January 6, 1936, and thereafter approved by Reconstruction Finance Corporation, shall have the right to any water belonging to him by such storage right or direct flow under said Assessment and Apportionment of Benefits, in the District's Reservoir, [*but such water consumer shall be required first to give forty-eight (48) hours notice to the General Manager of the District or to the office of the District of his intention to store said water, and such water consumer shall likewise give forty-eight (48) hours notice to the General Manager or to the office of the District of his desire again to use water.]* **(This paragraph was deleted from By-Laws June 2, 1964).**

Sec. 6. No water consumer shall be entitled to holdover storage water from year to year in the District's Reservoir whereby he may claim water for irrigation purposes.

Sec. 7. The Board of Directors shall have power to reduce the quantity of storage water demanded by any consumer in case of a shortage in the Mackay Reservoir, or by reason of breakage in the banks of canals, headgates or dams, whereupon it shall be the duty of the Board of Directors to apportion the water available pro rata among all consumers.

Sec. 8. All users of decreed water storing the same in the Mackay Reservoir, shall be charged with their proportion of evaporation losses in such Reservoir.

Sec. 9. No obstructions shall be placed in any of the canals or diversion works of the District without the consent of the Board of Directors in writing. No water wheels for generation of power or elevation of water shall be placed in any of the canals of the District except upon the written consent of the Board of Directors, and the payment of an annual fee therefor, such fee to be in such amount as the Board of Directors shall deem fit and proper.

Sec. 10. Consumers of water must not interfere with gates or measuring devices after the same have been set by the watermaster, or ditch rider.

Sec. 11. The number of headgates necessary for the irrigation of any tract of land may be determined by the Board of Directors, and no unnecessary headgates shall be maintained or operated.

Sec. 12. The banks of canals or laterals must not be out or trampled by livestock. Fences across the banks of canals or laterals must be constructed with proper gate-ways on the banks to be traveled by the watermaster and ditch rider. Fences across canals shall be so constructed as to be above water and so that drift will not collect against them.

Sec. 13. Wasting of water will not be permitted.

ARTICLE VIII.

FISCAL YEAR.

Sec. 1. The fiscal year shall begin January 1st and shall end December 31st of each year.

ARTICLE IX.

BUDGET ESTIMATES.

Sec. 1. It shall be the duty of the Board of Directors at its regular meeting in February of each year to ascertain and determine the amount of money necessary for the transaction and conduct of the District's business and the payment of the outstanding maturing obligations and for such other purposes as may have been specially and lawfully authorized, all as may be required for the twelve months' period commencing on the first day of May of each year.

ARTICLE X.

TOLLS, ASSESSMENTS AND MAINTENANCE CHARGES.

Sec. 1. The toll system has been definitely adopted by the District. For the purpose of defraying the expenses of the care, maintenance, operation, management and repair of the canals, dams, reservoirs, diversion works and other property of the District, and for the payment of the salaries of officers and employees of the District, the Board of Directors shall have the right to levy and collect a toll charge for the payment of such expenses, either in whole or in part. The Board shall meet on its regular meeting date on or before the first Tuesday of March of each year, beginning with the year 1937, levy and fix such toll charges, which toll charges may be either in whole or in part of the total amount required for such expenses.

Sec. 2. The Board of Directors, in its order fixing or levying such tolls each year shall fix the date or dates on or before which the same must be paid, and shall require the same payable in advance of the delivery of any water during the year for which the same are fixed, and may make provision for the collection thereof and the keeping of a toll book by the District Treasurer.

[Sec. 3. If water assessments or toll charges are not paid by July 1 of each year, the Board of Directors shall have the right to redistribute and pro rate the amount of storage water represented by such unpaid water assessments and toll charges among the consumers within the District entitled to water from said District.] **(Minutes of August 1, 1961. NOW THEREFORE, BE IT RESOLVED, that this said Section 3 of the By-Laws be, and hereby, canceled and removed from said By-Laws of the District, effective this date.)**

Sec. 4. No owner or user of decreed water will be permitted to store water in the District's Reservoir until such time as all assessments of every kind and character due said District against said decreed water and against the land to which said decreed water is appurtenant, have been paid.

ARTICLE XI.

SEAL.

Sec. 1. The corporate seal of this District shall have engraved thereon the full name of the District and the name of the State.

Sec. 2. The corporate seal of this District shall always remain in the custody of the Secretary.

ARTICLE XII.

ALTERATION OF BY-LAWS.

Sec. 1. These By-Laws may be altered, amended, or repealed at any meeting of the Board of Directors.

ARTICLE XIII.

POSSESSION OF BY-LAWS.

Sec. 1. These By-Laws shall always remain in the possession of the Secretary of the District and kept in the office of the District.

STATEMENT OF OBJECTIVES

To deliver to landowners the decreed water from the Big Lost River to which they are entitled pursuant to the water rights held by the individual landowner, and to deliver storage water of the Irrigation District to landowners within the district in the amounts to which said storage water has been apportioned to the lands within the district, all in the most efficient manner and consistent with good management practices. It is also an object of the Irrigation District to transport, by agreement, groundwater for use by landowners on lands within the district and for delivery to the outer boundaries of the district for use on lands outside of the district.

It is the further purpose to maintain the total irrigation system to the degree necessary to preserve the capacity and to maintain the condition of the facilities in a manner, which avoids undue depreciation; and to store and deliver irrigation water as required by the landowners within the Irrigation District.

It is also the object of the Irrigation District to maintain sound fiscal policies, including the maintenance of adequate reserves, and to promote the wise and efficient use of available water and the conservation of the lands within the district; and to hold a minimum, system seepage and operational waste, and to be constantly alert to technical advancement and the adoption of new practices which will improve system operating efficiency.

The Irrigation District is a public quasi corporation, organized; however to conduct a business for the private benefit of owners of land within its limits and it holds its property in a proprietary rather than a governmental capacity. Its quasi-municipal character renders Irrigation District subject to the constitutional requirements concerning electors. The Irrigation District is organized for the specific purpose of providing ways and means of irrigating lands with the district and maintaining the irrigation system for that purpose. The Irrigation District is not strictly municipal in the sense of exercising governmental functions other than those connected with raising revenue to defray expenses of irrigation systems. It is a mutual cooperative corporation organized not for a profit, but it is not a public service corporation in its broad sense. The Irrigation District though a quasi municipality corporation is nevertheless liable for negligence of its officers.

CONTROL OF FACILITIES

Ownership, operation and maintenance of the distribution facilities, dam and reservoir of the Irrigation District is vested in the Irrigation District, for the benefit of the landowners owning lands with the Irrigation District. The business and affairs of the Irrigation District shall be managed and conducted by the Board of Directors of the Irrigation District, which will employ and appoint such agents, officers and employees as may be required and prescribe their duties.

MEETINGS OF BOARD OF DIRECTORS

The Board of Directors shall hold a regular monthly meeting in the office of the Irrigation District on the first Tuesday in every month or such date each month as it shall fix by resolution and of business. All special meetings shall be ordered by the President or a majority of the Board, the order must be entered of record and the Secretary must give each member not joining in the order five-(5) days' notice of such special meetings. The order must specify the business to be transacted at such special meeting and none other than that specified shall be transacted, provided, that whenever all members of the Board are present, however called, the same shall be deemed a legal meeting and any lawful business may be transacted.

All meetings of the Board must be public, and a majority shall constitute a quorum for the transaction of business; but on all questions requiring a vote, there shall be concurrence of at least a majority of the members of the Board. All records of the Board shall be open to the inspection of any elector during business hours.

Minute Procedures adopted in minutes of June 1, 1999. Minutes are limited to motions and actions made by the Directors.

Written minutes of all meetings of the Board of Directors shall be taken, but neither a full transcript nor a recording of the meeting is required. Minutes of executive sessions may be limited to material the disclosure of which is not inconsistent with the provisions of 67-2345, Idaho Code, but shall contain sufficient detail to convey the general tenor of the meeting.

EXECUTIVE SESSIONS, IDAHO STATUTES 67-2345

Nothing contained in this act shall be construed to prevent, upon a two-thirds vote recorded in the minutes of the meeting by individual vote, a governing body of a public agency from holding an executive session. An executive session may be held: a) to consider hiring a public officer, employee, staff members or individual agent. This paragraph does not apply to filling a vacancy in an elective office; b) To consider the evaluation, dismissal or disciplining of, or to hear complaints or charges brought against, a public officer, employee, staff member or individual agent, or public school student; c) To conduct deliberations concerning labor negotiations or to acquire an interest in real property which is not owned by a public agency; d) To consider records that are exempt from disclosure as provided in chapter 3, title 9, Idaho Code. 2) Labor negotiations may be conducted in executive session if either side requests closed meetings. Notwithstanding the provisions of section 67-2343, Idaho Code, subsequent sessions of the negotiations may continue without further public notice. 3) No executive session may be held for the purpose of taking any final action or making any final decision.

ROBERTS RULES OF ORDER

Duties of the Chairman are generally as follows: To open the session at the time at which the assembly is to meet, by taking the chair and calling the members to order; to announce the business before the assembly in the order in which it is to be acted upon, to recognize members entitled to the floor, to state and to put to vote all questions which are regularly moved, or necessarily arise in the course of the proceedings, and to announce the result of the vote; to protect the assembly from annoyance from evidently frivolous or dilatory motions by refusing to recognize them; to assist in the expediting of business in every way compatible with the rights of the members, as by allowing brief remarks when undebatable motions are pending, if he thinks it advisable; to restrain the members when engaged in debate, within the rules of order; to enforce on all occasions the observance of order and decorum among the members, deciding all questions of order (subject to an appeal to the assembly by any two members) unless when in doubt he prefers to submit the question for the decision of the assembly; to inform the assembly, when necessary, or when referred to for the purpose, on a point of order or practice pertinent to pending business; to authenticate, by his signature, when necessary, all the acts, orders, and proceedings of the assembly declaring its will and in all things obeying its commands.

OFFICERS AND EMPLOYEES

No individual member of the Board of Directors may, except when authorized by the Board, interfere with the supervisory functions of any appointed or employed personnel, nor with any district employee in the performance of that employee's duties. Individual Directors should refrain from exercising any direct authority over any employee, and the Board shall act, as a unit, pursuant to decisions made in duly called Board meetings.

MACKAY RESERVOIR

The BLRID manages the Mackay Reservoir, which was purchased in 1935 by the bonding of the people of Lost River Valley for $235,000. The reservoir to elevation 6,062 ft. to elevation 6,066 ft. is an "easement only".

In May 1959, this easement was in a court action with Leland Zollinger. This property is now Six X ranches. This extended easement brings the reservoir capacity to 44,505-acre feet. Since the filling of the reservoir is to easement level, any storage water above the noted 44,505 AF whether by flood or otherwise would be constructed as trespass and be subject to legal action by the property owners being trespassed by the said water. In 1990 a survey was performed by Bill Erickson, to establish the boundaries, the crew installed fence posts. At the same time, the surveyor stated that it appeared that the Six X ranches were farming some the reservoir lands belonging to the BLRID. Attorney Roger Ling

stated that there was not any adverse or prescriptive use against a political entity, so this farming was not a problem.

The river has a capacity to carry a maximum of 2700 CFS during flooding, and even that is subject to river bank erosion.

The court judge in the case of Johnson, Donahue vs. BLRID was advised that the BLRID was only a canal company and to "stay out of the river". In that context, our crew must never be in the river unless it is to protect our headings. We have a 400 feet emergency permit for heading protection from the Corp. of Engineers.

The BLRID owns the following properties: the water rights, dam, reservoir and irrigation system of said project, in their entirety. All of the land where the campground and boat landing belongs to the BLRID and is leased with a 99-year lease to the Bureau of Land Management. Since this property, boat dock etc. is leased. Anyone wishing to do any work must obtain a sub-lease from the BLM. 20 acres in the W2SW4NE4 section 12, T7N, R23E.

Acquired as land patent number 11-69-0059 recorded May 13, 1973. This is the 20 acres where the caretaker's dwelling was for many years. 40 acres described as NW4SE4 section 12, T7N, R23E. Quit claim deed to BLRID from William Clark, June 16, 1942. 160 acres in NW4NW4, S2NW4, NE4SW4 section 12, T7N, R23E acquired by the purchase of the Mackay reservoir. Now being leased to Scott McAffee for $10.00 per year and to Idaho Fish and Game for the campground. VERY IMPORTANT that Scott McAffee is not allowed to forfeit payment because although the BLRID is political sub-division its possible it would require court action if Mr. McAffee filed for prescription or adverse use to claim ownership of the property. This same rule applies to the land that the 6X (according to the surveyor) farm that belongs to BLRID. Lots 18-24 in block 11 Mackay Original townsite, according to the official plat on file with the Custer county recorder. These are the lots where our shop and equipment are stored. Lots 1-3 N2 3 Mackay Original townsite block 11, this is the office.

Preface

This pamphlet provides an index and copy of the various Idaho laws that pertain to water distribution on canals and laterals. It is intended as a reference guide so water users and non-water users may have first-hand knowledge of certain water laws that apply to various aspects of canals and laterals. The pamphlet contains the most relevant and common laws pertaining to distribution of water on canals, ditches and laterals. Individuals are encouraged to consult these statutes when first addressing questions or issues related to ditches and laterals but recognize that these laws and this pamphlet may not answer or address all pertinent questions. Certain questions or assistance may be most appropriately addressed by local canal companies, irrigation districts and lateral organizations. The Idaho Department of Water Resources (IDWR) may provide some assistance in addressing general questions related to Idaho water laws with respect to common water distribution matters. A guide to IDWR office locations and phone numbers is provided on the inside cover of this pamphlet.

In addition to water distribution matters that routinely arise, many misunderstandings between neighbors involve disputes over the existence and scope of water related rights-of-way and easements. In many instances, disputes over these types of property interests can present difficult legal questions involving legal research and analysis requiring the parties to consult their attorneys.

Please note that this pamphlet is not a comprehensive reference of all the laws in Idaho related to irrigation, water use and water delivery. There are numerous laws that address water rights and irrigation. These laws are found in Titles 42 and 43 of the Idaho Code. These and several other laws found in different Titles of the Idaho Code may have some relevance to water delivery but are omitted from this publication since they are not germane to distribution of water on ditches and laterals. Sections 31-3805 and 31-3806, for example, address certain county zoning regulations applicable to water delivery systems in subdivisions.

A complete copy of the Idaho Code related to water rights and irrigation statutes may be viewed online using a link on the IDWR homepage at idwr.idaho.gov, or through the State of Idaho homepage at idaho.gov. A complete copy of the Idaho Code can also be obtained at most Idaho libraries.

Water Conversion Factors 22

Glossary 25

General Information Regarding Ditches and Easements

Irrigation Ditch Questions

Idaho property owners often have some type of ditch crossing their lands that transport water to another place. Two types of ditches are most common:

- Irrigation ditches, which carry needed "live" irrigation water to the place of use, and
- Wastewater-ditches, which carry away excess water from the place of use.

Water users generally maintain some type of easement to pass water through and maintain ditches over the lands of their neighbors. Easements are limited to right of use over the lands of another and pass with the land to subsequent owners. Easements are valuable interests in land and are protected from interference by others. Although many types of real estate easements are reduced to a written document and recorded at the county courthouse, most ditch easements are not. The right to use a ditch over the lands of another is often an implied right that was created about the same time as the water right was created and developed. The scope of the easement and the extent of maintenance practices are often established by historical usage. Under Idaho Code § 42-1207, subject to certain limitations, underlying landowners can relocate a ditch on their lands at their expense provided that there is no injury to the persons using the ditch.

The owners or operators of ditches used for irrigation purposes are responsible for maintenance and repair of ditches to prevent damage or injury to property owners, whether on lands of the owners or operators of ditches or upon other lands (see Idaho Code §§ 42- 1202 through 42-1204).

Title 42: Irrigation and Drainage – Water Rights and Reclamation

Chapter 1: Appropriation of Water — General Provisions

42-109. Change in Course of Ditch — When Prohibited.

Whenever any ditch or canal has been constructed for the purpose of conveying water and selling the same for irrigating purposes, it is unlawful for the owner or owners of said ditch or canal to change the line of said ditch or canal so as to prevent or interfere with the use of water from said ditch or canal, by any one who, prior to the proposed change, had used water for irrigating purposes from said ditch or canal.

Chapter 9: Distribution of Water to Consumers

42-901. Appointment of Watermaster — Appointment by Court.

It shall be the duty of those owning or controlling any ditch, canal or lateral to appoint a superintendent or watermaster, whose duty it shall be to measure the water from such ditch, canal or lateral through the outlet of those entitled thereto, according to his or her pro rata share: provided, that any vicinity or neighborhood, the inhabitants of which use the waters of any ditch, canal or lateral for the purpose of irrigation, or have or claim a common right to the waters of any ditch or lateral for such purposes, provided the waters so claimed or used have not been allotted to the individual users thereof, shall constitute a water district.

Any one or more of said joint owners so using the water of any ditch, canal or lateral as aforesaid, when the appointment of a watermaster can not be agreed upon, may petition the judge of the district court in whose district the ditch, canal or lateral may be located for the appointment of a watermaster for said ditch, canal or lateral, and shall set forth in said petition the facts of his or her ownership in said ditch, canal or lateral; the ownership and interest of all other joint owners; the location and length of said ditch, canal or lateral, and requesting said district court to appoint a watermaster to take charge of the same. Upon due notice being given to all of the water users under said ditch, canal or lateral, and after hearing before said court, it shall be the duty of the judge of said district court if he deem it necessary or equitable in order that the rights of all water users under said ditch, canal or lateral may be protected, to appoint a watermaster for the ditch, canal or lateral described in the petition. Said watermaster to receive such compensation as the court in his judgment may deem adequate, and shall be paid in the same manner as is provided for the payment of watermasters under chapter 5 [6] of this title, and shall perform the same duties and have the same power and authority as other watermasters appointed or elected in accordance with the provisions of this code.

42-902. Injuring Ditch or Head gate — Triple Damages.

Any person who, without the consent of the watermaster of the district, diverts any water from the ditch or channel where it was placed, or caused, or left to run by the watermaster or his deputies, or who shuts or opens any ditch, gate or dam with intent so to divert any water, and thereby deprive any person of the use of the same during any part of the time he is entitled to such use, or who, without the consent of the watermaster, cuts any ditch or the banks thereof, or breaks or destroys any gate or flume, is liable in a civil action to any person injured thereby in three times the actual damage sustained in consequence of any such wrongful act or acts.

42-903. Head gates and Measuring Devices — Water Companies to Furnish.

Any person, association or corporation delivering or distributing water under any fixed annual charge or rental shall provide the necessary gates and measuring devices to render possible and practicable a measurement of the quantity of water being delivered to any consumer (or number of consumers using a common lateral or distributing ditch); and the price charged for the annual use of the water so distributed shall be in proportion to the quantity of water delivered from the works of such person, association or corporation. Such measuring devices shall be of such a character, and provided with such gauges or scales, that the quantity of water being delivered at any time can be ascertained by inspection; and shall be of such general plan as shall meet with the approval of the department of water resources, which shall inspect any such devices whenever possible to ascertain their character, and the department shall furnish such general information and instructions to any consumer, or the watermaster of any number of consumers of water, as may be necessary to enable him to ascertain the quantity of water flowing through any such measuring device.

42-904. Division of Land into Classes by Priority.

When any ditch, canal or reservoir delivering or distributing water to several users has one or more rights or priorities by reason of enlargements made from time to time, the right of the land being irrigated by such works shall be divided into classes; rights of the first class belonging to those lands reclaimed between the dates of the first and second priorities or rights of such works; rights of the second class belonging to those lands reclaimed between the dates of the second and third priorities of such works; rights of any other class being determined in like manner; but all the rights belonging to the same class shall be equal and subject alike to the regulations of their respective class.

42-905. Point of Delivery.

Any person, association or corporation which may contract to deliver a certain quantity of water to any party or parties, shall deliver the same to such party or parties, together with a reasonable and necessary allowance for loss by evaporation and seepage, at some convenient point on the main ditch, canal or reservoir of said person, association or corporation, or on any branch or lateral thereof belonging to the owner or owners of such ditch, canal or reservoir.

42-906. Amount and Lien of Rental or Maintenance.

The amount to be paid by said party or parties for the delivery of said water, which amount may be fixed by contract, or may be as provided by law, is a first lien upon the land for the irrigation of which said water is furnished and delivered. But if the title to said tract of land is in the United States or the state of Idaho, then the said amount shall be a first lien upon any crop or crops which may be raised upon said tract of land, which said lien shall be recorded and collected as provided by law for other liens in this state. And any mortgage or other lien upon such tracts of land that may hereafter be given shall in all cases be subject to the lien for price of water as provided in this section.

42-907. Duties of Consumers — Appointment of Manager of Distributing Lateral.

Where two (2) or more parties take water from said ditch, canal or reservoir at the same point, to be conveyed to their respective premises for any distance through the same lateral or distributing ditch, such parties shall, on or before April first of each year, select some person to have charge during the succeeding season of the distribution of water from such lateral, whose duty it shall be to ascertain and see that the amount of water to which each of the parties interested is entitled is properly

apportioned and distributed. It shall be his further duty to see that the said person, association or corporation, contracting to furnish such water shall deliver the amount as provided in section 42-905, [Idaho Code,] and in case of dispute between such person and the said person, association or corporation as to the quantity of water to be delivered, or the amount actually delivered, the matter shall be referred to the department of water resources. The parties entitled to said water shall keep their ditches and laterals in good condition for carrying and distributing the same. In case the parties entitled to the use of water as in this section stated shall neglect or refuse to perform the duties imposed upon them by this section, they shall have no cause for damage against the person, association or corporation furnishing said water for failure to properly furnish and distribute the same.42-908. Manager of Distributing Lateral — Alternative Method of Selection.

Wherever two [(2)] or more persons take water from any main ditch, canal or reservoir, at the same point, to be conveyed to their respective premises for any distance through the same lateral or distributing ditch, as provided in section 42- 905, [Idaho Code,] the person to be selected by such parties on or before April first of each year, as provided in section 42-907 [Idaho Code,] may be selected and appointed by a written instrument designating such person, signed by the majority of such persons so using the said ditch for their said water, and filed with the watermaster or other managing agent or director of such main canal, ditch or reservoir.

42-909. Manager of Distributing Lateral — Appointment by District Watermaster — by Directors of Irrigation District — Payment of Compensation.

If two (2) or more parties taking water from any main ditch, canal or reservoir at the same point to be conveyed to their respective premises for any distance, through the same lateral or distributing ditch, do not select a manager for said lateral, as provided in section 42-907, [Idaho Code,] or section 42-908, [Idaho Code,] the watermaster of the water district, shall on the written demand of any one or more of said parties, appoint a manager for said lateral, who shall have and exercise all the powers and perform all of the duties of a manager of the distributing lateral as provided in section 42-910[Idaho Code]:provided, that if an irrigation district is owner of the main ditch, canal or reservoir, the board of directors of such district shall, upon such demand, make such appointment.

The compensation of said manager shall be fixed by said watermaster, and shall be paid in the manner provided by section 42-910[, Idaho Code,] for the payment of expenses incurred by him. If not paid, it may be collected, with other damages in the action provided by said section: provided, that if an irrigation district is the owner of the main ditch, canal or reservoir, the board of directors of such district shall fix the compensation of said manager; and at the end of the irrigation season upon the request of such manager the secretary of such district shall prorate the amount of such compensation among the several parties taking water through such lateral, or distributing ditch upon the basis of the number of acres irrigated by each, and mail each a statement of the amount prorated to such party, requesting that remittance be made to such secretary for and on behalf of such manager. In the event such parties or either of them, not later than the date when irrigation district assessments are delinquent, remits to such secretary, he shall, upon receiving same, and without making any entry in his books of account, deliver it to such manager. Should such parties or either of them fail or refuse at such time to remit to said secretary, then such manager may collect as hereinbefore provided.

42-910. Duties of Manager of Distributing Lateral — Assessment of Repair and Maintenance costs — Appeals.

Such person shall be known as the manager of such distributing lateral for the season for which he is selected, and in addition to the powers granted to him by section 42-907[, Idaho Code,] he shall have power to require of each user of such lateral such user's proportion of the amount of labor, material or money reasonably necessary for the proper repair and maintenance of such lateral, and to require measuring weirs, head-gates and checks to be installed for distributing the water among the users, and each user of such lateral shall furnish his proportion of such labor, material or money upon three (3) days' notice so to do, and, in default of so doing, such manager may employ other labor in his place, or furnish the material or money necessary, and such user shall pay to the manager the reasonable value of such material or labor so furnished by the manager, upon demand, in case of default in payment by such user the said manager may sue and collect the same in any court of competent jurisdiction, and in addition to all costs, the court shall allow said manager his reasonable attorney's fees incurred in that behalf. In the event such water user or water users shall not furnish his or their respective share of such labor, material or money within three (3) days after notice so to do, as hereinabove provided, then said manager may, if he elects, notify the association or corporation delivering water into said distributing lateral of the failure, neglect or refusal of said water users or any of them to furnish his or their respective share of such labor, material or money for the proper repair and maintenance of such lateral or for the furnishing and installation of measuring weirs, head-gates and checks, and upon receipt of such notice said association or corporation may, if it chooses to do so, proceed to furnish all labor, material and money necessary for the proper repair and maintenance of such lateral and for the furnishing and installation of measuring weirs, head-gates and checks, or it may, if it chooses so to do, proceed to repair and maintain said laterals and furnish and install such measuring weirs, head-gates and checks as it shall deem necessary or proper for the distribution of water among the several water users. The cost of such repair and maintenance and the cost of furnishing and installing such measuring devices, head-gates, and checks shall be apportioned among the several water users on the basis of benefits derived therefrom by said water users, and the said association or corporation furnishing said funds or doing the aforesaid things or any of them shall within thirty [(30)] days after completion thereof give each of such water users written notice of the amount or amounts to be paid by him and demand payment thereof. Should the water users or any of them desire to contest the assessment and apportionment made by such association or corporation, appeal may be taken from such assessment and apportionment to the district court in the county where the principal office of said association or corporation is located within ten (10) days after receipt of said notice and demand for payment, in the same manner as in the case of appeals from the boards of county commissioners. In case of appeal any sum or sums determined by said district court to be due, or in the event no appeal is taken then any sum or sums determined by such association or corporation to be due from any water users, shall be paid by such water user within ninety (90) days and the said association or corporation may refuse to deliver any water to any such water user until the amount due shall have been paid in full.

42-911. Users of Water Defined.

The term "users of water" from a community ditch shall be understood to include the owner of the land on which the water is used, or any tenant or other person in possession and control of said premises.

42-912. Company to Furnish Water on Demand.

Any person, company or corporation owning or controlling any canal or irrigation works for the

distribution of water under a sale or rental thereof, shall furnish water to any person or persons owning or controlling any land under such canal or irrigation works for the purpose of irrigating such land or for domestic purposes, upon a proper demand being made and reasonable security being given for the payment thereof: provided, that no person, company or corporation shall contract to deliver more water than such person, company or corporation has a title to, by reason of having complied with the laws in regard to the appropriation of the public waters of this state.

42-913. Application for Water.

Any person or persons owning or controlling land which has or has not been irrigated from any such canal, shall on or before January first of any year, inform the owner or person in control of such canal whether or not he desires the water from said canal for the irrigation of land during the succeeding season, stating also the quantity of water needed. In distributing water from any such canal, ditch or conduit during any season, preference shall be given to those applications for water for land irrigated from said canal the preceding season, and a surplus of water, if any there be, shall be distributed to the lands in the numerical order of the applications for it. But no demand for the purchase of a so called perpetual water right, or any contract fixing the annual charges or the quantity of water to be used per acre, shall be imposed as a condition precedent to the delivery of water annually as provided in this chapter; but the consumer of water shall be the judge of the amount and the duty of the water required for the irrigation of his land; and the annual charges to be made and to be fixed under the further provisions of this title, shall hereafter be based upon the quantity of water delivered to consumers, and shall not in any case depend upon the number of acres irrigated by means of such amount of water delivered.

42-914. Sale or Rental Constitutes a Dedication — Domestic Purposes Construed — Liability for Violation.

Whenever any waters have been or shall be appropriated or used for agricultural or domestic purposes under a sale, rental or distribution thereof, such sale, rental or distribution shall be deemed an exclusive dedication to such use upon the tract of land for which such appropriation or use has been secured, and, whenever such waters so dedicated shall have once been sold, rented or distributed to any person who has settled upon or improved land for agricultural purposes with the view of receiving the benefit of such water under such dedication, such person, his heirs, executors, administrators, successors or assigns, shall not thereafter be deprived of the annual use of the same when needed for agricultural or domestic purposes upon the tract of land for which such appropriation or use has been secured, or to irrigate the land so settled upon or improved, upon payment therefore, and compliance with such equitable terms and conditions as to the quantity used and times of use as may be prescribed by law. "Domestic purposes" shall not be construed to include any manner of land irrigation. Any person, association or corporation violating any of the provisions of this section, shall be liable for all damage to any party or parties injured thereby, which damage shall be determined by the proper court.

42-915. Consumer's Title not Affected by Transfer of Ditch.

When any payment is made under the terms of a contract, by means of which payment a perpetual right to the use of water necessary to irrigate a certain tract of land is secured, said water right shall forever remain a part of said tract of land, and the title to the use of said water can never be affected in any way by any subsequent transfer of the canal or ditch property or by any foreclosure or any bond, mortgage or other lien thereon; but the owner of said tract of land, his heirs or assigns, shall forever be entitled to the use of the water necessary to properly irrigate the same, by complying with such

reasonable regulations as may be agreed upon, or as may from time to time be imposed by law. And said payment for said water right shall be a release of any bond or mortgage upon the canal property of the person or company from whom such right is purchased or their successors or assigns, to the amount of such water right thus purchased and paid for, and said person or company from whom such water right is purchased shall furnish to the party or parties purchasing such right a release, or a good and sufficient bond for a release, from said mortgage or bonded indebtedness to the amount of the water right thus purchased.

42-916. Liability for Waste of Water.

No person entitled to the use of water from any such ditch or canal, must, under any circumstances, use more water than good husbandry requires for the crop or crops that he cultivates; and any person using an excess of water, is liable to the owner of such ditch or canal for the value of such excess; and in addition thereto, is liable for all damages sustained by any other person, who would have been entitled to the use of such excess water, as fixed by this section.

Chapter 11: Rights Of Way

42-1101. Rights of Landowners to Water.

All persons, companies and corporations owning or claiming any lands situated on the banks or in the vicinity of any stream, are entitled to the use of the waters of such stream for the purpose of irrigating the land so held or claimed.

42-1102. Owners of Land — Right to Right-of-Way.

When any such owners or claimants to land have not sufficient length of frontage on a stream to afford the requisite fall for a ditch, canal or other conduit on their own premises for the proper irrigation thereof, or where the land proposed to be irrigated is back from the banks of such stream, and convenient facilities otherwise for the watering of said lands cannot be had, such owners or claimants are entitled to a right-of-way through the lands of others, for the purposes of irrigation. The right-of-way shall include, but is not limited to, the right to enter the land across which the right-of-way extends, for the purposes of cleaning, maintaining and repairing the ditch, canal or conduit, and to occupy such width of the land along the banks of the ditch, canal or conduit as is necessary to properly do the work of cleaning, maintaining and repairing the ditch, canal or conduit with personnel and with such equipment as is commonly used, or is reasonably adapted, to that work. The right-of-way also includes the right to deposit on the banks of the ditch or canal the debris and other matter necessarily required to be taken from the ditch or canal to properly clean and maintain it, but no greater width of land along the banks of the canal or ditch than is absolutely necessary for such deposits shall be occupied by the removed debris or other matter. Provided, that in the making, constructing, keeping up and maintenance of such ditch, canal or conduit, through the lands of others, the person, company or corporation, proceeding under this section, and those succeeding to the interests of such person, company or corporation, must keep such ditch, canal or other conduit in good repair, and are liable to the owners or claimants of the lands crossed by such work or aqueduct for all damages occasioned by the overflow thereof, or resulting from any neglect or accident (unless the same be unavoidable) to such ditch or aqueduct.

The existence of a visible ditch, canal or conduit shall constitute notice to the owner, or any subsequent purchaser, of the underlying servient estate, that the owner of the ditch, canal or conduit has the right-of-way and incidental rights confirmed or granted by this section.

Rights-of-way provided by this section are essential for the operations of the ditches, canals and conduits. No person or entity shall cause or permit any encroachments onto the right-of-way, including public or private roads, utilities, fences, gates, pipelines, structures, or other construction or placement of objects, without the written permission of the owner of the right-of-way, in order to ensure that any such encroachments will not unreasonably or materially interfere with the use and enjoyment of the right-of-way. Encroachments of any kind placed in such right-of-way without express written permission of the owner of the right-of-way shall be removed at the expense of the person or entity causing or permitting such encroachment, upon the request of the owner of the right-of- way, in the event that any such encroachments unreasonably or materially interfere with the use and enjoyment of the right-of-way. Nothing in this section shall in any way affect the exercise of the right of eminent domain for the public purposes set forth in section 7-701, Idaho Code.

This section shall apply to ditches, canals or other conduits existing on the effective date of this act, [March 12, 1996], as well as to ditches, canals or other conduits constructed after such effective date.

42-1103. Owners of Springs and Streams - Right to Right-of-Way.

Where the owners of any spring, or the appropriators thereof, or of any stream, desire to conduct the waters thereof to any lands for the purposes of irrigation, or to any city or town for the use of the inhabitants thereof, or to any factory, or to any distant place, with the intent to apply the same to a beneficial use, and to accomplish such object it is necessary to cross with ditches, flumes or other conduit, the lands owned or occupied by others than the owners or appropriators of such spring or stream, the right of way over and across the lands of others for conducting said water may be acquired in the manner above provided.

42-1104. Right of Way Over State Lands.

The right of way over and upon any and all lands owned or controlled by the state of Idaho is hereby granted to any and all persons for the purpose of constructing and maintaining any ditch, canal, conduit or other works for the diversion or carrying of water for any beneficial use: provided, that no property shall be taken under the provisions of this section until a just compensation shall be paid therefore, to be ascertained in the manner prescribed by law for the taking of private property for a public use.

42-1105. Right of Way for Riparian Proprietors.

All persons, companies and corporations owning or having the possessory title or right to lands adjacent to any stream, have the right to place in the channel or upon the banks or margin of the same, rams or other machines for the purpose of raising the waters thereof to a level above the banks, requisite for the flow thereof to and upon such adjacent lands; and the right of way over and across the lands of others, for conducting said waters, may be acquired in the manner prescribed in the following section.

42-1106. Right of Eminent Domain.

In case of the refusal of the owners or claimants of any lands, through which any ditch, canal or conduit is proposed to be made or constructed, to allow passage thereof, the person or persons desiring the right of way may proceed as in the law of eminent domain.

42-1107. Right of Way for Drains.

Whenever the owner or owners of any parcel or parcels of land desire to construct a drain for the purpose of carrying off surplus water, and they cannot agree among themselves or with the parties who own land below through which it is expedient to carry the drain in order to reach a natural waterway, then proceedings may be had in the same manner as in cases of eminent domain affecting irrigating works of diversion, and the right of way for such drains shall be regarded as equal to that of irrigation canals.

42-1108. Right to Cross Ditches.

Any person, company or corporation, owners of any ditch, flume or other conduit, can not lawfully deny to any other person, company or corporation the right to cross their right of way with another ditch, flume or conduit either upon a higher or lower level, where the same can be done in a convenient and safe manner: provided, that such second person, company or corporation shall be liable for all damages that may accrue from the construction of such ditch, flume or other conduit across the conduit of another.

Chapter 12: Maintenance and Repair of Ditches

42-1201. Ditches to be Kept Full.

Every person, company or corporation owning or controlling any ditch, canal or conduit for the purpose of irrigation shall, during the time from April first to the first day of November of each year, keep a flow of water therein sufficient to the requirements of such persons as are properly entitled to the use of water there from: provided, however, that when the public streams or other natural water sources from which the water is obtained is [are] too low and inadequate for that purpose, or when the board of directors or governing body of an organization or entity furnishing water deem it in the best interests of that organization or entity to adjust the dates of availability and provide for termination of irrigation water, then such ditch, canal or conduit shall be kept with as full a flow of water therein as may be practicable, subject, however, to the rights of priority from the streams or other natural sources as provided by law.

42-1202. Maintenance of Ditch.

The owners or persons in control of any ditch, canal or conduit used for irrigating purposes shall maintain the same in good order and repair, ready to deliver water by the first of April in each year, and shall construct the necessary outlets in the banks of the ditches, canals or conduits for a proper delivery of water to persons having rights to the use of the water.

42-1203. Maintenance of Embankments.

The owner or owners of any irrigating ditch, canal or conduit shall carefully keep and maintain the embankments thereof in good repair, in order to prevent the water from wasting during the irrigation season, and shall not at any time permit a greater quantity of water to be turned into said ditch, canal or conduit than the banks thereof will easily contain or than can be used for beneficial or useful purposes; it being the meaning of this section to prevent the wasting and useless discharge and running away of water. The duties referenced in this section, whether statutory or common law, require reasonable care only, and shall not be construed to impose strict liability or to otherwise enlarge the liability of the owner or owners of any irrigating ditch, canal or conduit. The owners or constructors of such ditches, canals, works or other aqueducts, while responsible for their own acts or omissions, shall

not be liable for damage or injury caused by: (1) The diversion or discharge of water into a ditch, canal or conduit by a third party without the permission of the owner or owners of the ditch, canal or conduit; (2) Any other act or omission of a third party, other than an employee or agent of the owner or owners of the ditch, canal or conduit; or (3) An act of God, including fire, earthquake, storm or similar natural phenomenon. The provisions of this section shall not be construed to impair any defense that an owner or constructor of a ditch, canal, works or other aqueduct may assert in a civil action.

42-1204. Prevention of Damage to Others.

The owners or constructors of ditches, canals, works or other aqueducts, and their successors in interest, using and employing the same to convey the waters of any stream or spring, whether the said ditches, canals, works or aqueducts be upon the lands owned or claimed by them, or upon other lands, must carefully keep and maintain the same, and the embankments, flumes or other conduits, by which such waters are or may be conducted, in good repair and condition, so as not to damage or in any way injure the property or premises of others. The duties referenced in this section, whether statutory or common law, require reasonable care only, and shall not be construed to impose strict liability or to otherwise enlarge the liability of the owner or owners of any irrigating ditch, canal, works or other aqueduct. The owners or constructors of such ditches, canals, works or other aqueducts, while responsible for their own acts or omissions, shall not be liable for damage or injury caused by: (1) The diversion or discharge of water into a ditch, canal, works or other aqueduct by a third party without the permission of the owner or owners of the ditch, canal, works or other aqueduct; (2) Any other act or omission of a third party, other than an employee or agent of the owner or owners of the ditch, canal, works or other aqueduct; or (3) An act of God, including fire, earthquake, storm or similar natural phenomenon. The provisions of this section shall not be construed to impair any defense that an owner or constructor of a ditch, canal, works or other aqueduct may assert in a civil action. The owners or constructors have the right to enter the land across which the right-of-way extends, for the purposes of cleaning, maintaining and repairing the ditch, canal or conduit, and to occupy such width of the land along the banks of the ditch, canal or conduit as is necessary to properly do the work of cleaning, maintaining and repairing the ditch, canal or conduit with personnel and with such equipment as is commonly used, or is reasonably adapted, to that work. The right-of-way also includes the right to deposit on the banks of the ditch or canal the debris and other matter necessarily required to be taken from the ditch or canal to properly clean and maintain it, but no greater width of land along the banks of the canal or ditch than is absolutely necessary for such deposits shall be occupied by the removed debris or other matter.

42-1205. Bridges over Ditches.

All owners of any ditch, canal or conduit, or any other means for conveying water, shall build substantial bridges not less than sixteen (16) feet wide, and with boards not less than two (2) inches in thickness (unless the same shall be on a county or state road, when such boards shall not be less than three (3) inches thick), at all places where any county or state road crosses the same, or any road kept open and used by any neighborhood of people for their benefit and convenience. In case of neglect or refusal of such owners to build such bridges as above required, after a notice of ten (10) days being given by the said board of county commissioners of the proper county, said board shall proceed to the construction of the same, and shall collect the cost thereof together with the costs of suit: provided, that after any bridge shall have been constructed across any ditch, canal or conduit on any county or state road in accordance with the provisions of this section, it shall thereafter be maintained at the public expense.

42-1206. Repair of Community Ditches.

Where a ditch is common property, or there is a common right to the use of the water of a ditch without payment therefor, and any labor or materials are necessary for the repair or cleaning of the ditch, or any gate or flume thereon or thereunto belonging, the watermaster of the district may make a fair pro rata assessment of labor or materials against the inhabitants of the district claiming the use of such water, according to the benefits received by each; and if any person so assessed neglects or refuses, for the period of three (3) days after notice so to do from the watermaster or his deputy, to furnish his just proportion of the necessary labor or materials, according to such assessment, he must pay his pro rata in cash, to be recovered, with costs, in an action by the watermaster in his own name.

42-1207. Change of Ditch, Canal, Lateral, Drain or Buried Irrigation Conduit.

Where any ditch, canal, lateral or drain or buried irrigation conduit has heretofore been, or may hereafter be, constructed across or beneath the lands of another, the person or persons owning or controlling said land shall have the right at their own expense to change said ditch, canal, lateral or drain or buried irrigation conduit to any other part of said land, but such change must be made in such a manner as not to impede the flow of the water therein, or to otherwise injure any person or persons using or interested in such ditch, canal, lateral or drain or buried irrigation conduit. Any increased operation and maintenance shall be the responsibility of the landowner who makes the change, his heirs, executors, administrators, successors and assigns.

A landowner shall also have the right to bury the ditch, canal, lateral or drain of another in pipe on the landowner's property, provided that the pipe, installation and backfill reasonably meet standard specifications for such materials and construction, as set forth in the Idaho standards for public works construction or other standards recognized by the city or county in which the burying is to be done. The right and responsibility for operation and maintenance shall remain with the owner of the ditch, canal, lateral or drain, but the landowner, his heirs, executors, administrators, successors and assigns, shall be responsible for any increased operation and maintenance costs, including rehabilitation and replacement, unless otherwise agreed in writing with the owner.

The written permission of the owner of a ditch, canal, lateral, drain or buried irrigation conduit must first be obtained before it is changed or placed in buried pipe by the landowner.

While the owner of a ditch, canal, lateral, drain or buried irrigation conduit shall have no right to relocate it on the property of another without permission, a ditch, canal, lateral or drain owner shall have the right to place it in a buried conduit within the easement or right-of-way on the property of another in accordance with standard specifications for pipe, materials, installation and backfill, as set forth in the Idaho standards for public works construction or other standards recognized by the city or county in which the burying is to be done, and so long as the pipe and the construction is accomplished in a manner that the surface of the owner's property and the owner's use thereof is not disrupted and is restored to the condition of adjacent property as expeditiously as possible, but no longer than thirty (30) days after the completion of construction. A landowner shall have the right to direct that the conduit be relocated to a different route than the route of the ditch, canal, lateral or drain, provided that the landowner, his heirs, executors, administrators, successors and assigns, shall be responsible for any increased construction or future maintenance costs necessitated by said relocation. Maintenance of the buried conduit shall be the responsibility of the conduit owner.

42-1208. Easements or Rights-of-Way not Subject to Adverse Possession.

Easements or rights-of-way of irrigation districts, Carey act operating companies, nonprofit irrigation entities, lateral ditch associations, and drainage districts are not subject to adverse possession, and no person shall prevent free access of authorized personnel on easements or rights-of-way or construct any obstruction on easements or rights-of-way in an effort to adversely possess said easement or right-of-way.

42-1209. Encroachments on Easements and Rights-of-Way.

Easements or rights-of-way of irrigation districts, Carey act operating companies, nonprofit irrigation entities, lateral ditch associations, and drainage districts are essential for the operations of such irrigation and drainage entities. Accordingly, no person or entity shall cause or permit any encroachments onto the easements or rights-of-way, including any public or private roads, utilities, fences, gates, pipelines, structures or other construction or placement of objects, without the written permission of the irrigation district, Carey act operating company, nonprofit irrigation entity, lateral ditch association, or drainage district owning the easement or right-of-way, in order to ensure that any such encroachments will not unreasonably or materially interfere with the use and enjoyment of the easement or right-of-way. Encroachments of any kind placed in such easement or right-of-way, without such express written permission shall be removed at the expense of the person or entity causing or permitting such encroachments, upon the request of the owner of the easement or right-of-way, in the event that any such encroachments unreasonably or materially interfere with the use and enjoyment of the easement or right-of-way. Nothing in this section shall in any way affect the exercise of the right of eminent domain for the public purposes set forth in section 7-701, Idaho Code.

Chapter 13: Lateral Ditch Water Users' Associations

42-1301. Organization — Officers — Rules.

When three (3) or more parties each own or possess and control land with appurtenant water rights which each are entitled to receive from the same point or points of delivery in a canal or reservoir, or from the same point or points of diversion from waters of the state, to be conveyed to their respective premises for any distance through the same lateral or distributing ditch or laterals or distributing ditches that are not operated and maintained by an irrigation district, canal company or other water delivery organization, such parties shall be members of and shall constitute a water users' association known as "Lateral Water Users' Association." Such water users' association may meet and organize at any time after thirty (30) days after this chapter shall take effect, and shall meet annually thereafter between January 1 and the last Monday in March of each year, at the call of the secretary of such association, said secretary to give ten (10) days' notice by mail of such annual meeting; provided that if for any reason the secretary should fail to call a meeting, then the annual meeting of such association shall be held on the last Monday in March of each year. At such annual meetings each water user shall be entitled to one (1) vote in person, for each inch and a fractional vote for each fraction of an inch of water which such water user is entitled to receive from such laterals, and a corporation shall vote by one (1) of its officers designated by it. Such association shall organize by the election of a chairman, vice-chairman and a secretary-treasurer, which officers shall also constitute the board of directors of such association, and shall hold office for one (1) year and until their successors are elected. Such association at the annual meeting shall also elect a manager of said lateral or laterals to be known as "lateral manager" for the succeeding season and shall fix the compensation of said manager, and of all officers. Such association may adopt such rules and regulations for the management of said lateral or laterals or distributing ditch or ditches and the delivery of water therefrom as they deem best, and

may, by majority vote, if it be deemed for the best interests of the association, combine one (1) or more laterals and abandon laterals not in use, and do any and all things not in conflict with the provisions of this chapter or the laws of this state wherein the best interests of the association will be furthered.

42-1302. Lateral Manager — Election — Duties

Should any water users' association at its annual meeting fail to elect a lateral manager or fix his compensation such lateral manager may be elected by the board of directors of such association, who may also fix his compensation. The manager of any lateral shall, in addition to the duties prescribed by the association, perform all duties fixed for such lateral manager under the provisions of sections 42-907 and 42-910, [Idaho Code,] except as modified by this chapter

42-1303. Lateral Ditches — Repairs, Improvements, and Maintenance — Assessment of Costs.

The operation, improvement, repair and maintenance of any such lateral or distributing ditch shall be under the direction of the directors of the association. Following the association's annual meeting, the association's directors and the lateral manager shall examine the lateral or laterals or distributing ditch or ditches, and prepare an estimate of the total cost to operate, repair, improve and maintain the lateral or laterals or ditch or ditches to properly deliver water to the water users' lands during the succeeding season, including the compensation of officers and lateral manager. Such total cost shall be assessed to each water user either (1) in the proportion which the quantity of water the water user is entitled to receive from such lateral or ditch bears to the total quantity of water which all association water users are entitled to receive therefrom, or (2) if the water user's land consists of a lot or lots within a city or village, then the assessment may be made upon the basis of each lot, the same to be uniform upon lots of the same size.

42-1304. Assessments — Notice — Penalties for Delinquency.

On or before the fifteenth day of April in each year the secretary of the association shall notify each water user of the amount assessed against him for that year as herein authorized, and the same shall be due and payable on the first day of May of each year and if not so paid on or before the fifteenth day of June of such year, a penalty of ten per cent (10%) shall be added thereto, and the total amount due shall then draw interest at the rate of ten per cent (10%) per annum from said fifteenth day of June of such year until paid.

42-1305. Delinquent Users not Entitled to Water.

No water user shall be entitled to demand or receive water from said lateral whenever any such assessment is due and unpaid, and the lateral manager shall not distribute any water to such water user while delinquent in such payment except upon order of the board of directors of the association who shall have authority to cause such water to be delivered: provided, the water user shall give such security for the payment of such assessment against him as shall be required by the board of directors.

42-1306. Collection and Disbursement of Funds.

The lateral manager shall collect all assessments so made and pay the same to the secretary secretary]-treasurer taking his receipt therefore. The secretary- treasurer of this association shall keep the funds of the association in the name of the association and shall draw warrants or checks thereon to pay the costs and expenses of the management of said lateral as herein provided for upon the order of the

board of directors, and shall perform such other duties as the association may prescribe.

42-1307. Action for Assessment — Attorneys' Fees.

In case any assessment, as herein provided for is due and unpaid the association may sue to collect the same, in the name of its secretary-treasurer as such, in any court of competent jurisdiction, and in addition to the amount due including all penalties and interest, and all costs incurred in said action, may collect a reasonable attorney's fee in such action to be fixed by the court.

42-1308. Appointment of Lateral Manager by Director of Department of Water Resources.

(1) In the event that the water users or the board of directors of any lateral or ditch association do not meet and elect a lateral manager as provided chapter or a lateral manager is not selected as otherwise provided by law, then, the director of the department of water resources may appoint and fix the compensation of a lateral manager, upon the written petition of a water user alleging that water is not being apportioned and distributed properly among the users from the ditch or lateral and that the rights of the water user are being injured thereby.

(2) If the water users also have failed to elect association officers, the lateral manager appointed by the director may exercise the duties of the association officers, including the making and collection of assessments, but not the borrowing of money, as is necessary to achieve the proper allocation and distribution of water from the ditch or lateral and without regard to the statutory dates for the performance of these duties.

(3) The lateral manager appointed by the director shall hold office only for the period of time fixed by the order of appointment and in no event beyond the remainder of the year in which appointed.

(4) If the lateral is located within a water district established pursuant to chapter 6, title 42, Idaho Code, the director shall advise the district watermaster of the receipt of the petition and invite the watermaster to make recommendations concerning the need for appointment of a lateral manager and the person to be appointed.

(5) Upon receipt of a petition filed pursuant to subsection (1) of this section, the director shall make a reasonable effort to provide written notice of the petition to any irrigation district, Canal Company, or other water distribution entity that supplies water to the lateral, and to all persons having rights to the use of water from the lateral. Except in the case of serious threat of imminent injury to person or property, the director shall allow fourteen (14) days for written response to the petition.

(6) Based upon a review of the petition, the responses thereto, the recommendations of the watermaster, if any, and any investigation by the department of water resources, the director shall issue an order with findings either appointing a lateral manager or declining to appoint a lateral manager

Any person aggrieved by the order of the director shall be entitled to request a hearing before the director pursuant to section 42-1701A, Idaho Code.

42-1309. Association Authorized to Borrow Money, Mortgage or Pledge Assets.

Lateral ditch water users' associations are expressly authorized to borrow money from any private or governmental source, to be repaid over a period of years, and to levy assessments over such period of

years for the purpose of repaying said loan, and they are also authorized and empowered to mortgage and/or pledge any of the assets of said associations as security for said loan; providing, however, that before any money can be borrowed or any mortgage or pledge can be made and entered into, all members of said association shall be notified of an election by two (2) weekly publications in a legally authorized newspaper, as defined in section 60-106, Idaho Code, within the county in which the association is located, said notice to provide that an election is being called to determine whether or not the association shall be authorized to borrow money and mortgage and/or pledge its assets, and shall also state the date, time and place of said election, which shall be held within ten [(10)] days after the date of the last publication of said notice. If a majority of the total outstanding shares shall vote at said election in favor of borrowing said money and mortgaging and/or pledging said assets, then said association, through its president and secretary, shall be authorized to borrow said money and mortgage and/or pledge its assets.

42-1310. Lateral Ditches -- Repairs, Improvements and Maintenance by Irrigation Delivery Entities.

In the event that a water users' association of lateral or laterals has not been constituted on a particular lateral or distributing ditch pursuant to this chapter, any individual water user taking water from a canal or reservoir to be conveyed to their respective premises for any distance through such lateral or distributing ditch may authorize the irrigation delivery entity providing water to the lateral or ditch to perform any necessary repairs, improvements, or maintenance to the lateral or ditch. The irrigation delivery entity may agree to perform such work only if it has duly adopted a bylaw authorizing such work to be done for its individual water users, or adopts a resolution authorizing the work. In performing such work, the irrigation delivery entity shall have the same rights and privileges to enter the land across which the right-of-way extends, for the purposes of cleaning, maintaining and repairing the lateral or ditch, and to perform such work, as does the individual water user authorizing the work. By performing such work, the irrigation delivery entity does not assume ownership of the lateral or ditch, or responsibility for or incur liability for any injury to person or property caused by an act or omission of the individual water user authorizing the work, or of any other person. When such work has been authorized, the irrigation entity shall assess the individual water user for the annual cost of any necessary repairs, improvements, or maintenance performed on the lateral or ditch, in addition to the assessments that are levied for the delivery of water to the individual water user, and the same provisions shall apply with regard to delinquent assessments as in the case of assessments levied for the delivery of water. Nothing in this section shall affect the authority of a water users' association of lateral or laterals from assessing its members for work authorized under this chapter.

Title 43: Irrigation Districts

Chapter 11: Exclusion of Lands from District

43-1101. Petition.

Any person or persons owning land within any irrigation district and forming a part thereof may file with the board of directors of such irrigation district a petition in writing requesting the exclusion of the land or lands owned by them and described in the petition from the irrigation district. As many parties owning separate tracts or parcels of lands in any irrigation district or who are united in interest to which the same state of facts apply, may unite in the same petition. The petition shall be signed by all of the petitioners, but need not be acknowledged. A filing fee in the amount of five dollars ($5.00) for each parcel of land described in the petition shall accompany the filing of each petition, plus an exclusion fee in the amount of twenty-five dollars ($25.00) for each lot containing less than one (1) acre which is in a subdivision as defined in section 50-1301, Idaho Code, or an exclusion fee of fifty dollars ($50.00) for each parcel containing less than one (1) acre that is not in a subdivision, or an exclusion fee of fifty dollars ($50.00) for each acre and additional portion thereof in all other parcels of property, for which the district shall provide a suitable receipt evidencing payment. Any petition not accompanied by the required filing fee and exclusion fee shall be returned to the petitioner. The filing fee and the exclusion fee are borne by the petitioner and are not potentially apportionable costs as provided in sections 43-1105, 43-1106 and 43-1107, Idaho Code.

A person or persons purchasing land under a written contract shall be deemed to be the owners of that land for purposes of this section.

Chapter 15: Miscellaneous Provisions of District Law

43-1505. Irrigation Lateral Districts.

For the purpose of constructing, operating, and managing water in distributing systems by means of laterals, sub laterals, ditches, flumes, and pipe lines, an irrigation lateral district may be organized and created within the territory already organized as an irrigation district, in the same manner and by the same process required by the provisions of this title, for the creation of an irrigation district from unorganized territory, and such interior irrigation lateral district, when organized shall through its board of directors, other officers and employees have all necessary powers for the purpose of its creation conferred by this title upon the original irrigation district, including the power to issue, negotiate and sell bonds payable and secured as is in this title provided; to build and construct new works and to levy assessments and taxes necessary for the purpose of conducting its affairs in the same manner and by the same process as are by this title provided in the case of irrigation districts; provided, however, it is distinctly understood that the negotiation and sale of coupons bonds and levying of assessments and taxes and incurring of debts and obligations by any such irrigation lateral district shall not in any way or manner affect any of the bonds, assessments, taxes, or obligations of the irrigation district of which it is a part and shall not in any way or manner limit the power of such original irrigation district to incur the indebtedness, levying of assessments and issue its bonds for any of the purposes for which such district is by this title entitled to levy or issue the same.

this page intentionally left blank

Title 18: Crimes and Punishments

Chapter 43: Irrigation Works

18-4301. Interference with Ditches, Canals, Lateral, Drains or Reservoirs.

Every person who shall, without authority of the owner or managing agent, and with intent to defraud, take water from any canal, ditch, lateral, drain, flume or reservoir, used for the purpose of holding, draining or conveying water for manufacturing, agricultural, mining, or domestic uses, or who shall, without like authority, raise, lower, or otherwise disturb, any gate or other appurtenance thereof used for the control or measurement of water, or who shall empty or place, or cause to be emptied or placed, into any such canal, ditch, lateral, drain, flume, or reservoir, any rubbish, filth, or obstruction to the free flow of water, is guilty of a misdemeanor

18-4302. Wasting Water Used for Irrigation.

Any person or persons, who shall willfully or wantonly waste any of the waters of any stream, the waters of which are used for irrigation, to the detriment of any claimant of such water for irrigation purposes, by diverting the same for an unnecessary use or purpose, or by allowing such water to waste by running into depressions or dry channels so that the same cannot be used for irrigation, nor reach the original channel of the stream from which it has been diverted, are guilty of a misdemeanor.

18-4303. Obstruction of Overflow, Gauge or Waterway in Dam.

Any person or persons who shall obstruct any overflow gauge or waterway, placed in any dam by order of any watermaster, so as to impede the flow of water over such dam as regulated by the water master, shall be guilty of a misdemeanor.

18-4304. Wrongful Diversion of Water.

Any person who without the consent of the water master of the district, diverts any water from a ditch or channel where it has been placed, or caused or left to run by the water master or his deputies, or who shuts or opens any ditch, gate or dam, or in any way impedes or increases the flow of water in any stream or ditch diverting water from a stream, while the same is under the charge of a water master, or who cuts away any embankment of a stream, whereby the water of such stream is diverted, or breaks, injures, or removes any gate, flume or other device used for the equitable distribution of the water of any such stream by the water master, shall be guilty of a misdemeanor.

18-4305. Interference with Head gate – Cutting Banks of Stream.

If any obstruction shall be willfully and maliciously placed on any overflow gauge in any stream of water which is used for irrigation and is under control of a water master, and such obstruction retards or impedes the free overflow of the water of such stream, thereby increasing the pressure against a head gate through which water is diverted by means of such dam, or if any head gate regulated by a water master shall be removed, broken, injured or interfered with so as to disturb the distribution of the water as regulated by the water master, or if any bank of the natural stream, the water of which is being used for irrigation and is being distributed by a water master, shall be cut away so as to increase the flow of water from such stream, thereby interfering with the distribution of the water as regulated by a water master, the person or persons so interrupting the flow of said water as aforesaid, shall be guilty of a misdemeanor.

18-4306. Injuries to Ditches, Canals, Laterals, Drains and Appurtenances.

Any person or persons, who shall willfully cut, break, damage, or in any way interfere with any ditch, canal, lateral, drain, head gate, or any other works in or appurtenant thereto, the property of another person, irrigation district, drainage district, canal company, corporation, or association of persons, and whereby water is conducted to any place for beneficial use or purposes, and when said canal, head gate, ditch, lateral, drain, dam, or appurtenance is being used or is to be used for said conduct or drainage of water, shall be guilty of a misdemeanor..

18-4307. Injury to Measuring Devices.

Any person or persons who shall cut, break, injure, destroy, enlarge, change, or alter any head gate, sluiceway, weir, water box, or other measuring device, the property of any irrigation district, corporation or association of persons, or in the possession of, or in the use of, said irrigation district, corporation, or association, or the property of another, shall be guilty of a misdemeanor. Any person or persons who shall change, alter, destroy, disturb, enlarge, or interfere with any head gate, dam, weir, water box, or other measuring device, made, placed, used or regulated by any duly appointed, elected, or authorized water master, deputy water master, ditch walker, ditch rider, engineer, or other authorized agent of any irrigation company, corporation or association or person, when said measuring device is being used or is to be used for the measurement of water, shall be guilty of a misdemeanor.

18-4308. Change of Ditch, Canal, Lateral, Drain or Buried Irrigation Conduit.

Where any ditch, canal, lateral or drain has heretofore been, or may hereafter be, constructed across or beneath the lands of another, the person or persons owning or controlling the said land, shall have the right at his own expense to change said ditch, canal, lateral, drain or buried irrigation conduit to any other part of said land, but such change must be made in such a manner as not to impede the flow of the water therein, or to otherwise injure any person or persons using or interested in such ditch, canal, lateral, drain or buried irrigation conduit. Any increased operation and maintenance shall be the responsibility of the landowner who makes the change.

A landowner shall also have the right to bury the ditch, canal, lateral or drain of another in pipe on the landowner's property, provided that the pipe, installation and backfill reasonably meet standard specifications for such materials and construction, as set forth in the Idaho standards for public works construction or other standards recognized by the city or county in which the burying is to be done. The right and responsibility for operation and maintenance shall remain with the owner of the ditch, canal, lateral or drain, but the landowner shall be responsible for any increased operation and maintenance costs, including rehabilitation and replacement, unless otherwise agreed in writing with the owner.

The written permission of the owner of a ditch, canal, lateral, drain or buried irrigation conduit must first be obtained before it is changed or placed in buried pipe by the landowner.

While the owner of a ditch, canal, lateral, drain or buried irrigation conduit shall have no right to relocate it on the property of another without permission, a ditch, canal, lateral or drain owner shall have the right to place it in a buried conduit within the easement or right-of-way on the property of another in accordance with standard specifications for pipe, materials, installation and backfill, as set forth in the Idaho standards for public works construction or other standards recognized by the city or county in which the burying is to be done, and so long as the pipe and the construction is accomplished in a manner that the surface of the owner's property and the owner's use thereof is not disrupted and

is restored to the condition of adjacent property as expeditiously as possible, but no longer than thirty (30) days after the completion of construction. A landowner shall have the right to direct that the conduit be relocated to a different route than the route of the ditch, canal, lateral or drain, provided that the landowner shall agree in writing to be responsible for any increased construction or future maintenance costs necessitated by said relocation. Maintenance of the buried conduit shall be the responsibility of the conduit owner.

Any person or persons who relocate or bury a ditch, canal, lateral or drain contrary to the provisions of this section shall be guilty of a misdemeanor.

18-4309. Unauthorized Tampering With Measuring Devices.

Every person who shall willfully waste water for irrigation, or who shall willfully open, close, change or disturb, or interfere with, any headgate or water box or valve or measuring or regulating device, without authority, shall be guilty of a misdemeanor. The water masters or their assistants, within their district, shall have power to arrest any person or persons offending and turn them over to the sheriff or the nearest peace officer of the county in which such offense is committed, and immediately upon delivering such person so arrested into the custody of either of such officers, it shall be the duty of the water master making such arrest to make complaint, in writing and under oath, before the magistrate judge of such county, against the person so arrested.

18-4310. Neglect to Deliver Water — Interference with Delivery.

Any superintendent or any person having control or charge of the said ditch, canal or conduit, who hall willfully neglect or refuse to deliver water as provided in chapter 9, of title 42, or person or persons who shall prevent or interfere with the proper delivery of water to the person or persons having a right thereto, shall be guilty of a misdemeanor; and the owner or owners of such ditch, canal or conduit shall be liable in damages to the person or persons deprived of the use of water to which they were entitled as provided in said chapter 9.

Water Conversion Factors

cfs: cubic feet per second
af: acre feet
gpm: gallons per minute

1 acre-foot	=	enough water to cover 1 acre of land one foot deep		
1 acre-foot	=	43,560 cubic feet	=	325,850 gallons
1 cubic foot of water	=	7.4805 gallons	=	62.37 pounds
1 cfs	=	448.83 gpm	=	26,930 gallons per hour
1 cfs	=	646,315 gallons per day	=	1.9835 af per day
1 cfs	=	59.502 af per month (30 days)	=	723.94 af per year
1 cubic meter per second	=	35.31 cfs	=	15,850 gallons per minute
1 million gallons	=	3.0689 af		
1 million gallons per day	=	1,120.147 af per year		
1 miner's inch	=	9 gpm	=	0.02 cfs

this page intentionally left blank

Glossary

Note: Idaho Code references have been provided wherever possible. All other definitions are those commonly used by IDWR at the present time.

ACRE-FOOT (AF): a unit commonly used for measuring the volume of water; equal to the quantity of water required to cover one acre to a depth of one foot and equal to 43-560 cubic feet of 325,851 gallons.

APPROPRIATION DOCTRINE: the system of water law adopted by most Western States. The basic principles of the appropriation doctrine are: (1) that a private right to use water can be acquired only by diverting the water and applying it to a beneficial use; (2) the first in time of beneficial use is the first in right and the right is maintained only by use.

AQUIFER: a stratum or zone below the surface of the earth capable of producing water as from a well.

BENEFICIAL USE: one or more of the recognized uses of water including but not limited to irrigation, domestic, municipal, commercial, recreation, hydropower, stock watering and fish propagation uses for which permits to appropriate water can be issued. Industrial use includes manufacturing, mining and processing uses of water.

CONSUMPTIVE USE: that portion of the annual volume of water diverted under a water right that is transpired by growing vegetation, evaporated from soils, converted to non-recoverable water vapor, incorporated into products, or otherwise does not return to the waters of the state. Consumptive use does not include any water that falls as precipitation directly on the place of use unless the precipitation is captured, controlled and used under an appurtenant water right. Idaho Code Section 42-202B

CUBIC FEET PER SECOND (CFS): a unit used to express a rate of flow of water. One cfs is equal to 50 miner's inches or 448.8 gallons per minute.

DEPARTMENT: a shortened version of the Idaho Department of Water Resources.

DIRECTOR: the Director of the Idaho Department of Water Resources.

DIVERSION: the structure through which water is removed from a water source. A diversion structure, particularly on a natural channel, may also include a check structure in the channel. Diversion also refers to the act of removing water for a specific purpose.

GROUND WATER: water that occupies all the voids within a geologic stratum and occurs in its natural condition below land surface. As defined by Idaho law, ground water is all water under the surface of the ground, whatever may be the geological structure in which it is standing or moving. Idaho Code §§ 42-501 – 42-230(a)

GROUND WATER DISTRICT: a district organized in accordance with the provisions of chapter 52, title 42, Idaho Code. Such districts include holders of ground water irrigation rights and are formed or organized by such ground water users.

GROUND WATER RECHARGE: the introduction of surface or ground water to ground water storage. Ground water recharge can consist of natural recharge, artificial recharge or incidental recharge.

HEADGATE: structures which are constructed to control or regulate the flow of water in a ditch or canal.

HEADWORKS: see 'headgate'

IRRIGATION DISTRICT: a district organized in accordance with the provisions of chapter 1, title 43, Idaho Code.

IRRIGATION LATERAL DISTRICT: a district organized in accordance with Idaho Code § 43-1505; a district created within an area already organized as an irrigation district for the purpose of constructing, operating and managing water in distributing systems by means of laterals, sub laterals, ditches, flumes and pipelines. An irrigation lateral district is organized in the same manner and by the same process required for irrigation districts under chapter 1, title 43, Idaho Code.

LATERAL DITCH: a ditch that supplies water to two or more users. Lateral ditches normally divert water from a main canal or ditch which has its heading from a river or natural stream channel.

LICENSE: see 'water right license'

MEASURING DEVICE: a generally accepted structure or apparatus used to determine a rate of flow or volume of water. Examples are weirs, meters and flumes.

MINER'S INCH: a variable unit used to express a rate of flow of water in the western United States. In Idaho, a miner's inch is equal to 1/50 of a cubic foot per second (cfs), or 0.02 cfs. One miner's inch is the duty of water, or the standard allocated flow, for each acre of irrigated land.

PERIOD OF USE: the time period each year during which water under a given right may be beneficially used in compliance with terms of the water right.

PERMIT: see 'water right permit'

PLACE OF USE: the location where water is used. The place of use under Idaho water rights is given by legal descriptions, or 40 acre quarter-quarter section or government lot land descriptions.

POINT OF DIVERSION: the location at which water is physically diverted by manmade works from the source of water. Points of diversions are identified by legal descriptions in Idaho water rights.

PUBLIC WATER: as defined by Idaho law, all the waters of the state when flowing in their natural channels, including the waters of all-natural springs, lakes and ground water.

PRIORITY: see 'priority date'

PRIORITY DATE: the date of appropriation established in the development of a water right.

PRIORITY OF APPROPRIATION: see 'priority date'

REDIVERSION: a general term used to describe the location of any secondary point of diversion under a water right. For example: consider a storage reservoir on Creek A where storage water is released to Creek A and diverted downstream at Canal #1. The primary point of diversion for a water right with a storage reservoir on Creek A is the impounding dam across Creek A, while the point of re-diversion is Canal #1.

Re-diversion as used in an exchange, is the location where a quantity of water is diverted from source B after an equal quantity of water was diverted from source A and injected into source B.

RESERVOIR: a lake or pond in which water is collected and controlled for some beneficial use.

STORED WATER: water that is diverted to and retained within a reservoir and then released for some beneficial use. Water may be diverted to and stored in a reservoir located either within the stream channel or off of the stream channel. IDWR considers a storage facility as one which will not fill within 24 hours using the maximum authorized flow rate.

SOURCE: the water body at the point of diversion. Examples are Salmon River, Squaw Creek, spring, ground water, etc.

UNAPPROPRIATED WATER: the public water of the state of Idaho in streams, rivers, lakes, springs or ground water in excess of that necessary to satisfy prior rights including minimum stream flows and rights established by law.

WATERMASTER: the person elected or appointed pursuant to Chapter 6, Title 42, Idaho Code, to distribute water in the order of priority to those water users entitled to its use. In more general terms, a watermaster may also refer to a person who serves as the distribution manager of a canal, ditch or lateral.

WATER DISTRICT: a district organized in accordance with the provisions of Chapter 6, title 42, Idaho Code. The Director of the Idaho Department of Water Resources creates water districts in order to distribute water rights from natural water sources in accordance with water right priority dates. Water distribution in water districts is accomplished by watermasters who are elected annually by district water users. Watermasters are supervised by the Director of Idaho Department of Water Resources.

WATER AND SEWER DISTRICTS: districts organized in accordance with the provisions of chapter 32, title 42, Idaho Code. Water districts supply water for domestic, commercial and/or municipal purposes. Sewer districts provide for sewage disposal. A district may be created for a combination of water and sewer purposes. IDWR has no jurisdiction over this type of district.

WATER MEASUREMENT DISTRICT: a district organized in accordance with the provisions of chapter 7, title 42, Idaho Code. Water Measurement Districts are created by the Director of the Idaho Department of Water Resources (IDWR) in order to measure and report water that is diverted from natural water sources under state water rights. Water measurement and reporting in water measurement districts is accomplished by hydrographers who are elected annually by district water users. Hydrographers are supervised by the Director of IDWR.

WATER RIGHT LICENSE: the certificate issued by the director in accordance with Idaho Code § 42-219, confirming the extent of diversion and beneficial use of water that has been made in conformance with the permit conditions.

WATER RIGHT PERMIT: the water right document issued by the Director authorizing the construction of diversion facilities and commencement of use of public water of the state. Idaho Code Section 42-202

WATER USER: a person, corporation, association, firm, governmental agency or other entity entitled to divert and beneficially use water.

(3) Protection from delivery calls. 93
(4) A well drilling permit is required 94
(5) A few facts about domestic wells in Idaho 95
(a) Individually, domestic wells use small amounts of water, but together their potential production is significant 95
(b) Exempt domestic wells often are necessary for single homes in remote locations or for homes in subdivisions where no community water system exists 95
(c) Exempt domestic water rights may be developed despite aquifer-wide moratoriums that preclude new irrigation, industrial, and commercial water right applications 95
(6) Domestic wells can present water management challenges 96
(a) Domestic wells are essentially unregulated 96
(b) Hydrological considerations—the layered nature of aquifers 96
(c) Well leakage issues 97
(d) Unsealed wells present risks to ground water quality 98
8. LOW TEMPERATURE GEOTHERMAL WATER 99
9. CONJUNCTIVE ADMINISTRATION OF GROUND AND SURFACE SUPPLIES 100
A. Introduction to conjunctive administration 100
B. Response to changes in aquifer levels and spring production 103
(1) Introduction 103
(2) The effects of drought and increasing irrigation efficiencies on aquifer levels 104
(3) Expanding urban landscapes 105
(4) Declines in spring discharges to the Snake River and resulting water user conflicts 107
C. Delivery calls and administration in the ESPA 108
(1) Round One: The Musser call 108
(2) Round Two: The 2001-2003 interim settlement and replacement water obligation 109
(3) Round Three: The Clear Lakes call 110
(4) Round Four: The Rangen call 111

EXHIBIT C
Page No. 7 of 761

(5) Round Five: The Surface Water Coalition's 2005 delivery call and the challenge to the Department's rules in *AFRD* 112
(a) Background: the Surface Water Coalition's 2005 delivery call 114
(b) The lower court decision in *AFRD* 116
(c) The Supreme Court's decision in *AFRD* 120
(i) The *AFRD* ruling on facial vs. "as applied" constitutionality 120
(ii) The *AFRD* holding on the Rules' lack of certain procedural components 120
(iii) The *AFRD* ruling on carryover storage 122
(iv) The *AFRD* ruling on domestic and stock water rights 123
(6) Round Six: The ESPA delivery calls go to hearing before the Department, result in rulings 124
(a) Surface Water Coalition delivery call—the Hearing Officer's Recommended Order 125
(i) Neither side should be seen as the bad guy 127
(ii) The Director is obligated to investigate the senior's injury claims rather than taking them at face value 127
(iii) Some SWC members suffered material injury in 2004 as a result of ground water pumping, and, in his Emergency Orders, the Director reasonably predicted the same would occur in 2005 127
(iv) Burdens of proof in a water call 128
(v) The Department appropriately used a regional ground water model to determine several facts about the interaction of the aquifer and the river 128
(vi) The Department appropriately applied a ten percent error factor to the model and established a "trim line" to limit the extent of ground water curtailment 128
(vii) Not all pumping from the ESPA adversely affects the SWC's water rights; in wetter years, there is no injury and conjunctive management is "unnecessary or minimal" 128
(viii) The doctrine of "first-in-time, first-in-right" is to be applied in light of the public interest 129
(ix) In a delivery call, the Department must remove non-irrigated lands from its injury or curtailment calculation 130
(x) The Director appropriately adopted a "minimum full supply" concept to project material injury, but did not employ it correctly and now must modify it 130
(xi) The Director's use of 1995 as a fixed base year for determining minimum full supply was not appropriate. 131
(xii) Reasonable conservation practices and on-farm efficiencies 131
(xiii) The SWC members have a right to a reasonable amount of carryover storage, and juniors may be curtailed to provide it 131
(xiv) Juniors are not responsible for storage the seniors lease to others, and if the reservoir system fills, it cancels any need for mitigation 132
(xv) Mitigation or curtailment must be provided in the season when it is needed by the seniors 132
(xvi) Desirability of ground water users obtaining their own storage for mitigation 132
(xvii) Likely no curtailment in 2008 133
(xviii) Remaining issues for the Director to address in future years 133

(b) The Spring Users' delivery call 133
(i) Ground water pumpers are not solely responsible for spring declines, but must stop diverting or provide mitigation to the extent their pumping interferes with senior rights 134
(ii) It was proper for the Director to consider historical information about water available to the Spring Users' rights at the time they were appropriated, and not base his analysis solely on the maximum amounts stated in the Spring Users' decrees 134
(iii) The ground water users failed to prove that the Spring Users employed unreasonable means of diversion 135
(iv) The ground water pumpers were required to curtail, or provide replacement water equivalent to, some 57,000 acres of irrigated land in a program phased in over five years 135
(v) The 10% "trim line," based on model uncertainty, applies to the Spring Users' delivery call 135
(vi) The public interest is to be considered when curtailment is proposed 136
(vii) Water quality of the Spring Users' supply is an element that may be considered 136
(viii) Where the senior privately agrees to subordinate its water right, it cannot seek to fill it through a call against other juniors 137
(ix) The Ground Water District's replacement water plan for 2008 137
(c) IDWR Director's decision denying A&B Irrigation District's delivery call 137
(i) A&B has a full water supply 139
(ii) Available date show that none of A&B's lands are short of water 139
(iii) A&B has supplemental wells for which it has not accounted 139
(iv) A&B is subject to the reasonable pumping level mandate 139
(v) Hydrogeology 140
(vi) Well design and construction 140
(vii) Use of the ground water model 141
(viii) Irrigation of enlargement areas 141
(ix) Denial of ground water management area designation 141
(7) Round Seven: The SRBA Court's decision rejecting Idaho Power's attack on the *Swan Falls Agreement* 141
(8) Round Eight: The Idaho Supreme Court ultimately upholds most of the lower court (and Department) rulings on the Surface Water Coalition's original ESPA delivery call. 142
10. STOCK WATER RIGHTS 144
11. METHODS FOR APPROPRIATING WATER RIGHTS 146
A. The permit/license method 146
(1) The "mandatory permit" requirement: Idaho Code § 42-229 (ground water-1963), §§ 42-103 and 42-201 (surface water-1971) 146
(2) Proof of beneficial use at the end of the "development period." 150
(3) Issuance of license 152
B. Beneficial use (aka "constitutional method") water rights 152
C. Water rights for certain domestic and livestock uses that are exempt from permitting 154
D. Statutory claims 154
E. Posted notice 155
F. The curious case of "private waters" 155
G. Private and general adjudications of water rights 156

H. The burden of proof in water appropriations 157
I. One may not appropriate water that has been diverted and stored by another. 158
12. ADVERSE POSSESSION OF A WATER RIGHT 160
13. THE MAXIMUM USE DOCTRINE 161
14. THE ADMINISTRATIVE SYSTEM 166
A. Overview of the IDWR 166
B. IDWR hearing procedures 167
(1) Application and filing fee 167
(2) Publication 167
(3) Amendment of application for permit 167
(4) Protests 168
(5) Pre-hearing conference 168
(6) Hearing 168
(7) Building the record 169
(8) The decision 170
(9) Res judicata 172
(10) Retroactive legislation 173
(11) Judicial review 173
(12) Exhaustion 174
(13) Attorney fees and sanctions 174
(14) Error correction 175
(15) Authority of the Department to impose conditions on water rights 175
C. Time lines for IDWR hearings 176
(1) "Fast" versus "slow" scenario 176
(2) Detailed slow scenario 177
(a) From application to hearing 177
(b) From hearing to initial decision by hearing officer 178
(c) From preliminary or recommended order to final order 178
(d) From final order to judicial review 181
D. Administration of water rights 182
(1) Administration of water rights within water districts 183
(2) Administration of ground water rights under the Ground Water Act 186
(3) Administration through the Conjunctive Management Rules 186
(4) Temporary water rights 186
(5) Curtailment of illegal water diversions 186
(6) Judicial enforcement of priority 187
E. The Idaho Water Resource Board 187
F. The State Water Plan 187
15. TRANSFERS OF WATER RIGHTS 190
A. Background 190
B. Terminology: change vs. transfer vs. conveyance 191
C. The basic entitlement to change the elements of a water right 192
D. Basic transfer principles 193
E. The "no injury" rule 195
(1) The fundamental premise 195
(2) The rule is aimed at protecting all existing water rights 195
(3) Change in point of diversion in a surface supply 197
(4) Changes in water consumption in same beneficial use do not require a transfer 198
(5) Limitation to historical consumptive use in water right transfer 199

(6) The practical side to determining consumptive use in irrigation: FSA Acreage Reports. 202
(7) Place of use transfers within irrigation districts and canal companies do not require approval 203
F. Ground water transfers 204
G. Water rights mitigation in transfers, appropriations, and delivery calls 205
(1) Different meanings of mitigation 205
(2) California's "physical solutions doctrine" 206
(3) Three types of aquifer recharge in Idaho—ASR, PBAR & ARM 207
(a) Aquifer Storage and Recovery ("ASR") 208
(b) Public Betterment Aquifer Recharge ("PBAR") 208
(c) Aquifer Recharge for Mitigation ("ARM") 209
(4) Should ARM be undertaken for profit? 210
(5) Statutes addressing mitigation 211
(6) Three types of mitigation 212
(7) Mitigation pursuant to the Conjunctive Management Rules: "Capital-M mitigation" 213
(8) Mitigation when there is no conjunctive management delivery call: "small-m mitigation" 215
(a) Mitigation plans in support of applications for appropriation, transfer, or exchange 215
(b) Mitigation of existing water rights 216
(c) Small-m mitigation must be "like kind." 217
(d) Small-m mitigation is subject to re-evaluation at time of delivery call 217
(e) Type I and Type II mitigation 217
(f) It is no longer required to change the nature of use to mitigation 217
(g) Example involving mitigation of ponds 218
(h) Mitigation and instream flows 219
(i) If a senior water right is acquired as a replacement supply, why not simply transfer it to the acquiring junior user? 225
(9) Mitigation of ground water transfers within the ESPA 225
H. Change in source of water 229
(1) Underlying theory 229
(2) Surface-to-surface changes 229
(3) Ground-to-surface and surface-to-ground changes 230
I. The rule against enlargement 231
(1) The basic concept 231
(2) Increase in carriage losses 238
(3) Stacked water rights (primary and supplemental rights) (the *3G* case) 238
(4) Enlargement in a non-irrigation context 241
(a) The *Facility Volume Case* 242
(b) IDWR's *Transfer Memo* 244
J. Change in period of use 245
K. Changes in rate of diversion 247
L. Administrative procedures for water transfers 248
(1) The application process 248
(2) The burden of proof in water right transfers 249
(3) Conditions on transfers 250
M. Amendments to permits and pending applications 251
(1) Amendment of issued permits prior to or at time of licensing 251
(2) Amendment of pending permit applications 251

(3) Amendment of pending transfer applications 252
(4) Assignment of pending applications to new owner 253
N. Exchanges of surface water 253
O. Accomplished transfers 256
P. Modifications of existing conditions on water rights 257
16. STATUTORY CRITERIA FOR WATER RIGHT APPROPRIATIONS AND TRANSFERS 259
A. Summary of all statutory criteria 259
B. Tests applicable to both new appropriations and transfers 261
C. Tests applicable to new appropriations only 262
D. Tests applicable to water right transfers only 265
E. Tests applicable to water exports 266
F. Tests applicable to inter-basin transfers (aka out-of-basin transfers) 266
G. Statutory history of tests 266
17. WATER RIGHTS CONVEYANCING 269
A. Introduction 269
B. The purchase and sale or option agreement 270
C. Conveyance of perfected water rights by deed 272
(1) Quitclaim deed 272
(2) Grant deed 272
(3) General warranty deed 273
(4) Special warranty deed 273
D. Specificity/particularity and the statute of frauds (*Lexington Heights* and its progeny) 273
E. Conveyance of permit by assignment 274
F. Assignments in conjunction with water right deeds 275
G. Conveying a portion of an existing facility 275
18. CONSERVED WATER 277
A. Public policy 277
B. The practical problem of finding conserved water 278
C. Idaho's 2003 Water Conservation Statute 281
19. RECAPTURE AND REUSE, AND THE APPROPRIATION OF WASTE WATER 283
A. Overview 283
B. Right of the original diverter to recapture waste water for use on the original place of use 283
C. There is no right to compel another appropriator to continue discharging waste water. 287
D. Reuse of municipal effluent. 290
E. Land application of municipal or industrial wastewater 295
(1) IDEQ permit 295
(2) Background 295
(3) Required land treatment 296
(4) Optional land treatment 297
(5) Mixing water 297
(6) Land application where land has existing water right 298
(7) Where industrial user relies on municipal water 298
(8) Land application of municipal effluent by cities pursuant to water rights 299
F. 2012 statute (H.B. 608): A separate water right or transfer not required where wastewater is reused or disposed of in order to comply with environmental requirements. 300
20. MORATORIUMS 303
21. THE "TWO RIVERS" CONCEPT ON IDAHO'S SNAKE RIVER 306
A. Separate administration generally 306
B. The administration of the Snake River above and below Milner Dam 306
22. AQUIFER ENHANCEMENT 311

A. The need for additional water storage options 311
B. Public betterment aquifer recharge ("PBAR") 312
(1) The evolution of Idaho's ground water recharge statutes: Idaho Code § 42-232; Idaho Code § 42-234; and Idaho Code §§ 42-4201 to 42-4231 312
(2) Idaho's "public betterment aquifer recharge" statute 312
(3) Appropriations versus water right transfers for aquifer recharge 313
(4) Aquifer recharge as a designated beneficial use; allowing any entity to appropriate water for recharge 314
(1) Voidance, then partial reinstatement, of Idaho Power's Swan Falls subordination with respect to certain water rights acquired for aquifer recharge 316
(2) Summary of the public betterment aquifer recharge experience 319
C. Private Aquifer storage and recovery or "ASR" projects 320
(1) The difference between PBAR and ASR 320
(2) Water diversions and ASR 321
(3) Examples of ASR projects 322
(4) Aquifer mitigation 324
(5) Injection of spent geothermal water 326
23. MUNICIPAL WATER RIGHTS AND RAFN 327
A. The growing communities doctrine—an exception to the anti-speculation rule 327
B. Development of the doctrine in Colorado 329
C. Recognition of the doctrine in Idaho 331
D. The Municipal Water Rights Act of 1996 333
(1) Text of the statute (as amended) 333
(2) The 1996 Act recognized the common law as its foundation 341
(3) Who is a municipal provider? 342
(a) Cities, counties, and state 342
(b) Municipal water utilities 342
(c) Other political subdivisions (such as water and sewer districts) 342
(d) Private developers and homeowners' associations 343
(4) What are municipal purposes? 345
(5) The flexible service area 346
(6) How long is the planning horizon? 348
(7) Reasonably Anticipated Future Needs ("RAFN") 350
(8) Quantifying a municipal water right at licensing: Before and after the 1996 Act 353
(a) Common law rule for cities: Installed capacity/no annual volume limit 353
(b) RAFN rights at licensing: the "capacity of the system" standard (now repealed) 355
(c) Peaking factor calculation 358
(d) Incremental licensing of RAFN rights under the 2020 amendment 359
(e) Non-RAFN rights for traditional municipal providers after the 1996 Act 360
(f) Water rights for subdivision developers prior to the 1996 Act: Stub-in rule 365
(g) RAFN rights for non-traditional municipal providers 366
(h) Non-RAFN municipal water rights for non-traditional municipal providers 367
(9) Forfeiture protection for RAFN rights. 369
(10) Conditions to address changed circumstances in RAFN rights. 369
(11) The Act contains strong anti-speculation provisions 371
(a) The Act seeks to avoid municipal "water wars" seen in other states. 371
(b) The Act imposes three unique anti-speculation rules. 371
(i) Comprehensive plan consistency 371

(ii) Comprehensive plan overlap 372
(iii) Prohibition against selling future need water rights 373
E. The transition from common law to statutory scheme 374
F. Converting non-municipal rights to RAFN rights 375
G. Early experience with the 1996 Act 376
H. The path forward under the 1996 Act 378
I. Future needs water rights in other western states 379
(1) Arizona 379
(2) California 380
(3) Colorado 381
(4) Montana 384
(5) Nebraska 384
(6) Nevada 384
(7) New Mexico 385
(8) North Dakota 387
(9) Oregon 388
(10) South Dakota 390
(11) Utah 391
(12) Washington 391
(13) Wyoming 394
(14) Municipal water supply in the western United States 394
(a) Texts and handbooks on water planning 394
(b) State-by-state summary 395
J. Alternate points of diversion ("APODs") 400
K. Situations in which the APOD condition should not be applied 406
L. Authority of cities to provide water outside of their city limits 407
(1) The police power and inherent proprietary authority 407
(2) Idaho Code § 42-202B(9) (Municipal Water Rights Act of 1996) 408
(3) Idaho Code § 50-301 (home rule) 409
(4) Idaho Code § 50-323 (authorizing municipal water systems) 409
(5) Prior Idaho Code § 49-1132 and current Idaho Code § 50-1030(a) 411
(6) Idaho Code § 50-222(4)(b)(ii) (consent to annexation) 414
(7) Idaho Code § 50-324 (cooperative operation of out-of-state water system) 414
(8) Joint Services—Idaho Code §§ 50-1022 to 50-1025 415
(9) Joint Exercise of Powers Act (Idaho Code §§ 67-2326 to 67-2333) 416
(10) Contracts with irrigation districts providing water within cities (Idaho Code §§ 50-1805, 50-1805A) 416

VOLUME 2 418

1. INSTREAM FLOW RIGHTS 420
A. The traditional diversion requirement 420
B. The mechanics of instream flows 422
C. Idaho's minimum stream flow act 425
D. Statutes appropriating water for specific water bodies to be held by the State in trust 427
E. Transfers to instream uses 428
F. Water amenity rights 430
G. Boise River minimum flow releases 431
H. Snake River minimum stream flows 432
(1) Milner Dam (No. 2-200): 0 cfs - 1976 priority 433
(2) Murphy Gage (aka Swan Falls) (Nos. 2-201, 2-223, and 2-224): 3,900 cfs / 5,600 cfs – 1976/1985 priorities 434
(3) Weiser Gage (No. 3-6): 4,750 cfs – 1976 priority 435

(4) Johnson's Bar (No. 3-7): 5,000 cfs - 1978 priority 435
(5) Lime Point (3-8): 13,000 cfs – 1985 priority 436
2. THE PUBLIC TRUST DOCTRINE 440
A. The doctrine in a nutshell 440
B. The doctrine's origins—the State's property interest in submerged lands 443
(1) Roman law 443
(2) *Illinois Central* (1892) 445
(3) *Arnold v. Mundy* (1821) 446
(4) *Martin v. Waddell* (1842) 447
(5) *Pollard's Lessee* (1845) 448
(6) *Shively v. Bowlby* (1894) 450
(7) *Knight* (1891) 450
(8) *Phillips Petroleum* (1988) 451
C. The modern doctrine—a trust for the protection of natural resources 452
(1) The Sax articles (1970 and 1980) 452
(2) Mono Lake and other recent state decisions 453
D. The public trust doctrine in Idaho 455
(1) Idaho case law 455
(2) 1996 statute limiting the public trust doctrine 456
E. Is there a federal public trust doctrine? 458
(1) The Wilkinson article (1980) 458
(2) Early federal cases 459
(a) *Beebe* (1888) 459
(b) *Trinidad Coal* (1890) 459
(c) *Light* (1911) 459
(3) Modern federal public trust cases 460
(a) *Sierra Club v. Andrus* (1980) 460
(b) *Steuart Transportation* (1980) 461
(c) *1.58 Acres of Land* (1981) 462
(d) *Air Florida* (1984) 462
(e) *Sierra Club v. Block* (1985) 463
(f) *Burlington Northern* (1989) 464
(g) *Edmonds Institute* (1999) 465
(4) Would a federal public trust doctrine support public access and private utilization of natural resources? 465
3. LOCAL PUBLIC INTEREST REVIEW 467
A. Brief overview of the local public interest review 467
B. Proceedings in which the local public interest is considered 472
(1) Applications for new permits 473
(2) Transfers of existing water rights 474
(3) Amendment of issued permits 474
(4) Water supply bank rentals 475
(5) Exchanges of surface rights 475
(6) Minimum stream flows 475
C. Appellate case law applying the local public interest test 476
(1) *Hidden Springs Trout Ranch* (1981) 476
(2) *Shokal v. Dunn* (1985) 477
(3) *Collins Bros. Corp. v. Dunn* (1988) 482
(4) *Dovel v. Dobson* (1992) 483
(5) *Hardy v. Higginson* (1993) 484
(6) *Chisholm v. IDWR* (2005) 485

D. District court rulings 486
(1) *Box Canyon Dairy* (2000) 486
(2) *DeKruyf Dairy* (2001) 486
(3) *Wybenga* (2002) 487
(4) *Eden's Gate v. IDWR* (2022) 487
E. Unappealed IDWR contested case decisions on the public interest 488
F. Historical background on the local public interest test 493
G. Making sense of the public interest test 497
H. Deference to other agencies in evaluating the local public interest 499
4. STANDING 504
A. Standing in matters before the IDWR 504
B. Standing in general adjudications 504
5. THE WATER SUPPLY BANK 507
6. WATER DELIVERY AND MANAGEMENT ENTITIES 512
A. The basic types of water delivery organizations 512
B. Commercial irrigation companies (aka commercial ditch companies or carrier ditch companies) 514
C. Mutual irrigation companies (aka mutual canal companies or mutual ditch companies) and Carey Act operating companies 516
D. Lateral Ditch Water Users' Associations 520
E. Irrigation districts 520
F. Water districts 524
G. Ground water districts 526
H. City irrigation systems 526
7. WHO OWNS THE WATER DIVERTED BY WATER DELIVERY ENTITIES? 528
A. Overview 529
B. The "Public Use" concept in Idaho's Constitution 530
C. Water right ownership in commercial irrigation companies 534
D. Water right ownership in mutual irrigation companies (including Carey Act operating companies) 539
E. Water right ownership in irrigation districts 545
(1) Natural flow, ground water, or drainage rights held by irrigation districts 546
(2) Storage rights in federal reservoirs held by irrigation districts 547
F. Water right ownership in federal reclamation projects 548
(1) Federal reclamation law background 548
(2) The *Pioneer* decision 552
(a) The irrigators hold "title" (of some sort) to Bureau water. 552
(b) Why did ownership matter to the irrigators in *Pioneer*? 555
(c) The holding in *Pioneer* should be limited to water rights for Bureau projects 556
(i) First reason – *Pioneer* is grounded in reclamation law 556
(ii) Second reason – *Pioneer* left the commercial irrigation district cases intact. 557
(iii) Third reason – Judge Melanson expressly recognized that the outcome would be different in the context of commercial irrigation companies. 561
(iv) Fourth reason – The *Eagle Creek* decision confirms that commercial irrigation companies may hold full title to their water rights. 562
(v) In sum 563

G. Water right ownership for municipal providers 563
8. FLOOD CONTROL DUTY 566
9. FEDERAL RECLAMATION LAW 568
10. HYDROPOWER SUBORDINATION 572
A. The meaning and effect of subordination 572
B. No-call agreements distinguished (upstream and downstream effects) 573
C. 1928 amendment to the Idaho Constitution 575
D. Not self-executing 576
E. Retroactive subordination 576
F. Idaho statutes, regulations, and other regulatory actions 577
11. THE *SWAN FALLS AGREEMENT* 583
A. History of the controversy 583
B. Terms of the agreement 585
C. Appropriations in the "trust water area" pursuant to the Swan Falls statutes 590
12. GENERAL ADJUDICATIONS 592
A. SRBA (Snake River Basin Adjudication) (No. 39576) 592
B. NIA (North Idaho Adjudication) (Nos. 49576, 59576, and 69576) 592
C. BRBA (Bear River Basin Adjudication) (No. 79576) 593
D. The deferral process 593
(1) Overview 593
(2) Legal status of deferred claims 595
(3) Deferral in the CSRBA and PRBA 595
(4) Challenges by the United States in the CFPRBA and BRBA 596
(5) Appeal in the CFPRBA and BRBA 597

1. INTRODUCTION TO WATER LAW

The prospectors and settlers who traipsed across the plains toward the mountains and valleys of the West more than a century ago encountered a land unlike any they had experienced before. Its soil was rich. Its hills were pregnant with minerals. It was spectacular country. All that was needed to unlock its treasures was water. Water, however, was scarce. Startlingly scarce.

With little more than their own hands, some inspiration, and a stubborn refusal to give in to adversity, they began to change the face of the West. What water they found, they diverted, stored, channeled, pumped, piped, and sprayed in some of the most ingenious and monumental physical undertakings ever conceived. Beginning in the 1860s in Idaho, miners used water for placer and hydraulic mining, milling and other purposes. Mormon settlers devised remarkably elaborate irrigation systems in the upper Snake River Valley. Power companies first harnessed the hydroelectric potential of Idaho's rivers to power mines in 1901. The federal government followed suit with massive dams that powered the nation through World War II and turned the Great American Desert into an irrigated food factory. Idaho's towns and cities grew up where sagebrush once ruled.

In the course of these technological achievements and social transformations, the natural environment has changed dramatically. The hydrology of rivers, streams and aquifers has been altered, fish migration has been disrupted, and pollutants found their way into rivers, lakes, and aquifers. Most Idahoans now experience water's natural scarcity in the West as a byproduct of urban growth. Urban expansion requires water for municipal and industrial uses. Much of this water supply will come from formerly irrigated areas which are now being subdivided, paved over, or otherwise taken out of agricultural production. Today, as urban populations grow, as the environment responds to stress, as economies fluctuate, as politics shift, and as the climate itself threatens global change, the allocation of water grows ever more complicated and controversial.

Growing cities, emerging industries and new coalitions of users flex increasing muscle in a political setting which once knew only agriculture. Fish and wildlife advocates, backed by powerful federal legislation and federal courts, have claimed a seat at the table. Congress seems to run both ways at once—winding down the federal partnership with the states which bankrolled water development for most of this century, while at the same time stepping up its involvement in the regulatory arena. Hydroelectric power generators grapple with the prospect of deregulation, coupled with the challenge of relicensing most of their projects. Farmers and ranchers face tough economic conditions and ponder their future–on the one hand resenting and resisting the market forces which threaten their way of life, and on the other hand wondering what the water market might be capable of doing for them.

These are changing times for water right holders. Yet the basic principles of allocation today are the same ones devised by the first settlers more than a century ago. The first rules to evolve were simple understandings worked out (and sometimes enforced at the end of a gun) in the early mining camps. Today, the legislatures, courts, and regulatory bodies have taken over the task of writing the law. However, the basic premises remain unaltered. First, water is a public resource, owned by the public. Second, a private right to use the public's water can be acquired, but it is a conditional right

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

that is founded on continuing beneficial use. When proper procedures are followed, the right to continue using water so "appropriated" ripens into a legally enforceable "water right." Third, when there is insufficient water available to fill all of the water rights diverting from the same source, the state's administrative authority can be brought to bear to allocate the available supply on the basis of who first put it to beneficial use, but only as between those right holders who actually are using the water without waste.

Despite water's enormous economic value, rights to this public resource are awarded to the appropriator free of charge. Except for the cost of complying with state rules and some local delivery charges, the appropriator pays nothing to use the water. Only when a water right is sold to a new user does the right fetch a price—perhaps a substantial one.

The spread in value is tremendous. A gallon of bottled water sold for a dollar in a supermarket translates to $325,851 per acre-foot. That same acre-foot, in some circumstances, may be bought from Idaho's Water Supply Bank or the U.S. Bureau of Reclamation for under five dollars. Meanwhile, the price of a permanent supply in Idaho is slowly being driven up by moratoriums and other obstacles to new appropriations. While Idaho likely remains decades away—or longer—from the frenzied water transactions of Nevada, Colorado, Arizona and California, one thing is for sure. The days of simple, routine appropriation of new rights are over. Water markets—public and private—have arrived. Still in their infancy today, they will play a major role in the allocation of water from here on out.

The market for water, however, is unlike others. Water is not a simple commodity like apples or coal. It flows; it is used and used again; it is lost, recycled and renewed. To the user, its real value lies in the physical and legal reliability of its source. This leads to the central principle of Western water law—priority. The most commonly described attribute of water rights in the West is the rule that "first in time is first in right."[1] This is the essence of the prior appropriation doctrine—the governing law in the allocation of water throughout the West. The basic principles of Idaho's water law system are summarized below.

[1] The U.S. Supreme Court used the phrase "first in time, first in right" to summarize the priority doctrine in *California v. Arizona*, 373 U.S. 546, 555 (1963) (Black, J.). These words are also codified in Idaho Code § 42-106. Finally, our Idaho Supreme Court has employed the phrase: "Nearly every session our Legislature has attempted to improve upon its predecessor by so legislating as to improve the former use of water, and an inspection of the various acts plainly shows that the guiding star has always been to so legislate as to protect all users of water in the most useful, beneficial way, keeping in view the rule existing all over the arid region, 'First in time first in right.'" *Hard v. Boise City Irrigation and Land Co.,* 9 Idaho 589, 594, 76 P. 331, 332 (1904) (Ailshie, J., concurring).

Printed 6/23/2023 9:09 AM

2. RIPARIAN RIGHTS

The prior appropriation doctrine (to which Idaho subscribes) contrasts with the law of "riparian rights" prevalent in the Eastern United States where water is more plentiful. Riparian water rights are based on the principle of equal sharing of water among all riparian (streamside) landowners, without regard to who got there first. "Its fundamental precept is that usufructuary rights in a stream's water are created as an incident of ownership of riparian land." Baker v. Ore-Ida Foods, Inc., 95 Idaho 575, 579, 513 P.2d 627, 631 (1973). Nine of the Western states (California, Kansas, Nebraska, North Dakota, Oklahoma, Oregon, South Dakota, Texas, and Washington) mix together elements of prior appropriation and riparian water law. Even in these "dual system" states, however, the principles of prior appropriation dominate.

Idaho's commitment to the prior appropriation doctrine is spelled out in its Constitution: "The right to divert and appropriate the unappropriated waters of any natural stream to beneficial uses shall never be denied, except that the state may regulate and limit the use thereof for power purposes." Idaho Const. art. XV, § 3. The prior appropriation doctrine was followed even before Idaho's admission to the Union in 1890. *Malad Valley Irrigating Co. v. Campbell*, 2 Idaho 411, 18 P. 52 (1888). In *Hutchinson v. Watson Slough Ditch Co.*, 16 Idaho 484, 101 P. 1059 (1909), the court held that riparian rights are repugnant to the constitution and exist only to the extent they do not conflict with rights acquired through prior appropriation. *Schodde v. Twin Falls Land & Water Co.*, 224 U.S. 107 (1912) (noting that Idaho had rejected the riparian rights system of appropriation). *See also Baker v. Ore-Ida Foods, Inc.*, 95 Idaho 575, 513 P.2d 627 (1973) (rejecting "correlative rights" in ground water).

Curiously, it was not until 2021 that Idaho repealed a statute stating that persons owning riparian land "are entitled to the use of the waters of such stream for the purpose of irrigating the land so held or claimed." H.B. 307, 2021 Idaho Sess. Laws, ch. 250 (repealing Idaho Code § 42-1101). The repealed statute had been on the books (and essentially ignored[2]) since 1887. 1887 Idaho Revised Stat. § 3180. The 2021 Statement of Purpose said that section 42-1101 would be repealed because it "appears to recognize riparian doctrine in Idaho."

[2] The only reference to the statute is the dissent in *Drake v. Earhart*, 2 Idaho 750, 23 P. 541, 546 (1890) (Berry, J., dissenting). The dissent noted that the statute recognized "what are the equivalent to common-law water-rights [i.e., riparian rights]." *Id.* (referring to an 1881 statute, "Section 3180, Rev. St.").

3. A BRIEF IDAHO HISTORY

Water resource development in Idaho has proceeded under four distinct phases.[3] The first was the "easy" phase. It began with the earliest direct diversion of water from the Boise River in 1843. Other direct diversions of natural flow from the Snake River and its tributaries began in earnest in the 1860s, peaking in the 1880s and 1890s. By the turn of the last century, the direct flows, in large part, were fully appropriated.

Thus began phase two, the era of surface storage. Beginning with Milner Dam in the Magic Valley, ditches, canals and reservoirs were constructed by Carey Act companies, the Bureau of Reclamation, irrigation districts and others. Today the reservoir capacity of the Snake River Plain exceeds nine million acre-feet.

This was followed by a quieter, but just as important revolution. The third phase began after World War II, with the intersection of new technologies, low cost power, and burgeoning agricultural demand. This time, irrigators—acting largely on their own—looked down, to the vast Snake Plain Aquifer. Over the last fifty years, the landscape has been transformed once again by the hand line, the sideroll or wheel line, and the center pivot. Today vast aquifers throughout Idaho and across the West compete with the mighty rivers as the foundation for our water-based economies.

The fourth phase, beginning in the 1960s, again focused on surface water. This is the era of efficiency. Flood irrigation gave way in many parts of Idaho to sprinkler and laser-leveled fields—technologies developed for ground water pumping and adapted for surface water. Lined ditches yielded further gains, and gated pipe delivered water more efficiently to the remaining furrow irrigation operations. Meanwhile, the high-lift pump came on the scene, enabling the irrigation of vast areas of former desert with water pumped from the Snake River as much as 600 feet below. The extent of the change is unmistakable from the air: Circles of green stretching across the horizon. Or from the road: Evening sunlight refracted through the spray of countless pivots and siderolls.

Now, at the turn of the century, we are—perhaps—about to embark upon the fifth phase– reallocation of existing water supplies. This may be accomplished through a variety of means, from simple transfers of water rights, to more complex exchanges, and finally to creative new undertakings such as aquifer storage and recovery (or "ASR") and public betterment aquifer recharge ("PBAR").

[3] *See* Jeffrey C. Fereday & Michael C. Creamer, *Swan Falls in 3-D: A New Look at the Historical, Legal and Practical Dimensions of Idaho's Biggest Water Rights Controversy*, 28 Idaho L. Rev. 573 (1992).

4. THE FUNDAMENTALS OF WATER RIGHTS

A. A usufructuary right—a right to use

A water right is created and maintained by "appropriating" it, that is, exerting control over a flow or volume of water and putting it to beneficial use. Idaho, like most Western states, requires that one seeking a water right first must follow an administrative process involving an application to make the appropriation, which, if accepted, results in a permit. Provided its conditions are met, the permit then ripens into a license. The license is the certificate showing the existence of the water right. The appropriator pays nothing to acquire the water right, other than nominal application filing fees.[4] Once obtained, the water right is valuable property.

Although a water right is a property right, the owner does not own the water itself. The owner merely owns the right to use the water for a specific beneficial purpose consistent with various conditions and constraints. The water resource itself is owned by the people of Idaho.[5] In a technical sense, it can be said that once an appropriator diverts public water from a stream or aquifer, or impounds it in a reservoir, it becomes the appropriator's property, simply by virtue of the direct control the appropriator exerts over it. But even then, the water remains "impressed with the public trust to apply it to a beneficial use."[6] Water rights, therefore, often are described by lawyers as "usufructuary," meaning a right to *use* a thing, not ownership of the thing itself. Usufructuary rights are nevertheless property rights—a type of real estate.[7]

A water right may be sold, donated, mortgaged, deeded, leased, devised or otherwise treated in most ways like any other real estate. In Idaho a water right will pass to the purchaser of land any time title to land is transferred, unless the right is specifically reserved in the deed.

---

[4] Current filing fees are set out in Idaho Code § 42-221. Other fees associated with general adjudications are codified at Idaho Code § 42-1414. From time to time, proposals are made for a "severance tax" or other use fee to be paid by private parties when they use a public water resource. Such proposals have not been adopted. The same fees apply to changes in point of diversion and other elements of a water right.

[5] The State's ownership of water resources is in its sovereign capacity "for the purpose of guaranteeing that the common rights of all shall be equally protected and that no one shall be denied his proper use and benefit of this common necessity." *Poole v. Olaveson*, 82 Idaho 496, 502, 356 P.2d 61, 64 (1960), quoting *Walbridge v. Robinson*, 22 Idaho 236, 242, 125 P. 812, 814 (1912).

[6] *Washington Cnty. Irr. Dist. v. Talboy*, 55 Idaho 382, 385, 43 P.2d 943, 945 (1935); *see also Glavin v. Salmon River Canal Co.*, 44 Idaho 583, 588-89, 258 P. 532, 534 (1927); *American Falls Reservoir District No. 2 v. IDWR* ("*AFRD*"), 143 Idaho 862, 154 P.3d 433 (2007) (Trout, J.).

[7] Idaho Code § 55-101(1) (definition of real property); *Reno v. Richards*, 32 Idaho 1, 178 P. 81 (1918); *In re: Robinson*, 61 Idaho 462, 103 P.2d 693 (1940); *Anderson v. Cummings*, 81 Idaho 327, 334, 340 P.2d 1111, 1115 (1959); *Crow v. Carlson*, 107 Idaho 461, 690 P.2d 916 (1984). As discussed in section 11.A(1) at page 146, permits are deemed personal property, not real property.

Because they are property, water rights are subject to the U.S. (and State) Constitution's prohibition against uncompensated takings.[8] This does not mean that any government interference with a person's water right constitutes a compensable taking. However, the law of takings continues to develop.[9] Generally speaking, any physical invasion or a regulation that completely destroys the economic value of the water right probably constitutes a taking.[10]

B. The elements of a water right

Every water right is described by seven specific "elements" that define and limit its use.[11] Those elements are: source, quantity (either in annual volume or rate of flow, or both), priority date, point(s) of diversion, purpose(s) of use, period of use, and place of use. *See City of Blackfoot v. Spackman*, 162 Idaho 302 (2017) (Burdick, C.J.); *Olsen v. IDWR*, 105 Idaho 98, 666 P.2d 188 (1983).

---

[8] The government is required to pay compensation if its action results in a "taking" of property under the Fifth Amendment. U.S. Const. amend. V (takings clause). The Fourteenth Amendment makes the takings clause applicable to actions by state government as well. U.S. Const. amend. XIV.

[9] Traditionally the courts have given wide latitude to regulatory bodies, but the rules for what constitutes a taking remain mushy. *See, e.g.*, *Agins v. City of Tiburon*, 447 U.S. 255, 260 (1980) (land use regulation will be a taking only "if the ordinance does not substantially advance legitimate state interests . . . or denies an owner economically viable use of his land.") No doubt, the courts will be called upon to provide further guidance on this issue. The lower courts do not appear to be applying the rules consistently. *See, e.g.*, *Deltona Corp. v. United States*, 657 F.2d 1184 (Ct. Cl. 1981), *cert. denied*, 455 U.S. 1017 (1982) (denial of a section 404 permit did not constitute a compensable taking), *Florida Rock Industries, Inc. v. United States*, 791 F.2d 893 (Fed. Cir. 1986), *cert. denied*, 479 U.S. 1053 (1987), *on remand*, 21 Cl. Ct. 161 (1990) (to determine whether there is a complete diminution in value the court must consider the value of the land as sold to speculators), *Loveladies Harbor, Inc. v. United States*, 21 Cl. Ct. 153 (1990) (regulatory taking found in denial of section 404 permit).

[10] To further complicate matters, a doctrine known as the "navigation servitude" exempts the federal government from the obligation to pay compensation for federal actions which would otherwise constitute compensable takings when the federal action is taken pursuant to the navigation power. *Arizona v. California*, 283 U.S. 423 (1931). Recent U.S. Supreme Court decisions make clear, however, that even the navigation servitude is not a complete defense. *Kaiser Aetna v. United States*, 444 U.S. 164 (1979) (proposed regulation to require public access to pond newly connected to a bay amounted to a taking); *Vaughn v. Vermillion Corp.*, 444 U.S. 206 (1979) (proposed regulation to require public access to waterbody amounted to a taking).

[11] The various elements of a water right are identified in various locations of Idaho's water code (Title 42, Idaho Code) dealing with appropriation and transfer of water rights. E.g., Idaho Code §§ 42-203A, 42-217, 42-219 and 42-222. The elements are also set out in the a relatively modern statute describing the Director's Report to be submitted on each water right to the SRBA. Idaho Code § 42-1411(2). Note that the SRBA statutes originally called for quantification of the "consumptive use" as an element of a water right. This requirement was repealed in 1997. 1997 Idaho Sess. Laws, ch. 374. In addition to the elements listed above, Idaho Code § 42-1411(2) lists (1) the name and address of the claimant, (2) conditions, and (3) remarks. Although important, these are not generally understood to constitute "elements" of the water right.

Most elements may be changed, subject to administrative approval. A few elements, however, may not be changed. For instance, a water right user may not change the source of a water right, increase its quantity, or make its priority date earlier. For those elements that are changeable, a water right holder has the legal right to change them, but only where injury to other water users is avoided and other legal standards are met. Any change to an element of a water right requires the approval of the Idaho Department of Water Resources ("Department" or "IDWR") in a transfer proceeding. (See discussion in section 15 at page 190.).

(1) Source

The source of the water supply simply identifies the body of water from which the water is to be appropriated or diverted. In the case of a surface right, the particular stream, spring, or lake is named. In the case of ground water, the source is typically simply labeled "ground water."

Generally, the larger the water source the more secure the right because it will be more likely to provide water during periods of extended drought. Availability of water to satisfy a particular water right is dependent, as well, upon the number and size of any senior water rights from the same source.

Ordinarily the water user may not change the source of a water right, but must instead obtain a new water right in the new source. However, the Department will allow a change in one tributary to another tributary of the same source, if doing so does not result in injury.

All waters of the state when flowing in their natural channels, including springs, lakes and ground water are available for appropriation.[12] However, the Idaho Department of Water Resources is prohibited from issuing a permit to appropriate the water of any lake not exceeding five acres in surface area or any pond, pool or spring located entirely on the lands of a single owner except to the landowner, or if to another, with the acknowledged written permission of the landowner. These are inaccurately referred to as "private waters."

(2) Point of diversion

The point (or points) of diversion refers to a legal description of the location where the water is diverted from a stream, an aquifer, a lake or other water source. Any change in point of diversion requires approval of a transfer application by the Department.

For an instream flow water right, the beginning and ending points of the stream reach are described.

(3) Priority

Early water users are referred to as "senior," while those who come later are called "junior." A senior water right holder is entitled to have his right filled completely before any junior right holder is

[12] Idaho Code §§ 42-101, 42-226.

EXHIBIT C
Page No. 29 of 761

entitled to divert at all. (See Appropriation Example 1 below.) This is the principle of "first in time is first in right" that is set forth in Article XV, § 3 of the Idaho Constitution.[13]

The date on which a person (or his predecessor) first began to use the water is known as the user's priority date. Priority, as well as amount, is confirmed in license or a decree. During drought conditions, only senior users on a particular stream (say, with priority dates of 1890 or earlier) might be allowed to divert. Thus, the more senior the priority date, the more secure the water right, regardless of where the user is located on the stream.

When a water right is sold or changed, it ordinarily keeps its original priority date (so long as no other water user is injured). This is one of the most valuable aspects of its existence.

Note that when water rights are obtained by an irrigation delivery entity, such as a canal company or irrigation district, water rights are typically acquired for the project in a single block. Thus within the irrigation entity, all users who have obtained water rights out of that supply hold the same priority date, even if some settlers arrived earlier on the project than others.[14] Of course, if the project subsequently obtains an additional water right or rights, those subsequent acquisitions would have their own priority dates.

A senior water right holder may obtain the state's help in enforcing his or her priority. If a water user is not able to obtain water to achieve his or her beneficial use under the user's entitlement and believes that junior users are diverting water that he or she is entitled to divert, the senior may place a "delivery call" (aka "priority call" or simply "call") on the water source. In such a case, the state will require junior appropriators to reduce or cease their diversions to supply the senior. The curtailment of junior water rights by action of the state to enforce priorities is referred to as "administration" of the rights. On surface streams where the rights have been adjudicated, administration occurs in a routine and organized fashion through a state agent known as a watermaster: When the river flow drops to a pre-determined level, the watermaster closes a certain group of junior headgates; when it drops further, he or she closes the next group, and so forth. Where rights have not been adjudicated, or where both ground and surface water rights are to be administered together, administration often is more complicated, or requires additional processes. These and other issues pertaining to the administration of water rights are discussed in section 14.D(1) at page 183.

(4) Nature of use

The nature of use identifies the particular use that is made of the water under a water right. An appropriation must be for a useful or beneficial purpose.

[13] *See also* Idaho Code § 42-106.

[14] *Faris v. Blaine Cnty. Inv. Co.*, 3 F. Supp. 381 (D. Idaho 1983).

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

Most descriptions of the nature of use are quite broad. For instance, an irrigation rights is simply described as "irrigation" without specifying, for instance, the particular crop.[15] Likewise, an industrial facility's water right is typically described generically as "industrial" or, perhaps, "commercial." In some instances, however, it might be described more specifically such as, for instance, a "food production facility." The Department does not have a fixed practice regarding how much specificity is required. From the holder's perspective, the more general the description, the better, to provide maximum flexibility in the future.

(5) Quantity: rate of diversion and annual volume

All water rights must be quantified in some way to determine the amount of the right. Very early irrigation water rights were quantified simply by reference to the lands that were irrigated. (E.g., "water for 40 acres irrigation.") Just how much water this means is left for subsequent administrative or judicial determination.

Older irrigation water rights are often quantified simply in terms of a diversion rate, without any specified annual volume. This is typically expressed in cfs (cubic feet per second) or miner's inches (one fiftieth of a cfs in Idaho). The diversion rate is the rate of flow associated with the water diversion, measured at the point of diversion. If no annual volume is specified for the right, that does not mean there is no annual volume limitation (except in cases of municipal rights). Rather, the annual volume will be estimated based on historical use if the water right subsequently must be quantified, for instance in a transfer proceeding.

Today, new ground water rights and surface water rights typically are described with express terms for diversion rate, period of use, and annual volume. For instance, a water right used to irrigate 100 acres might be issued with a diversion rate of 2 cubic feet per second ("cfs") and an annual volume of 400 acre-feet. The annual volume serves as a critical cap on the water right. If a 2 cfs right were allowed to divert all day, year round, it would yield 1,448 acre-feet.

The question of how much water an irrigator is entitled to, is an evolving one. Prior to the advent of sprinkler systems, the Department issued most irrigation water rights based on the rather generous "inch per acre" rule specified in Idaho Code §§ 42-202(6) and 42-220. Under these statutes, which are still in effect, an irrigator may not exceed a miner's inch (0.02 cfs) for each acre irrigated unless the applicant can demonstrate special circumstances requiring a higher rate of diversion. Thus, based on the example above, 100 acres of irrigated land might have been awarded a water right with a diversion rate of 2 cfs (100 acres x 0.02).

With the advent of sprinklers and other more efficient delivery systems, however, an inch per acre is often more that is required to irrigate efficiently. Consequently, the Department is less likely to approve the full inch per acre at the permit stage. Instead, the Department will take into account the

[15] *Muir v. Allison*, 33 Idaho 146, 191 P. 206 (1920); see note: "Changes in consumptive use do not require a transfer pursuant to section 42-222." Idaho Code § 42-202B(1) (as amended in 2004).

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

particular delivery system, and set the permitted quantity accordingly. Many ground water rights in Idaho have been licensed for less than one inch per for this reason.

Thus, an irrigator using less efficient gravity (i.e., flood) irrigation would be able to acquire a larger water right, up to an "inch per acre," than a farmer who has installed more efficient sprinkler irrigation equipment.

At the license stage, the Department will review quantity again based on beneficial use of the as-built irrigation system. Thus, the licensed quantity could be cut back further consistent with on-the-ground conditions. There is a limit, however, to how far the Department evaluates individual circumstances at the licensing stage. For instance, it is not the Department's practice to take into account the particular crop grown, soil conditions, or other individual factors. Thus, to establish the diversion rate at the license stage, the Department ordinarily simply looks only at how much water the system delivers, measured at the point of diversion.

The discussion above relates to the quantification of irrigation rights. Industrial and commercial water rights are quantified based on the specific needs of the appropriator.

Small domestic rights are quantified based on a statutory formula.[16] However, in certain circumstances domestic rights may be aggregated in subdivisions and by non-municipal water providers serving domestic uses.[17]

Note that municipal water rights are quantified differently from others. It is the longstanding practice of the Department that municipal water rights are quantified solely in terms of flow (diversion rate); no separate annual volume is stated. In other words, its annual volume equates to what would be produced if operated at that rate of flow 24 hours per day for 365 days. Thus, a municipal right quantified at 2 cfs would carry (either implicitly or explicitly) an annual volume cap of 1,448 acre-feet (in contrast to 400 acre-feet for a typical 2 cfs irrigation right). As a practical matter, a municipal provider will not pump the full allowable volume for a number of years. Eventually, however, the municipal provider will "grow into" the full annual volume permitted. (See discussion of municipal rights and the "growing communities doctrine" in section 23.D(8) at page 353.)

What happens when an irrigator reduces the quantity of water required at some point after licensing of the right? For instance, suppose an irrigator historically using a gravity/flood irrigation technique switches to a more efficient sprinkler irrigation system. Does this reduce the size of the water right? The quick answer is "no," unless and until the water right is transferred to a new use (or some other change is made in the right's use).

---

[16] Idaho Code § 42-111; see also IDAPA 37.03.08.010.08 (definition of DCMI and discussion of domestic) and 37.03.08.010.15 (definition of "Single Family Domestic Purposes").

[17] There is no statutory provision specifically discussing these larger domestic rights. However, it has long been the Department's practice to award domestic rights for subdivision developments and the like. Since the enactment of the Municipal Water Rights Act of 1996, some of these uses may be eligible for a municipal water right, based on the broad definition of municipality. See discussion in section 23 beginning on page 327.

EXHIBIT C
Page No. 32 of 761

So long as the right continues to be used for irrigation, the farmer retains the flexibility to convert back and forth among irrigation systems, or among more or less water demanding crops (so long as the diversion quantity specified in the license or decree are not exceeded). Thus, in theory, the farmer could go from gravity to sprinkler and back to gravity without risk of having his or her right cut back in the interim.[18] And, generally speaking, the consumptive use under the right should change little due to such a switch, depending on the comparative amounts of such things as evaporation from ditch losses and sprinkler spray. However, the timing and location of return flows could be quite different as between the two techniques.

The situation is different, however, when that farmer seeks to transfer the water right to a new type of use. If, for instance, the farmer were to sell her water right to an industrial user after having converted to sprinklers, the Department would evaluate the quantity of water available for transfer based on recent historical use, for example, over the last five years. In other words, she may be able to convey only the quantity of water historically required for use in her sprinkler system. (See discussion of transfers in section 15 at page 190.)

Prior to *Hagerman II,*[19] it had been the Department's practice to report water rights to the Snake River Basin Adjudication at the lower quantity reflecting current irrigation practices. The Department first justified this on the basis of partial forfeiture. When the SRBA Judge declared (incorrectly) that there was no such thing as partial forfeiture, the Department changed its theory and justified the practice on the basis of a constantly evolving "beneficial use." In *Hagerman I,*[20] the Idaho Supreme Court reversed the SRBA Court and declared that partial forfeiture does exist in Idaho water law. In the companion case, *Hagerman II*, the court also rejected the Department's "beneficial use" rationale, saying that the forfeiture statute, being more specific, controlled the issue.

At that point, the Department might have taken the position that any change in irrigation practice resulting in a smaller water diversion for five years constitutes a partial forfeiture. *Hagerman II* seemed to invite this. Instead, the Department has accomplished the same result under a different rubric. Rather than declaring that the reduced diversion into a more efficient delivery system results in a partial forfeiture, the Department simply observes that as a principle of the law of transfers, it can allow the transfer of only that diversion then being made of the water, based on recent historical use. This distinction is more than semantic; it allows the Department to be lenient to the irrigator (by not calling the switch to sprinklers a partial forfeiture), while holding to the longstanding rule looking to

[18] If the right were to be adjudicated (for example in the SRBA) at the stage when sprinklers were in place, the right holder would be entitled to a decree for the potentially larger diversion quantity specified in the license, allowing her to revert to that diversion amount to support flood irrigation if need be. A number of water rights, however, were decreed at the lower diversion quantity at a time when that was the Department's practice. The only avenue available for the user who wakes up to discover this uneven treatment is to seek relief from the court. He or she will have to contend with Idaho R. Civ. Pro. 60(b) which limits the reasons for which a final decree may be changed and sets a six month rule for most requests. As a practical matter, it is unlikely that an irrigator would regress from sprinkler to flood techniques.

[19] *State v. Hagerman Water Right Owners, Inc. ("Hagerman II")*, 130 Idaho 736, 947 P.2d 409 (1997) (Schroeder, J.).

[20] *State v. Hagerman Water Right Owners, Inc. ("Hagerman I"),* 130 Idaho 727, 947 P.2d 400 (1997) (Schroeder, J.).

historical beneficial use--or even in some cases historical consumptive use--when it comes to deciding what diversion to allow in a water right transfer.

The quantification of a water right can pose a challenge for a growing company. If an industrial user is still growing the business at the time a water right is licensed, the right will be quantified based on the best year of production during the proof period. There is no cushion for future growth. A growing enterprise must apply for (or acquire by purchase) a new water right to cover the expansion.

(6) Period of use (aka season of use)

The period of use (or season of use[21]) identifies the time of the year when water is authorized to be diverted and used. For example, a water right for irrigation may be used only during the irrigation season.[22] The storage season, on the other hand, is that period of the year when water is not being used for irrigation.

Designation of the period of use is important because different water users often hold rights to the use of water from the same source but during different periods of the year. The period of use also reflects an implicit quantity limit on the water right. For instance, the holder of a year-round hydropower right on a stream may be concerned that irrigators not begin diverting upstream surface diversions too early in the Spring or too late in the Fall.

Older water rights often failed to expressly state the period of use, or simply describe it as, say, "the irrigation season." This creates difficulties in administration, and usually requires the Department or a court to determine the actual period of use based on actual dates, such as April 15-November 15 for irrigation. Current Idaho statutes require that in decreeing water rights the court shall designate the period of the year when water may be used for the authorized purpose.[23] Likewise, the Idaho Supreme Court has ruled that the irrigation season must be defined by specific beginning and ending dates. *A&B Irr. Dist. v. Idaho Conservation League* (aka *Basin-Wide Issue 5*) ("*ICL III*"), 131 Idaho 411, 424, 958 P.2d 568, 581 (1998) (McDevitt, J.).[24]

---

[21] The terms period of use and season of use are interchangeable, although it is possible that a particular period of use might correspond to something other than a season.

[22] The irrigation season in Idaho ranges from six to nine months, depending upon the geographic area. A map designating the applicable irrigation season for each area of the state is set out in Appendix B to IDAPA 37.03.08.

[23] Idaho Code §§ 42-1411(2)(g), 42-1412(6).

[24] In *ICL III*, the Director of IDWR included various general provisions (addressing administrative issues broadly applicable to all water rights) in the Director's Reports for three test basins. A&B Irrigation District and others moved the SRBA Court to designate a basinwide issue to consider the appropriateness of the general provisions. The SRBA Court struck the general provisions as unnecessary to define or efficiently administer water rights. The Idaho Supreme Court (opinion by Justice McDevitt) reversed as to the provision on firefighting (holding that was an appropriate general provision), but upheld the District Court in striking the general provisions for stock watering and excess water. On reconsideration (opinion by Justice Walters), the

(7) Place of use

Place of use of course refers to where the water diverted under the right is being beneficially used. A statute provides that for irrigation purposes, a license shall give a description, by legal subdivisions, of the land irrigated.[25] Similarly, rights for industrial and commercial uses will carry a specific description of the place of use.

There are two broad examples where a more general description is acceptable. The first is for municipal purposes. (See discussion of the flexible "municipal service area" in section 23.D(5) at page 346.)

The second exception is for certain irrigation water delivery organizations, such as canal companies and irrigation districts. They may receive a generalized place of use description within which water diverted under the entity's water rights may be moved freely from one irrigated parcel to another, both when they are obtaining licensed rights and when their rights are being adjudicated. Idaho Code § 42-219 applies in the licensing context. Idaho Code § 42-1411(2)(h) requires IDWR during an adjudication to determine "a legal description of the place of use; if one (1) of the purposes of use is irrigation, then the number of irrigated acres within each forty (40) acre subdivision, except as provided in section 42-219." (emphasis added).

The referenced exceptions are as follows:

> (5) For irrigation projects where the canals constructed cover an area of twenty-five thousand (25,000) acres or more, or within irrigation districts organized and existing as such under the laws of the state of Idaho ….It shall not be necessary to give a description of the land by legal subdivisions but a general description of the entire area under the canal system shall be sufficient. ….

Court remanded for further proceedings concerning general provisions on the season of use and conjunctive management.

In *A&B Irr. Dist. v Idaho Conservation League* ("*ICL II*"), 131 Idaho 329, 955 P.2d 1108 (1998) (Silak, J.), the Court addressed a general provision dealing with excess water included on water rights within the previously decreed Reynolds Creek Basin. In contrast to the "generic" excess water general provision in *ICL III*, this was a stipulated general provision setting out a specific administrative formula for administering the delivery of water during high flow periods. The SRBA District Court struck the provision, and various parties appealed. The Idaho Supreme Court upheld the general provision as necessary for the efficient administration of water rights, noting that it "describe[d] a long-standing system of allowing those who otherwise have water rights in the Reynolds Creek Basin to use excess water when it is available." *ICL II*, 131 Idaho at 334, 955 P.2d at 113. However, the Court also held that the provision did not establish a water right in the excess water because "General Provision 2 does not set forth a priority date, quantity, legal description of the place of use, nor any of the other elements of a water right." *ICL II*, 131 Idaho at 333, 955 P.2d at 112.

[25] Idaho Code § 42-219.

Printed 6/23/2023 9:09 AM

(6) For an irrigation project developed under a permit held by an association, company, corporation or the United States to divert and deliver or distribute surface water under any annual charge or rental for the beneficial use by more than five (5) water users in an area of less than twenty-five thousand (25,000) acres, the license issued shall be issued to the permit holder. For the place of use description in the license issued for the irrigation project, it shall be sufficient to provide a general description of the area within which the total number of acres developed under the permit are located and within which the location of the licensed acreage can be moved provided there is no injury to other water rights.[26]

(8) Consumptive use quantity is not an element

Another important dimension of water quantification is consumptive use, that is, the volume of water consumed in the course of use or otherwise made unavailable to other users.[27] (Consumptive use is typically expressed as an annual volume: acre-feet per annum.) Early in the SRBA process, the Legislature mandated that consumptive use be quantified as part of the adjudication of each right. This requirement was repealed in 1997.[28]

In 2004, the Legislature amended the water code to declare: "Consumptive use is not an element of a water right. . . . Changes in consumptive use do not require a transfer pursuant to section 42-222, Idaho Code."[29] This declaration reinforces the right of a water right holder to modify his or her use of the right (within the bounds of the water right) in a manner that increases the consumptive use. (See discussion in section 15.E(4) at page 198.) The declaration that consumptive use is not an element of a water right does not mean that consumptive use is never considered, however. It remains a vital part of measuring a water right in the transfer process—where water is transferred to a new use, consumptive use, typically, is the measure of the quantity of water that may be transferred without injury to others. Idaho Code § 42-222(1). (See discussion of consumptive use in section 15.E(5) at page 199 and discussion of enlargement in section 15.I on page 231.)

---

[26] Idaho Code § 42-219(5) and (6) (emphasis added).

[27] The water code defines "consumptive use" and "authorized consumptive use" as follows: "'Consumptive use' means that portion of the annual volume of water diverted under a water right that is transpired by growing vegetation, evaporated from soils, converted to nonrecoverable water vapor, incorporated into products, or otherwise does not return to the waters of the state. Consumptive use is not an element of a water right. Consumptive use does not include any water that falls as precipitation directly on the place of use. Precipitation shall not be considered to reduce the consumptive use of a water right. 'Authorized consumptive use' means the maximum consumptive use that may be made of a water right. If the use of a water right is for irrigation, for example, the authorized consumptive use reflects irrigation of the most consumptive vegetation that may be grown at the place of use. Changes in consumptive use do not require a transfer pursuant to section 42-222, Idaho Code." Idaho Code § 42-202B(1).

(9) Facility volume is not an element

Note: See also discussion in section 15.I(4) (Enlargement in a non-irrigation context) at page 241.

Earlier in the SRBA process, the Department took the position that water rights for fish farms should include a specification of facility volume in the "remarks" section, describing the number and size of the ponds, raceways, settlement basins and the like that could be served by the licensed or decreed diversion rate (rate being the amount of flow per second, potentially on a 24-hour basis). In other words, the facility volume was a statement of the maximum existing capacity of the operation, even though a larger capacity holding a larger volume of water could be served with the authorized diversion rate. The Department did not view facility volume as a separate element, but rather as part of the specification of the elements of quantity, nature of use and place of use.

SRBA District Court Judge Barry Wood rejected this approach in 1999, declaring that facility volume is not an element of a water right.[30] The court's opinion was based on statutory construction of section 42-1411(2), which lists each of the elements of a water right that the Director is to describe in his report to the SRBA Court. Because it does not list "facility volume," the court reasoned that it is not an element of a water right that will be decreed in the SRBA. Moreover, the court rejected the Department's contention that a description of facility volume is necessary to a complete description of the quantity, nature of use and place of use elements. The effect of this ruling was to allow expansion of a facility where the beneficial use takes place (for example, a fish propagation facility) while employing the same rate of diversion.

The more interesting aspect of the decision is the court's forthright discussion of why the Department (or other water users) might want facility volume to be included in the description of a water right. Such an element presumably would not benefit the water right holder, because its effect would be to limit the water right to the particular size of facility currently employed. The implication of having a facility volume described is twofold.

First, the water right holder arguably would be required to go through a change of water right proceeding every time additional raceways or other facilities were added (even though the diversion amount remains the same). In other words, expanding the size of the facility could be seen as an improper "enlargement" and would require the applicant to obtain a new junior priority right for the expansion. Second, if the holder implemented a water delivery call against junior users, any cash mitigation that might be ordered might be limited to the capacity and output of the original facility, not the enlarged (and potentially junior) portion.[31] The court rejected these principles.[32]

---

[30] *In re SRBA Case No. 39576, Subcase Nos. 36-02708 et al, Order On Challenge (Consolidated Issues) of "Facility Volume" Issue and "Additional Evidence" Issue*, Idaho Dist. Ct., Fifth Judicial Dist. (Dec. 29, 1999) ("*Facility Volume Case*") (Barry Wood, J.).

[31] By the way, there is no established precedent for awarding cash compensation in the context of a delivery call. Ordinarily, the focus is on the obligation of the junior to deliver an appropriate quantity of

> It is also extremely curious to the Court that it is IDWR's position that if additional ponds were added to a facility for the purpose of pollution control, this would not be considered an increase in facility volume, but if the additional ponds or raceways were to actually grow fish in, it would be an increase in facility volume. To this Court, this is at least a tacit admission by IDWR that its proposed facility volume remark has nothing to do with the quantity element, but is intended to directly deal with regulating production so that in the event of a future delivery call, and mitigation is sought, junior water users may be required to pay less. This position is contrary to at least two fundamental principles of water law . . . .

The court went on to note that it is improper to attempt to limit a fish farmer to a particular size of production facilities when, by analogy, a domestic right holder is not required to obtain a new water right when she expands the size of her home, when a farmer switches crops or seed varieties to produce more or higher valued product that consumes more water, or when a hydropower user adds additional generating capacity to an existing water flow.[33]

The court did not mention other industrial or hydropower uses, but the implication of his decision is apparent there too. Thus, a description of the internal workings of an industrial facility is not part of a water right. Consequently, for instance, a microchip producer might upgrade its facilities, enabling it to produce twice the quantity of product with the same amount of water, without changing its water right.[34]

---

mitigation water to the senior, or else be shut off. Hence the term "delivery call." Whether the Department has the authority to order monetary compensation, rather than water, is an open question. Of course, parties may agree between themselves to resolve a dispute through such an arrangement. Thus a senior might agree to subordinate her water right to a junior in exchange for a payment by the junior to the senior.

[32] *Facility Volume Case* at 9.

[33] IDWR's *Transfer Memo* captures this as follows: "Intensified Use of Water. An application for transfer is not required to increase production under an authorized use of water, unless the proposed change would also result in a change to one or more of the elements of the water right(s) as licensed or decreed. For example, an application for transfer is not required to increase the number or volume of raceways in a fish propagation facility, increase the number of cows at a dairy, change irrigation to a more water consumptive crop, or increase the generating capacity of hydroelectric generators, so long as none of the elements of the associated water rights are changed." *Transfer Processing Policies & Procedures* (Transfer Processing No. 24) at 7 (Dec. 21, 2009). Thus, for example, adding electric generating capacity is permissible so long as the right holder does not increase the amount of water diverted through the penstocks. However, an increase that requires a higher rate of flow presumably would not be allowed without obtaining a new water right.

[34] The court also did not address the situation where the expansion could entail an increase in annual diverted volume and potentially cause injury. This could happen, for example, where a 2 cfs diversion (a well, for example, or a pump in a stream) historically was used an average of 14 hours per day for a particular commercial enterprise, but after facility enlargement it was used at this rate for 20 hours per day.

C. Diversion requirement

The rule as traditionally stated is that a water right requires a "*diversion* to a beneficial use."[35] That is, it is necessary to artificially remove (or impound) water to obtain a legally protected right to its use. However, Idaho's Supreme Court has ruled that the state Constitution does not require a diversion where none is necessary to accomplish the beneficial use. It is as yet unclear whether instream flow rights can be established in Idaho outside of Idaho's rather restrictive minimum stream flow statute.[36]

D. Beneficial use - generally

Under Idaho's Constitution, an appropriation of water must be for a "beneficial use."[37] It is often recited that beneficial use is "the basis, the measure and the limit" of any water right. *United States v. Pioneer Irr. Dist.*, 144 Idaho 106, 111, 157 P.3d 600, 605 (2007) (Schroeder, C.J.). Indeed, Congress included this statement of the rule in the federal reclamation law.[38] The concept arises from the fact that a water right is not a right to the water itself, but rather is a right to *use* water owned by the people of the state.[39] In legal parlance, a water right is a "usufructuary" right. Thus, regardless of what the right holder may believe his right to be, and regardless of what the right's license, decree or other documentation proclaims, the extent of the right is limited to that amount which has actually been

---

[35] The diversion requirement is explored more fully in the Section on instream flows, see part 23.E beginning on page 374.

[36] Idaho's instream flow law is codified at Idaho Code §§ 42-1501 to 1505. (See discussion in section 1.C at page 425.)

[37] Idaho Const. art. XV, § 3 ("The right to divert and appropriate the unappropriated waters of any natural stream to beneficial uses, shall never be denied…."). The Legislature has declared: "The appropriation must be for some useful or beneficial purpose, and when the appropriator or his successor in interest ceases to use it for such purpose, the right ceases." Idaho Code § 42-104.

[38] This phrase appears in various places in western water law, and is perhaps the best succinct statement of the fundamentals of the prior appropriation doctrine. Congress included it as an express directive in section 8 of the Reclamation Act of 1902, 32 Stat. 388, 390. *See* Wells A. Hutchins, *Idaho Law of Water Rights*, 5 Idaho L. Rev. 1, 39 (1968) (an appropriator is held to the quantity of water he is able to apply to a beneficial use at a particular time, within the limit of his appropriation); 3 *Kinney on Irrigation*, § 1579 (2d ed. 1912) (no one is entitled to have a priority adjudged for more water than he has actually appropriated, nor for more than he actually needs); 2 *Waters and Water Rights* § 17.03(b) (1991); Trelease, *The Concept of Reasonable Beneficial Use in the Law of Surface Streams*, 12 Wyo. L. J. 1 (1956) (actual beneficial use is the measure of the right, and the right is not protected from loss by wasteful over-application); Golzé, *Reclamation in the United States* 95 (1961) (an essential part of the appropriation doctrine is the requirement that water be put to beneficial use, and if beneficial use lags, the right may be lost); Meyers, Tarlock, Corbridge & Getches, *Water Resource Management* 282 (3rd ed. 1988) (the concept that beneficial use is the basis, measure and limit of an appropriative right is recognized by state constitutions, statutes and judicial decisions throughout the Western states).

[39] *Coulsen v. Aberdeen-Springfield Canal Co.*, 39 Idaho 320, 323-24, 227 P.29 (1924).

placed to beneficial use,[40] and the extent to which a prior right may be enforced as against a subsequent right is limited to the amount that actually is required by the senior.[41] Thus, "paper" water rights in Idaho are subject to challenge, and likely cannot be changed or transferred to a new place of diversion or use, because they are not being put to beneficial use.[42] , Quite simply, to the extent of non-use they are not water rights.

Idaho's Constitution, like those of most Western states, names only a few beneficial uses for which water may be appropriated: agriculture, domestic uses, manufacturing, mining and hydropower.[43] However, the Idaho Supreme Court has ruled that this is not an exclusive list.

> With the exception of those uses elevated to beneficial status by Article 15, § 3, of the Constitution, the concept of what is or is not a beneficial use must necessarily change with conditions. . . . The notion of beneficiality must include a requirement of reasonableness.

State of Idaho, Dep't of Parks v. IDWR, 96 Idaho 440, 447, 530 P.2d 924, 931 (1974) (Bakes, J. concurring).

> While it is well established in western water law that an appropriation of water must be made for a 'beneficial use,' nevertheless in Idaho at least the generic term 'beneficial use' has never been judicially or statutorily defined.

Dep't of Parks, 96 Idaho at 443, 530 P.2d at 927.

Recent Idaho statutes have defined a few specific uses as beneficial.[44] However, the generic term has never been statutorily defined.

---

[40] *See e.g., Graham v. Leek*, 65 Idaho 279, 144 P.2d 475 (1943); *Albrethsen v. Wood River Land Co*., 40 Idaho 49, 231 P. 418 (1924) (decree is evidence of beneficial use of the right only as of the date of the decree).

[41] *American Falls Reservoir District No. 2 v. IDWR* ("*AFRD*"), 143 Idaho 862, 154 P.3d 433 (2007) (Trout, J.).

[42] *See e.g., Hillman v. Hardwick,* 3 Idaho 255, 28 P. 438 (1891).

[43] Idaho Const. art. XV, § 3.

[44] For instance, Idaho's Ground Water Recharge Act expressly states that "the appropriation and underground storage of water . . . for purposes of ground water recharge shall constitute a beneficial use." Idaho Code §§ 42-4201(2), 42-4201A(2) (repealed in 2009); s*ee also*, Idaho Code § 42-234(2). In a similar vein, in 1996, the Legislature addressed the issue in the context of municipal water rights. Municipal Water Rights Act of 1996, Idaho Code § 42-222 ("A water right held by municipal provider to meet reasonably anticipated future needs shall be deemed to constitute a beneficial use . . . ."). In a third example, the Legislature has declared certain instream uses to be beneficial. Idaho Code §§ 42-1501 to 42-1505.

The case law has filled in the constitutional and statutory gaps. For example, Idaho Supreme Court decisions and water right licenses issued by the Idaho Department of Water Resources have approved fish and wildlife habitat, aesthetics, recreation and similar purposes as beneficial uses in Idaho.[45] Today, the idea that only certain types of use are "beneficial" is little more than an historic relic.[46] The plain trend is toward recognition that, so long as the use serves some purpose and is not inherently wasteful, it probably qualifies as a beneficial use.

E. Storage rights

(1) Overview

This section addresses the law and practice of storage rights in Idaho, especially how their elements are described. In the case of natural flow surface water rights and ground water rights, water typically is applied to beneficial use as soon as it is diverted from its natural source.[47] In other instances, a user may desire to store water for later use. Water rights also may be obtained for stored water in either an on-stream or off-stream storage facility. A storage right is obtained just like any other. Even the same application form is used. (Of course, dam construction requires other permits as well as water rights.) See discussion in section 4.D at page 39 regarding storage of water as a beneficial use.

Compared to building a natural flow diversion facility, construction of a reservoir typically involves a considerably larger engineering effort. There are two basic advantages of owning a reservoir. First, a reservoir is capable of capturing flood flows during the pre-irrigation-season runoff period, even though a river's irrigation season flows may be fully allocated to senior natural flow rights. This is one reason why, historically, natural flow rights were developed first, and storage came

---

[45] Judge Melanson, then of the SRBA Court, issued a ruling in a basin-wide issue confirming: "Under Idaho law, any person may establish a diversionary water right, including to and from storage, for aesthetic, recreational or wildlife purposes." *In re SRBA, Case No. 39576,* Idaho Dist. Ct., Fifth Judicial Dist. (Basin-Wide Issue No. 00-91014, Amended Consent Decree, Feb. 25, 2009)

[46] An example of such a "relic" is *Empire Water and Power Co. v. Cascade Town Co.*, 205 F. 123 (8th Cir. 1913), in which a federal court applying Colorado law denied an instream flow water right to a resort community build around a natural waterfall. "[W]e think complainant [the town] is not entitled to a continuance of the falls solely for their scenic beauty. The state laws proceed upon more material lines. . . . It may be that if the attention of the lawmakers had been directed to such natural objects of great beauty they would have sought to preserve them, but we think the dominant idea was utility, liberally and not narrowly regarded, and we are constrained to follow it." *Id*. at 129. Certainly utility—beneficial use, to be precise— is the dominant idea. It would follow that a diversion to a useful aesthetic purpose, such as golf course ponds or artificial trout streams in a community, would meet this test. Likewise other recreational uses such as snow-making at ski resorts. None of these is expressly provided for in statute.

[47] Aquifer Storage and Recovery ("ASR") and Public Betterment Aquifer Recharge ("PBAR") projects would be exceptions to this. See Section 9.B at page 103.

EXHIBIT C
Page No. 41 of 761

later. Second, large storage reservoirs almost always are designed to hold water over for future dry years, thus providing a more reliable supply than natural flow.

After water is captured under a storage right (often during peak flows or in the winter when irrigation natural flow rights are not allowed to divert), the holder of the right is entitled to release that quantity of flow pursuant to the terms of the storage right to serve beneficial uses. Stored water released from a reservoir may even be delivered past the headgates of unfilled senior natural flow rights. Thus, the rights to stored water can give the user considerable flexibility.

Many water users rely on a combination of storage and natural flow rights. They use their natural flow rights as their primary source of supply when available, and then increasingly turn to their storage as the natural flow supply diminishes through the course of the year. Absent speculation, hoarding or other potential abuses, storage water not needed during one season may be carried over to subsequent years.[48]

When an on-stream reservoir is involved, the entitlement to "divert" describes the circumstances under which the dam is allowed to pass less water than is flowing into the reservoir—in other words, store water. The dam must release enough water (but no more than is flowing in upstream) to meet all senior demands downstream. When there is more than enough natural flow entering the reservoir to meet downstream senior demand, and provided the storage right is not limited to a specifically designated storage season, then the reservoir's storage water right is "in priority" and it may store the excess.

No separate water right is required to release water from a reservoir. That may be done at the holder's option (so long as it is for the authorized beneficial use).

(2) Points of diversion

The point of diversion for an on-stream reservoir is the location of the dam or impoundment. The point of diversion for an off-stream reservoir is the location of the diversion facility on the stream or other natural body from which water is diverted and taken to the off-stream reservoir.

(3) Points of rediversion, release, or delivery

Many Idaho water rights authorize water to be diverted from one stream, "injected" into another stream, and then "rediverted" to a storage facility or other use.[49] An example of this is a storage and direct flow right (no. 63-19893) for the Mountain Home Reservoir operated by Mountain Home Irrigation District. Under the "points of diversion" heading, the right lists the original point of diversion from Little Camas Creek, a point of injection into East Fork Long Tom Creek (a tributary of

[48] *Rayl v. Salmon River Canal Co.*, 66 Idaho 199, 201, 157 P.2d 76, 77 (1945) (Givens, J.); *American Falls Reservoir District No. 2 v. IDWR* ("*AFRD*"), 143 Idaho 862, 154 P.3d 433 (2007) (Trout, J.).

[49] Exchanges operate in a similar manner. Water may be injected into a stream to offset water diverted from the stream upstream of the point of injection.

Canyon Creek), and a point of rediversion from Canyon Creek. Thus, where water is injected back into a natural stream (and thus is outside the control of the appropriator) and subsequently rediverted from that natural stream, the injection and rediversion are considered additional points of diversion.

In contrast, when water is stored in a reservoir under the control of the appropriator, deliveries therefrom to beneficial uses are not deemed "points of diversion." In an on-stream reservoir, water is released by the dam, where it continues on down the stream to be rediverted later by water users. Typically, these water users also have natural flow rights out of the same stream, which are supplemented with released storage water when natural flow is inadequate. Their natural flow water rights specify a point of diversion, but the released storage water is not diverted under those natural flow rights. The water is simply diverted at the same point of diversion as the natural flow right pursuant to a spaceholder contract or other arrangement with the operator of the reservoir.

Less commonly, water is redirected to ditches directly out of an on-stream reservoir. An example is Payette Lake, a natural lake on the North Fork Payette River whose elevation was raised by a dam to create a manmade impoundment. Water is stored under water right no. 65-2278 held by Lake Reservoir Co. The stored water is then released from the lake into the river for diversion at various points of rediversion operated by several downstream irrigation entities. The water right notes the existence of these points of rediversion, but they are not listed under the description for "points of diversion." Instead, they are noted under the description of "place of use."[50]

Where water is stored in an off-stream reservoir, release or delivery of the water from the off-stream reservoir is not deemed a "point of diversion" for the storage right. An example is Lake Lowell.[51] That system, operated by the Boise Project Board of Control for the benefit of several irrigation districts, diverts natural flow[52] from the Boise River into the New York Canal which delivers the water to Lake Lowell, a man-made lake 15 miles away. After storage in Lake Lowell, water is

---

[50] "Points of re-diversion and places of use are those of Emmett Irrigation, Farmers Co-op, Enterprise, Letma, Nobel & Lower Payette Ditches." Partial decree for no. 65-2278, under heading "Place of Use."

[51] Lake Lowell is located in Basin 63 (Boise River) in Canyon County, five miles southwest of Nampa, Idaho. It is a manmade, off-stream storage reservoir with approximately 9,800 surface acres and 28 miles of shoreline containing approximately 173,000 acre-feet of water. The impoundment is created by a set of three dikes and the Deer Flat Upper Embankment, which is an earthen dam completed in 1908 by the Bureau of Reclamation, with a height of 74 feet and 4165 feet long at its crest. Water is diverted from the Boise River into the New York Canal approximately 15 miles to the east of Lake Lowell in the NWSW of Section 3, T2N, R3E. Water right no. 63-301A held by the US Bureau of Reclamation ("BOR") is currently associated with Lake Lowell. This right, decreed by the SRBA Court in 2014, is the latest permutation of a right that originated with a license in 1913, and which was subsequently decreed in a private adjudication in 1929 known as the "Bryan Decree."

[52] In addition to its natural flow water rights, the Boise Project also diverts water stored in and released from federal reservoirs on the Boise River. These diversions of stored water are made pursuant to spaceholder contracts with the Bureau of Reclamation. The Bureau holds its upstream storage rights in trust for the irrigators and other users.

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

delivered to systems operated by various irrigation districts. Various facilities controlled by the irrigation districts divert water stored in Lake Lowell to their respective delivery systems. None of these are deemed points of diversion on the Bureau's water right. In essence, it is of no concern to IDWR (the entity that administers the right) what the plumbing is that delivers water out of the off-stream reservoir to the specified place of use.

The practice in Idaho of not treating the rediversion of water from a reservoir as another point of diversion comports with Idaho Code § 42-110, which provides: "Water diverted from its source pursuant to a water right is the property of the appropriator while it is lawfully diverted, captured, conveyed, used, or otherwise physically controlled by the appropriator."

(4) Purpose of use

In Idaho, storage rights typically are issued with multiple "purpose of use" components. As described in IDWR guidance,[53] storage rights will typically contain one or more "purpose of use" couplets: "[Purpose] Storage" and "[Purpose] from Storage." For example:

- "Irrigation Storage" and "Irrigation from Storage"
- "Power Storage" and "Power from Storage"
- "Streamflow Maintenance Storage" and "Streamflow Maintenance from Storage."
- "Stockwater Storage" and "Stockwater from Storage"
- "Wildlife Storage" and "Wildlife from Storage"

The first component (e.g., "Irrigation Storage") describes the right to capture and store the water in the reservoir. The second (e.g., "Irrigation from Storage") describes the right to release the stored water from the reservoir for that stated beneficial use.[54]

A single water right may have more than one of these couplets. For example, Lake Cascade (an on-stream reservoir) stores water for irrigation and hydropower. Its storage right (No. 65-29027A) has these four components:

[53] Norm Young, *Application Processing No. 14* (*Applications for Permit for Storage Rights*) (June 1, 1978).

[54] In addition to listed purposes of use, holders of storage rights may release water for incidental purposes not listed on the water right that are inherent to reservoir operation, such as reservoir maintenance, flood control, or other emergencies.

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

Purpose of Use	Quantity	Period of Use
Irrigation Storage	697,500 AFY	1/1 to 12/31
Irrigation from Storage	697,500 AFY	1/1 to 12/31[55]
Power Storage	697,500 AFY	1/1 to 12/31
Power from Storage	697,500 AFY	1/1 to 12/31

In some instances, a reservoir may also have a stand-alone purpose of use, such as "Recreation Storage," with no corresponding "Recreation from Storage" component. This is because the water is not released from storage. Its sole beneficial use is to sit in the reservoir to support a fishery or other purpose.

In addition to the components described above, off-stream reservoirs will have an additional component for "Diversion to Storage." This is the component that authorizes diversion from the river or other natural source to the off-stream reservoir. In contrast to those storage purposes described above, "Diversion to Storage" is quantified as a rate of flow, not a volume.

Finally, some off-stream reservoirs may have yet another component authorizing "direct flow" use.[56] An example of this is Lake Lowell. That system, operated by the Boise Project Board of Control for the benefit of several irrigation districts, diverts natural flow[57] from the Boise River into the New York Canal which delivers the water to Lake Lowell, a man-made lake 15 miles away. After storage in Lake Lowell, water is delivered to systems operated by various irrigation districts. However, some irrigation ditches divert directly from the New York Canal before the water reaches Lake Lowell. Water delivered to beneficial use before it is stored is the so-called "direct flow." This direct flow component is listed on the water right simply as "Irrigation." Thus, the water right for Lake Lowell (No. 63-301A) has these four components:

Purpose of Use	Quantity	Period of Use
Irrigation	1,349.29 cfs	3/1 to 11/15
Irrigation Storage	173,100 AFY	1/1 to 12/31
Irrigation from Storage	173,100 AFY	3/1 to 11/5
Diversion to Storage	1,349.29 cfs	1/1 to 12/31

Note that the "irrigation" and "diversion to storage" components are quantified solely in terms of rate of flow, while the "Irrigation Storage" and "Irrigation from Storage" components are quantified solely in terms of volume.

---

[55] The year-round "Irrigation from Storage" period of use shown on this right is an anomaly.

[56] In some instances, water rights for on-stream reservoirs also include a "direct flow" component. An example of this might be a farmer to constructs a reservoir on a stream on his or her property, and seeks a water right allowing diversion of inflow as it enters the reservoir "before it is stored" or when the reservoir is full.

[57] In addition to its natural flow water rights, the Boise Project also diverts water stored in and released from federal reservoirs on the Boise River. These diversions stored water are made pursuant to spaceholder contracts with the Bureau of Reclamation. The Bureau holds its upstream storage rights in trust for the irrigators and other users.

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

All of this is consistent with guidance issued by IDWR decades ago (see footnote 53 at page 44). It should be said, however, that not all permits, licenses, and decrees conform to this format.[58]

(5) Period of use

Each purpose of use will have an associated period of use. For example, the period of use associated with "Irrigation Storage" is typically year round (reflecting the right to capture water any time it is legally and physically available and to retain it until it is needed). The period of use associated with "Irrigation from Storage" should be limited to the irrigation season. For hydropower, the period of use is year round.

(6) Quantity

As noted above in section 4.E(4) (Purpose of use), storage rights typically have multiple purposes of use. Each purpose of use will have an associated quantity. Some are measured in volume (acre-feet per year); others are measured by rate of flow (cfs).

As noted, storage rights for on-stream reservoirs are the quantified solely in terms of annual volume (for example the "Irrigation Storage" and "Irrigation from Storage" couplets). The quantity typically reflects the active storage capacity of the reservoir. The absence of a rate of flow for these volume-based components reflects the fact that the storage right may be used to store all physically and legally available water reaching the reservoir. Thus, an on-stream reservoir is required to bypass only water that downstream right-holders are entitled to divert. In other words, these on-stream rights authorize the owner to control every drop of water in the river—but only when they are in priority during a single fill. This maximizes the potential the reservoirs will fill completely and do so at a time least in conflict with other water users. This makes more water available for juniors and maximizes the use of the State's water resources.

As noted above, off-stream reservoirs (such as Lake Lowell) are licensed and decreed in a similar manner, with one critical distinction. In addition to the purposes of use components described

---

[58] An example of inconsistency is a water right for Mountain Home Reservoir (no. 61-10421). The reservoir sits on Rattlesnake Creek, but its water right authorizes diversions from two streams (Rattlesnake Creek and Canyon Creek). Thus, with respect to Canyon Creek, the reservoir is "off-stream." But contrary to *Application Processing Memo #14*'s instruction, the right does not contain a "diversion to storage" component for diversions from Canyon Creek. (By the way, the City of Mountain Home originally was known as "Rattlesnake Station.")

The storage components for so-called "Refill 1" and "Refill 2" water rights (nos. 63-33734A and 63-33734B) that were decreed in 2019 as part of the Refill Litigation Settlement at first glance might appear to be a departure from the standard practice, but there is an explanation. These rights each have three storage components ("Irrigation Storage," "Municipal/Industrial storage," and "Streamflow Maintenance Storage"), but they lack any component to take water out of storage ("[Purpose] from Storage"). The reason is found in language on the face of the decree. It explains that water accruing to storage under Refill 1 and Refill 2 supplements water accrued to the storage under the so-called "Base Rights" associated with the reservoirs, and that all such water shall be allocated under the federal contracts as if it had accrued under the Base Rights.

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

above (which are quantified in annual volume), they will display an additional purpose of use called "diversion to storage" that is quantified in terms of a flow rate (cfs). This purpose of use component describes the right to divert the water from the stream or other natural source to the off-stream reservoir. Thus, a key difference between an on-stream reservoir and an off-stream reservoir is that on-stream reservoirs are authorized to divert all water that is physically available in the stream and not required to satisfy other water rights, while off-stream reservoirs (like other natural flow and ground water rights) are limited to the rate of flow stated on the face of the right.

It appears that, because off-stream reservoirs are subject to a diversion rate limitation, off-stream rights are not subject to the one-fill rule. However, the authors are not aware of a case or other authority expressly so holding. This conclusion was implicit, however, in the Refill Litigation (see section 4.E(9) below) which spoke of the one-fill rule only in the context of on-stream reservoirs and emphasized that the one-fill rule was needed to counter-balance the absence of any limitation on rate of flow.

Hydropower storage rights licensed or decreed with the standard couplet ("Power Storage" and "Power from Storage") are likewise quantified in terms of volume (AFY). However, some hydropower rights are licensed or decrees with only a "power" component, which is measured in rate of flow (cfs). This presumably corresponds to the "direct flow" component of water right described in IDWR's guidance on storage rights (see footnote 53 at page 44). This might reflect run-of-river use of an on-stream reservoir.

At the time of licensing, each purpose of use must be proven separately. The "[Purpose] Storage" and "Diversion to Storage" components may be proven simply by showing the quantity of water that has been diverted to the reservoir.[59] In contrast, the "[Purpose] from Storage" component (e.g., "Irrigation from Storage") must be proven by showing actual application to the end beneficial use.

Thus, if an irrigation reservoir stored water, but, at the time of licensing, had never actually used any of that water for irrigation, the license would be denied because "Irrigation from Storage" purpose had not been shown. Mere storage of water without an ultimate beneficial use is an insufficient basis to establish a water right. *See*, *Jicarilla Apache Tribe v. United States*, 657 F.2d 1126 (10th Cir. 1981) (Albuquerque's storage of San Juan/Chama water for 40 years was not a beneficial use due to evaporation losses).

[59] The same terms, "divert" or "diversion" are used to describe water entering both on-stream and off-stream reservoirs. Thus, for an on-stream reservoir, IDWR considers all water entering the upper end of the reservoir that the right holder is not obligated to release to satisfy downstream rights to be "diverted" to the reservoir and, hence, accrued toward the fill of that storage right. This issue, however, is being litigated as of this writing.

(7) One-fill rule (storable inflow and paper fill)

The Department follows the rule common throughout the West[60] that a reservoir may only be filled under right of priority only once a year (unless the water right expressly authorizes multiple fills under priority). There is no Idaho statute on this point, but the Department has implemented the one-fill rule via a requirement in applications for water appropriations.[61]

See section 4.E(6) at page 46 above for a discussion of whether the one-fill rule applies to off-stream reservoirs.

The one-fill rule operates in that absence of a water right expressly authorizing additional fill beyond the first fill. For example, the Refill Settlement recognized a second water right authorizing additional in-priority fill. See discussion in 4.E(9) at page 50 below.

The one-fill principle has long been recognized as part and parcel of the prior appropriation doctrine. As far back as 1912, it was deemed black letter law in Kinney's treatise:

> As in the case with other rights acquired under the Arid Region Doctrine of appropriation, the rule of priority governs, and it is held that the reservoir having the prior right is entitled to fill the same first from the flow of the stream to the full extent of the capacity of the appropriation made therefor. But having once during any one season filled such reservoir, a later appropriation or a subsequent reservoir may take the surplus of the water flowing in the stream, after the prior reservoir has been once filled.

1 *Kinney on Irrigation*, 2nd ed. § 845, p. 1,484 (1912) (emphasis supplied).

The one-fill rule is based on the concept of "storable inflow." The storable inflow principle requires that if water is legally and physically available to be stored, it counts towards the annual fill of the volume stated on the face of the right. Thus, unless water in the stream must be bypassed to satisfy downstream seniors, it counts toward fill irrespective of whether it is stored or bypassed. Likewise, the release of water stored in the reservoir for flood control (or any other purpose) has no effect on the quantity accrued under the water right. Thus, the one-fill rule does not operate on the basis of "physical fill." Instead, the storage right holder is entitled to one "paper fill."[62] Once the right has been

[60] See, e.g., *City of Westminster v. Church*, 445 P.2d 52 (Colo. 1968); *Orchard City Irr. Dist. v. Whitten*, 361 P.2d 130 (Colo. 1961).

[61] "Impoundment (storage) applications shall show the maximum acre-feet requirement per year which shall not exceed the storage capacity of the impoundment structure unless the application describes a plan of operation for filling the reservoir more than once per year." IDAPA 37.03.08.035.03.b.v.

[62] Counting all "storable inflow" toward fill of a storage water right is frequently described as "paper fill." Thus, the term "paper fill" is simply shorthand for the combination of "one-fill" and "storable inflow." The term "paper fill" has been described as a "term of convenience to describe the cumulative amount of natural

filled on paper (even if water is bypassed for vacated for flood control), the reservoir operator may not fill or refill vacant space under right priority.

In sum, if water is physically present and legally available to store (i.e., "in priority"), the storage right holder is expected to store it. If a storage right holder decides to bypass storable inflow, or stores it and later releases some of it for whatever reason, that does not allow additional water to be stored under priority.[63]

Without calling it "storable inflow," IDWR's Director confirmed that the principle is embedded in IDWR's water rights accounting system:

> Under the accrual procedures of the Water District 63 water rights accounting program, any natural flow available under the priority of an on-stream reservoir water right at its point of diversion (the dam), or that would have been available at the dam if the water had not been stored in an upstream reservoir, is accrued (distributed) toward the satisfaction of the reservoir's water right until the cumulative total reaches the water right's annual volume limit.

Amended Refill Order, ¶ 106, p. 37.

Note that carry-over storage from the prior season counts toward the accrual of the single fill in the following year. *Amended Refill Order*, ¶ 118, p. 40. Thus, if a reservoir were half full at the beginning of the accounting year, the storage right holder would be entitled to store a quantity equal to the empty portion and no more.

The one-fill rule was litigated and ultimately settled in what is known as the Refill Litigation and the Refill Settlement. See section 4.E(9) at page 50 below.

---

flow accrued to a reservoir water right in the water rights accounting." IDWR Staff Memo of November 4, 2014 by Liz Cresto, Technical Hydrologist and then operator of the Department's accounting system.

[63] The history, basis, and operation of the one-fill rule is described in detail in a ruling by Director Gary Spackman in a contested case prompted by challenges to the Department's application of the one-fill rule. *In the Matter of Accounting for Distribution of Water to the Federal On-Stream Reservoirs in Water District 63* Idaho Department of Water Resources (Amended Final Order, Oct. 20, 2015) (Spackman, Director) ("*Amended Refill Order*"). This order was appealed in the final round of the Refill Litigation. Ultimately those appeals were dismissed and the district court's ruling on the order was vacated on October 22, 2019 as part of the Refill Settlement (see Stipulation of July 2, 2018, ¶ 13, pp. 6-7). The *Amended Refill Order* was left in place by the settlement and continues to reflect departmental policy.

(8) The free river principle

An important exception or corollary to the one-fill rule is the free river principle.[64] It provides that, although an on-stream reservoir may be filled only once under right of priority, the reservoir owner is free to store any additional water available under so-called "free river" conditions—that is, when there is sufficient flow to satisfy all other water users. The key point is that this free river refill does not occur under right of priority.[65]

(9) The Refill Litigation and Refill Settlement

As discussed above, Idaho, like most western states, follows the rule allowing only one "fill" if a reservoir under priority pursuant to its storage right (except for rare instances where the right expressly or through clear implication authorizes refill). (See section 4.E(7) above at page 48.) For years, IDWR quietly implemented this rule through its accounting procedures with little apparent concern by water users.[66] Beginning in 2007, however, a decade-long battle occurred over the one-fill rule[67] known as the "Refill Litigation."[68]

---

[64] The authors borrow the term "free river refill" from Colorado. *City of Westminster v. Church*, 445 P.2d 52, 59 (Colo. 1968).; Casey S. Funk, *Basic Storage 101*, 9 U. Denver L. Rev. 519, 539 n.137 (2006). Idaho employs the more abstruse terminology "excess water" and uses the term "unaccounted for storage" to describe such water once it is held in storage.

[65] In his 2016 order in the Refill Litigation, Director Spackman confirmed that IDWR's accounting system allows the historical practice of refilling vacated space in on-stream reservoirs with "excess flows" after the storage rights are satisfied: *Amended Refill Order*, ¶ 34, p. 67. The order was appealed as part of the Refill Litigation. District Court Judge Wildman affirmed virtually all of Director Spackman's order, but rejected the provision dealing with free river refill. Before the Idaho Supreme Court ruled on appeals of Judge Wildman's decision, the matter was settled and the Wildman order was vacated (see Stipulation of July 2, 2018, ¶ 13, pp. 6-7). (The settlement sidestepped broader free river principle by implementing it instead through recognition of a beneficial use right allowing additional refill subject to subordination.) However, the Refill Settlement left Director Spackman's 2016 order intact. Accordingly, the free river principle described in the order continues to be employed in the Department's administration of all other on-stream reservoirs.

[66] The September 21, 1979 Minutes of Committee of Nine Meeting states: "Lester Saunders asked the Director of the Department of Water Resources, Stephen Allred, to explain the watermaster's process for crediting water to the reservoirs. Steve explained that any water available at a reservoir for storage is credited to that reservoir storage right. Once a right has been filled on paper, even if the water has been released and additional space is available, the priorities of the reservoirs are considered to no longer be in effect."

[67] The origin of the Refill Litigation was objections filed on April 19, 2007 in the SRBA by the Bureau to IDWR's recommendations on two Bureau storage right claims in the Snake River Basin (01-2064 and 01-2068). In its objection, the Bureau asked that a "remark" be added to its water right authorizing it to refill its Snake River projects under right of priority. IDWR declined to do so, instead offering an alternative remark authorizing free river refill. See discussion in *In re SRBA Case No. 39576, Basin-Wide Issue 17, Subcase No. 00-91017*, Memorandum Decision at page 4 (4th Dist. Idaho Mar. 20, 2013) (Wildman, J.). Irrigators filed a petition to designate a so-called "basin-wide issue." In 2015, parties resolved the refill dispute in the Upper

Snake by the Bureau securing additional junior water rights authorizing refill. In 2019, a similar result was reached in the Boise River Basin.

[68] The "Refill Settlement" resolved the "Refill Litigation," which consisted of the following:

- Basin-wide 17: *In re SRBA Case No. 39576, Basin-Wide Issue 17, Subcase No. 00-91017*, Order Designating Basin-Wide Issue (4th Dist. Idaho Sept. 21, 2012) (Wildman, J.); *In re SRBA Case No. 39576, Basin-Wide Issue 17, Subcase No. 00-91017*, Memorandum Decision (4th Dist. Idaho Mar. 20, 2013) (Wildman, J.); *A&B Irr. Dist. v. State* ("*Basin-Wide 17*"), 157 Idaho 385, 336 P.3d 792 (2014) (Burdick, C.J.).
- Basin 63 Late Claims: *In re SRBA Case No. 39576, Subcase Nos. 63-33732 (consolidated subcase No. 63-33737), 63-33733 (consolidated subcase No. 63-33738), and 63-33734*, Memorandum Decision and Order on Challenge and Order of Recommitment to Special Master (4th Dist. Idaho Sept. 1, 2016) (Wildman, J.). No appeal was taken.
- Basin 65 Late Claims: *In re SRBA Case No. 39576, Subcase Nos. 63-23531 and 65-23532*, Memorandum Decision and Order on Challenges, Final Order Disallowing Water Right Claims (4th Dist. Idaho Oct. 7, 2016) (Wildman, J.); *United States v. Black Canyon Irr. Dist.,* 163 Idaho 54, 408 P.3d 52 (2017) (Burdick, C.J.); *Black Canyon Irr. Dist. v. State,* 163 Idaho 144, 408 P.3d 899 (2018) (Burdick, C.J.).
- Basin 63 Contested case: *In the Matter of Accounting for Distribution of Water to the Federal On-Stream Reservoirs in Water District 63*, Notice of Contested Case and Formal Proceedings, and Notice of Status Conference (IDWR Oct. 24, 2013) (Spackman, Director); *In the Matter of Accounting for Distribution of Water to the Federal On-Stream Reservoirs in Water District 63*, Order Staying Proceeding (IDWR Dec. 27, 2013) (Spackman, Director); *In the Matter of Accounting for Distribution of Water to the Federal On-Stream Reservoirs in Water District 63*, Order Lifting Stay and Notice of Status Conference (IDWR Sept. 9, 2014) (Spackman, Director); *In the Matter of Accounting for Distribution of Water to the Federal On-Stream Reservoirs in Water District 63*, Amended Final Order (IDWR Oct. 15, 2015) (Spackman, Director) ("*Amended Refill Order*"); *In the Matter of Accounting for Distribution of Water to the Federal On-Stream Reservoirs in Water District 63*, Order Denying Petitions for Reconsideration (IDWR Nov. 19, 2015) (Spackman, Director); *Ballentyne Ditch Co. v. Boise Project Bd. of Control*, Case Nos. CV-WA-2015-21376 and CV-WA-2015-21391, Memorandum Decision and Order (4th Dist. Idaho Sept. 1, 2016) (Wildman, J.) (affirming in large part the Director's order); *Ballentyne Ditch Co. v. Boise Project Bd. of Control*, Case Nos. CV-WA-2015-21376 and CV-WA-2015-21391, Order Denying Rehearing (4th Dist. Idaho Nov. 14, 2016) (Wildman, J.). Three appeals were filed: Idaho Supreme Court Nos. 44677-2016, 44745-2017, and 44746-2017. These appeals were fully briefed and awaiting oral argument when the Refill Settlement was reached in the Stipulation of July 2, 2018. Following the enactment of H.B. 1 and approval of Refill 1 and Refill 2 by the SRBA Court on 7/19/2019, the appeals were withdrawn and Judge Wildman's orders were vacated (see Stipulation of July 2, 2018, ¶ 13, pp. 6-7) in *Ballentyne Ditch Co. v. Boise Project Bd. of Control*, Case Nos. CV-WA-2015-21376 and CV-WA-2015-21391, Order Vacating Orders and Remanding to the Idaho Department of Water Resources (4th Dist. Idaho Oct. 22, 2019) (Wildman, J.).

The litigation centered mainly on IDWR's accounting methodology for water rights associated with federal on-stream reservoirs. (See section 4.E(6) at page 46 above for a discussion of whether the one-fill rule applies to off-stream reservoirs.) The accounting methodology matters because Idaho, like most western states, allows only one "fill" of a storage water right under priority (unless the right expressly provides for additional fill).[69] The core question was whether water vacated[70] for flood control purposes counts (aka, accrues) toward fill (*i.e.*, satisfaction of the water right).

The final round of the Refill Litigation involved challenges to the order issued by Director Spackman in a contested case initiated by the Department in response to prior rounds of the Refill Litigation. *In the Matter of Accounting for Distribution of Water to the Federal On-Stream Reservoirs in Water District 63* Idaho Department of Water Resources (Amended Final Order, Oct. 20, 2015) (Spackman, Director) ("*Amended Refill Order*").

Ultimately, the litigation was settled, pursuant to a Stipulated dated July 2, 2018), in a manner that left in place IDWR's longstanding accounting system recognizing that under the one-fill rule all water available to a storage right holder accrues to the right. A key part of the settlement provided that decrees should issue for two new storage rights known as Refill 1 and Refill 2. These rights are discussed in footnote 58 at page 46.

In a nutshell, the settlement terms authorize refill of federal reservoirs with water in excess of the quantity of the original storage rights authorizing the first fill of the reservoirs. These original water rights are referred to as the "Base Rights." The conditions and extent of this refill are governed by two carefully crafted storage rights decreed to the Bureau by the SRBA Court. They are commonly referred to as Refill 1 (no. 63-33734A) and Refill 2 (no. 63-33734B).

---

[69] For convenience, we refer to the primary storage right(s) associated with a reservoir or system of reservoirs authorizing the initial fill as the "Base Right(s)." The Base Rights are distinguished from any additional water right(s) (*e.g.*, the "Late Claims" that resulted in Refill 1 and Refill 2) authorizing a second fill of the reservoir(s) under right of priority.

The Bureau's Base Rights for Basin 63 (Boise River Basin) are Nos. 63-303, 63-3613, 63-3614, and 63-3618. The Basin 63 Late Claims are Nos. 63-33732, 63-33733, 63-33734, 63-33737, and 63-33738. No. 63-33734 was split into 63-33734A and 63-33734B to become Refill 1 and Refill 2. Except for Refill 1 and Refill 2, all Basin 63 Late Claims were disallowed by the SRBA Court on 7/19/2019 pursuant to the Refill Settlement. The Basin 65 (Payette River Basin) Base Rights are Nos. 65-2927A, 65-2927B, 65-2917, and 65-9483. The Late Claims for Basin 65 are Nos. 65-23531 and 65-23532. The Basin 65 Late Claims were disallowed on *res judicata* grounds.

[70] We employ the term "vacated" to describe space in a reservoir that becomes empty when stored water is released prior to the irrigation season for flood control purposes. In addition, the term "vacated" includes space that is kept empty when water that could have been lawfully stored is bypassed for flood control purposes (*i.e.*, water is passed through the reservoir without being physically stored). Strictly speaking, "vacate" refers to the creation or maintenance of space in the reservoir. Thus, one vacates space by releasing water. However, for convenience and brevity, we also speak of vacating water in order to create or maintain storage space. Thus, "vacated" water includes both releases of previously stored water and bypass of water than is never physically stored.

The Refill 1 and Refill 2 rights are summarized in the table below:

Summary of Settlement Rights – Refill Litigation		
	Refill 1 (63-33734A)	**Refill 2 (63-33734B)**
Purpose	This "beneficial use right" formally implements the concept of free river refill (*i.e.*, refill does not occur under priority, except for 3 carve-outs, where refill does occur under priority).	This is a senior "enlargement right" which, due to its subordinations, functionally operates like a junior appropriation for second fill.
May be exercised under priority?	No. Except for the three carve-outs, Refill 1 is subordinated to all water rights (existing and future). Thus, diversion may occur only under "free river" conditions. However, Refill 1 operates under priority as to the three carve-outs.	Yes. Refill 2 may be exercised under priority against post-2014 water rights (as described in the subordination).
Subordination:	Subordinated to all existing and future water rights.	(1) All water rights included on a list attached to Refill 2. This list includes all known surface water rights through 1/30/2014. (2) All surface rights under 1.0 cfs with priority dates prior to 5/1/2014, even if omitted from the above list.
Carve-outs (which eliminate the subordination and allow the right to be exercised under priority):	(1) Surface water storage rights greater than 1,000 AF issued after 4/15/2019 (as described in Idaho Code § 42 115). (2) Managed ground water recharge rights issued after 4/15/2019. (3) All hydropower rights.	None.
Priority date	Due to the subordination, the 9/30/1965 priority date is irrelevant (except for the hydropower carve-out). For purposes of the other two carve-outs, the priority date is functionally converted to a 2019 priority.	Due to the subordination, the 3/16/1973 priority date functionally converts Refill 2 to a 2014 priority. The 3/16/1973 priority date was based on the date of a 1973 statute allowing storage of up to five AF/acre.
Quantity	3,672,732 AF/year. This corresponds to the largest recorded inflow into the reservoirs. In other words, the right is for the entire river flow.	587,056 AF/year. This is the quantity that could be stored under the 1973 statute's five AF/acre provision beyond the quantity authorized under the Base Rights

Refill 1 confirmed the Bureau's unlimited right to "free river" refill—that is, the right to refill with virtually no limitation when there is sufficient water in the river to satisfy all other priorities. Refill 1 does not include any priority right to call out other users (with three exceptions known as "carve-outs"). Refill 1 has a priority date of September 30, 1965, but the priority date is rendered meaningless due to its complete subordination to existing and future appropriations (except for the carve-outs). Thus, Refill 1 formalizes the Department's longstanding administrative practice of allowing free river refill (*i.e.*, not under right of priority), except for carve-outs that allow some refill under priority.

In contrast, Refill 2 may be exercised under right of priority as to all post-settlement rights (roughly speaking, post-2014 rights). Thus, it allows the reservoirs to "top-off" by curtailing post-settlement rights up to 587,056 AF/year (which is more than half the volume of the federal Boise River reservoirs). By providing a substantial quantity of priority-based refill, Refill 2 renders Condition 908 unnecessary on new water rights.

(10) Place of use

It is well established in Idaho and elsewhere that storage of water in a reservoir is a beneficial use, so long as the storage water is appurtenant to an identifiable area and applied to a beneficial use (either within the reservoir or after release), such as irrigation, hydropower, municipal, or recreation purposes.[71]

However, in Idaho,[72] the fact that storage is a beneficial use does not mean that the place of use corresponds to the location of the storage reservoir. Instead, the place of use looks to the location of the ultimate place of beneficial use (e.g., irrigation or power generation).

Accordingly, the "[Purpose] Storage" component of the right ordinarily does not have an associated place of use (unless the storage itself is the end purpose, e.g., "recreation storage" or

[71] In the irrigation context, storage is seen as protection against recurring drought and as a source of supplemental supply for appropriators whose natural flow rights may not provide them enough to complete the irrigation season. "The supreme court held in 1941 that the maintenance of a dam, under permit from the Department of Reclamation [now the Idaho Department of Water Resources], for the storage of flood and winter-flow waters, could not constitute a wrongful interference with decreed rights on the stream, provided the owner of the dam released during the irrigation season the quantities of water necessary to supply the decreed rights." Wells A. Hutchins, *The Idaho Law of Water Rights*, 5 Idaho L. Rev. 1, 45 (1968) (citing *Knutson v. Huggins*, 62 Idaho 662, 115 P.2d 421 (1941).)

"The storage of water for future uses has long been held to be a beneficial use." Robert E. Beck, 1 *Waters and Water Rights*, § 13.03 at 144 (1991) (citations omitted); "Initially, the system relented on this proposition [requiring immediate use] only with reference to the building of reservoirs to catch otherwise unusable seasonal flows and floodwaters. . . . Now, of course, municipalities are allowed to acquire supplies for projected future use; indeed, in many instances are required to, for long-term growth." Robert E. Beck, 1 *Waters and Water Rights*, § 12.03(c)(2) at 108 (1991) (citations omitted); Samuel C. Wiel, *Water Rights in the Western States* § 378 at p. 410 (1911); 45 Am. Jur. 2d *Irrigation* § 38 (1969). *But see*, *Jicarilla Apache Tribe v. United States*, 657 F.2d 1126 (10th Cir. 1981) (Albuquerque's storage of San Juan/Chama water for 40 years was not a beneficial use due to evaporation losses.).

[72] We understand that this is not the practice in Utah, which treats the storage reservoir as the place of use.

"aesthetic storage").[73] However, this practice is not consistent. On occasion, Idaho storage rights list the reservoir as the place of use for the "[Purpose] Storage."[74]

For example, the three water rights held by Idaho Power Company for its Hells Canyon Complex (no. 3-10247 for Hells Canyon dam, no. 3-10246 for Oxbow dam, and 3-2018 for Brownlee dam) designate no place of use for the "Power Storage" component of those rights. Instead, a place of use at the power plant is designated for the "Power from Storage" component of these rights.

Another example is Lake Lowell, which is not designated as a place of use on water right no. 63-301A. Instead, that right designates 194,498 acres of irrigated land as the place of use.

In contrast, the "[Purpose] from Storage" component does have a place of use; it is the location of that end use. Thus, for "Irrigation from Storage," the place of use might be a specified irrigated land or a more broadly described irrigation district boundary.

In the case of hydropower, the place of use for "Power from Storage" (or "power") is the location of the power generation facility. For an on-stream reservoir, the power plant is often located at the base of the dam—in which case, the point of diversion and place of use are the same. However, the power generation facility may be located elsewhere. For example, Idaho Power's Oxbow dam impounds water at a dam in Adams County, Idaho and delivers it to a power station downstream on the Snake River (after the oxbow turn) in Baker County, Oregon. (See water right no. 3-10246.)

(11) The 24-hour fill policy

As a matter of administrative ease, the Department does not require very small reservoirs to obtain storage rights. The Department's rule of thumb is that if the facility can be filled in twenty-four hours, based on the authorized direct diversion rate of a natural flow or ground water right, then no separate storage right is required.[75] This simplifies the application process for farms, ranches, dairy operations, subdivisions, and the like that often make use of small holding tanks, ponds and other storage facilities.

---

[73] For example, the three water rights held by Idaho Power Company for its Hells Canyon Complex (No. 3-10247 for Hells Canyon dam, No. 3-10246 for Oxbow dam, and No. 3-2018 for Brownlee dam) designate no place of use for the "Power Storage" component of those rights. Instead, a place of use at the power plant is designated for the "Power from Storage" component of these rights. The same is true for many rights held by the Bureau of Reclamation for on-stream reservoir storage; these rights designate the large area of irrigation and other uses as the place of use. E.g., No. 63-303.

[74] For example, the *Idaho Appropriation Application* lists Bear Lake as the place of use for each of the "[Purpose] Storage" components (Irrigation Storage, Municipal Storage, etc.). Additional Information, § 9, p. 2, attached to Application for Permit No. 11-7835 (Mar. 23, 2018).

[75] A. Lynne Krogh-Hampe, *Injury and Enlargement in Idaho Water Right Transfers,* 27 Idaho L. Rev. 249, 284 (1990). See also Norman C. Young, IDWR, *Administrator's Memorandum – Application Processing No. 67*, at 3 (reproduced as Appendix O).

The twenty-four hour rule is discussed in two pieces of IDWR guidance (both are reproduced in Appendix O):

- Jeff Peppersack, *Application Processing No. 73* (*Utilization of the 24-Hour Fill Allowance for Impoundments*) (Apr. 18, 2013).

- Norman C. Young, *Application Processing No. 67* (*Permitting Requirements for Ponds*) (Feb. 28, 2003).

The 2003 memorandum states:

> A water right permit is not required to construct and use a pond or ponds that are part of a system used to distribute and use water in accordance with a valid water right if the pond or ponds do not impound a larger volume of water than authorized for diversion within a 24-hour period under the water right or rights associated with the project. One example would be a pond constructed as part of an irrigation system to provide a higher rate of flow over a short period of time as required in some border irrigation systems.

Application Processes sing Memo No. 67, at 3.

In a 2007 decision, an IDWR hearing officer applied the rule with this explanation:

> Nonetheless, IDWR has recognized the need for short-term storage for irrigation sets of duration less than 24 hours. The shorter, more concentrated irrigations are necessary for golf courses, where irrigation during playing hours would frustrate the purpose of the irrigation. In addition, homeowners may also concentrate irrigation during shorter periods of the day. To accommodate the need for short-term storage, IDWR has allowed water to be delivered to storage by a direct flow water right, but has limited the storage to the volume of water that can be accrued by the direct flow authorized for a period of 24 hours.

IDWR Preliminary Order, Application for Amendment of Permit 95-9045 (Black Rock Utilities, Inc.), ¶ 13 at 6 (June 4, 2007).

(12) Storage and municipal water rights

On occasion, IDWR issues municipal water rights for storage purposes. These may follow the standard breakdown: "diversion to storage," "municipal storage," and "municipal from storage." See, for example, Water Right Permit No. 65-23750 issued to the Tamarack Resort in April 2020.

On other occasions, however, IDWR has recognized that storage incidental to delivery of water to municipal customers is included within the panoply of municipal uses and does not need to be called out on the face of a municipal water right. Two examples follow.

Black Rock Utilities, Inc.

The first involves the golf club and residential development known as Black Rock near Coeur d'Alene. A municipal provider known as Black Rock Utilities, Inc. serves that development. The irrigation system for the golf course employs aesthetic ponds used for storage.

In 2008, Black Rock filed an application to amend its permit No. 95-9045. (Although this was not a new appropriation, the principles with respect to storage rights for municipal water rights would be the same in the context of a new appropriation.)

Initially, the application for amendment of permit followed the standard practice of seeking storage for diversion to storage, municipal storage, and municipal from storage. However, Black Rock changed course and requested IDWR to issue the amended permit as a simple municipal water right without municipal components listed among the elements of the right.

The Department agreed. In 2010 it issuing a final order approving the permit amendment described only as municipal.[76]

Tamarack Resort

The second example is found in recent licenses for the Tamarack Resort between McCall and Cascade (Nos. 65-23811, 65-23812, 65-23813, and 65-23814) issued on March 13, 2019.

The permits for these licenses had been issued, according to traditional practice, for the full panoply of diversion components (diversion to storage, municipal storage, and municipal from storage). When licensed, however, the rights were issued by the Department as a simple municipal use. In doing so, the Department found that the complexity of separately listing storage components in the permit is unnecessary in the case of municipal rights. This is because municipal use is broadly defined to include storage that is incidental to the delivery of water for other municipal purposes.

As noted above, a permit was recently issued to the Tamarack Resort that included storage components. We are advised, however, that this was done only because the application sought those components. We are further advised that those storage components are likely to be removed at the time of licensing, leaving only a simple municipal use.

F. Duty of water

Closely related to the rule of beneficial use is the concept of "duty of water," which is that amount of water reasonably necessary to achieve the purpose for which the water was appropriated,

[76] Conditions were added to the permit, and later to the license, addressing storage quantities associated with the aesthetic ponds. That was a function of the fact that the right holder was constrained by an existing permit with a limited "reserve" that could be carved out for the new storage purpose. That complexity should not come into play in an ordinary application for a new municipal water right. Notably, these conditions were not displayed in the portion of the right showing the purposes and associated quantities as elements of the right.

and no more. The rather odd phrase "duty of water" is understood more easily in the context of the following quotation from an early Idaho case: "It is a cardinal principle established by law and the adjudications of this court that the highest and greatest duty of water be required. The law allows the appropriator only the amount actually necessary for the useful or beneficial purpose to which he applies it." *Munn v. Twin Falls Canal Co.*, 43 Idaho 198, 207, 252 P. 865 (1926).

Each water right is limited by its "duty of water" even though the license, decree, or other basis for the right may not quantify that amount. For instance, a person might hold a license for a right to divert 10 cfs to irrigate a particular piece of land. Nevertheless, a competing user could argue that this rate of diversion is more than reasonably required. In making this argument, the other user would contend that the quantity stated in the first user's licensed right exceeded the duty of water and his diversion should be cut back to that duty. Such a challenge would arise ordinarily in a change or transfer proceeding, in a delivery call situation, or in a general adjudication.[77]

The duty of water concept ordinarily applies in the agricultural irrigation context and is often expressed in terms of cfs of diversions from the source per irrigated acre.[78] Some have suggested it has no application outside that context.[79]

In Idaho, a statutory presumption regarding the duty of water has been codified. "[N]o one shall be authorized to divert for irrigation purposes more than one cubic foot of water per second of the normal flow for each fifty (50) acres of land to be so irrigated, or more than five (5) acre feet of stored water per annum for each acre of land to be so irrigated, unless it can be shown to the satisfaction of the department of water resources that a greater amount is necessary."[80] This amounts to one "miner's inch" of water per acre.[81] Thus, for example, if a farmer irrigates 200 acres, the state will presume the duty of water not to exceed diversions of 200 x 0.02 = 4 cfs, absent a showing that more is needed. Incidentally, diverting at constant rate of one miner's inch throughout a 183-day irrigation season

---

[77] Presumably, a challenge based on duty of water also could arise where the complaining party asserts that an appropriator is diverting more than a reasonable duty during a particular time period (such as in the early or late season, when less water might be needed). Such a challenge would essentially be an assertion that the appropriator is wasting water.

[78] "The duty of water in the Payette River Drainage is generally based on not more than 0.02 cfs per acre with consideration given for reasonable losses incurred. . . . [T]he duty of water under the decree is 0.0167 cfs per acre (1.6 cfs/96 acres = 0.0167)." *Dovel v. Dobson*, 122 Idaho 59, 65, 831 P.2d 527, 533 (1992) (Justice McDevitt dissenting).

[79] "Water duty is limited to agricultural uses." A. Dan Tarlock, *Law of Water Rights and Resources,* § 5:66.

[80] Idaho Code § 42-202; *see also* Idaho Code § 42-220 (repeating the requirement in the context of issuance of water right licenses).

[81] A miner's inch is a flow rate equal to 9 gallons per minute. Under the Idaho standard, there are fifty miner's inches in a cubic foot per second ("cfs"); thus, a miner's inch is also expressed as 0.02 cfs.

()4/15 to 10/15) yields nearly over seven acre-feet of diversions. Because annual consumptive use by crops in Idaho typically is less than three acre-feet (IDWR uses as much as 4.5 AF/year for some irrigation land), the inch-per-acre target is more than ample for most delivery systems. Indeed, Idaho irrigators using wells and sprinklers typically divert little more than the consumptive amount.

The duty of water will include a reasonable amount of seepage, evaporation and ditch carriage loss, and can vary from place to place depending on conditions. In addition, the one-inch-per-acre presumption can be overcome by evidence that more (or less) water is reasonably needed. For instance, a user could obtain a water right for diversions of 11 cfs if he could demonstrate that 10 cfs was required for application to his 500 acres and an additional 1 cfs was lost in transporting the water to the fields. Note that the water right is measured at the point of diversion. Only a portion of the water diverted under a user's water right, perhaps 50 percent, is actually consumed beneficially in many agricultural settings. As indicated above, canal diversions almost always are much higher per acre than ground water diversions.

The duty of water and beneficial use requirements both are central concepts in the corollary rule of Western water law that a water right does not include the right to waste water. In addition, the courts and legislatures of many Western states, Idaho among them, have announced that encouraging (or requiring) "maximum utilization" (or "optimum use") and efficiency also are legitimate subjects of state regulation.[82] This makes sense. The constitutional requirements of priority and beneficial use alone lay a broad foundation for these concepts.

G. Measurement

Water users are required to maintain headgates or other controlling works at the point of diversion suitable to the Department of Water Resources.[83] Water users must monitor and report their water usage only if there is a specific requirement to do so imposed by the Department. Such requirements, if they exist, are typically shown as a condition of the water right.[84]

In 1995, the Idaho Legislature authorized the Director to divide the state into water measurement districts to carry out the water measuring requirements of Chapter 7, Title 42, Idaho Code. The Director of IDWR issued an order on October 24, 1996, creating three water measurement districts covering the Eastern Snake Plain Aquifer in southern Idaho. Another has been added in the Big Wood River basin.

Increasingly, the Department is requiring the installation of more sophisticated measuring devices as a condition of new appropriations and transfers.

See discussion in section 24.A at page 751.

I. Water quality as part of water right holder's interest

The prior appropriation doctrine deals primarily with the allocation of water quantity, not quality. Protection of water quality is left largely to other state and federal laws and regulatory bodies.[85] To a limited extent, however, some courts have recognized the right of an appropriator of water to bar other water right users from polluting a common water source. Professor Davis summed up these authorities as follows:[86]

> Prior appropriation waste discharge cases hold that a senior appropriator cannot expect to retain natural quality of flow, but must expect some deterioration in quality by the activities of upstream junior appropriators. However, he is entitled to be free from unreasonable interference with the fair enjoyment of his prior appropriative right by material deterioration of water quality.

In 1939, the Idaho Supreme Court offered the following summary of the law on the subject of water quality under the prior appropriation doctrine:[87]

> Numerous authorities announce the doctrine that while a proper use of the water of a stream for mining purposes necessarily contaminates it to some extent, such contamination or deterioration of the quality of the water cannot be carried to such a degree as to inflict substantial injury upon another user of the waters of said stream. [Citations omitted] We believe the rule stated in Arizona Copper Co. v. Gillespie, 12 Ariz. 190, 100 P. 465, 470; *Id*., 230 U.S. 46, 33 S. Ct. 1004, 57 L. Ed. 1384, is controlling in this case, namely: "We do not mean to say that the agriculturist may captiously complain of a reasonable use of water by the miner higher up the stream, although it pollutes and makes the water slightly less desirable, nor that a court of equity should interfere with mining industries because they cause slight inconveniences or occasional annoyances, *or even some degree of interference, so long as such do no substantial damage*." [Emphasis by Court.]

---

[85] "The Department of Health and Welfare continues to have the primary responsibility for policing water quality control in this state." *Shokal v. Dunn*, 109 Idaho 330, 341, 707 P.2d 441, 452 (1985) (Bistline, J.).

[86] Peter N. Davis, *Protecting Waste Assimilation Streamflows by the Law of Water Allocation, Nuisance, and Public Trust, and by Environmental Statutes*, 28 Nat. Resources J. 357, 368-69 (1988).

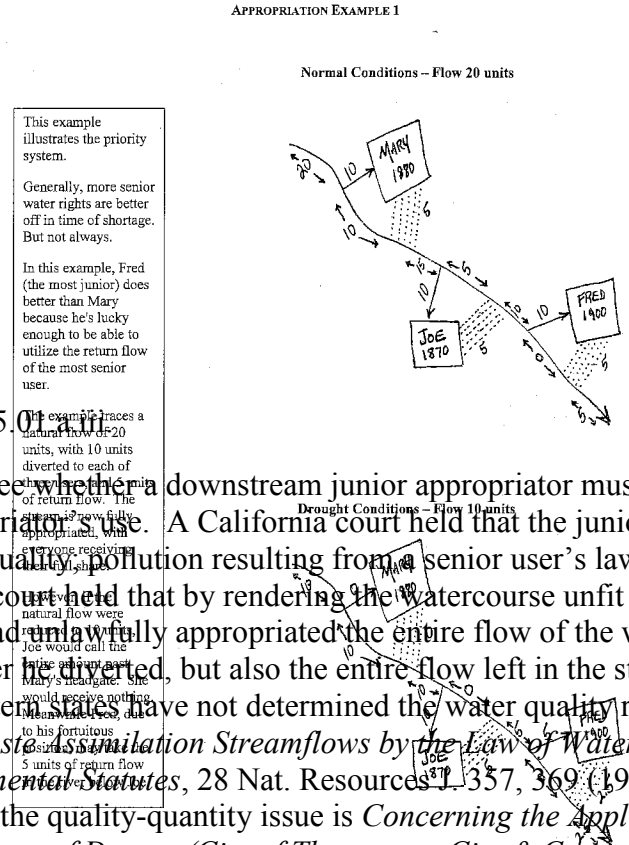
EXHIBIT C
Page No. 60 of 761

> "What deterioration in quality would injuriously affect the water for irrigation, and whether or not the deterioration to which the defendant company subjected the waters in question injured the land of the plaintiff, were matters of fact;" Montana Company v. Gehring, supra.

The Department's rules for new water right appropriations establish this criteria:[88]



> The quality of the water available to the holder of an existing water right is made unusable for the purposes of the existing user's right, and the water cannot be restored to usable quality without unreasonable effort or expense.

There has been little further litigation on the subject, and the above statements continue to provide the most complete expression of the law in Idaho.

Idaho's protection of water quality as a component of a water right has support from other states, as well.[89]

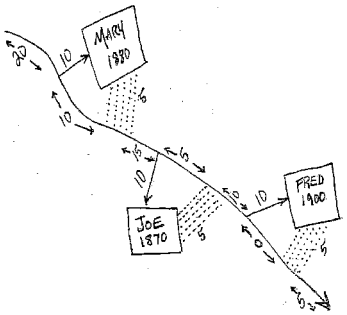
J. Priority of right: simple graphic examples

On the following pages, we set out some simple graphic examples demonstrating the operation of the priority system in a surface water context.

[88] IDAPA 37.03.08.045.01.a.iii.

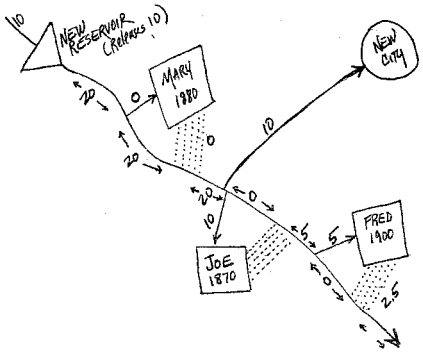
[89] "Jurisdictions disagree whether a downstream junior appropriator must accept degraded water quality resulting from a senior appropriation's use. A California court held that the junior user takes the water as he finds it, both in quantity and quality; pollution resulting from a senior user's lawful use is considered part of his use. By contrast, a Colorado court held that by rendering the watercourse unfit for diversionary uses by a junior user, a polluting senior user had unlawfully appropriated the entire flow of the watercourse. The senior user had not only appropriated the water he diverted, but also the entire flow left in the stream by rendering it unfit for their use. Courts in most western states have not determined the water quality rights of junior appropriators." Peter N. Davis, *Protecting Waste Assimilation Streamflows by the Law of Water Allocation, Nuisance, and Public Trust, and by Environmental Statutes*, 28 Nat. Resources J. 357, 369 (1988) (footnote citations omitted). A Colorado case dealing with the quality-quantity issue is *Concerning the Application for Plan for Augmentation of the City & Cnty. of Denver (City of Thornton v. City & Cnty. of Denver)*, 44 P.3d 1019 (Colo. 2002).

This example illustrates the integration of stored water into the priority system.



In the first scenario, three diverters each divert 10 units with 5 units of return flow. If under normal conditions 20 units are flowing in the stream, the stream is fully appropriated, with everyone receiving their full share.

If a new user needs water from this source, the only options are (1) to buy out an existing user, or (2) to construct storage.



If a new reservoir is constructed on the stream, it will not be allowed to impound water so long as when flows are at 20 units, because it is all called for downstream. But it will be able to store high flows which occasionally occur.

Once stored, that water may be diverted at will by the new user, even calling it past senior natural flow water rights that have been curtailed during times of drought, as shown in the second diagram.

Normal Conditions – Flow 20 units
(Stream Fully Appropriated)

Drought Conditions – Flow 10 units
(Previously Stored Water Available)

5. WATER USES THAT DO NOT REQUIRE A WATER RIGHT

A. Firefighting

The Department has long recognized that diversion of water from a natural water body to fight an existing fire does not require a water right. (As noted below, this is now codified.) However, routine sprinkling of water to maintain a vegetative barrier against fires is not considered fighting an existing fire and would require a water right.

Similarly, water stored for another purpose may be used to fight and existing fire. However, storage of water specifically for firefighting purposes would require a storage right just like any other storage of water.

In 1998, the Idaho Supreme Court approved the Department's inclusion of a general provision in all water rights decreed by the SRBA stating that the right may be used for firefighting. *A&B Irr. Dist. v. Idaho Conservation League* (aka *Basin-Wide Issue 5*) ("*ICL III*"), 131 Idaho 411, 415-16, 958 P.2d 568, 572-73 (1998) (McDevitt, J.). Indeed, the condition provides that any water, with our without a water right, may be used for firefighting.

The firefighting exemption was later codified, Idaho Code § 42-201(3)(a), along with an exemption for certain minor diversions for forest practices (such as dust abatement), Idaho Code § 42-201(3)(b).

IDWR's guidance documents on both RAFN[90] and non-RAFN[91] water rights provide that municipal ground water or natural flow water rights may not be obtained based on firefighting use. (See discussion in section 23.D(8)(e) at page 360 and section 23.D(8)(g) at page 366.) In other words, in quantifying a municipal water right, the quantity may not include a component for firefighting. The reason is that, as noted above, no water right is needed to fight an existing fire. Of course, a water right is required to store water to fight a future fire.[92]

On the other hand, any person, including a municipal provider, may obtain a non-municipal water right specifically for the purpose of firefighting. Such a right might be used not only to fight active fires, but to test diversion of water for fire flow testing. Such a right would constitute a property

[90] Mat Weaver, *Memorandum – Application Processing No. 74, Permit Processing No. 20, License Processing No. 13, Transfer Processing No. 29* (Mar. 16, 2015) (replacing Nov. 15, 2014 and Nov. 13, 2013 versions) ("*2015 Weaver Memo*") (reproduced in Appendix M).

[91] Jeff Peppersack, *Administrator's Memorandum – Processing Applications and Amendments and Determining Beneficial Use for Non-RAFN Municipal Water Rights – Application Processing No. 18; Licensing No. 1* (Oct. 19, 2009) ("*2009 Peppersack Memo*") (reproduced in Appendix M).

[92] Presumably, the Department would make an exception and allow a municipal right for firefighting if it could be shown that the water would not be physically present but for the existence and administration of the water right. That, however, would be an exceptional situation.

right with a priority right, and, presumably, under the right circumstances, such a right could later be transferred to another use. Since such a right is a non-municipal (and, hence, non-RAFN) right, it must be based and quantified upon present need, not future need.

B. Land application of effluent by municipal providers

In 2012, the Legislature enacted an additional exemption allowing municipalities, municipal providers as defined by Idaho Code § 42-202B, sewer districts, or a regional entities operating publicly owned wastewater treatment works to collect, treat, store, and dispose of effluent or stormwater where doing so "in response to state or federal regulatory requirements." Idaho Code § 42-201(8). See discussion in section 19.F at page 300.

6. FORFEITURE AND ABANDONMENT

A. Overview

Because beneficial use is the basis for a water right, the failure to use a right, or a part of it, can result in its loss. Note how different this is from other forms of property. One does not forfeit ownership of a piece of land simply because he lets it sit vacant. But this is exactly what can happen to an unused water right; again, it is a right whose very existence is based on beneficial use. In other words, under the prior appropriation doctrine forfeiture is the other side of the beneficial use coin.

Water rights may be lost in several ways, the primary methods being forfeiture (an objective statutory rule) and abandonment (a common law doctrine based on subjective intent). Both rules operate throughout the West. Water rights lost through either abandonment or forfeiture revert to the state as unappropriated water and are either subject to further appropriation or serve to satisfy the rights of existing junior appropriators from the same water source. *Jenkins v. State Dep't of Water Resources*, 103 Idaho 384, 647 P.2d 1256 (1982). This does not mean that, a forfeited senior-priority water right can be picked up and diverted under that priority by another water user. Rather, by eliminating this right from the priority line, more junior rights effectively "move up the ladder" or become that much more reliable because they have fewer senior rights in front of them.

There has been a trend in Idaho, as in some other Western states, to avoid strict enforcement of the forfeiture statute, and several exceptions have been enacted in recent years. This is an interesting development given the increasing demands for water. Nevertheless, statutes and case law have increasingly provided the means by which an appropriator who has no present need for water, and no present ability to place it to beneficial use, still may retain the water right. On the other hand, any transfer of a water right, or any attempt to curtail other rights to serve it, still must answer to its actual beneficial use. *See, e.g., American Falls Reservoir District No. 2 v. IDWR* ("*AFRD*"), 143 Idaho 862, 154 P.3d 433 (2007) (Trout, J.).

A detailed discussion of forfeiture in Idaho is found in Peter R. Anderson, *Why Does Idaho's Water Law Regime Provide for Forfeiture of Water Rights?*, 48 Idaho L. Rev. 419 (2012).

B. Common law abandonment

Abandonment is a common law principle long recognized by western courts. Abandonment of a water right requires (1) an intent to give up the right, and (2) an actual relinquishment or surrender of the right. *Jenkins v. State Dep't of Water Resources*, 103 Idaho 384, 647 P.2d 1256 (1982); *Sears v. Berryman*, 101 Idaho 843, 623 P.2d 455 (1981); and *Gilbert v. Smith*, 97 Idaho 735, 552 P.2d 1220 (1976).

The "actual relinquishment or surrender" does not require a declaration other affirmative act. Rather it refers to the relinquishment of possession, i.e., the physical act (or non-action) of not using the water.

As Samuel Wiel put it:

> To constitute abandonment, properly speaking, there must be a concurrence of act and intent, the relinquishment of possession, and the intent not to resume it for a beneficial use, so that abandonment is always voluntary, and a question of fact.
>
> It has been said: "To constitute an abandonment of a water-right, there must be a concurrence of the intention to abandon it and the actual failure in its use."

Samuel C. Wiel, 1 Water Rights in the Western State § 567 (1911) (cited as authority in *Gilbert v. Smith*, 97 Idaho 735, 738, 552 P.2d 1220, 1223 (1976)).

The standard of proof is high. "Intent to abandon must be proved by clear and convincing evidence of unequivocal acts, and mere non-use of a water right, standing alone, is not sufficient for a per se abandonment." *Jenkins v. State Dep't of Water Resources*, 103 Idaho 384, 388-89, 647 P.2d 1256, 1260-61 (1982). "Such intent may be evidenced by non-use for a substantial period of time, but mere non-use is not a per se abandonment." *Gilbert v. Smith*, 97 Idaho 735, 738, 552 P.2d 1220, 1223 (1976).

The "abandonment" doctrine still applies in Idaho. However, it rarely is encountered because the requisite proof of a mental state (i.e., the intent to abandon) can be difficult to make.

C. The forfeiture statute

Idaho's water code has long contained a provision declaring that if a water right is not placed to beneficial use for a period of five years, it is "forfeited"—regardless of the owner's intent.[93] Section 42-222(2) provides, in part:

> All rights to the use of water acquired under this chapter or otherwise shall be lost and forfeited by a failure for the term of five (5) years to apply it to the beneficial use for which it was appropriated and when any right to the use of water shall be lost through nonuse or forfeiture such rights to water shall revert to the state and be again subject to appropriation under this chapter, except that any right to the use of water shall not be lost through forfeiture by failure to apply the water to beneficial use under certain circumstances as specified in section 42-223, Idaho Code.

Idaho Code § 42-222(2).[94] *See*, *Dovel v. Dobson*, 122 Idaho 59, 831 P.2d 527 (1992). *See also* Idaho Code § 42-104 declaring that "when the appropriator or his successor in interest ceases to use it for such [beneficial] purposes, the right ceases."

---

[93] Predecessors to the current forfeiture provision have been on the books since 1903. 1903 Idaho Sess. Laws, at 223-24 (H.B. 146) (establishing a two year forfeiture period). In 1905, the period was extended to five years. 1905 Idaho Sess. Laws, at 27 (H.B. 19).

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

EXHIBIT C
Page No. 66 of 761

This provision is followed by another authorizing the Department to extend the five-year period for an additional five years upon a showing of "good and sufficient reason for nonapplication." Idaho Code § 42-222(3) (This provision was added in 1933. 1933 Idaho Sess. Laws, ch. 193.) However, this appears to require an affirmative action by the user to obtain the extension prior to the expiration of the first five-year period. Moreover, the time may not be extended further than a total of ten years under this provision.

Courts have interpreted the statute as not to apply to water rights where the non-use results from circumstances beyond the right holder's control. *Jenkins v. State Dep't of Water Resources*, 103 Idaho 384, 647 P.2d 1256 (1982). The issue of what qualifies as a circumstance beyond the right holder's control has been treated as a question of fact. Moreover, forfeiture does not apply if there is no need to divert water due to wet weather conditions. For instance, a storage right in a reservoir may be held for many years in anticipation of a drought.

Forfeiture must be proven by "clear and convincing evidence." This is a heightened evidentiary standard applicable in special cases such as abandonment,[95] forfeiture,[96] fraud,[97] and prescription[98] where the outcome is one disfavored in the law.

D. Statutory exceptions to forfeiture

In addition, numerous specific statutory defenses to forfeiture have been enacted over time. Idaho Code § 42-223 (previously codified to section 42-222(2)).[99] The statutory exceptions to forfeiture include:

(1) Water rights appurtenant to lands placed in a federal cropland set aside program.
(2) Water right held by municipal provider for "planning horizon" needs.
(3) Water rights replaced by land application of waste water.
(4) Ground water rights not diverted in compliance with a ground water management plan aimed at bringing ground water withdrawals in balance with ground water recharge.
(5) Water rights placed in the water supply bank.[100]
(6) Nonuse resulting from circumstances over which the water right holder has no control.

---

[94] See also Idaho Code § 42-350 (added by 1986 Idaho Sess. Laws, ch. 313). This provision authorized IDWR to issue a show cause order and to initiate proceedings leading to the revocation of a license under which water has not been put to beneficial use for five years. As of this writing, there are no published decisions addressing this statute.

(7) Nonuse of water supplied by an irrigation delivery entity (where nonuse is beyond the control of the delivery entity).
(8) Nonuse resulting from exclusion of land from an irrigation district (where nonuse is beyond control of the irrigation district).
(9) Nonuse resulting from a water conservation practice.[101]
(10) Nonuse resulting from the water right being used for mitigation purposes.
(11) Nonuse of a water right for "mining, mineral processing or milling," where the nonuse was "due in whole or in part to mineral prices," and where the water right owner "has maintained the property and mineral rights for potential future mineral production."
(12) Codification of resumption of use under *Sagewillow*.

E. The "no control" issue

Idaho Code § 42-223(6) sets out the defense to forfeiture that "the water right owner has no control."

"Typical circumstances in which this [no-control] exemption might apply include weather-related factors, family or civilian emergencies, financing problems, legal difficulties, or the destruction of diversion facilities." Peter R. Anderson, *Why Does Idaho's Water Law Regime Provide for Forfeiture of Water Rights?*, 48 Idaho L. Rev. 419, 435 (2012).

There is little Idaho case law on the subject. One issue addressed by the courts is that the defense applies when water under the right is not physically available:

> The availability of water qualifies as a circumstance over which an appropriator has no control. That is, "for a water right to be forfeited water must be available to satisfy the water right during the alleged period of non-use." In *Re SRBA Case No. 39576, Subcase No. 65-05663B, Order of Partial Decree*, Idaho Dist. Ct. for the 5th Judicial District (May 9, 2002), p. 32–33 (Burdick, J.) ("*Wood v. Troutt*"). Similarly, this Court recently held that a senior water right holder was "entitled to the full measure of its rights, subject to availability of water." *Idaho Ground Water Ass'n v. IDWR*, 160 Idaho 119, 132, 369 P.3d 897, 910 (2016).").

Barnes v. Jackson , 163 Idaho 194, 198, 408 P.3d 1266, 1270 (2018) (J. Jones, J.).

F. Resumption of use

The courts also have carved out another special exception to forfeiture and abandonment, known as the resumption doctrine.[102] Under this doctrine, forfeiture may be avoided despite a period of nonuse, if the right is resumed before any third party obtains rights that would be impaired by the

[101] See discussion in section 18.C beginning on page 281.

[102] *Zezi v. Lightfoot*, 57 Idaho 707, 68 P.2d 50 (1937); *Carrington v. Crandall*, 65 Idaho 525, 532-32, 147 P.2d 1009, 1011 (1944); *Application of Boyer*, 73 Idaho 152, 248 P.2d 540 (1952) (Givens, C.J.).

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

resumption. Until 2003, the scope of this doctrine and, in particular, the nature of third party rights that would defeat the resumption, was unclear.

In *Sagewillow, Inc. v. IDWR* ("*Sagewillow II*"), 138 Idaho 831, 70 P.3d 669 (2003) (Eismann, J.), the Supreme Court clarified the circumstances in which resumption will be allowed.[103] In that case, a landowner applied to the Department to change the place of use of numerous ground and surface water rights that originally had been authorized for irrigation of up to 2,390 acres in the Little Lost River Basin. The application was protested, and at the hearing it was established that two of the ground water rights appurtenant to approximately 640 acres had been appropriated in the 1960s to facilitate obtaining federal desert land entry ("DLE") patents, and thereafter had been abandoned. Testimony also showed that between the late 1960s and 1989, no more than 1,412 acres had ever been irrigated under the remaining rights by Sagewillow's predecessor in interest. In 1989, Sagewillow purchased the property and immediately began redeveloping the irrigation system. By 1994, Sagewillow had brought approximately 2,390 acres back under irrigation, and then sought to change the place of use of the rights to reflect how they were then being used. The Department held that the two ground water rights appurtenant to 640 DLE acres had been forfeited in their entirety and that the portions of the remaining rights appurtenant to anything more than 1,412 acres also had been forfeited. The Department approved the transfer on condition that Sagewillow could irrigate no more than 1,412 acres. On appeal, the primary issue was whether Sagewillow had lawfully resumed the water rights and thereby avoided forfeiture.

The Supreme Court held that common law resumption remains a valid defense to forfeiture that can be defeated by a showing that a third party has made a "claim of right" to the water prior to the senior's resumption of use.[104] A third party has made a claim of right to the water if he has: 1) instituted proceedings to declare a forfeiture; 2) obtained a valid water right authorizing the use of such

---

[103] A prior case, *Sagewillow, Inc. v IDWR* ("*Sagewillow I*"), 135 Idaho 24, 13 P.3d 855 (2000), involved the same parties and facts. On appeal, however, the Supreme Court vacated and remanded the decision of the District Court, Seventh Judicial District, which had affirmed the Department's findings of forfeiture, on the ground that the Snake River Basin Adjudication Court had exclusive jurisdiction. In response, the 2001 Legislature enacted Idaho Code § 42-1401D to provide that judicial review of Department actions subject to review under the Idaho Administrative Procedure Act (including *Sagewillow I*) were not to be heard in the SRBA district court, but rather in the district courts authorized by Idaho Code § 67-5272. The case was immediately transferred from the SRBA back to the Seventh Judicial District Court, which reissued its original order affirming the Department without further proceedings. The matter was back before the Supreme Court on a Sagewillow's Notice of Appeal by April of 2001.

[104] The court did not address the argument made by the protestants, James Mays and Mays Land & Livestock, that the common law resumption doctrine was abrogated by enactment of Idaho Code § 42-222(4). That statute requires an application to be filed with the Department prior to the running of the forfeiture period requesting an extension of time to resume the use. The statute also establishes a procedure by which the Department determines whether other water rights will be "impaired by granting an extension of time within which to resume the use of the water," and whether good cause exists for the nonuse. Justice Kidwell, in a separate opinion concurring only in the result (joined by Justice Schroeder), found this argument persuasive. *Sagewillow II,* 138 Idaho at 846, 70 P.3d at 684.

water with a priority date prior to the resumption; or 3) used the water pursuant to an existing right. *Sagewillow II,* 138 Idaho at 842, 70 P.3d at 680. The court also held that the resumption need not be made by the original appropriator, but must be upon the lands to which the water right originally was appurtenant. *Id*. Resuming the use of only a portion of the forfeited or abandoned right will not prevent a loss of the non-resumed portion. *Id*.

The Court remanded the case to the Department for further proceedings, in part because:

> [T]he Department did not make any finding that after the statutory period of nonuse and before resumption of use by Sagewillow and/or its predecessors, any junior appropriator used water that was available because of continued nonuse by Sagewillow and/or its predecessors. The Department likewise did not make any finding that during such period any third party applied for and obtained a water right in the same or an interconnected watercourse. For example, the Department did not find that the two watercourses involved in this case were overappropriated and that because of continued nonuse by Sagewillow and/or its predecessor, junior water users received water that they would otherwise not have received.

Sagewillow II, 138 Idaho at 838, 70 P.3d at 676.[105]

Thus, although a water right may have gone unused for a significant period (in *Sagewillow II* nonuse continued for over twenty years), it may be resumed with the original priority date and to the original extent if it can be shown that junior water users did not obtain a determination of forfeiture or directly benefit from the forfeiture.

This is a big "if." As a practical matter, it is unlikely that a valid resumption of use can occur on many water systems in Idaho. This is because these systems already are fully (or over) appropriated.[106] By implication, there are juniors on the system who are benefiting from the senior's non-use and would be harmed by the resumption. Interestingly, although resumption essentially serves as an affirmative defense in the face of facts demonstrating forfeiture or abandonment, the court did not place the burden of proof on the party asserting the resumption defense. Rather, the court held:

> [A]lthough the owner of the water right has the burden of raising defenses to statutory forfeiture, the burden of persuasion remains on the party

[105] Compare *Sagewillow II*'s focus on whether the junior had made use of the water, with the Court's statement in *Jenkins* that a resumption that changes a junior's relative status on the ladder of priority clearly causes injury to the junior. ("Priority in time is an essential part of western water law and to diminish one's priority works an undeniable injury to the right holder.")

[106] *Sagewillow II,* 138 Idaho at 846, 70 P.3d at 684 (Justices Kidwell and Schroeder concurring in result).

> claiming that the water right was forfeited, and that party must disprove the defense.[107]

Sagewillow II, 138 Idaho at 842, 70 P.3d at 680.

G. Partial forfeiture

Partial forfeiture refers to forfeiting a portion of a water right when that portion is not beneficially used. The concept of partial forfeiture was challenged by a group contending that a water right cannot be forfeited if any part of it is put to beneficial use. The Idaho Supreme Court rejected that argument and confirmed that the forfeiture statute applies where a portion of the beneficial use served by a water right goes unused, without adequate excuse, for the statutory five-year period. *State v. Hagerman Water Right Owners* ("*Hagerman I*") ("*Basin-Wide Issue 10*")*,* 130 Idaho 727, 947 P.2d 400 (1997) (Schroeder, J.).

The Hagerman Water Right Owners contended that Idaho Code § 42-222(2) contemplates only a total forfeiture, not partial forfeiture. The Idaho Supreme Court found that the statute is ambiguous, but construed it to allow partial forfeiture, based on consistency with longstanding prior administrative practice and sound public policy. In particular, the Court found that partial forfeiture advanced the "goal of securing maximum use and benefit of our natural water resources." *Hagerman I*, 130 Idaho at 735, 947 P.2d at 408.

In a companion case, *State v. Hagerman Water Right Owners, Inc.* ("*Hagerman II*"), 130 Idaho 736, 947 P.2d 409 (1997), the Court said that the Department could not report a water right for less than its prior decreed quantity simply because it was not being beneficially used to the same extent today. The only reason this "beneficial use" issue was raised is that the SRBA judge (Judge Hurlbutt) recently had rejected partial forfeiture (and abandonment is difficult to prove). Consequently, the Department was trying at the time (prior to *Hagerman I*) to find another legal theory on which to justify reporting and recommending water rights at their current level of use.

For example, consider the situation where a farmer has a 4 cfs water right to irrigate 200 acres, but then takes 50 acres out of irrigation for use as a processing facility, a housing development, or some other non-irrigated use. The "forfeiture clock" would begin running as to a portion of the water right. After five years, one-fourth of the water right, or 1 cfs, would be subject to a ruling that it had been forfeited. Such a result is hardly surprising, given that the foundational principles of the prior appropriation doctrine are beneficial use, the avoidance of waste, and maximum use of the resource. Of course, the farmer could avoid forfeiting this portion of the right by transferring it to some other use or placing it in a "water bank" or "rental pool" established pursuant to state law.[108]

Under the above example, one also might argue that the farmer could be deemed to have abandoned that portion of his water right, because his intent clearly was to stop using it. Nonetheless,

[107] *Id.,* 138 Idaho at 842, 70 P.3d at 680.

[108] Idaho Code §§ 42-1761—42-1766.

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

abandonment is considered difficult to prove, and requires some type of legal or administrative action to confirm it. As a practical matter, the courts are most likely to allow the five years, as a kind of "grace period," in which the right holder has the opportunity to seek to use the water right elsewhere or for a different use. Of course, in the transfer proceeding the agency will evaluate the amount of historical use under the right, including consumptive use, to determine what conditions must be imposed on the transfer to avoid causing injury to other water rights. Periods of nonuse may come into play in that analysis.

One frequently hears of water right holders who do not actually place some or all of their right to beneficial use but who claim that the right is not subject to forfeiture because they divert waters under the right once every season, or irrigate for a few days, or keep their ditch full. But diverting alone does not suffice to establish beneficial use. Water right holders who are using this technique may be in for a rude awakening if they ever attempt to transfer the right or if the right is subjected to the scrutiny of a water rights adjudication.

Partial forfeiture is triggered by a reduction in beneficial use (such as irrigating only a portion of the lands intended to be served by the right). IDWR takes the position that partial forfeiture does not apply to the diversion rate associated with a water right, so long as the full beneficial use is maintained. For instance, suppose that a farmer initially used the full diversion rate associated with the water right, but later changed the method of irrigation (e.g., from flood to sprinkler) so that the full diversion rate no longer was required to accomplish the beneficial use. The Department's position is that this would not result in a reduction of the diversion rate associated with the right. That farmer would be entitled to return to the previous method of irrigation employing the higher diversion rate (without notice to the Department or anyone else). Other western states have taken a more rigorous view of this issue; the Idaho Supreme Court has yet to address it.

H. The *Peiper* case and its codification

In Idaho, special considerations come into play in dealing with forfeiture of water rights held by irrigation water delivery entities. (For background on various types of water delivery entities *see* discussion in section 6 at page 512.) One reason the analysis is complicated is that the delivery entity typically holds title (at least legal title) to the water rights, while the landowner-irrigator actually applies the water to beneficial use (and may be seen as holding "beneficial title" to his or her share of the water right). The question, then, is what happens when the landowner-irrigator inexcusably fails to irrigate her land for the statutory period? Is the corresponding portion of the water right—which presumably is in the name of the irrigation entity—forfeited?

The obvious answer would seem to be "yes." After all, failure to place a water right to beneficial use (irrespective of who owns it) violates the most basic rule of the appropriation doctrine. One would think that both forfeiture and abandonment would apply. The Idaho Supreme Court seemed to have so held in 1908:

> [T]he appropriation and diversion of water by a ditch company that is not prepared to use the water itself is practically valueless without water

> consumers. In other words, it takes the water user, applying the water to a beneficial purpose, to enable a ditch company that has appropriated waters for sale, rental or distribution, to continue the diversion of the water. If it should cease to have water users or consumers, and cease to apply the water to a beneficial use, its right to divert the water would cease.

Farmers' Co-Operative Ditch Co. v. Riverside Irrigation ., 14 Idaho 450, 458, 94 P. 761, 763 (1908) (Ailshie, C.J.).

And again in 1931:

> And where a ditch is used in common for the conveyance of water for two appropriations, each owner may sell or abandon his right to the ditch, separate from the other [citation], the same right belongs to a stockholder in a mutual ditch company [citation].

In re Dep't of Reclamation, 50 Idaho 573, 579, 300 P. 492, 494 (1931) (emphasis added).[109] There are many instances where suburban landowners, despite paying annual assessments to a ditch company or irrigation district, have elected to stop using the entity's water for a variety of reasons. The water typically still is diverted from the river, but just no longer serves such owners' parcels. Ordinarily, this would suggest forfeiture or abandonment of that portion of the water right.

Nevertheless, in 1999 the Idaho Supreme Court ruled that a Carey Act operating company (a type of mutual irrigation company) does not suffer forfeiture of a portion of the water right issued in its name when one of its shareholders fails to apply his share of the water to a beneficial use. *Aberdeen Springfield Canal Co. v. Peiper*, 133 Idaho 82, 982 P.2d 917 (1999) (Silak, J.).

The *Peiper* case arose in an unusual context. This was not a dispute among competing water right holders. Nor did it involve an action or determination by an administrative agency dealing with forfeiture. Instead, the forfeiture issue was raised by the landowners, Mr. and Mrs. Peiper, when the canal company sought to recover assessments that had not been paid. The Peipers refused to pay because they and their predecessors had not used not used any irrigation water from the canal company in over 30 years and contended that the water right (or portion thereof) appurtenant to their property had been forfeited. Based on this, they argued they no longer were obligated to pay assessments.

The Court expressed no sympathy for the Peipers. "The Peipers wish to use forfeiture only to avoid paying maintenance assessments. A finding of forfeiture here would do nothing to advance the policy reasons that motivate the [forfeiture] statute's existence." *Peiper*, 133 Idaho at 87, 982 P.2d at 922. The Court continued:

---

[109] *In re Dep't of Reclamation* involved a single ditch shared by (1) a mutual canal company and its shareholders and (2) a private water user who owned a separate water right using the same canal. As noted in the quotation above, however, the rule is the same when dealing with transactions among shareholders.

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

> Such a ruling [for forfeiture] would give stockholders, who are not appropriators, the power to determine the fate of ASCC's water rights. If a number of stockholders chose not to use their share of ASCC's water for the statutory period, ASCC's water right would gradually revert to the state through partial forfeiture. If the Peipers' argument were valid, ASCC could only watch helplessly while its water right was lost.

Peiper, 133 Idaho at 87, 982 P.2d at 922 (citations omitted).

The Court's legal reasoning was based on a technical point—the observation that forfeiture applies to the "appropriator" of the water, not to the end user:

> In almost every case where forfeiture has been before this Court, the Court has held I.C. § 42–222(2) provides that an appropriator who fails to apply the water right beneficially for a period of five consecutive years loses all rights to use such water, regardless of intent. . . . The forfeiture statute was not intended to apply to settlers within a Carey Act project who were not themselves the appropriators of the water from the public stream of the state.

Peiper, 133 Idaho at 87, 982 P.2d at 922 (emphasis original) (citations and quotation marks omitted).

One might argue that the *Peiper* case is an anomalous application of the rule of forfeiture that should be limited to its particular facts.[110] But the Court's opinion does not call for such a narrow application. Indeed, it marked a sharp departure from the beneficial use requirement and the principle that the shareholder-irrigator holds beneficial title to that portion of the water right appurtenant to her property and may transfer, sell, forfeit, or abandon it.[111]

[110] In another part of the *Peiper* decision, the Court mentioned that the water not used by the Peipers may have been rented to other users. *Peiper*, 133 Idaho at 87, 982 P.2d at 922. If the *Peiper* decision were limited to situations in which the water company is making some substitute use of the water, that would be a far more limited ruling. If substitute use is not a requirement (and, frankly, it does not appear to be), then the *Peiper* case amounts to overturning *Farmers' Co-operative* discussed above.

[111] Mutual canal companies and irrigation districts hold no more than nominal title to the water right while their shareholders or patrons who use the delivered water hold beneficial title. *See United States v. Pioneer Irr. Dist.*, 144 Idaho 106, 157 P.3d 600 (2007) (Schroeder, C.J.); *Ickes v. Fox*, 300 U.S. 82, 57 S.Ct. 412 (1937). *See also* discussion ownership of water rights in water delivery entities in sections 6 and 7 of this Handbook.

Printed 6/23/2023 9:09 AM

Irrigation entities applauded the decision, which was promptly codified by the Idaho Legislature in 2002 at their urging. H.B. 569, 2002 Idaho Sess. Laws, ch. 343. Indeed, the codification applies the non-forfeiture protection even more broadly than did the decision.[112]

The statutory exception to the forfeiture rule now reads:

> (7) No portion of a water right held by an irrigation district, a Carey Act operating company, or any other company, corporation, association or entity which holds water rights for distribution to its landowners, shareholders or members shall be lost or forfeited due to nonuse by such landowners, shareholders or members, unless the nonuse is subject to the control of such entity.

Idaho Code § 42-223(7).

The 2002 amendment provides that forfeiture protection applies not just to Carey Act companies, but to any irrigation distribution entity that holds a water right for use by its shareholders (e.g., a mutual canal company) or distributees (an irrigation district). Indeed, the statutory forfeiture protection is not limited to irrigation entities or irrigation water. Indeed, it applies to "any other company, corporation, association or entity which holds water rights for distribution to its landowners, shareholders or members." That would appear to cover, for example, a homeowners association that operated a water delivery system for its members within a subdivision or planned community development.

The statute does not require that water not used by one landowner be used elsewhere instead. Instead, the protection applies any time the non-use is not "subject to the control" of the company. Given that a water entity would rarely if ever be able to force its members or irrigators to use water, that is an easy test to meet. Indeed, it would also appear to protect from forfeiture a water right licensed to a homeowners association based on the "stub out" rule despite the fact that homes are not built for many years.

The effect of *Peiper* and its codification appears to be that non-use by subject entities is absolutely protected from forfeiture so long as the non-use is occurring for reasons beyond the control of the entity. But the lack of forfeiture still does not settle the question whether the water right was placed to beneficial use, and this will be relevant in any attempt to transfer the water right.

I. Tolling of "forfeiture clock" for SRBA claims

In two sub-cases, the SRBA Court has ruled that the forfeiture statute is tolled for water rights once a claim for them is filed in the SRBA, and that the tolling continues until a partial decree is issued

[112] One could argue that the statue runs afoul of the Idaho Constitution's beneficial use requirement. Likewise, its retroactive effect could be seen as constituting an uncompensated taking of vested property rights. To the authors' knowledge, no one has raised these claims.

EXHIBIT C
Page No. 75 of 761

for that right.[113] Moreover, once the partial decree issues, the statutory period for non-use begins to run anew and does not tack on pre-SRBA non-use.[114]

The Department adheres to this policy of restarting the forfeiture clock after the partial decree enters.[115]

Thus, by way of example, if a water right holder ceased irrigating without excuse or exception in 1986, filed a claim the SRBA four years later in 1990, and had that claim adjudicated in 2004, he or she would be entitled to a partial decree without forfeiture, and the five-year clock for forfeiture would begin again in 2004—despite 18 years of nonuse.

In *In re SRBA Case No. 39576, Subcase Nos. 36-02708 et al, Order On Challenge (Consolidated Issues) of "Facility Volume" Issue and "Additional Evidence" Issue* ("*Facility Volume Case*"), Idaho Dist. Ct., Fifth Judicial Dist. (Dec. 29, 1999) (Barry Wood, J.), the SRBA court held expressly that filing a claim in the SRBA tolls the forfeiture clock. *Facility Volume Case* at 26-28.

In *McCray v. Rosenkrance*, 135 Idaho 509, 516, 20 P.3d 693, 700 (2001) (Kidwell, J.), the Court declined to take up the defense that filing a claim in the SRBA tolls the forfeiture clock because the issue had not been preserved on appeal.

J. Procedure

Unlike the practice in other states, the Idaho Department of Water Resources does not actively evaluate water rights to ferret out potential forfeitures. The forfeiture question arises most often in disputes between right holders, in an adjudication, or in those cases where one seeks to transfer a water right.

In a transfer proceeding, the Department typically will investigate whether there has been a forfeiture or abandonment of the right sought to be transferred; the state will not allow a forfeited water right to be brought "back to life" by transferring it to another user. To do so would result in injury to

---

[113] *In re SRBA*, Case No. 39576, Subcase Nos. 36-02708 *et al.* (*Facility Volume* cases) (Idaho Fifth Judicial Dist., May 2002) (R. Barry Wood presiding); *In re SRBA*, Case No. 39576, Subcase No. 65-05663B (*Wood v. Troutt*) (Idaho Fifth Judicial Dist. - SRBA, May 2002) (Judge Roger S. Burdick).

[114] "Once the partial decree is issued for the water right, the non-user has five years within which to put the water to beneficial use before the decreed right is subject to forfeiture. In Idaho a decreed water right is not insulated from forfeiture, however, it has long been established that once the decree is issued the statutory time period for non-use begins to run anew." *Wood v. Troutt* at 21.

[115] "The department will presume, absent other information indicating forfeiture, that the right has not been forfeited if the department's water measurement records, aerial photography, remote sensing, or other information, shows use of water during the previous, consecutive, five-year period." *Transfer Processing Policies & Procedures* (Transfer Processing No. 24) at 22 (Dec. 21, 2009) (reproduced in Appendix L.)).

other users who benefited from, or obtained their rights in reliance on, the prolonged non-use of the water right.[116]

However, the Department is not required in all circumstances to evaluate forfeiture in a change case. It may choose not to do so, for instance, where it is apparent that the SRBA court will review the issue. A hearing officer summed up the law this way in a recent order:

> Determining whether a change does not enlarge a right or injure existing rights requires IDWR, in the first instance to determine whether the right exists at all. The Idaho Supreme Court recognized that this means that IDWR may investigate whether a water right has been forfeited or abandoned. *Jenkins v. IDWR*, 103 Idaho 384, 387 (1982). A logical extension of the *Jenkins* analysis is that IDWR must also determine whether an unadjudicated, beneficial use or common law water right exists at all before it can be changed. The Idaho Supreme Court has also ruled, however, that forfeiture and abandonment do not necessarily need to be adjudicated in a change proceeding. [*Sagewillow v. IDWR* ("*Sagewillow II*"), 138 Idaho 831, 70 P.3d 669 (2003).] No similar pronouncement has been made whether IDWR must determine whether a beneficial use right even exists, before it can be changed.[117]

[117] Order re Motion for Stay and Scheduling Order, *In the Matter of Application for Transfer of Water Rights in the Name of United Water Idaho, Inc., Integrated Municipal Application Package (IMAP)*, Idaho Dep't of Water Resources (Nov. 12, 2003) (Peter R. Anderson, Hearing Officer).

7. GROUND WATER FUNDAMENTALS

A. Introduction

Idaho's Constitution specifically establishes the appropriation doctrine in Idaho only with respect to water diverted from natural streams. The operative language provides:

> The right to divert and appropriate the unappropriated waters of any natural stream to beneficial uses, shall never be denied. . . . Priority of appropriation shall give the better right as between those using the water. . . .

Idaho Const. art. XV, § 3.

The Constitution makes no mention of ground water. Nonetheless, nine years after statehood, Idaho's legislature asserted its authority over "subterranean waters," and declared that they were subject to appropriation.[118] And it was not until 1931 that Idaho's Supreme Court had the opportunity to reason, "by analogy," that ground water rights could be appropriated and administered, at least as among themselves, under the prior appropriation doctrine.[119]

As will be discussed in detail below, the ensuing years have seen the dramatic development of Idaho's ground water resources, to the point that significant conflicts between surface and ground water right holders have come to dominate Idaho water management and jurisprudence during the past twenty years. These conflicts are fostered by continuing uncertainties about ground water development's effects on surface water supplies, and by fundamental disagreements about the legal framework that should govern conjunctive administration of interconnected water sources.

B. Ground water is subject to appropriation

When compared to the surface water appropriation and administration system in the West, the history of ground water development and administration has been relatively brief. The complex hydrogeology of ground water sources, and the lack of adequate pumping technology, inhibited early exploitation of this abundant resource. Indeed, early understanding of ground water throughout the West often rested as much on superstition as on scientific observation. Despite these initial hindrances, Idaho now ranks among the top five states in terms of the volume of ground water used.[120]

---

[118] *See* 1899 Sess. Laws 380 (codified at Idaho Code 42-103); Idaho Code § 42-101.

[119] *Silkey v. Tiegs*, 51 Idaho 344, 5 P.2d 1049, 1053 (1931).

[120] The Idaho Groundwater Quality Council estimates that ninety percent of Idaho's drinking water comes from ground water sources and Idahoans divert approximately 6,500 million gallons of ground water per day. Irrigated agriculture accounts for the majority of ground water usage in the state. Idaho Ground Water Quality Plan, Protecting Ground Water Quality in Idaho, Idaho Ground Water Quality Council (1991).

Court decisions from the late 1800s and early 1900s reflect the limited understanding that people then had of the ground water resource. Like some other prior appropriation states, Idaho's Constitution authorizes appropriations from "natural streams," but does not mention ground water.[121] In 1899, the Idaho Legislature passed an act that provided that appropriations could be made from subterranean waters as well as from rivers, streams, lakes and springs.[122] Despite this statute, disputes continued into the 1930s regarding whether ground water was subject to the prior appropriation doctrine. Several of the early reported court decisions involved contests where each party labored to prove or disprove that a particular diversion was from water that flowed in an underground channel with a defined bed and banks so as to be an appropriation of water from a "natural stream."[123]

In 1931, Idaho's Supreme Court confirmed that ground waters were subject to appropriation under the priority doctrine either by the constitutional method of diversion and application to beneficial use, or by the statutory permit procedures.[124] The subsequent enactment of Idaho's Ground Water Act in 1951[125] established a comprehensive scheme of ground water appropriation, administration and protection, and validated pre-existing ground water appropriations. It also swept aside, through a simple definition, disputes over what is and what is not ground water: "'Ground water' is all water

---

[121] Idaho Const. art. XV, § 3.

[122] 1899 Sess. Laws 380 (codified at Idaho Code § 42-103). Idaho's Territorial Statutes provided that "[t]he right to the use of the running water flowing in a river, or stream, or down a canyon or ravine, may be acquired by appropriation." Idaho Rev. Stat. § 3155 (1887).

[123] Occasionally, facts (or assumed facts) actually corresponded with the Stygian conception of ground water, in which subterranean watercourses were believed to flow in well-defined channels. An example is reported in *Medano Ditch Co. v. Adams*, 68 P. 431 (Colo. 1902). Medano Creek prehistorically had flowed west from the Sangre de Cristo Mountains in southern Colorado, and had served as the source of water for Big Springs Creek. Subsequent geologic events formed the Great Sand Dunes, which covered the Medano Creek channel to a depth of several hundred feet. Although a majority of the surface flow of Medano Creek thereafter was deflected by the dunes to the southwest, significant subsurface flows continued to follow the original channel under the dunes to emerge at the head of Big Springs Creek seven miles to the west. In resolving a dispute between appropriators, the Colorado court held that the ground water flows were within a natural stream within a defined bed and banks and the junior's appropriation from Medano Creek was enjoined to protect senior appropriations from Big Springs Creek. Colorado continues to observe legal distinctions between appropriations of surface and ground waters, although most ground waters in that state, deemed "tributary groundwater," are administered conjunctively with surface water courses.

Examples of water flowing in defined channels also exist in the Idaho's Snake Plain Aquifer where lava tubes carry large flows of water for considerable distances and where it has been hypothesized that the Big Lost River flows southwest in one or more ancient buried river channels, then spreading into the basalt- and sediment- layered Eastern Snake Plain Aquifer to emerge from the canyon walls in the Snake River's Thousand Springs reach generally between Twin Falls and Bliss, Idaho. For purposes of appropriation and administration, however, surface and ground waters are treated similarly under Idaho law.

[124] *Silkey v. Tiegs*, 51 Idaho 344, 5 P.2d 1049 (1931).

under the surface of the ground whatever may be the geological structure in which it is standing or moving."[126]

The Ground Water Act was amended in 1953 to provide, among other things, that the doctrine of first in time is recognized for ground water, but could not be exercised so as to block full economic development of the water resource. Prior ground water appropriations are to be protected through the maintenance of reasonable pumping levels. The 1953 amendments also granted the Department authority to protect ground water from depletion and to prohibit ground water withdrawal from existing wells when necessary to protect senior ground water appropriations.[127]

C. Ground water appropriation

After 1963, the application, permit, and license procedures became the exclusive means of acquiring ground water rights in Idaho.[128] However, the exceptions to the permit/licensing requirements still exist for domestic wells and drainage and recovery wells.[129] In addition to these exemptions, domestic wells drilled prior to March 29, 1978 may be absolutely protected from any significant drawdown by junior ground water diversions—that is, this class of domestic wells are not burdened by the "reasonable pumping level" obligation.[130] Indeed, this view of the law is reflected in a condition that has been included in at least some new ground water permits issued by the Department:

> The right holder is responsible to insure that pumpage under this water right does not directly cause the water level to significantly decline in any domestic well drilled and in use prior to March 29, 1978, or to cause the water level in any other well having a prior right to exceed a reasonable pumping level, unless the right holder provides reasonable compensation or mitigation to the prior water right holder for the reduced water levels as determined by the Director.[131]

The same appropriation procedures set out for surface waters apply to ground water, including the requirements of public notice and an opportunity to protest.[132] The protest must be filed within ten days of the last date of publication of notice of the application. If the would-be protestant misses the deadline, he or she may petition to intervene in the proceeding.

In addition to the permit requirements for appropriation of ground water, a well drilling permit must be issued before a well may be drilled. The Department has not required a well drilling permit for the excavation of gravel pits or ponds greater than eighteen feet that intercept and expose ground water.

All wells, including domestic, drainage and recovery wells, must be drilled by licensed well drillers.[133] An exception to the licensed well driller requirement exists for persons who dig wells by hand on their own property. Idaho Code § 42-238 *et seq*. contains the licensing requirements for well drillers and well drilling standards. The Department has adopted drilling rules establishing standard for well construction. Well drillers must demonstrate their knowledge of Idaho water law and well construction methods and standards before they may be licensed. They must prepare accurate well logs of all wells drilled. Well drillers also are required to obtain a surety bond, which, under certain circumstances, can be charged by the Department for the cost of reconstructing or abandoning wells that have been improperly constructed. Well drillers are subject to civil penalties of up to $10,000 for submitting fraudulent well logs.

D. Protection of ground water supplies from depletion (GWMAs and CGWAs)

The 1953 Amendments to Idaho's Ground Water Act provided the Department with the authority to regulate ground water withdrawals from aquifers that are subject to depletion. The primary mechanism for this regulation is the Department's designation of Ground Water Management Areas ("GWMA") and Critical Ground Water Areas ("CGWA").

A CGWA is any ground water basin without sufficient ground water to provide a reasonably safe supply for irrigation or other uses in the basin at the then current rates of withdrawal.[134] A GWMA is an area identified by the Department as approaching the conditions of a CGWA.[135]

Upon designating a special ground water area under the Ground Water Act, the Department may require measurement and reporting of existing withdrawals, limit or prohibit new appropriations, or curtail or reduce diversions in order of priority to bring withdrawals into balance with the reasonably

anticipated average rate of future natural recharge within the basin.[136] Most of the designated GWMAs and CGWAs are in Southern Idaho.

In addition, an Idaho statute declares that "[w]ater in a well shall not be deemed available to fill a water right therein" if pumping from the well to satisfy the right would withdraw ground water supply " beyond the reasonably anticipated average rate of future natural recharge."[137] In *Baker v. Ore-Ida,* the court held that this language "forbids 'mining' of an aquifer."[138]

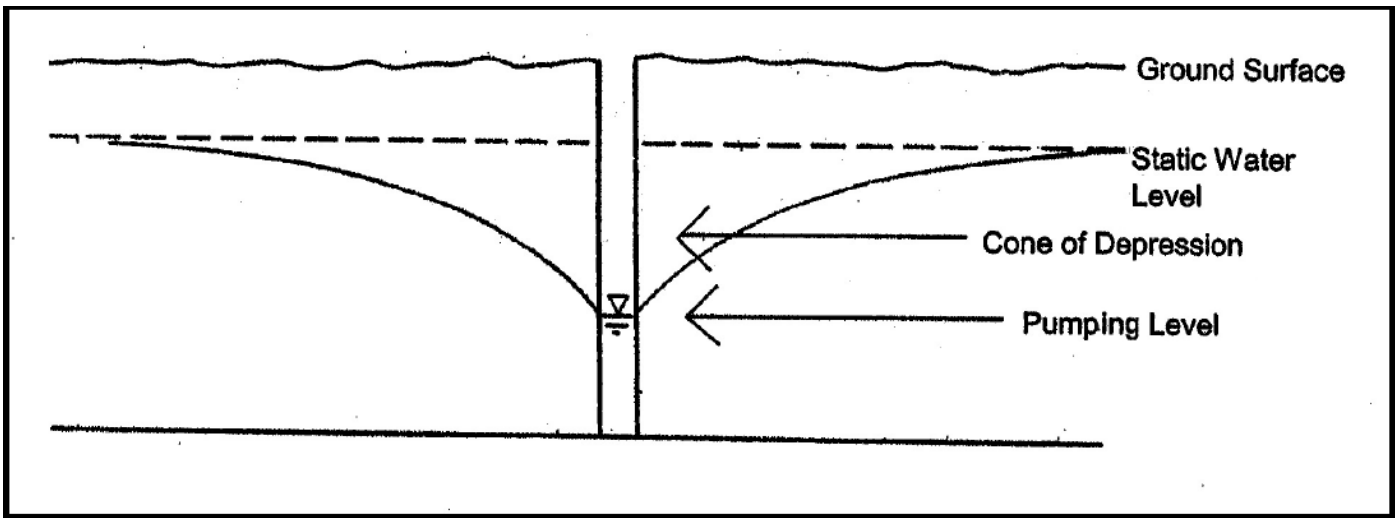
E. Protection of reasonable pumping levels and the Doctrine of Maximum Use

(1) Quick answer

The quick answer is that in Idaho, senior ground water users are entitled to protection against juniors only to the extent of maintaining a reasonable pumping level (as determined by IDWR). Thus, the senior is required to suffer the expense of deepening a well or taking other measures to continue the senior diversion if the junior has not lowered the water level below a reasonable pumping level. An exception, however, applies to pre-1978 domestic ground water rights, which are entitled to protection of their historic pumping levels.

(2) The mechanics of well interference

Modern ground water diversions often involve the use of powerful pumps that are capable of drawing water from great depths in the aquifer. When a ground water pump is turned on it draws water from the surrounding water-bearing material, causing the water level in the well to decline and creating a funnel-shaped area around the well where the water has been evacuated. See the figure below. The shape and extent of this "cone of depression," and its area of influence, depend on hydrogeologic factors such as porosity, permeability, transmissivity and the hydraulic gradient of the surrounding



---

[136] Idaho Code §§ 42-233a, 42-233b, 42-237a.

[137] Idaho Code § 42-237a(g).

[138] *Baker v. Ore-Ida Foods, Inc*., 95 Idaho 575, 583, 513 P.2d 627, 635 (1973). The concept of "mining" an aquifer is interesting and controversial. Where an aquifer receives significant annual recharge, this Idaho statute—together with other statutory provisions (such as reasonable pumping level requirements) and common law principles of reasonable means of diversion—allows the overall volume of water in an aquifer to be reduced to an equilibrium where annual natural recharge can be expected to produce a relatively steady state, with water levels in wells thereafter declining and rebounding during pumping and non-pumping sequences. The "beyond annual recharge" language appears to be aimed at preventing a sustained and irreversible downward trend in ground water to depths below reasonable pumping levels. On the other hand, there are aquifers (though perhaps not many in Idaho) having virtually zero annual recharge. Some in Arizona and Colorado come to mind. As a practical matter, the only use that can be made of such aquifers is to "mine" them—either that or forego the resource altogether. In these cases, the policy challenge would be to determine the rate of permissible mining and to put in place appropriate plans for alternative supplies when the resource no longer is economically or physically accessible.

medium.[139] Cones of depression of neighboring wells may overlap, which may compound the drawdown effects of the neighboring pumps and further reduce the water level in the wells.

(3) Historic vs. reasonable pumping levels

Like all water rights in Idaho, ground water rights are protected by the priority system. Consequently, a junior appropriation of water will not be allowed to cause material injury to senior ground water rights. The question, then, is what is material injury? Under what circumstances does a reduction in pumping levels (or artesian pressure) constitute material injury?

The question boils down to whether the senior water right hold is entitled to protection of his or her historic pumping level, or whether the senior is only protected from interference with a reasonable pumping level (as determined by IDWR).

At a practical level, this boils down to who pays to deepen the senior's well—the senior or the junior? If the senior's historic pumping level is protected and the junior's well reduces the ground water level (or artesian pressure), then the junior must either curtail her right or pay to deepen the senior's well. If, on the other hand, a rule of reasonable pumping levels is in effect, the senior must pay to deepen his own well to some reasonable level.

(4) The 1953 amendment to the Ground Water Act retroactively established reasonable pumping levels as the standard

As the law has developed in the Western states, the rule generally has been that a senior appropriator is entitled to the maintenance of a reasonable pumping level (but not an unreasonable historic pumping level). Since 1953, Idaho has followed this principle—subject to an exception respecting pre-1978 domestic wells, as discussed below.

[139] *See* Keith E. Anderson, *Ground Water Handbook* at 296 (1998).

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

The Idaho law requiring reasonable pumping levels has constitutional and common dimensions as well as a statutory basis under the 1953 Amendments to the Ground Water Act. The concept of reasonable pumping levels is one expression of the rule requiring water users to employ reasonable means of diversion, and not command all or a large portion of the resource to delivery their small part of it.[140]

This principle is codified in Idaho's Ground Water Act of 1951, which reaffirmed the "traditional policy of the state of Idaho" that ground water is subject to the prior appropriation doctrine "requiring the water resources of this state to be devoted to beneficial use in reasonable amounts through appropriation." 1951 Idaho Sess. Laws, ch. 200 § 1 (codified at Idaho Code § 42-226). In 1953, the Legislature amended the Act, adding the provision respecting reasonable pumping levels. 1953 Idaho Sess. Laws, ch. 182 § 1 (codified at Idaho Code § 42-226).

The Act, as amended, provides:

> The traditional policy of the state of Idaho, requiring the water resources of this state to be devoted to beneficial use in reasonable amounts through appropriation, is affirmed with respect to the ground water resources of this state . . . and while the doctrine of "first in time is first in right" is recognized, a reasonable exercise of this right shall not block full economic development of underground water resources. Prior appropriators of underground water shall be protected in the maintenance of reasonable ground water pumping levels as may be established by the director of water resources as provided herein.

Idaho Code § 42-226.[141]

The 1953 Amendment applied retroactively to all ground water rights (except pre-1978 domestics, as discussed below), including those obtained prior to the 1953 Amendment. This is evident in another section of the 1951 Act, which stated: "But the administration of all rights to the use of ground water, whenever or however acquired, shall, unless specifically exempted herefrom, be governed by the provisions of this act." 1951 Idaho Sess. Laws, ch. 200 § 4 (codified at Idaho Code § 42-229). This proviso remained intact and applied to the 1953 Amendment as well.

This conclusion as to the retroactive effect of the reasonable pumping level provision was confirmed by IDWR in *In the Matter of Applications To Appropriate Water Nos. 63-32089 and 63-*

---

[140] The seminal case on reasonable means of diversion is *Schodde v. Twin Falls Canal Co.*, 224 U.S. 107, 121 (quoting *Basey v. Gallagher*, 20 Wall. 670, 683, 87 U.S. 670, 683 (1874)).

[141] In 1963, Colorado enacted the Ground Water Management Act, which adopted almost verbatim many of the provisions of Idaho's Ground Water Act including principles of full economic development of water resources, maintenance of reasonable pumping levels and authorities of the state to curtail diversions causing injury to prior rights. The Colorado version of this statute applies only to "designated ground water basins," which are basins containing ground water that is deemed not tributary to surface water sources.

32090 in the Name of the City of Eagle, Final Order at 33 n.2 (IDWR, Feb. 26, 2008)[142] (overruling a prior order containing dictum suggesting that the reasonable pumping level defense recognized in the 1953 Amendment applied only prospectively).[143] IDWR came to the same conclusion on different grounds in a separate case involving a delivery call by ground water users on the ESPA.[144]

The effect of the 1953 amendment was to legislatively overrule the common law rule enunciated in *Noh v. Stoner*, 53 Idaho 651, 26 P.2d 1112 (1933) (Givens, J.) that protected a senior's historic pumping level with a new rule protecting the senior only to the extent of reasonable pumping level. This result was confirmed in *Baker v. Ore-Ida Foods, Inc*., 95 Idaho 575, 513 P.2d 627 (1973) (Shepard, J.).[145] On the other hand, the Court in *Baker* went on to explain that a junior's reasonable

---

[142] This is the citation to the subsequent case history: *In the Matter of Applications To Appropriate Water Nos. 63-32089 and 63-32090 in the Name of the City of Eagle* (IDWR's Final Order Feb. 26, 2008; Order on Reconsideration July 3, 2008), *appeal dismissed as untimely*, *City of Eagle v. Idaho Dep't of Water Resources*, 150 Idaho 449, 247 P.3d 1037 (2011).

[143] To reach this conclusion, IDWR had to overcome this statement in *Musser v. Higginson*: "[T]he original version of what is now I.C. § 42-226 was enacted in 1951. Both the original version and the current statute make it clear that this statute does not affect rights to the use of ground water acquired before the enactment of the statute." *Musser v. Higginson*, 125 Idaho 392, 396, 871 P.2d 809, 813 (1994) (citation to statute omitted). In its 2008 Order, IDWR explained that this statement in the opinion was "incorrect." Final Order at 31 § 14. Both sections 1 and 4 of the 1951 Ground Water Act made clear that the Ground Water Act applies to pre-1951 ground water rights. The Idaho Supreme Court's confusion arose in a 1987 amendment that imposed certain new restrictions on low-temperature geothermal wells, 1987 Idaho Sess. Laws, ch. 347 § 1, which stated, "This act shall not affect the rights to the use of ground water in this state acquired before its enactment." In context, it is clear that this provision applied only to the "Act" then being enacted, which was a set of amendments relating to geothermal ground water. In any event, the 1987 amendments did not change the provision in Idaho Code § 42-229 (quoted above) clearly stating that the Ground Water Act applies to pre-enactment ground water rights.

[144] *Order Regarding Motion for Declaratory Ruling, In the Matter of Petition for Delivery Call of A&B Irrigation District for the Delivery of Ground Water and for the Creation of a Ground Water Management District* (Hearing Officer Schroeder, May 26, 2008). In this case, the Hearing Officer found that the *Musser* language noted above did not address the *Baker v. Ore-Ida* ruling or Idaho Code § 42-229, and in any event was not aimed at determining the meaning of the Ground Water Act. Both the *City of Eagle* and *A&B Irr. Dist.* decisions are on appeal to district court as of early 2009.

[145] *Baker v. Ore-Ida Foods, Inc*., 95 Idaho 575, 584, 513 P.2d 627, 636 (1973) ("Appellants contend that our Act's use of the phrase 'reasonable pumping levels means that senior appropriators are not necessarily entitled to maintenance of historic pumping levels. We agree . . . ."

Decisions in other states such as Colorado have held that senior pumpers should not be required to improve their diversion facilities "beyond their economic reach." *City of Colorado Springs v. Bender*, 148 Colo. 458, 366 P.2d 552 (1961); *Alamosa-La Jara Water Users Protection Ass'n v. Gould*, 674 P.2d 914 (Colo. 1983). These Colorado cases involved alleged injury to senior water rights caused by pumping tributary ground water. *Bender* is often cited for the proposition that, for a ground water user to insist on curtailment of juniors alleged to be causing him injury, he must show that he is producing ground water from a sufficient depth to ensure that the resource is not being hoarded or tied up by those whose wells barely penetrate the water table.

pumping level defense does not come into play if the junior is "mining" the ground water (in the sense of removing ground water at an unsustainable rate so as to ultimately deplete the resource) to the extent that there is not enough to serve both the junior and the senior. *Baker*, 95 Idaho at 583, 513 P.2d at 635.

(5) Constitutional and common law support for reasonable pumping levels

The statutory mandate for reasonable pumping levels has its basis in constitutional and common law principles. "We hold that the Ground Water Act is consistent with the constitutionally enunciated policy of promoting optimum development of water resources in the public interest. Full economic development of Idaho's ground water resources can and will benefit all our citizens. . . . Our Ground Water Act contemplates that in some situations senior appropriators may have to accept some modification of their rights in order to achieve the goal of full economic development." *Baker v. Ore-Ida Foods, Inc*., 95 Idaho 575, 584, 513 P.2d 627, 636 (1973) (Shepard, J.) (citations omitted). On the other hand, whether these principles mandate, or simply allow, reasonable pumping levels is another question.

The underlying basis for what may at first appear to be a departure from a strict application of the priority doctrine is the principle that no appropriator is entitled to maintain an unreasonable "means of diversion" that prevents the optimum use of the state's water resource. The seminal case of *Fellhauer v. People*, 447 P.2d 986 (Colo. 1968) was decided in 1968 by the Colorado Supreme Court.[146] It remains one of the most oft-quoted decisions concerning the tension between a vested private right to the use of the public's water and the public's interest in optimizing the uses of the state's water resources. In *Fellhauer*, the Colorado court noted that the concept of maximum use of water always has been implicit in Western water law. Remarking on the water appropriation provisions in Colorado's Constitution, which were the model for Idaho's, the Court observed:

> It is implicit in these constitutional provisions that, along with *vested rights*, there shall be *maximum utilization* of the water of this state. As administration of water approaches its second century the curtain is opening on the new drama of *maximum utilization* and how constitutionally that

[146] Though extensively cited in Colorado and by commentators, *Fellhauer* has never been cited by an Idaho appellate court. However, the doctrine has also long been recognized in Idaho. In *American Falls Reservoir District No. 2 v. IDWR*, 143 Idaho 862, 867, 154 P.3d 433, 438 (2007) (Trout, J.), this Court upheld against a facial constitutional challenge the Department's Conjunctive Management Rules which were premised on an integration of the prior appropriation doctrine and "the principle of optimum use of Idaho's water." In the same case, the Court recognized the Department's authority to determine, in the context of a conjunctive use delivery call, when use of a water right is "reasonable." *Id*., 143 Idaho 862, 876-77, 154 P.3d 433, 447-48 (citing *Schodde v. Twin Falls Land & Water Co.*, 224 U.S. 107) (1912)). See also, *Poole v. Olaveson*, 82 Idaho 496, 502, 356 P.2d 61, 65 (1960) ("The policy of the law of this State is to secure the maximum use and benefit, and least wasteful use, of its water resources"); *Kunz v. Utah Power & Light Co.*, 117 Idaho 901, 904, 792 P.2d 926, 929 (1990) ("The policy of the law of this State is to secure the maximum use and benefit, and least wasteful use, of its water resources."). The doctrine has now been codified in Idaho. Idaho Code § 42-226.

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

> doctrine can be integrated into the law of *vested rights*. We have known for a long time that the doctrine was lurking in the backstage shadows as a result of the accepted though oft violated, principle that the right to water does not give the right to waste it.

Fellhauer, 447 P.2d at 994 (emphasis original).

There has been some disagreement in Idaho regarding whether the reasonable means of diversion principle reflected in Idaho Code § 42-226 is applicable only to ground water uses. However, the better argument seems to be that all water rights are subject to the reasonable diversion and use requirement (and to the closely-related principle of maximum use) and that § 42-226 simply reiterates or affirms this requirement for wells in the context of the Ground Water Act.

Cases involving surface water consistently have held that an appropriator may not command the entire flow of a stream to effect an appropriation of only a portion. One way to read these cases is that the means of diversion itself is not a protected element of the water right.[147] This was the case in *Van Camp v. Emery*, 13 Idaho 202, 89 P. 752 (1907) (Ailshie, C.J.), where the Court held that an appropriator was not entitled to dam an entire stream merely to raise the water level sufficiently to subirrigate his land.

The same approach was taken by the U.S. Supreme Court in *Schodde v. Twin Falls Water Co.*, 224 U.S. 107 (1912) (*aff'g*. 161 F. 43 (9th Cir. 1908)), where a senior appropriator had used a waterwheel driven by the current of the Snake River to raise irrigation water to his lands. The Supreme Court affirmed the lower court ruling that there is "no right under the constitution and laws of the State of Idaho to appropriate the current of the river so as to render it impossible for others to apply the otherwise unappropriated waters of the river to beneficial uses." *Schodde*, 224 U.S. at 117 (1912). The Court cited one of its earlier cases in concluding that a water right "must be exercised with reference to the general condition of the country and the necessities of the people, and not so as to deprive a whole neighborhood or community of its use and vest an absolute monopoly in a single individual." *Schodde*, 224 U.S. at 121 (quoting *Basey v. Gallagher*, 20 Wall. 670, 683, 87 U.S. 670, 683 (1874)).

[147] *See e.g., Doherty v. Pratt*, 34 Nev. 343, 124 P. 574 (1912) (reasonable use requirement applies to methods of diversion); *Tudor v. Jaca*, 178 Or. 126, 164 P.2d 680 (1946) (wasteful methods of diversion common among early settlers do not establish a vested right to their continuance); *Hough v. Porter*, 51 Or. 318, 98 P. 1083 (1909) (old methods of diversion are not a right but a privilege permitted so long as they can be exercised without substantial injury to anyone); *Tulare Irr. Dist. v. Lindsay-Strathmore Irr. Dist.*, 3 Cal. 2d 489, 45 P.2d 972 (1935) (appropriator may not be compelled to use most scientific diversion method, but it must be reasonable according to the custom of the locality); *Wayman v. Murray City Corp*, 23 Utah 2d 97, 458 P.2d 861 (1969) (applying "rule of reasonableness" in refusing to protect ground water appropriator from diminution of pressure in existing well); *City of Colorado Springs v. Bender*, 148 Colo. 458, 366 P.2d 552 (1961) (at his own point of diversion, each diverter must establish some reasonable means of effectuating his diversion).

Another reading of these cases would be that the appropriation of an unreasonable quantity of water to accomplish the diversion of the remainder does not constitute a beneficial use. The result is substantially the same in either case.

As courts have faced this issue in the context of ground water disputes, they have reached much the same result.

(6) Pre-1978 domestics excepted

An important exception to the reasonable pumping level rule was recognized in the 1982 case of *Parker v. Wallentine*, 103 Idaho 506, 650 P.2d 648 (1982) (Bistline, J.).

In that case a senior domestic well pumper (Parker) sued to enjoin a junior pumper (appropriately named Junior Wallentine) whose deeper well was interfering with the senior's shallow well. The Idaho Supreme Court ruled that the reasonable pumping level mandate added to the Ground Water Act in 1953 did not apply to domestic wells because the Ground Water Act, when first enacted in 1951, declared that domestic wells "shall not be in any way affected by this act."[148] Because the Act enunciated the reasonable pumping level standard, the Court reasoned that this principle does not apply to domestic well owners. Accordingly, the Court concluded that Parker was entitled to demand that Junior Wallentine either stop pumping or pay to have Parker's domestic well deepened.

However, the Court noted that the Act was changed in 1978 to remove this item of protection for domestic wells.[149] The Court noted that the Legislature could have made the 1978 amendment retroactive, but did not elect to do so. *Parker v. Wallentine*, 103 Idaho 506, 511, 650 P.2d 648, 653 (1982). Consequently, protection of historic pumping levels (i.e., immunity from the reasonable pumping level rule) is limited to pre-1978 domestic wells.

In sum, the reasonable pumping level defense is recognized only when the senior is a non-domestic well or a post-1978 domestic well. In the case of a pre-1978 domestic well, the junior will be curtailed or compelled to compensate for <u>any</u> decline in levels that adversely impairs the senior's beneficial use.

One could argue that the exception of pre-1978 domestics from reasonable pumping levels is contrary to the constitutional principles of maximum beneficial use of water. The authors are not aware of that contention being presented in a reported decision.

---

[148] "Section 2. DRILLING AND USE OF WELLS FOR DOMESTIC PURPOSES EXCEPTED. – The excavation and opening of wells and the withdrawal of water therefrom for domestic purposes shall not be in any way affected by this act . . . ." 1951 Idaho Sess. Laws, ch. 200 § 2.

[149] 1978 Idaho Sess. Laws, ch. 324 ch. 324 § 1. This provision removed the provision saying that domestics would "not be in any way affected by this act" replacing it with a statement saying that domestics were exempt from permitting requirements.

F. Domestic water rights

(1) Licensed domestic rights

The Legislature has allowed very few exceptions to the requirement that those seeking to establish new water rights go through the permitting and licensing process.[150] The most notable exception is the one allowing water users to hold water rights for small domestic wells without any permit or license. Idaho Code §§ 42-111, 42-227 and IDAPA 37.03.08.035.01.b. In some cases, however, water users nonetheless elect to obtain a permit and license for their domestic ground water right.

If the domestic right relies on spring or surface water, rather than a well, the domestic exemption does not apply, and, since 1971, the user would be required to obtain a permit and license.

Obtaining a permit and license has the advantage of putting others on notice of the use and reducing the potential for factual disputes. It also can provide the basis for a delivery call by the domestic user. Moreover, domestic rights may be decreed in the SRBA or any other adjudication. (See discussion in section 13.C at page 601.) Indeed, domestic and stock water rights must be claimed in the SRBA, although the requirement for these claims has been postponed. See discussion in section 13.C at page 601.

The statutory definition of domestic use set out in Idaho Code § 42-111(1)(a) (which limits domestic uses to 13,000 gallons per day and irrigation of up to ½ acre of land) is applicable only to exempt domestic ground water rights, not to domestic water rights authorized by permits and licenses. Thus, a right for domestic purposes could be permitted and licensed for more than 0.02 cfs (which equates roughly to 13,000 gallons per day) and could authorize irrigation of more than ½ acre.

(2) Exemption for domestic ground water rights

In the 1951 Ground Water Act, the Legislature provided an exception from permitting requirements for domestic ground water rights:

> The excavation and opening of wells and the withdrawal of water therefrom for domestic purposes shall not be subject to the permit requirement under section 42-229, Idaho Code; providing such wells and withdrawal devices are subject to inspection by the department

[150] Stock watering directly from a surface stream also is exempt from licensing. Idaho Code § 42-113 and IDAPA 37.03.08.035.01.c. Other exemptions are found in Idaho Code § 42-201. For example, subsection 42-201(3)(a) (2000 Idaho Sess. Laws, ch. 291, § 1) makes it unnecessary to obtain a water right for diversions to fight existing fires. Subsection 42-201(3)(b) (2008 Idaho Sess. Laws, ch. 320, § 1) addresses forest practices and dust abatement. Subsection 42-201(3)(c) (2020 Idaho Sess. Laws, ch. 6, § 1) addresses environmental cleanups. Subsection 42-201(8) (2012 Idaho Sess. Laws, ch. 218, § 1) exempts use or disposal of treated municipal effluent. Subsection 42-201(9) (2016 Idaho Sess. Laws, ch. 139, § 1) exempts incidental hydropower generation in irrigation canals.

EXHIBIT C
Page No. 89 of 761

> of water resources and the department of environmental quality and providing further that the drilling of such wells shall be subject to the licensing provisions of section 42-238, Idaho Code. Rights to ground water for such domestic purposes may be acquired by withdrawal and use.

Idaho Code § 42-227 (originally enacted as 1951 Idaho Sess. Laws, ch. 200 § 2 and amended in 1970, 1978, and 2001). Regulations are found at IDAPA 37.03.08.035.01.b (exemption from application rules for ground water rights for single-family, domestic purposes).

Note that this domestic exemption applies to wells; it does not apply to surface diversions for domestic purposes.

Although persons whose domestic ground water use falls within the statutory definition are not required to obtain a permit or license, they nonetheless have a water right, meaning that their diversion is lawful and that they hold an enforceable real property interest. This is reflected in the last sentence of the statute: "Rights to ground water for such domestic purposes may be acquired by withdrawal and use." Idaho Code § 42-227.

Although domestic wells are exempt from permitting/licensing requirements for water rights, a well drilling permit still is required in all instances (see section 7.F(4) at page 94).

Domestic water rights obtained after 1978 (when the Ground Water Act was amended again) are subject to the same "reasonable pumping level" rules that govern non-domestic ground water rights. See discussion in section 7.E at page 82.

Special treatment also is provided for domestic uses (either exempt or licensed) under certain moratoriums (see discussion in section 20 at page 303). However, those moratoriums do not refer to the definition of domestic uses in section 42-111 (or any other definition). It is the authors' understanding that the use of the term "domestic" in these moratoriums is merely a generic reference to all domestic-type uses, including that portion of a municipal provider's delivery to households and similar purposes, and was not intended to be interpreted strictly within the statutory definition.

The Water Code sets out a detailed definition of domestic uses for purposes of the domestic well exemption:

> (1) For purposes of sections 42-221, 42-227, 42-230, 42-235, 42-237a, 42-242, 42-243 and 42-1401A, Idaho Code, the phrase "domestic purposes" or "domestic uses" means:
>
> (a) The use of water for homes, organization camps, public campgrounds, livestock and for any other purpose in connection therewith, including irrigation of up to one-half (½) acre of land, if the total use is not in excess of thirteen thousand (13,000) gallons per day, or

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

> (b) Any other uses, if the total use does not exceed a diversion rate of four one-hundredths (0.04) cubic feet per second and a diversion volume of twenty-five hundred (2,500) gallons per day.
>
> (2) For purposes of the sections listed in subsection (1) of this section, domestic purposes or domestic uses shall not include water for multiple ownership subdivisions, mobile home parks, or commercial or business establishments, unless the use meets the diversion rate and volume limitations set forth in subsection (1)(b) of this section.
>
> (3) Multiple water rights for domestic uses or domestic purposes, as defined in this section, shall not be established or exercised in a manner to satisfy a single combined water use or purpose that would not itself come within the definition of a domestic use or purpose under this section. The purpose of this limitation is to prohibit the diversion and use of water, under a combination of domestic purposes or domestic uses as defined in this section, to provide a supply of water for a use that does not meet the exemption of section 42-227, Idaho Code, and is required to comply with the mandatory application and permit process for developing a right to the use of water pursuant to chapter 2, title 42, Idaho Code.

Idaho Code § 42-111.[151]

The first category, described in section 42-111(1)(a), is applicable only to specific uses: "water for homes, organization camps, public campgrounds, livestock" and purposes incidental thereto. This section also allows for irrigation of up to one-half acre of land around the home or camp, provided that the sum of all the domestic uses do not exceed 13,000 gallons per day. (This equates roughly to 0.02 cfs on a 24-hour basis.) An IDWR regulation roughly tracks the language of this provision in its definition of "Single Family Domestic Purposes."[152]

---

[151] Section 42-111 was first enacted in 1899, Gen. Laws 1899, p. 380. In 1890, it defined "domestic purposes" without any quantity precise quantity limitation to include "water for the household, and a sufficient amount for the use of domestic animals kept with and for the use of the household." It was amended in 1990 to add what appear now as sections 42-111(1) and (2). 1990 Idaho Sess. Laws, ch. 319. Thus, the limitation on use of the domestic exemption for multiple ownership subdivisions dates to 1990. It was amended again in 1995 to add what is now section 42-111(3). 1995 Idaho Sess. Laws, ch. 233.

[152] IDAPA 37.03.08.035.01.b (exemption from application rules for ground water rights for "single family domestic purposes"); IDAPA 37.03.08.010.15 (definition of "Single Family Domestic Purposes" as "Water for household use or livestock and water used for all other purposes including irrigation of up to one half (1/2) acre of land in connection with said household where total use is not in excess of thirteen thousand (13,000) gallons per day.").

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

The second category, provided in section 42-111(1)(b), is a catch-all, but for a smaller quantity. This section applies to any "other" uses, but caps the volume at 2,500 gallons per day and the flow rate at 0.004 cfs. This category allows a person to use a small quantity of ground water for any miscellaneous purpose (such as a water amenity or even an industrial use) without obtaining a water right. Thus, the definition of domestic uses includes uses that normally are not associated with the term "domestic" in the household sense. Indeed, to qualify they must be "other" uses (i.e., uses not for homes, camps, or livestock).

The statute contains two limitations. Section 42-111(2) makes "water for multiple ownership subdivisions, mobile home parks, or commercial or business establishments" ineligible for the domestic exemption, "unless the use meets the diversion rate and volume limitations set forth in subsection (1)(b)." Thus, for instance, a subdivision could use the domestic well exemption for irrigation of a small common area or for a water amenity that used a total of no more than 2,500 gallons per day.

The second limitation is found in section 42-111(3). It expressly prevents combining multiple domestic water rights into a "single combined water use or purpose that would not itself come within the definition of a domestic use or purpose." This limitation was added by the Legislature in reaction to efforts by some users to employ multiple domestic exemptions to serve large dairy operations. Thus, in the example above, the subdivision may use only one domestic well exemption for all of its water amenities—meaning that, collectively, they may not exceed 2,500 gallons/day.

The Department's position is that, irrespective of section 42-111(3), the domestic well exemption may be used by multiple individual homeowners within a subdivision, allowing each individual homeowner to drill a well without obtaining a permit or license.[153] In other words, the Department does not view multiple homeowners drilling their own wells as acting "in a manner to satisfy a single combined water use." This is not a settled question, however, and one might argue the contrary where, for example, the developer's plan calls for individual domestic wells in a multi-lot subdivision. The argument would seem particularly strong where the developer of the subdivision drilled the wells on the lots prior to selling them (a situation the Department has not yet faced).

Water uses exceeding the statutory diversion volume or irrigation limits, or for purposes not listed in the applicable definition, do not give rise to a domestic ground water right. For example, a homeowner who uses a "domestic" well to provide indoor uses, to fill a pond, and to irrigate 0.6 acres of lawn (thus violating the ½ acre rule) is violating the statute and therefore has not established a domestic water right, even if the homeowner is within the 13,000 gpd limit. On the other hand, if she

[153] The Department has no rule or guidance on this subject, but generally follows this approach. Conversation with Phillip J. Rassier (Apr. 8, 2005).

is irrigating a half-acre or less, she will be within the domestic exception if she can show that the combined uses, including the diversions to the pond, do not exceed the 13,000 gpd diversion limit.[154]

The domestic well exemptions described above are purely statutory. There is no constitutional entitlement to the domestic water right exemption.

The Department authorizes water users to tack on an exempt domestic ground water right to another permitted or licensed right. Thus, if a user had a license to irrigate 3.0 acres of residential lawn, but was actually irrigating 3.5 acres out of the domestic well, he or she could claim a domestic exception for the additional 0.5 acre of irrigation. This is so even if a moratorium on new water rights is in effect, because domestic water rights are exempt from the moratorium.[155]

(3) Protection from delivery calls.

In theory, domestic water rights are subject to curtailment by priority just like any other water right. This is equally true for undocumented exempt domestic rights and domestic rights for which the owner has obtained a permit, license, or decree. In practice, domestic rights have never been curtailed, and doing so on any significant scale undoubtedly would result in considerable political backlash.

Interestingly, the Department's *Conjunctive Management Rules* provide that domestic rights are not subject to curtailment pursuant to delivery calls by senior surface water right holders:

> A delivery call shall not be effective against any ground water right used for domestic purposes regardless of priority date where such domestic use is within the limits of the definition set forth in Section 42-111, Idaho Code, nor against any ground water right used for stock watering where such stock watering use is within the limits of the definition set forth in Section 42-1401A(12), Idaho Code; provided, however, this exemption shall not prohibit the holder of a water right for domestic or stock watering uses from making a delivery call, including a delivery call against the holders of other domestic or stockwatering rights, where the holder of such right is suffering material injury.

IDAPA 37.03.11.020.11.

Thus, the Department has sought to give domestic and stock ground water rights special treatment in the delivery call context. Is this constitutional? These rights are not singled out in Idaho's

---

[154] *See* Norman C. Young, IDWR, *Administrator's Memorandum – Application Processing No. 67* (Feb. 28, 2003) (reproduced in Appendix O) (permissible pond size depends on amount of daily flow necessary to fill it and keep it full).

[155] This was confirmed in a telephone call from Chris Meyer to Phil Rassier, then chief counsel to IDWR, on Nov. 21, 2006. Mr. Rassier consulted with Jeff Peppersack, Chief, Water Allocation Bureau, in confirming this.

Constitution for such treatment. The Idaho Supreme Court was asked to address this in the 2007 *AFRD* litigation, although neither side in the case placed much weight on the question. In its opinion, the Court indicated that the Rule provision exempting domestic ground water rights from delivery calls is not on its face unconstitutional because the Idaho Constitution allows domestic right holders to condemn, or pay for the taking of, senior irrigation or industrial water rights that might be instituting the delivery call. In other words, the Court found that there is a set of circumstances under which domestic water rights could immunize themselves from a delivery call without causing an uncompensated taking of the rights of non-domestic water right holders.[156] Still, if the issue were pressed in an actual delivery call, it is likely that even domestic and stock water right holders will be called to account, either by shutting off their wells, paying for mitigation, or taking some action to implement the constitutional "condemnation" provision (which might add up to the same thing as paying for mitigation).

The Department's practice is to recognize that portion of a municipal provider's ground water usage that falls within the 13,000 gallon-per-day and one-half acre limitations of section 42-111 as qualifying for "domestic purposes" within the above rule. Presumably, a municipal provider delivering surface water would not, to the extent of the surface water, enjoy the same protection. In any event, as indicated, it is quite possible that none of these delivery call exemptions can stand constitutional scrutiny in an as-applied context.

(4) A well drilling permit is required

Although obtaining a water right permit, license, or decree for a domestic right is optional, obtaining a well drilling permit is not. Before drilling a domestic well, the well driller or well owner must obtain a well drilling permit from the Department (which requires a $75.00 filing fee). Idaho Code § 42-235. This provision was first enacted in 1987. 1987 Idaho Sess. Laws, ch. 347, § 4.

Since 1970 (even before the well drilling permit requirement), Idaho Code § 42-227 has required that the project be carried out by a well driller who is licensed under Idaho's well driller statute, Idaho Code § 42-238. 1970 Idaho Sess. Laws, ch. 187, §§ 1, 4. This requirement is reiterated in the Department's rules. IDAPA 37.03.10.020.01.

As to the abandonment of a well—that is, closing and sealing off a well pursuant to specified procedures—section 42-235 explicitly states that this must be done by a licensed driller.

(5) A few facts about domestic wells in Idaho

(a) Individually, domestic wells use small amounts of water, but together their potential production is significant

An exempt domestic well is considered to involve a de minimis amount of water. However, in the aggregate these wells can pump a significant amount. For example, if the nearly 10,000 domestic wells drilled in the 1987-2004 period in Basin 63 produced half of their full annual entitlement, this group of wells alone would pump 70,000 acre-feet per year, or enough water each year to supply all the current yearly residential uses in Ada and Canyon Counties. In other words, domestic wells in the aggregate can account for much more than a de minimis contribution to aquifer withdrawals.

Two hydrologists reported in 1997 that in the eleven years between 1987 and 1997, almost 7,000 new domestic wells were drilled in Water Basin 63, which includes the Treasure Valley. These wells accounted for 76% of all the wells drilled in the basin during that period.[157] According to this report, as many as a thousand wells have been drilled in a single year in Basin 63. Between 1997 and June 2004, the basin averaged about 670 new domestic wells per year.[158]

(b) Exempt domestic wells often are necessary for single homes in remote locations or for homes in subdivisions where no community water system exists

A homeowner who wishes to build in an area that is not served by a municipal or other community water system either can seek a water right or simply forego the water right permitting process and construct a domestic well. Many take the latter course. In some areas, domestic wells are installed despite the existence of a municipal water supply system. Certainly, going through the application and permit process takes longer and costs more than the exempt domestic procedure, which involves simply obtaining the drilling permit and going ahead.

(c) Exempt domestic water rights may be developed despite aquifer-wide moratoriums that preclude new irrigation, industrial, and commercial water right applications

On the Eastern Snake Plain Aquifer and in Basin 63 (which includes Ada and Canyon Counties), the Department has imposed moratoriums on the processing or granting of new ground water right applications unless they provide one-for-one mitigation. Exempt domestic wells are also exempt from these moratoriums.

(6) Domestic wells can present water management challenges

Domestic wells are widespread and proliferating in Idaho, but the State knows relatively little about them. The authors believe that while domestic wells serve an important purpose, particularly where there is no alternative or community water supply available, they also present significant challenges to water management and protection of drinking water aquifers.

(a) Domestic wells are essentially unregulated

The Department's well construction standards, contained in IDAPA 37.03.09, enunciate the general requirement that all wells are to be "constructed in a manner that will guard against waste and contamination of the ground water resources of the state," and specify that domestic wells must meet "all of the siting and distance requirements set forth by the appropriate District Health Department and Idaho Department of Environmental Quality rules." IDAPA 37.03.09.025.01(a). However, the Department's rules are permissive with regard to specific provisions dealing with domestic wells (for example, allowing for verbal approvals), and currently have what some professionals in the well drilling field consider to be minimal casing and sealing requirements for all wells. No water quality sampling, hydraulic testing, or maximum depth is required for either type of well. Typically, domestic wells involve only a 6-inch-diameter, thin-wall casing 18 feet into the ground with no effective seal or well-screen. With the large number of domestic wells drilled in Idaho each year, there is little opportunity for the State to inspect them.

There also is no standard for, or means of quality testing, the driller's report filed with the Department. Often, hydrogeologists find that drillers' logs are inaccurate and that well completion reports for domestic wells generally are not uniformly catalogued or indexed to allow consistent retrieval.

(b) Hydrological considerations—the layered nature of aquifers

As a general matter, most Idaho aquifers consist of layers of water-saturated sandy, gravelly, or fractured material between less permeable layers of clay, mudstone, or similar material. The less permeable layers act as barriers between aquifer zones. For example, in the Eastern Snake Plain Aquifer, the main water-bearing zones are layers of fractured basalt, which are interbedded with numerous sedimentary or unfractured layers that are not readily permeable and contain little or no water.

In most aquifer situations, the uppermost zones (the top 100 feet, for example) contain substantial alluvial gravels and are in hydraulic contact with surface waters such as streams, canals, drains, reservoirs, and lakes. Not surprisingly, most aquifer contamination originates in this uppermost zone, where contaminant spills on the land surface often readily enter the shallow aquifer. For the same reason, the shallow aquifer zone also is the most readily recharged from surface water. In some cases, a shallow aquifer can be created and maintained by leakage—sometimes called "incidental recharge"—from surface irrigation. Indeed, in parts of the Treasure Valley it is estimated that water levels in the shallow aquifer have risen more than 100 feet over natural conditions due to incidental

recharge from canal systems and on-farm irrigation ditches and practices.[159] As the amount of this recharge declines due to commercial and residential development in the Valley, however, so will the water levels in the shallow aquifers.

(c) Well leakage issues

A basic problem presented by any well is how to prevent it from becoming a conduit for water or contaminant flow between layered aquifer zones. Most community drinking water is produced from wells penetrating into deeper aquifers that are separated from shallower aquifers by the largely impervious layers described above. By the same token, most individual domestic wells, particularly older wells, penetrate only the uppermost aquifers—only a small amount of water is needed, and it obviously is cheaper to drill only to a shallow depth. However, for a variety of reasons—including the decline in shallow aquifers due to reductions in incidental recharge and drought cycles (particularly since the late 1980s)—many domestic wells now have been drilled (or re-drilled) through the shallow aquifer and into deeper water-bearing zones.

Domestic wells often are drilled by air-rotary or cable tool methods, neither of which is particularly effective for sealing the well into impermeable layers or maintaining vertical separation between various geologic strata. Although a well may be lined throughout nearly its entire depth with steel or plastic casing (and presumably most new wells are cased), the concern really is the space outside the casing created by the drilling process. Air rotary and cable tool methods can create significant space, and often large and irregular voids, outside the well casing. This outside ring, or "annular" space, throughout the well's depth can act as a conduit for water and contaminants to move between aquifer zones. In most cases, the existence of this space also makes it impossible to actually "abandon" such a well; merely filling the casing with concrete or bentonite does nothing to fill the outside-the-casing space or stop it from continuing to conduct water between zones.

There are other drilling methods, principally mud rotary or similar fluid-assisted techniques, that use drilling fluids such as water or drilling mud to create a hole that can be sealed throughout its depth outside of the casing as the well is constructed. In other words, the well can be constructed to seal the outside of the casing tight against impervious native stratigraphy with grout, bentonite, or concrete, thus sealing off this space as a conduit. Most domestic wells (and presumably many non-domestic wells) are not sealed between the casing and the penetrated layers.

The Department's well construction rules[160] do not specify any particular drilling technique. The rules require only an 18-foot casing at the top of the well that is sealed on the outside. The short distance of this sealed section alone typically means that the casing terminates partway through surficial river floodplain gravel deposits. As the well continues below the upper layer, its annular space typically is not sealed and can provide a conduit for any water or contaminants it encounters.

---

[159] This is consistent with the adage that "sooner or later every irrigation district gives rise to a drainage district."

[160] IDAPA 37.03.09.

Printed 6/23/2023 9:09 AM

(d) Unsealed wells present risks to ground water quality

Any well, unless adequately sealed, provides a conduit for surface contaminants and shallow contaminated ground water to move into the deeper aquifers. When municipal supply or other wells are activated in the deeper zone, their pumping can induce even more flow into these wells from any well in the vicinity, domestic or otherwise, that may not be properly sealed.

At least in the Treasure Valley, most of the municipal drinking water supply comes from deep aquifers that most municipal water providers tap with fully-cased wells constructed with high-quality techniques and proper seals at all levels. Unfortunately, conjunctive management administration of water rights ultimately may lead to drilling or re-drilling domestic wells into these deeper aquifers, since the deeper zones often are not connected to surface streams in areas where the connection may cause controversy. Without substantive changes to the drilling rules, the construction of deeper domestic wells could result in pollution of these all-important deep aquifers.

8. LOW TEMPERATURE GEOTHERMAL WATER

Water rights for low temperature (85 º to 212º F) geothermal resources in Idaho are acquired by the same permitting process applicable to other ground and surface sources.[161] However, Idaho law includes a special provision applicable to geothermal resources: the appropriator is required to use the resource primarily for heat value and only secondarily for its value as water.[162] Consequently, the usage of low temperature geothermal water for uses other than heat value is not considered a beneficial use of the resource unless the Department exempts the proposed use. The Department may grant such an exemption provided 1) there is no feasible alternative use of the resource, 2) there is no economically viable source of non-geothermal water, and 3) the exemption is in the public interest.

Because the statute is drafted with reference to wells, it appears that it applies only to ground water, not to natural hot springs.

[161] Low temperature geothermal water is defined at Idaho Code § 42-230(a)(1).

[162] Idaho Code § 42-233(1).

9. CONJUNCTIVE ADMINISTRATION OF GROUND AND SURFACE SUPPLIES

A. Introduction to conjunctive administration

Idaho, like most western states, has long recognized in principal that the prior appropriation doctrine applies to both ground and surface water.[163] Nevertheless, as a practical matter, ground water and surface waters long were managed separately. This is no longer the case. With improving scientific understanding of the physical connection between ground and surface waters, conjunctive administration has become a legal and practical reality.

First a comment on terminology. "Administration" refers to the Department's statutory responsibility to enforce priority, including the curtailment of junior water rights when required to meet senior needs. The term "conjunctive administration" refers to the administration of ground and surface water rights. The term "conjunctive management" is broader. It refers to the full panoply of mostly voluntary governmental and private efforts to reduce conflict between ground and surface water users and promote more effective utilization of all water resources. Thus, while conjunctive administration deals with the brute-force "policing" of priorities, conjunctive management includes such things as research, education, voluntary conservation measures and other demand reduction, recharge projects, provision of substitute water supplies, and other efforts to stabilize or improve water availability. This distinction in terminology, however, is fairly recent. At the time that the Conjunctive Management Rules were adopted in 1994, the term conjunctive administration was not yet in vogue. Using current terminology, those rules would more appropriately be named the Conjunctive Administration Rules.

Today, conjunctive administration and conjunctive management present perhaps the most complex policy issues in Idaho water administration today. Part of this complexity comes from the limited (but steadily increasing) knowledge about the hydraulic operation of the ground water resource itself and its connection to surface supplies. In the past, it was impossible to quantify how pumping a well here might affect a river there. Today sophisticated computer models are capable of predicting such impacts with remarkable precision—at least in parts of the state. Making such predictions is particularly complex because the impacts are not static. The extent and timing of these effects often are delayed, masked, or compounded by other factors, both known and unknown.[164]

In most cases, ground water will be "tributary" (i.e., connected) to surface streams, meaning that it will contribute to, or receive water from, surface stream flows. Localized situations do exist where the ground water is confined in such a way that it will not reach a surface stream, where its movement

[163] This recognition is not universal. For instance, the Supreme Court of Nebraska recently confirmed that Nebraska law ignores the interrelationship of ground water and surface water. In that state, the law of prior appropriation applies only to surface water, while ground water is governed by the common law rule of reasonableness and the statutory Ground Water Management and Protection Act. *Spear T. Ranch, Inc. v. Knaub*, 269 Neb. 177, 691 N.W.2d 116 (2005).

[164] An excellent discussion of the complexities of conjunctive management is contained in Douglas L. Grant, *The Complexities of Managing Connected Surface and Ground Water Under the Appropriation Doctrine*, 22 Land & Water L.Rev. 63 (1987).

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

toward a stream is best measured in geologic time, or where the connection is geographically remote from the stretch of river where most wells or headgates are located.

As a matter of law, conjunctive administration is applicable and appropriate anywhere in the state that ground and surface water supplies are hydraulically interconnected. To date, conjunctive administration has been actively undertaken by IDWR only with respect to water rights drawing from the Eastern Snake Plain Aquifer ("ESPA") and hydraulically connected rivers and streams. It is expected that conjunctive administration will reach other areas of the state, perhaps with the Big Wood River basin being next.

The ESPA is a highly productive ground water aquifer underlying a 10,800 square mile area stretching across southern and southeastern Idaho. (See map of the ESPA set out in Appendix G.) As the Idaho Supreme Court has observed, "[i]t is estimated that [the ESPA] contains up to a billion acre-feet of water, which would be roughly the amount of water contained in Lake Erie."[165] The aquifer is connected to the Snake River in various places and to varying degrees. The aquifer discharges to the Snake River approximately 7.5 million acre-feet annually through spring complexes located in the Thousand Springs area and near the American Falls Reservoir. It reportedly receives an average of 8 million acre-feet of recharge. In addition, the Snake River provides irrigation water to some two million acres through natural flow and some 4 million acre-feet of storage in the River's upper reaches. Another two million acre-feet of water is pumped each year from the ESPA to serve over one million acres of farm land.

In 1994, the IDWR promulgated rules governing conjunctive administration of ground and surface waters having a common source of supply.[166] The Department's rulemaking was spurred by the decision in the case of. *Musser v. Higginson*, 125 Idaho 392, 871 P.2d 809 (1994). In *Musser*, the Idaho Supreme Court held that the Department's Director had a clear legal duty to "distribute" water to the holder of senior irrigation rights diverted from springs in the Thousand Springs area near Hagerman, Idaho.[167] Because the senior's source of water in *Musser* was a spring discharge from the ESPA at a point on the Snake River canyon wall, there were no junior spring or surface rights that could be curtailed to fill the calling spring right. The implication of this ruling, then, was that the Director could be required to curtail junior ground water rights withdrawing from the ESPA if the curtailment would result in more water being made available to the spring user.

The Department's Conjunctive Management Rules establish a procedure by which senior water right holders may make a "delivery call" by petitioning the Department to administer ground and surface water rights in priority within an area of common ground water supply. These rules set out

---

[165] *Clear Springs Foods, Inc. v. Spackman*, 150 Idaho 790, 252 P.3d 71 (2011) (this was the Idaho Supreme Court's decision in the "Spring Users' delivery call," discussed below).

[166] *Rules for Conjunctive Management of Surface and Ground Water Resources* ("*Conjunctive Management Rules*" or "*CMR*"), IDAPA 37.03.11, were promulgated by order of the Director on October 7, 1994. The Idaho Legislature took no action to disapprove the rules under Idaho Code § 67-5291.

[167] *Musser v. Higginson,* 125 Idaho at 395, 871 P.2d at 812.

extensive criteria for determining the nature and extent of the interconnection of various water rights, for evaluating whether withdrawals by a junior ground water right will materially injure a senior water right, and for evaluating mitigation plans that might be proposed by a junior right holder who ultimately is found to be subject to the senior delivery call. The rules also provide for phased-in curtailment of ground water rights subject to a delivery call.

Although the Conjunctive Management Rules are applicable statewide, so far the Department has designated only the ESPA as an area having a common ground water supply. This area is defined by the Department by reference to the report "Hydrology and Digital Simulation of the Regional Aquifer System, Eastern Snake River Plain, Idaho" U.S. Geological Survey Professional Paper 1408-F (1992).

In the SRBA, the court adopted a "general provision" dealing with conjunctive management that places all water users on notice that the designation of a source for their water right does not immunize them from a delivery call from a senior right holder in a separate, but connected, source.[168] The court's decision in what was designated as Basin Wide Issue 5, concluded protracted litigation among SRBA claimants concerning the manner in which the SRBA decree would address conjunctive management. In *A&B Irr. Dist. v. Idaho Conservation League* (aka *Basin-Wide Issue 5*) ("*ICL III*"), 131 Idaho 411, 958 P.2d 568 (1998) (McDevitt, J.), the Idaho Supreme Court observed that "[c]onjunctive management of ground water and surface water rights is one of the main reasons for the commencement of the Snake River Basin Adjudication." *ICL III*, 131 Idaho at 422, 958 P.2d at 579 (quoting 1994 Interim Legislative Committee Report on the Snake River Basin Adjudication, p. 36-37). The Court required the SRBA Court to determine the ultimate source of the ground and surface water rights being adjudicated and the relative priority between surface and ground water rights. *ICL III*, 131 Idaho at 423, 958 P.2d at 580.[169]

[168] *In re: SRBA Case No. 39576, Memorandum Decision and Order of Partial Decree, Connected Sources General Provision (Conjunctive Management), Basinwide Issue No. 5*, (Feb. 27, 2002).

[169] In response to the SRBA Court's ruling that a conjunctive management general provision was not required because the Department had adopted the Conjunctive Management Rules, the Supreme Court also held that

> [the Rules] do not necessarily overlap the SRBA proceedings. They do not provide for administration of interconnected surface and ground water rights in the SRBA, nor do they deal with the interrelationship of water rights within the various Basins defined by the Director and the SRBA district court, and they do not deal with the interrelationships of those Basins to each other and to the Snake River in the SRBA proceeding. The Rules adopted by the IDWR are primarily directed toward an instance when a "call" is made by a senior water right holder, and do not appear to deal with the rights on the basis of "prior appropriation" in the event of a call as required.

ICL III, 131 Idaho at 422, 958 P.2d at 579. This language could be read to mean simply that the Rules themselves do not determine the relative priorities of rights or the hydrologic interrelationship between those rights or between the various sources and basins, which the Court ruled were issues the SRBA was specifically commenced to conclude. Others have argued that this statement holds that the Conjunctive Management Rules

As water right claims have been recommended[170] or decreed in the SRBA, the Department has incorporated them into Water Districts organized pursuant to Chapter 6, Title 42 of the Idaho Code. Since 2002, the Department has formed five new Water Districts (Water Districts 100, 110, 120, 130 and 140) encompassing much of the ESPA.[171] Administration of ground water rights in these new Water Districts, including conjunctive administration, is to occur pursuant to standing instructions from the Department to the Watermasters.

B. Response to changes in aquifer levels and spring production

(1) Introduction

The early development of Idaho's water resources focused on direct diversions and storage of surface water to beneficial uses—primarily for mining and irrigation. By the time a second period of agricultural expansion began after World War II, much of the surface water supply in Idaho's arid southern region had been fully appropriated, or in some cases, over appropriated. This fact, and the availability of new high-lift pumping technology and relatively cheap electrical power, made ground water the preferred source, and in many cases the only source, for new water development.

At the time, a large supply of ground water (often augmented over pre-development volumes by recharge incident to irrigation) and lack of understanding or concern about the interrelationships between ground and surface water sources made the Department's approval of new ground water appropriations largely perfunctory. But between the 1960s and the late 1980s, the significant new ground water withdrawals for irrigation and growing municipal uses, combined with cycles of drought, increasing efficiencies in surface water irrigation and expanding urbanization significantly altered the water balance in some Idaho aquifers. Consequently, Idaho water managers and water users have begun to express growing concern about declining aquifer water levels in various parts of the state, and to consider alternatives to reverse these trends.

Declining water levels in some regional aquifers increased the pumping costs for local ground water users and affected shallow domestic wells.[172] The ESPA is not in a state of overdraft, but ground water pumping has been deemed to contribute to declining spring discharges to the Snake River.[173]

---

violate the prior appropriation doctrine. The Idaho Supreme Court's 2007 ruling that the Conjunctive Management Rules are constitutional on their face, however, is inconsistent with that argument. *See American Falls Reservoir Dist. No. 2 v. IDWR*, 2007 WL 677947 (Idaho).

[170] Some water right claims have been incorporated into Water Districts on the basis of the Department's recommendations of the claims to the SRBA before final determination and decree by the Court. The Department has sought such "interim administration" in areas where it believes it has sufficient information about the water rights and where immediate administration has been deemed necessary.

Page No. 103 of 761

Although north Idaho generally receives more precipitation than southern Idaho, and (with the exception of Kootenai County) has experienced lower rates of population growth, concerns about declining aquifers and the effects of increasing aquifer withdrawals exist there as well. Like the ESPA, the hydrology of aquifers such as the Spokane-Rathdrum and the Moscow-Pullman is complex. This complexity can make identifying the sources of problems and possible solutions difficult. And in these aquifers, standard notions about aquifer management, including whether or how to conduct aquifer recharge, may need adjustment.[174] Existing research suggests that "more precipitation" does not necessarily translate into "more natural recharge" to some aquifers in the area, particularly the deeper aquifers. Nor is it necessarily correct to assume that increased withdrawals from these aquifers via pumping for irrigation and municipal purposes are primarily responsible for water level declines or that curtailing such diversions will increase water levels.

(2) The effects of drought and increasing irrigation efficiencies on aquifer levels

Coincident with the remarkable expansion of ground water-irrigated agriculture that occurred after World War II, southern Idaho has experienced repeated periods of drought. These droughts reduced the rates of natural recharge to regional aquifers from direct precipitation and snowmelt.[175] They also motivated many surface water irrigators to increase the efficiencies of their water delivery facilities, which in turn reduced the historical rate of incidental recharge to aquifers.[176]

---

[173] The fact that there is a correlation between increased ground water withdrawals and declines in spring discharges in the 1000 Springs reach of the Snake River near Hagerman, Idaho has been understood for many years. The actual contributing effect of these withdrawals, in comparison to the effects of drought and reduced incidental recharge, is less well understood. However, the IDWR has estimated that sixty percent of the observed declines in spring discharges is attributable to changes in irrigation practices on the Eastern Snake River Plain that have reduced the historical incidental recharge. This is not surprising given that nearly one hundred percent of the approximately 3,700 cfs increase in spring discharges that occurred between 1902 and 1953 is attributable to incidental recharge from surface water irrigation on the Eastern Snake River Plain that began in the early 1900s.

[174] For example, in the Moscow-Pullman Basin, due in part to rolling topography, the nature of overlying soils and to the spatial relationship of the two primary basalt aquifers, diversions of surface water to recharge basins or injection wells, or through leaky canals, as is common in southern Idaho recharge projects, are unlikely to improve declining water levels in the Grande Ronde basalt aquifer—the primary source of municipal water in the area. Instead, managed recharge in this area conceivably could come in the form of "diversions" of ground water from the shallower Wanapum basalt aquifer to the deeper Grande Ronde aquifer via wells completed through both that essentially would allow ground water from the upper aquifer to leak into the lower.

[175] Natural recharge typically includes recharge to the aquifer from deep percolation of runoff, tributary underflow and to a lesser extent, precipitation.

[176] Incidental recharge is recharge resulting from the use of water diverted for beneficial uses, and includes recharge due to leakage from irrigation water distribution and delivery facilities, and deep percolation of applied irrigation water below the crop root zone. Improved irrigation facilities and practices implemented by surface water irrigators in the upper Snake River Basin following the severe drought of 1977 have reduced

In arid southern Idaho, incidental recharge from surface water diversions can be the primary source of water accruing to aquifer storage. For example, based on 1980 figures, it is estimated that natural recharge through precipitation accounts for only about nine percent of the annual recharge to the Snake Plain Aquifer.[177] However, from sixty to eighty percent of the eight million acre-feet of annual recharge to the Snake Plain regional aquifer is incidental to—that is, it is a byproduct of—surface irrigation, including seepage from canals, ditches, laterals, and irrigated fields.[178]

For aquifers in southwest Idaho's Treasure Valley[179] the numbers are not yet fully developed, but their relative percentages may be similar to those for the ESPA. Preliminary recharge estimates for the Treasure Valley were that 60 percent of ground water recharge is attributable to canal leakage, some 30 percent is attributable to a combination of agricultural flood irrigation and precipitation, and that all of this recharge is primarily to the shallow alluvial aquifer system.[180] The thinking originally was that recharge to the deeper aquifers in the Treasure Valley—from which most of the area's drinking water is pumped— is very slight and/or that the water within them is confined by largely impervious layers.[181] However, more recent studies, and the stable water levels shown in both large-production municipal wells and long-term monitoring wells, have shown that these deeper municipal supply aquifers actually are primarily one large aquifer, now known as the Pierce Gulch Sand Aquifer, which is robustly recharged, likely has a connection to alluvial gravels where the aquifer slants upward across a wide swath of the Valley, and extends into the Payette River Drainage.[182]

(3) Expanding urban landscapes

Conversion of significant areas of agricultural land to subdivisions, shopping malls and roadways can reduce both natural and incidental ground water recharge. In the Treasure Valley, where

much of Idaho's population growth is occurring, these land use changes are beginning to have noticeable effects on aquifer recharge, particularly recharge to shallow aquifers. Lands that formerly were flood irrigated to grow row crops are giving way to development. Even though urban development's often retain significant areas of irrigated lawn and open space, typically more than half of the land in urbanized areas consists of impervious, non-irrigated surfaces.[183] These impervious surfaces increase surface runoff and preclude infiltration of precipitation.

Moreover, urban landscaped acres usually are served by pressurized irrigation systems that often are more efficient than gravity irrigation systems, and therefore may result in less incidental recharge.[184] Typically, these pressurized irrigation systems deliver the same non-potable surface irrigation water diverted through the same canal system that served the cropland on which the urban development now stands. The canal systems themselves continue to contribute to ground water recharge.[185] But the net effect of urbanization on formerly agricultural areas still appears to be a decline in both the amount of beneficial use for irrigation and natural and incidental ground water recharge. Logically, where the subdivision results in reduced consumptive use of water, as compared to the former farm irrigation, the excess surface water will find its way to drains, other ditches, or the stream or river from which it was originally diverted.

---

[183] Personal communication, Zena Cook, Idaho Dep't of Water Resources, October 28, 2002.

[184] Recent studies have suggested that, for several reasons, suburban or commercial site lawn and landscape irrigation likely provides little direct ground water recharge. Many recharge-inducing lateral ditches are abandoned, lined or piped to accommodate urban development; lawn irrigation systems typically use sprinklers; and there is evidence that lawn irrigation itself often results in reduced soil perviousness due to compaction of soils and effects of grading during home construction. *See e.g.*, NRDC, *et al.*, *Paving Our Way to Water Shortages: How Sprawl Aggravates the Effects of Drought* at 5-6 (2002), *citing* EPA, *Clean Water Through Conservation*, EPA 841-B-95-002 (April 1995); Sakrison, R., *Water Use In Compact Communities: The Effect of New Urbanism, Growth Management and Conservation Measures on Residential Water Demands* (University of Washington, 1997); and Schueler, T., *The Peculiarities of Perviousness*, Watershed Protection Techniques, Vol. 2, Issue 1, 1995.

[185] Typically, where formerly flood irrigated farmland has been converted to urban pressurized irrigation in the Treasure Valley, the canal company or irrigation district delivering the water has continued to deliver the full historical amount of appurtenant water to the headgate, even though as much as half of the farmland may be converted to impervious or non-irrigated surfaces. This may provide the developed land up to twice as much water for urban landscaping as the irrigated farm ground received. Several reasons have been advanced for this approach. First, it provides a peaking capability for the irrigation system during periods of extreme temperature and irrigation demand, particularly systems that are not on a strict watering schedule. It also minimizes labor and management costs for the delivery entity and complaints from homeowners. But it also raises several legal and policy issues for future water management. First, this changes the "duty of water" for the water right on the developed land from, on average, one inch per acre to as much as two inches per acre. This presumably is inconsistent with the goal of conservation, the decreed duty of water for the delivered right and Idaho statutes and case law that impose a standard duty of water of no more than one inch to the acre. Also, this can result in development of a delivery and use infrastructure that continues to demand the full historical "head" of water in the system to operate, and thereby can preclude alternative future uses of the water historically allotted to farmland, but now appurtenant to a parking lot or industrial complex.

(4) Declines in spring discharges to the Snake River and resulting water user conflicts

In addition to the growing awareness of the effects of changes in natural and incidental recharge throughout the state, in south-central Idaho declines in spring flows discharging to the Snake River from the ESPA have been the source of increasing conflict.[186] This conflict reached a peak in August of 2000, again in early 2004, and yet a third time in early 2005.

In August of 2000, anticipating continued severe drought conditions for southern Idaho and significant declines in spring discharges from the ESPA to the Snake River, the Department's Director gave notice to ground water users on the ESPA that he intended to curtail ground water diversions beginning in the spring of 2001 within a band extending from five to ten kilometers from the Snake River in the Thousand Springs and American Falls reaches to increase the water supply to spring and surface water users.[187] On the eve of the Department's intended issuance of curtailment orders,[188] water users presented the Director with an agreement in principle to avoid curtailments. Ground water users would provide up to 68,000 acre-feet of replacement water to surface and spring water users in the 2002 and 2003 irrigation seasons. The parties also would engage in mediation to attempt to reach long-term agreements aimed at managing the ESPA's ground and surface water supplies conjunctively.[189] This agreement in principle ultimately resulted in written agreements among water users above and below Milner Dam (the "2001 Interim Agreements"). These agreements are discussed further in section 9.C(2) below.

---

[186] 1953 marked the end of a long-term trend of increased spring discharges to the Snake River that began in the early 1900s due to incidental recharge from widespread surface irrigation across eastern and southern Idaho. North side spring flow contributions to the Snake River below Milner Dam peaked at about 6,900 cfs in 1953 and had declined by approximately 600 cfs by 1980. *See* Jeffrey C. Fereday and Michael C. Creamer, *Swan Falls in 3-D: A New Look at the Historical, Legal and Practical Dimensions of Idaho's Biggest Water Rights Controversy* 28 Idaho L. Rev. 573 (1992) for a historical review of Eastern Snake Plain Aquifer hydrology and development.

[187] IDWR, Order *In the Matter of Designating the American Falls Ground Water Management Area* (August 3, 2000) and IDWR, Order *In the Matter of Designating the Thousand Springs Ground Water Management Area* (August 3, 2000).

[188] The Director was proceeding under Idaho Code § 42-233b, which, among other things, requires that an order to ground water users within a Ground Water Management Area to cease or reduce diversions must be issued before September 1, and is effective during the growing season of the next year.

[189] If the full amount of replacement water could not be obtained, ground water users agreed to curtail their diversions by a proportionate amount, up to a maximum of from ten to fifteen percent of historical diversions. In the Upper Snake River, replacement water was delivered into reservoir storage for surface water users' use. However, in the Thousand Springs reach the majority of the replacement water delivered was applied in the vicinity of springs to increase direct recharge through infiltration basins and increase incidental recharge through conversion of ground water irrigated acres to surface water irrigation. In addition to providing some incidental recharge to the aquifer, conversion of agricultural land to surface water irrigation also reduced ground water withdrawals in the vicinity of the springs.

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

A second major period of conflict between ground and spring water users on the ESPA began in the fall of 2003 when ground and spring water users in Water District 130 were unable to reach either a long-term agreement or one that would extend the 2001 Interim Agreement. In October of 2003, the Magic Valley and North Snake Ground Water Districts filed a Preliminary Mitigation Plan with the Department proposing a five-year program to mitigate injury to senior spring rights. The Preliminary Mitigation Plan incorporated, in large part, the programs that were initiated under the 2001 Interim Agreements, but also included an adaptive management approach intended to allow changes to the Preliminary Mitigation Plan over its term based on new information, monitoring of results and collaboration with spring users and the Department. That Plan was protested by over sixty individuals and entities.[190] The potential for protracted litigation of the Preliminary Mitigation Plan ultimately was overshadowed by the Department's resolution in late 2003 of two sets of delivery calls made under the Conjunctive Management Rules—the Clear Lakes Call and the Rangen Call. The Musser Call, subsequent delivery calls, and the several resulting interim settlement agreements are discussed in more detail below.

C. Delivery calls and administration in the ESPA

(1) Round One: The Musser call

The current era of conjunctive administration of water rights began with the Musser call on June 16, 1993. Alvin and Tim Musser (together with tenant, Howard "Butch" Morris) (collectively, "Musser") placed a call for delivery of their 1892 priority water right, in the amount of 4.8 cfs. The right was delivered from a natural spring through the Martin-Curran Tunnel located in the 1000 Springs area near Hagerman, Idaho.[191] According to Musser, flows in the spring had declined due to up-gradient ground water pumping, and he was unable to meet their full water needs in 1993.

The Director denied the call on the basis that there had not yet been "a formal hydrologic determination that such conjunctive management is appropriate."[192] Musser sued, seeking a writ of mandate compelling the Director to administer the aquifer in priority to deliver their full senior right, pursuant to Idaho Code § 42-602 (which has since been modified).

Section 42-602 directs the Director to distribute water within designated water districts in accordance with the prior appropriation doctrine. The statute was substantially amended in response to the *Musser* decision (see discussion below). At the time, however, it authorized the Director to curtail unadjudicated water rights outside of a water district, so long as the call came from the holder of an adjudicated right within a water district. Although most water rights in the surrounding ESPA were then unadjudicated and therefore not within water districts, the Musser property was located within a

[190] Proceedings for review of the Ground Water Districts' Preliminary Mitigation Plan were stayed as part of the March 15 Settlement reached among the Legislature, the Ground Water Districts, and spring and surface water users. (See discussion in section 9.C(4)).

small water district known as 36A in which surface and spring water rights had been adjudicated in the 1930s.

The Department initiated rulemaking for conjunctive management and a contested case proceeding for the Mussers, and urged the trial court to dismiss the lawsuit as moot, given that an administrative process was now underway. The trial court found the case was not moot, and issued a writ of mandate requiring the Director to "distribute water" in accordance with the Prior Appropriation Doctrine to serve Mr. Musser's decreed entitlement.

The writ of mandate affirmed by the court soon became moot when Musser received a supply of water from another source, so there was never any litigation over the appropriateness of how the Department responded to the writ. For example, the writ of mandate required that the Director "immediately comply with I.C. § 42-602." Because the dispute was mooted, there was never occasion to determine what immediate compliance means and what factors the Department should consider and what procedures it should employ in responding to such a call. Nevertheless, *Musser* plainly had the effect of jumpstarting the Department's development of conjunctive management rules, which have shaped the debate that continues to unfold.

The Legislature responded immediately to the *Musser* decision by amending section 42-602 and other sections addressed by the Supreme Court.[193] First, the amendments removed the Director's authority under Idaho Code §§ 42-602 to 42-619 to use the watermaster/water district system to curtail rights outside an established water district. The legislation also replaced the Director's specific "duty" to have "immediate direction and control" with a more deferential and discretionary directive that the Director "shall have direction and control of the distribution of water." The Legislature also struck the provision in section 42-602 requiring the Director to "execute the laws relative to the distribution of water in accordance with the rights of prior appropriation." This language was replaced with the provision that the Director is to "distribute water in water districts in accordance with the prior appropriation doctrine." Finally, it amended various other provisions of the water code to expressly recognize the Director's discretion in these matters and his authority to proceed administratively. These changes presumably were intended to recognize and underscore the Director's expertise and discretion in managing the complex interactions of water rights and to reaffirm that there is more to the prior appropriation doctrine than rote enforcement of priorities.

(2) Round Two: The 2001-2003 interim settlement and replacement water obligation

In 2001 the Department issued orders designating the Thousand Springs Ground Water Management Area and the American Falls Ground Water Management Area.[194] As part of these

[193] 1994 Idaho Sess. Laws, ch. 450.

[194] IDWR, Order *In the Matter of Designating the American Falls Ground Water Management Area* (August 3, 2000) and IDWR, Order *In the Matter of Designating the Thousand Springs Ground Water Management Area* (August 3, 2000).

actions, the Director notified ground water users within these GWMAs of his intent to issue curtailment orders to ground water users within an area extending five kilometers from the Snake River in the Thousand Springs Reach ("TSR") of the Snake River (below Milner Dam) and the American Falls Reach (above Milner) due to the extended drought conditions and continuing declines in spring discharges. The Department's orders were based on a general finding of material injury to spring and surface water rights in the reaches. The orders set an August 31, 2001 deadline for ground water users to provide a plan for mitigation to the reaches or face curtailment. The North Snake, Magic Valley, Bingham, Bonneville-Jefferson and Aberdeen-American Falls Ground Water Districts were instrumental in negotiating two-year, interim agreements on behalf of their members. Agreements in principle were reached with spring and surface water users on August 31st that later were reduced to formal written agreements. These agreements avoided IDWR's threatened curtailment of ground water withdrawals for irrigation, industrial and municipal uses. Among other things, the 2001 Interim Agreements required ground water users to acquire and provide up to 68,500 acre-feet of replacement water to surface and spring water users in the 2002 and 2003 irrigation seasons.[195]

The Department's action, although initiated without first holding a hearing, presumably was premised on the following assumptions: (1) that surface and spring water users in the Magic Valley were not receiving their full entitlements; (2) that such shortfalls constituted material injury to senior surface and spring rights; (3) to the extent shortfalls were being experienced, they could not be corrected by the seniors employing reasonable efforts to improve their existing means of diversion; (4) that those claiming shortfalls could beneficially use the higher quantities authorized under their decreed water rights; and (5) that persons holding water rights in springs fed in large part by incidental recharge and return flows from up-gradient surface water irrigation may require continuance of the same quantity of return flows by ground water users when up-gradient surface irrigation and related incidental recharge is reduced. Due to the 2001 Interim Agreements, these and other relevant assumptions have not been tested.

(3) Round Three: The Clear Lakes call

In May of 2003, Clear Lakes Trout Company, Rim View Trout Company and the Estate of Earl Hardy ("Clear Lakes") made demand on the Director of the Department to direct the Watermaster for Water District 130 to "administer water rights in the Water District that deplete the supply of water" to the Clear Lakes water rights that were not being satisfied by the available spring flows (the "Clear Lakes Call").

The Director deemed the Clear Lakes demand to be a "delivery call" under the Department's Conjunctive Management Rules. In October of 2003, the Director issued an Order denying the Clear Lakes Call. Among the reasons given for denying this call, the Director found that for certain of the

[195] Under the separate Interim Agreements, the North Snake and Magic Valley Ground Water Districts agreed to provide 40,000 acre-feet of replacement water to the TSR in 2002 and 2003. The Aberdeen-American Falls, Bingham and Bonneville-Jefferson Ground Water Districts agreed to provide, in conjunction with several commercial/industrial ground water users, 28,500 acre-feet of replacement water per year to the American Falls reach above Milner.

Clear Lakes rights, there was sufficient water available, certain other rights were not receiving their full decreed rate due to natural seasonal variations that had existed since the time the rights were first appropriated, and that the mitigation then being provided by the Magic Valley and North Snake Ground Water Districts under the 2001 Interim Agreement was "an approved and effectively operating mitigation plan" under the Conjunctive Management Rules that provided full mitigation for the effects of ground water pumping under junior rights in Water District 130 through December 31, 2003.[196]

The Order also provided the opportunity for any person aggrieved to petition the Department for a hearing. Clear Lakes did petition for a hearing, and numerous parties intervened. This contested case was stayed as part of the settlement of a subsequent delivery call filed by Rangen, Inc., that the Director determined to honor.

(4) Round Four: The Rangen call

In September and October of 2003, a fish food producer and research facility known as Rangen, Inc. filed a delivery call demanding that the Director shut off junior water rights alleged to be interfering with Rangen's 1962 priority spring water right diverted from the Curren Tunnel—the same source as the Musser water right.[197] On February 25, 2004, after expiration of the 2001 Interim Agreement for Water District 130, the Director recognized the Rangen delivery call and stated his intent to order curtailment of all up-gradient consumptive water rights within the Water District junior to July 13, 1962 unless ground water users submitted, and received approval of, a suitable mitigation plan by April 1, 2004 ("Rangen Order").[198]

Specifically, the Rangen Order provided that members of the North Snake Ground Water District or the Magic Valley Ground Water District would not be curtailed (on a temporary basis) if they provided sufficient replacement water. The replacement water could be either (1) a substitute supply of 16,000 acre-feet directly usable by Rangen, or (2) 53,000 acre-feet of replacement water to the TSR. In either case, the plan for providing the substitute supply would have to be approved by the Director by April 1st. At a status conference held on March 5, 2004, the Department announced that due to the discovery and correction of a computer modeling error after the Rangen Order had been

---

[196] Order, *In the Matter of Distribution of Water to Water Right Nos. 36-02659, 36-02680, 36-04032A, 36-04032B, 36-04032C, 36-04032D, 36-07004, 36-07080, 36-07167, 36-07176, 36-07725, 36-07731 and 36-08089* (October 10, 2003).

[197] The delivery call referenced three water rights. The most senior (1957 priority) right has been fully met, however. The most junior (1977 priority) was deemed to have been "incorrectly" issued by the Department and therefore arguably not the proper basis for a call. Consequently, the water right that drove the call was the intermediate priority right with a July 13, 1962 priority date.

[198] Order, *In the Matter of Distribution of Water to Water Right Nos. 36-15501, 36-02551and 36-07694* (February 25, 2004).

issued, the Department had determined that the required quantity of replacement water to the TSR would be reduced to 26,500 acre-feet.[199]

The Rangen Order implicated the potential curtailment of ground water diversions serving approximately 120,000 irrigated acres in the Magic Valley, as well as many municipal and commercial rights held by cities and dairies. To avoid the threat of significant economic dislocation caused by both the declining spring flows and potential curtailment, the Ground Water Districts, Rangen and Clear Lakes sought to reach a further interim agreement that would include significant involvement and commitments by the State of Idaho. On March 15, 2004, following a full day of negotiations, a settlement was reached among water users, the Legislature and the Governor that resulted in the stay of the Clear Lakes and Rangen Calls and the pending curtailment of post-1962 ground water diversions in Water District 130 ("2004 Settlement").[200]

During the 2004 Settlement's one-year term, the parties each agreed to undertake specific actions, the most significant of which were the commitment by the Ground Water Districts to continue to provide 40,000 acre-feet of replacement water to the Thousand Springs Reach and the authorization of the Legislature's Expanded Natural Resources Interim Committee for Water Supply and Management Issues ("Interim Committee"). The Interim Committee was assigned a broad scope of tasks aimed at developing short-term and long-term management goals for the ESPA, investigating and recommending water management and supply programs, and investigating funding and legislative needs to implement identified goals and objectives. The Interim Committee established monthly meetings of the full committee and smaller working groups that were assigned specific tasks for the ESPA and other regions of the State experiencing water supply problems.

(5) Round Five: The Surface Water Coalition's 2005 delivery call and the challenge to the Department's rules in *AFRD*

In January 2005, a group of seven canal companies and irrigation districts diverting at or above Milner Dam on the Snake River and calling themselves the "Surface Water Coalition" (or "SWC")[201]

---

[199] Subsequent review of the computer modeling simulations revealed that the 26,500 acre-foot number also was incorrect. However, because of a settlement reached among the State of Idaho, the Magic Valley and North Snake Ground Water Districts and other water users on March 15, 2004, a final quantification of this number never was developed pursuant to the Rangen Call.

[200] Eastern Snake Plain Aquifer Mitigation, Recovery and Restoration Agreement (March 15, 2004). The March 15 Settlement also provided for the stay of a pending district court case challenging the validity of the Conjunctive Management Rules brought by Clear Lakes in Ada County and pending contested cases before the Department concerning the dissolution of the Thousand Springs GWMA and amendment of the boundaries of the American Falls GWMA. The March 15 Settlement also provided for a stay of the pending contested case concerning the Ground Water Districts' Preliminary Mitigation Plan.

[201] These are the Twin Falls Canal Company, North Side Canal Company, Milner Irrigation District, American Falls Reservoir District No. 2, Minidoka Irrigation District, A&B Irrigation District, and Burley Irrigation District.

filed a delivery call with the Department seeking curtailment of hundreds of junior ground water rights in the ESPA that they alleged decreased river flows to the injury of their senior water rights. This action resulted in near-immediate emergency orders from the Director, followed by preparations for hearings on the merits (discussed below).

However, even before discovery could be completed, five SWC members and others brought a court challenge in 2005 to the Department's Conjunctive Management Rules under which their call would be heard.[202] This challenge, which sidetracked the delivery calls pending its outcome, led to the Idaho Supreme Court's ruling in *American Falls Reservoir District No. 2 v. IDWR* ("*AFRD*"), 143 Idaho 862, 154 P.3d 433 (2007) (Trout, J.). The opinion upheld the facial validity of Idaho's Conjunctive Management Rules ("Rules"), IDAPA 37.03.11.000, *et seq*. The Rules, adopted by the Department in 1994, set forth the process by which ground and surface water rights in Idaho are to be administered together. *AFRD* is given particular attention here because it is seen as a highly significant ruling in the area of conjunctive administration and the confirmation of central principles of water law in Idaho.

In addition to validating the Rules, the decision confirmed, in the context of water rights administration, several foundational principles of Idaho's prior appropriation doctrine—each of which is referenced in the Rules—such as the continuing requirements of beneficial use and reasonable means of diversion, the state policy of full economic development of water resources, the prohibition of waste, and others. The court held that the Rules are consistent with state constitutional principles in allowing the agency to consider the amount of storage water available to a senior surface water right holder before ordering the curtailment of a junior water right. The decision underscores the importance of administrative fact-finding before the state will shut off diversions under junior water rights alleged to be causing material injury to seniors.[203]

The plaintiffs in *AFRD* had criticized the Rules in various ways since their adoption, and in this litigation finally brought their theories to court. Plaintiffs' central premise over the years had been that when a senior water right holder alleges a water shortage and demands curtailment of junior-priority water rights, the Department's job is immediate and ministerial, and watermasters should be directed to shut off ground water pumps without the Director first considering any facts other than the quantity of the senior's water right and the existence of shortage. Plaintiffs' position became even more emphatic

---

[202] Joining the five Surface Water Coalition members as plaintiffs challenging the Rules were Idaho Power Company (which maintains hydroelectric facilities on the river at Milner and elsewhere) and holders of water rights in springs flowing from canyon walls in the river reach below Twin Falls. Each of these plaintiffs asserts its water rights are dependent, at least in part, on Idaho's vast Eastern Snake Plain Aquifer ("ESPA" or the "aquifer"). As noted elsewhere in this paper, the aquifer is understood to be connected to the Snake River in various places and to varying degrees across southern Idaho.

[203] The procedure or body of law by which the state uses its power to shut off a junior water right so that a more senior right might obtain its water supply is commonly referred to as water right administration. The senior's request is referred to as a "delivery call."

once the bulk of ground water rights on the ESPA had been decreed in the ongoing Snake River Basin Adjudication and brought into water districts for which watermasters were appointed.

The Rules do not describe a summary curtailment model for conjunctive administration, and instead require fact-finding on various issues. Because of this, Plaintiffs claimed that the Rules violate a number of water law principles, including the "first in time" admonition of Idaho's Constitution; Idaho' water delivery statutes, Idaho Code § 42-601 *et seq*. (setting forth, among other things, watermaster duties in water districts); and the common law. Plaintiffs further asserted that it was illegal for the Rules to allow the Director, when responding to a delivery call, to consider such issues as the seniors' actual beneficial use (such as the number of acres actually being irrigated), whether their means of diversion are reasonable, and how the agency's action would serve the concept of "full economic development of underground water resources." Idaho Code § 42-226. Plaintiffs took the position that any such matters had been resolved in the process wherein their water rights were licensed or decreed and could not be revisited in a delivery call, and that engaging in these inquiries under the Rules would cause a "readjudication" of their water rights. In *AFRD*, the Idaho Supreme Court rejected all of these theories.

(a) Background: the Surface Water Coalition's 2005 delivery call

As noted above, the dispute giving rise to *AFRD* began in early 2005 when the Surface Water Coalition, acting under the Rules' delivery call procedures, formally asked the Department to curtail diversions under unspecified thousands of ESPA ground water rights. The Surface Water Coalition believes ESPA ground water pumping is reducing spring inflows to the river upstream from their headgates and injuring their surface water rights.

The Department responded immediately. Applying various provisions of the Rules, the Director issued emergency orders in February through May 2005 that, on a preliminary basis, determined it reasonably likely that pumping would cause material injury to the water rights of two of the seven[204] SWC members in the upcoming irrigation season. The emergency orders sought additional information from the SWC, but in the meantime required ground water users to provide the SWC with certain amounts of replacement water.

Both sides filed objections to the preliminary orders. The Department established a discovery schedule and scheduled a hearing. Meanwhile, the ground water users provided mitigation water as required by the orders, primarily by renting storage water from upper Snake River reservoirs to provide to the SWC and by fashioning means to idle ground water wells. A final determination in the matter,

[204] The five Canal Companies who were plaintiffs in the *American Falls* case were Twin Falls Canal Company, American Falls Reservoir District No. 2, Minidoka Irrigation District, Burley Irrigation District, and A&B Irrigation District.

including any mitigation requirement, would come after the facts could be sorted out at the hearing, where both sides could put on evidence on various factors enunciated in the Rules.[205]

The Surface Water Coalition took the position that there should be no further fact-finding, that their water right decrees were proof enough of their entitlements, and that their delivery call sufficiently explained to the Director that they were not receiving water to which they are entitled. They maintained that, under the Constitution's "first in time" mandate, the Department was obligated to shut off ground water pumps in the ESPA, and to do so immediately. The Surface Water Coalition also contended that the various Rule provisions on which the Director relied, and under which he intended to receive evidence at hearing, were unconstitutional or otherwise in violation of Idaho water law.

However, rather than wait to raise these claims in the administrative hearing on the delivery call, in August 2005 five of the seven Surface Water Coalition members, joining with Idaho Power Company and a group of aquaculture interests in the Thousand Springs area[206] (collectively, "Plaintiffs"), filed a separate action in Idaho's Fifth Judicial District Court in Gooding County Judge Barry Wood) asking for a declaration that the Rules violate the prior appropriation doctrine as established by the Idaho Constitution. Plaintiffs' arguments were as follows:

- The Rules allow inquiry into several principles other than "first in time" that Plaintiffs believed should not come into play in water right administration, including such concepts as "reasonable means of diversion," whether a senior right can be satisfied using alternate points and/or means of diversion; whether the senior actually is suffering "material injury;" and whether the administration is consistent with "full economic development" of the ground water resource.

- The Rules allow the Department to evaluate a senior's storage water account, including projected "carryover storage," in determining whether senior rights are suffering material injury.

---

[205] As of this writing, the hearing still has not been held, although the Department has resumed its analysis of the delivery calls and has issued notified certain ground water right holders that they will be subject to curtailment unless they provide replacement water for 2007. Absent a settlement, these issues presumably will go to hearing.

[206] The Eastern Snake Plain aquifer's western edge is truncated by the deep Snake River canyon along an approximately 40-mile long section downstream from Twin Falls. The aquifer's water, flowing westward, encounters the canyon and literally spills out of the basalt canyon walls through innumerable fissures and springs in the Buhl/Hagerman area. The aquifer discharges in this reach collectively are several thousand cubic feet per second. Large amounts of this cold, clean water are collected to serve, primarily, the water rights of fish farms and irrigated tracts on benchlands situated between the cliffs and the river below, including the Rangen facility referenced above (the "Spring Users"). By the time the Spring Users had joined the Canal Companies in filing the Rules litigation, they too had filed their own delivery calls against ESPA ground water pumpers. These delivery calls also are still pending.

Printed 6/23/2023 9:09 AM

- The Rules invite factual inquiry that impermissibly "looks behind," "readjudicates," or otherwise gives insufficient legal effect to the senior's water right decrees.
- The Rules impermissibly shift the burden to the senior to prove injury in a delivery call.
- The Rules are illegal in allowing junior right holders to provide mitigation in lieu of curtailment.

Plaintiffs' complaint asked Judge Wood for a declaratory judgment that the Rules are unconstitutional both on their face and as the Director sought to apply them in the delivery calls. Normally, a district court would dismiss such an action for failure to exhaust administrative remedies; the parties had not yet produced evidence in the administrative case, the agency had not applied law to facts, and there was no final agency action or factual record for court review. However, Plaintiffs convinced Judge Wood that their action should be heard because of language in Idaho's declaratory judgment statute, Idaho Code § 67-5278, referring to the statute's applicability where rules are "threatened" to be applied. Plaintiffs argued, in essence, that the Director's current process under the Rules was the "best evidence" of how the Department aimed to apply the Rules. The Department and the ground water users argued against this interpretation, but Judge Wood sided with Plaintiffs and heard their challenge.

(b) The lower court decision in *AFRD*

After motion practice over many months, lengthy briefing, and oral argument, the District Court issued a 127-page opinion granting Plaintiffs' summary judgment motions, relying on "the underlying facts in this case," that is, the actions that had occurred under the delivery calls lodged with the agency.[207] The Judge construed the declaratory judgment statute as vesting the court with jurisdiction over the action based on the "threatened application" of the Rules that Plaintiffs alleged in their briefing. The District Court thus adopted a hybrid approach that considered the Rules constitutionally both facially and as the Department threatened to apply them.[208]

In its Order, the District Court found that the Rules are unconstitutional because they: 1) fail to include express directives as to five "tenets and procedures" that the court believed are constitutionally required; 2) exempt domestic and stock water rights from conjunctive administration; and 3) allow the Director, in determining material injury, to consider a senior's right to store water in reservoirs for potential future use (so-called "carryover storage").

The press reports of Judge Wood's decision were simply that he had declared the Rules unconstitutional. However, the District Court's ruling actually upheld the bulk of the Rules, finding them unconstitutional only on narrow, mostly procedural, grounds. For example, the District Court

[207] Order at 25. References to the "Order" refer to Judge Barry Wood's *Order on Plaintiffs' Motion for Summary Judgment* in *American Falls Res. Dist #2 v. IDWR*, Case No. CV-2005-600, Idaho District Court for the Fifth Judicial Dist., County of Gooding (June 2, 2006).

[208] Order at 25.

rejected Plaintiffs' central premise that the numerous factors the Rules allow the Director to consider "are on their face contrary to the prior appropriation doctrine."[209] Judge Wood held that a "decree is not conclusive as to any post-adjudication circumstances,"[210] and in a delivery call "the Director has the duty and authority to consider" whether the senior is "irrigating the full number of acres decreed under the right."[211] The District Court rejected Plaintiffs' argument that junior users cannot use mitigation or replacement water to avoid curtailment.[212] The court agreed with defendants that the "concept of 'reasonableness of diversion' is also a tenet of the prior appropriation doctrine."[213] Judge Wood specifically noted that the prior appropriation doctrine allows the state "to compel a senior to modify or change his point of diversion under appropriate circumstances."[214]

In a portion of the order that could have particular relevance to the injury claims of the Spring Users in the Hagerman Valley area, the District Court states that, in a delivery call, the Director is entitled to "tak[e] into account whether the senior is protected to historical diversion levels or reasonable aquifer levels."[215] The Judge ruled that "a water user may not command the entirety of a volume of water of a ground or surface source to support his appropriation for a beneficial use involving less than the entire volume," and that "a senior spring user cannot tie up the entire volume of water of an aquifer in order to maintain the natural flow of a spring."[216] The District Court referred to this as the "bath tub" example, wherein "the only time the 'over-flow' produces water is when the bath tub is full."[217]

[211] Order at 92.

[212] Order at 90 and 102.

[213] Order at 88.

[214] Order at 89.

[215] Order at 102.

[216] Order at 88-90.

[217] Order at 90; n. 21. The ESPA actually exhibits greater spring discharges in this area today than it did before any significant water development began on the Snake River Plain. This is due to incidental recharge to the aquifer, and increases in aquifer storage, that resulted from surface water irrigation on the Plain beginning in the late 1800s. Between 1902 and 1953, the spring discharges in this fabled "Thousand Springs" reach increased by approximately 3,700 cubic feet per second, nearly doubling the 1902 discharges. Most of the rights appropriated by the Spring Users were established when the aquifer was in this enhanced state. Since 1953, spring discharges have gradually decreased (although they still are above 1902 levels), due in part to the use of increasingly efficient surface irrigation practices on the Eastern Snake River Plain that have reduced the historical incidental recharge. Ground water pumping and cyclical drought also are seen as causes of spring flow declines.

The District Court acknowledged that juniors subject to a delivery call are entitled to a hearing, and may offer evidence to show, among other things, that the senior is "wasting water," or "to establish a futile call."[218] The lower court agreed that "the policy of the state is to secure the maximum use and benefit and least wasteful use of its resources," and the Rules' "integration of this policy" "is not necessarily inconsistent with Idaho's version of the prior appropriation doctrine."[219] The District Court ruled that a "senior user cannot call for water if the water is not, or will not, be put to a beneficial use, irrespective of whether the right is decree,"[220] and acknowledged "that most of the issues pertaining to the principles comprising the prior appropriation doctrine have developed in the context of surface water only. Applying these same principles to the integration of surface and ground water presents an entirely new set of complexities."[221]

Plaintiffs' arguments to the District Court essentially took the position that in water right administration there is no place for any of the several tenets of Idaho's prior appropriation doctrine except the "first in time" rule. They ended up with a decision from the District Court that disagreed with this theory and with most of their substantive claims. As the Supreme Court was to note in its decision, the "district court rejected [Plaintiffs'] position . . . that water rights in Idaho should be administered strictly on a priority in time basis."[222] The upshot is the unremarkable proposition that all of the doctrine's tenets remain in play not just at the appropriation stage, or at the time a water right is scrutinized in an adjudication, but throughout all periods when the right is being exercised. And especially when its owner asks the state to curtail others to supply it. Plaintiffs did not appeal the District Court's rulings on these issues, although they continued to argue about several of these points in their briefs to the Supreme Court.

The District Court rejected Plaintiffs' core contentions about Idaho water law, but did conclude that the Rules are unconstitutional primarily with regard to certain procedural points. As the Supreme Court put it, "[w]hile the district court largely rejected [Plaintiffs'] arguments, it did grant summary judgment based on its finding that the Rules are facially unconstitutional on a different basis: a lack of 'procedural components' of the prior appropriation doctrine that the court viewed as constitutionally mandated."[223] The District Court perceived constitutional infirmities in the Rules' failure: 1) to describe burdens of proof and evidentiary standards applicable in a delivery call; 2) to give proper legal effect to senior water right decrees; 3) to describe objective criteria necessary to evaluate these factors; and 4) to establish a time frame in which the delivery call process must be completed.

---

[218] Order at 101.

[219] Order at 86.

[220] Order at 86.

[221] Order at 91.

[222] *American Falls*, 154 P.3d at 441.

[223] *American Falls*, 154 P.3d at 439.

The District Court had believed that "[s]uch components are necessary to protect and prevent diminishment to vested senior property rights," and that without these elements in place, "seniors are put in the position of re-defending their adjudicated water right every time a call is made for water."[224] Judge Wood had concluded that while "some minimal due process is required" in carrying out a delivery call, "setting up a procedural labyrinth of requiring a senior water right holder to initiate a contested case proceeding . . . which cannot be completed during the irrigation season prevents timely administration to a growing crop and was not what either the framers of the constitution had in mind or what the legislature had in mind in adopting" Idaho's water administration statutes.[225]

As to the substantive issues, the District Court concluded that the Rules' exclusion of domestic and stock water rights from administration amounts to a taking of the senior's water right without compensation. It also struck down the Rules' treatment of a senior's carryover storage in a delivery call.

The carryover storage ruling could be seen as the central substantive water law question in the case on appeal. The question was whether it is constitutional for the Director to ascertain whether "the requirements of the holder of a senior-priority water right could be met with the user's existing facilities and water supplies" before curtailing junior well owners, as specified by the Rules. IDAPA 37.03.11.42.01.g (the "Carryover Rule").

The Carryover Rule defines reasonable carryover as the water an appropriator would have left in his reservoir account at year's end "under comparable water conditions" without restricting his ability to divert water to storage and fill his reservoirs when water is available: "In determining a reasonable amount of carry-over storage water, the Director shall consider the average annual rate of fill of storage reservoirs and the average annual carry-over for prior comparable water conditions and the projected water supply for the system." IDAPA 37.03.11.42.01.g. Plaintiffs claimed, and the District Court agreed, that it was unconstitutional for the agency ever to require an appropriator to use some of its storage before curtailing junior rights.

The State and the ground water users appealed to the Idaho Supreme Court. The Plaintiffs did not appeal.[226] The Idaho Supreme Court took up the matter on an expedited schedule. As to their delivery calls, Plaintiffs technically could have gone forward with the administrative hearing during the court challenge and appeal; indeed, the Plaintiffs successfully resisted the State's motion that the Supreme Court stay the administrative action until after it ruled. Nonetheless, Plaintiffs did not press for action before the Department, and the calls effectively were placed on hold while the Rules challenge went through the appeal.

Printed 6/23/2023 9:09 AM

Presumably, now that the Idaho Supreme Court has made its decision, the Surface water users' allegations of injury will resume as contested cases before the Department. *AFRD* makes clear that the Rules set forth correct legal standards under which the Department will hear these cases.[227]

(c) The Supreme Court's decision in *AFRD*

(i) The *AFRD* ruling on facial vs. "as applied" constitutionality

To begin with, the Idaho Supreme Court held that the District Court erred in considering a lawsuit that evaluated aspects of the Rules "as applied." The high court held, as defendants had argued below, that the reference to a rule's "threatened application" in Idaho's declaratory judgment statute is intended "to permit standing to challenge a rule, but does not eliminate the need for completion of administrative proceedings for an as applied challenge."[228] The Court noted that "a district court cannot properly engage in an 'as applied' constitutional analysis until a complete factual record has been developed."[229] However, rather than simply reverse on this single point and dismiss the case as premature, the high court took up, and ultimately reversed, the balance of the District Court's opinion.[230]

(ii) The *AFRD* holding on the Rules' lack of certain procedural components

The Supreme Court analyzed each of the "tenets and procedures" the District Court had concluded the constitution requires be set out in the Rules. As a starting point, the court noted that the Rules expressly incorporate all applicable Idaho law, and found that "it is unnecessary to incorporate every extant law unless specifically necessary to a clear understanding of the particular Rule."[231] This is particularly the case, found the court, in a constitutional challenge where a court is required to seek an interpretation of a rule that upholds its constitutionality.

As to the specific rulings, the court first reversed the District Court's conclusion that the Rules must specify burdens of proof and evidentiary standards. These procedures "have been developed over the years and are to be read into the Rules," and the Rules "do not permit or direct the shifting of the

---

[227] Plaintiffs sought rehearing before the Idaho Supreme Court on the carryover storage issue. As of this writing, the Court has not acted on the rehearing petition. Plaintiffs also refiled their delivery calls for 2007.

[228] *American Falls*, 154 P.3d at 442-43.

[229] *American Falls*, 154 P.3d at 442-43.

[230] Actually, the Court affirmed the District Court on one ruling not germane to the water law issues: whether the lower court erred by revoking the City of Pocatello's intervention as a party in the case. The Supreme Court agreed that the District Court had properly exercised its discretion in that regard.

[231] *American Falls*, 154 P.3d at 444.

burden of proof."[232] The court expressed no opinion as to what those burdens are in connection with particular claims, defenses, or factual allegations in a water delivery call.

Second, the Supreme Court rejected the District Court's conclusions about "timely administration" of water rights. "Even if this Court embarked on an analysis of an as applied challenge to the Rules, the facts developed thus far do not support American Falls' contention that it was deprived of timely administration in response to the Delivery Call."[233]

> Clearly it was important to the drafters of our Constitution that there be a timely resolution of disputes relating to water. While there must be a timely response to a delivery call, neither the Constitution nor the statutes place any specific timeframes on this process, despite ample opportunity to do so. Given the complexity of the factual determinations that must be made in determining material injury, whether water sources are interconnected and whether curtailment of a junior's water right will indeed provide water to the senior, it is difficult to imagine how such a timeframe might be imposed across the board. It is vastly more important that the Director have the necessary pertinent information and the time to make a reasoned decision based on the available facts.

AFRD, 154 P.3d at 446.

Third, the court took up the question of whether the Rules violated a constitutional principle for failing to enunciate "objective standards." The high court noted that the Rules catalogue numerous factors the Director may consider "in determining material injury and whether the holders of water rights are using water efficiently and without waste." The court held that these "are decisions properly vested in the Director."[234]

> Those factors, of necessity, require some determination of "reasonableness" and it is the lack of an objective standard—something other than "reasonableness"—which caused the district court to conclude the Rules were facially defective. Given the nature of the decisions which must be made in determining how to respond to a delivery call, there must be some exercise of discretion by the Director. . . . [T]he Rules are not facially deficient in not being more specific in defining what is "reasonable" in any given case.

AFRD, 154 P.3d at 446.

Printed 6/23/2023 9:09 AM

Fourth, the Supreme Court addressed the District Court's conclusion that the Rules "allow the Director to, in essence, re-adjudicate water rights by conducting a complete re-evaluation of the scope and efficiencies of a decreed water right in conjunction with a delivery call."[235] The Supreme Court noted, with evident approval, that the District Court had ruled that "even with decreed water rights, the Director does have some authority to make determinations regarding material injury, the reasonableness of a diversion, the reasonableness of use and full economic development."[236] The court found that the Rules allow the Director to consider factors such as "the system, diversion, and conveyance efficiency, the method of irrigation water application and alternate reasonable means of diversion."[237]

Plaintiffs had argued that "the Director is not authorized to consider such factors before administering water rights" and "is 'required to deliver the full quantity of decreed senior water rights according to their priority' rather than partake in this re-evaluation. (Emphasis in original brief.)."[238] In rejecting the plaintiffs' position, the court focused on the admonition in the Constitution itself that priority is to be extended only to those actually using water. Consequently, the court found that actual use always is a factor to be considered in water rights administration.

> Clearly, even as acknowledged by the district court, the Director may consider factors such as those listed above in water rights administration. Specifically, the Director "has the duty and authority" to consider circumstances when the water user is not irrigating the full number of acres decreed under the water right. If this court were to rule the Director lacks the power in a delivery call to evaluate whether the senior is putting the water to beneficial use, we would be ignoring the constitutional requirement that priority over water be extended only to those using the water. Additionally, the water rights adjudications neither address, nor answer, the questions presented in delivery calls; thus, responding to delivery calls, as conducted pursuant to the CM Rules, do not constitute a readjudication.

AFRD, 154 P.3d at 447-48.

(iii) The *AFRD* ruling on carryover storage

Carryover storage refers to "the unused water in a reservoir at the end of the irrigation year which is retained or stored for future use in years of drought or low-water." *AFRD*, 143 Idaho at 878, 154 P.3d at 449. There is no doubt as to the right of the holder of a storage right to retain such stored

[235] *American Falls*, 154 P.3d at 447.

[236] *American Falls*, 154 P.3d at 447.

[237] *American Falls*, 154 P.3d at 447.

[238] *American Falls*, 154 P.3d at 447.

water for future years. The issue in *AFRD* was whether a person who held both storage rights and natural flow rights could curtail junior users in order to provide a full supply of his natural flow rights despite the availability of water in storage. In other words, is the holder of these rights obligated first to draw on his own storage before curtailing juniors? Or, to put it yet another way, may the Director "refrain from curtailing junior water rights if a senior has sufficient storage rights to meet his needs"? *AFRD*, 143 Idaho at 879, 154 P.3d at 450. The Conjunctive Management Rules said the answer is, essentially, maybe. Specifically, the Rules allow the senior to demand both all natural flow rights necessary to satisfy his beneficial use plus a reasonable quantity of carryover storage. That is, he must use his storage rights before curtailing others to the extent that the storage rights are in excess of what is reasonably needed to protect against future drought.

Judge Wood had concluded that the Rules are unconstitutional in allowing the Department to consider a senior's carryover storage in determining whether to curtail juniors. The Supreme Court also reversed Judge Wood on this issue.

> Concurrent with the right to use water in Idaho "first in time," is the obligation to put that water to beneficial use. To permit excessive carryover of stored water without regard to the need for it would be in itself unconstitutional. The CM Rules are not facially unconstitutional in permitting some discretion in the Director to determine whether the carryover water is reasonably necessary for future needs.

AFRD, 154 P.3d at 451. The court further held:

> Neither the Idaho Constitution, nor statutes, permit irrigation districts and individual water right holders to waste water or unnecessarily hoard it without putting it to some beneficial use. At oral argument, one of the irrigation district attorneys candidly admitted that their position was that they should be permitted to fill their entire storage water right, regardless of whether there was any indication that it was necessary to fulfill current or future needs and even though the irrigation districts routinely sell or lease the water for uses unrelated to the original rights. This is simply not the law in Idaho.

AFRD, 154 P.3d at 451.

(iv) The *AFRD* ruling on domestic and stock water rights

The District Court had held that the Rules' exemption of domestic and stock water rights from administration in a delivery call amounted to a taking of the seniors' water rights—in other words, that conjunctive administration should not give this category of water rights a free pass.[239] Neither side

[239] The Rules provide an exemption from administration for domestic and stock water rights. IDAPA 37.03.11.20.11.

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

attacked this ruling in its appeal briefs, but the Supreme Court took it up anyway, reversing the District Court. The Supreme Court's position was that the Constitution allows those diverting water for domestic purposes to have "preference" over those using for any other purpose, provided that the domestic right owner provide compensation to the rights taken.[240] Even though the Rule exempting domestic and stock water rights does not reference the "take, but compensate" authority, the court reasoned that because the Rules incorporate all applicable Idaho law and do not prohibit use of this authority, this provision is constitutional.

The court did not explain how a stock water right—presumably an "agricultural" entitlement within the constitutional provision—might be able to have preference over another agricultural water right, such as the irrigation rights the Canal Companies assert in the pending delivery calls. The constitutional provision does not mention stock water rights as such, but expressly provides agricultural rights as a preference only over those using water for "manufacturing purposes."

The Idaho Supreme Court's decision in *AFRD* likely will be seen as a milestone in Idaho water law. It cleared away a number of questions about the Rules and reaffirmed several fundamental principles of the prior appropriation doctrine.

(6) Round Six: The ESPA delivery calls go to hearing before the Department, result in rulings

In the four months between January and April 2008, and following close on the heels of *AFRD*, the Idaho Department of Water Resources ("Department") conducted hearings and issued decisions in three delivery calls in these near-epic contests between holders of ground and surface water rights in or dependent upon the huge ESPA.

The amount of water in ESPA storage increased dramatically after surface water irrigation began in eastern Idaho in the late 1800s—seepage from ditches and fields, and even year-round diversion practices in some areas, put huge amounts of water into the aquifer. With the advent of ground water pumping in about 1950, and later the conversion of flood irrigation techniques to more efficient methods, both the amount in storage and the amount of incidental recharge declined. While aquifer levels still are above those believed to have existed before settlement, aquifer contributions to the Snake River have declined since about 1950, primarily in two reaches. One is upstream from Twin

[240] "The right to divert and appropriate the unappropriated waters of any natural stream to beneficial uses, shall never be denied, except that the state may regulate and limit the use thereof for power purposes. Priority of appropriations shall give the better right as between those using the water; but when the water of any natural stream are not sufficient for the service of all those desiring the use of the same, those using the water for domestic purposes shall (subject to such limitations as may be prescribed by law) have preference over those claiming for any other purpose; and those using the water for agricultural purposes shall have preference over those using the same for manufacturing purposes. And in any organized mining district those using the water for mining purposes or milling purposes connected with mining, shall have preference over those using the same for manufacturing or agricultural purposes. But the usage by such subsequent appropriators shall be subject to such provisions of law regulating the taking of private property for public and private use, as referred to in section 14 of article I of this Constitution." Idaho Const. art. XV, § 3.

Falls where river flows serve the senior rights of the seven irrigation districts and canal companies calling themselves the Surface Water Coalition ("SWC"). The other is at the western edge of the ESPA where the aquifer spills spectacularly out of the walls of the deep Snake River canyon in huge springs whose cold, pure waters supply trout farms (the "Spring Users"), hydropower, and other uses on bench lands situated between the aquifer and the river.

As discussed above, in 2005, believing ground water pumping had injured their water rights, both the Spring Users and the SWC filed delivery calls with the Department's Director by which they sought orders shutting off literally hundreds of junior ground water irrigation wells in the ESPA. This section discusses the outcome (so far) of these delivery calls.

AFRD answered fundamental questions about how delivery calls—particularly those involving disputes between ground and surface water rights—are to be carried out in Idaho, and affirmed the Department's administrative rules governing such calls. While it is appropriate to identify *AFRD*, and now these decisions, as milestones in Idaho water law, to a great extent these rulings all reaffirm—albeit in the new setting of conjunctive administration—principles of water law that have been around for decades. The senior surface water users in these cases contended that such principles do not apply or should be narrowed. These contentions failed. However, the decisions of course still require juniors to answer for actual material injury they cause to senior water rights, subject to several "public interest" limitations.

The first of these post *AFRD* decisions, a hearing officer's post-hearing recommended order to the Director, was issued January 11, 2008 in the Spring Users' delivery call. The second was the January 29, 2008 ruling from the Director in the A&B Irrigation District delivery call. The third, issued April 29, 2008, was the hearing officer's recommended order in the Surface Water Coalition's delivery call. (Below, we discuss the SWC case first, because it provides useful context for considering the others.)

(a) Surface Water Coalition delivery call—the Hearing Officer's Recommended Order

Editor's note: The discussion below was written before the appeal of the Director's ruling. That ruling was largely affirmed by the district court, which, in turn, was affirmed by the Idaho Supreme Court in A&B Irr. Dist. v. IDWR, 153 Idaho 500, 284 P.3d 225 (2012) (Burdick, C.J.).

On April 29, 2008 the Department's Hearing Officer issued his Recommended Order[241] in the case before the Department entitled *In the Matter of Distribution of Water to Various Water Rights Held by or for the Benefit of [the Surface Water Coalition]* (2008).

[241] The Department's Rules specify the process by which the Director assigns a matter to a hearing officer, who then makes a recommended order for the Director's consideration. IDAPA 37.01.01.720 (Rule 720).

In this case, seven irrigation districts and canal companies holding senior rights to divert from the Snake River, and pursuing their claims jointly under the name "Surface Water Coalition" ("SWC"),[242] filed a delivery call with the Department in early 2005 seeking curtailment of hundreds of ground water wells in Water Districts 120 and 130, which cover a large part of southern Idaho's agricultural land.[243] In response, the Director issued an emergency, pre-hearing order in May 2005 and supplemented it several times thereafter (collectively, the "Emergency Order").[244] The Emergency Order found it likely that ground water pumping in these areas was causing, or had caused, material injury to two of the SWC members' surface water rights, and directed junior ground water right holders (at least pending a full evidentiary hearing) to provide replacement water to these two SWC members. The Emergency Order determined that the other five had not suffered material injury and were not likely to in the coming irrigation season. Both sides filed exceptions to the Emergency Order and asked for a hearing.

The evidentiary hearing in the controversy was delayed for nearly two years while the parties took a side trip to district court and then to the Idaho Supreme Court to test SWC's theory that the Department's Conjunctive Management Rules ("Rules") are unconstitutional. This, of course, resulted in the *AFRD* decision rejecting SWC's theory that the Rules impermissibly allow the Director to evaluate various factors, such as the senior's means of diversion, its actual use of water, and factors pertaining to material injury. In early 2008, the SWC matter finally went to evidentiary hearing on both sides' challenges to the Director's Emergency Order. The Department's Hearing Officer, retired Idaho Supreme Court Justice Gerald F. Schroeder,[245] issued a recommended decision (i.e., a recommendation to the Director) on April 29, 2008 ("SWC Rec. Order").

In most respects, the SWC Rec. Order affirms the Director's Emergency Order, which had projected some material injury to, and required replacement water for, Twin Falls Canal Company

---

[242] The SWC participants are Twin Falls Canal Company, North Side Canal Company, Minidoka Irrigation District, Burley Irrigation District, Milner Irrigation District, American Falls Reservoir District No. 2, and A&B Irrigation District. Each diverts from the Snake River at or just above Milner Dam, which is up-river from the City of Twin Falls.

[243] The SWC call actually did not seek to shut off ground water rights in Water District ("WD") 130; it named only the more easterly (upstream) WD 120. However, the Director determined that, based on evidence available to the Department (including results from running various scenarios under the Eastern Snake Plain Ground Water Model), pumping in the adjacent WD 130 also had an effect on river reach gains above Milner, and that therefore WD 130must be included. Ground water pumping in WD 140 is projected by the ground water model to have significant effects in both WDs 120 and 130, so we can expect 140 to be a target of future delivery calls.

[244] Idaho's Administrative Procedure Act authorizes an agency, in certain circumstances, to issue an emergency order before conducting a hearing on the matter, provided the hearing is conducted "as quickly as feasible." Idaho Code § 67-5247(4).

[245] The parties stipulated to former Justice Schroeder's appointment to the case.

("TFCC") and American Falls Reservoir District No. 2. However, the trial produced several important adjustments to the Director's approach.

These are the most significant portions of the Hearing Officer's Recommended Order:

(i) Neither side should be seen as the bad guy

The Hearing Officer began with language plainly intended to defuse the rhetoric and emotion that has arisen around this multi-year controversy. He noted that both the surface water users and ground water pumpers have valid water rights and both have contributed to the development of the state. The surface water users "have opened vast expanses of land to productivity" and "have done so under a state of law that appeared to provide them with protection ('first in time, first in right') from interference with the rights they developed." SWC Rec. Order at 1-2. The ground water pumpers, he wrote, "are not poachers who sneaked through an unlocked door to take water away from surface water users." SWC Rec. Order at 2. He also concluded that the interconnected Snake River and ESPA system "has not run out of water." SWC Rec. Order at 6.

(ii) The Director is obligated to investigate the senior's injury claims rather than taking them at face value

Hearing Officer reiterated this fundamental ruling from *AFRD,* noting that "to do otherwise would be irresponsible to the public interest and often unduly expensive to the parties." SWC Rec. Order at 28.

(iii) Some SWC members suffered material injury in 2004 as a result of ground water pumping, and, in his Emergency Orders, the Director reasonably predicted the same would occur in 2005

There was not much evidence of crop loss due to lack of water in this case. The SWC failed to identify lands that were not irrigated, or insufficiently irrigated, due to lack of water. However, the Hearing Officer found, based on certain Farm Services Administration information upon which the Department had relied, that there were some instances of water shortages that "adversely impacted crops and influenced crop decisions, e.g. foregoing a cutting of hay to supply water to corn crops." SWC Rec. Order at 30.[246]

[246] Since the SWC delivery call, which is deemed renewed each year, has been in place since 2005, the Department has responded to it in the context of three separate years. After the hearing in the case, Department staff issued a memorandum containing injury calculations for 2007 and the projected injury for 2008. "Surface Water Coalition Call 2007 Final Injury and 2008 Predicted Injury," *Memorandum from Steve Burrell, Hydrology Section, to Director Dave Tuthill* (April 14, 2008). The memorandum calculates a total of 17,345 acre-feet of injury in 2007, all to one SWC member: Twin Falls Canal Company. It projects no injury for any SWC member in 2008.

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

(iv) Burdens of proof in a water call

Citing *AFRD*, the Hearing Officer found that the senior users in a delivery call "have the initial burden of establishing their water rights and material injury to those water rights," after which the burden shifts to the junior to present defenses. SWC Rec. Order at 25. The Hearing Officer noted that the Emergency Order does not make clear how the Director applied these burdens, but since the Emergency Order was issued without the benefit of hearing, that could be expected. In any event, the Hearing Officer made it clear that he applied the burdens as the Supreme Court had directed.

(v) The Department appropriately used a regional ground water model to determine several facts about the interaction of the aquifer and the river

The ESPA controversy has proceeded concurrently with the development and refinement of the Eastern Snake Plan Aquifer Model ("ESPAM"), a multi-agency project that has been produced over several years of data gathering, scientific collaboration and number crunching (and continues today). The Hearing Officer noted that ESPAM has limitations. It cannot predict, for example, the effect of a well on a particular spring outflow into the Snake River. However, the Hearing Officer found that the model has scientific basis and is the best tool currently available to make certain predictions. SWC Rec. Order at 33. In summary, the model predicts the effects of ground water pumping on several Snake River reaches across southern Idaho. Among these is the conclusion that "ground water pumping has contributed to a decline in ground water levels ranging between five and 60 feet throughout the ESPA." SWC Rec. Order at 6. This has contributed to a declining trend in reach gains to the river above Milner during the irrigation season. SWC Rec. Order at 10. The Hearing Officer found the evidence to show that about "90% of the total steady-state depletions to ground water pumping have manifested themselves in the Snake River." SWC Rec. Order at 12.

(vi) The Department appropriately applied a ten percent error factor to the model and established a "trim line" to limit the extent of ground water curtailment

In his Emergency Order, the Director had found the model to embody a ten percent margin of error and therefore determined that ground water rights falling within an area having ten percent or less effect on a particular reach would not be curtailed or required to provide mitigation as a result of the SWC delivery call. (He made a similar ruling in the Spring Users case, discussed below.) According to the Hearing Officer, "Application of the trim line was proper to avoid a significant probability that curtailment would extend to ground water users who would suffer significantly without contributing water where necessary to remediate the material injury to the surface water users." SWC Rec. Order at 33. The Hearing Officer observed that as the model is refined, "these improvements should be applied as they occur." *Id.* at 34.

(vii) Not all pumping from the ESPA adversely affects the SWC's water rights; in wetter years, there is no injury

and conjunctive management is "unnecessary or minimal"

SWC Rec. Order at 29. The Hearing Officer found that during recent drought years, "ground water pumping has affected the quantity and timing of water available to SWC members." *Id.* This and other portions of the Recommended Order contradict one of SWC's core contentions—namely, that the ESPA is over-appropriated and that there is ongoing injury that can be solved only by permanently shutting off many wells. *See, e.g.*, SWC Rec. Order at 18. The Hearing Officer found that:

> not all water withdrawn from pumping has an adverse effect on surface water users dependent upon the Snake River. Sometimes there is enough water entering the system to fill all needs. In such circumstances conjunctive management is unnecessary or minimal.

SWC Rec. Order at 29.

(viii) The doctrine of "first-in-time, first-in-right" is to be applied in light of the public interest

The Director has discretion to consider factors that may outweigh a water user's priority, including the senior's actual need and beneficial use, actual acres irrigated and whether the irrigator is using reasonable means of diverting or applying the water. The Hearing Officer cited the case of *Schodde v. Twin Falls Land and Water Co.*, 224 U.S. 107 (1912), for the proposition that "the public interest is a factor to be considered in water rights litigation that impacts the public." SWC Rec. Order at 37. The Hearing Officer concluded:

> The Director is not limited to counting the number of acre-feet in a storage account and the number of cubic feet per second in the license or decree and comparing the priority date to other priority dates and then ordering curtailment to achieve whatever result that action will obtain regardless of actual need for the water and the consequences to the State, its communities and citizens.

SWC Rec. Order at 39. The Hearing Officer found that the senior must be placing "the water to a beneficial use," and must not simply have "a desire to use the maximum right in the license or decree." *Id.* The Hearing Officer noted that these conclusions relative to the public interest are embodied in the Rules, and that they

> have significance in considering several issues in this case. They affect the Director's use of the so-called "trim line," a point of departure beyond which curtailment will not be considered. It affects the Director's consideration of alternatives to curtailment. The public interest affects determination of whether there will be curtailment of other mitigation to provide for carryover storage water, drawing a line between what is

> reasonable and what is hording [*sic*]. It affects consideration of issues of farm efficiency as opposed to achievable farm efficiency. Consideration of the public interest gives relevance to evidence of the economic impact of curtailment upon the State and local communities.

SWC Rec. Order at 39. These are examples of rulings in this case that restate longstanding principles of water law, but ones that the SWC has maintained do not apply in their actions against ground water users.

(ix) In a delivery call, the Department must remove non-irrigated lands from its injury or curtailment calculation

It seems elementary that when an irrigation entity, such as those in the SWC, makes a delivery call to supply its irrigation water rights, it should expect the State to curtail juniors only to the extent necessary to supply actually irrigated acres. However, in their 2005 delivery calls the SWC members did not describe the number of acres that actually are irrigated within their boundaries, relying instead on their more generally described boundaries and the number of shareholders or members they have. This approach was rejected by the Hearing Officer, who found, in his SWC Rec. Order, that some 14,500 acres in three of the seven irrigation entities "are not irrigated" and cannot be considered in calculating their necessary water supply.[247] SWC Rec. Order at 53. Much of this non-irrigated area is comprised of land that, though farmed in the past, now has been developed into residential subdivisions and commercial areas. The Hearing Officer concluded that the "calculation of a water budget in determining if there will be curtailment should be based on acres, not shares." *Id.*

(x) The Director appropriately adopted a "minimum full supply" concept to project material injury, but did not employ it correctly and now must modify it

In the Emergency Order, the Director had calculated the minimum water supply, both natural flow and storage, the seniors needed to meet their crop requirements in the upcoming irrigation season. Then he compared this to the predicted 2005 supply to determine injury. The SWC members objected, again asserting simply that they were entitled to their licensed and decreed amounts. The Hearing Officer approved of the minimum full supply concept, noting that "if it accurately defines need, use of water above that amount would not be applied to a beneficial use and would constitute waste." SWC Rec. Order at 44. However, the Hearing Officer found that the Director's use of 1995 as a baseline year, without adjustment to take into changing conditions, was inappropriate.

---

[247] The group of irrigation entities that brought the ESPA delivery call (which calls itself the Surface Water Coalition) is comprised of seven members. It is possible that the other four entities not mentioned by the Hearing Officer in this context also have acres that are not irrigated but for which curtailments are sought. At the hearing, the ground water users offered evidence only on the three noted by the Hearing Officer in the Recommended Order (Twin Falls Canal Co., Minidoka Irrigation District, and Burley Irrigation District).

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

(xi) The Director's use of 1995 as a fixed base year for determining minimum full supply was not appropriate.

The Hearing Officer observed that the Director's use, in the Emergency Order, of 1995 conditions as involving the SWC's minimum full supply "was never intended as a final word," that the baseline should not be fixed onto one year, and that it should be "adjustable" to reflect wet and dry years and changing irrigation practices. Specifically, the Hearing Officer concluded that the 1995 baseline should be analyzed and adjusted as necessary to embody the following elements:

- To what degree the need for irrigation water in 1995 was "depressed by the well-above average precipitation" that year compared to a normal year.
- Any significant cropping changes since 1995.
- Changes in facilities, diversion, conveyance, and irrigation practices, such as conversions to sprinklers.
- Soil conditions, such as soil water retention ability.
- The number of non-irrigated acres in the SWC entity's service area (this is discussed further below).
- Calculation of the senior's water needs should be based on acres, not shares in a mutual canal company (such as Twin Falls Canal Co.).
- Twin Falls Canal Company's per-acre full headgate rate of water delivery must be limited to $^{5}/_{8}$ miner's inch (0.0125 cfs), instead of the ¾ inch 0.015 cfs) they claimed (this is discussed further below).

SWC Rec. Order at 49-53.

(xii) Reasonable conservation practices and on-farm efficiencies

The City of Pocatello, which has at least one ESPA ground water right, had argued that the SWC members should be held to the standard of "achievable farm efficiency" in their irrigation practices. The Hearing Officer disagreed, noting that the Rules require the calling senior to employ "reasonable diversion and conveyance efficiency and conservation practices." SWC Rec. Order at 56. He concluded that the SWC members have been reasonably efficient and have employed reasonable conservation practices. However, he noted that if the Director identifies such measures that are not being used, he "may consider that fact in future determination of need." SWC Rec. Order at 57.

(xiii) The SWC members have a right to a reasonable amount of carryover storage, and juniors may be curtailed to provide it

Again, the Hearing Officer turned to the Rules, as supported by the holding in *AFRD*, to conclude that the SWC members are entitled to a reasonable amount of carryover storage. The Hearing Officer concluded that curtailment or a replacement water obligation to supply carryover storage could be imposed only for "the forthcoming year," and that attempting to ensure carryover "for periods of

years" is problematic and presents "too great a likelihood for the waste of water." SWC Rec. Order at 62. "There is no precise amount of reasonable carryover storage, but the amount should be sufficient to assure that if the following year is a year of water shortage there will be sufficient water in storage in addition to whatever natural flow rights exist to fully meet crop needs." *Id*.

(xiv) Juniors are not responsible for storage the seniors lease to others, and if the reservoir system fills, it cancels any need for mitigation

Curtailment cannot be imposed to make up for storage water whose holder sold or leased to others "for purposes unrelated to the original right." SWC Rec. Order at 61 and 64 (again citing *AFRD*). This includes stored water that is leased to other irrigators or for instream flow maintenance or salmon flow enhancements. On the other hand, if storage releases are mandated without compensation to the surface water users, then "ground water users would be subject to a condition for their depletion of the river." SWC Rec. Order at 61. If the senior's storage accounts fill, this "would erase the debits and credits" relative to determining injury and the juniors' responsibility for mitigation. SWC Rec. Order at 62.

(xv) Mitigation or curtailment must be provided in the season when it is needed by the seniors

The ground water users responded to the Emergency Order by offering, in the 2005-2007 period, storage water and other measures to provide replacement water to offset the projected injury to the two SWC members. The Hearing Officer observed that despite these efforts, "the procedural steps for approving a mitigation plan," as outlined in the Rules, were not followed and there never was a hearing or other "protocol for the presentation of objections" on such a plan. SWC Rec. Order at 65. One of the criticisms SWC leveled at the replacement water plans was that they allegedly did not provide "in-season" relief. The Hearing Officer found that the injured seniors "are entitled to curtailment or replacement water in the season of material injury," and suggested that a protocol should be developed to handle these questions. *Id.* He ruled that in-season replacement may occur either by the ground water users "obtaining lease water before the beginning of [the] irrigation season" to provide to the seniors or "underwriting the affected SWC members in their acquisition of the water as needed with a year end accounting." SWC Rec. Order at 66.

(xvi) Desirability of ground water users obtaining their own storage for mitigation

The Hearing Officer observed that it "would be very desirable to have a mechanism for [ground water users] to have an independent right to storage which it could apply as replacement water as an alternative to curtailment . . . ." SWC Rec. Order at 11. To date, the ground water users do not have a permanent storage contract, and instead must obtain storage (typically on a one-year basis) from the Upper Snake Rental Pool.

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

(xvii) Likely no curtailment in 2008

The Department expects a full Snake River reservoir system in spring 2008. Accordingly, we anticipate that there will be an adequate water supply for SWC members in 2008 and that ground water users will not be required to curtail pumping or provide mitigation to surface water users in the upcoming irrigation season. However, it seems inevitable that drier years in the future will require ground water users to provide some level of mitigation or replacement water, at least to the two SWC participants who were deemed to have suffered injury in 2005. Assuming the Hearing Officer's recommendations are accepted (and upheld on any appeal), in those years the Director will implement the recommendations and, presumably, make additional findings concerning the issues the Hearing Officer identified but did not answer (these are discussed below).

(xviii) Remaining issues for the Director to address in future years

The Hearing Officer noted that the Director still will have facts to determine in coming seasons. These issues would include, perhaps among others:

- *Conduct further analysis of the base year in calculating minimum full supply*. As noted above, the Director would need to consider additional factors to determine the basis for calculating the seniors' minimum full supply.
- *Determine the acreage served by supplemental ground water rights held by SWC members*. The Hearing Officer found that an "undetermined number" of SWC irrigators may hold supplemental ground water rights. SWC Rec. Order at 10. During the first weeks of the delivery call in 2005, the Director had requested information from SWC about the number and locations of these wells, but this information was not made available then. Evidently it still remains unclear. In any event, the Hearing Officer noted that "[i]t would seem that any such ground water rights would be junior to the surface irrigation rights and subject to curtailment." SWC Rec. Order at 10. This appears to be another area where ground water users could insist on a display of facts in future years.
- *Account for additional non-irrigated acres within SWC*. The proof at hearing pertaining to non-irrigated acres focused on only three of the seven SWC members. Furthermore, even these three can be expected to have additional lands converted from irrigated agriculture to non-irrigated areas in the future. Consequently, it would appear that the Director would need to investigate such conversions in all seven entities before either determining material injury or setting a curtailment or mitigation number in the future.
- *Develop a protocol for considering mitigation or replacement water plans*. The Hearing Officer's decision carries the expectation that the Department will adopt a protocol for either providing storage water before the fact or paying for the seniors' purchase of it. Presumably, the Director will take one of these paths or adopt some other acceptable protocol. SWC Rec. Order at 65-66.

(b) The Spring Users' delivery call

The second part of what we refer to "Round Six" concerns the Spring Users' delivery call. On January 11, 2008, Hearing Officer Gerald Schroeder issued his *Opinion Constituting Findings of Fact, Conclusions of Law and Recommendation* ("Springs Rec. Order") after a November 2007 evidentiary hearing in two consolidated delivery calls brought by Blue Lakes Trout Farm, Inc., and Clear Springs

Foods, Inc. (together, the "Spring Users"). These entities are trout producers in Idaho's famed "Thousand Springs" region. Each holds water rights authorizing large diversions from springs that flow from the basalt canyon walls where the Snake River has incised into, and truncated, the Eastern Snake Plain Aquifer. The Spring Users' commercial trout facilities are situated between the aquifer and the river, and they depend on the gravity flow of large quantities of cold, high-quality water from the aquifer into their raceways. Their delivery calls were premised on the claim that junior-priority ground water pumping from the aquifer had depleted flows to their facilities and caused them material injury.

As was the case in the SWC delivery call, the Director had issued a pre-hearing emergency order. The Hearing Officer was in effect reviewing that order based on the evidence at a trial. His order is a recommendation to the Director after hearing.

Following the hearing, Hearing Officer Schroeder issued a recommended order that in nearly all material respects affirmed former Director Karl Dreher's orders that junior ground water users are to provide a certain level of mitigation to increase spring flows for the benefit of the Spring Users, based on injured spring water rights having priorities of 1964 and 1973. Many of the Hearing Officer's conclusions mirror those in the SWC delivery call decision, and these will not be repeated. In addition to those, the following are the key rulings in the Springs case:

(i) Ground water pumpers are not solely responsible for spring declines, but must stop diverting or provide mitigation to the extent their pumping interferes with senior rights

The ground water pumpers, acting through the North Snake and Magic Valley Ground Water Districts (the "Ground Water Districts") and represented by a larger consortium of such districts known as Idaho Ground Water Appropriators, Inc. ("IGWA"), pointed out that the Spring Users made their appropriations at times—primarily the 1960s and 1970s—when aquifer outflows at the springs were higher, due to incidental recharge from inefficient surface irrigation practices, than they were in 1902. "IGWA maintains that there should not be curtailment when the Spring Users' rights are dependent upon an inflated water level that was dependent upon incidental recharge that resulted from inefficient farming practices that cannot now be required." Springs Rec. Order at 7. The Hearing Officer acknowledged the anomalous situation in the ESPA, in which the aquifer holds more water now than it did under pre-development conditions, but applied the basic priority rule nonetheless. He noted that the Spring Users "cannot require the continuance of inefficient flood [irrigation] practices." At the same time, he found that ground water rights still must answer to the priority system. Accordingly, he ruled that the "Spring Users are entitled to curtailment to the extent that the junior ground water users interfere with the water the Spring Users would otherwise have under their water rights." Springs Rec. Order at 8.

(ii) It was proper for the Director to consider historical information about water available to the Spring Users' rights at the time they were appropriated, and not base

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

his analysis solely on the maximum amounts stated in the Spring Users' decrees

The Spring Users maintained that they should be entitled to curtail juniors to supply the full amount of their licensed water rights year-round, and that the Director was without power to "go behind" or "readjudicate" their recent SRBA decrees ratifying these amounts. The Ground Water Districts maintained that, at the time the spring rights were established, the supplies from the aquifer fluctuated down seasonally, and did not supply the maximum diversion amounts year-round. The Hearing Officer agreed with the ground water users, as had the Director in his emergency order. The amount of curtailment or mitigation would take into account such fluctuations. Springs Rec. Order at 10-11. The "Spring Users cannot be guaranteed the full amount of the water rights adjudicated every day of the year or every year when that condition has not existed during any relevant time." *Id.* at 18-19.

(iii) The ground water users failed to prove that the Spring Users employed unreasonable means of diversion

AFRD had confirmed that, in a delivery call, juniors can raise the defense that the seniors are not using reasonably efficient means of diversion. In his emergency order, the Director already had found a couple instances where the Spring Users were not using reasonable means, and he had restricted the amount of curtailment accordingly. At hearing, the ground water users argued for additional restrictions, but failed to provide adequate proof. The Hearing Officer found that arguments such as the possibility of horizontal drilling into the aquifer or pump-back arrangements lacked sufficient evidence to support expanding the Director's findings on this issue. Springs Rec. Order at 10-12.

(iv) The ground water pumpers were required to curtail, or provide replacement water equivalent to, some 57,000 acres of irrigated land in a program phased in over five years

As part of their mitigation or replacement water effort, the Ground Water Districts have obtained storage water with which to provide aquifer recharge for the benefit of spring flows, and have shut off several wells in favor of using available surface water to irrigate these same lands. The Hearing Officer found that the Rules appropriately allowed phased curtailment or mitigation over a five year period.

(v) The 10% "trim line," based on model uncertainty, applies to the Spring Users' delivery call

As in the SWC delivery call, the Hearing Officer agreed it was appropriate for the Director to limit the reach of the delivery call to those wells for which the model predicts, with greater than 10% certainty, that their pumping depletes a particular spring reach. The use of the trim line was of huge import in this case. "One of the most startling facts in these cases is the amount of [ground water supplied] acreage that must be curtailed in order to deliver water to the Spring Users facilities."

Springs Rec. Order at 22. The Hearing Officer noted that, without applying the 10% trim line, the number of ground water irrigated acres required to be dried up "for Blue Lakes would go from 57,220 acres to 300,000 acres. The acres curtailed to be applied to [Clear Springs] would rise from 52,740 acres to 600,000 acres." Springs Rec. Order at 22. The Hearing Officer recited the importance of ground water development to several cities and the agricultural industry in southern Idaho, then wrote:

> In this context to say that land will not be dried up when there is a substantial possibility that there will be no significant contribution to the Spring Users water rights is consistent with the policies set forth in the Conjunctive Management Rules, which are consistent with the Idaho Constitution and the legislative policy towards ground water development.

Spring Rec. Order at 23.

(vi) The public interest is to be considered when curtailment is proposed

Again citing *Schodde*, the Hearing Officer found that "the public good" can be considered in delivery calls such as this, and in some cases might "outweigh the private right." Springs Rec. Order at 15.

> "First in time is first in right" is fundamental to water administration but is subject to consideration of the public interest. The Director is not limited to counting the number of cubic feet per second in the decree and comparing the priority date to other priority dates and then ordering curtailment to achieve whatever result that action will obtain regardless of the consequences to the State, its communities and citizens. These conclusions have significance in several issues in this case. They affect the Director's use of the so-called "trim line," a point of departure beyond which curtailment was not ordered. The public interest affects the timing of curtailment. Consideration of the public interest gives relevance to the economic evidence that was presented.

Springs Rec. Order at 17.

(vii) Water quality of the Spring Users' supply is an element that may be considered

The Spring Users argued that the quality of the water they receive from the springs, including its temperature, is essential to fish propagation and should be maintained in any replacement water plan. Although water quality is not an element of a water right, the Hearing Officer concluded nonetheless that "in considering alternate proposals to provide water in a manner different from the practices in place when the rights were licensed and ultimately decreed, the quality of the water may be considered." Springs Rec. Order at 22.

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

(viii) Where the senior privately agrees to subordinate its water right, it cannot seek to fill it through a call against other juniors

In his Emergency Order, the Director had reduced the amount of water to which Blue Lakes was entitled by 0.7 cfs, which was the amount of a license that Blue Lakes in an earlier and unrelated dispute had agreed to subordinate to the more junior right held by a neighboring fish facility. The Hearing Officer concurred with the Director's view. "Rather than curtail [junior ground water pumpers] to provide this water, it should be counted as water already available to Blue Lakes Trout Farm." Springs Rec. Order at 25.

(ix) The Ground Water District's replacement water plan for 2008

The Magic Valley and North Snake Ground Water Districts, the only districts among the eight covering portions of the ESPA, submitted a Replacement Water Plan ("Plan") to the Department for 2008 that includes continuation of certain mitigation actions they have implemented in prior years, such as supplying surface water to formerly ground water-irrigated acres. The Plan also incorporates mitigation measures that have been facilitated by the joint purchase of a separate fish farm by the State, the City of Twin Falls and the Ground Water Districts. The purchase makes it possible for this farm's spring water to be redirected to supply the Blue Lakes hatchery, thus alleviating the shortage on which it based its delivery call.

- The Ground Water Districts also propose to use spring water rights currently diverted by the Idaho Department of Fish and Game to supply up to 2 cfs of spring water to Clear Springs.
- Based on this representation by the Districts, the Director found them to be proceeding in good faith and did not curtail junior ground water users. The Idaho Supreme Court ultimately found the Ground Water Districts' Replacement Water Plan for 2008, though it provided sufficient replacement water that year for the seniors, violated the Rules' requirement that only formally approved mitigation plans can be used for this purpose. *In the Matter of Distribution of Water to Various Water Rights, A&B Irr. Dist. et al. v. Spackman*, Slip Op. at 19-20 (Dec. 17, 2013) (discussed below).
- Based on the Emergency Order, which the Hearing Officer largely ratified, the Ground Water Districts are obligated to provide increasing amounts of mitigation over a five-year period (beginning in 2005).

In his July 11, 2008 *Final Order Regarding Clear Springs and Blue Lakes Delivery Calls*, Department Director David Tuthill affirmed the Hearing Officer's Recommended Order in all material respects.

(c) IDWR Director's decision denying A&B Irrigation District's delivery call

This analysis discusses the third part of "Round 6," the Director's January 29, 2008 Order in the case before the Department titled *In the Matter of the Petition for Delivery Call of A&B Irrigation*

District for the Delivery of Ground Water and for the Creation of a Ground Water Management Area ("*A&B Order*").

In the *A&B Order*, IDWR Director David Tuthill denied a water delivery call in which A&B Irrigation District ("A&B") sought to curtail potentially hundreds of junior ground water rights in the ESPA. The Director concluded that A&B had suffered no material injury and that the water supply problems they allege likely stem from poor well construction or location, overly-shallow pumping depths, and similar problems—not from reduced supply due to pumping by junior ground water right holders. In any event, he noted that A&B has sufficient water to fully irrigate its patrons' lands. The Director also denied A&B's request to create a Ground Water Management Area.

A&B is comprised of two divisions. The A Division relies on Snake River surface water to irrigate about 15,000 acres. With respect to these surface water rights, A&B is part of the Surface Water Coalition ("SWC"), and has participated in SWC's delivery call against essentially the same junior ground water rights as are involved in the A&B call (discussed below). The B Division, which serves some 63,000 acres and is the subject of the delivery call, relies on about 177 wells diverting ESPA ground water under 1948-priority rights. This priority is among the most senior ground water priorities in the ESPA, and likely is a chief reason A&B has seen itself aligned with SWC, despite SWC's broad-based attack on ESPA pumping.[248]

A&B's position is that aquifer levels at its wells have dropped an average of 20 to 40 feet since 1959, and that it has had trouble pumping enough water to fully satisfy its rights. A&B alleged that it now can produce only about 974 cfs, about an 11 percent decrease in flow rate from the 1,100 cfs it says was available originally. *A&B Order* at 43. It blames junior ground water users.

A&B's delivery call against junior ESPA ground water users actually was filed in 1994, then put on hold due to a stipulation. In March 2007 A&B petitioned the Department to proceed with the matter, the Department did so, and the *A&B Order* resulted. A&B then challenged the *A&B Order*'s denial of its delivery call, and has petitioned for a hearing. The hearing was scheduled for mid-May 2008 before Hearing Officer Gerald Schroeder. In the meantime, A&B has filed a motion for declaratory order asserting that it is not subject to the Idaho law (or the Conjunctive Management Rule mandate) requiring ground water appropriators, at their own expense, to produce from a reasonable pumping level—that is, a level that is sufficiently deep so as not to command the entire ground water resource to the exclusion of other appropriators.

As he has done in the other two delivery call disputes (Spring Users and SWC), Director Tuthill reviewed the delivery call petition, evaluated information requested from A&B, considered the

[248] It is likely that any ground water curtailment to serve the SWC's surface water rights would not require shut-offs of ground water priorities as senior as 1948. Indeed, the Director's May 2, 2005 emergency order in the SWC delivery call (and subsequent orders supplementing it) affected only ground water rights that, though numerous, were many years more junior. As to a future Spring Users' call, it also is unlikely that ground water rights senior to the early 1960's would be subject to curtailment; most spring rights for fish propagation were granted between the late 1960s and mid-1980s.

Printed 6/23/2023 9:09 AM

Department's own information about A&B's water rights, and then issued a decision. The Director's *A&B Order* reflects a significant amount of hydrological and geological analysis.

The *A&B Order*'s fundamental conclusion is that A&B failed to demonstrate material injury. The additional information the Director reviewed solidified this finding.

These are the main points from the A&B decision:

(i) A&B has a full water supply

The Director concluded that, in part due to efficiency improvements, such as sprinklers replacing flood techniques, A&B was receiving sufficient water from its wells to fully irrigate all the lands of its patrons (approximately 63,000 acres). Based on studies by the Department, the University of Idaho, and the U.S. Bureau of Reclamation regarding irrigation water requirements within A&B—as well as information from A&B's own hydrogeologist—A&B has pumped a full water supply to its lands every year since 1994. *A&B Order* at 12-14.

(ii) Available date show that none of A&B's lands are short of water

A&B claimed it had 18,525 acres that were "water short," and not receiving the ¾ inch of deliveries per acre that A&B believes its lands require. The Department used an evapotranspiration model, Landsat photos, and other analyses to test this claim, and found that these lands in fact had been receiving adequate irrigation water. *A&B Order* at 15-23.

(iii) A&B has supplemental wells for which it has not accounted

Some 27,000 acres within A&B (including some of the claimed water short areas) receive ground water from private supplemental wells, although the "annual volumes pumped from these private wells were not provided by A&B and are not included in any A&B annual or monthly water use summaries." *A&B Order* at 16. In other words, the Director found A&B's wells annually pumped sufficient water for the entire project, but that over 40 percent of the project lands received at least some water from separate ground water pumps operated by A&B patrons. The Director did not discuss the priorities of these supplemental wells or their potential effects on the A&B wells.

(iv) A&B is subject to the reasonable pumping level mandate

The Director noted that ground water levels in the ESPA have declined some since the 1950s, but "generally remain above" the levels existing before surface irrigation and its attendant incidental recharge began in the late 1800s. *A&B Order* at 5. The Director concluded that A&B is required to produce its water from a reasonably deep level, and that there is no indication that A&B is being asked to pump water from below such a level. *Id.* Furthermore, the Director found that the costs A&B has incurred in deepening its wells "are not unreasonable." *Id.* at 45. In its recent motion for declaratory order, A&B argues that its 1948 priorities immunize it from the reasonable pumping level requirements

of the 1951 Ground Water Act. The motion was argued in late April 2008, and the Director has not yet ruled on it.[249]

(v) Hydrogeology

The Department referenced several hydrological and geological studies of the ESPA in A&B's area to conclude that some of A&B's wells were located in areas having little ground water productivity. The Director noted that other A&B wells were constructed into areas that had not been evaluated for productivity. A&B Order at 24. The Director refused to curtail other ground water rights when A&B's own actions had left it with insufficient water due not to overall supply in the aquifer, but to their having chosen well locations poorly.

(vi) Well design and construction

A&B had asserted, in support of its delivery call, that it abandoned seven wells "because they no longer provide adequate water." *A&B Order* at 26. However, the Director found that only five had been abandoned and that the reasons for abandonment could not be laid at the feet of the junior pumpers (four were in the non-productive sediments in the south of the project and one was abandoned due to a crooked borehole). *Id.* at 27. A&B also maintained that since 1980 it "drilled 8 replacement wells to replace wells that would no longer provide an adequate water supply as a result of the lower ground water tables." *Id*. at 28. Again, A&B's assertions did not square with the facts, since there were only five such replacement wells, one was the well to replace the crooked bore described above, and four were in the difficult hydrogeological zone. In any event, the Director concluded that "[t]he need for well deepening, well replacement, pump lowering, and pump bowl replacement, however, is not a recent development and is attributable, in part, to substandard original well construction, routine operation and maintenance, extraordinary operation and maintenance caused by sand pumping, and a variety of other causes." *A&B Order* at 28.

The Director also found that that A&B did not have geophysical logs of its wells or information about the saturated thickness of the aquifer. *A&B Order* at 32. In the absence of this information, the Director concluded that "it is difficult to assess how serious a problem is posed by potential future water level declines." *Id.* at 32.

The Director ruled that "A&B has not adopted formal standards for the design and installation of wells," and instead designs wells informally with a drilling contractor. *A&B Order* at 44. A&B uses the cable tool drilling technique, "which is not well suited for use in the geological environment in the southwestern portion of the District…." *Id.* A&B's "[f]ailure to use appropriate technology artificially

[249] There is little doubt that the Director will rule that A&B, despite having water rights that predate the 1951 Ground Water Act, is subject to the reasonable pumping level mandate spelled out in that statute. This is because the Director recently ruled, in another case, that pre-1951 rights are subject to the Act. *In the Matter of Applications To Appropriate Water Nos. 63-32089 and 63-32090 in the Name of the City of Eagle* (IDWR's Final Order Feb. 26, 2008; Order on Reconsideration July 3, 2008), *appeal dismissed as untimely*, *City of Eagle v. IDWR*, 150 Idaho 449, 247 P.3d 1037 (2011).

limits access to available water supplies and is not consistent with the requirement for the appropriator to use reasonable access." *A&B Order* at 45.

(vii) Use of the ground water model

A&B sought to extrapolate effects on its wells from ground water pumping that might be deduced from use of the ground water model that has been used to evaluate pumping effects on reach gains to various reaches of the Snake River. The Director noted that the ground water model "does not properly account for local hydrogeologic features within the aquifer or local pumping effects and thus, should not be used to evaluate impacts of one well on another." A&B Order at 33.

(viii) Irrigation of enlargement areas

A&B asserted that it had some 22,700 acres of water-short areas under 39 wells. However, the Director observed that the senior water rights associated with these wells allow irrigation of about 4,100 fewer acres than this. *A&B Order* at 15. These acres may correspond to a similar number of acres that were recognized as enlargements in *A&B Irr. Dist. v. Aberdeen-American Falls Ground Water Dist.*, 141 Idaho 746, 118 P.3d 78 (2005) (Schroeder, C.J.). Enlargement acres received a statutory amnesty but are required to take a priority of 1994, the date of the statute.

(ix) Denial of ground water management area designation

Idaho Code § 42-233b authorizes the Director to designate a ground water management area ("GWMA") covering a ground water basin that he determines "may be approaching the conditions of a critical ground water area." The GWMA statute authorizes the Director to impose certain conditions or restrictions, including curtailment of junior rights, to protect ground water levels and senior water rights. A&B asked that the ESPA be designated as a GWMA, essentially as an alternative means to achieve curtailment of junior ground water rights. The Director denied the petition, concluding that because water districts pursuant to Idaho Code Title 42, Chapter 6, already are in place across the entire ESPA, and because administration of junior water rights can be carried out in these districts, "no additional relief would be provided to A&B by such a designation." *A&B Order* at 47.

(7) Round Seven: The SRBA Court's decision rejecting Idaho Power's attack on the *Swan Falls Agreement*

In its *Memorandum Decision and Order on Cross-Motions for Summary Judgment*, ("IPCo Decision"), Consolidated Subcase 00-92023 (92-93), *In re SRBA, Case No. 39576*, Idaho Dist. Ct., Fifth Judicial Dist. (April 18, 2008), the Snake River Basin Adjudication ("SRBA") Court ruled that the *Swan Falls Agreement*, the 1984 contract between the State of Idaho and Idaho Power Company, will be enforced as Idaho Power's water rights are decreed in the SRBA. The court ruled that, under the *Swan Falls Agreement*, a portion of Idaho Power's hydropower water rights on the Snake River at Swan Falls Dam were placed in trust, with the State as trustee, and that these rights are subject to being subordinated by the State to new water rights licensed upstream or up-gradient that might deplete flows at Swan Falls. Such new rights, for irrigation and other uses, were granted in the ensuing years pursuant to statutory provisions implementing the Agreement.

The dispute arose when the SRBA court, "due to an oversight in uncontested cases," issued partial decrees naming Idaho Power as the sole owner of these water rights. IPCo Decision at 42. The State and others filed late objections seeking to name the State as owner, subject to the trust described in the *Swan Falls Agreement*. In this decision, the court ruled for the State, and will issue the decrees in the name of the State, as legal title holder, noting that Idaho Power and the citizens of Idaho share equitable title to those Idaho Power water rights held in trust pursuant to the *Swan Falls Agreement*. IPCo Decision at 20-21.

This decision thwarted Idaho Power's attempt to evade the *Swan Falls Agreement*'s subordination of the company's rights to junior ground water rights in the ESPA.

(8) Round Eight: The Idaho Supreme Court ultimately upholds most of the lower court (and Department) rulings on the Surface Water Coalition's original ESPA delivery call.

In December 2013, the Idaho Supreme Court issued its decision in the appeal from the protracted litigation that originated with the 2005 delivery call filed by the Surface Water Coalition—the same 2005 delivery call discussed above.[250] The high court had before it only a few issues on appeal, two of which are material here.

First was the question as to how material injury is to be determined. The SWC argued that the Director had abused his discretion with his approach, which:

> considered a "baseline quantity" independent of the decreed or licensed quantity. The baseline quantity represented the amount of water predicted from natural flow and storage needed to meet in-season irrigation requirements and reasonable carry-over [of storage]. The Director then determined material injury based on shortfalls to the predicted baseline as opposed to the decreed or licensed quantities.[251]

The Court ruled that the factors for determining material injury in Rule 042 of the CM Rules require that "a finding of material injury requires more than shortfalls to the decreed or licensed quantity of the senior right."[252] of water to which the senior is entitled for deciding whether material injury has occurred to senior water rights that calculates "minimum full supply" and "reasonable in-season demand."[253] The Court upheld the Director's approach.

Second was the question whether the Director abused his discretion by not requiring the ground water users to implement a mitigation plan containing "contingency plans by which junior water right holders would ensure

that material injury would not occur to the seniors' carry-over storage rights."[254] The Court agreed with the district court that the Director had, by allowing insufficient "water replacement plans," essentially followed a "wait and see" approach that put the risk of shortfall on the seniors. This approach, found the Court, was not allowed by the CM Rules.[255]

10. STOCK WATER RIGHTS

Stock water rights may be obtained based on ground or surface water diversions. Such rights are referred to as "in-stream watering of livestock" rights where the livestock drink directly from a natural stream without use of a constructed physical diversion works.[256]

Holders of stock water rights are exempt from permitting requirements. (This is similar to the exemption for domestic ground water rights, as discussed in section 7.F(1) at page 89.) Of course, stock water users are free to, and often do obtain permits, licenses, and decrees for their stock water rights. Indeed, they must file a claim in the SRBA, although the claim deadline has been postponed. See discussion in section 13.C at page 601.

The Legislature has adopted a statute specifically designed to facilitate stream protection improvements that move cattle out of streams through the construction of off-stream troughs or tanks.[257] This statute requires the water user to file a notice, pay a small fee, and meet certain measurement and technical requirements, but it exempts the user from obtaining an approval of a change in the water right under section 42-222.[258] Water rights under this special provision are limited to 13,000 gallons per day per diversion.[259]

Where grazing occurs on federal lands, the federal government has taken the position that it holds stock water rights. President Coolidge's 1926 Executive Order withdrew and reserved thousands of tracts of public land containing water holes and other water sources used by the public for watering purposes. The SRBA Court concluded that the Executive Order did not create a federal reserved water right. The Idaho Supreme Court reversed, ruling that the Executive Order was an express statement showing an intent to reserve federal water rights in the waters on these lands. *United States v. State* ("*Basin-Wide Issue 9*"), 131 Idaho 468, 959 P.2d 449 (1998) (Walters, J.).

The Court noted that the purpose of the federal reservation was to ensure that the water would be available for use "by whichever member of the public happens at any time to have the grazing permit for the lands" thereby preventing private appropriations whereby "individuals could monopolize the water." *Basin-Wide Issue 9*, 131 Idaho at 471, 959 P.2d at 452. "To hold otherwise would be in contravention of the policy of this state 'to secure the maximum use and benefit, and least wasteful use, of its water resources.'" *Basin-Wide Issue 9*, 131 Idaho at 472, 959 P.2d at 453 (quoting *Poole v. Olaveson*, 82 Idaho 496, 502, 502 P.2d 61, 65 (1960) (Smith, J.)).

An Idaho statute provides that any changes sought in such rights require the approval of the grazing permittee.[260]

Meanwhile, the United States pursued and obtained partial decrees for thousands of stockwater rights on non-reserved BLM land based on beneficial use (as opposed to federal reserved rights). These de minimis stock water claims were subject to deferral, but the United States elected to pursue them. Then, in 2007, the Idaho Supreme Court ruled water rights for stockwatering on unreserved federal land (BLM land) are held by the grazing permittee, not by the federal government. *Joyce Livestock Co. v. United States*, 144 Idaho 1, 156 P.3d 502 (2007) (Eismann, J.). That shut down any new federal stock water claims on BLM land, but left the thousands of rights already obtained intact. In 2020, however, the Idaho Legislature enacted Idaho Code § 42-224, which provides a mechanism for forfeiture of federal stockwater rights in accordance with the holding in *Joyce Livestock*.

11. METHODS FOR APPROPRIATING WATER RIGHTS

A. The permit/license method

(1) The "mandatory permit" requirement: Idaho Code § 42-229 (ground water-1963), §§ 42-103 and 42-201 (surface water-1971)

In the early days of settlement, water could be appropriated simply by taking it (see the "constitutional method" discussed below in section 11.B at page 152.) This "do-it-yourself" approach may have worked well enough for the early-arriving miners, all of whom essentially were temporary trespassers on the public domain. Their title, as against all but the federal government, could be perfected solely by the will to take possession of the water and the determination to keep it. It also helped that the relative number of these trespassers was small. But as more people arrived in Idaho and took water from the streams for the new and larger projects necessary to support permanent settlement, this early approach ultimately had two primary shortcomings. First, the appropriation was not confirmed or quantified in any way, and thus always was subject to challenge and uncertainty. Second, there was no way to secure a water right prior to completion of the proposed project.

In response to these problems, the Idaho Legislature soon created a more formal process for obtaining water rights through a state agency. In 1903 the Legislature established a permit-based procedure for the appropriation of water. Thus, since the early days of statehood, a person seeking a water right could file an application seeking a water right with the state reclamation engineer (now the Director of the Department of Water Resources).

In 1951, the Legislature enacted the Ground Water Act, 1951 Idaho Sess. Laws, ch. 200.[261] Section 7 through 12 of the Act established procedures for permitting and licensing of ground water rights. (These procedures were for ground water only, but loosely tracked modern sections 42-202 *et al.*, which today govern permitting and licensing of both ground and surface water rights). However, the 1951 Act expressly provided that the ground water permitting procedures were optional, and that ground water rights could also be created by diversion to beneficial use. 1951 Idaho Sess. Laws, ch. 200, § 4 (codified as amended at 42-229).

In 1963, the Ground Water Act was amended to make the permit process mandatory (with limited exceptions) for ground water rights. 1963 Idaho Sess. Laws, ch. 216 (codified at Idaho Code § 42-229). The Act contained an emergency clause making it effective on March 25, 1963.

In 1971, the Legislature enacted legislation mandating permitting for all water rights (with exceptions). 1971 Idaho Sess. Laws, ch. 177 (codified at Idaho Code §§ 42-103, 42-201) (discussed in *Joyce Livestock Co. v. United States*, 144 Idaho 1, 7, 156 P.3d 502, 508 (2007)). The 1971 amendments did not single out surface water (as the 1963 amendments had singled out ground water).

[261] The 1951 Session Law did not codify the legislation. Parts of it were later codified (section 1 through 6 of the Act became Idaho Code §§ 42-226 through 42-231).

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

The 1971 amendments made permitting mandatory for all water rights, subject to exceptions carved out elsewhere. The 1971 Act did not contain an emergency clause, so it went into effect on May 20, 1971.

In 1986 the Legislature amended the mandatory permitting statute by re-numbering Idaho Code § 42-201 as subsection 42-201(1) and adding a new subsection 42-201(2). H.B. 369, 1986 Idaho Sess. Laws, ch. 313, § 2. Since its amendment in 1971, subsection 42-201 provided that the only way to obtain a water right is through the permitting process. But it did not expressly prohibit persons from diverting water to beneficial use without a permit. In other words, a person might lawfully choose to divert water to beneficial without the protection of a water right. The addition of subsection 42-201(2) in 1986 established that, henceforth, the only way to lawfully divert and apply water to a beneficial use is through the permitting process.

Today, the only water uses that are authorized to commence without an approved permit are domestic uses from ground water wells,[262] stock water use where the stock drink directly from a surface source,[263] firefighting,[264] and land application or other disposal of municipal effluent.[265]

The permitting process is a two-step approach, involving a permit and then a license. The first step is to apply for a "permit."[266] The criteria for approval of a permit are discussed in section 16 at page 259. This is typically done before the applicant begins construction of the project. Once the permit is issued, it secures the holder's priority date. The holder then may construct the project with the knowledge that a water right, of known priority, will be available.

After the permit Application is filed, it is advertised according to statute. Other appropriators or members of the public are entitled then to protest the permit application within a fixed period of time. If that happens, the Department will conduct a "prehearing conference" in an effort to resolve the protest. If that does not end the protest, a full-blown administrative hearing takes place in which all parties present argument, testimony and other evidence.[267]

[266] Idaho Code § 42-202.

[267] Idaho Code § 42-203A(4).

In deciding whether to grant a water right permit, the Department must determine whether the application satisfies statutory criteria. Today, there are seven set out in section 42-203A(5):

> In all applications whether protested or not protested, where the proposed use is such
>
> (a) that it will reduce the quantity of water under existing water rights, or
>
> (b) that the water supply itself is insufficient for the purpose for which it is sought to be appropriated, or
>
> (c) where it appears to the satisfaction of the director that such application is not made in good faith, is made for delay or speculative purposes, or
>
> (d) that the applicant has not sufficient financial resources with which to complete the work involved therein, or
>
> (e) that it will conflict with the local public interest as defined in section 42-202B, Idaho Code, or
>
> (f) that it is contrary to the conservation of water resources within the state of Idaho, or
>
> (g) that it will adversely affect the local economy of the watershed or local area within which the source of water for the proposed use originates, in the case where the place of use is outside of the watershed or local area where the source of water originates;
>
> the director of the department of water resources may reject such application and refuse issuance of a permit therefor, or may partially approve and grant a permit for a smaller quantity of water than applied for, or may grant a permit upon conditions.

Idaho Code § 42-203A(5) (formatted added to improve readability).

See also the summary of statutory tests in section 16 at page 259.

Note that Director may grant the permit in full or in part or with conditions.[268]

The Department has promulgated regulations addressing water appropriation. IDAPA 37.03.03. These include regulations governing trust water, IDAPA 37.03.08.000 to 37.03.08.039. It also includes regulations specifying information that must be included in an application for appropriation, IDAPA

[268] The Water Code provides: "[T]he director of the department of water resources may reject such application and refuse issuance of a permit therefore, or may partially approve and grant a permit for a smaller quantity of water than applied for, or may grant a permit upon conditions." Idaho Code § 42-203A(5). The Department's rules provide: "The director will use the following criteria in evaluating whether an application . . . should be approved, denied, approved for a smaller amount of water or approved with conditions." IDAPA 37.03.08.045.01.

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

37.03.08.040 ("Rule 40").[269] And it includes regulations setting out "evaluation criteria" for new permits. IDAPA 37.03.08.045 ("Rule 45").

There are no comparable rules for transfers.[270]

A permit is not a water right (though it does authorize the holder to divert and use the water under the terms of the permit). A water permit is often described as an inchoate right.[271] The permit is not itself real property, but represents the user's right to perfect an interest in real property. Consequently, it is described as personal property, rather than real property.[272] Consequently, the Legislature may change the rules governing licensing and make the changes applicable to existing permit holders.[273] Other than this, the real versus personal property distinction is largely semantic (but see the discussion of differences in how the two are conveyed).

---

[269] More detailed "Additional Information Requirements" are set out in IDAPA 37.03.08.040.05. These requirements are waived for applications of 5.0 cfs or less. However, the Department reserves the right to require submission of this additional information even for small applications when it determines necessary. IDAPA 37.03.08.040.05.c. It has determined that certain additional information is required for municipal water right applications. See discussion in section 23.D(8) at page 353 of this Handbook.

[270] There are no comparable rules for evaluating the local public interest or other requirements in the context of water transfers. Indeed, the Department has not promulgated any rules governing water transfers. One might argue that these rules (applicable to new appropriations) should apply, at least by analogy, to public interest review in the context of water transfers. On the other hand, one might contend that the criteria should not be the same. Arguably a new appropriation (which, in effect, takes water out of the public domain) should be subject to more vigorous public review than the transfer of a water right from one private use to another. Because new appropriations are "free" (meaning that the appropriator pays nothing for the right except a filing fee), the marketplace provides no reality check on the economic value of the use. Water transfers, in contrast, typically are subject to significant marketplace constraints that, to some extent at least, ought to guard against unwarranted uses.

[271] *Hardy v. Higginson*, 123 Idaho 485, 490, 849 P.2d 946, 951 (1993).

[272] In contrast to a water right (evidenced by a license or decree or by beneficial use), an application for a permit and a permit itself are deemed personal property. By application for permit under such statutes the permittee secures an inchoate right which will ripen into a legal and complete appropriation by compliance with the statutory steps. Such right is merely a contingent right, which may ripen into a complete appropriation, or may be defeated by a failure of the holder to meet the statutory requirements. The permit, therefore, is not an appropriation of the public waters of the state. It is not real property." *Big Wood Canal Co. v. Chapman*, 45 Idaho 380, 402, 263 P. 45, 52 (1927). "An applicant's interest in an application for permit to appropriate water is personal property." IDAPA 37.03.08.035.02.d (Water Appropriation Rules).

EXHIBIT C
Page No. 149 of 761

(2) Proof of beneficial use at the end of the "development period."

Once the permit is issued, the holder is authorized to proceed with the project and begin placing the water to beneficial use. Except for very large water rights (over 25 cfs), the holder must begin excavation or construction of the diverting works within one year and proceed "diligently and uninterruptedly to completion."[274]

The permit will specify a period of time of up to five years from the date of permit approval in which to place the water to beneficial use.[275] This is known as the "development period." On or before the last day of the development period, the permit holder must submit proof of beneficial use.

The statute provides various extensions of the deadline for submission of proof of beneficial use. Every permit is eligible for one five-year extension upon showing of good cause.[276] One or more extensions totaling up to ten years are available for certain larger water right permits.[277] Most

[274] "Every holder of a permit which shall be issued under the terms and conditions of an application filed hereafter appropriating twenty-five (25) cubic feet or less per second must, within one (1) year from the date upon which said permit issues from the office of the department of water resources, commence the excavation or construction of the works by which he intends to divert the water, and must prosecute the work diligently and uninterruptedly to completion, unless temporarily interrupted through no fault of the holder of such permit by circumstances, over which he has no control." Idaho Code § 42-204.

[275] "The department shall require that actual construction work and application of the water to full beneficial use shall be completed within a period of five (5) years from the date of such approval, but may limit the permit to a less period than is named in the application, and the permit shall set forth the date when beneficial application of the water to be diverted by such works shall be made." Idaho Code § 42-204. Where a shorter time is set, it may be extended back to the full amount provided upon a proper showing. Idaho Code § 42-218.

[276] "In all other situations not governed by these provisions the department may grant one (1) extension of time, not exceeding five (5) years beyond the date originally set for completion of works and application of the water to full beneficial use, or beyond any grant of extension pursuant to the provisions of subsection (1) of this section, upon request for extension received on or before the date set for completion, provided good cause appears therefor." Idaho Code § 42-204(6).

[277] "The time for completion of works and application of the water to full beneficial use under any permit involving the diversion of two (2) or more cubic feet per second or the development or cultivation of one hundred (100) or more acres of land may be extended by the director of the department of water resources upon application by the permittee for an additional period up to ten (10) years beyond the initial development deadline contained in the permit, or beyond a grant of extension pursuant to the provisions of subsection (1) of this section [dealing with regulatory delays], provided the permittee establishes that the permittee has exercised reasonable diligence and that good cause exists for the requested extension." Idaho Code § 42-204(4). The statute previously provide for only a five-year extension. This ten-year provision was added in 2013. 2013 Idaho Sess. Laws, ch. 82. An informal guidance memorandum from Shelley W. Keen dated May 21, 2013 states: "Furthermore, if the department grants an extension of fewer than ten years under this provision, the permit holder is not limited to filing only one extension request. If the size requirement applies, the Department may grant multiple extensions totaling up to ten years." This guidance is reproduced in Appendix O.

practitioners find that the Department applies a lenient standard in determining good cause under these extension provisions. There are a handful of other special extensions.[278]

However, an applicant for a water right permit is not allowed to assume that an extension will be granted for purposes of showing need for water at the time of application.[279]

An uncodified portion of the 2013 legislation (adding the 10-year extension) provided that the legislation is retroactive: "Permits pending before the department are entitled to the maximum qualifying extension available pursuant to the provisions of section 42-204, Idaho Code, regardless of whether the permittee received a prior extension under section 42-204(6), Idaho Code." 2013 Idaho Sess. Laws, ch. 82 § 2.

In addition, other provisions of the water code provide extensions of time in connection with the submission of proof. Idaho Code §§ 42-218, 42-218(a).

Once the project is completed and the water is put to beneficial use, the permittee must "prove up" his or her water right, that is, demonstrate to the Department's satisfaction, that the water has been put to beneficial use according to the terms of the permit. Idaho Code § 42-217.

The Water Code provides limited statutory exceptions for failure to prove up within the allotted time.[280] If proof is not provided (or excused) within this time, the water right will be deemed abandoned.[281]

The proof is accomplished by submitting a *Proof of Beneficial Use* form to the Department accompanied by either (1) a license examination fee and request for the Department to perform the field exam, or (2) a completed field report prepared by a certified water right examiner retained by the water right holder.

---

[278] *E.g.*, Idaho Code § 42-204(2) (for projects irrigating at least 5,000 acres diverting over 25,000 acre-feet per year); Idaho Code § 42-204(3) (for storage projects of more than 10,000 acre-feet); Idaho Code § 42-204(5) (for water projects undertaken by the United States or the Idaho Water Resource Board).

[279] The Department expects the applicant for a non-RAFN municipal appropriation to demonstrate at the time of application that system-wide need for the permit will materialize (and the ability to divert will be in place) within the five-year "development period" after permit issuance. Although extensions of the proof deadline are often obtained for up to a total of 15 years, the Department will not allow the permit quantity to be premised on needs beyond the first five years. Water rights premised on needs more than five years out require a RAFN application. Telephone conference between Jeff Peppersack, [Former] Chief, Water Allocation Bureau, IDWR and Christopher H. Meyer (March 3, 2015); confirmed by email from Mr. Peppersack to Mr. Meyer (Mar. 19, 2015).

[280] Idaho Code § 42-204(1) (extension of time available in the case of litigation retaining to water title and for failure to obtain certain consents and approvals). As noted in footnote 278 at page 150, certain large water projects are accorded additional leniency in the proof date.

[281] Idaho Code § 42-204.

If the proof is not timely submitted, the permit will "lapse" and a *Lapse Notice* will be mailed to the holder. If proper administrative steps are not promptly undertaken, the permit will be forfeited entirely. However, the Department may reinstate the permit if the holder makes a showing of reasonable cause within 60 days of the lapse notice. In such case, the priority date of the permit will be advanced by the number of days that the showing followed the date set for proof. Idaho Code § 42-218a(1). If a showing of reasonable cause is made more than 60 days after the lapse notice, the permit may be reinstated but the priority date will be advanced to the date that beneficial use proof is made. Idaho Code § 42-218a(2).

(3) Issuance of license

Once the proof is satisfactorily completed, the permit holder is entitled to receive a license for that amount of water beneficially used with a priority date relating back to the date of the application for the permit.[282] In many cases, the quantity of water on the license will be adjusted downward from the permitted quantity to reflect actual beneficial use.

The primary advantage of the permit/license process is that a potential water user may determine and secure his priority (or place in line) *before* undertaking a considerable investment in the construction of the water project. Today, every Western state, except Colorado, has adopted a permit system. Colorado achieves much the same result via what it calls a "conditional right" issued by a special water court.

A license, like a decree, is sometimes described as a "paper" water right. It is legal evidence of the right, but that right may be lost through subsequent abandonment or forfeiture. And of course, there is no guarantee that water will be available to fill the water right.[283]

B. Beneficial use (aka "constitutional method") water rights

From the earliest days of the territory, an appropriation of water could be made simply by diverting water to beneficial use with the intent to create a water right. "As early as 1881 a statutory procedure for appropriating water was adopted, providing that a person intending to appropriate water should post a notice at the point of diversion and record the same." *Fremont-Madison Irr. Dist. & Mitigation Grp. v. Idaho Ground Water Appropriators*, 129 Idaho 454, 456, 926 P.2d 1301, 1303 (1996) (Schroeder, J.) (referencing Hutchins, *The Idaho Law of Water Rights*, 5 Idaho L. Rev. 1 (1968).

Idaho courts have long recognized that these three acts (intent, diversion and beneficial use) establish a valid water right with a priority date as of the date of application to beneficial use.[284]

---

[282] Idaho Code § 42-219.

[283] *State v. Hagerman Water Right Owners, Inc.* ("*Hagerman II*"), 130 Idaho 736, 947 P.2d 409 (1997) (Schroeder, J.).

This do-it-yourself approach is sometimes referred to as the "constitutional method" and claims thereunder are often called "beneficial use" rights. The reference to the constitution reflects the courts' recognition that even without specific statutory authorization, appropriations are lawful under the Idaho Constitution.[285] The "constitutional method" terminology is potentially misleading, however.

The constitutional method is not constitutionally mandated, but merely constitutionally permissible. It is better understood as a creation of the common law, and, as such, is most certainly subject to legislative override (unlike a constitutional right). Consequently, it would be more accurately described as the "common law method." Alas, the "constitutional method" terminology has come to stick.

Prior to the adoption of statutes governing the process of appropriation, the constitutional method was the only means of obtaining a water right. Even after legislation was adopted (which occurred as early as 1881[286]), the constitutional method was deemed by the courts for many years to be an alternative to statutory requirements.[287] Finally, in 1963 (for ground water)[288] and 1971 (for surface water),[289] the Idaho Legislature enacted legislation making clear that statutory methods were henceforth the only methods available for appropriating water.

Because there is no administrative or judicial process involved in obtaining a constitutional method water right—and thus nothing recorded—these rights remain a significant unknown in the administrative system. One of the major objectives of modern adjudications in Idaho, such as the Snake River Basin Adjudication and the Northern Idaho Adjudication, is to review, define and quantify these beneficial use rights, and place them within the administrative system.

It is important to note that, within water districts, beneficial use water rights are administered as junior to decreed, permitted, or licensed rights.[290]

See discussion in section 11.C below regarding requirements to report or claim beneficial use water rights.

EXHIBIT C
Page No. 153 of 761

C. Water rights for certain domestic and livestock uses that are exempt from permitting

The Idaho Legislature has allowed limited water rights to ground water to be established outside the permit system by diverting and beneficially using ground water for statutorily-defined "domestic" uses, which include residential culinary uses and stock watering, provided the overall diversion volume does not exceed 13,000 gallons per day and any irrigation involved is for less than one-half acre.[291] A ground water right within these limits is exempt from the statutory permit/license requirement, but the water user must obtain a drilling permit before the well can be drilled.[292] While water rights for domestic purposes can be obtained by license, and can receive decrees in water right adjudications, often they are evidenced in IDWR's records only by means of a drilling permit and, once the well is completed, the driller's report.

The Idaho Code also authorizes exempt water rights to surface water for certain stock water uses. Idaho Code § 42-113(1) states that "[a] permit may be issued, but shall not be required for appropriation of water for the in-stream watering of livestock." The statute explains that "the phrase 'in-stream watering of livestock' means the drinking of water by livestock directly from a natural stream, without the use of any constructed physical diversion works." *Id.* Despite this "drinking from stream" language, section 42-113(3) provides that a person who has established such a stock water right "may, in addition to the in-stream use, divert the water for livestock use away from the stream" so long as the diversion is to "a trough or tank through an enclosed delivery system," it involves diversions of no more than 13,000 gallons per day per diversion, and it meets several other conditions. *Id.*

D. Statutory claims

Since 1967, Idaho's water code has authorized persons holding beneficial use water rights to file their claims with the Department.[293] In 1978, this option was converted to a mandatory requirement that such claims be filed by June 30, 1983.[294] However, the Legislature later declared that a claim filed in the Snake River Basin Adjudication (or other general adjudication commenced) prior to June 30, 1988 satisfies this requirement.[295]

In a somewhat confusing choice of terminology, the Department refers to beneficial use claims filed under this statute as "statutory claims" (referring to the statute authorizing and later requiring that

[291] Idaho Code § 42-111.

[292] Idaho Code §§ 42-227 and 42-238(2).

[293] Idaho Code §§ 42-243, 42-244. (Section 42-243 was designated section 42-225a prior to 1978.)

[294] 1978 Idaho Sess. Laws, ch. 345 (codified at Idaho Code §§ 42-243 to 42-245).

[295] Idaho Code §§ 42-245.

Printed 6/23/2023 9:09 AM

such beneficial use claims be filed). The choice of language is confusing because the basis of these beneficial use claims is not statutory law, but common law.

The idea behind this filing requirement was to require water users to declare the existence of their beneficial use claims. Failure to do so would result in non-recognition of a beneficial use right. However, no statute indicates that the IDWR is expected, or even authorized, to subject these claims to any scrutiny once they are submitted. The Department simply publishes notice of the claims and keeps them on file. Presumably, one who asserts a beneficial use claim—such as in opposition to someone else's appropriation or transfer, or in aid of one's own proposed transfer—will be required to answer to the filing requirement.

This statute remains in effect statewide. Within the Snake River Basin, however, the statutory claim requirement has been overtaken by the SRBA, which is reviewing all water rights, including all beneficial use claims. Outside the Snake River basin (e.g., Kootenai River basin, Bear River basin), this statute continues to have practical effect. Those who have not filed statutory claims by the deadline can no longer assert beneficial use claims.

E. Posted notice

There is a special category of beneficial use rights known as "posted notice" rights. Under a statute enacted in 1881[296] and repealed in 1903, an appropriator could physically post notice of his or her intent to appropriate water. The notice would be posted near the proposed diversion (and recorded like a mining claim). In addition, the user was required to record the notice at the county recorder's office. If he or she completed the project within a reasonable time, and applied the water to beneficial use, a water right, based on actual measured use, would be issued with a priority date going back to the original posting.

These rights share with rights under the permit system the advantage of "relation back" to the date of the notice. Nevertheless, they are considered "beneficial use" rights because they are not confirmed by a permit, license, or decree.

This method is no longer available. However, rights created under this method are still valid (assuming they have not been forfeited or abandoned).

F. The curious case of "private waters"

Idaho Code 42-212, enacted in 1911 and carrying the caption "Diversion of private waters," addresses springs or small lakes that are "situated wholly or entirely upon the lands" of a single landowner. This statute prohibits IDWR from granting permits to divert this water "except to the person or corporation owning said land, or with his or its written permission…." Most of the few cases construing the statute have found that the statute does not apply because the water is found to flow off the property in some way. No reported case has considered whether a spring's (or lake's)

EXHIBIT C
Page No. 155 of 761

contribution to a regional ground water aquifer—which presumably occurs in nearly every case through percolation—is such a disqualifying circumstance. However, as a matter of hydrology, it probably would be difficult to argue that spring seepage does not eventually reach an aquifer and leave the property in that way, and therefore is not "wholly or entirely" upon the owner's land.

Moreover, and despite the statute's caption, the text of the statute does not address the concept of "private waters." Rather, it simply bars a non-owner from obtaining a permit for waters "situated wholly or entirely" on another's property without that property owner's permission. Moreover, it clearly indicates that the landowner himself still would need a permit or an exemption, such as those provided by sections 42-111 or 42-113, to use this water (section 42-212 simply prohibits IDWR from granting permits for this water "except to the person or corporation owning said land or with his or its permission").

Interestingly, a few Idaho Supreme Court cases, in dictum, and despite the statute's actual language, have stated that section 42-212 establishes the rule that such springs "are appurtenant to and a part of the lands and belong exclusively to the owners of the land." *See, e.g., Maher v. Gentry*, 67 Idaho 559, 566, 186 P.2d 870, 874 (1947). The authors believe that the "private waters" statute would be narrowly construed today, and that it is unlikely a court would follow the *Maher* dictum and conclude that such waters "belong exclusively" to the landowner. Still, based on the *Maher* dictum, a property owner who can make the case that a source is "wholly or entirely" on his or her land would have a plausible argument that there is such a thing as private waters.

G. Private and general adjudications of water rights

Water users also may bring lawsuits to establish their rights and settle disputes. A private water adjudication is analogous to a quiet title action for land. The result is a decree recognizing each party's water rights in a particular reach of stream or other water body. However, an adjudication does not create water rights, it simply recognizes already-established water rights created by some lawful means, either as a valid use exempt from permitting (domestic or stock water), as a right created through the statutory permit method, or as one established before the statutory deadlines by the constitutional method.

In addition to such private adjudications, general adjudications are held from time to time for particular basins. A private adjudication is limited to named parties. In a general adjudication, in contrast, notice is published and every person claiming to hold a water right in the named basin must come forward and prove up his or her water right.

A general adjudication usually is necessary only when the general state of affairs is confused with respect to who holds what water rights, what their amounts and uses are, and so forth. The purpose of the general adjudication is to bring all players into court, resolve all the controversies at once, settle the books, and allow future developments to proceed with greater certainty. Sometimes a general adjudication is deemed necessary so that federal and Indian Tribe water rights can be determined and quantified in state court under the immunity waiver provided by the McCarran Amendment, as discussed in footnote 1091 at page 600.

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

The most notable general adjudication is the Snake River Basin Adjudication, discussed in section 13 at page 599.

Water rights obtained through such private or general adjudications are referred to as "decreed" rights.

H. The burden of proof in water appropriations

Idaho's water code does not expressly allocate the burden of proof[297] in water right appropriation.[298] However, the Idaho Supreme Court has squarely placed the burden on the applicant for a new water appropriation to demonstrate that the basic statutory requirements are met.[299]

The court has twice addressed the burden of proof issue in the context of a public interest challenge to a new water right appropriation.[300] In the case of the local public interest, a special rule

---

[297] The burden of proof is really composed of two elements: the burden of production—that is, who has to go first—and the burden of persuasion—that is, who wins in an evidentiary "tie." IDAPA 37.03.08.040.04.a.

[298] In the special case of "trust water" appropriations under the *Swan Falls Agreement*, the statute does allocate the burden of proof. Idaho Code § 42-203C; IDAPA 37.03.08.040.04.

[299] *Cantlin v. Carter*, 88 Idaho 179, 186, 397 P.2d 761, 765 (1964).

[300] In *Shokal v. Dunn*, 109 Idaho 330, 707 P.2d 441 (1985), the Court quoted District Judge Schroeder in this extended, but lucid, discussion of the burdens of production and persuasion:

> As Judge Schroeder correctly noted below, this burden of production lies with the party that has knowledge peculiar to himself. For example, the designer of a fish facility has particularized knowledge of the safeguards or their lack concerning the numbers of fish that may escape and the amount of fecal material that will be discharged into the river. As to such information the applicant should have the burden of going forward and ultimately the burden of proof on the impact on the local public interest. On the other hand, a protestant who claims a harm peculiar to himself should have the burden of going forward to establish that harm.
>
> However, the burden of proof [that is, the ultimate burden of persuasion] in all cases as to where the public interest lies, as Judge Schroeder also correctly noted, rests with the applicant:
>
> > [I]t is not [the] protestant's burden of proof to establish that the project is not in the local public interest. The burden of proof is upon the applicant to show that the project is either in the local public interest or that there are factors that overweigh the local public interest in favor of the project.

Shokal, 109 Idaho at 339, 707 P.2d at 450 (referring to District Judge Schroeder, now on the Supreme Court) (quoted again in *Collins Bros. Corp. v. Dunn*, 114 Idaho 600, 607, 759 P.2d 891, 898 (1988).

The only other Idaho case to address burden of proof in the context of the local public interest was *Collins Bros.* That case merely recited that "the applicants had not met their burden of proof" and quoted from the Shokal case regarding burden of proof." *Collins Bros.*, 114 Idaho at 606, 759 P.2d at 897.

applies: The applicant bears the initial burden of coming forward with evidence for the evaluation of the local public interest criterion as to any factor of which he is knowledgeable or reasonably can be expected to be knowledgeable. The protestant bears the initial burden of coming forward with evidence relevant to any factor for which the protestant can reasonably be expected to be more cognizant than the applicant. The applicant then bears the ultimate burden of persuasion.[301]

The Department subsequently adopted regulations allocating the burden of proof in all new appropriation applications:

> b. The burden of coming forward with evidence is divided between the applicant and the protestant as follows:
>
> i. The applicant shall bear the initial burden of coming forward with evidence for the evaluation of criteria (a) through (d) of Section 42-203A(5), Idaho Code [injury, supply, speculation, and finance];
>
> ii. The applicant shall bear the initial burden of coming forward with evidence for the evaluation of criterion (e) of Section 42-203A(5), Idaho Code [local public interest, now section 42-202B], as to any factor affecting the local public interest of which he is knowledgeable or reasonably can be expected to be knowledgeable. The protestant shall bear the initial burden of coming forward with evidence relevant to criterion (e) of Section 42-203A(5), Idaho Code [local public interest, now section 42-202B], of which the protestant can reasonably be expected to be more cognizant than the applicant.
>
> iii. [Deals with "trust water" appropriations.]
>
> c. The applicant has the ultimate burden of persuasion for the criteria of Section 203A, Idaho Code [all standard criteria, including local public interest, which is now defined in section 42-202B], and the protestant has the ultimate burden of persuasion for the criteria of Section 42-203C ["for trust water"].[302]

See part 15.L(2) at page 249 for a discussion of the burden of proof in transfer proceedings.

I. One may not appropriate water that has been diverted and stored by another.

Once water is diverted and stored under a water right by one person, another person may not thereafter appropriate that water.

Note that different burden of proof rules apply to the special public interest tests applicable to appropriations of "trust water" pursuant to the *Swan Falls Agreement*. Idaho Code § 42-203C; IDAPA 37.03.08.040.04.

[301] *Shokal v. Dunn*, 109 Idaho 330, 707 P.2d 441 (1985).

EXHIBIT C
Page No. 158 of 761

> After the water was diverted from the natural stream and stored in the reservoir, it was no longer "public water" subject to diversion and appropriation under the provisions of the Constitution (article 15, § 3). It then became water "appropriated for sale, rental or distribution" in accordance with the provisions of sections 1, 2, and 3, art. 15, of the Constitution. The waters so impounded then became the property of the appropriators and owners of the reservoir, impressed with the public trust to apply it to a beneficial use. A subsequent appropriator claiming a part or all of such waters would be the only person who could question the lack, extent, or nature of its application to a beneficial use.
>
> We are treating the water appropriation here from which this reservoir is supplied as being taken from a natural stream or flow of "public waters." It is not entirely clear from the record, and we accordingly do not pass upon the question, as to whether or not the waters collected in this reservoir are in fact taken from a natural stream or on the contrary are a mere collection of flood waters from rains and melting snow that runs off in the winter and spring and does not actually comprise or enter any natural stream or body of water. If the water impounded belongs to the latter class, then it is the unqualified private property of the owners of the reservoir, and they may do with it as they see fit. *King v. Chamberlin*, 20 Idaho, 504, 118 P. 1099; *Public Utilities Commission v. Natatorium Co.*, 36 Idaho, 287, at page 302, 211 P. 533; *Union Central Life Ins. Co. v. Albrethsen*, 50 Idaho, 196, 202, 294 P. 842; *Hinton v. Little*, 50 Idaho, 371, 374, 296 P. 582; *Vaughan v. Kolb*, 130 Or. 506, 280 P. 518; *Hagerman Irr. Co. v. McMurry*, 16 N. M. 172, 113 P. 823; 1 *Wiel on Water Rights*, (3d Ed.) § 37. Otherwise, it is impressed with the public trust as above indicated.
>
> No one can make an appropriation from a reservoir or canal for the obvious reason that the waters so stored or conveyed are already diverted and appropriated and are no longer "public waters." *Rabido v. Furey*, 33 Idaho, 56, 190 P. 73. This does not mean, however, that the reservoir or canal owner may waste the water or withhold it from persons who make application to rent the same. *Van Camp v. Emery*, 13 Idaho, 202, 89 P. 752; *Gerber v. Nampa & Meridian Irr. District* (on rehearing), 16 Idaho, 22, 26, 100 P. 88; *Niday v. Barker*, 16 Idaho, 73, 79, 101 P. 254; *Farmers' Co-op. Ditch Co. v. Riverside Irr. Dist.*, 16 Idaho, 525, 535, 102 P. 481; *Schodde v. Twin Falls Land & Water Co.*, 161 F. 43, 88 C. C. A. 207, affirmed 224 U. S. 107, 32 S. Ct. 470, 56 L. Ed. 686. If, on the other hand, the owner of the reservoir owns land subject to irrigation from such reservoir, he may apply it to his own land or sell it to others, or both, according to the priorities of their applications.

Washington Cnty. Irr. Dist. v. Talboy, 55 Idaho 382, 43 P.2d 943, 945-46 (1935) (Ailshie, J.),

12. ADVERSE POSSESSION OF A WATER RIGHT

It is possible, at least in theory, for one person to adversely possess, and thus come to own, the water right of another. In *Mountain Home Irr. Dist. v. Duffy*, 79 Idaho 435, 319 P.2d 965 (1957) (Taylor, J.), the senior irrigation district sought to enjoin an upstream diversion. The defendant contended that he was entitled to divert the water because he had done so for more than five years. (Note that the statutory period to establish adverse possession is now 20 years) The Idaho Supreme Court rejected the defense on the facts, holding that the ditch rider for the irrigation district allowed the upstream diversion only in years when the downstream reservoir did not need the water in order to fill. "The rule that the adverse use must in fact conflict with the owner's right has long been the law in this jurisdiction." *Mountain Home*, 79 Idaho at 443, 319 P.2d at 969.

The Court premised its ruling on the policy of maximum use. "It must be remembered that the policy of the law of this state is to secure the maximum use and benefit of its water resources." *Mountain Home*, 79 Idaho at 442, 319 P.2d at 968. It described this as a "constitutional policy" that is also grounded in statute. *Id*.

13. THE MAXIMUM USE DOCTRINE

In a seminal 1907 decision, the Idaho Supreme Court noted that a senior may not take his water inefficiently so as to deprive others:

> In this arid country, where the largest duty and the greatest use must be had from every inch of water in the interest of agriculture and home building, it will not do to say that a stream may be dammed so as to cause subirrigation of a few acres at a loss of enough water to surface irrigate 10 times as much by proper application.

Van Camp v. Emery, 13 Idaho 202, 208, 89 P. 752, 754 (1907) (Ailshie, C.J.) (senior upstream user not entitled to dam stream to subirrigate a meadow resulting in reduced stream flows to junior downstream headgates).

In 1909, the Court allowed a prior decree to be re-opened to examine whether senior appropriators really needed as much water as they had been awarded. *Farmers' Co-operative Ditch Co. v. Riverside Irrigation District, Ltd.,* 16 Idaho 525, 102 P. 481 (1909) (Ailshie, J.). "One farmer, although he has a superior water right, should not be allowed to waste enough water in the irrigation of his land to supply both him and his neighbor simply because his land is not adequately prepared for the economical application of the water." *Farmers' Co-operative*, 16 Idaho at 536, 102 P. at 484.

In 1912, the U.S. Supreme Court, applying Idaho law, handed down the most celebrated maximum use case of all. In *Schodde v. Twin Falls Water Co.*, 224 U.S. 107 (1912), a German immigrant installed a waterwheel driven by the current of the Snake River to raise irrigation water to his farm. Sometime thereafter, Milner Dam was built. When the placid water behind the dam stilled Schodde's waterwheels, he sued the junior appropriator. The U.S. Supreme Court affirmed the Ninth Circuit's ruling that, while the senior's priority is entitled to protection, he may not use an inefficient diversion to impair all other development of the Snake River. No doubt Schodde's waterwheel was a brilliant engineering feat. And it was efficient, so far as Schodde was concerned. But it was inefficient, so far as the resource as a whole was concerned.

As the *Schodde* Court said, "If the plaintiff were permitted to own the current of the stream appurtenant to his right of appropriation and diversion, he would be able to add indefinitely to the water right he could control and own. . . . It is clear that in such a case the policy of the state to reserve the waters of the flowing streams for the benefit of the public would be defeated." *Schodde*, 224 U.S. at 120. The U.S. Supreme Court cited one of its earlier cases in concluding that a water right "must be exercised with reference to the general condition of the country and the necessities of the people, and not so as to deprive a whole neighborhood or community of its use and vest an absolute monopoly in a single individual." *Schodde*, 224 U.S. at 121 (quoting *Basey v. Gallagher*, 20 Wall. 670, 683, 87 U.S. 670, 683 (1874)).

The Idaho Supreme Court held in a 1915 water right transfer case that the quantity transferred is limited to the amount previously put to beneficial use. This principle—which seems obvious enough

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

today—was grounded in the Court's recognition that the policy of maximum beneficial use is embedded in the prior appropriation doctrine. "A prior appropriator is only entitled to the water to the extent that he has use for it when economically and reasonably used. It is the policy of the law of this state to require the highest and greatest possible duty from the waters of the state in the interest of agriculture and for useful and beneficial purposes." *Washington State Sugar Co. v. Goodrich*, 27 Idaho 26, 44, 147 P. 1073, 1079 (1915) (Budge, J.).

In 1931, a federal district court ruled that the Twin Falls Canal Company may not compel upstream users to pay for construction of Milner dam, even if they benefit from the increase in water elevation. Doing so would "result in such a monopoly as to work disastrous consequences to the public." *Twin Falls Canal Co. v. American Falls Reservoir Dist. No. 2*, 49 F.2d 632, 635 (D. Idaho 1931). The court said this result was compelled by *Schodde*. *Id.* at 636.

In 1954, the Ninth Circuit, applying Idaho law, rejected a nuisance claim by a farmer who complained that an upstream reservoir increased the flow below the dam thus interfering with his ability to ford the stream. "In our opinion, the *Schodde* case supplies a complete answer to appellant's contentions." *Johnson v. Utah Power & Light Co.*, 215 F.2d 814, 816 (9th Cir. 1954).

In 1957, the Idaho Supreme Court addressed the maximum use doctrine in the context of adverse possession of a water right. In *Mountain Home Irr. Dist. v. Duffy*, 79 Idaho 435, 319 P.2d 965 (1957) (Taylor, J.), the Court rejected the defendant's claim of adverse possession of a water right. The Court premised its ruling on the policy of maximum use. "It must be remembered that the policy of the law of this state is to secure the maximum use and benefit of its water resources." *Mountain Home*, 79 Idaho at 442, 319 P.2d at 968 (citing *Van Camp*, *Farmers' Cooperative*, *Duffy*, *et al*.). It described this as a "constitutional policy" that is also grounded in statute. *Id*.

In a 1960 case, the Court held: "The policy of the law of this State is to secure the maximum use and benefit, and least wasteful use, of its water resources." *Poole v. Olaveson*, 82 Idaho 496, 502, 356 P.2d 61, 65 (1960) (Smith, J.) (holding that one party may discharge its irrigation waste into the drainage ditch of another party where that artificial channel substituted for the original channel by which the wastewater would have been returned to natural flows).

In 1964, the Court reiterated that "it is the policy of the law to prevent waste and to secure the maximum beneficial use of the waters of the state." *Ward v. Kidd*, 87 Idaho 216, 226-27, 392 P.2d 183, 190 (1964) (Taylor, J.).

In 1973, the Court upheld a constitutional challenge to the reasonable pumping level restrictions in Idaho's Ground Water Act. "We hold that the Ground Water Act is consistent with the constitutionally enunciated policy of promoting optimum development of water resources in the public interest. Idaho Const. art. 15, § 7." *Baker v. Ore-Ida Foods, Inc*., 95 Idaho 575, 584, 513 P.2d 627, 636 (1973) (Shepard, J.). Accordingly, "senior appropriators are not necessarily entitled to maintenance of historic pumping levels." *Id*.

In 1977, the Court invoked the principle of maximum use in holding that the statute authorizing state water masters to allocate water during times of shortage with preferences for decreed, permitted, and licensed water rights did not work a deprivation of property as to holders of non-adjudicated constitutional use water rights. "The governmental function in enacting not only I.C. § 42-607, but the entire water distribution system under Title 42 of the Idaho Code is to further the state policy of securing the maximum use and benefit of its water resources." *Nettleton v. Higginson*, 98 Idaho 87, 91, 558 P.2d 1048, 1052 (1977) (Donaldson, J.).

In 1982, the Court upheld—on the basis of "optimum development" and "maximum use"—a statutory distinction (eliminated in 1978) between treatment of domestic and other wells. "The decision as to how the optimum development of water resources in the State of Idaho can best be achieved is a policy decision exclusively within the province of the legislature. The legislature was therefore free to give special consideration to the position of domestic water users in enacting legislation to implement the policy of 'optimum development.'" *Parker v. Wallentine*, 103 Idaho 506, 512, 650 P.2d 648, 654 (1982) (Bistline, J.). The Court continued:

> Furthermore, it is clearly state policy that water be put to its maximum use and benefit. That policy has long been recognized in this state and was reinforced in 1964 by the adoption of article XV, section 7 of the Idaho Constitution.

Parker, 103 Idaho at 513, 650 P.2d at 655 (citing *Poole* and Hutchins, *The Idaho Law of Water Rights*, 5 Idaho L. Rev. 1, 2 (1968)).

In 1985, the Court invoked the policy of maximum use in holding that a prescriptive easement for drainage does not entitle the owner to engage in unnecessarily wasteful irrigation practices. "Regardless of how long such practices had continued, or whether easements had been acquired to discharge certain volumes of water across a lower property, those wasteful practices would contravene the public policy of this state. That policy 'is to secure the maximum use and benefit, and least wasteful use, of its water resources.'" *Merrill v. Penrod*, 109 Idaho 46, 55, 704 P.2d 950, 959 (Ct. App. 1985) (Swantrom, J.) (quoting *Poole*).

In 1990, the Court reiterated that our arid conditions compel maximum use of our water resources. "Because Idaho receives little annual precipitation, Idahoans must make the most efficient use of this limited resource. 'The policy of the law of this State is to secure the maximum use and benefit, and least wasteful use, of its water resources.'" *Kunz v. Utah Power & Light Co.*, 117 Idaho 901, 904, 792 P.2d 926, 929 (1990) (Bakes, C.J.) (quoting *Poole v. Olaveson*, 82 Idaho 496, 502, 502 P.2d 61, 65 (1960) (Smith, J.) (the policy of seeking maximum use of the State's water resources justifies not holding reservoir and canal operators strictly liable for flood damage).

In a 1997 basin-wide decision, the Court recognized partial forfeiture of water rights, which it found was compelled by the longstanding goal of maximum use. "The governmental function in enacting . . . the entire water distribution system under Title 42 of the Idaho Code is to further the state policy of securing maximum use and benefit of our natural water resources." *State v. Hagerman Water*

Right Owners ("*Basin-Wide Issue 10*") ("*Hagerman I*"), 130 Idaho 727, 735, 947 P.2d 400, 408 (1997) (Schroeder, J.) (quoting *Nettleton* and citing *Kunz*).

In the same year, the Court extended the maximum use ruling in *Kunz* (which limited the liability of irrigation dam owners) to dams constructed for wildlife and other purposes. As in *Kunz*, the Court based its ruling on the policy of maximum use. "It has been the policy of this State to secure the maximum use and benefit of its water resources." *Stott v. Finney*, 130 Idaho 894, 896, 950 P.2d 709, 711 (1997) (Walters, J.).

In another 1998 case, the Court recognized a federal reserved water right for stock watering to benefit permittees on federal lands. *United States v. State*, 131 Idaho 468, 959 P.2d 449 (1998) (Walters, J.). The Court noted that the purpose of the federal reservation was to ensure that the water would be available for use "by whichever member of the public happens at any time to have the grazing permit for the lands" thereby preventing private appropriations whereby "individuals could monopolize the water." *United States v. State*, 131 Idaho at 471, 959 P.2d at 452. "To hold otherwise would be in contravention of the policy of this state 'to secure the maximum use and benefit, and least wasteful use, of its water resources.'" *United States v. State*, 131 Idaho at 472, 959 P.2d at 453 (quoting *Poole v. Olaveson*, 82 Idaho 496, 502, 502 P.2d 61, 65 (1960) (Smith, J.)).

In 1999, the Court carved out an exception to the forfeiture principle for Carey Act irrigators. In noting that forfeiture is not favored, the Court relied on the "state policy of securing the maximum use and benefit of its water resources." *Aberdeen-Springfield Canal Co. v. Peiper*, 133 Idaho 82, 91, 982 P.2d 917, 926 (1999) (Silak, J.) (quoting *Hagerman I*, which, in turn, quoted *Nettleton*).

In 2007, the Court upheld the constitutionality of the Department's Conjunctive Management Rules which were expressly premised on an integration of the prior appropriation doctrine and "the principle of optimum use of Idaho's water." *American Falls Reservoir District No. 2 v. IDWR* ("*AFRD2*"), 143 Idaho 862, 867, 154 P.3d 433, 438 (2007) (Trout, J.).

In 2011, the Court employed the maximum use doctrine in upholding the Director's conjunctive management curtailment order.

> There is no difference between securing the maximum use and benefit, and least wasteful use, of this State's water resources and the optimum development of water resources in the public interest. . . . The policy of securing the maximum use and benefit, and least wasteful use, of the State's water resources applies to both surface and underground waters, and it requires that they be managed conjunctively.

Clear Springs Foods, Inc. v. Spackman, 150 Idaho 790, 808, 252 P.3d 71, 89 (2011) (Eismann, C.J.) (citing *Niday v. Barker,* 16 Idaho 73, 101 P. 254 (1909), *Farmers' Cooperative*, *Poole*, and *Parker*).

In 2013, the Court invoked the policy of maximum use in upholding the right of an irrigator to condemn a pipeline easement in order to reduce conveyance losses. The Court reiterated that it is "this State's policy to secure the maximum use and benefit, and least wasteful use, of its water resources."

Telford Lands LLC v. Cain, 154 Idaho 981, 987, 303 P.3d 1237, 1243 (2013) (Eismann, J.) (quoting *Poole*).

In 2016, the Court upheld the Director's conjunctive management curtailment order in which the Director relied on the maximum use doctrine in avoiding curtailments beyond a "trim line." "Additionally, the Director relied on the policy of promoting the optimum development of the State's water resources enunciated in Article XV, section 7 of the Idaho Constitution and this Court's decision in *Clear Springs,* where we stated that '[t]he policy of the law of this State is to secure the maximum use and benefit, and least wasteful use, of its water resources.'" *Rangen, Inc. v. IDWR* ("*Rangen II*"), 160 Idaho 119, 129, 369 P.3d 897, 907 (2016) (J. Jones, C.J.) (brackets original)[303]. "As we recently stated in *Clear Springs,* the policy of securing the maximum use and benefit, and least wasteful use of Idaho's water resources, has long been the policy in Idaho." *Rangen II*, 160 Idaho at 131, 369 P.3d at 909 (citing *Clear Springs*, *Niday*, *Farmers' Co-operative*, and *Poole*). "[A]n appropriator is not entitled to command the entirety of large volumes of water in a surface or ground water source to support his appropriation contrary to the public policy of reasonable use of water." *Rangen II*, 160 Idaho at 140, 369 P.3d at 918 (quoting IDAPA 37.03.11.020.03).[304] The Court also expounded on the importance of *Schodde* and *Van Camp*. *Rangen II*, 160 Idaho at 132-34, 369 P.3d at 910-12.[305]

[303] *Rangen II* is sometimes referred to as *IGWA v. IDWR*. IGWA is included in the "In the Matter of" portion the caption, but Rangen is the plaintiff-appellant. Another Rangen case, *Rangen, Inc. v. IDWR* ("*Rangen I*"), 159 Idaho 798, 367 P.3d 193 (2016) (J. Jones, J.), deals with the finality of decrees and does not implicate the maximum use doctrine. A third case deals with a mitigation plan addressing the same delivery call. *Rangen, Inc. v. IDWR* ("*Rangen III*"), 160 Idaho 251, 371 P.3d 305 (2016) (J. Jones, J.).

[304] In this passage, the Court quoted from IDWR's conjunctive management rule. The Court made clear, however, that the principle of maximum use has its roots not just in the rule but in the Idaho Constitution. "The Director did not treat either [the rule or the Idaho Constitution] as directly granting him discretion to apply a trim line. Instead, the Director recognized, correctly, that each source merely restated a broader understanding of Idaho law . . . ." *Rangen II*, 160 Idaho at 132, 369 P.3d at 910.

[305] The maximum use doctrine is not unique to Idaho. See, *American Fork Irr. Co. v. Linke,* 121 Utah 90, 97, 239 P.2d 188, 192 (1951) (upholding use of water right that "contemplates the more beneficial use of water, a most desired result fully consistent with progress and change, and reflecting the established policy of this state."); *Arave v. Pineview West Water Co.,* 2020 UT 67, ¶33 (holding that the "primary objective" in water disputes is ensuring that "the greatest amount of available water is put to beneficial use").

14. THE ADMINISTRATIVE SYSTEM

A. Overview of the IDWR

The Idaho Department of Water Resources ("IDWR") has authority over water quantity related issues, including water rights, in Idaho.[306] IDWR's authority primarily resided in title 42 of the Idaho Code. IDWR's administrative rules are located at IDAPA 37. IDWR has other authorities, including jurisdiction over stream channel alterations[307] and injection wells.[308]

The water resource activities of IDWR are divided into two divisions: the water management division and the planning and policy division. (A third division deals with energy issues.) The water management division contains the water right permitting, transferring and enforcement functions. The planning and policy division supports the statewide water resource planning conducted by the Idaho Water Resource Board. It also provides the technical services for the entire Department. An IDWR organizational chart is set out under Appendix E.

The Department administers water rights on the basis of over fifty "administrative basins." They are shown on the map set out under Appendix D. Each permit or water right issued by the Department is assigned a number whose first two digits correspond to the administrative basin in which it is located.

The primary contact with IDWR for most practitioners will be at IDWR's regional offices. Applications for water right permits, transfers, well permits and other administrative approvals can be obtained at these offices and are submitted there as well. A list of addresses and phone numbers for IDWR's offices is provided under Appendix E.

---

[306] The IDWR traces its roots to the Office of the State Engineer, established by the Idaho Legislature in 1895. In 1919 the agency's name was changed to the Idaho Department of Reclamation. Initially its it head was known as the Commissioner of Reclamation, but in 1943 the agency's head was renamed the State Reclamation Engineer. In 1965 the Legislature created the Idaho Water Resource Board (discussed in section 14.D(6) at page 187). In 1970, the agency's name was changed to the Department of Water Administration and its head was renamed the "Director." 1970 Idaho Sess. Laws, ch. 12. Four years later, in 1974, the Legislature merged the Idaho Water Resource Board into the Department of Water Administration and changed its name to the Department of Water Resources, as it is known today. 1974 Idaho Sess. Laws, ch. 20 (codified as amended at Idaho Code §§ 42-1701 to 42-1806). In 1981 the Office of Energy was merged into the Department of Water Resources, as an operational division known as the Division of Energy.

[307] Idaho Stream Channel Protection Act, Idaho Code §§ 42-3801 to 42-3813. Implementing regulations are found at IDAPA 37.03.07.

[308] *Waste Disposal and Injection Wells*, Idaho Code §§ 42-3901 to 42-3919.

B. IDWR hearing procedures

(1) Application and filing fee

All requests for new or transferred water rights begin with an application. Requirements for applications for appropriation of new water rights are discussed in section 11.A at page 146. See section 15.L at page 248 for a discussion of procedures for water right transfers.

Every application must be accompanied by a filing fee, which vary depending upon the type of application and the quantity of water involved. The various filing fees are set out in Idaho Code § 42-221.

When a water right application is filed, the Applicant is entitled to have the Department process the application.[309] The form and timing of IDWR's investigation and hearing are within its discretion, so long as the fundamental rights of the participants are not violated.

(2) Publication

Upon receipt of the application and the filing fee, the Department will prepare a notice for publication.[310] The notice will be published for two consecutive weeks in a newspaper printed or circulated within the county containing the point of diversion.[311] If the application involves more than ten cfs or 1,000 acre-feet of water, the notice must be published in newspapers achieving statewide circulation.[312]

(3) Amendment of application for permit

Idaho Code § 42-211 addresses amendments of applications for permit. It requires, anachronistically, that the amendments "be made by indorsement by the applicant or his agent on the original application" and that the application then be re-published.

---

[309] Idaho Code § 42-222(1) ("Upon the receipt of any protest, accompanied by the statutory filing fee as provided in section 42-221, Idaho Code, it shall be the duty of the director of the department of water resources to investigate the same and to conduct a hearing thereon."); Idaho Code § 42-211 ("Whenever a permit holder desires to change the place, period, or nature of the intended use, or make other substantial changes in the method of the diversion or proposed use or uses of the water, he shall file an application for amendment . . . and upon receipt thereof [of an application for amendment of a permit] it shall be the duty of the department of water resources to examine same . . . .").

[310] Idaho Code §§ 42-203A, 42-211 and 42-222(1).

[311] Idaho Code § 42-203A(2).

[312] Idaho Code § 42-203A(2).

(4) Protests

Anyone wishing to object to an application may do so by filing a notice of protest with the Department within ten days of the last date of publication of the notice. Idaho Code §§ 42-203A(1) and 42-222(1). The protest must be accompanied by a $25.00 filing fee. Idaho Code §§ 42-203A(4), 42-221(L), and 42-222(1).

The statutes do not require a protestant to be a water right holder. However, a protestant initially should be prepared to demonstrate that he or she would somehow be affected by the outcome of the application.[313] An impact on the protestant arising under the local public interest test is a sufficient basis for a protest. (See discussion the local public interest in section 3 at page 467.)

(5) Pre-hearing conference

If a protest is filed, the Department will arrange an informal meeting called a "prehearing conference" with the transfer applicant and the protestants. This will be scheduled at the parties' convenience, typically within a few weeks of the protest. The prehearing conference will be moderated by a departmental employee (frequently the head of the regional office).

Although it is generally a good idea for the parties to have arranged to see each other before hand, the prehearing conference is often the first time the parties meet. The conference provides a good opportunity for the applicant to explain the purpose of the application and for the protestants to identify their concerns. The prehearing conference serves as an informal settlement conference. It also provides an informal opportunity for the parties to narrow the issues, to exchange documents and information, to agree on undisputed facts, to schedule any discovery and set other deadlines. It is worthwhile for both parties to give considerable thought to each of these matters before appearing at a conference, and to make the most of the opportunity to resolve the dispute informally.

To encourage frank discussions, the prehearing conference may be conducted off the record.[314]

(6) Hearing

If the protest cannot be settled by the parties at the prehearing conference stage, the Department will appoint a hearing officer, who will set the matter for hearing in the county where the water right is located.

Note that if no protest is filed (or the protest is withdrawn), the Department will proceed to evaluate the application issue an order without holding a hearing. In the case of an amended permit

---

[313] The Department has held that a protestant must "demonstrate some nexus to the issue in controversy." *Hardy v. Higginson*, Case No. 92599 (4th Dist., July 25, 1990) (unpublished Memorandum Decision).

[314] IDAPA 37.01.01.512.

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

application,[315] a transfer application,[316] or an exchange application,[317] a disappointed applicant may request a hearing after the Director issues an order to build a record for judicial review.

The hearing is governed by the APA, the Department's Rules of Practice and Procedure, and the Idaho Rules Civil Procedure (to the extent they are adopted by the Department's rules). Litigants should carefully review these rules, which set out important procedures for appearance, pleading and conduct at the hearing.

The hearing will be scheduled far enough out to allow the parties to prepare. Formal discovery (under the Idaho Rules of Civil Procedure) is not automatically available, but may be sought by motion to the Hearing Officer.[318] Subpoenas may be issued by the Director commanding the appearance of witnesses from any place within Idaho.

The hearing is basically an administrative trial. If a party has several applications pending which raise common issues, the Department may agree to consolidate them into a single hearing. The hearing may last anywhere from a few hours to a few weeks. Most are completed within a couple of days. Counsel are often present, although parties are allowed to appear *pro se*.[319] Although strict rules of evidence do not apply, most hearing officers will follow a "common sense" version of the rules of evidence in which irrelevant, immaterial, incompetent or redundant material is excluded.

Testimony is typically presented by live witnesses in a manner similar to a courtroom procedure (with direct examination, followed by cross-examination and re-direct). However, the Department's rules do allow for the use of pre-filed prepared testimony of expert witnesses, at the Hearing Officer's discretion.[320] Prepared testimony is not commonly employed at the Department, but is the standard practice before the Idaho Public Utilities Commission. Prepared testimony can shorten hearing times and enable a more effective and efficient fact-finding exercise.

(7) Building the record

Judicial review of contested cases is conducted "on the record" (as opposed to *de novo*). IAPA, Idaho Code §§ 67-5277, 67-5249; see also Idaho R. Civ. P. 84(b)(2), 84(j), 84(k) and 84(l). Therefore, creating the best possible record in the proceedings below is critical to upholding or overturning an action in court.

---

[315] Idaho Code § 42-211.

[316] Idaho Code § 42-222(5).

[317] Idaho Code § 42-240(7).

[318] IDAPA 37.01.01.521.

[319] Natural persons may appear *pro se*. However, corporations must be represented by counsel.

[320] IDAPA 37.01.01.413.01.b and 37.01.01.605 (Rule 605). This is expressly authorized by the APA. Idaho Code § 67-5241(b).

The hearing is tape-recorded by the Department. The hearing officer should ensure that speakers identify themselves and speak clearly and audibly. The recording equipment is cumbersome to use, and attempting to transcribe these recordings is not easy. Anyone wanting a transcript of the hearing should request a court reporter several days before the hearing and arrange to pay for the reporter's presence.[321] An accurate transcript can be a valuable asset on appeal.

The administrative record also includes written materials, including the application, staff reports, maps and any other information submitted into the record. These materials should become part of the record simply by submitting them to the decision-making body. However, it is a good practice to formally request inclusion in the administrative record of any material important to a matter. Parties should also take care to ensure that materials offered by other parties are properly placed in the record.

Winning before the Department is not enough. A decision can be overturned if it is not supported by substantial evidence in the administrative record. Therefore, it is very important to address each of the statutory and regulatory criteria with evidence and argument needed to support party's position.

(8) The decision

Under its rules, the Department may issue four types of orders:

- "Interlocutory orders." These do not decide all previously undecided issues presented in a proceeding. They are issued during the course of a proceeding by either the hearing officer or the Director. Because they are not final, they are not appealable (until a final order is issued).[322] A party[323] may seek review by the director of an interlocutory order at any time during the course of the administrative proceeding.[324] The rule specifies no time limit for such a petition.

- "Recommended orders." This is a type of order typically issued at the end of a proceeding by the hearing officer. Recommended orders do <u>not</u> become effective without action of the Director.[325]

---

[321] See IDAPA 37.01.01.651.

[322] IDAPA 37.01.01.710 (Rule 710) and 37.01.01.711 (Rule 711).

[323] Rule 711 says that any "party or person affected by an interlocutory rule" may seek review. Thus, even non-parties may seek review.

[324] IDAPA 37.01.01.711 (Rule 711). The review is in the nature of a petition for reconsideration, but, under the terminology of the rule, is referred to as a petition to review the interlocutory order. It is directed to the officer who issued the interlocutory order (which may be either a hearing officer or the Director).

[325] IDAPA 37.01.01.720 (Rule 720).

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

EXHIBIT C
Page No. 170 of 761

- "Preliminary orders." This is another type of order typically issued at the end of a proceeding by the hearing officer. Preliminary orders will become effective automatically within a fixed period of time, unless the Director affirmatively undertakes to review them.[326] The Department also employs preliminary orders to handle administrative matters, such as error corrections, that do not go before a hearing officer.

- "Final orders." This is either (1) a preliminary order that becomes final automatically, (2) an order issued by the Director in review of a recommended order, or (3) any other appealable order issued by the Director.[327] Typically, a final order concludes the entire proceeding or, in some instances, concludes discrete portions of a proceeding. However, final orders are also employed by the Director in special, emergency circumstances such as cease and desist orders and show cause orders.[328]

In the ordinary course, the Director does not review interlocutory orders issued by a hearing officer until the hearing is concluded and the hearing officer issues either a recommended or preliminary order. However, the hearing officer has the authority to refer interlocutory matters to the Director at any time.[329] Moreover, the Director has the authority to review, *sua sponte*, any interlocutory order of the hearing officer at any time.[330]

The rules do not expressly provide a mechanism for a party to refer or appeal an interlocutory matter to the Director. Presumably, the same could be accomplished by either a motion to the hearing officer or a petition to the Director seeking that he or she exercise his or her discretion under Rule 562. This, however, is not a standard practice.

A party, at its option, may seek review of a recommended order, preliminary order, or final order by way of petition for reconsideration. Petitions for reconsideration are governed by statute and administrative rules. The statute, part of the IAPA (Idaho Code § 67-5246), sets a 21-day deadline for the agency to "dispose of" the petition. The Idaho Supreme Court ruled that this means the agency must issue a ruling on the merits within 21 days, and is not allowed to simply grant the petition and then take the matter under consideration (as is typically done in the judicial context). *A&B Irr. Dist. v. IDWR*, 154 Idaho 652, 301 P.3d 1270 (2012) (Eismann, J.).

---

[326] IDAPA 37.01.01.730 (Rule 730).

[327] IDAPA 37.01.01.740 (Rule 740)

[328] IDAPA 37.01.01.740.01 (and statutory authority cited therein).

[329] IDAPA 37.01.01.562 (Rule 562).

[330] IDAPA 37.01.01.562 (Rule 562).

The rules for such petitions are contained in the separate rules for each type of order.[331] In each case, the petition must be filed within fourteen days. Note that the three-day mailbox rule does not apply here.[332] A petition for reconsideration is not mandatory (to exhaust administrative remedies).

An alternative (or supplement) to the petition for reconsideration is the petition for clarification.[333] A petition for clarification may be filed in response to any type of order (interlocutory, recommended, preliminary or final). However, unlike a petition for reconsideration, a petition for clarification does not toll the time to seek further review. Thus, the petition for clarification should be employed only where the party does not object to the merits of the order, but merely seeks clarification of some detail.

A rarely-employed special review procedure is available to persons who are aggrieved by a final decision, but who have not been afforded an opportunity to be heard.[334]

Note that post hearing procedures and deadlines are governed both by the APA[335] and by the Department's own rules.[336] The two dovetail. In a few cases, the Departmental rules provide specific deadlines left up to the discretion of the agency by the statute.

(9) Res judicata

"The doctrine of res judicata applies to administrative proceedings. *Hansen v. Estate of Harvey*, 119 Idaho 333, 806 P.2d 426 (1991); *J & J Contractors/O.T. Davis Constr. v. State by Idaho Transp. Bd.*, 118 Idaho 535, 797 P.2d 1383 (1990)." *Sagewillow, Inc. v. IDWR* ("*Sagewillow II*"), 138 Idaho 831, 844, 70 P.3d 669, 682 (2003) (Eismann, J.). However, issue preclusion attaches only to issues actually raised. Thus, a transfer approval in which the issue of forfeiture did not actually arise is not res judicata as to that issue.

By statute, decrees from a general adjudication (such as the SRBA) are given binding effect. "The decree entered in a general adjudication shall be conclusive as to the nature and extent of all water rights in the adjudicated water system [with certain stated exceptions, e.g., domestic rights excluded by court order]." Idaho Code § 42-1420.

[332] IDAPA 37.01.01.057 (Rule 57).

[333] IDAPA 37.01.01.770 (Rule 770).

[334] Idaho Code § 42-1701(3); IDAPA 37.01.01.740.02.b.

[335] Idaho Administrative Procedure Act ("APA"), Idaho Code §§ 67-5243 to 67-5249.

[336] IDAPA 37.01.01.720 to 37.01.01.740 (Rule 740).

See also, *State v. Hagerman Water Right Owners, Inc.* ("*Hagerman I*"), 130 Idaho 736, 947 P.2d 409 (1997) (dealing with the non-binding effect in the SRBA of certain prior decrees), discussed in section 13.I(2) at page 605.

(10) Retroactive legislation

There is a good discussion of retroactive water rights legislation in *San Carlos Apache Tribe v. Superior Court*, 972 P.2d 179 (Ariz. 1999).

In 1978 the Idaho Legislature amended the law governing water rights for domestic wells.[337] The Idaho Supreme Court noted that the Legislature could have made the 1978 amendment retroactive—presumably retroactive so as to affect rights with pre-1951 priorities—but did not elect to do so.[338]

In *Fremont-Madison Irr. Dist.& Mitigation Grp. v. Idaho Ground Water Appropriators, Inc.*, 129 Idaho 454, 926 P.2d 1301 (1996) (Schroeder, J), the Idaho Supreme Court was asked to consider the constitutionality of the amnesty for illegal enlargements. The question was whether the Legislature retroactively can validate illegal enlargements of water rights by such a waiver. The Idaho Supreme Court's answer is yes, but with a substantial caveat that sharply limits the result. The Court cautioned that a waiver cannot operate so as to injure, such as by dilution of priority, any water right existing on the 1994 date the amnesty statute was enacted. The effect of this ruling is to require mitigation or a condition, such as a subordination, before an enlargement can be given a date-of-enlargement priority.

The Washington Legislature codified the rule in *Theodoratus* and extending it to all water right holders, including municipal providers. Thus, all new certificates for "perfected rights" will be limited to actual beneficial use, not system capacity. The Legislature softened the blow, however, by creating an expansive new definition of "municipal water supply purposes" (Wash. Rev. Code § 90.03.015) and grandfathering water right certificates issued for such purposes (Wash. Rev. Code § 90.03.330). This legislation was challenged as being unconstitutional retroactive legislation, but it survived. *Lummi Indian Nation v. State*, 241 P.3d 1220 (Wash. 2010).

(11) Judicial review

As noted above, interlocutory orders are not appealable to district court (until a final order is issued).

---

[337] 1978 Idaho Sess. Laws, ch. 324 ch. 324 § 1. This provision removed the provision saying that domestics would "not be in any way affected by this act" replacing it with a statement saying that domestics were exempt from permitting requirements.

[338] *Parker v. Wallentine*, 103 Idaho 506, 511, 650 P.2d 648, 653 (1982).

When a final decision is rendered by the Department, any party to the proceeding may appeal to district court within 28 days of the final decision.[339] The district court's decision may be appealed directly to the Idaho Supreme Court (bypassing the court of appeals).

The standard of review is set out in Idaho's APA.[340] Essentially, the party challenging the agency's decision must show that the Department (1) applied the law incorrectly, (2) made a factual determination which is clearly erroneous, or (3) abused its discretion.

An Idaho statute (which effectively overruled a prior case) states that the SRBA court does not have jurisdiction to review Idaho Department of Water Resources administrative decisions affecting water rights claimed in an adjudication, including a water right transfer decision involving a determination that all or a portion of a water right has been forfeited. Rather, judicial review of Department decisions is to be brought pursuant to the Idaho Administrative Procedures Act.[341] This statute notwithstanding, the Idaho Supreme Court issued an administrative order on December 9, 2009 stating that "all petitions for judicial review of any decision regarding the administration of water rights from the Department of Water Resources shall be assigned to the presiding judge of the Snake River Basin Adjudication . . . ."

(12) Exhaustion

The issue of exhaustion of administrative remedies (notably, whether it is necessary to file exceptions or a petition for reconsideration) is addressed in the *Idaho Land Use Handbook*.

(13) Attorney fees and sanctions

EDITOR'S NOTE: A more extensive discussion of Idaho Code § 12-117 and other attorney fee provisions is contained in the *Idaho Land Use Handbook.*

The Department's rules contain no provision addressing the award of attorney fees or other sanctions against a non-prevailing party who engages in unreasonable or frivolous administrative litigation. "Generally, an administrative agency has no power to award attorney's fees unless specifically authorized by statute or agreement between the parties." *In the Matter of Application for Transfer No. 5691 in the Name of Jerome Cheese Company,* Idaho Department of Water Resources (Order Denying Motion for Attorney's Fees, Nov. 11, 2000) at 2 (citing *Idaho Power Co. v. Idaho Public Utilities Comm'n*, 102 Idaho 744, 750, 639 P.2d 442, 448 (1981).

---

[339] Idaho Code §§ 42-203A(6), 42-211, 42-222(5), 42-240(7), 42-1701A(4), 67-5270, and 67-5273(2).

[340] Idaho Code § 67-5279. *See*, *Dovel v. Dobson*, 122 Idaho 59, 61-62, 831 P.2d 527, 529-30 (1992), and cases cited therein.

[341] Idaho Code § 42-1401D (negating decision of the Idaho Supreme Court in *Sagewillow, Inc. v. IDWR* ("*Sagewillow I*"), 135 Idaho 24, 13 P.3d 855 (2000), which held that venue and jurisdiction provisions of adjudication statutes override those of the Idaho Administrative Procedures Act). The legislation amending Idaho Code § 42-1401 included an express statement of intent. *See* 2001 Idaho Sess. Laws, ch. 31.

However, the Department has recognized that Idaho Code § 12-117 authorizes it to award attorney fees in administrative matters involving litigation between a governmental entity and a private party. *In the Matter of Application for Transfer No. 5691 in the Name of Jerome Cheese Company,* Idaho Department of Water Resources (Order Denying Motion for Attorney's Fees, Nov. 11, 2000) (case involved a protest by a city against a private party applicant). Although the Department declined to award attorney fees in that case, it determined that it could and must do so where the standards of section 12-117 are met. (See the *Idaho Land Use Handbook* for a detailed discussion of attorney fee recovery provisions.) This case, however, is unusual in that the protestant was a governmental entity, thus making section 12-117 applicable. This provision authorizes awards of attorney fees to the prevailing party in litigation involving "a state agency, a city, a county or other taxing district." Idaho Code § 12-117(1). Moreover, it authorizes awards "in any administrative or civil judicial proceeding." *Id*. Idaho courts have interpreted this to allow awards not only in the context of judicial appeals of administrative decisions, but by the administrative body in the administrative hearing itself. *Stewart v. Dep't of Health and Welfare*, 115 Idaho 820, 822-23, 771 P.2d 41, 43-44 (1989), *see*, *Ockerman v. Ada Cnty. Bd. of Comm'rs*, 130 Idaho 265, 267, 939 P.2d 584, 586 (Idaho Ct. App. 1997).

Where none of the parties to a contested case are governmental entities, there does not appear to be any direct statutory authority for the Department to award attorney fees at the administrative level. For instance, Idaho Code §§ 12-121 and 12-123 authorize attorney fee awards and sanctions, but are limited to civil proceedings.

Note, however, that the Department's Rules do authorize the award of sanctions in the context of discovery abuses. IDAPA § 01.01.01.531. Under Rule 37 of the Idaho Rules of Civil Procedure, discovery sanctions can include the award of attorney fees.

(14) Error correction

The Department does not have express general statutory authority to correct errors discovered in permits, licenses, and other documents. The Department's practice, however, it to correct such errors without instituting special proceedings therefore, where the error is manifest and other parties are not affected thereby. Typically, the Department simply will issue a preliminary order to the water right holder explaining how the error occurred, accompanied by a corrected permit, license, or other document.

(15) Authority of the Department to impose conditions on water rights

The authority to condition water rights is expressly stated in the Water Code. The first applies to transfers:

> The director of the department of water resources shall examine all the evidence and available information and shall approve the change in whole, or in part, <u>or upon conditions</u>, provided no other water rights are injured thereby, the change does not constitute an enlargement in use of the original right, the change is consistent with

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

> the conservation of water resources within the state of Idaho and is in the local public interest as defined in section 42-202B, Idaho Code, the change will not adversely affect the local economy of the watershed or local area within which the source of water for the proposed use originates, in the case where the place of use is outside of the watershed or local area where the source of water originates, and the new use is a beneficial use, which in the case of a municipal provider shall be satisfied if the water right is necessary to serve reasonably anticipated future needs as provided in this chapter.

Idaho Code § 42-222(1) (emphasis added).

The second applies to permit amendments:

> The director of the department of water resources shall give such notice to other affected water users as he deems appropriate and may grant the amendment, in whole or in part or upon conditions, or may deny same.

Idaho Code § 42-211 (emphasis added).

The third applies to licensing:

> A license may be issued to a municipal provider for an amount up to the full capacity of the system constructed or used in accordance with the original permit provided that the director determines that the amount is reasonably necessary to provide for the existing uses and reasonably anticipated future needs within the service area and otherwise satisfies the definitions and requirements specified in this chapter for such use. The director shall condition the license to prohibit any transfer of the place of use outside the service area, as defined in section 42-202B, Idaho Code, or to a new nature of use of amounts held for reasonably anticipated future needs together with such other conditions as the director may deem appropriate.

Idaho Code § 42-219(1) (emphasis added).

C. Time lines for IDWR hearings

(1) "Fast" versus "slow" scenario

Predicting how long a hearing before the Department necessarily involves some guesswork. The best we can provide are some illustrative examples. Here we employ two: a "fast" and a "slow" scenario.

The "fast" scenario assumes that a protest is filed, followed by minimal discovery, a short hearing, no briefing, no reconsideration, and no appeal. That scenario would play out in just over five months (from the date of application).

In contrast, the "slow" scenario assumes that protests are filed and that the protestants will take advantage of every opportunity for discovery, briefing, reconsideration and review. The estimated time frame for the slow scenario runs one year and three months (from the date of application). The two scenarios are compared below:

STAGE	FAST SCENARIO	SLOW SCENARIO
From Application to Hearing	88 days	156 days
From Hearing to Initial Decision	30 days	88 days
From Preliminary or Recommended Order to Final Order	14 days	149 days
From Final Order to Deadline to Initiate Judicial Review	28 days	63 days
TOTAL	160 days	456 days

The estimated times for each step are based on a combination of fixed regulatory timeframes coupled with estimates where no fixed deadline applies. Obviously, actual time frames can vary widely.

The slow scenario is not a worst case scenario. Complex discovery, motion practice, remands and other delays could extend this process even further. These time frames take the applicant only to the point of judicial review. As noted above, district court litigation might take eight months or more and a state supreme court appeal could entail another year.

(2) Detailed slow scenario

A detailed breakdown of the "slow scenario" follows.

(a) From application to hearing

EVENT	COMMENT	ESTIMATED TIME	CUMULATIVE TIME
Application Filed			Day 1
Prepare Publication Notice	The Department will prepare the notice of publication and submit it to local newspaper(s). Idaho Code § 42-203A(2).	2 weeks (Depending on the Department's workload, this could be much longer)	Day 15
Notice of Application Published	Notice of the Application must be published once in each of two weeks. Idaho Code § 42-203A(2).	8 days, plus 5 days advance time required by paper	Day 28
Deadline for Protests	Protests must be filed within 10 days of the last day of publication. Idaho Code § 42-203A(1). However, a would-be protestant who misses the deadline may file a petition for intervention.	10 days	Day 38
Prehearing Conference	This is arranged through the Department by mutual agreement of the parties. IDAPA 37.01.01.510 to .513.	2 weeks (this could be much longer)	Day 52

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

EVENT	COMMENT	ESTIMATED TIME	CUMULATIVE TIME
Discovery and Motion Practice	Discovery is not automatic, and must be initiated through petition. The Department will then set a discovery schedule (which will generally conform to the agreement of the parties). IDAPA 37.01.01.521.	3 months (this could be longer or shorter, in some cases much longer)	Day 142
Witness and Exhibit Disclosure	The Department will set a deadline for disclosure and identification of witnesses and exhibits.	Assume 10 days before trial, following discovery cutoff	Day 152
Hearing	This is arranged through the Department by mutual agreement of the parties. Idaho Code § 42-1701A; Idaho Code § 7-5242; IDAPA 37.01.01.550. Note: In addition to the above, the water code contains a separate "catch all" provision that provides a right to a hearing before the Director when no other opportunity for hearing was provided. Idaho Code § 42-1701A(3); IDAPA 37.01.01.730.02.e; IDAPA 37.01.01.740.02.b.	Assume 4 day hearing	Day 156

(b) From hearing to initial decision by hearing officer

EVENT	COMMENT	ESTIMATED TIME	CUMULATIVE TIME
Last day of hearing			Day 0
Post-hearing briefs	There is no provision in the rules for the filing of briefs. Parties should discuss this with the hearing officer.	Assume opening brief 14 days after hearing, response 7 days later, followed by reply in 7 days	Day 28
Recommended or preliminary order	Idaho Code § 67-5243(1)(a); IDAPA 37.01.01.720.01; IDAPA 37.01.01.730.01 Note: Once the recommended or preliminary order is issued, the clock begins to run simultaneously on petitions for reconsideration and administrative appeals.	No deadline. However, IDWR orders usually come out within 60 days.	Day 88

(c) From preliminary or recommended order to final order

EVENT	COMMENT	ESTIMATED TIME	CUMULATIVE TIME
Preliminary Order or Recommended Order	The Hearing Officer may issue either a preliminary order or a final order. If she issues a preliminary order, it will become final automatically if not challenged. If challenged, the agency head will review and issue a final order. If she issues a recommended order, it will be reviewed by the agency head (whether or not it is appealed). The agency head will then issue a final order. Either type of order may be appealed to the agency head. If an appeal is filed, the time frames are identical. Preliminary Order: Idaho Code § 67-5243(3)(b); IDAPA 37.01.01.730. Recommended Order: Idaho Code § 67-5243(3)(a); IDAPA 37.01.01.720.		Day 0

EVENT	COMMENT	ESTIMATED TIME	CUMULATIVE TIME
Optional: Petition for reconsideration of preliminary order.	Preliminary Order: Idaho Code § 67-5243(3); IDAPA 37.01.01.730.02.a. Recommended Order: Idaho Code § 67-5243(3); IDAPA 37.01.01.720.02.a. Note: A party may skip the "petition for reconsideration" and immediately file an administrative appeal. If a petition for reconsideration is filed, the parties will have another opportunity to file an administrative appeal after the petition is resolved. Filing a petition for reconsideration at this stage affords the hearing officer an opportunity to correct the alleged error before the matter is elevated to the agency head. Note that there is a separate provision for a "petition for clarification," IDAPA 37.01.01.770. This serves a similar, but less formal function. Most importantly, a petition for clarification does not suspend the time for appeal.	14 days after preliminary or recommended order. Preliminary Order: If neither petition for reconsideration or administrative appeal is filed within 14 days, the preliminary order automatically becomes final (and appealable). Recommended Order: If neither petition for reconsideration or administrative appeal is filed within 14 days, the recommended order goes to Director for further action.	Day 14
Optional: Response to petition for reconsideration.	The rules do not contemplate the filing of a response to a petition for reconsideration. This follows the appellate model, in which no response is filed unless and until the petition for reconsideration is granted, at which point additional briefing may be ordered. Nevertheless, some people do file responses, and the Department generally accepts them for filing.	None	Day 14
Order "disposing of" petition for reconsideration.	Preliminary Order: Idaho Code § 67-5243(3); IDAPA 37.01.01.730.02.a. Recommended Order: Idaho Code § 67-5243(3); IDAPA 37.01.01.720.02.a. Note: The hearing officer is required to "dispose of" the petition within 21 days. Neither the statute nor the rule say what this means. It could mean that the hearing officer is required to address the merits of the petition within that time. But the Department does not read the rule that way. According to the Department, granting the petition simply means that the hearing officer has agreed to reconsider his or her decision. It does not indicate one way or the other whether the order will be changed in accordance with the request of the petitioner. Moreover, according to the Department, granting the petition essentially "stops the clock." Because the IDAPA and the Department's implementing rule do not say what happens next, the Department takes the view that the hearing officer can take as long as he or she needs to reconsider the matter. Presumably, the end result is a new recommended order or preliminary order, which sends the parties back to step one. But this is not spelled out in the statute or rule. Thus, there is risk of substantial delay in filing a petition for reconsideration.	21 days after petition for re-consideration (or else deemed denied).	Day 35

EVENT	COMMENT	ESTIMATED TIME	CUMULATIVE TIME
Appeal to agency head from preliminary or recommended order	Preliminary Order: Idaho Code § 67-5245(3); IDAPA 37.01.01.730.02.b. The terminology is inconsistent. The statute speaks in terms of "administrative review," "motion for review" and "petition for review." The regulation says a party may "appeal or take exceptions." Note: Even if no one seeks review of the preliminary order, the agency head may, on his own motion, within 14 days, decide to review the order. Idaho Code § 67-5245(3). However, this statutory provision for "sua sponte review" does not appear to be reflected in IDWR's rules. Recommended Order: Idaho Code § 67-5244(1); IDAPA 37.01.01.720.02.b. The statute says a party may "file exceptions." The regulation says a party may "support or take exceptions."	14 days from order, or from denial of petition for reconsideration.	Day 49
Opening brief on petition.	Preliminary Order: Idaho Code § 67-5245(5); IDAPA 37.01.01.730.02.b. Recommended Order: Idaho Code § 67-5244(1); IDAPA 37.01.01.720.02.b and .c.	The opening brief is filed simultaneously with the administrative appeal.	Day 49
Opposing brief on petition.	Preliminary Order: Idaho Code § 67-5245(5); IDAPA 37.01.01.730.02.c. Recommended Order: Idaho Code § 67-5244(1); IDAPA 37.01.01.720.02.c.	14 days from opening brief.	Day 63
Further briefing and oral argument (optional).	Preliminary Order: Idaho Code § 67-5245(5); IDAPA 37.01.01.730.02.d. Recommended Order: Idaho Code § 67-5244(1); IDAPA 37.01.01.720.02.c.	If the agency head grants the petition, further briefing and oral argument will follow. No deadline set. This schedule assumes (most optimistically) that argument is scheduled within 30 days.	Day 93

EVENT	COMMENT	ESTIMATED TIME	CUMULATIVE TIME
Final order (or remand for further evidentiary hearings).	Preliminary Order: Idaho Code § 67-5245(6)(a); IDAPA 37.01.01.730.02.d. Recommended Order: Idaho Code § 67-5245(2)(a); IDAPA 37.01.01.720.02.c. Note: The 56 day clock does not begin to run until the other parties have had an opportunity to file briefs. So, as a practical matter, this is really 70 days from the filing of the appeal (aka exceptions). Note: The rules provide that the Department may extend the 56 day deadline "for good cause shown" but they do not provide any consequence for failure of the Department to take any action. The Department's position is that its failure to respond by the deadline does not have any legal effect. Specifically, its lack of a response does not have the effect of automatically denying (or granting) the exceptions. Nor does it convert the preliminary order into a final order. Consequently, judicial review continues to be premature, and the clock for filing a judicial appeal has not started to run. A party finding itself in this circumstance may bring the matter to the attention of the Department, or may request a court to force the agency to act. Note: In addition to issuing a final order, the agency head also has the option to conduct further hearings or remand the issue for further factual development of the record. Preliminary Order: Idaho Code § 67-5245(6)(b) and (c); IDAPA 37.01.01.723.d. Recommended Order: Idaho Code § 67-5244(2)(b) and (c); IDAPA 37.01.01.720.02.c. Note: A party may choose to file a motion seeking an administrative stay on further processing of the application to supplement the record or for other stated purposes. However, the party should simultaneously file an appeal.	56 days after briefs and oral argument, if there is one. The agency may take longer, for good cause.	Day 149

(d) From final order to judicial review

EVENT	COMMENT	ESTIMATED TIME	CUMULATIVE TIME
Final Order by agency head (or a Preliminary Order that was not challenged)			Day 0
Optional: Petition for reconsideration of final order by agency head. (Not applicable to preliminary order which becomes final automatically).	Idaho Code § 67-5246(4); IDAPA 37.01.01.740.02.a. Note: This is called a "motion for reconsideration" in the statute. Idaho Code § 67-5246(4). However, the regulations refer to it as a "petition for reconsideration." IDAPA 37.01.01.740.02.a. Note: A petition for reconsideration may be filed at this stage only if the final order was issued by the agency head. If a preliminary order has become final automatically (because there was no appeal or petition), then no further administrative review is available.	14 days from final order issued by agency head.	Day 14

EVENT	COMMENT	ESTIMATED TIME	CUMULATIVE TIME
Order disposing of petition for reconsideration.	Idaho Code § 67-5246(4); IDAPA 37.01.01.740.02.a.	21 days from petition (or else deemed denied).	Day 35
Final order becomes "effective." Applies only to orders issued by agency head (not to preliminary order which becomes final automatically).	Idaho Code § 67-5246(5). Note: The statute refers to "the order" which apparently relates back to "any final order issued by the agency head" in the previous subsection. This 14 day period runs simultaneously with the 28 day appeal period. Thus, the rule becomes effective halfway through the appeal period, if no petition is filed. Thus, this statutory provision is simply a mechanism to ensure that the parties have an opportunity to file a petition for reconsideration of orders issued by an agency head before the order goes into effect. Note: This rule has no applicability to preliminary orders which become final automatically because no administrative appeal is filed; they become "effective" as soon as they become final—because there is no further mechanism for administrative review. Note also that the Department's rules provide that the effectiveness of any order shall not be stayed automatically on the filing of an appeal.	14 days after issuance of the order, if no petition for reconsideration. If a petition for reconsideration is filed with respect to a final order by an agency head, the final order becomes effective once the petition is disposed of.	(runs concurrently)
Petition for judicial review to district court.	Idaho Code §§ 67-5270 to 67-5279, in particular 67-5273(2); IDAPA 37.01.01.740.02.c.	28 days from final order (that is, 28 days from order issued by the agency head or from date when preliminary order became automatically final). Note, if no petition for reconsideration is filed, the 28 days begins to run immediately from issuance of order. Note: Venue is specified in IDAPA 37.01.01.740.02.c.	Day 63
Cross-petition for judicial review.	Idaho Code § 67-5273(2).	14 days from petition for judicial review.	Day 77

D. Administration of water rights

The curtailment of junior water rights by state action to enforce priorities is referred to as the "administration of water rights." In its simplest terms, administration usually refers to shutting down juniors in accordance with their priorities to meet the needs of seniors. In contrast, the term "water management" or "management of water rights" implies a broader regulatory perspective and the use of a broader range of management tools. For instance, management might involve aquifer recharge and cooperative conservation efforts. Both administration and management of water rights occurs within the framework of the prior appropriation doctrine.

The Department does not have general or blanket authority to administer water rights. Rather, the Director (or a water right holder seeking enforcement) must proceed under one of a handful of specific authorities:

- IDWR (typically acting through a watermaster) may administer decreed rights within a "water district" pursuant to Idaho Code §§ 42-602 to 42-619.
- IDWR may administer ground water rights under the Ground Water Act, Idaho Code § 42-237a(g).[342]
- In the case of conjunctive management of water rights, the Conjunctive Management Rules provide mechanisms for calls under each of these authorities. Rule 40 deals with calls within a water district. Rule 30 deals with calls outside of a district.[343]
- In addition, the Department has authority to shut down diversions by persons without a water right, but this is not technically "administration" in the sense of enforcing priorities.
- Finally, an injured water right holder may seek direct judicial enforcement of his or her priority. Each of these is discussed below.

(1) Administration of water rights within water districts

As discussed in section 6.F on page 524, water districts are created solely in areas where water rights have been adjudicated—that is, where the rights have been through a general or local court action (a "water rights adjudication") brought to determine amounts, priorities, places of use, and other elements of all water rights claimed in a particular source. Around the West, and certainly in Idaho, essentially all major surface streams have had some type of adjudication.

The Department's authority and responsibility to administer water rights within water districts is governed by Idaho Code §§ 42-602 to 42-619. This authority ordinarily is limited to the administration of decreed rights within the water district.[344] A delivery call placed pursuant to Idaho Code § 42-607 cannot reach junior water rights outside the water district, even if they are the cause of the shortage.[345]

The Department also may seek authority from the SRBA Court for "interim administration" of partially decreed water rights,[346] which the Director has done in created Water Districts 120 and 130. On February 19, 2002 the Director issued an order creating Water District 120 (American Falls area) and another order creating Water District 130 (Thousand Springs area) pursuant to Idaho Code § 42-

[342] IDAPA 37.03.11.040.

[343] IDAPA 37.03.11.030.

[344] Idaho Code §§ 42-602, 42-604, 42-607.

[345] Such extra-district calls upon unadjudicated water rights have always been prohibited, except for a two-year period ending in 1994. 1992 Idaho Sess. Laws, ch. 34; 1994 Idaho Sess. Laws, ch. 450. During this window, the *Musser* case was decided (see discussion in section 9.C(1) at page 108).

[346] Idaho Code § 42-1417.

EXHIBIT C
Page No. 183 of 761

604.[347] On January 8, 2003, the Director issued an order expanding the boundaries of Water District 130 (Thousand Springs area) to include parts of Administrative Basin 37.[348] On January 22, 2003, the Director expanded the boundaries of Water District 120 to include parts of Administrative Basin 29.[349] The Department is now seeking to further expand the boundaries of Water Districts 120 and 130 to include virtually all ground water within the Eastern Snake Plain Aquifer.[350]

Under the statutory framework set out under Chapter 6 of the Water Code, the distribution of water within water districts is carried out by a locally-elected state official known as a watermaster. Each water district has its own watermaster. The watermaster operates under the authority of the IDWR Director, but typically is not seen as a department employee so much as an agent for a local committee of irrigators and other water users who are empowered by statute to elect the watermaster and (subject to the Department's final approval) set the watermaster's annual budget, which in turn is funded by annual fees levied on the district's water users. The distribution of water is not typically seen as being the result of a "delivery call" (although that is, in effect, what the watermaster is administering on a daily basis). Rather, it is seen as a rote exercise established after the amounts and priorities have been sorted out in an adjudication.

Historically, virtually all water districts were based upon an adjudication of surface water rights, and therefore were organized to administer surface diversions. For example, Water District 1, Idaho's largest such district, administers natural flow surface diversions and surface storage deliveries on the Snake River upstream from Milner Dam. Likewise, in Water District 63, the watermaster opens and shuts headgates, measures surface diversions, and accounts for storage deliveries along the Boise River, all pursuant to a decree of water rights entered in the early part of the twentieth century.

Idaho's water districts typically are labeled with the number corresponding to the Department's administrative water basin in which the district exists. An exception has been in the recent creation of water districts that include decreed ground water rights on the Eastern Snake River Plain. The first two such water districts were numbered Water District 120 and Water District 130. Water Districts 110 and 140 are contemplated as ground water rights in the upper Snake River Basin and in the Oakley Fan area

---

[347] On November 19, 2001, the Department sought authority from the SRBA Court for interim administration of partially decreed rights in Administrative Basins 35 and 41 (American Falls area) and Basins 36 and 43 (Thousand Springs area). On January 8, 2002, the SRBA Court issued an order authorizing the requested interim administration.

[348] On August 30, 2002, the Department filed a second motion with the SRBA Court seeking authorization for interim administration of water rights within Administrative Basin 37. The SRBA Court granted the request on November 19, 2002.

[349] On July 10, 2003, the Department filed a third motion with the SRBA Court seeking authorization for interim administration of water rights within a portion of Administrative Basin 29. The SRBA Court granted the request on October 29, 2003.

[350] On April 15, 2005, the Department filed three motions with the SRBA Court seeking authorization for interim administration of rights within Administrative Basins 25, 31, 32, 33, and 45.

that are recommended to be decreed in the next one to two years (as of this writing). The water district covering surface waters in the Boise River drainage, which is administrative Basin 63, is Water District 63. In a few cases, sub-areas have been established to encompass decreed rights in smaller tributaries or sources within a water district. In one unusual situation, the holders of ground water rights within a specific, well-defined ground water source that earlier had undergone the proof and sorting out process of an adjudication, successfully petitioned the Department to establish a water district. The result was Water District 63A, which encompasses a portion of the low-temperature geothermal aquifer in the Boise area. Now that conjunctive management of ground and surface water sources will begin to occur in many areas, there will be additional water districts comprised of ground water rights. Water Districts 120 and 130 on the Eastern Snake Plain Aquifer are two examples.

The essential reality underlying the traditional watermaster's duties is that, on a surface stream, there are a limited number of established diversions—typically, headgates—that can be manipulated and readily measured; shutting or opening each of them has immediate effects on the flow available for other water rights. Such a system usually can be operated on a basis of more-or-less instantaneous cause-and-effect relationships, as headgates are closed or opened. Consequently, the judges who issued the old court decrees—virtually all of which dealt solely with the surface water rights on a stream—faced the relatively straightforward task of determining acres irrigated and sorting out the parties' relative priorities. Once this had been accomplished, the "administration" was a largely ministerial task of closing and opening headgates according to the program set out in the decree. Water users did not have to go back into court to have their water delivered. While there sometimes were controversies (typically involving alleged illegal diversions and the like), rarely was there a "delivery call" as such. It was much more a question of living in the priority system according to the level of stream flows. It was usually obvious whose headgate was to be turned off, when, and for how long. This system incorporated such concepts as futile call, and usually gave rise to a set of local customs and practices for assuring the delivery of water in line with the decree while avoiding controversy or waste of water.

Now that Idaho has begun to administer ground water rights conjunctively with surface water rights, the water district concept is likely to undergo change; as this happens, the concept should be understood in the context of its origins. Because of the complexity of ground water-surface water interactions, simply shutting off ground water rights in priority will not produce the same result, in the same timeframe, as occurs on the surface stream when surface headgates are opened or closed according to the decreed priorities. Rather than having a watermaster carry out a well-defined program of opening and shutting headgates according to river gauge readings and decreed priorities, the watermaster operating in the era of conjunctive management may be called upon to administer mitigation plans or other arrangements involving a widespread group of ground and surface water users, and do so with reference to complex hydrological models, special rulings from the Department, or long-term agreements among the affected water users.

(2) Administration of ground water rights under the Ground Water Act

The Department is given authority to administer ground water rights pursuant to the Ground Water Act,[351] notably Idaho Code § 42-237a(g). The Department's Conjunctive Management Rules are premised in part on this Act. Even in the absence of the Conjunctive Management Rules, however, the Department presumably would have direct authority to administer ground water rights under this Act.

(3) Administration through the Conjunctive Management Rules

The Conjunctive Management Rules implement the Department's authority under the Ground Water Act and under Chapter 6 (dealing with Water Districts) with respect to the conjunctive management of ground and surface rights. These rules are discussed in section 9 beginning on page 100.

(4) Temporary water rights

The Water Code authorized the Department to issue temporary water rights on an expedited basis for a "minor use of short duration" that is "not intended to become an established water right." Idaho Code § 42-202A. Such rights may not exceed five acre-feet in total diversion and can last no more than one year.

If an entity needs more than five acre-feet, it may rent water from the Idaho Water Supply Bank on a temporary basis.

IDWR also has the authority to issue temporary approval of transfers in a drought emergency. Idaho Code § 42-222A.

Another approach is to rely on an exempt domestic water right. This would provide a permanent right but for a small quantity. Despite the name, "domestic" is defined broadly to include "any other use"—even industrial or commercial. However, the domestic exemption allows only 0.04 cfs capped at a volume of 2,500 gallons per day. Also there are limits on the ability to use multiple such domestic exemptions. Idaho Code §§ 42-111(2) and (3).

(5) Curtailment of illegal water diversions

Under Idaho Code § 42-351 the Director has authority to issue a notice of violation and/or seek judicial enforcement against any person diverting water without a water right. This section, however, does not authorize action against water right holders to enforce priority.

Violations of section 42-351 may give rise to an enforcement action under Idaho Code § 42-1701B. Subsection 42-1701B(6)(a)(i) provides for penalties for illegal water diversion of $50 per 0.1 cfs per day or $50 per 0.2 acre-feet diverted to storage—up to a maximum of $50,000 per year. In

[351] Idaho Code §§ 42-226-239.

Printed 6/23/2023 9:09 AM

addition, Idaho Code § 42-351(4) authorizes IDWR to seek injunctive relief (in addition to pursuing a notice of violation).

(6) Judicial enforcement of priority

Priorities also may be enforced by recourse to the courts, although, understandably, this typically arises where the water rights have not been decreed and there is no water district.[352] In such cases, the litigants are required to demonstrate the various elements of their water rights vis-à-vis the others, and the plaintiffs must prove material injury from the junior diversions.

It is likely that the plaintiffs seeking judicial enforcement will have to show that they have exhausted available administrative remedies. In the case of undecreed surface water rights outside of a water district, there would be none to exhaust. However, for rights within a water district or covered by either Rule 30 or 40 of the Conjunctive Management Rules, it is possible that the court might require the injured party to exhaust available remedies first.

E. The Idaho Water Resource Board

The Idaho Water Resource Board was created by the Idaho Legislature in 1965 following the passage of a constitutional amendment that established the Board.[353] There are eight Board members, appointed by the governor, who serve four-year terms. The current members of the board are listed under Appendix E.

The Board initially was created as a separate agency with its own staff. In 1974, the Board and the existing Department of Water Administration were combined to form the present Idaho Department of Water Resources. Today, the Department provides administration and staff support to the Board. The Board and IDWR have interrelated functions in areas such as appeals, administrative rules adoption, water bank administration, and water right negotiations with the federal government and Indian Tribes.

Board programs are divided into three general categories: comprehensive state water planning, water management activities, and financial programs.

F. The State Water Plan

In the 1964, partly in response to concerns about proposals to divert Idaho rivers for use in the Southwest, Idahoans approved a constitutional amendment which established the Idaho Water Resource Board and empowered it to "formulate and implement a state water plan for optimum

[352] *See Geertson v. Barrack*, 3 Idaho 344, 29 P. 42 (1892); *Dunniway v. Lawson*, 6 Idaho 28, 51 P. 1032 (1898).

[353] Idaho Const. art. XV, § 7 (adopted in 1964).

EXHIBIT C
Page No. 187 of 761

development of water resources in the public interest."[354] In adopting the Plan, the Board must follow criteria including, among other things, means to achieve conservation and optimum use; minimum stream flow for aquatic life, recreation and aesthetics; and maximizing supplies for beneficial uses.

The Board is the agency described in Idaho's constitution to formulate and implement the State Water Plan (reproduced under Appendix F). The Idaho Supreme Court ruled in 1983 that the Board, being a constitutional entity, has authority to adopt a state water plan (including designation of instream flow targets on the Snake River) without legislative approval.[355] This did not sit well with the Legislature. The Idaho Constitution was subsequently amended to expressly provide that legislative approval or acquiescence is required.[356]

The first State Water Plan was adopted in 1976 and approved by the Legislature (with amendments) 1978.[357] The current State Water Plan was adopted in 1996 and is reproduced under Appendix F. The current plan is arranged into numerous short policy statements, each followed by a brief explanation. These policies carry considerable weight with the Department in water allocation decisions and may well be influential with a court. Policies adopted by the Board include recognition of the importance of non-consumptive uses and the need for protection of instream flows, particularly in connection with the state's anadromous fishery resource, endorsement of the Water Supply Bank, closer review of federal water projects, establishment target flow levels for the Snake River (ranging from zero flow below the Milner gauge to 13,000 cfs at Lime Point).

Although the State Water Plan has limited direct legal effect. Applications for new appropriations must be consistent with the minimum flow provisions of the State Water Plan.[358] Under

---

[354] Idaho Const. art. XV, § 7 (adopted Nov. 3, 1964, amended Nov. 6, 1984). Implementing legislation is codified primarily at Idaho Code §§ 42-1730 to 42-1736B and 1805(7).

[355] *Idaho Power Co. v. State ("Swan Falls I")*, 104 Idaho 570, 661 P.2d 736 (1983).

[356] Idaho's Constitution now provides: "The Legislature of the State of Idaho shall have the authority to amend or reject the state water plan in a manner provided by law. Thereafter any change in the state water plan shall be submitted to the Legislature of the State of Idaho upon the first day of a regular session following the change and the change shall become effective unless amended or rejected by law within sixty days of its submission to the Legislature." Idaho Const. art. XV, § 7. The Legislature implemented this constitutional authority as follows: "The state water plan adopted by the Idaho water resource board pursuant to authority of section 42-1734, Idaho Code, shall not become effective until it has been submitted to the legislature of the state of Idaho and has been affirmatively acted upon in the form of a concurrent resolution which may adopt, reject, amend or modify the same. Thereafter, any change in the state water plan shall be submitted in the same manner to the legislature prior to becoming effective." Idaho Code § 42-1736. (This statute was actually enacted prior to the 1984 constitutional amendment providing for legislative approval.) There appears to be conflict between the Constitution (which contemplates legislative acquiescence) and the statute (which requires affirmative approval).

[357] House Concurrent Resolution No. 48 (1978).

[358] "In addition to the other duties prescribed by law, the director of the department of water resources shall have the following duties: . . . After notice, to suspend the issuance or further action on permits or

the Department's rules, appropriations of "trust water" that have a significant impact on Snake River flows must be shown to be consistent with the State Water Plan.[359] Although not directly binding, the Department will consider the State Water Plan in applying the "local public interest" evaluation applicable to new appropriations and transfers and the special "public interest" evaluation applicable to trust water appropriations.

applications as necessary to protect existing vested water rights or to ensure compliance with the provisions of chapter 2, title 42, Idaho Code, or to prevent violation of minimum flow provisions of the state water plan." Idaho Code § 42-1805(7).

15. TRANSFERS OF WATER RIGHTS

A. Background

A change or transfer of a water right simply refers to a change in its use, that is, a change in one of its "elements."[360] That might entail, for instance, moving irrigation water from one farm to another. It might involve moving an irrigation right to a new industrial use. Or it might involve adding a new use, such as a new program of land application of waste water at the tail end of an existing industrial process.

Water transfers are quite common today, but this was not always so. In the early stages of water development, a person seeking to start a new activity using water was often able to appropriate a new water right for the project. There was no point in going through the expense and complexity of a transfer proceeding if a new water right could easily be obtained. As demand on the State's water resources increases, however, new users are increasingly finding it necessary to secure a water supply by acquisition and transfer of existing water rights.

The trend toward transfers has been slower to develop in Idaho than in some other Western states, simply because Idaho is a relatively water-rich state. The Snake River Basin contributes nearly thirty-seven million acre-feet of water to Columbia River flows each year,[361] Idaho has over 12 million acre-feet of surface reservoir storage space, and the Snake Plain Aquifer, which underlies much of the approximately 15,600 square mile Snake River Plain, holds an additional 300 to 500 million acre-feet.[362]

Despite this relative abundance of water in Idaho, shortages do occur on both a regional and seasonal basis. Even during normal precipitation years in areas such as the Upper Snake River Basin, the Big Lost River Basin, and the Boise River Basin, the natural surface flows during the peak of the irrigation season typically are fully appropriated. In addition, most of the feasible water storage projects already have been constructed in Idaho, and the availability of federal or state funding for large new storage projects appears to be limited for the foreseeable future.

Also, modern, large-scale development of ground water resources within the Snake Plain Aquifer and elsewhere have combined with periodic drought and changing surface water irrigation practices to affect recharge to the aquifers and return flows to surface sources. As a result,

---

[360] For a detailed treatment of the subject of changes and transfers, see A. Lynne Krogh-Hampe, *Injury and Enlargement in Idaho Water Right Transfers*, 27 Idaho L. Rev. 249 (1990). In 1990, the author was a senior deputy attorney general assigned to the IDWR. She is now a Magistrate Judge in the Third Judicial District.

[361] Idaho Dept. of Water Resources, *Stream Flows in the Snake River Basin: 1989 Conditions of Use and Management*, Open File Report 27 (June 1989).

[362] U.S. Dept. of Energy, *Geohydrologic Story of the Eastern Snake River Plain and the Idaho National Engineering Laboratory* 2 (Wash. D.C. 1982).

opportunities to make new ground water appropriations have become severely limited in recent years as controversies have erupted and the Department has imposed administrative moratoriums on the acceptance or processing of applications for permits. (See part 20 at page 303 for a discussion of moratoriums.)

Where opportunities for new appropriations now are much more limited, changes of existing water rights to new uses and transfers to new owners, new places of use and new points of diversion represent a practical means of obtaining water for new beneficial uses. Under the prior appropriation doctrine, in areas where existing supplies are fully appropriated, transfers of existing rights may represent the only means of acquiring water to meet the new and growing demands for water for industry, municipalities and environmental protection. Consequently, water transfers are becoming increasingly common in Idaho, as they are throughout the West.

In addition to traditional agriculture-to-agriculture transfers involving changes in points of diversion and places of use, significant amounts of water are being transferred to new beneficial uses—typically from irrigation to municipal and industrial uses. Temporary transfers are facilitated through Idaho's Water Supply Bank programs. The U.S. Bureau of Reclamation,[363] which operates most of Idaho's largest irrigation reservoirs, also is involved in transfers among irrigators of Bureau-stored water. It is likely that the Bureau will play a greater role in future water reallocations as demand increases for new uses of water.

B. Terminology: change vs. transfer vs. conveyance

The terms "change" and "transfer" tend to be used interchangeably. Sometimes we hear the word "transfer" used to describe what is more accurately described as a conveyance—that is, a change in ownership of a water right.

Technically speaking, the term "transfer" is used in Idaho to describe the process for a change in how a water right can be used (that is, a change in one of its elements). These are initiated by filing an *Application for Transfer of a Water Right* under Idaho Code § 42-222(1). Likewise, they are governed by the new *Transfer Processing Policies & Procedures* (Oct. 30, 2002) (reproduced under Appendix L.) Thus, if someone wishes to change the point of diversion or place of use under a water right, the person would file a water transfer application. As noted, this might also be called, at least informally, a "change" application.

[363] The Bureau of Reclamation has developed a transfer policy and an administrative guidance document that govern the Bureau's role in water right transfers in the West. The underlying principle of the Bureau's transfer policy is that the Bureau will involve itself only as a facilitator of voluntary transfers affecting federal water projects and water rights with the goal of mitigating third party effects and preserving existing financial, operational and contractual commitments of the Bureau and its water users. *See* Department of Interior, *Principles Governing Voluntary Water Transactions that Involve or Affect Facilities Owned or Operated by the Department of Interior* (Dec. 16, 1988); U.S. Bureau of Reclamation, *Voluntary Water Transactions: Criteria and Guidance* (1989).

In contrast, a change in the ownership of a water right is accomplished by a conveyance—that is, a deed—and involves no approval process. Once the deed or other proof of title is obtained, the new owner should file a *Notice of Change in Water Right Ownership* form with the Department.[364] Thus, for instance, if the owner of a farm sells the farm to another (along with the water right), and no change in use of the water right is contemplated, the new owner may simply inform the Department that he or she now owns the water right. No regulatory review or approval is required.

In many instances, a change in ownership does contemplate a water right transfer. This would be the case, for instance, where a farmer, without reserving his irrigation water right in the deed, sells a portion of his farm to a land developer, who in turn seeks to use the appurtenant water right for a commercial purpose. Here, Department approval is not required for the water right's conveyance to the developer, but is required for to change its nature of use (that is, from an irrigation to a commercial purpose).

C. The basic entitlement to change the elements of a water right

In Idaho, as in other prior appropriation states, a water right is valuable real property that may be conveyed together with, or apart from, the land to which it is appurtenant.[365] Idaho's courts held early on that a water right holder also has the right to change its type or nature of use provided that the rights of others are not injured as a result.[366] One commentator observed:

---

[364] Note that only the buyer (the new owner) signs the notice form. The form must be filed with the Department within 120 days of closing. Idaho Code § 42-248. (As a practical matter, however, this deadline is not generally enforced.)

In some cases, the sale is consummated before the Department has approved the transfer. When this occurs, the new ownership form should be filed (together with a copy of the deed) following closing. When this occurs, the Department will issue the new water right in the buyer's name. If the Department has only been provided a copy of a purchase and sale agreement, the new water right will be issued in the name of the seller, with the expectation that the buyer will notify the Department upon completion of the sale.

A change of ownership notice also is required if a portion of a water right is conveyed to a different owner. This is referred to as a "split." Note, however, that this is applicable only if the water continues to be used on the same ground. If a water right is to be split, and any change is made to any element of the right (such as place of use), then a transfer of the right is required as well.

Where a change in ownership occurs for a right for which an SRBA claim has been filed, notice shall be provided to the IDWR. If no claim has been filed, the new owner is obligated to do so. Idaho Code § 42-1409(6).

[365] Idaho Code § 55-101(1) (definition of real property); *Reno v. Richards*, 32 Idaho 1, 178 P. 81 (1918); *In re: Robinson*, 61 Idaho 462, 103 P.2d 693 (1940); *Anderson v. Cummings*, 81 Idaho 327, 334, 340 P.2d 1111, 1115 (1959); *Crow v. Carlson*, 107 Idaho 461, 690 P.2d 916 (1984).

State*, 49 Idaho 740, 291 P. 1064 (1930); *In re Dep't of Reclamation*, 50 Idaho 573, 300 P. 492 (1931); *In re Robinson*, 61 Idaho 462, 103 P.2d 693 (1940); *Noh v. Stoner*, 53 Idaho 651, 26 P.2d 1112 (1933) (overturned as to reasonable pumping levels by *Baker v. Ore-Ida Foods, Inc.*, 95 Idaho 575, 513 P.2d 627 (1973).

> It has been held that, absent injury, the right to make a change in use of a water right is inherent in the constitutional right of property ownership and that the statute setting forth the procedure and standards for changes in use neither adds to nor detracts from existing rights. It therefore appears that the right to change is a constitutional right much like the constitutional "right to appropriate," although the right to change is not expressly stated in the Idaho constitution.[367]

Despite this general entitlement, strict standards and procedures apply. The basic point of these is to ensure that injury to existing water rights does not result from the transfer.

Under Idaho law, a transfer of a water right can involve a change in virtually any of the right's essential elements. (See part 4.B at page 28 for a discussion of the elements of a water right.) The most typical elements changed in a transfer proceeding are:

1. point of diversion
2. nature (or type) of use[368]
3. place of use
4. period of use

These four elements are specifically mentioned in the water transfer provisions of Idaho's water code. Under limited circumstances, the Department may permit changes in other aspects of a water right. For instance, although a water user generally may not transfer a water right's diversion point to a completely new source (although it is theoretically possible if no injury results), she may be allowed to switch to a different tributary of the same source, assuming no injury to other users. To some extent, a new method of diversion may be adopted (although this may not entail a formal transfer, so long as it makes no change in return flows or causes no injury to others). Within bounds, the rate or volume of diversion may be reallocated when a water right is split into two or more parts.

D. Basic transfer principles

Idaho's water code lists the basic requirements for a water right transfer:[369] As amended in 2003, the Department's criteria for approving a transfer are as follows (paragraphs added to facilitate reading):[370]

---

[367] A. Lynne Krogh-Hampe, *Injury and Enlargement in Idaho Water Right Transfers*, 27 Idaho L. Rev. 249, 251-52 (1990).

[368] Until 1981 changes in nature of use and period of use were not authorized by statute. *Beker Industries Inc. v. Georgetown Irr. Dist.*, 101 Idaho 187, 610 P.2d 546 (1980) (McFadden, J.) (denying transfer from agricultural use to manufacturing). In 1981, the Legislature amended the water code to expressly allow such changes, but added a proviso requiring the Department to evaluate the impact of transfers of agricultural rights on "the agricultural base of the local area." 1981 Idaho Sess. Laws, ch. 147 (codified at Idaho Code § 42-222).

[369] Idaho Code § 42-222(1), *see also* Idaho Code § 42-108.

42-222. …

(1) …

The director of the department of water resources shall examine all the evidence and available information and shall approve the change in whole, or in part, or upon conditions, provided no other water rights are injured thereby, the change does not constitute an enlargement in the use of the original right, the change is consistent with the conservation of water resources within the state of Idaho[371] and is in the local public interest as defined in section 42-202B, Idaho Code,[372] the change will not adversely affect the local economy of the watershed or local area within which the source of water for the proposed use originates, in the case where the place of use is outside of the watershed or local area where the source of water originates,[373] and the new use is a beneficial use, which in the case of a municipal provider shall be satisfied if the water right is necessary to serve reasonably anticipated future needs as provided in this chapter.[374] The director shall not approve a change in the nature of use from agricultural use where such change would significantly affect the agricultural base of the local area.

Idaho Code § 42-222 (footnotes added).

See also summary of criteria in section 16 at page 259.

The Department has not promulgated rules governing water transfers. However, it recently issued guidance for water transfers in the Eastern Snake Plain Aquifer.[375] As a practical matter, that guidance is setting departmental policy statewide.

---

[370] Idaho Code § 42-222(1) (emphasis added).

[371] The "conservation of water" test was added in 1990. 1990 Idaho Sess. Laws, ch. 141. The measure was adopted in response to *Sporhase v. Nebraska ex rel. Douglas*, 458 U.S. 941 (1982) (Stevens, J.). See discussion in footnotes 875 at page 496.

[372] The "local public interest" test was added in 1981, along with the protection of the local agricultural base. This act also added a provision limiting water rights to one change; this was repealed in 1986. 1981 Idaho Sess. Laws, ch. 147.

[373] This basin-of-origin protection requirements was added in 2003, as one of the amendments to the local public interest test. H.B. 284.

[374] In 1996, the Legislature added "beneficial use" as the fifth criterion, and declared that beneficial use was satisfied in the case of "future need" water rights for municipal providers. Municipal Water Rights Act of 1996, 1996 Idaho Sess. Laws, ch. 297.

E. The "no injury" rule

(1) The fundamental premise

The first principle listed in section 42-222(1) that "no other water rights are injured thereby."[376] This is the foremost requirement in any water right transfer. The basic idea is that no other water user, junior or senior, may be made worse off as a result of the transfer.[377] Thus:

> Injury will result where a change makes a junior appropriator subject to a priority to which the junior was not previously subject or where a change increases the burden on the stream or reduces the volume of water flowing in the stream. The injury, however, must be to a water right and must be real and substantial.[378]

(2) The rule is aimed at protecting all existing water rights

The rule quoted above speaks only about protecting juniors. Seniors, however, are protected too. Idaho Code section 42-222(1) draws no distinction between juniors and seniors. It speaks of protecting all water rights. As a practical matter, however, the injury analysis typically focuses on protection of junior right holders because they are the only ones ordinarily at risk, and if juniors are protected then seniors automatically would be as well. In any event, "[t]he injury or enlargement analysis is generally not concerned with injury to senior appropriators because seniors are protected by their priorities."[379]

An example may illustrate this. Suppose that a junior water right holder were to move her point of diversion upstream of a senior. Ordinarily, the senior would not be injured by this move because she may "call out" (i.e., seek curtailment of) the junior priority in times of shortage. Thus, as a practical matter, the upstream junior headgate is no threat, because the senior below may shut it off as needed to fill her senior right.

Often, however, the senior will oppose the transfer to ensure that the transferred use will not place a greater draw on the system than the pre-transfer condition. A senior also might oppose if the effect will be to compel the senior to repeatedly take actions to protect his right in the future. While

Printed 6/23/2023 9:09 AM

such may not be grounds for denying the transfer, it may result in the Department's imposing conditions that guarantee, to everyone's satisfaction, that the status quo on the stream will not change.

There are instances, however, where a senior right holder's priority might not adequately protect her against a junior's transfer. These are based on practical considerations. This might occur, for example, where a transfer would change a point of diversion so as to overlap and interfere with a senior right holder's point of diversion, or where a change in the location of a storage reservoir would inundate a senior's water right or increase the rate of evaporation from the stream system.[380] Likewise, it could occur in a conjunctive management context where movement of a ground water right would reduce the supply of water to a down-gradient spring user, but due to hydrological lag times there is no practical way of curtailing the ground water use in time to benefit the senior.

Thus, the general rule is that juniors are entitled to have conditions in the source maintained as they found them when they first made their appropriation.[381] "The fundamental premise underlying the no-injury rule is that a junior appropriator has a vested right to maintenance of stream conditions existing at or after the time of the junior's appropriation."[382] One might think of the fundamental transfer rule as requiring that a water right must not increase its overall net impact on the water source or on the rights of others—that is, its full impact after taking into account all consumption, evaporation, seepage and return flows attributable to the exercise of the right pre-transfer. Evaluating these cases can become complicated when one considers issues of timing and location of return flows and actual historical consumption.

However, not every *effect* is legal *injury*. The injury occurring due to a transfer or, for that matter, an alleged out-of-priority use, must be real, identifiable and material, not merely theoretical or speculative. As the Idaho Supreme Court has said: "The question . . . is whether other users . . . are injured or will be injured by the change, or, as frequently said, substantially injured, not merely a fanciful injury but a real and actual injury."[383] This does not mean that small effects cannot be injury, or that they cannot be considered in light of their effect when accumulated with other small effects. In fact, just the opposite generally is the rule. For example, in the 1998 contested case of *Huf-N-Puf*,[384] the proposed transfer's added effect on a river would amount to 0.02 cfs. The applicant argued that this was so small compared the river's average flow that it could not be measured and, consequently was

not "substantial and material" under *Cassia*. The Department ruled that, small or not, it was "real and actual injury" and would not be allowed absent mitigation.

(3) Change in point of diversion in a surface supply

Reciting the no-injury rule is easy enough. Applying it is trickier. A few examples will demonstrate that the analysis is highly dependent on the unique hydrological factors of each circumstance. (These examples deal with injury in the context of surface diversions. See the discussion in section 15.E(4) at page 198 for examples dealing with injury between ground water users. See part 8 at page 99 for a discussion of ground versus surface water conflicts.)

In a simple example, suppose that two farmers have natural flow water rights, in which the junior is located upstream and the senior is located downstream. Suppose that the senior sought to change her point of diversion to a location upstream of the junior. Would the junior be injured? That cannot be answered without knowing the hydrologic conditions in the stream. (Although, as a practical matter, the junior probably would file a protest to make sure no injury occurred.)

If the stream is neither gaining nor losing and there are no changes in the quantity of water entering the stream, the upstream movement of the senior would have no effect on the junior user. If conditions on the stream do not allow both rights to be fully met, the senior will either call water past the junior (if located downstream) or physically take it out first (if located upstream). The result is the same either way; the junior is no worse off. (In fact, the junior could be made better off by having the senior move upstream, thus allowing the junior to benefit by the senior's return flow.)

Another example would be a situation where a senior several miles upstream from a junior appropriator seeks to move her point of diversion (and place of use) to a point downstream of the junior's headgate. On the face of it, one might conclude that there is no difference: In the original configuration, the senior diverted all her entitlement before it reached the junior's headgate; and, after the change, the senior would be entitled to call all her water past the junior's headgate. But it often is not so simple, primarily because of the changes to the return flow regime that the change may cause. If the junior were relying on return flows from the upstream senior's use, then the senior generally will not be allowed to make the change without providing mitigation for the junior. She would be depriving junior of the pattern of return flows that junior relied upon when he established his right.

A variation on this would be the instance where a stream gains stream flow the farther it flows (that is, water is being added to the stream at various points along its length from the aquifer, from tributaries, or from return flows through drains or otherwise). The movement of the senior to a point upstream of the junior may injure the junior. This is because the senior has moved into the "water-poor" section of the stream. Because she no longer benefits from the stream gain downstream of the junior, her water right must now be served by water that previously flowed to the junior. Thus, the junior would be injured, and this transfer would not be allowed or would require mitigation.

In contrast, if the stream is a losing one (that is, water is being lost naturally to the aquifer as water moves downstream), movement of the senior to a point upstream will probably not injure the

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

EXHIBIT C
Page No. 197 of 761

junior, and may even enhance her position. This is because, in a losing stream, it takes a large quantity of water upstream to deliver a relatively small quantity of water to the downstream senior. If the senior voluntarily moves her point of diversion upstream, into the more "water rich" portion of the stream, that right may be more easily satisfied, with as much or more water left over for the junior.

Now, let us consider movement by an upstream senior to a new diversion point below a junior user. Here, even if the stream is neither gaining nor losing, such a move would injure the junior user. This is because prior to the change the junior probably benefited to some extent from the senior's return flow. Movement downstream means that the return flow from the senior will no longer be available to the junior water user. Instead, if the transfer were allowed, the senior could call the entire diversion quantity past the now upstream junior. Accordingly, to avoid injury, it would be necessary to condition the senior's water right to reduce the quantity transferred (at least in times of shortage).

These examples form the tip of the iceberg. Many more are explored in Judge Krogh's article.[385]

(4) Changes in water consumption in same beneficial use do not require a transfer

It is not uncommon for farmers to switch from one crop to another. Because crops vary in consumptive use, changing crops will affect the amount of return flow available to other users. In 2004 the Legislature adopted legislation to confirm what had generally been understood to be the law before: Such changes may be made freely, despite their impacts on other users, without any oversight by the Department.[386] The Legislature expressly declared: "Consumptive use is not an element of a water right."[387] The legislation further provides: [388]

> "Authorized consumptive use" means the maximum consumptive use that may be made of a water right. If the use of a water right is for irrigation, for example, the authorized consumptive use reflects irrigation of the most consumptive vegetation that may be grown at the place of use. Changes in consumptive use do not require a transfer pursuant to section 42-222, Idaho Code.

Note that the last sentence of the section, stating that changes in consumptive use do not require a transfer, is not limited to agricultural contexts. Thus, an industrial user presumably could modify its processes, and substantially decrease return flow, without seeking the Department's approval.

On the other hand, if any element of the water right is changed, a transfer application and approval of the Department continues to be required under section 42-222.[389] Moreover, when such a transfer occurs, consumptive use may not be increased. This is discussed in the following section.

(5) Limitation to historical consumptive use in water right transfer

As discussed above, Idaho law, like the law in other appropriation doctrine states, prohibits enlarging the use under a water right through a transfer. When a water right transfer involves no change in nature of use, quantification and enlargement are usually not issues. For example, if a farmer dries up one forty-acre field and seeks to transfer the water right to an adjacent forty-acre field, the Department ordinarily will simply transfer the right in whatever quantity appears on the face of the license or decree (assuming there is one). Barring exceptional circumstances (such as forfeiture, etc.[390]), the full diversion quantity (both the rate and the volume) can be moved from the old use to the new use. Of course, as indicated above, the location of return flows still may be an issue in an injury analysis, depending upon the hydrology of the situation.

However, when a new use or changes in the points of diversion are involved, more scrutiny is required because the change may alter or eliminate return flows, thus affecting other users.[391] To protect other water users, the rule of thumb is that only the consumptive use component of the water right may be transferred when the transfer involves movement to a new use in a way that disrupts prior return flows. This longstanding principle was codified in 1997,[392] and was recognized by the Idaho Supreme Court in 2001.[393] Of course, consumptive use has always fundamental to the injury/enlargement analysis.

Consumptive use (or "CU") refers to the quantity of water consumed in the course of a particular beneficial use, and therefore is not available to other water users. In an agricultural setting, consumptive use is the water consumed in growing the crops. This includes evaporation in the course

---

[389] The 2004 legislation expressly declared that consumptive use is not an element of a water right. 2004 Idaho Sess. Laws, ch. 258 (codified at Idaho Code § 42-202B(1)).

[390] The Department's memorandum on "Transfer Processing Policies and Procedures" at page 23 (reproduced in Appendix L) mentions another possibility: An agriculture-to-agriculture transfer might be limited to historic beneficial use where sub-irrigation at the original place of use limited actual historic use of the right.

[391] "If the application for transfer proposes to change the nature or purpose of use or the season of use, the applicant must include an attachment documenting the historic extent of beneficial use under the right. . . ." IDWR's *Transfer Processing Policies & Procedures* (Transfer Processing No. 24) p. 14 (Dec. 21, 2009) (reproduced in Appendix L.)

[392] "The director may consider consumptive use, as defined in section 42-202B, Idaho Code, as a factor in determining whether a proposed change would constitute an enlargement in use of the original water right." 1997 Idaho Sess. Laws, ch. 373 (codified at Idaho Code § 42-222(1)).

[393] *Barron v. IDWR*, 135 Idaho 414, 419, 18 P.3d 219, 224 (2001).

EXHIBIT C
Page No. 199 of 761

of water delivery and evapotranspiration from the plants themselves. By limiting the amount of a water right that may be changed to a new use to its consumptive use component, injury to other users is prevented.

Bear in mind that crops typically derive their water from a combination of diverted irrigation water and natural precipitation. The amount of precipitation that the crop is able to use is called the "effective precipitation." Sometimes people use the term "consumptive use" to describe the entire quantity of water used by a crop, regardless of the source. Other people use the term "consumptive use" to describe only that portion of the water consumed by the crops that is attributable to the irrigation water. In an effort to avoid confusion, some people employ the term "consumptive irrigation requirement" or "CIR" to more clearly describe the latter, distinguishing it from total consumptive use. Thus, the CIR is equal to total amount of water consumed by the crop less the portion of consumptive use supplied by precipitation. In a dry climate, most of the water consumed by a crop will come from irrigation, so the CIR will be a large component of the total consumptive use for the crop.

This distinction is important in quantifying changes in water rights. When a person changes a water right to a new use, he or she is only allowed to move the water right itself. The user may not claim credit at the new place of use for the precipitation that was consumed by the crops at the old place of use. Consequently, the Idaho Department of Water Resources will allow the user to transfer only the consumptive use associated with the water right (the CIR), not the effective precipitation.

In Idaho, the CIR typically is determined by reference to tables set out in an analysis by Allen & Robison.[394] These tables take into account the particular crop and the climate in which they crops are grown.

The volume of consumptive use or CIR is likely to be substantially less that the diversion volume shown on the license or decree (and much less than the annual quantity based on the diversion rate). In the case of flood irrigation, less than half the water diverted may be consumptively used. In the case of ground water delivered directly through sprinklers (usually a far more efficient means of irrigation), the consumptive use is likely to be substantially more than half the volume diverted.

The flip side of CIR is return flow. Return flow is the quantity of diverted water that returns to the public source of supply (the stream or aquifer). To avoid injury to others, a user changing a water right typically must avoid any material alteration of the return flow, including its quantity, timing, and location.

---

[394] R.G. Allen and C.W. Robison, *Evapotranspiration and Consumptive Irrigation Water Requirements for Idaho*, University of Idaho Research and Extension Center at Kimberly (Sept. 2006, rev'd April 2007) www.kimberly.uidaho.edu/ETIdaho/. Previously, the accepted analysis on this subject was R.G. Allen and C.E. Brockway, *Estimating Consumptive Irrigation Requirements for Crops in Idaho*, Idaho Water and Energy Resources Research Institute, University of Idaho (August 1983). The two analyses do not differ a great deal, and we still see Allen and Brockway cited occasionally.

You will hear people use the term "return flow" in different ways, but we use the term broadly to be everything diverted under a water right that is not consumed.[395] This includes various components. It includes water that seeps from irrigation ditches and laterals and water applied to the crops that is not taken up and passes below the plant root zone. It also includes water that runs off the end of the field as waste water. All this water eventually reaches other water users and is again diverted and applied to other beneficial uses. Indeed, water is often used and reused many times as it works its way down a stream system and even through an aquifer system. All other water users, even juniors, are entitled to have these return flows maintained in the event of a transfer.

The Department limits the transferred quantity to the historical consumptive use.[396] This practice is consistent with that of other prior appropriation states, such as Colorado,[397] and was approved by the Idaho Supreme Court.[398] Thus, for instance, the Department will look to the actual crops irrigated by the water user, and base the consumptive use on the consumptive use rates associated with those crops. Where the farmer has grown different crops over the years, the Department will approve the transfer based on the most consumptive crop, that is, the highest consumptive use in any given year.[399] This policy may give rise to a temptation to switch to a more consumptive crop prior to requesting the transfer. The Department has not yet been confronted with this fact setting.

---

[395] As described by the Colorado courts, return flows consist of "irrigation water seeping back to a stream after it has gone underground to perform its nutritional function." *City of Boulder v. Boulder & Left Hand Ditch Co.* 192 Colo. 219, 223, 557 P.2d 1182, 1185 (1976).

[396] IDWR's *Transfer Processing Policies & Procedures* (Transfer Processing No. 24) p. 30 (Dec. 21, 2009) (reproduced in Appendix L.)

[397] "[O]nce an appropriator exercises his or her privilege to change a water right . . . the appropriator runs the real risk of requantification of the water right based on actual historical consumptive use. In such a change proceeding a junior water right . . . which had been strictly administered throughout its existence would, in all probability, be reduced to a lesser quantity because of the relatively limited actual historical use of the right." *Pueblo West Metropolitan Dist. v. Southeastern Colorado Water Conservancy Dist.*, 717 P.2d 955, 959 (1986).

[398] "Under I.C. § 42-222(1), the director may consider historic consumptive use, as defined in I.C. § 42—202B, as a factor in determining whether a proposed transfer would result in an enlargement in use or injure other water rights." *Barron v. IDWR*, 135 Idaho 414, 419, 18 P.3d 219, 224 (2001) (footnote omitted).

[399] The Department's revised Transfer Processing Memorandum No. 24 dated December 21, 2009 ("*Transfer Memo*") (reproduced in Appendix L) contemplates that the transfer applicant will submit the most recent five years of cropping pattern and rotation data. However, the Department will consider information from prior years where "information provided by the applicant supports using a longer historic period." *Transfer Memo* at 30. The Department then will select the year with the highest consumptive use out of the data available.

In 2004, the Legislature adopted an amendment to the water code providing, for the first time, a definition of "authorized consumptive use."[400] However, the legislation's effect was limited to circumstances in which the only thing changed is the consumptive use.[401]

(6) The practical side to determining consumptive use in irrigation: FSA Acreage Reports.

As noted in the proceeding section, when an irrigation water right is changed to another use, the Department will evaluate the quantity of consumptive use and allow transfer of only that quantity reflecting the most water consumptive crop that has been irrigated. Where multiple crops are grown on a particular property in any given year, the Department will look to the highest overall average consumptive use in any year for the land that will be dried up. Thus, it is necessary to know which crops were grown and the acreages for each.

Often the most effective ways to document cropping history is through acreage reports provided by the farmer to the local office of the Farm Service Agency ("FSA"), an agency of the U.S. Department of Agriculture. These records are provided voluntarily by farmers who elect to participate in federal crop subsidy programs. Participation rates in Idaho, however, are very high.

Copies of these reports may be obtained from the FSA only with the permission of the particular farmer who submitted the reports.[402] Thus, the current owner may not be able to obtain older cropping

---

[400] 2004 Idaho Sess. Laws, ch. 258 (codified at Idaho Code § 42-202B(1)). As amended, the water code provides: "'Consumptive use' means that portion of the annual volume of water diverted under a water right that is transpired by growing vegetation, evaporated from soils, converted to nonrecoverable water vapor, incorporated into products, or otherwise does not return to the waters of the state. Consumptive use is not an element of a water right. Consumptive use does not include any water that falls as precipitation directly on the place of use. Precipitation shall not be considered to reduce the consumptive use of a water right. 'Authorized consumptive use' means the maximum consumptive use that may be made of a water right. If the use of a water right is for irrigation, for example, the authorized consumptive use reflects irrigation of the most consumptive vegetation that may be grown at the place of use. Changes in consumptive use do not require a transfer pursuant to section 42-222, Idaho Code." Idaho Code § 42-202B(1).

[401] As originally introduced, the legislation would have required the Department to quantify a right in a transfer proceeding based on the authorized consumptive use defined as "the maximum consumptive use that may be made of a water right." Thus, the Department would have been required, apparently, to look at the most water consumptive crop that could possibly have been grown on the property, and base the quantity of water transferred on that hypothetical use, irrespective of what was actually grown. This provision of the legislation was dropped prior to passage. Consequently, the limitation to historic (or "historical") consumptive use remains in effect.

[402] The FSA's position is based on a provision of the federal Freedom of Information Act that exempts from disclosure "personnel and medical and similar files the disclosure of which would constitute a clearly unwarranted invasion of personal privacy." 5 U.S.C. § 552(b)(6). There are agency rules and guidance on the subject, but they do little more than restate statutory language. The FSA nonetheless deems the acreage information in the acreage reports to fall within the "similar files" category. The FSA's take is that any information that tends to reveal the personal wealth of an individual falls into this catch-all exemption. The

records on his or her own farm, unless he has secured a release from the prior owner. This is an important thing to think about at the time of acquiring a property, when the buyer has some leverage. Farm or water sale agreements should include an obligation on the seller to produce these records to facilitate future transfers.

(7) Place of use transfers within irrigation districts and canal companies do not require approval

The Legislature has provided an exemption to the transfer procedure for those situations where water users within a canal company or irrigation district simply are changing the irrigated place of use under the entity's water rights, so long as the new place is within the "generally described place of use" authorized for the entity. The statute still prohibits any increase in the amount of water diverted or the acres irrigated.[403]

Implicit in this authorization is the concept that a canal shareholder or irrigation district patron may change his or her point of delivery as necessary to serve the new location within the entity's service area (again, subject to the non-injury rule). This is not to say that the water user could, without a formal transfer approval, establish a new "point of diversion"—i.e., change or add to the entity's licensed or decreed point of diversion from the source. Rather, the change contemplated in this provision would be to a different headgate, pump or other diversion on the ditch or lateral system, or to different lands, within the entity's boundaries.

A separate statute, Idaho Code § 50-805A, authorizes cities to pool water supplies obtained by contract with multiple irrigation districts and that "such pooling shall not be deemed a change in place of use and shall not require compliance with sections 42-08 or 42-222, Idaho Code." This statute, which is discussed in more detail below in connection with municipal water rights, was enacted in 1981 at the behest of the City of Nampa, with contracts with Nampa & Meridian Irrigation District, Pioneer Irrigation District, and Boise-Kuna Irrigation District for delivery of surface water used in the City's pressurized irrigation water delivery system.

FSA's view is that the type of crop grown is not personal and may be released without the farmer's authorization, but that the acreage numbers tend to reveal wealth and are not disclosable without authorization. The agency has not developed written guidance to this effect, but the position appears to be well entrenched.

[403] Idaho Code § 42-219(7). This provision provides, in part: "Subject to other governing law, the location of the acreage irrigated within a generally described place of use, as defined in accordance with subsections (5) and (6) of this section and as filed with the department pursuant to sections 42-323, Idaho Code, may be changed without approval under the provisions of section 42-222, Idaho Code. However, the change shall not result in an increase in either the rate of flow diverted or in the total number of acres irrigated under the water right and shall cause no injury to other water rights." The process for establishing an irrigation entity's "generally described place of use" is set forth in the referenced subsections.

EXHIBIT C
Page No. 203 of 761

F. Ground water transfers

Ground water transfers are subject to generally the same procedural requirements as transfers of surface waters, except that if an applicant proposes an out-of-basin transfer of ground water that will irrigate more than five-thousand acres, or that will involve a volume of more than 10,000 acre-feet per year, the transfer must be approved by both the Director and the Legislature.[404]

An interim policy memorandum issued by the Department in 2002 governs the processing of applications proposing transfers of ground water rights in the Eastern Snake Plain Aquifer ("ESPA"). This policy sets out the information that must be included with an application for it to be accepted and processed, and describes when a transfer application is and is not required. With respect to ESPA transfers, the policy provides that:

> if the application for transfer proposes to move the point of diversion for a water right to divert and use ground water from one location to another within the Eastern Snake Plain Aquifer (ESPA) including any modeled tributary aquifers, the applicant must submit an attachment with the application that sets forth the time series of calculated depletions (transient to steady-state) to reaches of the Snake River that are hydraulically-connected to the ESPA using or based on the department's current ground water model for the ESPA, or other equivalent analysis acceptable to the department. When using results from or based on the department's ground water model, the time series of calculated depletions must be for the cells containing the points of diversion both before and after the proposed transfer (initiating at the date of priority of the water right and ending at future steady state condition). If the cells are the same, the attachment is not required except as described below. A copy of the department's ESPA ground water model, or associated transfer spreadsheet can be obtained by contacting the department or visiting the department's web site.

IDWR's *Transfer Processing Policies & Procedures* (Transfer Processing No. 24) (Dec. 21, 2009) (footnote omitted) (reproduced in Appendix L).

The stated purpose for this requirement is to provide a basis for evaluating whether the proposed transfer will increase depletions to hydraulically connected reaches of the Snake River. The policy presumes that any increases in depletions will cause injury to existing water rights. This presumption may be rebutted with an appropriate analysis. Absent such an analysis, however, increased depletions are required to be mitigated.[405]

---

[404] Idaho Code § 42-226.

Although the October 30, 2002 transfer policy is directed toward ground water transfers within the ESPA, much of the document is applicable to transfers generally, and it has been implemented in each of the several IDWR administrative regions for processing surface and ground water transfers.

G. Water rights mitigation in transfers, appropriations, and delivery calls

(1) Different meanings of mitigation

Before launching into a discussion of mitigation, it is worth pondering that mitigation means different things in different contexts. In the dictionary sense, it means to reduce the extent or intensity of a harm, not to avoid or eliminate it altogether. It is used in that sense in the law of contracts, which calls on the non-breaching party to mitigate (i.e., minimize) the damages caused by the breaching party. In this context, the injured party is called upon to mitigate the damages.

In contrast, in environmental and water law it is the party causing the harm who undertakes the mitigation. For example, federal environmental laws might require a party to mitigate adverse impacts to wetlands or endangered species by taking offsetting actions to restore habitat. Though not usually termed mitigation, the same concept applies in the context of air and water pollution credit trading programs.

In water law, mitigation describes an action by one water user to offset injury that his or her diversion causes to another water user. The duty to mitigate applies differently in the context of delivery calls versus transfers and appropriations. In the context of priority administration (a delivery call), a water right holder owes a duty to avoid material injury only to seniors. That duty to avoid injury expands to include juniors as well as seniors when a water right is changed (aka transferred) in some way. In other words, the change cannot be approved if there will be injury to any other water right (junior or senior). And, in a new appropriation, the appropriator has a duty to everyone, since the new right is the most junior.

In order to avoid injury, the right holder may seek to "mitigate" that injury. This is typically, but not necessarily, accomplished by providing a substitute supply to the injured right holder. This allows an existing use to continue or a new or changed use to be made. Where water rights are concerned, the idea is not just to reduce the harm, but to avoid or eliminate material injury altogether, thus making the other water user whole.

In the water rights context, mitigation may come in various forms. On occasion, notably in the context of settlement of tribal reserved rights claims, mitigation may consist of an array of government funded or facilitated measures addressing environmental and instream flow concerns that may or may not be directly related to the alleged injury to the reserved rights. In other contexts, state or other governmental entities may undertake aquifer recharge or other water replacement programs on a regional scale in response to or in anticipation of delivery calls that could cause economic dislocation.

Elsewhere in the West, water right mitigation is often undertaken in response to extraordinary strains on water supplies that are complicated by federal environmental laws (e.g., the Endangered Species Act), tribal reserved water rights, and/or federal decrees or compacts apportioning water

supplies between states. Idaho, in contrast, enjoys a comparatively abundant water supply. Moreover, most water right mitigation in Idaho is undertaken without the complication of a federal law overlay.[406] Accordingly, Idahoans enjoy ample opportunities for win-win solutions that allow the State's water to be put to optimum use while protecting environmental values.

(2) California's "physical solutions doctrine"

It is not necessary that the injured water right holder agree to the mitigation proposed by the party causing the injury. If the Idaho Department of Water Resources ("IDWR" or "Department") or a court finds that a mitigation plan proposed by the party causing the injury is sufficient to avoid material injury, that plan may be approved over the objection of the injured parties.

California has taken this a step further, allowing mitigation to be designed an imposed by the court. Thus, under what is known in California as the "physical solutions doctrine," California has gone much further than Idaho in imposing mitigation solutions. Although this doctrine has no applicability in Idaho, we discuss it here because, by way of contrast, it sheds light on how mitigation is viewed in Idaho.

Under California's doctrine, a court may craft its own mitigation solution and impose it on both parties. The seminal case dates to 1936: "[I]t is not only within the power, but it is also the duty, of the trial court to admit evidence relating to possible physical solutions, and, if none is satisfactory to it, to suggest on its own motion such physical solution. The court possesses the power to enforce such solution regardless of whether the parties agree." *City of Lodi v. East Bay Municipal Utility Dist.*, 60 P.2d 439, 341 (Cal. 1936) (citation omitted).

More recently, the California Court of Appeals summarized the physical solution doctrine this way: "As noted, a physical solution is an equitable decree designed to implement the constitutional mandate and to maximize the beneficial use of water. The court has power to enforce a physical solution regardless of whether the parties agree to it." *Central Basin Municipal Water Dist. v. Water Replenishment Dist. of S. California*, 150 Cal. Rptr. 3d 354, 360, Cal. App. 4th 943, 950 (2012).

The breadth of the doctrine is captured in this commentary:

> In working out a physical solution to water shortages where more efficient means of diversion and conveyance may be desirable, a court of equity is not limited by physical properties as they stand at the time of trial, or by suggestions and offers made by the parties. If it feels that substantial

[406] Even when no federal environmental laws are applicable, the environmental effects of a mitigation plan are appropriately considered under Idaho law. This is called out in the Conjunctive Management Rules themselves (IDAPA 37.03.11.043.03.j). It is also reflected in the Idaho Water Code's local public interest provisions (Idaho Code §§ 42-202B(3), 42-203A(5)(e), 42-222(1), 42-1763). Finally, the mitigation plan must work within the constraint of any existing instream flow water rights (Idaho Code §§ 42-1501 to 42-1507). On the other hand, it is not the obligation of the mitigating party to enhance environmental conditions. See discussion of instream flows in section 15.G(8)(h) at page 219.

> savings can be effected at reasonable cost by changing some of the works, it has the power, by injunctive order, to cause the change to be accomplished and to apportion the cost as justice may require. The court must, however, keep in mind that prior appropriators have prior rights and cannot be required lawfully to incur any material expense in order to accommodate a later appropriator. In working out a physical solution and determining whether an injunction should be granted, the fact that there is no immediate danger to a water right is an element to be considered. If the trial court needs or desires expert assistance or evidence to determine a physical solution in the problem of putting water resources to beneficial use to the fullest extent possible, it possesses the statutory power either to refer the matter to the division of water rights, or to appoint it as an expert.

Romualdo P. Eclavea, *et al.*, *Physical Solutions as Equitable Remedy in Allocating Water Interests*, 62 Cal. Jur. 3d Water § 456 (2015) (footnotes omitted).

Indeed, commentators have gone so far as to describe as mitigation what amounts to condemnation of the senior water right that is suffering the injury:

> A physical solution is not incompatible with a finding that it will not provide full compensation, and if the facts justify it, an award of damages may be made in addition to the physical solution. Further, a physical solution need not be applied when the remedy in damages is adequate.

Eclavea, § 456 (footnotes omitted).

If this commentary is correct, it means that California's physical solutions doctrine embraces not only the imposition of physical solutions, but financial ones, on the parties to a water conflict. It would allow a court to say, in essence: "I am not impressed with the mitigation strategy urged by the juniors. It is costly and likely to be ineffective in the long run. But it is not in the public interest simply to curtail the juniors. Given the enormous economic benefits of allowing the juniors to continue to divert (in comparison to the economic benefits generated by the senior), the sensible thing is for the senior to stop diverting and the junior to fully compensate the senior for its resulting losses."

(3) Three types of aquifer recharge in Idaho—ASR, PBAR & ARM

Water right mitigation strategies run the gamut—drying up farms, piping water to new places, building dams, you name it. An increasingly common and important mitigation strategy involves aquifer recharge. Indeed, aquifer recharge may be used either as a basis to mitigate other water rights or for storage of water to create new water rights (which is not mitigation at all).

Because aquifer recharge is so important (and complicated), I include here a background discussion that draws distinctions among three very different approaches to aquifer recharge:

- Aquifer Storage and Recovery ("ASR")

- Public Betterment Aquifer Recharge ("PBAR")
- Aquifer Recharge for Mitigation ("ARM")

They have different goals and operate in different ways. Each has value, but sets out a distinct approach that should not be confused with the others.

ASR, PBAR, and ARM are all commonly accepted approaches to mitigation in Idaho (though these labels are not routinely employed).

(a) Aquifer Storage and Recovery ("ASR")

The first category of aquifer recharge is known in Idaho as aquifer storage and recovery ("ASR"). In an ASR project, water is stored underground so that it may later be recovered (i.e., diverted) for the project owner's own use.

ASR is not a mitigation strategy. It is typically a water supply strategy in support of new water rights, though ASR is may also be undertaken for water quality reasons. ASR is conceptually no different than storing water in an above-ground reservoir. Obviously, water put in the ground does not stay put quite as well as water held behind a dam. Accordingly, a major part of any ASR project is the technical challenge of quantifying how much will remain for subsequent diversion over time.

ASR is typically undertaken by private parties to create a stored underground supply for later diversion to beneficial use by the entity undertaking the recharge. For example, Micron Technologies diverts water from the Boise River, stores in it an aquifer, and later pumps and uses a calculated volume based on the amount recharged. In this sense, ASR works conceptually like a surface reservoir (while also providing water purification benefits).[407]

In theory, an ASR project could be undertaken by a governmental agency, just as the Bureau of Reclamation built irrigation dams across the West for the ultimate benefit of individual irrigators. But there is no precedent for this in Idaho.

(b) Public Betterment Aquifer Recharge ("PBAR")

Aquifer recharge may be undertaken by the State or other entities for the general benefit of all water users. I call this "Public Betterment Aquifer Recharge" (or "PBAR").[408] This typically involves

[407] Obviously, aquifers are not tightly confined storage vessels like surface reservoirs. Accordingly, it is typically necessary for the proponent of an ASR project to develop a computer model that predicts how much of the water placed in the aquifer will still be there, over time, for subsequent diversion.

[408] There is one statutory reference to "public betterment" in the context of aquifer recharge. "In view of the public betterment to be achieved by the completion of aquifer recharge projects, the legislature hereby declares that the appropriation and underground storage of water by an aquifer recharge district hereinafter created for purposes of groundwater recharge shall constitute a beneficial use . . . ." Idaho Code § 42-4201(2).

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

large scale, regional efforts to recharge aquifers through infiltration ponds and/or by running water in leaky irrigation canals during the non-irrigation season.

The practice often is undertaken with minimal hydrologic analysis. Unlike ASR, no hydrologic analysis is required for PBAR projects, because the water put in the ground does not result in any specific new or enhanced water right to divert that water. Nor does it serve as a basis for releasing particular water uses from a delivery call.

Thus, a PBAR plan may be quite seat of the pants: "Let's put some water in the aquifer. It will probably do some good. Hard to say how much, but it can't hurt." There is no need to monitor or quantify how much good a PBAR project does, because it is not undertaken as a basis for subsequent diversion under right or as mitigation for particular water right users. Rather, PBAR is simply an effort to create a better supply for all. This "firms up" the rights of all water users connected to the aquifer and reduces the likelihood of conflict among users. It is as if Mother Nature added the water for everyone's benefit.

PBAR may be undertaken as a precautionary measure before delivery calls are made, or it may be undertaken in direct response to a call by holders of senior water rights. The thing that distinguishes "public betterment" aquifer recharge from other aquifer recharge is that PBAR is not undertaken for the specific benefit of particular water users. Thus, in a call situation, a PBAR project might be of sufficient size to completely eliminate the call, or it might only partially satisfy the call thereby reducing the number of juniors called out. In either case, water continues to be allocated in order of priority just as before. No one has a special claim to the water recharged through PBAR.

(c) Aquifer Recharge for Mitigation ("ARM")

A third form of aquifer recharge involves recharging an aquifer for the purpose of providing a replacement supply to senior users who, but for the recharge, would call out juniors. I call this "Aquifer Recharge for Mitigation" or "ARM." This may occur, for instance, where steps are taken to add water to an aquifer which then discharges the additional water to a stream serving senior surface users.

By providing this mitigation, other users may secure new appropriations or avoid having existing rights called out. This sort of mitigation may be undertaken by individual water users for their own benefit, by quasi-governmental ground water districts for the benefit of their members, or by a mitigation project developer who, in turn, sells mitigation plans or credits to junior water users.

Unlike PBAR, ARM is undertaken for the specific benefit of specific junior water users (or a class of them, such as members of a ground water district). An ARM recharge plan is calculated to provide a replacement supply sufficient only to compensate for the impact of the specific diversions providing the mitigation. Thus, other diverters who have not provided mitigation may continue to be called out.

In contrast to PBAR, an ARM plan invariably requires strict attention to hydrogeology, pumping effects, ground water movement, and similar variables; often, a ground water model is involved.

Implementing an ARM allows its sponsor to take credit for providing the replacement supply, thereby allowing it or its members to continue diverting. Meanwhile, other juniors who fail to offer mitigation may face curtailment. In PBAR, by contrast, curtailments continue to occur in strict order of priority, but, one hopes, there will be fewer of them because of the increased water supply.

Summary Comparison	
ASR	Typically undertaken privately for the purpose of storing and diverting the water for the benefit of the person who stored it. If some "leaks" out of the aquifer and is used by others, that is incidental and unavoidable.
PBAR	Typically undertaken at public expense by governmental entities for the purpose of allowing more water to reach surface users. Indeed, if some "leaks" out of the aquifer, that is the whole purpose. If a ground water user diverts some from the aquifer before it "leaks" out, that is incidental and unavoidable.
ARM	Typically undertaken by private parties for profit or by groups of water users (or governmental districts) for mitigation purposes. Unlike PBAR, the entity undertaking the project owns the water, may prevent others from taking it, and may claim the quantifiable mitigation benefits from the quantity that "leaks" out.

(4) Should ARM be undertaken for profit?

No one seems to struggle with the idea of ARM undertaken by the junior water users to avoid a call or by governmental entities to help resolve a call. Indeed, one of the stated legislative purposes of ground water districts is to develop and implement ARM.[409] In contrast, ARM undertaken for profit by third-party mitigation project developers is a new concept in Idaho, and it has encountered some resistance.

This discomfort with the idea of for-profit aquifer recharge is reflected, for instance, in unsuccessful legislative efforts over the last few years. Specifically, there have been efforts to modify Idaho Code § 42-234 (authorizing water rights for aquifer recharge). Some of the legislative proposals appear to reflect a measure of uncertainty or mixed feelings with respect to efforts by private parties to undertake for-profit aquifer recharge programs (particularly those involving new appropriations) in support of mitigation plans that will be sold to other water users. Also involved may be concerns that

[409] In response to growing attention and concern among water users about conjunctive management issues, particularly within the Eastern Snake River Plain, the Idaho legislature enacted legislation authorizing the creation of ground water districts. 1995 Idaho Sess. Laws, ch. 290; Idaho Code § 42-5200 *et seq.* The primary purposes of these special districts were to provide a mechanism for ground water users within a given area to organize and assess themselves for the costs of measuring and reporting annual ground water withdrawals from wells, and as necessary, responding collectively to delivery calls, curtailment orders, or other forms of administration. Thus, ground water districts, unlike water districts, are not water delivery entities.

successful ARM projects, using stream flood flows, will reduce amounts flowing through hydropower projects on the Snake River that cannot demand, but benefit from, these flows.

Some people sense something wrong in someone profiting by selling an interest in a mitigation plan that utilizes a public resource like water. This concern may derive from the prior appropriation doctrine's hostility to speculation and the insistence that only those putting water to beneficial use may obtain rights therein. Others dismiss this concern, pointing out that there is no incompatibility between individual profit and maximum use of the resource. After all, the biggest canal in the Treasure Valley—the New York Canal—is so named because it was conceived and funded by entrepreneurs two thousand miles away in New York City. Likewise, no one doubts the right of a farmer to sell his or her water rights at great profit. Similarly, no one doubts that for-profit water brokers may lawfully make a living matching buyers and sellers of water rights, thereby ensuring that this public resource finds its way to its highest and best use. The fact is, water rights mitigation is increasingly complicated and challenging. Not every water user has the wherewithal to design and undertake a successful mitigation project.

The author of this section sees nothing in the prior appropriation doctrine that should prevent people from putting together such projects and selling credits in them to others. I don't know how to build a car, either. Nor do I care to rely on the government to build all the cars. I am glad that someone does build them, and is willing to sell one to me. For this analogy to work, however, it is essential that the developer of the mitigation project add something of value, rather than just appropriate water and sell it to others. That value may come in the form of engineering, infrastructure (diversion, storage, or delivery), computer modeling, administrative services, and the like.

The concern centering on the for-profit aspect of these efforts is particularly acute in the Big Wood River Valley where plans are being explored by private mitigation project developers to use otherwise unclaimed spring flood flows to recharge the aquifer in the Sun Valley area to support mitigation plans that may be sold to holders of junior surface and ground water rights (or those diverting without any water right) who face all but certain curtailment in the coming years. It conceivably could support some new appropriations as well, a fact that seems hard to swallow for people who have been confronted with the typical seasonal water scarcity in the area.

(5) Statutes addressing mitigation

At its core, mitigation is a common law principle growing out of a water right owner's entitlement to provide a substitute supply to a senior, thereby allowing both parties to enjoy their constitutional right to divert. Idaho statutes provide scant guidance on water rights mitigation.

One of the few statutes speaking to the subject is the aquifer recharge statute mentioned above, Idaho Code § 42-234, which dates to 1978.[410] It is a sweeping statement of public policy extolling the virtues and value of aquifer recharge coupled with maddeningly ambiguous regulatory authority over

[410] 1978 Idaho Sess. Laws, ch. 366 (codified as amended at Idaho Code §§ 42-232, 42-233a, 42-234; *see also* 1978 Idaho Sess. Laws, ch. 293 (codified as amended at Idaho Code §§ 42-4201 to 42-4231).

recharge projects. The statute may have been written with PBAR in mind, but its language is not so limited. For instance, it includes the broad and unambiguous declaration that "the appropriation of water for purposes of ground water recharge shall constitute a beneficial use of water." Idaho Code § 42-234(2). Thus, the statute appears to provide a foundation for private ARM projects, as well.

Another statute touching on the subject is an amendment to Idaho Code § 42-223(10) which expressly protects from forfeiture a water right that is not being diverted because of its use as part of a mitigation plan.

See also Idaho Code § 42-1416B dealing with expanded (i.e., enlarged) ground water rights within a critical ground water area. It provides: "Water shall be deemed unavailable to fill the rights for expanded use, even if decreed in the adjudication, unless the director finds that a management program exists which will, within a time period acceptable to the director, limit the average annual water withdrawals from the aquifer designated in the critical ground water area to no more than the average annual recharge to the aquifer."

Idaho Code § 42-1779 provides for a statewide "a statewide comprehensive aquifer planning and management effort over a ten (10) year period of time beginning in fiscal year 2009."

Since 1978, the Idaho Legislature has provided for the establishment of aquifer recharge districts, which have taxing authority to raise money for and undertake ground water recharge project. Idaho Code §§42-4202 to 42-4231.

(6) Three types of mitigation

In Idaho, private water rights mitigation comes in various forms. One may place them into three broad categories, as follows:

- "Capital-M mitigation" (undertaken pursuant to Idaho's Conjunctive Management Rules in response to an active delivery call)
- "small-m mitigation" (developed outside of the Conjunctive Management Rules (a) in support of an appropriation, transfer, or exchange, (b) in anticipation of a delivery call, or (c) in response to an active delivery call against a surface right (which is not covered by the Conjunctive Management Rules))
- "ESPA mitigation" (a sub-species of "small-m mitigation") involving changes in points of diversion of ground water rights hydrologically connected to surface rights

Each of these is discussed below.

(7) Mitigation pursuant to the Conjunctive Management Rules: "Capital-M mitigation"

The only formal administrative rules dealing with mitigation are contained within the Conjunctive Management Rules, IDAPA 37.03.11.000 to 37.03.11.050.[411] The Conjunctive Management Rules were promulgated in 1994 (and approved by the Legislature in 1995) in response to calls for the administration (i.e., curtailment) of ground water rights by a trout farm. *See, Musser v. Higginson*, 125 Idaho 392, 871 P.2d 809 (1994). They set out a carefully crafted set of legal principles governing the difficult subject of delivery calls directed to junior ground water rights. However, the applicability of these rules is limited.

The conjunctive management rules come into play only in response to "a delivery call made by the holder of a senior-priority surface or ground water right against the holder of a junior-priority ground water right in an area having a common ground water supply." IDAPA 37.03.11.001.[412]

---

[411] The formal title of the rules is "Rules for Conjunctive Management of Surface and Ground Water Resources," IDAPA 37.03.11.001, but they are commonly referred to as the Conjunctive Management Rules. A note on terminology: "Administration" refers to the Department's statutory responsibility to enforce priority, including the curtailment of junior water rights when required to meet senior needs. The term "conjunctive administration" refers to the administration of ground and surface water rights. The term "conjunctive management" is broader. It refers to the full panoply of mostly voluntary governmental and private efforts to reduce conflict between ground and surface water users and promote more effective utilization of all water resources. Thus, while conjunctive administration deals with the brute-force "policing" of priorities, conjunctive management includes such things as research, education, voluntary conservation measures and other demand reduction, recharge projects, provision of replacement water supplies, and other efforts to stabilize or improve water availability. This distinction in terminology, however, is fairly recent. At the time that the Conjunctive Management Rules were adopted in 1994, the term conjunctive administration was not yet in vogue. Using current terminology, those rules would more appropriately be named the Conjunctive Administration Rules.

[412] The rules also require that the Department to establish an "area having common ground water supply." *See* IDAPA 37.03.11.010.01 (definition of area having a common ground water supply); IDAPA 37.01.11.031 (determination of areas of common ground water supply); IDAPA 37.01.11.050 ("Rule 50") (areas determined to have a common ground water supply). The Department has included only one area of common ground water supply in Rule 50—the Eastern Snake Plain Aquifer. In a 2014 rulemaking, Docket No. 37-0377-1101, the Department sought to repeal Rule 50 altogether, explaining that the formality of declaring these areas by rulemaking is unnecessary and that "the administrative hearings and deliberations associated with individual delivery calls is the proper venue to address which ground water right should be subject to administration under a delivery call." The Idaho Legislature (which has the power to veto rules, Idaho Code § 67-5291) rejected the rule in 2015. 2015 House Concurrent Resolution No. 10. The effect of this is somewhat unclear, but there is an argument that areas of common ground water supply must be added by formal rulemaking to Rule 50 before the Department has authority to administer rights in such area under a conjunctive management delivery call.

Arguably, another prerequisite of conjunctive administration is the development of a reliable computer model to evaluate the effect of ground water diversions and recharge on surface rights and other ground water rights. This is not stated in so many words in the Conjunctive Management Rules, but it is difficult to imagine

Notably, they do not come into play until a delivery call is made. Even then, they do not apply to calls against surface water users,[413] and they apply only if an area of common ground water supply has been established.

The Conjunctive Management Rules address a host of issues. One of them is mitigation plans developed in response to a delivery call against ground water users. This is known as "Rule 43" of the Conjunctive Management Rules. IDAPA 37.03.11.043 ("Rule 43") (copy attached.)[414]

Rule 43 borrows heavily from the Colorado concept of "plans for augmentation." This was the first time the concept of private mitigation for the benefit of specific water rights was codified in Idaho.

Here are some of the key points about Rule 43:

As noted, the Conjunctive Management Rules operate in the context of an active (as opposed to anticipated) delivery call. Accordingly, a water user may not obtain advance approval of a Capital-M mitigation plan under Rule 43 in anticipation of a call. A water user may develop a mitigation plan and keep it on the shelf, but the Department will not determine the plan's adequacy until the delivery call is made and everyone's hair is on fire. This may seem odd, but the Department takes the position it does not know what the delivery call will look like until it sees it and cannot approve a plan in the abstract. Likewise, the Department says that senior users should not be required to review and object to every mitigation plan (or forever hold their peace) in advance of an actual delivery call. Furthermore, until the delivery call is made, it is not clear which seniors have an interest in, and must be entitled to respond to, the Capital-M mitigation plan.

Rule 43 recognizes that no two mitigation plans are alike. The rule encourages creative solutions tailor-made to the specific circumstances of the call. Specifically, it notes that mitigation may

---

how the Department would fulfill its obligation to evaluate material injury and the futile call defense in the absence of such a model. The whole premise of the Conjunctive Management Rules is that rights should not be curtailed by rote application of the priority system (as is done, more or less, for surface water calls); instead curtailment should be limited to the extent necessary to effectively prevent material injury. *See*, IDAPA 37.03.11.020.04 (application of futile call principle), IDAPA 37.03.11.010.08 (definition of futile call); IDAPA 37.03.11.042 (determining material injury).

[413] The Conjunctive Management Rules do not apply to delivery calls against junior surface rights. The thought was that surface water is easy enough to administer. (When surface rights are involved, a diversion upstream has a clearly quantifiable impact on downstream rights. There is no need to develop a computer model to figure out who is causing the injury, and how and when it radiates from the point of diversion.) This means, however, that junior surface users—who do not fall within the Conjunctive Management Rules—may not develop Capital-M mitigation plans in response to a delivery call. However, they may still craft small-m mitigation plans outside the rules, which may be just as effective.

[414] In addition, "Rule 42" expressly provides: "The holder of a senior-priority surface or ground water right will be prevented from making a delivery call for curtailment of pumping of any well used by the holder of a junior-priority ground water right where use of water under the junior-priority right is covered by an approved and effectively operating mitigation plan." IDAPA 37.03.11.042.02 (copy attached).

come in the form of "other appropriate compensation." IDAPA 37.03.11.043.c. For instance, a water user might pay for efficiency improvements in the senior's use of water, thereby enabling the junior to provide less wet water as a replacement supply. Likewise, it is conceivable that a junior user depleting an instream flow might provide offsetting habitat improvements to compensate for the flow reduction. This is known as out-of-kind mitigation (as opposed to in-kind mitigation, which is replacement water). Tradeoffs like these are common in negotiated settlements, but compelling the senior water user to accept out-of-kind mitigation is new territory in Idaho.[415]

Rule 43 established a detailed list of "factors" the IDWR Director must consider in determining whether to approve a plan. The factors control the Director's otherwise broad discretion.

One of the factors is agreement between the junior and senior users. But this is only a factor. In other words, even a stipulation of the parties that the mitigation is adequate may be rejected by the Director. In the absence of a stipulation, a mitigation plan proposed by the junior user may be imposed on the senior making the call. On the other hand, the rules do not appear to go so far as California has under its physical solutions doctrine, which would allow the Department to devise its own mitigation solution and impose it on both parties (see discussion in Section 15.G(2) at page 206).

The plan must address only "material injury," not insignificant or fanciful injury. Rule 42 of the Conjunctive Management Rules sets out various factors (including the efficiency of the senior's use and the reasonableness of the senior's means of diversion) to consider in determining whether an allegation of injury constitutes "material injury." IDAPA 37.03.11.042.

(8) Mitigation when there is no conjunctive management delivery call: "small-m mitigation"

(a) Mitigation plans in support of applications for appropriation, transfer, or exchange

As noted above, Capital-M mitigation plans are available only in the context of responding to an active conjunctive management delivery call against a ground water right. However, the Department will evaluate and recognize on a case-by-case basis what I call "small-m mitigation" plans that fall outside the Conjunctive Management Rules. For instance, the Department will consider a plan to mitigate the impact of new appropriations, transfers, or exchanges.

Suppose a homeowner or real estate development requires a new water right, but water in the area is either fully appropriated or new appropriations are subject to frequent curtailment due to their

[415] California—which faces much more severe water challenges than does Idaho—has embraced out-of-kind mitigation under its "physical solutions" doctrine. See discussion in Section 15.G(2) at page 206. Although out-of-kind mitigation is embraced to some extent in Rule 43 of the Conjunctive Management Rules, it does not appear that Idaho has not gone quite so far in that direction as has California, particularly with respect to allowing the Department or a court to fashion and impose a mitigation plan not embraced at least by the junior water right holders. Likewise, there is no suggestion, to date, in Idaho that damages would be a sufficient remedy for injury to a water right.

junior priority. (Alternatively, suppose that a domestic well has been illegally diverting water for irrigation or aesthetic purposes in excess of the authorized amount, and the owner wishes to obtain a lawful appropriation.) In such a case, the applicant will need a plan to mitigate the effects of new appropriation by providing a replacement supply for senior water users. The result is to allow water under the new appropriation to be diverted "out-of-priority" so long as the mitigation plan is in effect.[416] For all practical purposes, the junior priority of the new right becomes irrelevant, and the new right takes on the priority date of whatever water right is offered as mitigation. Or, if the mitigation plan is premised on storage (including aquifer recharge), then its ability to divert out-of-priority is effective so long as stored water is physically available to offset any material injury that would otherwise be caused by the diversion.

(b) Mitigation of existing water rights

The owner of a junior water right may be concerned that his or her right will be called out in the future. This is a real threat in the Big Wood River Valley today, where trophy homes and hobby ranches in the Sun Valley area face imminent curtailment of ground water rights in conjunctive administration.[417] Even today, surface water rights as senior as the early 1880s are subject to late-season curtailment in the Big Wood because they are junior to even more senior downstream surface rights.

The difficulty is that a Capital-M mitigation plan under the Conjunctive Management Rules cannot be approved in advance of the delivery call. And, under current policy, the Department will not evaluate a small-m mitigation plan outside the context of an application for appropriation, transfer, or exchange.

A water user wishing to secure approval of a mitigation plan for an existing right prior to a delivery call may get the plan before the Department by subjecting the existing right to some sort of water right application, such as a transfer application to add an alternate point of diversion. Kluges like this are not always available, however.

Even if they cannot obtain advance review and approval of the plan, junior water users are nonetheless well advised to put together a mitigation plan and have it available in the event of a delivery call. At that point, it may be offered as a Capital-M plan, and the user will find out if the

---

[416] Diversion "out-of-priority" is a commonly employed shorthand reflecting that the right is not subject to curtailment despite its junior priority. Meanwhile, other junior rights that have not provided mitigation are subject to curtailment in order of priority.

[417] On February 23, 2015, two delivery calls were placed by groups of senior surface water users on the Big and Little Wood Rivers south of Sun Valley. Arguably, these calls are premature, given that the Department has not yet designated the valley's aquifer as a "common source of supply," as is required under the Conjunctive Management Rules. IDAPA 37.03.11.050 ("Rule 50"). In 2014, the Department repealed Rule 50, which would have allowed it to informally declare or adjust the boundaries of common sources of supply (including the Big Wood River Valley aquifer) without formal rulemaking. In 2015, however, the Idaho Legislature overruled the repeal. House Concurrent Resolution 10 (signed Mar. 16, 2015).

Printed 6/23/2023 9:09 AM

Department deems it good enough. However, if it is developed by competent engineers, hydrogeologists, and water attorneys, the likelihood of it being effective is maximized.

(c) Small-m mitigation must be "like kind."

As noted above, Rule 43 of the Conjunctive Management Rules contemplates the possibility of out-of-kind mitigation (i.e., something other than a replacement supply of water). In contrast, small-m mitigation plans, which operate outside of Rule 43, ordinarily provide like-kind mitigation. In other words, a water user relying on a small-m mitigation plan will probably be required to provide a water supply to the senior of sufficient quantity, quality, and timing to meet the senior's needs to the same extent as those needs would have been met by curtailing the junior.

(d) Small-m mitigation is subject to re-evaluation at time of delivery call

As noted above, Capital-M mitigation plans, once approved, cannot be re-opened during the course of the call. Small-m mitigation plans that are approved in the context of an application for appropriation, transfer, or exchange do not enjoy that certainty. The Department may approve the mitigation plan for purposes of the pending application, thus allowing the permit, transfer, or exchange to be approved.

However, if and when a delivery call is made in the future, the effectiveness of the previously approved mitigation plan may be reevaluated in light of new circumstances and information, including impacts on parties not anticipated at the time the original plan was approved. In other words, approval of a small-m mitigation plan in anticipation of future conjunctive management provides no guarantee that the mitigation plan will be found adequate when the delivery call comes.

Obviously, this uncertainly is a drag on marketplace and financial transactions involving property that requires reliable water rights.

(e) Type I and Type II mitigation

IDWR guidance updated in 2015 breaks down mitigation into two forms:

- Type I – Diversion and delivery of replacement water to offset injury or depletion
- Type II – Non-use of water to offset injury or depletion

Jeff Peppersack, IDWR, *Describing Mitigation in Water Right Records – Application Processing No. 71, Transfer Processing #27* (updated Nov. 4, 2015).

(f) It is no longer required to change the nature of use to mitigation

In the past, the Department required that if the acquired right is left idle for mitigation purposes (Type II mitigation), its nature of use element must be changed through the transfer process to "mitigation," "aquifer recharge," or the like in order to protect the undiverted right from forfeiture.

This requirement to change the nature of use was of no great consequence, so long as the right was fully under the control of the person creating the mitigation plan. In other words, it was just another "t" that needed to be crossed. However, it presented a problem if, for instance, the plan relied on deliveries by a separate irrigation entity whose right cannot easily be changed to some other nature of use. In other words, even if the irrigation district wanted to cooperate, it could not if it perceived that its water rights could not lawfully be changed to a use other than irrigation.

In response, the Legislature amended the forfeiture statute, Idaho Code § 42-223(10), to exempt from forfeiture a water right that is not diverted because of its use in a mitigation plan. Consequently, a mitigation plan may now safely rely on an undiverted water right, without putting that right through its own transfer proceeding to change its nature of use to mitigation.

(g) Example involving mitigation of ponds

In Idaho, a water right is required for every artificial pond (to cover the evaporative loss), even if the pond fills naturally with ground water. Thus, if a developer contemplates construction of an artificial pond fed by ground water, a water right must be obtained. The Department has determined that the consumptive use associated with irrigation is virtually identical to the annualized evaporative loss of ponds on an acre-for-acre basis. In other words, if you dry up an acre of irrigated land to create a one-acre pond, there is no gain or loss of water to the system. Thus, it would seem to be a trivial exercise to convert previously irrigated land to aesthetic ponds. Alas, it can be tricky, and a mitigation plan may be required.

In one example, a developer sought to convert farm land irrigated with surface water to a commercial development with ponds that would fill naturally from ground water with a high water table.

If the farm land had been irrigated with ground water, a portion of those rights readily could have been changed from irrigation use to aesthetic pond use. This would be a straight transfer with no mitigation required. Of course, the aesthetic right would have the same priority date as the ground water right and would thus be vulnerable to being called out in a future conjunctive administration call. The problem is that this is not a risk the pond-owner is allowed to take. If a ground-water-fed pond is found to be not in priority, the water cannot simply be shut off. Water will continue to fill that pond no matter what (unless the pond is filled in). Thus, the owner would be obligated to scramble to develop a new mitigation plan under crisis conditions.

Here, the problem was different. The farm was irrigated with surface water, while the pond is fed by ground water. Surface and ground water are considered to be different "sources" of water, and transfers from one source to another are not allowed. Nor could the developer obtain a new appropriation of shallow ground water to feed the pond, because the shallow ground water is hydrologically related to the fully appropriated Boise River.

Consequently, it was necessary to develop a mitigation plan. The surface water right previously used for irrigation of the land where the ponds were located was left undiverted and dedicated to

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

mitigation of the evaporative loss of the ponds. The additional water left in the Boise River thus would offset any claim of injury by downstream seniors. (No one raised an issue about impacts to other ground water users; the "pressure point" was the over-appropriated Boise River. In other words, there was unappropriated ground water available.)

(h) Mitigation and instream flows

Where a junior water right is subject to curtailment (or where there is no unappropriated water available to cover an illegal or new use), one approach is for the user to acquire a senior right and transfer it his or her use. This, of course, is not mitigation; it is a simple transfer. This can be tricky, however, where a point of diversion of a surface right must be moved upstream—which must be done in a manner that protects all other water rights on the river, even juniors. It is all the more challenging where the other water right is an instream flow right.

Such is the case in the Big Wood River Valley where two instream flow waters rights have been imposed on the Big Wood River from Ketchum to Bellevue.[418] As a practical matter, this makes it impossible to move a senior water right upstream within or above the protected reach. Water diverted at a farm below the protected reach has no impact on the protected reach. But if the point of diversion is moved upstream, the depletion will diminish flows in the protected instream flow reach.

This is a big problem on the Big Wood because most of the properties in need of water are within or above the protected reach and nearly all of the senior rights available for purchase are downstream.

The Department has adopted the practice of imposing a condition on such upstream transfers subordinating them to the minimum stream flow rights. The effect is that the transferred right cannot be exercised any time the minimum stream flow right is not being met. Because the minimum stream flow rights on the Big Wood River are quite junior (1981 and 1987), they are often out of priority. As a practical matter, such a condition defeats the entire purpose of the transfer, because the right may only be used in the wettest years despite its early priority.

The good news is that there is a work-around for the minimum stream flow problem—at least for some users. You guessed it, it involves a mitigation plan. The idea is to acquire a senior surface right capable of providing a replacement supply to the seniors downstream. (To be effective, the replacement water right must be upstream of every downstream senior who could place a call on the junior. It would be pointless to eliminate one call and still be subject to another.)

Instead of transferring the acquired right up the river, it is used to provide mitigation to downstream seniors (thereby allowing the out-of-priority upstream diversion to continue). Conceptually, it works like this. One does not change any of the elements of the acquired right. Instead, it is simply not diverted (drying up whatever land it was used to irrigate). In the event of a call

[418] Nos. 37-7919 and 37-8307 have priority dates of 1981 and 1987, respectively. They cover the same stretch of river, but the second right adds additional cfs.

Printed 6/23/2023 9:09 AM

EXHIBIT C
Page No. 219 of 761

(or as part of another water application), the user seeks approval of a mitigation plan under which the un-diverted replacement water compensates for any injury caused to the senior user(s).

One might ask why calling it "mitigation" works when simply transferring the same right up river is not viewed as injury to the instream flow. The impact on the minimum stream flow is identical under either scenario. In either case, the continued diversion by the junior will diminish flows that would otherwise be available to the instream right.

The answer is this works if and only if the upstream junior holds a water right that is senior to the instream flow right. Like all water rights, the instream flow right "took the river as it found it," which included the upstream user's right to divert. Thus, the upstream user is entitled to continue to divert to the detriment of the even more junior instream flow right. Moreover, the upstream user is entitled to respond to a call by a downstream senior in any way that satisfies the senior.[419] The instream flow right may "hope" that the upstream right is called out. But, if that happens, it would be only an incidental result of the call. The purpose of the call was to satisfy the downstream senior, not to incidentally benefit the instream flow. The holder of the instream flow right may not complain if the upstream diverter manages somehow to satisfy the call and continue its diversion. Thus, the upstream user may continue to divert, under the mitigation plan, even when the minimum stream flow is not being met.

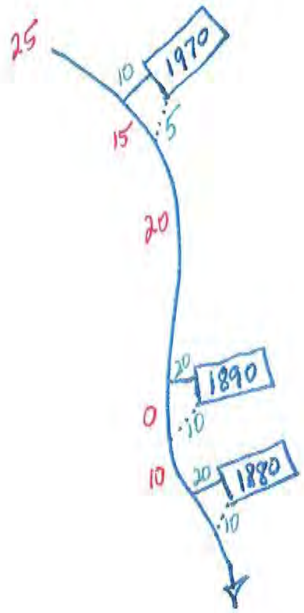
In contrast, if he or she had sought simply to transfer the replacement right upstream to serve his or her use, the transfer would have been denied. This is because transfers must avoid injury to all other water rights, even the junior minimum stream flow right. In contrast, the mitigation plan essentially amounts to a transfer of the acquired right downstream to the senior, which has no injury effect on the instream flow.

Again, however, this mitigation approach will not be effective if the upstream user does not hold a water right that is at least senior to the instream flow. In other words, it is a shallow accomplishment for the mitigation plan to resolve the call by the downstream diverter if the junior upstream right is still subject to curtailment by a more senior instream flow right.[420] The upshot is that a seemingly worthless upstream junior water right is quite valuable indeed so long as it is senior to the instream flow rights and is coupled with a mitigation plan that addresses injury to senior diverters further downstream.

---

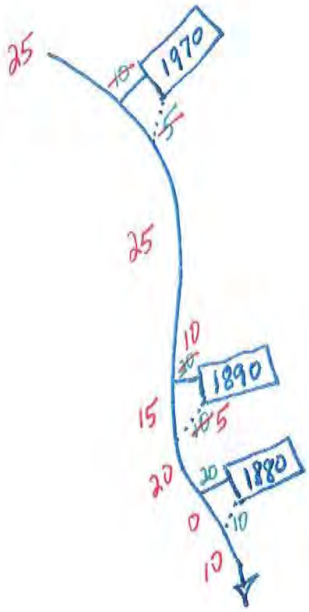
[419] For example, the junior could go to the senior and offer enough money to simply buy the senior out. Doing so would allow the junior to divert more (in priority with other rights), and the instream flow right would have no basis to complain. A mitigation plan based on a substitute supply closer to the senior is no different. Yes, every user (including the instream flow) "takes the river as he or she finds it." But one of the things they "take" is the potential that a downstream senior will no longer need or desire to call for as much water.

[420] If the mitigation plan involved idling a senior right upstream of both the instream flow right and the senior downstream diverter, then it could effectively respond to both calls. The problem in the Big Wood River Valley is that nearly all of the senior rights available for purchase are located within or downstream of the instream flow reach. To be effective in a call by the instream flow right, the mitigation would need to benefit the entire reach.

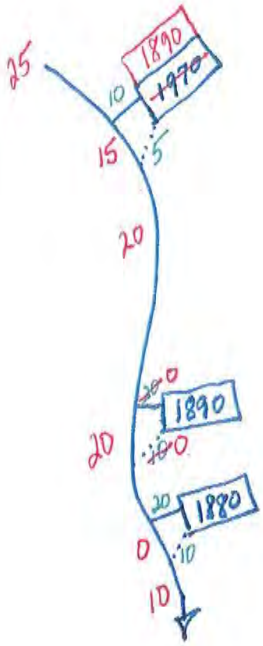


© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

There is one possible glitch. Because the mitigation cannot be approved as a Capital-M mitigation plan until there is a delivery call (nor as a small-m mitigation plan outside of water right application), the non-diverted replacement water is subject to forfeiture. (Idaho Code § 42-223(1) protects from forfeiture Capital-M and small-m mitigation plans, but only if they have been approved by the Department.) Accordingly, steps should be taken to either keep the replacement water in use until needed for mitigation or to get it into the water supply bank.



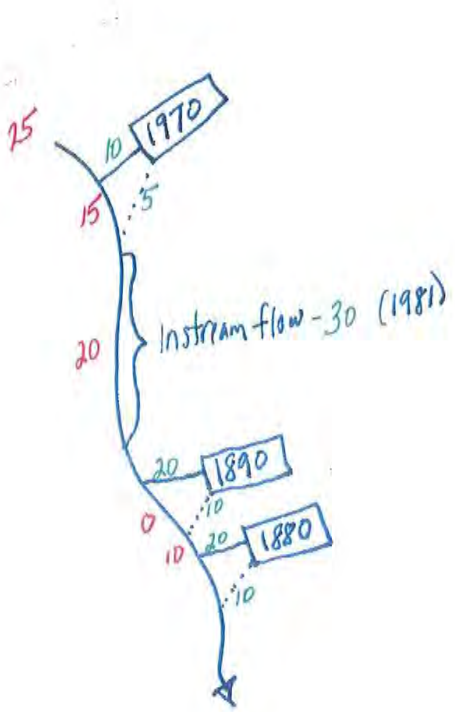
This concept of mitigating a downstream senior to benefit a diversion upstream of (or within) a reach protected by an instream flow right is conceptually tricky. The simplified schematics on the pages that follow may assist the reader in seeing how this works. Scenarios A1, A2, and A3 show how much easier it is to move water rights around in the absence of an instream flow right. These scenarios illustrate how an upstream junior may respond to a delivery call by a downstream senior by buying another right and moving it upstream. Scenarios B1, B2, and B3 show how this does not work if there is an intervening instream flow. Scenario B4 illustrates how a mitigation plan may work where moving the right upstream does not.

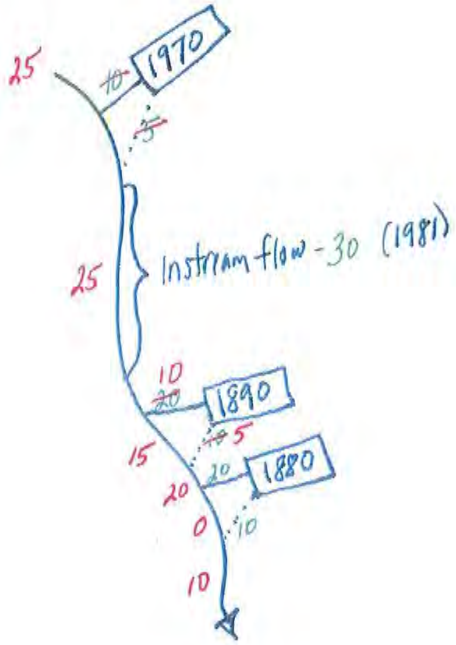


© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

***Scenario A1*: Shortage before call.**
In this scenario, 25 units of water is insufficient water to satisfy all three users. The downstream 1880 right is short 10 units and is entitled to call for water.

***Scenario A2*: Result after call.**
The 1880 right will initiate a delivery call resulting in the complete curtailment of the 1970 right and a partial curtailment of the 1890 right. The 1880 right is made whole.

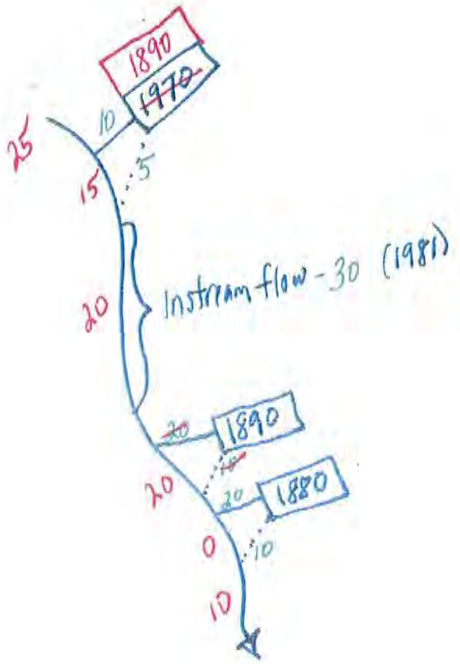




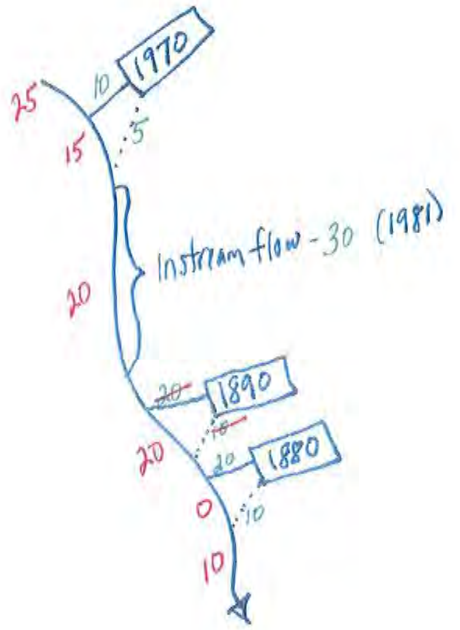
***Scenario A3*: Result after transfer of 1890 right.**
Faced with being called out, the owner of the junior 1970 right may acquire the 10-unit portion of the 1890 right that survives the call and move its point of diversion up to her property.

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

EXHIBIT C
Page No. 222 of 761



***Scenario B1*: Shortage before call.** This is same as Scenario A1, except for the addition of an instream flow right of 30 units with an 1981 priority date. Again, 25 units of water are insufficient to satisfy all water rights. The downstream 1880 right and the instream right are each short 10 units. The 1880 right is entitled to call for water. In contrast, the 1981 instream flow right may not, because it is junior to the upstream user. It must suffer the 10 unit shortage.



***Scenario B2*: Result after call.** The 1880 right will initiate a delivery call resulting in the complete curtailment of the 1970 right and a partial curtailment of the 1890 right. The 1880 right is made whole. The 1880 right will not call out the junior instream flow, because doing so would not add any new water. This result is identical to Scenario A2 (without the instream flow).

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

***Scenario B3*: Result after attempted transfer of 1890 right.** As in *Scenario A3*, the owner of the junior 1970 right may acquire the 10-unit portion of the 1890 right that survives the call and attempt to move its point of diversion up to her property. Doing so would not be allowed, however, because a change in the point of diversion will only be allowed if no injury occurs. Moving the 1890 right upstream would reduce the instream flow to 20 units (compared to 25 units before the transfer as shown in *Scenario B2*). Accordingly, this transfer would be denied.

***Scenario B4*: Result after mitigation plan using 1890 right.** Alternatively, the owner of the junior 1970 right may acquire the 10-unit portion of the 1890 right that survives the call and use it in a mitigation plan that dries up the farm. The additional 10 units now flows to the 1880 right, making it whole and allowing the 1970 right to continue to divert. The other 10 units under the 1890 right would continue to be called out by the 1880 right, but that is of no concern to the holder of the 1970 right, whose only duty is to mitigate for the injury her diversion causes. Meanwhile the instream flow continues to suffer a 10-unit shortage, but, it can do nothing about it. The instream flow cannot call out the 1970 right, because it is junior to that right. Nor can it complain of the mitigation plan, which involves no change in point of diversion and, in any event, does not affect water rights above it on the stream.

(i) If a senior water right is acquired as a replacement supply, why not simply transfer it to the acquiring junior user?

The basic premise of many mitigation plans is to acquire a senior right and make it available to the senior to offset the adverse effects of the junior's diversion. One might ask, having gone to the trouble of acquiring the senior right, why not simply transfer it to serve the junior's use? The effect is identical. Either way, the junior user gets to operate under the priority of the newly acquired water right.

That is a good question—one that sometimes people skip over. The answer is that, if the acquired right can be transferred to the acquiring party's place of use and point of diversion, that is probably the way to go. In short, one should keep the solution as simple as possible. There are times, however, when a direct transfer of the replacement supply to the junior will not work.

For example, there may be times (particularly where the replacement supply results from aquifer recharge or other storage) when it is not physically possible to get the new water to the place where the junior needs it. In other words, the only option may be to deliver the water to the senior under a mitigation plan. This might entail, for example, dry up of land irrigated by ground water where the land is located down-gradient from the junior but above-gradient from the senior, thus allowing the undiverted water to flow downward to the satisfy the call.

The mitigation water right may be owned by a water district or other entity that is unwilling or unable to allow a portion of its water right to be split off and transferred to a new use. But the district may be willing to let a portion of its water right go "idle" to serve as mitigation.

In some cases, the senior surface right acquired as a replacement supply cannot be moved upstream without injury to other rights—notably where the stream is subject to an instream flow right. (See discussion below in section 15.G(8)(h) at page 219.)

(9) Mitigation of ground water transfers within the ESPA

Ordinarily, it is fairly simple to move points of diversion for ground water from one place to another within the same aquifer. There may be individual well interference issues (cone of depression issues). But, other than that, one may "move a straw from one end of the bathtub to the other" without any impact on the water resource or other users. Thus, mitigation is usually not required as between ground water users.

The situation is different, however, where ground water is hydrologically connected to surface water. Moving the point of diversion of a ground water right from one well to another well may affect hydraulically connected surface rights and entail mitigation. This is a special sub-category of small-m mitigation.

Printed 6/23/2023 9:09 AM

It arises most notably in the Eastern Snake Plain Aquifer ("ESPA") in the Magic Valley of Idaho. The Snake River runs for hundreds of miles along or near the southern boundary of the ESPA, a massive aquifer covering 10,800 square miles and holding as much water as Lake Erie.[421]

Water within the ESPA flows underground toward to the Snake River. Thus, every consumptive diversion of ground water from the ESPA results in a corresponding reduction in flows somewhere in the Snake River. Each well affects the river in a different way, however. To put it simply, wells in the upper (eastern) part of the aquifer reduce flows most significantly in the upper part of the Snake and have gradually less impact on each succeeding lower reach of the river. And vice versa.

As a result, moving a point of ground water diversion from "point A" to "point B" will increase flows in one part of the Snake while reducing flows in another. The net depletion effect (once steady state is achieved) will be zero, but the effect on specific reaches of the river may be substantial as the impact is redistributed up and down the river. This change benefits some users and injures others.

Because the ESPA is administered as being fully appropriated, new users (notably dairies, industries, and cities) must buy water rights from farms, dry them up, and transfer the water right to the new location.

For a while during the 1990s, the Department refused to approve any ground water transfers due to the then-unquantifiable injury to surface users. Ultimately a computer program (known as the Eastern Snake Plain Aquifer Model or "ESPAM") was developed to model the effect of every possible change in location on every reach of the river.

This methodology, and the Department's implementation of it to date, is focused solely on mitigating the adverse effects of a transfer on the affected reaches of the Snake (and tributaries thereto). The same methodology also quantifies the corresponding and offsetting positive impacts on other reaches of the river. A major piece of unfinished business is the establishment of a "credit" system to reflect these positive benefits. So far, the Department has approved water right transfers recognizing those benefits and securing the right of water right holders to claim them in the future once a system is put in place to quantify and trade those credits.

The result is that a person seeking to transfer a point of diversion to a new location in the ESPA may be required to leave some of the water behind. For instance, if the right authorized diversion of 5

[421] "The Eastern Snake Plain Aquifer ('ESPA') is defined as the aquifer underlying an area of the Eastern Snake River Plain that is about 170 miles long and 60 miles wide as delineated in the report 'Hydrology and Digital Simulation of the Regional Aquifer System, Eastern Snake River Plain, Idaho.' U.S. Geological Survey ('USGS') Professional Paper 1408-F, 1992, excluding areas lying both south of the Snake River and west of the line separating Sections 34 and 35, Township 10 South, Range 20 East, Boise Meridian. The ESPA is also defined as an area having a common ground water supply. See IDAPA 37.03.11.050." *Order*, Finding No. 1 at 2, *In the Matter of Distribution of Water to Various Water Rights Held By or For the Benefit of A&B Irr. Dist., American Falls Reservoir Dist. #2, Burley Irr. Dist., Milner Irr. Dist., Minidoka Irr. Dist., North Side Canal Co., and Twin Falls Canal Co.* (IDWR, Feb. 14, 2005).

cfs at the original location, the Department might approve a transfer of only 4 cfs, if the computer model showed that pumping that amount in the new location would leave no surface user of the Snake River worse off. The greater the distance the water is moved up and down the aquifer, the more water must be left behind to prevent injury.

Of course, in such a transfer, some water users will be made better off. There are two ways in which the transferring party may capture this benefit. First, the Department has recognized a "credit" for the improvement to other reaches of the Snake River. That credit (in theory at least) may be used to offset some future transfer in the other direction. Alternatively, the water user (or water broker) may arrange various simultaneous transfers in opposing directions whose impacts on various reaches of the river cancel each other out, thus allowing the rights to be transferred at full face value (or close to it).

The reduction in transferred quantity based on the ESPAM is different from other mitigation plans in several ways. First, it is not undertaken in response to or anticipation of a conjunctive administration delivery call. Second, no new, alternate supply of water provided to the other potentially injured rights. Instead, injury is avoided by cutting back the quantity of an existing right (the transferred right) or by using credits or offsets from other transfers. (That quantity may be defined to change over time, reflecting the gradual impact of the transfer until steady state is achieved.) Third, once the transfer is approved, there is no ongoing mitigation plan to implement. Fourth, the effect of the mitigation is only to allow approval of the transfer. It has no effect in protecting the ground water user from a future delivery call. However, when that delivery call comes, it will be evaluated on the basis of the post-transfer impacts of new (lower) quantity being diverted from the new place of diversion.

An illustrative example of a ground water transfer within the Eastern Snake Plain is set out on the following page. This is, of course, grossly simplified. It communicates, however, the idea that a change in the point of diversion may be accomplished without injury to any of the river reaches if the diversion quantity is reduced at the new point of diversion. This amounts to "leaving money on the table," because other reaches are benefited and the overall impact of the diversion is reduced. To some extent, this "money on the table" effect may be avoided by combining two or more transfers that to some extent cancel out each other's impact. This may be done simultaneously, or at different times through retention of credits after the first transfer.

Eastern Snake Plain Aquifer Ground Water Transfer Scenario. In this scenario, 100 units of water are initially pumped from location A and consumptively used. The computer model calculates that this will diminish flows in each of six reaches of the Snake River as shown in blue.

If the point of diversion is moved to location B, the computer model predicts that the steady-state impact on each river reach will be as shown in red. The effect of the move from A to B is to improve flows in reaches #1, #2 and #3, but to reduce flows in reaches #4, #5, and #6. This equates to injury, and the transfer will not be approved for the full 100 units.

By restricting the diversion at point B to 50 units, the steady-state impact on each reach is reduced by half (as shown in green). The result is that reaches #1, #2, #3, #4, and #5 all experience a decline in impact compared to pumping 100 units at point A (meaning more flow and no injury), while reach #6 is neutral.

H. Change in source of water

(1) Underlying theory

Idaho's transfer statute authorizes changes in "point of diversion," but says nothing about changes in the "source" of the water. Nevertheless, it is well understood that a change in point of diversion is permissible (assuming no injury, etc.), while a change to an entirely new source of supply is prohibited. Instead, it will be treated as a new appropriation.[422] The trick is telling the difference.

If the user simply moves the point of diversion from one location to another within the same source, that is an ordinary transfer, and will be evaluated on the basis of injury, enlargement, and so on. If approved, the old priority will be retained.

If, on the other hand, the user is really moving the point of diversion to an entirely new source of supply, that is not a change. It is really a new appropriation (and abandonment of the old one). This matters in several ways. First, it may affect the injury analysis, because there is no *status quo* diversion against which to measure the new appropriation. Also, the new appropriation will have a new priority date, rather than keeping the old one. Moreover, it may not be allowed at all if, for instance, a moratorium on new appropriations is in place.

How does one determine whether a change in point of diversion is a change in water right or a new appropriation? It boils down to whether the new location is tributary (that is, hydraulically connected) to the old location. "Since the original right did not include any right to non-tributary sources of water, the use of water from a non-tributary source is a new appropriation. Therefore, a purported change to a source that is not tributary to the original source must be considered a new appropriation."[423]

(2) Surface-to-surface changes

Thus, for instance, a surface user may switch from one fork of a stream to another, and a downstream user below the fork would have no right to complain if the overall impact is unchanged.[424]

---

[422] In *In re SRBA,* Case No. 39576, Subcase Nos. 29-00271 *et al.* (Idaho, Fifth Judicial Dist., Nov. 9, 2009 and April 12, 2010) (reproduced in Appendix S), *aff'd, City of Pocatello v. Idaho*, 152 Idaho 830, 275 P.3d 845 (2012) (Eismann, J.), SRBA Judge Melanson (who retained the case after his appointment to the Idaho Court of Appeals) rejected the City of Pocatello's argument that the accomplished transfer statute does not apply to pre-1969 water rights. The same court also held that the accomplished transfer statute does not allow changes in the source of water, but only changes in place of use, point of diversion, nature or purpose of use, or period of use. The court observed: "A change in source is essentially the appropriation of a new water right." *Id*. at 11. The Idaho Supreme Court affirmed in 2012.

[423] A. Lynne Krogh-Hampe, *Injury and Enlargement in Idaho Water Right Transfers*, 27 Idaho L. Rev. 249, 260-61 (1990).

[424] *Saunders v. Robinson*, 14 Idaho 770, 95 P. 1057 (1908). Of course, such a move might change the overall impact. For example, suppose the new fork had more consistent flows than the old fork, thereby

Printed 6/23/2023 9:09 AM

EXHIBIT C
Page No. 229 of 761

Such a move might be barred if it impaired uses on the other tributary, but that would be a function of injury analysis, not an absolute prohibition based on being a different source.[425] In contrast, obviously, a move from one river to an entirely different river system would be considered a different source and would be treated as a new appropriation, not a transfer.

(3) Ground-to-surface and surface-to-ground changes

The same principles would appear to apply to a change from surface to ground water. One commentator has stated: "Applying the general rules applicable to changes in source, a purported change from a surface source to a non-tributary aquifer would be a new appropriation while a change from a surface source to a tributary aquifer would be evaluated as a change in use."[426] Another commentator (who is also a departmental official) has a more circumspect viewpoint.[427] In any event, even if the source is determined to be tributary and therefore the "same source," the user seeking the change still must demonstrate no injury to both surface and ground water users which might be affected. This would entail a potentially complex hydrological analysis. A special master in the SRBA has concluded, in a recommended order, that "IDWR will recognize a well as an alternate point of diversion for a surface water source if the two are very closely connected."[428]

A change from ground water to surface water may be accomplished, assuming that the ground water is tributary to the surface stream. However, the injury questions are hydraulically complicated. A recently developed model for the ESPA, for instance, would allow a user to buy up and shut down ground water rights, and predict, subject to the model's limitations, the resulting increases in flows in the Snake River. Of course, the impact will not be immediate, but the model would predict how much could be diverted without injury in any given year. Another complicating factor, however, would be time of use. A shutdown of irrigation wells would result in a year-round increase in flows in the river.

A change from surface water to ground water is also permissible, if and only if a close hydraulic connection can be demonstrated.

---

enabling the water user to fill her right more often. In such a case, a downstream junior could complain of injury, even though the transfer was deemed to be from the same "source."

[425] S*ee*, *Clear Springs Foods, Inc. v. Clear Lakes Trout Co*., 136 Idaho 761, 40 P.3d 119 (2002) (holding that two streams fed by different springs flowing from the Snake Plain Aquifer are the same sources, however holding depended in part on the fact that diversion structures commingled the water).

[426] Krogh-Hampe at 261.

[427] "It is not a given that the Department will allow a change in point of diversion of a surface water right to a tributary ground water source. Despite the interconnection, this normally is viewed as a change in source and not allowed except in extraordinary circumstances that I am not presently able to describe." Email from Phillip J. Rassier, Chief Counsel, IDWR (April 30, 2003).

[428] *Master's Report and Recommendation and Order on Motion to Reconsider*, Subcase Nos. 29-00271 *et al.*, *In re: SRBA,* Case no. 39576 Dist. Ct. for 5th Jud. Dist. of Idaho (October 2, 2007) at 6.

Printed 6/23/2023 9:09 AM

The Department's 2002 transfer guidance addresses the topic of ground-to-surface and surface-to-ground water changes. It provides that an appropriation for transfer proposing such a change is approvable if the ground water and surface water sources have a direct and immediate hydraulic connection (at least 50 percent depletion in original source from depletion at proposed point of diversion in one day).[429]

A 2007 decision from Special Master Bilyeu of the SRBA Court rejected a claim by the City of Pocatello, which sought recognition of its wells as alternate points of diversion for its surface rights.[430] The Special Master concurred with the conclusion in the Director's Report that the wells (which were between ¼ and 1 mile from the creeks) were not sufficiently hydraulically connected. Special Master Bilyeu offered this useful summary: "IDWR does not usually recognize wells as alternate points of diversion for surface water sources. However, IDWR will recognize a well as an alternate point of diversion for a surface water source if the two are very closely connected. For example, IDWR recognized that a well as an alternate point of diversion near the Salmon River. In that case, a point of diversion on an abandoned ditch was changed in favor of a nearby well. IDWR determined that the two points of diversion were close to each other and the well was so shallow that the ditch and the well essentially withdrew the same water." *In re SRBA*, Case No. 39576, Subcases: See Attached Exhibit A, Master's Report and Recommendation, Idaho Fifth Dist. Ct, at 6 (Oct. 2, 2007). The Special Master explained that it is insufficient to show that a stream contributes substantially to an aquifer. The person seeking to divert a former surface right from the aquifer must demonstrate that the hydraulic connection is so tight that "the two are essentially diverting the same water." *Id*. at 12.

I. The rule against enlargement

(1) The basic concept

Enlargement is a concept closely related to injury, but it is not the same. Injury is a consideration for both new water appropriations and changes of existing rights; enlargement is only applicable only to changes in rights. Both injury and enlargement are aimed at avoiding actions that increase the burden on the water system or otherwise make less water available to other water users protected by the priority system. Changes in water use that result in injury typically result in enlargement, and vice versa. But this is not always the case.

Injury analysis is typically fact-specific and is evaluated with respect to a specific injured party. In contrast, enlargement may be thought of as *per se* injury—injury that is presumed and need not be shown as to particular water users. Here are some examples:

---

[429] IDWR's *Transfer Processing Policies & Procedures* (Transfer Processing No. 24) (Dec. 21, 2009) (reproduced under Appendix L).

[430] Her decision was affirmed by the SRBA Court in *In re SRBA,* Case No. 39576, Subcase Nos. 29-00271 *et al.* (Idaho, Fifth Judicial Dist., Nov. 9, 2009 and April 12, 2010) (reproduced in Appendix S), and was affirmed by the Idaho Supreme Court in *City of Pocatello v. Idaho*, 152 Idaho 830, 275 P.3d 845 (2012) (Eismann, J.).

- If a user sought to increase the rate of diversion beyond that specified on the original right or to increase consumptive use in the context of expanded irrigation acres or a new nature of use, this would result in injury. Indeed, it constitutes is *per se* injury (meaning it is presumed to hurt someone) and is therefore deemed an enlargement.

- If a user sought an earlier priority date than he or she was entitled to, that too would constitute *per se* injury. This might or might not also be described an enlargement, but it hardly matters because it is impermissible.

- If a user sought to move a point of diversion from point A to point B (without changing the quantity or any other element), that may or may not result in injury depending on the circumstances. If, for instance, it reduced return flows relied on by another user, that would constitute injury. But even if there were injury, it would not be described as an enlargement because there is no overall increase in burden on the water system and no *per se* injury.

It is generally understood that any change in use that increases the rate or volume of diversion, the number of irrigated acres, or the duration of the period of use[431] constitutes an enlargement. Such changes can be predicted to cause injury to some other water right, if not immediately then in the future at a time of administration. This is the reason that enlargement is described as a *per se* injury rule. In such a case, it is deemed an enlargement and there is need to go through the exercise of identifying and proving injury to a specific water user.

In some cases, enlargement is discussed in terms of increases in beneficial use (see footnote 445 on page 242). Most of the time, references to increased "beneficial use" is really just shorthand for increases irrigated acreage—which increases consumptive use. The one reported decision addressing enlargement in a non-irrigation context found that an increase in beneficial use where nothing else changed and the burden on other water users was not increased did not constitute enlargement.[432] Nevertheless, for reasons that are unclear, IDWR's transfer guidance continues to suggest that an increase in beneficial use alone may, in some contexts, constitute enlargement. See discussion in section 15.I(4) (Enlargement in a non-irrigation context) at page 241.

One way to think about enlargement is that it is, in effect, a new appropriation. It cannot be carried out unless it is separately approved. Even though a new ground water right, for example, might be shown to cause no injury to existing water rights, it still must take its place as the newest right in the system and be assigned a junior priority. Its owner cannot be assigned a senior priority simply because

---

[431] As for changes in the period of use, see discussion in section 15.J on page 245.

[432] *In re SRBA Case No. 39576, Subcase Nos. 36-02708 et al, Order On Challenge (Consolidated Issues) of "Facility Volume" Issue and "Additional Evidence" Issue* ("*Facility Volume Case*"), Idaho Dist. Ct., Fifth Judicial Dist. (Dec. 29, 1999) (Barry Wood, J.). This SRBA decision was not appealed. The *Facility Volume Case* has been cited by the Idaho Supreme Court, but not with respect to the enlargement issue. *North Snake Ground Water Dist. v. Gisler*, 40 P.3d 105, 108-08 (Idaho 2002) (Kidwell, J.).

Printed 6/23/2023 9:09 AM

EXHIBIT C
Page No. 232 of 761

there is no evident injury to another user. For example, if a farmer appropriated 3.2 cfs to irrigate 160 acres, and then later sought to irrigate an additional 40 acres with the water she "conserved" through the use of more efficient irrigation methods, she would be obliged to obtain a new water right for the 40 acres and accept a junior priority for it. The reason is simple. Despite the fact that farm is diverting no more water than before, 200 acres of crops will consume more water than the original 160 acres, resulting in less water available for others.

Thus, the rule against enlargements really is another way of stating a more fundamental rule: each new water right must take its place in line behind all existing water rights. Put simply, an enlargement is a new or additional use that must have a new water right, with a junior priority. If it cannot obtain a new-priority right (due, for instance, to a moratorium), then, legally, it cannot exist.

The most common fact setting for enlargement is "water spreading." This is the practice of expanding the number of irrigated without increasing the quantity of water diverted, which can be accomplished through the adoption of more efficient irrigation techniques.[433] Addressing water

[433] A farmer might switch from flood irrigation to pressurized sprinklers, or from an earthen ditch to a pipeline. The improvements appear to result in more water, and there is no question that water has been conserved. Irrigating the same field now requires diversion of less water: less water per unit diverted escapes through percolation, ditch leaks, and the like, and a higher percentage is delivered to the crop. But the amount of consumptive use per acre remains the same. The irrigator then would find herself with "extra" water without increasing the rate of diversion. One having additional water might conclude she is allowed to bring additional acreage under irrigation.

Many have done this, believing it acceptable because they did not increase their original diversion rate and achieved the enlargement through a conservation practice. However, as more acreage is brought under irrigation, the total consumptive use necessarily increases (as does the place of use, which typically is another limiting element in a water right). In short, water is illegally taken from the system, return flows reduced—and other water right holders injured or at least placed more at risk of a shortage—even though the appropriator's diversion rate stays the same. Such water spreading is illegal in Idaho.

Thus, the only way to bring new acres under irrigation with the same water right, is to dry up an equal number of previously irrigated acres. There are several reasons for the dry-up requirement. First, the prior appropriation doctrine limits a water right to the amount that reasonably can be placed to beneficial use. If the original lands could continue to be irrigated after some portion of the appurtenant water right had been transferred to other lands, then the amount being transferred away presumably was never needed for the beneficial use in the first place. Second, any increase in the total acres irrigated under the right after the transfer would increase the right's consumptive use and reduce return flows, including ground water recharge, supplying other rights.

Note that in some instances, a conservation measure actually can decrease consumptive use somewhat. For example, if an open ditch is replaced with a pipeline, this will eliminate the evaporation from the ditch surface and the evapo-transpiration through phreatophytes along the ditch—actual consumption of water is reduced. (Phreatophytes are plants growing along streams and canals.) The authors sometimes refer to this as the "sliver" of consumptive use that can be freed-up by implementing a conservation measure. However, this amount usually is so small that it is impractical to quantify or use it—although it could be practical if, say a large ditch were piped, reducing evaporation from acres of water surface. In any event, a proposal to put such saved water to use on new land or in some other new use still would require a new water right. Finally, the courts (at least in other states) have discouraged or disallowed the use of this type of saved consumptive use in

spreading in general adjudications is the purpose of the accomplished transfer statute (Idaho Code §§ 42-1425 and 42-1426). The accomplished transfer statute uses the term "enlargement" to describe this practice. As the Court said in reference to this statute:

> The term "enlargement" has been used to refer to any increase in the beneficial use to which an existing water right has been applied, through water conservation and other means. See I.C. § 42–1426(1)(a). An enlargement may include such events as an increase in the number of acres irrigated, an increase in the rate of diversion or duration of diversion.

Fremont-Madison Irr. Dist. & Mitigation Grp. v. Idaho Ground Water Appropriators, Inc., 129 Idaho 454, 458, 926 P.2d 1301, 1305 (1996) (Schroeder, J).

Injury must be addressed in both in new appropriations and in transfers. Enlargement, in contrast, arises only in the context of a change to an existing water right. Enlargement is addressed in the transfer statute (Idaho Code § 42-222[434]) and in the accomplished transfer statute (Idaho Code

---

part for policy reasons. For example, in *Southeastern Colorado Water Conservancy Dist. v. Shelton Farms, Inc.*, 529 P.2d 1321 (Colo. 1971), appropriators cut down portions of a cottonwood forest growing along the Arkansas River and then attempted to claim the "saved" water resulting from the elimination of these phreatophytes. The Colorado Supreme Court rejected the attempt, and refused to recognize a new water right free from call on the river. In its opinion, the Court reviewed the extremely narrow circumstances in which one might acquire such a water right based on a "salvaged water" or similar theory. The *Shelton Farms* ruling could be seen as stemming in part from the Colorado court's concern about the environmental degradation that could result if the decision when the other way. To a similar effect is *RJA, Inc. v. Water Users Association of District 6*, 690 P.2d 823 (Colo. 1984) (appropriator was denied the attempt to enlarge his water supply by draining a peat bog).

[434] The transfer statute provides in pertinent part:

> The director of the department of water resources shall examine all the evidence and available information and shall approve the change in whole, or in part, or upon conditions, provided no other water rights are injured thereby, the change does not constitute an enlargement in use of the original right, the change is consistent with the conservation of water resources within the state of Idaho and is in the local public interest as defined in section 42-202B, Idaho Code, the change will not adversely affect the local economy of the watershed or local area within which the source of water for the proposed use originates, in the case where the place of use is outside of the watershed or local area where the source of water originates, and the new use is a beneficial use, which in the case of a municipal provider shall be satisfied if the water right is necessary to serve reasonably anticipated future needs as provided in this chapter. The director may consider consumptive use, as defined in section 42-202B, Idaho Code, as a factor in determining whether a proposed change would constitute an enlargement in use of the original water right. The director shall not approve a change in the nature of use from agricultural use where such change would significantly affect the agricultural base of the local area. The transfer of the right to the use of stored water for irrigation purposes shall not constitute an enlargement in use of the

§§ 42-1425[435] and 42-1426[436]).[437] There are no IDWR rules addressing enlargement, but there is a guidance document.[438]

> original right even though more acres may be irrigated, if no other water rights are injured thereby. A copy of the approved application for change shall be returned to the applicant and he shall be authorized upon receipt thereof to make the change and the original water right shall be presumed to have been amended by reason of such authorized change. In the event the director of the department of water resources determines that a proposed change shall not be approved as provided in this section, he shall deny the same and forward notice of such action to the applicant by certified mail, which decision shall be subject to judicial review as hereafter set forth. Provided however, minimum stream flow water rights may not be established under the local public interest criterion, and may only be established pursuant to chapter 15, title 42, Idaho Code.

Idaho Code § 42-222(1) (emphasis added).

[435] Section 42-1425 of the accomplished transfer statute provides in full:

> (1) Legislative findings regarding accomplished transfers and the public interest.
>
> (a) The legislature finds and declares that, prior to the commencement of the Snake River basin adjudication, the northern Idaho adjudications, and the Bear River basin adjudication, many persons entitled to the use of water or owning land to which water has been made appurtenant either by decree of the court or under provisions of the constitution and statutes of this state changed the place of use, point of diversion, nature or purpose of use, or period of use of their water rights without compliance with the transfer provisions of sections 42-108 and 42-222, Idaho Code.
>
> (b) The legislature finds that many of these changes occurred with the knowledge of other water users and that the water has been distributed to the right as changed. The legislature further finds and declares that the continuation of the historic water use patterns resulting from these changes is in the local public interest provided no other existing water right was injured at the time of the change. Denial of a claim based solely upon a failure to comply with sections 42-108 and 42-222, Idaho Code, where no injury or enlargement exists, would cause significant undue financial impact to a claimant and the local economy. Approval of the accomplished transfer through the procedure set forth in this section avoids the harsh economic impacts that would result from a denial of the claim.
>
> (c) The legislature further finds and declares that examination of these changes by the director through the procedures of section 42-222, Idaho Code, would be impractical and unduly burdensome. The more limited examination of these changes provided for in this section constitutes a reasonable procedure for an expeditious review by the director while ensuring that the changes do not injure other existing water rights or constitute an enlargement of use of the original right.
>
> (2) Any change of place of use, point of diversion, nature or purpose of use, or period of use of a water right by any person entitled to use of water or owning any

land to which water has been made appurtenant, either by decree of the court or under the provisions of the constitution and statutes of this state, prior to November 19, 1987, the date of commencement of the Snake River basin adjudication, prior to January 1, 2006, for the northern Idaho adjudications authorized by section 42-1406B, Idaho Code, and prior to the date of commencement of the Bear River basin adjudication authorized by section 42-1406C, Idaho Code, may be claimed in the applicable general adjudication even though the person has not complied with sections 42-108 and 42-222, Idaho Code, provided no other water rights existing on the date of the change were injured and the change did not result in an enlargement of the original right. Except for the consent requirements of section 42-108, Idaho Code, all requirements of sections 42-108 and 42-222, Idaho Code, are hereby waived in accordance with the following procedures:

(a) If an objection is filed to a recommendation for accomplished change of place of use, point of diversion, nature or purpose of use, or period of use, the district court shall remand the water right to the director for further hearing to determine whether the change injured a water right existing on the date of the change or constituted an enlargement of the original right. After a hearing, the director shall submit a supplemental report to the district court setting forth his findings and conclusions. If the claimant or any person who filed an objection to the accomplished transfer is aggrieved by the director's determination, they may seek review before the district court. If the change is disallowed, the claimant shall be entitled to resume use of the original water right, provided such resumption of use will not cause injury or can be mitigated to prevent injury to existing water rights. The unapproved change shall not be deemed a forfeiture or abandonment of the original water right.

(b) This section is not applicable to any claim based upon an enlargement of use.

Idaho Code § 42-1425 (emphasis added).

[436] Section 42-1426 of the accomplished transfer statute provides in pertinent part:

(1) Legislative findings regarding enlargements:

(a) The legislature finds that several adjudications of water rights were commenced or will be commenced in the state of Idaho subsequent to the mandatory permit system provided in sections 42-201 and 42-229, Idaho Code. These adjudications include the following, with associated commencement dates:

[list of adjudications]

Persons entitled to the use of water or owning any land to which water has been made appurtenant by decree, license or constitutional appropriation have, through water conservation and other means, enlarged the use of said water without increasing the rate of diversion and without complying with the mandatory permit system adopted by the legislature. Enlargements have been done with the knowledge of other water users, and water has been distributed based upon the right as enlarged. Junior water users made appropriations based upon a water system that reflected these enlarged uses. Thus, the legislature further finds and declares that it is in the public interest to waive the mandatory permit

Although the Water Code sets out the obligation to avoid enlargement in a transfer or accomplished transfer, it does not define the term. The only guidance on the meaning of enlargement found in section 42-222 is this sentence: "The director may consider consumptive use . . . as a factor in determining whether a proposed change would constitute an enlargement in use of the original water right." Idaho Code § 42-222(1). This suggests that enlargement, like injury, is aimed at avoiding changes to a water right that would increase its burden on the water supply.

Section 42-1426 of the accomplished transfer statute (which applies only in the context of general adjudications) sets out legislative findings and limitations with respect to enlargement (see footnote 436). However, these provisions boil down to a traditional injury analysis. In a nutshell, an enlargement made in violation of the mandatory permit statute may be decreed with its own priority

---

> requirements for these enlargements in use prior to the commencement of a general adjudication, as long as such enlargements in use did not increase the rate of diversion of the original water right or exceed the rate of diversion for irrigation provided in section 42-202, Idaho Code, after the enlargement of use, and the enlargement of use did not reduce the quantity of water available to other water rights existing on the date of the enlargement in use.
>
> . . .
>
> (2) The mandatory permit requirements of sections 42-201 and 42-229, Idaho Code, are waived, and a new water right may be decreed for the enlarged use of the original water right based upon the diversion and application to beneficial use, with a priority date as of the date of completion of the enlargement of use for any enlargement occurring on or before the commencement date of an adjudication; provided however, that the rate of diversion of the original water right and the separate water right for the enlarged use, combined, shall not exceed the rate of diversion authorized for the original water right; and further provided, that the enlargement in use did not injure water rights existing on the date of the enlargement of use. An enlargement may be decreed if conditions directly related to the injury can be imposed on the original water right and the new water right that mitigate any injury to a water right existing on the date of enactment of this act. If injury to a water right later in time cannot be mitigated, then the new right for the enlarged use shall be advanced to a date one (1) day later than the priority date for the junior water right injured by the enlargement. It is further provided that any such enlargement of use allowed in a general adjudication shall not constitute an abandonment or forfeiture of the original water right to the extent of current use.

Idaho Code § 42-1426 (emphasis added).

[437] A special provision of the transfer statute allows an expanded number of acres in transfers involving stored water, so long as injury is avoided. Idaho Code § 42-222.

[438] See, *Transfer Processing Policies & Procedures* (Transfer Processing No. 24) § 2 (Changes in Consumptive Use), p. 4, § 2 (Intensified Use of Water), p. 7, § 5d (Enlargement of Use), pp. 28-33 (revised Dec. 21, 2009) (reproduced in Appendix L).

Printed 6/23/2023 9:09 AM

date which must be advanced as necessary to assure that no other water user is injured thereby. Indeed, as the Idaho Supreme Court found, the priority date will always be advanced.[439]

(2) Increase in carriage losses

Enlargement of a water right also can occur where an appropriator seeks to transfer a point of diversion to a location farther from the original place of use, or vice versa. Often the increased distance between the point of diversion and place of use will increase conveyance or carriage losses of the water because of increased exposure to canal seepage and evaporation. If the diversion rate were to be increased to compensate for the increased loss, an enlargement of the water right would occur. In Idaho, the burden of increased conveyance loss must be borne by the one seeking the transfer and not by other appropriators.[440] This is consistent with the principle that a water right is measured for its sufficiency at the point of diversion and not at the place of use.[441]

(3) Stacked water rights (primary and supplemental rights) (the *3G* case)

A primary water right is the principal (or only) water right supporting a particular use. In some instances, water users may obtain an additional "supplemental" water right to serve as a back-up supply, in the event that the primary right is unavailable. A combination of primary and secondary rights serving the same purpose and place of use are referred to as "stacked rights." If those rights are separated and transferred or conveyed to separate uses, that is referred to as "unstacking" of rights.

---

[439] The accomplished transfer statute was held constitutional in *Fremont-Madison Irr. Dist. & Mitigation Grp. v. Idaho Ground Water Appropriators, Inc.*, 129 Idaho 454, 926 P.2d 1301 (1996) (Schroeder, J), owing to the act's built-in protections against injury and enlargement. See discussion of this statute and the related enlargement statute in section 13.I(9) beginning on page 611. Nine years later, the Court confirmed that *Fremont-Madison* did indeed create a *per se* injury rule requiring that expansions of acres irrigated seeking protection under the amnesty statute are subject to a mitigation condition subordinating the expanded portion of the right to all rights existing on April 12, 1994 (the enactment date of the amnesty statute, Idaho Code § 42-1426). *A&B Irr. Dist. v. Aberdeen-American Falls Ground Water Dist.*, 141 Idaho 746, 118 P.3d 78 (2005) (Schroeder, C.J.). This was confirmed again in *City of Pocatello v. Idaho*, 152 Idaho 830, 275 P.3d 845 (2012) (Eismann, J.) and *3G AG LLC v. IDWR*, 170 Idaho 251, 509 P.3d 1180 (2022) (Stegner, J.).

[440] *Glen Dale Ranches, Inc. v. Shaub*, 94 Idaho 585, 494 P.2d 1029 (1972).

[441] *Stickney v. Hanrahan*, 7 Idaho 424, 63 P. 189 (1900); *State v. Twin Falls Canal Co.*, 21 Idaho 410, 121 P. 1039 (1911); *Bennett v. Nourse*, 22 Idaho 249, 125 P. 1038 (1912). *See also, State v. Dickcon*, In Re: SRBA Case No. 39756, Memorandum Decision re: Petition for Preliminary Injunction, Docket No 91-07-009 (5th Dist. 1991) (recognizing that conveyance losses incurred by changing place of use are to be borne by transferor and do not justify increase in rate of diversion of the original right). *See generally Fremont-Madison Irr. Dist. & Mitigation Grp. v. Idaho Ground Water Appropriators, Inc.,* 129 Idaho 454, 926 P.2d 1301 (1996) (Schroeder, J) and Idaho Code § 42-1426 (making clear that such enlargements, even if they result from "conservation practices," are not authorized under a water right and must be approved, if at all, under the amnesty provided by this statute).

In a typical situation, a water user may hold a surface right as the principal means of irrigation, but will also obtain a supplemental ground water right that she uses only when the surface right is not available. The supplemental ground water right is granted subject to the condition that it may be used only when the primary water right is not available.

The distinction between a primary and supplement right often receives the most attention when the holder seeks to transfer one of the rights. The rule of thumb is that a supplemental right cannot be converted to a primary right (because doing so would constitute a *per se* enlargement). This issue is addressed in IDWR's *Transfer Processing Policies & Procedures* (Transfer Processing No. 24) at 26-27 (Dec. 21, 2009) (reproduced in Appendix L.)

In *Barron v. IDWR*, 135 Idaho 414, 418, 18 P.3d 219, 223 (2001) (Walters, J.), the Idaho Supreme Court upheld the Department's denial of a transfer application that sought to transfer a portion of a primary surface right to a new location, leaving the supplemental ground water right in place at the original location. The applicant argued that doing so would not cause injury or enlargement, because the Department could and should curtail the ground water right. But the Court said that it was the applicant's responsibility, not the Department's, to avoid injury and enlargement. In addition to unstacking, *Barron* involved the applicant's failure to provide evidence of his historical use.

At least in theory, a supplemental water right may be separated from its primary water right and transferred to a new primary use. However, to prevent an enlargement—an increase in its diversion, volume, or consumptive use under the right as it was used as originally appropriated—the post-transfer elements must be no greater than the pre-transfer elements.

The Department's guidance on supplemental rights provides:

> When it is necessary to determine the historic consumptive use under a supplemental right, the average annual historic consumptive use, over an appropriately representative time period that may be greater than five years, will be the basis for the volume available for transfer. . . .

IDWR's *Transfer Processing Policies & Procedures* (Transfer Processing No. 24), § 5d(5), p. 30 (Dec. 21, 2009) (reproduced under Appendix L.)

For example, if a supplemental well had been used an average of fifteen days per year at a flow rate of one cfs, then its transferable amount should be about 30 acre-feet per year (1 cfs x 1.98 AF/day x 15 = 29.7 AF), not the 723 acre-feet that such a well would produce if pumped year-round (1 cfs x 1.98 AF/day x 365 = 722.7 AF). As a result of the transfer, of course, the original primary right loses the supplemental back-up. Often, attempting to transfer supplemental uses is not practical because of these complications. Typically, the supplemental water right will continue to be tied to the primary water right in a transfer.

In *3G AG LLC v. IDWR*, 170 Idaho 251, 509 P.3d 1180 (2022) (Stegner, J.), the Court affirmed IDWR's rejection of a transfer that sought to unstack irrigation water rights. In *3G*, an irrigator used both a licensed ground water right and a surface water entitlement (shares in Aberdeen-Springfield

Canal Company) to irrigate a 53.9 acres of land. The irrigator stopped using the ground water right and sought to transfer it to other land, thus doubling the number of irrigated acres. The district court and then the Idaho Supreme Court affirmed IDWR's rejection of the transfer. Both courts agreed with IDWR that the unstacking was an unlawful enlargement under Idaho Code § 42-222(1) because it would have allowed twice as much land to be irrigated as before, thereby increasing consumptive use and constituting *per se* injury.

The significance of the *3G* case is that it confirmed or clarified that ground and surface rights that serve the same land for the same purpose are deemed stacked even if the water rights themselves contain no express language linking them together. In other words, the stacked rights concept is inherent to the enlargement/injury analysis and is compelled by the statutory directive in Idaho Code § 42-222(1) that IDWR "shall examine all the evidence and available information." The stacked water analysis is not dependent on the presence of condition language on the face of the water rights (e.g., a combined use condition or a condition requiring that the supplemental right be used on when the primary right is unavailable.) In the *3G* case, there was no such language in the ground water right, notwithstanding the fact the IDWR became aware of the canal company shares at the time of licensing. Indeed, the record apparently did not reveal which came first—the permit or the shares. The Court said, in essence, "who cares?" It found it unnecessary to decide which right was primary and which was supplemental. Either way, the transfer would have allowed more acres to be irrigate than before, which constituted both enlargement and *per se* injury. *3G*, 170 Idaho at 264-65, 509 P.3d at 1193-94.

The *3G* case plowed no new ground. It is a "no brainer" analysis of enlargement in a traditional irrigation context. It affirmed longstanding IDWR guidance (the *Transfer Memo*) based on settled law (*Fremont-Madison Irr. Dist. & Mitigation Grp. v. Idaho Ground Water Appropriators, Inc.*, 129 Idaho 454, 926 P.2d 1301 (1996) (Schroeder, J) and *Barron v. IDWR*, 135 Idaho 414, 18 P.3d 219 (2001) (Walters, J.)). It addresses enlargement in the context of a change in use bringing more land under irrigation. The proposed increase in beneficial use would have increased consumptive use and constituted *per se* injury thereby burdening the public water supply and making less water available to other users.

The *3G* Court summed up enlargement as follows:

> Thus, there are two types of enlargement: (1) "an increase in the number of acres irrigated"; and (2) "an increase in the rate of diversion or duration of diversion."

3G, 170 Idaho at 264-65, 509 P.3d at 1193-94 (quoting *Fremont-Madison Irr. Dist. & Mitigation Grp. v. Idaho Ground Water Appropriators, Inc.*, 129 Idaho 454, 458, 926 P.2d 1301, 1305 (1996) (Schroeder, J)).

The Court also confirmed that when it speaks about increases in beneficial use, it means increases in irrigated acreage.

> The two "enlargement" issues in *Barron* were whether: (1) the transfer would cause an increase in the rate or duration of diversion at the two proposed points of diversion; and (2) whether unstacking the overlapping surface and ground water rights would cause an increase in the total number of acres irrigated, i.e., an increase in overall beneficial use. Id. at 419-420, 18 P.3d at 224-25.

3G, 170 Idaho at 517, 509 P.3d at 1188.

In other words, an increase in beneficial use standing alone is not a problem. It is the increase in consumptive use resulting from increasing the number of acres irrigated or the quantity of diversion that gives rise to enlargement. Thus, nothing in the *3G* case is at odds with the teaching of the *Facility Volume Case*: An increase in beneficial use that does not burden the public water supply by increasing diversion quantity or consumptive use is not enlargement. That kind of increase in beneficial use is a good thing.

(4) Enlargement in a non-irrigation context

Except for the *Facility Volume Case* discussed below, all reported decisions on the subject of enlargement have arisen in the irrigation context (water spreading,[442] stacked water rights,[443] or changes in consumptive use[444]). In the irrigation context, enlargements are all about *per se* injury—that is, injury arising from increases in the amount of water diverted or consumed, thereby reducing the water available to other water right holders. As noted above, the accomplished transfer statute was specifically aimed at water spreading. Accordingly, the language in that statute and in the *Fremont-Madison* case refer to increases in irrigated acreage as "enlargements" and "increases in beneficial

---

[442] E.g., *Fremont-Madison Irr. Dist.& Mitigation Grp. v. Idaho Ground Water Appropriators, Inc.*, 129 Idaho 454, 926 P.2d 1301 (1996) (Schroeder, J). This case is also known as "Basin-Wide Issue 4" in the SRBA.

[443] E.g., *Barron v. IDWR*, 135 Idaho 414, 18 P.3d 219 (2001) (Walters, J.); *3G AG LLC v. IDWR*, 170 Idaho 251, 509 P.3d 1180 (2022) (Stegner, J.).

[444] Typically, consumptive use comes into play when the user seeks to change the nature of use or period of use or to unstack water rights. For example, in addition to unstacking, *Barron* involved the applicant's failure to provide evidence of historical use. The statutory definition of consumptive use was amended in 2004 to provide: "Consumptive use is not an element of a water right. . . . Changes in consumptive use do not require a transfer pursuant to section 42-222, Idaho Code." H.B. 636, 2004 Idaho Sess. Laws, ch. 258 (codified at Idaho Code § 42-202B(1)). Thus, a change in consumptive use alone (that does not violate the terms of the water right) is permissible and no transfer is required. But increases in consumptive use may come into play if a transfer is required for other reasons. "The director may consider consumptive use, as defined in section 42-202B, Idaho Code, as a factor in determining whether a proposed change would constitute an enlargement in use of the original water right." Idaho Code § 42-222(1) (added in 1997). IDWR's *Transfer Memo* addresses changes in historic consumptive use in a variety of contexts, see, e.g., *Transfer Memo* § 2, p. 4, § 5d(5), pp. 29-30.

EXHIBIT C
Page No. 241 of 761

use."[445] Likewise, the transfer statute (which says IDWR may consider consumptive use in evaluating enlargements) and the accomplished transfer statute (which is aimed at preventing *per se* injury via water spreading) reinforce the idea that the prohibition of enlargement is directed to increases in beneficial use that have the potential to harm others.

In a non-irrigation context (as in any other context), enlargement should also be thought of as *per se* injury resulting from actions that increase the burden on other water users. However, language arising in the irrigation context equating "enlargement" and "increase in beneficial use" led IDWR to re-conceive enlargement as arising any time there is an increase in beneficial use—even if no other water user is impacted.

IDWR's strict view of enlargement was rejected in the *Facility Volume Case* discussed below. Yet IDWR's transfer guidance continues to state that any transfer involving a change in the nature or place that also results in a net increase in beneficial use constitutes an enlargement. It is difficult to reconcile IDWR's guidance on this point with the *Facility Volume Case* and the Maximum Use Doctrine. This is explored further below.

(a) The *Facility Volume Case*

The only reported case to address enlargement in a non-irrigation context is the SRBA court's decision in *In re SRBA Case No. 39576, Subcase Nos. 36-02708 et al, Order On Challenge (Consolidated Issues) of "Facility Volume" Issue and "Additional Evidence" Issue* ("*Facility Volume Case*"), Idaho Dist. Ct., Fifth Judicial Dist. (Dec. 29, 1999) (Barry Wood, J.).[446] This case is discussed further in section 4.B(9) at page 37.

The *Facility Volume Case* did not arise in the context of a transfer. It arose as part of the SRBA's adjudication of existing water rights held by various fish farmers.[447] IDWR sought to include a "facility volume remark"[448] on each water right describing the extent of the existing hatchery

[445] *Fremont-Madison*, 129 Idaho at 458, 926 P.2d at 1305 ("The term 'enlargement' has been used to refer to any increase in the beneficial use to which an existing water right has been applied, through water conservation and other means. *See* I.C. § 42-1426(1). An enlargement may include such events as an increase in the number of acres irrigated, an increase in the rate of diversion or duration of diversion.").

[446] The *Facility Volume Case* has been cited by the Idaho Supreme Court, but not with respect to the enlargement issue. *North Snake Ground Water Dist. v. Gisler*, 40 P.3d 105, 108-08 (Idaho 2002) (Kidwell, J.).

[447] The *Facility Volume Case* involved challenges to IDWR's recommendations brought by Clear Lakes Trout Company, Clear Springs Foods Inc., Blue Lakes Trout Farm Inc, and John W. Jones, Jr. When each of three special masters ruled in favor of the trout farmers, irrigation water right holders brought this consolidated appeal to the SRBA judge.

[448] Idaho Code § 42-1411(2)(j) authorizes the Director to include in the Director's Report setting out recommended water rights in a general adjudication "such remarks and other matters as are necessary for definition of the right, for clarification of any element of a right, or for administration of the right by the director." If approved by the adjudication court, these remarks will be included in the partial decree and become part of the water right.

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

facilities. The effect of the facility volume remark was to prevent the fish farmer from adding additional raceways in the future.

In this unappealed ruling affirming all three special masters, the SRBA court rejected IDWR's inclusion of a facility volume remark. The court held that a trout farm may increase the beneficial use made of its water right by adding more raceways to a fish hatchery, so long as it does not increase the diversion rate, annual volume, or consumptive use. The court held that IDWR view of enlargement was overly strict and would needlessly punish the water right holder for increasing beneficial use in a way that harmed no one. This, said the court, was contrary to Idaho's constitutional doctrine of maximum utilization. The court noted that the only reason any other water user might care about such an increase in beneficial use was if the other water user was injuring the fish farmer and wished to provide financial compensation (rather than wet water) to mitigate that injury. The court said the goal of the prior appropriation doctrine is to encourage maximum utilization, not to minimize the cost of mitigation in response to a delivery call.

> It is also extremely curious to the Court that it is IDWR's position that if additional ponds were added to a facility for the purpose of pollution control, this would not be considered an increase in facility volume, but if the additional ponds or raceways were to actually grow fish in, it would be an increase in facility volume. To this Court, this is at least a tacit admission by IDWR that its proposed facility volume remark has nothing to do with the quantity element, but is intended to directly deal with regulating production so that in the event of a future delivery call, and mitigation is sought, junior water users may be required to pay less. This position is contrary to at least two fundamental principles of water law: the prior appropriation doctrine and the goal of obtaining the maximum beneficial use of water. Additionally, this illustrates that trying to regulate fish propagators with facility volume is analogous to IDWR trying to regulate an irrigator to the type or quantity of a crop that can be grown, i.e., regulation of production, not quantity of water.

Facility Volume Case at 9.

The court concluded that an increase in beneficial use that does not burden other water users is not an enlargement.

> The court cannot limit "the extent of beneficial use of the water right" in the sense of limiting how much (of a crop) can be produced from the use of that right, so long as there is not an enlargement of use of the water right. . . . In other words, because the use is a non-consumptive, continuous flow use, the highest and greatest duty of the water would seem to encourage the grower to use his or her best efforts to maximize the crop obtained from using the water. And if this means the grower under these

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

> circumstances can economically produce 200 pounds of fish versus 100, there is no legitimate policy in water law for not allowing this to occur.

Facility Volume Case at 17.

Accordingly, the SRBA court determined that it was not proper to describe and thereby limit the size of the trout-rearing facility. *Facility Volume Case* at 18. Water users are allowed and encouraged to increase the extent of beneficial use, so long as the water available to others is not reduced.

(b) IDWR's *Transfer Memo*

Ten years after the *Facility Volume Case*, IDWR adopted its revised version of *Administrator's Memorandum, Transfer Processing No. 24* (Dec. 21, 2009) ("*Transfer Memo*"). This guidance addresses a range of subjects including enlargements.

The *Transfer Memo* first addresses the subject in the context of when a transfer is not required.

> Intensified Use of Water. An application for transfer is not required to increase production under an authorized use of water, unless the proposed change would also result in a change to one or more of the elements of the water right(s) as licensed or decreed. For example, an application for transfer is not required to increase the number or volume of raceways in a fish propagation facility, increase the number of cows at a dairy, change irrigation to a more water consumptive crop, or increase the generating capacity of hydroelectric generators, so long as none of the elements of the associated water rights are changed.

Transfer Memo, § 2, p. 7 (emphasis original).

This is a direct and straightforward implementation of the court's ruling in the *Facility Volume Case*. In other words, if the only thing that changes is the amount of beneficial use (aka intensity of use), the increase is permissible and no transfer is required.

The harder question is when a transfer is required for some other reason. First, the *Transfer Memo* states that, in a transfer application, the extent of beneficial use is not an enlargement consideration for nonconsumptive water rights.

> Enlargement will occur if the total diversion rate, annual diversion volume, or extent of beneficial use (except for nonconsumptive water rights), exceeds the amounts or beneficial use authorized under the water right(s) prior to the proposed transfer.

Transfer Memo, § 5d, p. 28. This conclusion flows directly from the *Facility Volume Case*. If the use is nonconsumptive, any increase in beneficial use will not harm other water users. Thus, there can be no *per se* injury, and enlargement should not come into play.

In the next breath, however, the *Transfer Memo* reaches the opposite conclusion if a non-consumptive use is added to an existing consumptive use:

> An application for transfer proposing to change the place of use or nature of use for all or part of a water right or water rights, which change would not result in an equivalent reduction in beneficial use under the original right(s), will be presumed to enlarge the water right(s). For example, hydropower use cannot be added to a right used for irrigation, even though no additional water would be diverted for the hydropower use. The irrigation use, or part thereof, could be changed to hydropower use by reducing the irrigation use by an equivalent amount, or the new use could be provided without reducing the irrigation use by obtaining a new permit to appropriate water for hydropower use.

Transfer Memo, § 5d(2), p. 28 (emphasis added).

IDWR does not explain why adding a new hydropower use to an irrigation right is an enlargement, while adding additional hydropower capacity to a facility served by an existing hydropower right is not enlargement.[449]

In addition, the quoted provision from section 5d(2) could be read to say that an existing nonconsumptive use (e.g., hydropower) cannot increase its beneficial use (e.g., add new generating capacity) if the transfer also entails a change in place of use. That conclusion, however, cannot be reconciled with earlier quoted portion of section 5d saying that increased beneficial use is not a consideration for nonconsumptive water rights. Accordingly, it may be appropriate to understand the section 5d(2) guidance as limited to the situation where a user seeks to add an entirely new beneficial use to an existing water right (as in the example of adding a hydropower right to an irrigation right).

Even that conclusion (that adding hydropower to an irrigation right is enlargement) is at odds with the teaching of the *Facility Volume Case*, which held that the purpose of the prior appropriation doctrine and the maximum utilization doctrine is to encourage the full use of water where doing so does not injure others.

J. Change in period of use

Change in period of use (aka season of use[450]) is permissible, but it can raise injury and enlargement issues. For instance, if a surface water user wished to expand her period of use from six months to seven, that would plainly constitute an impermissible enlargement (absent an annual volume

[449] Elsewhere, the *Transfer Memo* states that increasing the generating capacity of hydroelectric generators is not an enlargement and does not even require a transfer. *Transfer Memo*, § 2, p. 7 ("Intensified Use of Water").

[450] We use the terms period of use and season of use interchangeably, although it is possible that a particular period of use might correspond to something other than a season.

limit or other restrictive condition). Suppose, on the other hand, she simply sought to shift her entire period of use forward by a few weeks, the result of which was no increase in the quantity diverted or consumed. Thus, there arguably would be no enlargement. Such a shift might nevertheless constitute injury if other surface users on the stream had rights to divert during those last weeks of the season, and were now subjected to a new senior priority during this critical period.

Take another example. Suppose an entity acquired a surface irrigation right and sought to change it to a year round municipal or industrial use on the same stream—thus spreading out the impact of the use over twelve months. Out the outset, it is clear that this could only be done subject to an annual volume limitation, to avoid enlargement of the right. Assuming such a volume limit, the result would be less stress on the river during peak irrigation season, but more stress on the river during the winter. If there were other junior right holders with entitlements during the winter, they could object to any new senior demand during those months that would impair their ability to divert. In such a case, the transfer could be approved only if they were protected, for instance by subordinating the changed right to the junior winter users.[451]

Suppose, however, there were no junior winter users on the stream. Under this unusual fact setting, it is conceivable that an irrigation right might be converted to a year-round right. Then again, this is really no different than requiring the person to obtain a new appropriation. If there are no other users on the stream, priority is irrelevant.

One way of accomplishing a change in period of use while avoiding injury to other users is through the use of storage. If water can be lawfully stored when it is "in priority" then it may be diverted out of storage at any time without injury to others. Thus, in theory, one could divert a surface irrigation right during the historical irrigation season, place it in storage, and divert it out of storage irrespective of period of use—without injury to any other user. Storage might come in the form of an on-stream reservoir, an off-stream reservoir, or, notably, an aquifer (a natural storage reservoir). In such cases, a ground water right might be converted to a year round use without any impact on other users within the same aquifer.

The SRBA Court held that expansion of the season of use of a ground water right by an industrial user does not constitute an enlargement, and is permissible so long as no injury occurs to other users.[452] In this case, Magic West, Inc. held two water rights for a potato processing plant in Glenns Ferry. Although the rights were licensed for 7 and 10.5 months per year, respectively, Magic West actually used the rights year round. The company claimed in the SRBA that it was entitled to an "accomplished transfer" for the year-round use under Idaho Code § 42-1425. The accomplished

---

[451] A. Lynne Krogh-Hampe, *Injury and Enlargement in Idaho Water Right Transfers*, 27 Idaho L. Rev. 249, 284 (1990).

[452] *In re SRBA Case No. 39576, Subcases 61-02248B and 61-07189* (Order Modifying Memorandum Decision and Order on Challenge; I.R.C.P. 11(a)(2)(B); & Order of Partial Decree) (Idaho Dist. Court for Fifth Judicial Dist. – SRBA, Jan. 4, 2002) (the *Magic West* case). The opinion (which reversed a prior decision by the same judge) was authored by Roger S. Burdick, who now sits on the Idaho Supreme Court.

transfer statute allows recognition of such transfers, so long as there was no enlargement of the right or injury to others.

The *Magic West* court concluded that the change did not constitute an improper enlargement, so long as there was no increase in the volume of water diverted annually.[453] The court was careful to note, however, that this case involved a ground water use, and, consequently, that it made no difference to other users during what part of year the water was diverted. Indeed, the court noted that in other hydrological situations, a change in season of use might well injure other users. The thrust of the decision seems to be that, so long as the volume is not increased and no injury results, an expansion in season of use does not constitute enlargement.

The decision leaves open whether a surface water right may be changed to a different season of use. However, as noted above, it would seem that if there is any other junior user on the stream during the time period into which a new user sought to expand her season of use, that user would be in a position to assert injury.

K. Changes in rate of diversion

In Idaho, water rights typically are quantified in terms of rate of diversion (the maximum instantaneous flow rate) and often also an annual volume. (There are exceptions. See discussion in section 4.B(5)31.) When a water right is split in two, the associated quantities ordinarily are allocated to each of the new rights, maintaining the same proportion as in the original right.

For instance, suppose a farmer held a water right to irrigate 100 acres. If the diversion rate was originally calculated based on an "inch per acre," the total diversion rate would be listed as 2 cfs. Let us further suppose that the right was based on a duty of water equal to three and a half acre-feet per acre. Its volume cap would then be 350 acre-feet per annum. Suppose the farmer decided to sell to a dairy the water right appurtenant to half of his acreage. Assuming that the new dairy use was 100 percent consumptive use, the farmer would be entitled to transfer only the former "consumptive use" associated with the fifty acres he has agreed to dry up. That consumptive use will be calculated by the Department based on historic cropping patterns. Assuming that his consumptive use is calculated to be 2.75 acre-feet per acre the dried-up 50 acres will produce an annual volume of water available to the dairy equal to 50 x 2.75 = 137.5 acre-feet per annum.

Ordinarily, the diversion rate would be split as well. Because fifty percent of the land was taken out of production, the new dairy right would be allocated 1 cfs, and the water right retained for the other fifty acres would be allocated the other 1 cfs.

Suppose, however, that the two parties agree to allocate the rate of diversion more heavily in favor of the dairy. Is there any reason they could not, for instance, allocate 1.2 cfs to the dairy and 0.8

[453] The SRBA court initially held that the expansion of season of use constituted a *per se* enlargement. The court then reconsidered its decision and reached the opposite conclusion.

cfs to the retained 50 acres of irrigation? The answer presumably would be no, so long as the original beneficial use on the retained 50 acres can still be achieved at that lower maximum pumping rate.

On the other hand, the parties would not be free to allocate 1.2 cfs to the remaining fifty acres of irrigation, unless they were able to justify exceeding the statutory "inch-per-acre" rule of thumb.[454]

A word of caution: Transfers of this nature are new to the Department, so there is little or no precedent for this sort of reallocation. However, the principles of water law seem to clearly dictate the result. There can be no injury or enlargement. Consequently, the "before" and "after" diversion rates must be equal. However, so long as the total remains unchanged, and each beneficial use remains viable, the parties should be free to reallocate the diversion rate so as to maximize the beneficial use.

L. Administrative procedures for water transfers

(1) The application process

The procedures for obtaining a transfer are contained in Idaho's water code, the APA, and the Department's rules. Note in particular the Department's guidance documents entitled "Transfer Processing Policies & Procedures" dated October 30, 2002 (set out in Appendix L).[455]

The transfer process is initiated by filing an application form with the Department describing the existing right and the way it will be exercised after the transfer.[456]

If the transfer involves water that is represented by shares in a corporation or irrigation district, then consent to the transfer is required from the corporation or district.[457] Applications for change in period of use or nature of use for a quantity exceeding 5,000 acre-feet of stored water or fifty cfs of any water requires the approval of the Legislature.[458]

The procedures for publication, protests, pre-hearing conference, hearing, decision and review thereof are the same as for applications for appropriation. These are discussed in section 14.B at page 167.

---

[454] Idaho Code §42-202(6).

[455] The guidance memorandum applies on its face only to transfers of ground water in the Eastern Snake River Plain. However, the Department's practice appears to be to follow this guidance for all water right transfers.

[456] Idaho Code § 42-222(1).

[457] Idaho Code § 42-108. This restriction is discussed further in section 7.D beginning on page 539.

[458] Idaho Code § 42-108.

(2) The burden of proof in water right transfers

Idaho's water code does not address the burden of proof in either transfers or new appropriations. The Department has adopted regulations allocating the burden of proof in new appropriations,[459] but there are no regulations governing water transfers. Nor does IDWR's *Transfer Processing Policies & Procedures* (Transfer Processing No. 24) (revised Dec. 21, 2009) address the subject.

In *Barron v. IDWR*, the Idaho Supreme Court placed the burden of proof on the applicant for a water transfer to prove non-injury and non-enlargement.[460] The court noted that this is the case even where there are no protestants to the application.[461] This is consistent with informal guidance issued by the Department on protested transfer applications.[462] This is also consistent with the general law of burden of proof in civil litigation.[463]

Even where the burden of proof rests with the applicant, however, it does not follow that protestants should be allowed to "put the applicant to its proof" for purposes of strategic delay or expense.[464]

The court has twice addressed the burden of proof issue in the context of a public interest challenge to a new water right appropriation.[465] In the case of the local public interest, a special rule

---

[460] *Barron v. IDWR*, 135 Idaho 414, 418, 18 P.3d 219, 223 (2001).

[461] *Barron v. IDWR*, 135 Idaho 414, 421, 18 P.3d 219, 226 (2001).

[462] IDWR's "Conference and Hearing Procedures."

[463] A. Lynne Krogh-Hampe, *Injury and Enlargement in Idaho Water Right Transfers*, 27 Idaho L. Rev. 249, 253 (1990) (the author is now a Magistrate Judge in the Third Judicial District).

[464] In the authors' opinion, the Department should use the prehearing conference, and discovery if necessary, to determine whether the applicant is prepared to present a *prima facie* case and, if so, whether the protestant has any meaningful and relevant rebuttal. If the applicant is prepared to go forward, but the protestant has not shown that it will be capable of presenting a relevant rebuttal case, then, on the applicant's motion, the protest should be dismissed prior to hearing. In such a case, the applicant should not be subjected to the costs of "fishing-expedition-type" discovery nor the costs of retaining experts and presenting a formal case on the public interest.

If the protestant is allowed to proceed, the Department should specify with reasonable clarity the bounds of allowable issues and evidence, so that both protestant and applicant may effectively and efficiently prepare for hearing.

If the Department summarily denies a protest or excludes an issue area, the protestant should be allowed to make a brief record of the nature of the evidence which would have been sought or produced. But neither the protestant nor the applicant should be put to the expense of fully developing evidence on that issue unless and until a reviewing court overrules the Department and remands for further proceedings.

applies: The applicant bears the initial burden of coming forward with evidence for the evaluation of the local public interest criterion as to any factor of which he is knowledgeable or reasonably can be expected to be knowledgeable. The protestant bears the initial burden of coming forward with evidence relevant to any factor for which the protestant can reasonably be expected to be more cognizant than the applicant. The applicant then bears the ultimate burden of persuasion.

(3) Conditions on transfers

Numerous conditions can be placed on an approved transfer to prevent injury or to protect the public interest. Some common transfer conditions include:

1. Limit the amount transferred to the consumptive use;
2. Require measuring devices to document diversions and/or return flows;
3. Require water releases at specified times to guarantee water availability at a junior's point of diversion;
4. Require basin-of-origin protection such as construction of additional storage for out-of-basin transfers;
5. Retain administrative jurisdiction for a reasonable period to evaluate and fine-tune the transfer; and
6. Restrict the rate of diversion or period use to avoid expansion of the right and/or to guarantee the timing of return flows.

---

[465] In *Shokal v. Dunn*, 109 Idaho 330, 707 P.2d 441 (1985), the Court quoted District Judge Schroeder, who now sits on the Idaho Supreme Court in this extended, but lucid, discussion of the burdens of production and persuasion:

> As Judge Schroeder correctly noted below, this burden of production lies with the party that has knowledge peculiar to himself. For example, the designer of a fish facility has particularized knowledge of the safeguards or their lack concerning the numbers of fish that may escape and the amount of fecal material that will be discharged into the river. As to such information the applicant should have the burden of going forward and ultimately the burden of proof on the impact on the local public interest. On the other hand, a protestant who claims a harm peculiar to himself should have the burden of going forward to establish that harm.
>
> However, the burden of proof [that is, the ultimate burden of persuasion] in all cases as to where the public interest lies, as Judge Schroeder also correctly noted, rests with the applicant:
>
> > [I]t is not [the] protestant's burden of proof to establish that the project is not in the local public interest. The burden of proof is upon the applicant to show that the project is either in the local public interest or that there are factors that overweigh the local public interest in favor of the project.

Shokal, 109 Idaho at 339, 707 P.2d at 450 (referring to District Judge Schroeder, now on the Supreme Court) (quoted again in *Collins Bros. Corp. v. Dunn*, 114 Idaho 600, 607, 759 P.2d 891, 898 (1988).

The only other Idaho case to address burden of proof in the context of the local public interest was *Collins Bros.* That case merely recited that "the applicants had not met their burden of proof" and quoted from the Shokal case regarding burden of proof." *Collins Bros.*, 114 Idaho at 606, 759 P.2d at 897.

Note that different burden of proof rules apply to the special public interest tests applicable to appropriations of "trust water" pursuant to the *Swan Falls Agreement*. Idaho Code § 42-203C; IDAPA 37.03.08.040.04.

M. Amendments to permits and pending applications

(1) Amendment of issued permits prior to or at time of licensing

The discussion in this section deals primarily with changes in final water rights (that is, licensed rights, decreed rights or beneficial use claims). Similar principles govern the amendment of a permit (where the permit has been issued, but the right has not yet been licensed).

Permit amendments are governed by a separate statute that sets out a more limited set of criteria. It authorizes amendment of an issued permit, subject to two criteria:

> [I]t shall be the duty of the department of water resources to examine the same [an application for amendment of a permit] and if approval thereof would not result in the diversion and use of more water than originally permitted and if the rights of others will not be adversely affected thereby, the director of the department of water resources shall approve said application and return an approved copy to the permit holder.

Idaho Code § 42-211 (emphasis added). (Idaho Code § 42-211 also provides for changes to applications for permits, where no permit has yet been issued).

These two criteria are the familiar "enlargement" and "injury" criteria applicable to a transfer of a licensed right. One might ask why the other criteria do not apply as well. The Idaho Supreme Court pondered this question in *Hardy v. Higginson*,[466] concluding that the local public interest test should also apply. Accordingly, the Department now applies the local public interest test to permit amendment applications in addition to the injury and enlargement tests set out above.

On the other hand, the Department does not apply the other tests for water right transfers set out in Idaho Code § 42-222 (e.g., no adverse effect on the local economy of the watershed for trans-basin transfers). Nor does the Department apply the criteria set out in Idaho Code § 42-203A(5) applicable to an application for permit (e.g., financial qualifications).

Publication of notice of the application for amendment of a permit is discretionary. "The director of the department of water resources shall give such notice to other affected water users as he deems appropriate . . . ."[467]

(2) Amendment of pending permit applications

Suppose an applicant files an application for a permit, but then seeks to change the terms of the application before the permit is issued. Idaho Code § 42-211 (paragraph 2) provides that changes to

[466] *Hardy v. Higginson*, 123 Idaho 485, 849 P.2d 946 (1993).

[467] Idaho Code § 42-211 (paragraph 1).

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

applications for permits (where no permit has yet been issued) may be handled informally simply by modifying the application form.[468]

Rules governing amendments of pending permit applications are set out at IDAPA 37.03.08.035.04. The Department has also issued informal guidance on this subject.[469]

Although amendments are freely allowed, republication may be required if there is any enlargement. Likewise, if more water is sought, the priority date is advanced to the date of the amendment.

Filing fees associated with such amendments are set out in Idaho Code § 42-221(A) (if the quantity is increased) and Idaho Code § 42-221(F) (for all amendments).[470]

(3) Amendment of pending transfer applications

Suppose an applicant for a transfer seeks to modify the terms of the transfer application after it has been filed, but before it has been approved. No statute or rule addresses this circumstance. However, the Department recently issued the following guidance:

> Amendment of Application. An applicant may revise or amend an acceptable application for transfer to clarify or correct information on the application. Significant changes to the place, period, or nature of the proposed use, amount of water, method or location of diversion, or other substantial changes from those shown on a pending application for transfer, will require filing a new application for transfer to replace the original application. If the revisions are not substantial, the application may be revised or amended with an initialed, dated endorsement by the applicant, or by the applicant's representative, on the original application, or by a notarized letter describing the amendments in sufficient detail. Changes to the application or supporting information are not to be made by staff under any circumstances. A replacement application must be identified as "changed" or "revised" on its face so that it can be distinguished from the original application, and the original application must be marked as "superseded." An additional filing fee may be required if the revised or replacement application involves more water than proposed in the original application for transfer. A re-advertisement fee, as provided in Section 42-

[468] Idaho Code § 42-211 (paragraph 2). The first paragraph of section 42-211 deals with changes made after a permit has been issued (but before licensing). The second paragraph of section 42-211 deals with changes to an application for permit before the permit is issued.

[469] Norman C. Young, IDWR, *Administrator's Memorandum – Amended Application Processing No. 9* (Jan. 12, 2000).

221F, *Idaho Code*, will be required if notice of the original application has been published and changes to the original application are significant and warrant re-notice. (See Transfer Processing Memorandum No. 20 for additional information regarding changes to applications.)[471]

(4) Assignment of pending applications to new owner

Department guidance expressly provides that transfer applications are freely assignable.[472] The only requirement is notice to the Department.

Applications for permit are also assignable. However, the Department's rules provide: "An assignment of interest in an application must include evidence satisfactory to the director that the application was not filed for speculative purposes." IDAPA 37.03.08.035.02.d

There is a reason for this difference in the treatment of permit and transfer applications. In the case of an application for a permit, the priority date of the water right is tied to the application date. In contrast, the priority date of a water right involved in a transfer is not affected by the date of the transfer application. Consequently, whether a modification is treated as an amendment or a new application matters more in the case of a permit. Moreover, the Department is obligated by statute to consider the speculative purpose and financial feasibility of the proposed use in the case of a new permit, while this is not a factor in transfer applications. Thus, if the Department determined that the initial applicant for a permit was a speculator, the Department would not allow the purchaser of the permit application to step into the shoes of the speculator and retain the original priority date.

N. Exchanges of surface water

An exchange is essentially a swap of one water right (or portion thereof) for another (or portion thereof). For example, one water right holder might agree to allow a second water user to divert water under the first user's water right in exchange for a substitute supply provided by the second user. Exchanges have been used informally for decades.

A good introduction to exchanges is found in Michael White's article:

> When exchanges first came on the scene, well before the turn of the [last] century, they were relatively simple. To divert or store water "by exchange," an upstream junior water right owner simply kept downstream seniors whole by insuring that they received a specifically designated substitute supply of water sufficient to satisfy their senior water rights. Typically, . . . the upstream junior controlled downstream reservoir releases

EXHIBIT C
Page No. 253 of 761

which it could not use itself but which could be used as a substitute supply for the seniors' benefit. For the better part of this century, such exchanges were routine in several states — usually carried on under the administrative supervision of state water officials.

More recently, however, the practice of exchange has taken on new dimensions. Instead of simply using storage releases to satisfy senior direct flow rights, exchanges now appear in every conceivable combination of direct flow and storage. Instead of operating primarily upstream-to-downstream, exchanges now also operate downstream-to-upstream and "around the horn" (from one tributary of a river to another of its tributaries). In addition, exchanges are now made not only between groundwater and surface water users but also between groundwater users themselves. With the proliferation of exchanges, water right administration is becoming increasingly demanding if not overwhelming.

Michael D. White, *Water Quality Exchanges*, 39 Rocky Mtn. Min. L. Inst. § 18.03 (1993).

Although changing water rights to accommodate new needs is recognized in all the western states, alternate devices exist in some states. Instead of being changed, the old water right is used to generate a substitute supply for downstream seniors, thereby satisfying the senior calls and, as a result, allowing junior or out-of-priority diversions for the new need. Most frequently these devices are called "exchanges," although they and their variations are also known as substitute supply plans, replacement plans, augmentation plans, rotation plans, in lieu plans, make up plans, commingling, secondary use, physical solutions, mitigation plans, and repositioning plans. With the caveat that there are significant differences, all these devices will be referred to in this paper as "exchanges."

Of the western states, exchanges (or close relatives) appear to be accepted in some form by Arizona, California, Colorado, Idaho, Montana, Nebraska, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming. They do not appear to be available in Alaska, Hawaii, Kansas, North Dakota, Oklahoma, South Dakota, and Texas.

When they first came on the scene more than 100 years ago, exchanges were relatively simple. In order to divert or store water "by exchange," an upstream junior water right owner simply needed to make sure that downstream seniors were kept whole through the receipt of a specifically designated substitute supply of water sufficient to satisfy their senior water rights. Typically, reservoir releases which the junior could not use himself were designated as a substitute supply for the downstream seniors' benefit. Such exchanges have become routine in several states and are administered by state water officials. With increased competition for water, however, exchanges now appear in every conceivable combination of direct flow and

storage. With the proliferation of exchanges, their administration is becoming increasingly demanding if not overwhelming.

Exchanges make sense under only certain conditions:

> A water exchange is usually appropriate when at least four or, perhaps, five conditions exist. Obviously, water must be physically available at the exchanger's headgate, reservoir, or well. The exchanger must control a substitute supply of water which can satisfy senior water rights by replacing the water to be diverted by exchange. Upon operation of the exchange, there may be no resulting injury from reduced flows to intervening senior water rights diverting within the exchange reach, i.e., the stream segment between the exchange's diversion and the point of introduction of the exchange's substitute supply. In some instances, where surface streams are involved, another requirement is imposed, necessitating a "live stream" between the exchanger's headgate and the introduction point of substitute supply. Based on the futile call doctrine, this requirement is designed to insure that the water diverted in the exchange would have actually reached the senior right. In addition, without a live stream, upstream diversions may establish a "hole" in the alluvial aquifer which will continue long after termination of exchange operations.

Michael D. White, *Water Transfers* (presented at CLE International's Western Water Law Conference in Denver, Colorado on March 5, 1998).

Amendments to the Idaho water code in 1998 codified and regularized the practice of informally exchanging surface water rights between users.[473] The 1998 amendments ensure that informal exchanges end, and that all further exchanges be subject to a level of departmental review functionally the same as for the ordinary transfers.[474] This includes opportunity for protests and requires local public interest review.

The exchange concept is statutorily limited to surface rights. However, natural flow rights may be exchanged for storage rights.

---

[473] Idaho Code §§ 42-105, 42-240. The 1998 enactment replaced an older exchange statute (adopted in 1969) that was repealed in 1986, inadvertently leaving a gap until the 1998 enactment.

[474] Idaho Code § 42-105(3).

Printed 6/23/2023 9:09 AM

EXHIBIT C
Page No. 255 of 761

Two examples of exchanges of storage releases for natural flow water rights were approved by the Idaho Department of Water Resources in 1999 and 2004.[475] In these two nearly identical cases, diversions under Snake River water rights are foregone in exchange for a like amount of diversions on the Boise River. These exchanges involved an interesting twist, essentially amounting to a program of making temporary use of instream flow releases. It works like this. The federal government makes annual summertime storage releases from reservoirs above Boise to provide additional stream flow far downstream in the lower Snake River—all as part of a NOAA Fisheries program believed to aid endangered salmon and steelhead migration. Veolia Water Idaho Inc. (then United Water), the municipal water provider for households and businesses in the City of Boise and surrounding areas, maintains two water treatment plants and diversion facilities on the Boise River. It also owns irrigation water rights with licensed diversion points on the Snake River above the mouth of the Boise River. Under these approved exchanges, United Water diverts a portion of the federal government's flow augmentation releases from the Boise River while simultaneously replacing these withdrawals by foregoing an equivalent amount of diversions under its Snake River rights.

Exchanges such as these achieve the same result as a new appropriation made subject to a mitigation condition requiring an offsetting release of water from another water right. Whether one chooses to approach this as a new appropriation or as an exchange may depend on other considerations. Calling it an exchange has the benefit of emphasizing that there will be no increase in total diversions thereby avoiding injury—and thus minimizing protests. Calling it a new appropriation has the benefit of producing an asset (a new water right) that may be easier for lenders and others to understand. An appropriation may also allow more flexibility as to the source of the mitigation water.

O. Accomplished transfers

The discussion above relates to formal transfers pursuant to Idaho Code § 42-222. In launching the SRBA, the Legislature quickly came to recognize that many water right holders had moved points of diversion or otherwise changed elements of their water rights over the years without bothering to apply for a transfer under the Water Code. The Legislature granted a broad amnesty to such "accomplished transfers" in Idaho Code § 42-1425. In 2006, the accomplished transfer statute was amended to include the Northern Idaho Adjudication ("NIA").

This statute was held constitutional in *Fremont-Madison Irr. Dist. & Mitigation Grp. v. Idaho Ground Water Appropriators, Inc.*, 129 Idaho 454, 457-58, 926 P.2d 1301, 1304-05 (1996) (Schroeder, J), owing to the act's built-in protections against injury and enlargement. See discussion of this statute and the related enlargement statute in section 13.I(9) beginning on page 611.

The statute allows a claimant in a general adjudication to base the claim on changes to the place of use, point of diversion, nature of use, or period of use that have occurred on the ground

[475] *In the Matter of Application for Exchange of Water in the Name of United Water Idaho*, Preliminary Order, July 22, 1999 (this order since has become final); and *In the Matter of Exchange of Water by United Water Idaho Inc.*, Water Right No. 63-31871 (Preliminary Order issued May 11, 2004). Both of these orders now are final.

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

(notwithstanding the absence of a formal transfer) if the changes occurred before the commencement of the adjudication. Idaho Code § 42-1425(2). For the SRBA, that is November 19, 1987. For the NIA, the cutoff date is January 1, 2006. Idaho Code § 42-1425(2).

The critical caveat is that the change must not result in injury to other water rights or enlargement of the right. Idaho Code § 42-1425(2).

Per longstanding IDWR policy interpretation, the accomplished transfer provision does not apply to a claim based on a permit. In other words, the Department will base its recommendation on the elements as described in the permit. If a change has occurred since the permit was issued, the permit holder should file an application to amend the permit.

P. Modifications of existing conditions on water rights

In some instances, the holder of a water right may desire a modification of a condition imposed by the Department on the water right. Some conditions directly affect an "element" of a water right.[476] For instance, conditions might be imposed on a group of water rights limiting the total quantity which they may collectively divert. Any modification of a condition affecting an "element" of a water right must be accomplished through the formal procedures for a "change" in a water right discussed above in this section.

On the other hand, some conditions do not relate to the elements of a water right. For instance, the water right might be conditioned to require a particular procedure for monitoring and reporting of diversions. If the water right holder wished to substitute a new technology or less cumbersome procedure, what procedure should he or she follow?

Neither the water code nor the Department's regulations specifically address how the holder and the Department should process such a request.

In some instances, the conditions themselves may set out a procedure for their own modification. For instance, a condition on the water right might expressly provide that the Director is retaining jurisdiction to re-evaluate a particular requirement. Where that is the case, obviously, any procedures set out in the conditions will control.

In most circumstances, however, the water right will not spell out any mechanism for the modification of conditions. In these situations, the Department has relied on its general authority under the Idaho Administrative Procedure Act ("APA") to entertain and act on such a request.[477] The water

[476] The "elements" of a water right are identified and discussed in section 4.B beginning on page 28.

[477] For example: "An agency shall not revoke, suspend, modify, annul, withdraw or amend a license, or refuse to renew a license of a continuing nature when the licensee has made timely and sufficient application for renewal, unless the agency first gives notice and an opportunity for an appropriate contested case in accordance with the provisions of this chapter or other statute." Idaho Code § 67-5254.

right holder should initiate consideration of the matter by filing a request setting out the proposed modification and justification therefore.

As a practical matter, the Department will act informally (without initiating a contested case) where it is apparent that no other person would be adversely affected by the requested modification. Where there is any potential for such adverse effect on others, the Department will initiate a formal contested case proceeding, with notification to known interested parties and the public.

16. STATUTORY CRITERIA FOR WATER RIGHT APPROPRIATIONS AND TRANSFERS

A. Summary of all statutory criteria

Three sets of statutory criteria are potentially applicable to water right permit and transfer applications:

- Criteria applicable to water permit applications (for new appropriations) are set out in Idaho Code § 42-203A(5).
- Criteria applicable to water transfer applications are set out in Idaho Code § 42-222(1).
- Both of these, as well as six other criteria (or called "factors") are applicable to out-of-state water transfers.

One would think that only the transfer criteria would be applicable, but that is not the case. The Idaho Water Export Act arguably applies. (This is discussed at length in the Master Memo.) If it does (and we are assuming that it will if Idaho asserts jurisdiction), the export act makes the permit criteria applicable as well. Accordingly, we analyze all three sets of criteria.

They are summarized in the tables below. The permit and transfer criteria overlap to some extent, so they are presented in the first table. The six additional water export criteria are presented in the second table.

Permit criteria (Idaho Code § 42-203A(5)) *Paraphrasing:* The Director may reject, condition, or partially approve an application where the proposed use is such:	**Transfer criteria (Idaho Code § 42-222(1))** *Paraphrasing:* The Director shall approve in whole or in part or upon conditions, provided that:
(a) that it will reduce the quantity of water under existing water rights, or	[1] no other water rights are injured thereby, [2] the change does not constitute an enlargement in use of the original right,
(b) that the water supply itself is insufficient for the purpose for which it is sought to be appropriated, or	
(c) where it appears to the satisfaction of the director that such application is not made in good faith, is made for delay or speculative purposes, or	
(d) that the applicant has not sufficient financial resources with which to complete	

the work involved therein, or	
(e) that it will conflict with the local public interest as defined in section 42-202B, Idaho Code, or (f) that it is contrary to conservation of water resources within the state of Idaho, or	[3] the change is consistent with the conservation of water resources within the state of Idaho and [4] is in the local public interest as defined in section 42-202B, Idaho Code,
(g) that it will adversely affect the local economy of the watershed or local area within which the source of water for the proposed use originates, in the case where the place of use is outside of the watershed or local area where the source of water originates;	[5] the change will not adversely affect the local economy of the watershed or local area within which the source of water for the proposed use originates, in the case where the place of use is outside of the watershed or local area where the source of water originates, and
	[6] the new use is a beneficial use, which in the case of a municipal provider shall be satisfied if the water right is necessary to serve reasonably anticipated future needs as provided in this chapter.

In addition to satisfying the criteria above, all applications for out-of-state uses are subject to the Director's consideration of the following six factors:

Export criteria **(Idaho Code § 42-401(3))**
Paraphrasing: To approve an out-of-state application, the Director must find the use is consistent with section 42-203A(5) criteria for new appropriations. [Implicitly, the section 42-222(1) criteria for transfers would also be applicable to an out-of-state transfer.] In addition, the Director shall consider the following factors:
(a) The supply of water available to the state of Idaho;
(b) The current and reasonably anticipated water demands of the state of Idaho;
(c) Whether there are current or reasonably anticipated water shortages within the state of Idaho;
(d) Whether the water that is the subject of the application could feasibly be used to alleviate current or reasonably anticipated water shortages within the state of Idaho;
(e) The supply and sources of water available to the applicant in the state where the applicant intends to use the water; and
(f) The demands placed on the applicant's supply in the state where the applicant intends to use the water.

These are discussed in more detail in the sections below.

B. Tests applicable to both new appropriations and transfers

Beneficial use. An appropriation of water must be for a beneficial use.[478] In the case of a municipal provider who has an approved planning horizon and quantification of future needs, water rights sought to satisfy those needs automatically satisfy the beneficial use test.[479]

No injury. A water permit application may be rejected where "it will reduce the quantity of water under existing water rights."[480] Likewise, a transfer application may be rejected where "other water rights are injured thereby."[481] Although worded differently, the two tests mean the same thing. The "no injury" test is closely related to the "no enlargement" test discussed below.

Conservation. Appropriation and transfer applications may be rejected if the new use is "contrary to conservation of water resources within the state of Idaho."[482] (Adopted in 1990.[483])

Local public interest. Both new appropriations and transfers may be rejected where found to "conflict with the local public interest."[484] (Adopted in 1978.[485])

---

[478] Idaho Code §§ 42-104 (appropriations); 42-222(1) (transfers).

[479] Idaho Code §§ 42-222(1), 42-223(2).

[480] Idaho Code § 42-203A(5)(a); *see* IDAPA 37.03.08.040.05.a and IDAPA 37.03.08.045.01.a (appropriations).

[481] Idaho Code § 42-222(1).

[482] Idaho Code §§ 42-203A(5)(f) (appropriations), 42-222(1) (transfers). Note that the Department's water appropriation rule does not address this requirement. This provision was used in 2002 to deny two water right applications filed in connection with two proposed gas-fired power projects near Rathdrum, Idaho. *In the Matter of Application for Permit No. 95-09069 in the Name of North Idaho Power LLC*, Before the Idaho Dep't of Water Resources (Preliminary Order, July 18, 2002); *In the Matter of Application for Permit No. 95-09086 in the Name of Kootenai Generation LLC*, Before the Idaho Dep't of Water Resources (Preliminary Order, July 18, 2002). Both applications were denied because the proposed natural gas-fired power projects proposed to employ water-based cooling technologies where other technologies were available. The Department concluded that the inefficient use of water threatened the Rathdrum Prairie Aquifer. Note that this decision was based on the "conservation of water" test (Idaho Code §§ 42-203A(5)(f), 42-222(1)), not the local public interest test.

[483] 1990 Idaho Sess. Laws, ch. 141, §§ 4, 5. Note that the Department's water appropriation rule does not address this requirement.

[484] Idaho Code §§ 42-203A(5)(e) (appropriations); 42-222(1) (transfers); 42-202B (definition); *see* IDAPA 37.03.08.040.05.g (appropriations). The scope of the public interest evaluation in Idaho was narrowed by the Legislature in 2003 and is now limited to an evaluation of impacts on the water resource itself (as opposed to broader social impacts). 2003 Idaho Sess. Laws, ch. 298 (H.B. 284) (amending Idaho Code §§ 42-203A(5)(g), 42-222(1), 42-240(5), 42-1763) (limiting the scope of the local public interest to "interests

Basin-of-origin protection. As part of the 2003 amendment to the local public interest legislation, the Legislature grafted onto the water code new protections against out-of-basin water uses. When water is moved from one basin to another (in an appropriation, transfer, or other context), the Director must determine that the move "will not adversely affect the local economy of the watershed or local area in which the source of water originates" (i.e., the basin of origin).[486] Note: This is one of two "basin-of-origin" provisions, the other being Idaho Code § 42-226, which is limited to large new ground water appropriations. See discussion in section 20.C(3) (Basin-of-origin protection (avoiding harm to local economy)) at page 709.

Out-of-state. Out-of-state water uses are required to follow special procedures to satisfy five additional tests aimed generally at evaluating the relative ability of water in the sending and receiving states.[487] (Adopted in 1990.[488]) Likewise, out-of-state water bank rentals are subject to the same five special tests.[489] (Adopted in 1992.[490]) See further discussion of export restrictions in section 20.C(2) at page 705.

C. Tests applicable to new appropriations only

Available water. A water permit application may be rejected where "the water supply itself is insufficient for the purpose for which it is sought to be appropriated."[491] (Adopted in 1935.[492])

Note that additional information requirements relative to the impact of the proposed use on other water rights are required of applicants seeking to appropriate more than 5 cfs, 500 acre-feet of storage, or 200 acres of irrigation.[493] Unlike the other tests described in this chapter, these

---

that the people in the area directly affected by a proposed water use have in the effects of such use on the public water resource.").

[485] 1978 Idaho Sess. Laws, ch. 306, § 1 (codified as amended at Idaho Code §§ 42-202B(3), 42-203A(5)(e)); 1979 Idaho Sess. Laws, ch.193, § 3 (codified as amended at Idaho Code §§ 42-202B(3), 42-1763); 1981 Idaho Sess. Laws, ch. 147, § 3 (codified as amended at Idaho Code §§ 42-202B(3), 42-222(1)); H.B. 284 (2003).

[486] 2003 Idaho Sess. Laws, ch. 298 (H.B. 284). It is codified in multiple places: Idaho Code §§ 42 203A(5)(g) (appropriations), 42-222(1) (transfers), 42-240(5) (exchanges), 42-1763 (water bank).

[487] Idaho Code §§ 42-401(3).

[488] 1990 Idaho Sess. Laws, ch. 141, § 3.

[489] Idaho Code §§ 42-1763.

[490] 1992 Idaho Sess. Laws, ch. 101 § 1.

[491] Idaho Code § 42-203A(5)(b); *see* IDAPA 37.03.08.040.05.d.

[492] 1935 Idaho Sess. Laws, ch. 145, § 2.

[493] IDAPA 03.08.040.05.c.

EXHIBIT C
Page No. 262 of 761

requirements are imposed by administrative rule, not be statute. The rule provides, however, that the Director, in his discretion, may impose these information requirements on any applicant.

Speculation. A permit application also may be rejected "where it appears to the satisfaction of the director that such application is not made in good faith [or] is made for delay or speculative purposes."[494] (Adopted in 1935.[495]) Although the statute does not expressly so provide, presumably water rights acquired by a municipal provider to meet an approved future needs plan would be deemed not to be speculative.

Financial resources. An appropriation application may be denied where "the applicant has not sufficient financial resources with which to complete the work involved therein."[496] (Adopted in 1935.[497]) In *Shokal v. Dunn*, 109 Idaho 330, 335-36, 707 P.2d 441, 446-47 (1985) (Bistline, J.), the Idaho Supreme Court ruled that it is not necessary for the applicant to demonstrate that he or she can "then and there" obtain the necessary financing to complete the project. Rather, the applicant must show that it is "reasonably probable" that financing can be secured to complete the project within the time constraints of the permit.[498]

---

[494] Idaho Code § 42-203A(5)(c); *see* IDAPA 37.03.08.040.05.e. This was the basis for rejecting a water right application for expansion of a CAFO in October, 2002. The Department determined that the application was speculative in light of the fact that the Applicant had been denied a "request for variance" from the county and would not be able to obtain one without a change in the county ordinance. *In the Matter of Application for Permit of Water Right No. 61-11954 in the Name of Rocky Mountain Land & Cattle Co.* (IDWR Preliminary Order, Oct. 21, 2002). The decision also cited "local public interest" concerns.

[495] 1935 Idaho Sess. Laws, ch. 145, § 2.

[496] Idaho Code § 42-203A(5)(d); *see* IDAPA 37.03.08.040.05.f.

[497] 1935 Idaho Sess. Laws, ch. 145, § 2.

[498] The court explained:

> The ultimate question under the financial resources requirement of I.C. § 42-203A is this: who should bear the risk of failure. . . . The 'then and there" standard, while admirably encouraging pecuniary caution, goes beyond a reasonable reading of the statutory requirement of "sufficient financial resources." I.C. § 42-203A(5)(d).
>
> The "reasonably probable" standard used by Water Resources shifts the risk of failure and shows that the state is more willing to take a risk by providing individuals with the opportunity to put water to beneficial use. It indicates a willingness on the part of the state to take a chance that a proposed water use with sound prospects of financing will become a successful venture, thereby benefiting both the water user and the state. We believe this to be a more reasonable standard for the financial resources requirement of I.C. § 42-203A. The water resources of this state are not so limited that they must be safeguarded with permits issued *only* when the applicant has secured all necessary financing prior to the water permit application. At the same time, the applicant must make a

Over 25 cfs, 500 horsepower, or 10,000 acre-feet. An applicant seeking more than 25 cfs, the development of more than 500 theoretical horsepower, or the storage of over 10,000 acre-feet in active storage may be required by the Director to provide detailed financial information.[499] (Adopted in 1967.[500])

Instream flow. All new appropriations must respect all prior instream flow appropriations.[501] (Adopted in 1978.[502]) Note also that all instream flow appropriations must meet a set of statutory criteria, including a finding that it is in the "public, as opposed to the private, interest."[503] (Adopted in 1978.[504])

> showing that it is reasonably probable he or she will obtain necessary financing within five years [the date when proof is due under the permit]. The extent of the applicant's own investment is a strong factor to be considered.
>
> The financial resources requirement, added in 1935, was clearly intended to prevent the tying up of our water resources by persons unable to complete a project because of financial limitations. The financial requirement provision was added at a time when unscrupulous promoters were obtaining permits and lulling unsuspecting investors into purchasing worthless securities on worthless projects. *See* Eighth Biennial Report of the Department of Reclamation, State of Idaho, 1933-1934, R.W. Faris, Commissioner of Reclamation, pp. 28-29. The legislature has provided Water Resources with the authority to weed out the financially insufficient applications. I.C. § 42-203A. We believe a showing by the applicant that it is "reasonably probable" that financing can be secured to complete the project within five years serves the purpose of screening out undeserving projects without being destructive of growth and development in the state. Any concern which may exist about tying up the water to the prejudice of a potential junior applicant is adequately satisfied by other statutory provisions requiring timely commencement, progress and completion of works. I.C. §§ 42-204 and 42- 301. Thus we hold proper the "reasonably probable" standard originally applied by Water Resources.

Shokal, 109 Idaho at 335-36, 707 P.2d at 446-47 (emphasis original). In this case, the Court found it sufficient that the applicant for a water right for a fish farm had a $4,500 "base" (presumably referring to money in hand) for a project that would cost over $265,000.

[499] Idaho Code § 42-202(5).

[500] 1967 Idaho Sess. Laws, ch. 374, § 1.

[501] Idaho Code § 42-1736B(1).

[502] 1978 Idaho Sess. Laws, ch. 345, § 2.

[503] Idaho Code § 42-1503.

[504] 1978 Idaho Sess. Laws, ch. 345, § 11.

Out-of-basin ground water - over 5,000 acres or 10,000 acre-feet. An appropriation for use of ground water for use "outside the immediate ground water basin" for irrigation of over 5,000 acres or for a total volume of over 10,000 acre-feet (apparently for any purpose) per year must meet special tests related to "the local economic and ecological impact" and must be specifically approved by the Legislature.[505] (Adopted in 1980.[506]) Note: This is one of two "basin-of-origin" provisions, the other being Idaho Code §§ 42 203A(5)(g) (appropriations), 42-222(1) (transfers), 42-240(5) (exchanges), 42-1763 (water bank).

D. Tests applicable to water right transfers only

No enlargement. The Department may reject a transfer application if it would "constitute an enlargement in the use of the original right."[507]

Agricultural base. The Department may reject a transfer application involving "a change in the nature of use from agricultural use where such change would significantly affect the agricultural base of the local area."[508] (Adopted in 1981.[509])

Over 50 cfs/5,000 acre-feet. Specific legislative approval (presumably in the form of a concurrent resolution) is required of any change in the nature or period of use of any water right involving over 50 cfs or 5,000 acre-feet of storage water.[510] (Adopted in 1981.[511]) Note that this provision is triggered only if the period or nature of use is changed. Thus, it does not apply to changes in point of diversion or place of use, even on a very large scale. Also, the Department is allowed to approve temporary transfers of large water rights for less than three years without legislative approval.[512] Although the statute does not specify a sequence, IDWR has expressed the view (informally) that legislative approval would not be sought until after the Department has acted to approve the transfer.

---

[505] Idaho Code § 42-226.

[506] 1980 Idaho Sess. Laws, ch. 186, § 1.

[507] Idaho Code § 42-222(1).

[508] Idaho Code § 42-222(1).

[509] 1981 Idaho Sess. Laws, ch. 147, § 3.

[510] Idaho Code § 42-108.

[511] 1981 Idaho Sess. Laws, ch. 1.

[512] Idaho Code § 42-108.

E. Tests applicable to water exports

The Idaho Water Export Act, Idaho Code § 42-401(3), sets the following out six criteria (called "factors") to be applied by the Director in evaluating an out-of-state transfer. See discussion in section 20.C(2)(a) (Idaho Water Export Act) at page 705.

The supply of water available to the state of Idaho.

The current and reasonably anticipated water demands of the state of Idaho.

Whether there are current or reasonably anticipated water shortages within the state of Idaho.

Whether the water that is the subject of the application could feasibly be used to alleviate current or reasonably anticipated water shortages within the state of Idaho.

The supply and sources of water available to the applicant in the state where the applicant intends to use the water.

The demands placed on the applicant's supply in the state where the applicant intends to use the water.

F. Tests applicable to inter-basin transfers (aka out-of-basin transfers)

See discussion in section 20.C(3) (Basin-of-origin protection (avoiding harm to local economy)) at page 709.

G. Statutory history of tests

The following chart traces the legislative enactments leading to several of the key current statutory tests applicable to new appropriations and transfers.

Date	Current Citation	Session Law	Applies to	Operative Language (as codified today)	Comment
1935	Idaho Code § 42-203A(5)(b).	1935 Idaho Sess. Laws, ch. 145, § 2, p. 358	Appropriation	The director must find "that the water supply itself is insufficient for the purpose for which it is sought to be appropriated".	Requires a showing of sufficient hydrological availability to support the use.
1935	Idaho Code § 42-203A(5)(c).	1935 Idaho Sess. Laws, ch. 145, § 2, p. 358.	Appropriation	The director must deny an application upon finding "that such application is not made in good faith, is made for delay or speculative purposes".	Speculative applications may be rejected. Was used to deny an application for an expanded CAFO.
1935	Idaho Code § 42-203A(5)(d).	1935 Idaho Sess. Laws, ch. 145, § 2, pp. 358-59.	Appropriation	The director must deny an application upon finding "that the applicant has not sufficient financial resources with which to complete the work involved therein".	Authorizes evaluation of the applicant's ability to carry out the project.

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

Date	Current Citation	Session Law	Applies to	Operative Language (as codified today)	Comment
1935	Idaho Code § 42-202.	1935 Idaho Sess. Laws, ch. 145, § 1, p. 355.	Appropriation	If the application involved more than twenty-five (25) cubic feet per second of water or the development of more than five hundred (500) theoretical horsepower . . .."	Establishes a set of special criteria for large appropriations. The applicant must provide detailed financial and corporate disclosure data, etc.
1978	Idaho Code §§ 42-202B(3), 42-203A(5)(e).	1978 Idaho Sess. Laws, ch. 306, § 1, pp. 767-69.	Appropriation	The director may reject an application where he finds "that it will conflict with the local public interest" where the local public interest is defined as "the interests that the people in the area directly affected by a proposed water use have in the effects of such use on the pubic water resource." (Note, the above language reflects 2003 amendment.)	The "local public interest test" was first adopted in 1978, when it applied to water appropriations only. See below amendments of 1981 (extending to water right transfers) and 2003 (limiting scope of the test). Note that the Department's implementing criteria (IDAPA 37.03.08.045.01.e) have not been updated to reflect the 2003 legislation.
1978	Idaho Code § 42-1503.	1978 Idaho Sess. Laws, ch. 345, § 11, p. 893.	Appropriation	To be approved, the director must find that a proposed instream flow "is in the public, as opposed to private, interest".	Section 11 of chapter 345 (1978) created the minimum flow law. It contained its own public interest determination provision (quoted here).
1978	Idaho Code § 42-1736B.	1978 Idaho Sess. Laws, ch. 345, § 2, p. 886.	Appropriation	"All future filings, permits and decrees on the unappropriated waters of this state shall be determined with respect to the effect such filings, permits and decrees will have on the minimum daily flow of the affected stream or river, or on the daily maintenance level of the affected lake or reservoir."	Section 2 of chapter 345 (1978) (quoted here) requires future appropriations to protect prior established instream flows.
1979	Idaho Code § 42-1763.	1979 Idaho Sess. Laws, ch. 193, § 3, p. 561.	Water Bank	Rental of water from water supply bank must not "conflict with the local public interest where the local public interest is defined as the affairs of the people in the area directly affected by the proposed use."	This is the same language as section 42-203A(5)(e), but there is no cross-reference to this section. It was made part of the original water supply bank legislation in 1979, and has not been changed since then.
1980	Idaho Code § 42-226.	1980 Idaho Sess. Laws, ch. 186, § 1, p. 414.	Appropriation	"Any application for a water permit that seeks to transfer ground water outside the immediate ground water basin as defined by the director of the department of water resources for the purpose of irrigating five thousand (5,000) or more acres on a continuing basis or a total volume in excess of ten thousand (10,000) acre feet per year, the application must first be approved by the director of the department of water resources and then by the Idaho Legislature. Each shall give due consideration to the local economic and ecological impact of the project or development so proposed."	Sets up a special public interest review for large agricultural transfers outside the basin of origin. Also requires legislative approval.
1981	Idaho Code § 42-222(1).	1981 Idaho Sess. Laws, ch. 147, § 3, p. 256.	Change	The director must find that an application for change of water right "is in the local public interest" as defined in section 42-202B(3).	This 1981 act extended 1978 local public interest test to changes in water rights. See 2003 amendment (restricting scope of test).

Date	Current Citation	Session Law	Applies to	Operative Language (as codified today)	Comment
1981	Idaho Code § 42-222(1).	1981 Idaho Sess. Laws, ch. 147, § 3, p. 256.	Change	"[T]he director shall not approve a change in the nature of use from agricultural use where such change would significantly affect the agricultural base of the local area."	The same 1981 act contained a provision to protect the local agricultural base from changes in the nature of use of water rights.
1981	Idaho Code § 42-108.	1981 Idaho Sess. Laws, ch. 147, § 1, p. 254.	Change	"[A]ny permanent or temporary change in period or nature of use in or out-of-state for a quantity greater than fifty (50) cfs or for a storage volume greater than five thousand (5,000) acre-feet shall require the approval of the Legislature, except that any temporary change within the state of Idaho for a period of less than three (3) years may be approved by the director without legislative approval."	Note that this provision applies only to changes involving a change in period or change in nature of use. Thus, it appears that the Act is aimed at transfers from agricultural use to new industrial, municipal or other uses. The provision applies equally to in-state and out-of-state transfers.
1990	Idaho Code § 42-401.	1990 Idaho Sess. Laws, ch. 141, § 3, pp. 316-17.	Appropriation and Change	"Applications for use of public waters outside the State. . . . The director shall consider the following factors: (a) The supply of water available to the state of Idaho; (b) . . ."	Repealed former statute specifically providing for use of Idaho water rights in Oregon. Added new section 42-401 requiring all out-of-state users to meet five additional criteria relating to the relative availability of water in Idaho and the receiving state.
1990	Idaho Code §§ 42-203A(5)(f), 42-222.	1990 Idaho Sess. Laws, ch. 141, § § 4, 5.	Appropriation and Change	Requires that applications be consistent with (or not contrary to) "conservation of water resources within the state of Idaho."	The same act (ch. 141) also amended the appropriation and change provisions affecting all water rights, to include this new criterion. This was used to deny water right applications for energy projects.
1992	Idaho Code § 42-1763.	1992 Idaho Sess. Laws, ch. 101, § 1, pp. 319-20.	Water Bank	"The director shall consider in determining whether to approve a rental of water for use outside of the state of Idaho those factors enumerated in subsection (3) of section 42-401, Idaho Code."	Out-of-state rentals from the water bank were previously prohibited. This act allows out-of-state uses, but subjects them to the test set out in section 42-401 for permanent out-of-state uses.
2003	2003 Idaho Sess. Laws, ch. 298 (H.B. 284).	2003 Idaho Sess. Laws, ch. 298 (H.B. 284).	Appropriation, Transfer, Exchanges and Water Bank	Limited the scope of the local public interest to "interests that the people in the area directly affected by a proposed water use have in the effects of such use on the public water resource."	Clarified that local public interest test authorizes review only of issues related to protection of the water resources, not other social or environmental concerns.
2003	Idaho Code §§ 42-203A(5)(g), 42-222(1), 42-240(5), 42-1763.	2003 Idaho Sess. Laws, ch. 298 (H.B. 284).	Appropriation, Transfers, Exchanges and Water Bank	Prohibits inter-basin transfers which "will adversely affect the local economy of the watershed or local area within which the source of water for the proposed use originates."	The same bill which limited the scope of the local public interest review added an entirely new basin-of-origin protection feature to the water code.

17. WATER RIGHTS CONVEYANCING

At the outset, it bears emphasis that transferring (aka changing) a water right is different from conveying a water right. (See discussion in section 15.B.) A conveyance changes ownership of something from one person to another. For instance, a seller may convey land and appurtenant water rights to a buyer without making any change in the water rights themselves. However, where the parties wish to separate the water (or part of it) from the land to which it previously was appurtenant, they will need both to convey the water right (a purely private matter between the parties) and to transfer the water right (a regulatory procedure over which the Department of Water Resources has control).

Previous chapters have explored water right transfers. This chapter deals with conveyancing.

A. Introduction

Water rights are real property.[513] As such, they are conveyed by deed, just like any other real property.[514] As with other real property, water rights may be conveyed by warranty deed, special warranty deed, grant deed, or quit claim deed. These terms are not defined by Idaho statute, except for Idaho Code § 55-612 discussed below and another statute which has very narrow application.[515]

In real estate transactions involving land, title insurance may be obtained to protect the buyer in the event title is not properly conveyed. As a practical matter, title insurance companies do not issue title policies for water rights. Consequently, the onus falls on the parties to ensure that title is properly conveyed, and the selection of the proper form of conveyance is all the more important.

In the world of conveyancing, form sometimes matters, but substance always does. The practitioner should never rely upon the title of a deed or other document. If you want to know what the deed does, you should read the deed to see what, if any, covenants and warranties are included.[516]

---

[513] Idaho Code § 55-101.

[514] Water rights of all types may be conveyed, including water rights represented by licenses or decrees, beneficial use claims, domestic rights, and water rights provided by canal companies and irrigation districts.

[515] Idaho Code § 42-2604 provides, on its face, that all "contracts and deeds for the sale of water rights shall be of the form approved by the department . . . ." Despite the over-broad language of this section, it applies only to particular circumstances involving the initial creation of canal companies and their conveyance of water rights to settlers within the project; this was the case with Carey Act Companies. There is no standard departmental form of contract or deed.

[516] As a practical matter, the verbs "covenant" and "warrant" are used interchangeably by most drafters. Technically, a covenant is a promise to do something (or to refrain from doing something) in the future, such as a covenant to defend title. A warranty is an assertion of a condition in the present, such as a warranty of ownership. Thus, a covenant may be breached in the future, while a warranty may be breached at the time of execution of the conveyance document. This is a semantic nicety which is of no particular consequence.

B. The purchase and sale or option agreement

Water rights, of course, may be conveyed as appurtenances to land. However, they are often conveyed separately from the land, particularly when the purchaser intends to change them to a new use. Because of the uncertainties of the transfer process, transactions in water often rely on an option agreement, rather than a direct purchase and sale. This enables the purchaser to undertake due diligence and pursue the transfer before exercising the option and moving to closing.

In some cases, simple form purchase and sale or option agreements have been employed to accomplish this. With the increasing value of water, and the increasing complexity of the transfer process, the stakes have been raised. Accordingly, option agreements are increasingly sophisticated and individually tailored to the circumstances of the transaction, allocating risks and contingencies, establishing duties and entitlements, defining representations and warranties, and setting deadlines and penalties. In a high value transaction, the option agreement may run dozens of pages.

Among many other issues to be considered in tailoring a purchase and sale or option agreement are the following (in no particular order):

- Unit definition & pricing. There are many ways to define the price terms, and many pitfalls resulting from misunderstandings about how quantity terms work. Typically annual volume is of more relevance to the buyer than the diversion rate. However, depending on the needs of the buyer, other measures of quantity that may be critical.
- Quantification before or after transfer. Likewise, the timing of quantification is significant. Do the parties intend for the price term to be applied to the quantity prior to transfer, or after? Will it be diminished to the extent of mitigation requirements, consumptive use restrictions, etc.?
- Shortfall in quantity. Does the seller have a responsibility to provide additional water in the event that transferable quantities are less than anticipated? How will the source of that water be identified?
- Identification of individual acres. Each of the above consideration has potential ramifications under *Lexington Heights v. Crandlemire.*[517] Failure to provide mechanisms for resolving uncertainty at any stage of the contract, under any possible scenario, may result in giving one of the parties an unintended way out of the agreement. See discussion in section 17.D at page 273.
- Partial forfeiture. If partial forfeiture is identified during the course of the transaction, how will that affect the price term?
- Duration / option periods. The duration of the option may be fixed, keyed to other contingencies, or extendable at the option of the buyer. These provisions may have their own price terms.
- Sequencing of payments. The timing of option and purchase payments may be simple or quite complex. It is important to think through the all contingencies and to clarify any offsets.
- Incremental transfers. The parties should consider whether the buyer is entitled to exercise the option incrementally—with respect to parts of the water right. If that is permissible, the agreement should include a mechanism to determine what is being acquired. Lack of specificity may void the contract.

[517] *Lexington Heights v. Crandlemire*, 140 Idaho 276, 92 P.3d 526 (2004). See discussion in section 17.D at page 273.

Printed 6/23/2023 9:09 AM

EXHIBIT C
Page No. 270 of 761

- Due diligence period. One or more diligence periods may be required. The parties should define the authority of the buyer to continue investigations after the due diligence period(s). The scope of access granted should be clarified. The parties should clarify the seller's obligation to be forthcoming, particularly with FSA records and other documentation (including records of prior owners).

- Initiation of transfer prior to exercise. The parties should consider under what circumstances the buyer is authorized to initiate the transfer proceeding prior to exercise of the option. The agreement should clarify the duties of the parties in the event that the transfer is denied, approved with conditions unacceptable to buyer, and other potential circumstances. The agreement should allocate the obligations and costs associated with transferring the water back in the event the sale does not go through.

- Recording. Depending on the parties' needs, the agreement may provide for recording of a memorandum of option agreement, pending closing. In any event, it should define what either party is entitled to record and under what circumstances.

- Dry up obligation. The agreement should carefully address the scope of the dry-up obligation. Does the seller have a right and/or duty to continue farming (or other water use) pending transfer approval, after transfer approval (to end of irrigation season), etc.? What rights do the buyer and seller have to change the use during the middle of the irrigation season?

- Representations and warranties. The agreement must carefully consider and define disclosure obligations, representations and warranties regarding the use and validity of the water right. As with other issues, there is no cookbook answer for what these obligations should be. Key issues to address (in addition to the usual real estate representations and warranties) would include:

  - quantities and forfeiture,
  - the accuracy of information and good faith disclosures,
  - the presence of supplemental water rights,
  - existing mitigation obligations, and
  - subordinations.

- Encumbrances. The parties should develop and define financial disclosure obligations and mechanisms for dealing with encumbrances and refinancing during the option period and at closing.

- Confidentiality. The parties should consider their interest in confidentiality and carefully define confidentiality obligations and penalties.

- Form of deed. The parties should come to terms at the time of the option agreement as to the form of the deed. This, in turn, raises key questions regarding warranties.

- Easements. The parties should think through whether any easements need to be conveyed in conjunction with the water rights.

- Wells and equipment. The parties should consider whether any wells or equipment is to be conveyed along with the water rights.

- Closing(s). Closing provisions vary greatly from agreement to agreement. The agreement should resolve confusion over whether closing refers to closing on the option agreement or closing on the exercise of the option (or closing on an incremental exercise).

- Survivability. The agreement should define which provisions survive closing and for how long.
- Walk-away provisions. The agreement should carefully define under what circumstances either party may walk away from the transaction (without triggering a default), and who keeps what.
- Remedies. The parties should carefully identify the cures and remedies available for each potential default. Boilerplate should be avoided where it does not fit the needs of the parties.

C. Conveyance of perfected water rights by deed

(1) Quitclaim deed

The most minimal form of conveyance is the quitclaim deed. A quitclaim deed provides simply that the grantor conveys whatever interest the grantor may then have in the property. It includes no warranties of any kind.

In essence, the grantor says: "I'm not saying I own this water right. I may have even sold it to someone else. But whatever interest I may have in it is now yours."

The operative words in a quitclaim deed are "I hereby quitclaim."[518] The drafter should not use the verb "grant" in a quitclaim deed. Doing so will likely convert it to a grant deed, as discussed below.[519] To put it colloquially, a quitclaim deed would be the proper vehicle (from the seller's perspective) to repeatedly sell the Brooklyn Bridge.

A quitclaim deed is appropriate where the purpose of the conveyance is to remove a cloud (as to any claim by the grantor) and thus help to clarify title in a particular party.

(2) Grant deed

An Idaho statute states that the use of the term "grant" in any conveyance carries by implication two and only two covenants, unless otherwise expressly set out in the deed.[520] Thus, if the grantor simply declares that he "grants" (or grants, conveys, etc.) his or her water rights to a named person, and says nothing else, the court will imply the following two covenants: first, that he or she has not previously conveyed the property to another and, second, that he or she has not encumbered or suffered an encumbrance on the property as of the time of execution.

In plain English, the seller is saying: "I don't know if I own this water right, but I promise you that I have not previously sold or encumbered it, and whatever I own is now yours." This is basically a glorified quitclaim deed, enhanced only by the promise that the seller has not previously sold or

---

[518] To express it as a lawyerly redundancy: "I hereby convey, release, remise and forever quitclaim . . . ."

[519] Oddly, most quitclaim deeds employ the noun "Grantor" while avoiding the verb "grant." Presumably, and according to the statute, it is only use of the verb that triggers the "grant deed" warranties.

[520] Idaho Code § 55-612.

encumbered the property. To put it even more colloquially, one might say: "Here is a deed to the Brooklyn Bridge. This is the first time I have ever sold the Brooklyn Bridge."

In other words, you may convey the Brooklyn Bridge by quit claim as often as you like without violating any warranty, but you may convey it by grant deed only once.

Such an unadorned grant deed may be employed in water transactions where there is some reason for uncertainty about whether the seller actually owns the rights. In such cases, it is reasonably preferred and expected over a simple quitclaim deed, because the seller, even if he cannot promise that he or she owns the right, should be able to promise at least that he or she has not sold it twice.

(3) General warranty deed

A general warranty deed goes a substantial step further and includes warranties of fee simple ownership coupled with promises to defend title to the property if it is challenged. From the buyer's perspective, a warranty deed is always preferred. From the seller's perspective, a warranty deed may be problematical if there is any question about the validity of the underlying water rights. On the other hand, the warranty arguably only extends to the defense of title, not to the validity of the water right.

(4) Special warranty deed

The parties to a transaction are not limited to the three models set out above, but are free to devise other covenants or warranties. Such hybrid deeds go by various labels including "special warranty deed," "limited warranty deed," "bargain and sale deed," and even "grant deed" (despite the fact that it contains more than the statutory covenants). Others prefer the name "special warranty deed." For all practical purposes, the name makes no difference, so long as the covenants and warranties are themselves clear.

Thus, special covenants and warranties may be devised to handle particular purposes. These are not very common in ordinary real estate transactions (where a cookie cutter deed is generally appropriate), but are common for water right deeds (where the issues of validity and ownership can be murkier).

For example, the parties to a transaction might agree to assurances that more clearly define what warranties are included, for example including a defense of title but not of the validity of the water right. The deed might also include a warranty to the effect that the seller has acted in good faith in acquiring and using the water rights and knows of no defect in them.

D. Specificity/particularity and the statute of frauds (*Lexington Heights* and its progeny)

In the case of *Lexington Heights v. Crandlemire*, 140 Idaho 276, 92 P.3d 526 (2004) (Eismann, J.), the Idaho Supreme Court imposed a rigorous standard for specificity of the lands to be conveyed. Although the case dealt with the sale of land, presumably it would apply equally to water right deeds.

A more detailed discussion of this topic is found in the *Idaho Land Use Handbook*.

E. Conveyance of permit by assignment

In contrast to a perfected water right, a water right permit is an inchoate right authorizing the holder to proceed with diverting water to beneficial so as to perfect an interest in real property in the future.[521] As such, the permit is deemed personal property, not real property.[522] Consequently, water right permits traditionally are formally conveyed by assignment (and/or bill of sale[523]), rather than by deed.

The Idaho Department of Water Resources provides a form entitled *Assignment of Permit* for this purpose. It is intended to be executed and acknowledged by the assignor and filed with the Department, along with a required filing fee. Unlike the Department's *Change of Ownership,* form, which is used to provide the Department with notice that a perfected water right has been conveyed by deed to a new owner, either as an appurtenance or separate from land, the Assignment of Permit form can serve the dual purpose of effecting the legal conveyance of the permit and providing notice to the Department of the conveyance of the permit.

What happens if an assignment is not used where a permit authorizing development of a water right on a particular tract of land exists? Suppose first that a seller conveyed her land, which was being irrigated pursuant to an inchoate water right represented by a permit. Suppose also that she used a "silent" deed (which simply conveyed the land and all appurtenances, without expressly naming them), and suppose there was no separate assignment or bill of sale concerning the permit. Would the deed effectively convey the right to irrigate the land represented by the permit even though it is deemed personal property? The authors are not aware of a judicial decision on point. Arguably the right to develop a water right on a particular piece of real property (i.e., the permit) could be considered an appurtenance, and a "silent" conveyance of the land would convey all appurtenant interests in water, both real and personal. On the other hand, Idaho law requires that water rights be treated with the same formalities as other property. But, again, we are not aware of precedent on this point.

---

[521] *Hardy v. Higginson*, 123 Idaho 485, 490, 849 P.2d 946, 951 (1993).

[522] "An applicant's interest in an application for permit to appropriate water also is personal property." IDAPA 37.03.08.035.02.d (Water Appropriation Rules).

[523] Technically, a bill of sale is used to convey tangible personal property to which title attaches. Intangible personal property interests to which title does not attach (such permits, shares of stock, and contract rights) are conveyed by assignment. Nevertheless, this subtle distinction is not always followed. Indeed, parties often employ a separately drafted bill of sale in addition to the Department's *Assignment of Permit* form. Perhaps this is an unnecessary belt and suspenders exercise, but it is a common practice and, until our courts tell us otherwise, probably a good idea.

EXHIBIT C
Page No. 274 of 761

F. Assignments in conjunction with water right deeds

It is sometimes appropriate to include other assignments along with the conveyance of a water right. This is appropriate where there are physical documents that reflect title or other interests in the water right, such as claims to water rights filed in a water right adjudication, stock certificates or contracts. Assignments may be included as part of a deed. Note, however, that water delivery organizations typically have their own procedures and forms of documents for the transfer of water rights on their books or assessment rolls. These organizations should be consulted prior to closing a transaction that involves water rights that they deliver.

For instance, if the water right is represented by shares in a mutual canal company (aka mutual ditch company, including Carey Act companies), it is important not only to convey to the buyer the water rights themselves but also to assign and deliver the shares in the canal company to the purchaser.

Another example of an appropriate use of an assignment is for SRBA claims. Where a water right has been claimed in the SRBA, but not yet decreed, the conveyance document should include a deed for the water right (or assignment for the permit) coupled with an assignment of the SRBA claim. When conveying land with appurtenant water rights that are the subject of a claim in a water rights adjudication, the authors prefer to use a single document styled as a "deed and assignment" that describes not only the underlying real property with specificity, but also all water rights intended to be conveyed as appurtenances to the land, together with an express assignment of all notices of claim to water rights pending in an adjudication.

In transactions involving a water right evidenced by a license, the parties sometimes assign and deliver the original license certificate in addition to conveying the water right by deed.

G. Conveying a portion of an existing facility

Most commercial and industrial facilities are served by municipal water providers and do not own their own water rights. However, some of the larger ones do have their own wells, as do dairies and other remotely located industrial operations.

If the entire facility is being conveyed as a unit, it is a simple matter to convey the appurtenant water rights. Indeed, it is no different from conveying irrigated land. Since no change in use is entailed, this is not a "transfer" event requiring approval from the IDWR. It is simply a matter of providing the appropriate new ownership notice to the Department.[524]

Likewise, if a commercial, industrial, or agricultural property is being divided and a portion of it sold to a user who will maintain the same nature of use, this will entail what the Department calls a "split" of the right. Again, this is not a "transfer" event (within the meaning of section 42-222), so no Department approval is required. But the Department must be made aware of the change in ownership,

[524] The proper form is known as a "Notice of Change in Water Right Ownership." This is described in footnote 364 at page 192.

Printed 6/23/2023 9:09 AM

whereupon the Department will change its records to show that the water right has been divided into two separate rights, each with a new number.[525] Naturally, in the conveyance documents the parties should be explicit about the quantity of water, preferably expressed in both cfs and acre-foot amounts, each resulting right holds.

[525] Formerly, the Department assigned "A," "B," "C" suffixes to split water rights. Its current practice, however, is to assign entirely new numbers to the two resulting rights, retiring the old number.

18. CONSERVED WATER

A. Public policy

In recent years, attention has focused on efforts to squeeze more water out of a given diversion stream through conservation measures.[526] These measures can include lining ditches, increased use or maintenance of pipelines, tighter scheduling of irrigation applications to meet actual crop consumptive irrigation requirements, and the use of sprinkler application rather than flood irrigation. In the domestic or municipal water context, conservation measures may include water conservation education programs or restricting lawn watering to specific days or times of the day. Experience has demonstrated that these kinds of conservation methods can significantly reduce instantaneous and annual water demand, although per unit pricing of water surely remains the primary means to induce conservation.

Some conservation measures involve substantial capital investments to minimize seepage, evaporation or flow-through of waste water. Idaho law and policy already mandate that the right to use the waters of the state does not include the right to waste it. However, for water users who already employ reasonable diversion and application methods, such laws and policies likely are less important in their decision to employ water conserving methods than the simple need to reduce labor and maintenance costs, or to improve product quality and profit margins.

In recent years, water conservation has become a significant theme in the debate on water policy. Seeing enormous "waste" in water use, many policy makers have seized upon the idea that the gains achieved recently in energy conservation—such as improvements in electrical appliances, gas mileage, and insulation—should set the pattern for water conservation.

"Shouldn't we encourage water users to become more efficient?" the thinking goes. More specifically, the suggestion is made that water right holders who adopt conservation measures should be entitled to retain the benefits of that conservation. That is, they should be allowed to use the "conserved" water for a new use, or sell it to someone else.

Other Western states, such as California and Oregon, have adopted precisely this approach, with statutes that expressly allow conserved water to be sold, leased, transferred or exchanged.[527]

---

[526] We use the term "conserved water" to describe water saved as a result of efficiency improvements or other changes made in the delivery or application of a water right. The term can also be used to describe efforts to reduce consumer demand in the context of municipal water rights.

"New" water can also be created through modifications of natural conditions aimed at reducing system losses to evaporation and the like. These rights are often referred to as "developed" water, or sometimes, "salvaged" water. Although there are some parallels between conserved water and developed water, judicial treatment of the two often differs.

[527] Cal. Water Code § 1011(b); Or. Rev. Stat. §§ 537.455 to 537.500 and 540.510 (allowing a water right holder to retain up to 75 percent of conserved water, with the balance going to the State to maintain return flows).

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

EXHIBIT C
Page No. 277 of 761

Unfortunately, these state statutes fail to distinguish carefully between true conservation and recapture of return flows. Thus they overlook the most difficult issue: increases in consumptive use causing injury to others. As a result, they have proven largely ineffective in their policy goal. The discussion in the prior section outlines the law governing the use of conserved water. In addition to those theoretical problems, practical problems are encountered by those seeking to apply or market such water.

A few states–Oregon comes to mind–have been quite direct about the issue. The Oregon Legislature has created a system aimed at encouraging water conservation through more efficient water uses.[528] Under this Oregon statute, if changes are made which "save" surface water through greater efficiency, the bulk of the "conserved" water is retained by the owner of the water right, while a fraction (25 percent) is automatically committed to instream flows.

Even in places like Oregon, which actively encourage conserved water projects, there have been relatively few successful examples of conserved water to date. One reason is it is hard to find cases where the expanded use made possible by the improved efficiency will not injure some other water users. In other words, water conservation often involves robbing Peter to pay Paul.[529] In this way, water conservation is much more complicated than, say, energy conservation.

B. The practical problem of finding conserved water

Water is used over and over by a series of people. A change in use by one user is likely to affect everyone else downstream. An example may help to illustrate the point.

Consider the hypothetical situation above involving two rather inefficient irrigators. Suppose that Farmer Hanson and Farmer Rodriguez each own water rights to divert 10 cfs of water, and that each farm consumed only 3 cfs while returning 7 cfs to the stream through leaky ditches and so on. (The relative priorities of the farms are not relevant here.) Regardless of priority, neither farmer may make any change which injures the other.

As a result of these diversions, what would have been a natural flow of 13 cfs, is reduced to 3 cfs between points A and B, 10 cfs between points B and C, zero between points C and D, and 7 cfs downstream of D. Thus, the stream is "fully appropriated" in the sense that no new consumptive user can divert upstream of either farmer.

Now suppose that for one reason or another (for instance, a federal subsidy, a regulatory requirement, or a mitigation banking effort), Farmer Hanson decides to undertake an extensive irrigation efficiency improvement project. Let us suppose that by lining his ditches, converting to drip irrigation, or what have you, Farmer Hanson is able to significantly improve his efficiency and cut his diversions in half. Thus, after the efficiency improvements, Farmer Hanson only needs to divert 5 cfs

[528] Or. Rev. Stat. § 540.510.

[529] An efficiency improvement saves a watt of energy, a watt of energy has been saved, and one less needs to be created. Water, in contrast, is used and reused by many people.

to grow the same crop while consumptive use stays at 3 cfs. This would leave 8 cfs in the stretch between points A and B (compared to 3 cfs before the improvements).

Moving downstream, however, the water savings vanish. As Farmer Hanson reduced his diversion by 5 cfs, his return flow also was reduced by 5 cfs (from 7 to 2 cfs). Downstream of his return flow (between points B and C), the flow remains at 10 cfs, the same as it was before the costly efficiency measures were installed. And Farmer Rodriguez continues to divert all of it onto his crops.

Presumably, most efficiency improvements are worthwhile to the water right holder, who will be able to reduce labor or maintenance expenses or increase yields. However, whether the efficiency improvements are worthwhile in changing conditions instream depends upon whether the object was to improve flows within the depleted stretch upstream of the return flow (between points A and B) or downstream of the return flow. For instance, if an endangered snail lived between points A and B, the efficiency improvements could be of significant value in improving that habitat. If, on the other hand, the object of the improvements was to provide more water to flush endangered salmon through reservoirs somewhere far downstream of point B, the efficiency improvements may not have increased the total volume of downstream flow.

This example, of course, is highly simplified. It assumes (1) instantaneous return flows, (2) discrete, non-overlapping return flow points, (3) no conjunctive use of ground water, (4) no change in consumptive use, (5) no storage of water, (6) no inter-basin transfers, (7) no water quality effects, and (8) no cumulative effects. Changing any of these assumptions might change entirely the outcome of the analysis.

First, in the real world, return flow is not instantaneous. The component of return flow that returns water to a river at the end of the irrigation system is close to instantaneous, but the component which returns via ground water may involve considerable delays. To the extent that return flows are delayed, water conservation measures may result in temporary net inputs to the river until a new equilibrium is reached. This would occur as diversions are reduced, but recharge (from old diversions) continues for a period at the same rate. While the bonus is temporary, it might nevertheless be a critical component of a species recovery program.

Second, water which returns to the stream via the ground water return usually does not come in at a particular point and may not return for long distances. Consequently, the area of improved flow resulting from efficiency improvements may be both less discrete and much larger than in the example above. Thus, flows may be improved not just down to the next farm, but for hundreds of miles.

Third, the example above does not include a ground water component. A more realistic example may be that Farmer Hanson's excessive diversion is not only returning to the stream to be used by downstream diverters, but is recharging a large aquifer which also is supplying down-gradient ground water pumpers. If Farmer Hanson then implements irrigation improvements which reduce his diversions, there will be more water in the river and less water for the ground water pumpers.

Assuming the ground water pumpers cannot prevent Farmer Hanson from reducing his diversion,[530] they are the loser, and the river is the winner.

Fourth, the example in the figure above assumes no change in consumptive use. That is probably a fair assumption in most cases. Lining a ditch, for example, has little impact on evaporative loss and does not change the quantity of water lost to evapotranspiration. On the other hand, some conservation measures may change consumptive use. Where that happens, "real" savings are realized. For instance, if water is lost from a leaky ditch to a contaminated aquifer whose waters cannot be used, lining the ditch puts "new" water back into the system. Switching from sprinkler to drip irrigation will reduce evaporation. And, of course, switching crops may produce huge changes in consumptive use.

Fifth, while the example above produced no change in the total *volume* of water below point B, the timing of flows may have changed due to a variety of real-world factors. In a particular situation, it may be that flows could be "shaped" to improve habitat or advance other goals. This ability to shape flows may be enhanced if the water not diverted may be put into storage (or may be left in storage).

Sixth, if the water savings occur on a trans-basin diversion (or involve crossing other hydrologic or legal barriers, such as state lines), the results may be substantially different from the example above. For instance, if Denver diverts water on the Western slope of the Rockies but provides return flows to the Platte River system on the other side of the Continental Divide, municipal water conservation (if it actually leads to reduced diversions) would increase flows on the Western Slope while reducing flows in the Platte.

Seventh, even if water quantity is not increased below Farmer Hanson's return point, water quality may be improved. For instance, the addition of flow may improve the stream's capacity to assimilate discharges within the reach.

Eighth, the example above focuses on conservation measures adopted only by a single farmer. Perhaps a more meaningful scenario would involve water conservation adopted throughout a basin. If that were the case, the incremental savings between points A and B could be replicated over a larger area.

In short, while water conservation is an important goal, it is not as simple as screwing in a lower wattage bulb. A gallon saved is not necessarily a gallon earned. Whether habitat is improved as a result of efficiency improvements is highly situation specific, a fact sometimes not fully appreciated by advocates for efficiency improvements. By better understanding the dynamics of water conservation and water reuse, we can better target investments in conservation to ensure the biggest return for increasingly scarce dollars.

---

[530] This is probably the correct result. While ground water users are entitled in Idaho (and most Western states) to complain of injury just as is a downstream diverter, it is unlikely that a court would consider Farmer Hanson's efficiency improvements to constitute a "change" in use, because he has not changed his point of diversion, place of use, or time of use. It must be said, however, that this is merely a prediction of a legal outcome. The authors are not aware of this situation having been tested in the courts.

C. Idaho's 2003 Water Conservation Statute

The costs of employing conservation measures, and the potential that they will allow more water to be available for actual beneficial use, raises the question of who is entitled to make use of the conserved water, and for what purposes. In Idaho, the law appears to be that the original appropriator may use the "additional" water for the original beneficial use, provided the water has not yet left his control, and provided the use does not result in an expansion of the original use. These, however, are significant conditions.

One of the early Idaho cases to consider the question is *Reno v. Richards*.[531] In *Reno*, the appropriator had removed brush and logs from the stream, and excavated channels through gravel bars in the streambed. In doing so, the appropriator increased the amount of water flowing through the channel and available for diversion. The Idaho Supreme Court held that:

> A person who, by removing obstructions from a stream and constructing artificial works, prevents the loss of water flowing therein through seepage and evaporation, and materially augments the amount of water available from the stream for a beneficial use, has the right to make use of the amount of water so conserved by his efforts in excess of the natural flow of the stream.[532]

Actually, the *Reno* case is more accurately treated as an "augmented supply" case rather than as one involving the right to conserved water. In *Reno*, the facts show that the actual supply of water at the source was increased by the appropriator's efforts.[533] In contrast, "conserved water" might best be defined as that water which results from making better use of the water once it has been diverted.

In 2003, the Legislature enacted a measure expressly exempting conserved water from forfeiture.[534] Thus, a water right user, having managed to "conserve" a fraction of her water right through the institution of conservation measures, is assured that the conserved portion will not be forfeited. Thus, the user retains the option of reverting to the pre-conservation practice. This merely

---

[531] *Reno v. Richards*, 32 Idaho 1, 178 P. 81 (1918).

[532] 32 Idaho at 1, 178 P. at 82-83.

[533] *See also Basinger v. Taylor*, 36 Idaho 591, 211 P. 1085 (1922) (party who augments streamflow by 10 percent by constructing pipeline should be decreed prior right to the quantity saved). Compare the cases of *Southeastern Colorado Water Conservation Dist. v. Shelton Farms, Inc.,* 529 P.2d 1321 (1975), and *R.J.A., Inc. v. Water Users Ass'n of Dist. No. 6*, 690 P.2d 823 (Colo. 1984), in which the Colorado Supreme Court held that there is no right to appropriate water made available by removing water consuming vegetation along a stream. The rationale in the Colorado cases is that such water already is a part of the stream, and when it becomes available, belongs to appropriators from the stream in the order of their priority. These Colorado cases also focus on the potential for severe environmental effects that would result from a policy that encouraged destruction of riparian vegetation to salvage additional water from the stream.

[534] H.B. 1100 (2003) (codified at Idaho Code §§ 42-223(9), 42-250).

confirms what is already departmental policy. (See discussion of partial forfeiture in section 6.G at page 71.)

The Act provides a new definition of conservation practice:

> For purposes of this section, "water conservation practice" means any practice, improvement, project or management program, that results in the diversion of less than the authorized quantity of water while maintaining the full beneficial use(s) authorized by the water right. Water conservation practices include, but are not limited to, practices that result in reductions in consumptive use as defined in section 42-202B, Idaho Code, reductions in conveyance losses, and reductions in surface and seepage losses occurring at the place of use.[535]

Consumptive use, in turn, is defined as follows:

> "Consumptive use" means that portion of the annual volume of water diverted under a water right that is transpired by growing vegetation, evaporated from soils, converted to nonrecoverable water vapor, incorporated into products, or otherwise does not return to the waters of the state. Consumptive use does not include any water that falls as precipitation directly on the place of use unless the precipitation is captured, controlled and used under an appurtenant water right.

Idaho Code § 42-202B(1).

Thus, under the 2003 Act, conserved water may be created and protected from forfeiture through practices such as ditch lining. As noted above, however, ditch lining and similar practices often result in a material reduction in return flows to other users—or, more likely, they alter the location and timing of return flows. Thus, presumably, no such conserved water may be transferred to a new use, because doing so would result in injury.[536] Thus, the practical applicability of the legislation appears to be quite limited.

Although there are no Idaho cases directly addressing the right to conserved water, Idaho cases dealing with the right to recapture and use waste water or seepage (discussed below) are instructive.

---

[535] Idaho Code § 42-250(2).

[536] The act only addresses forfeiture. It does not change the rules governing transfer of the "conserved" portion for transfer to a new use. Such transfers would remain subject to basic no-injury principles. Thus, for instance, a user who lined a leaking canal could not sell the "conserved" portion of the right, if other users had formerly relied on return flows from the leaking canal.

19. RECAPTURE AND REUSE, AND THE APPROPRIATION OF WASTE WATER

A. Overview

Few water uses consume one hundred percent of the water they divert. For example, a surface water irrigator typically diverts considerably more water than is applied to the crops. What is left over goes by various names such as waste water, return flow, tail water, seepage water, and drain water—whose definitions are sometimes vague and overlapping.

We use the terms "waste water"[537] and "return flow" interchangeably to describe, collectively, tail water accruing at the end of an irrigated field, the seepage water that leaks out of canals or reservoirs, the excess water applied to crops that percolates into the soil, and effluent or sewage generated or collected by an industrial user, a municipality, or a sewer district.[538]

This section explores the rights of the original appropriator to recapture his or her own waste water and the rights of third parties to obtain an appropriation of waste water released by another. This section also addresses the rights of municipal entities and industrial users to retain and use effluent (aka "wastewater") from their municipal treatment facilities or industrial operations. It also addresses the rights of a municipal provider to contract with another entity for reuse of wastewater. Finally, it addresses broader questions of land application of wastewater, with and without a water right.

B. Right of the original diverter to recapture waste water for use on the original place of use

It is a basic premise of the Prior Appropriation Doctrine that water diverted and not used be returned to its source.[539]

> It is elementary that the waters of the public streams of this state belong to the people, and that appropriators acquire only a right of use. It is also settled law that an appropriator is limited in his use of water to his actual needs. He must not waste it, and if there is a surplus remaining after use, it must be returned to the stream whence it came.

---

[537] Note that wastewater—typically written without a space—refers to effluent from industrial uses or municipal treatment plants. In the irrigation context, waste water—typically written with a space—has a somewhat different meaning; it refers to any water left over after the initial irrigation. This also is sometimes referred to as "tailwater."

[538] In *A&B Irr. Dist. v. Aberdeen-American Falls Ground Water District*, 141 Idaho 746, 118 P.3d 78 (2005) (Schroeder, C.J.) (emphasis omitted), the Idaho Supreme Court (quoting the SRBA Court) defined waste water as: "(1) water purposely discharged from the project works because of operation of necessities, (2) water leading from ditches and other works, and (3) excess water flowing from irrigated lands, either on the surface or seeping under it."

[539] A good overview of the entire subject of water rights in waste water and reuse is James W. Johnson, et al., *Reuse of Water: Policy Conflicts and New Directions*, 38 Rocky Mtn. Min. L. Inst. § 23 (1992).

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

Water Supply and Storage Co. v. Curtis, 733 P.2d 680 (Colo. 1987) (quoting *Pulaski Irr. Dist. v. City of Trinidad*, 203 P. 681 (Colo. 1922).

This principle is counterbalanced with the equally important principle that an appropriator may recapture and reuse water previously diverted so long as the reuse occurs within the geographic and other limitations of the original water right. This is not so much an exception to the obligation to return water to the common source as it is a clarification of what is "unused." Simply put, the water that is lawfully recaptured and used within scope of the original water right is not "unused" water that must be returned to the common supply.

The right to recapture has long been recognized Idaho law. "It is settled law that seepage and waste water belong to the original appropriator and, in the absence of abandonment or forfeiture, may be reclaimed by such appropriator as long as he is willing to put it to beneficial use." *Reynolds Irr. Dist. v. Sproat* ("*Reynolds II*"), 70 Idaho 217, 222, 214 P.2d 880, 883 (1950) (Taylor, J).[540] This is true even if the recapture and reuse comes years after the initial water right was established. And, most importantly, it is true even if the change reduces the water available to other water users downstream.[541] It is generally recognized that the recapture must occur before the appropriator relinquishes control (i.e., before the water reaches natural water bodies where it becomes available for appropriation by others).

For example, a farmer may capture tail water running off the low end of a field and pump it back to a portion of that field which, due to topography or other factors, was chronically under-irrigated. Since the right of recapture is considered part of the original water right, it would be allowed under the priority date of the original diversion—provided the recaptured waste water is put to beneficial use on the original parcel (for example to water an area that previously was under-irrigated). Others who may have come to rely on the waste water may not insist that the original appropriator maintain the artificial conditions from which they have benefited.

This is not to say that all seepage and waste water literally "belongs" to the original appropriator in the sense that they may do with it as they like. In fact this right to recapture and reuse is quite limited, particularly in the irrigation context. As discussed below, however, the situation is considerably more flexible tor municipal providers.

---

[540] *See also Hidden Springs Trout Ranch v. Hagerman Water Users, Inc.*, 101 Idaho 677, 619 P.2d 1130 (1980); *Sebern v. Moore*, 44 Idaho 410, 258 P. 176 (1927) (third parties may appropriate waste water, subject to the original appropriator's right, in good faith, to cease wasting it and put it to a beneficial use); and *Application of Boyer*, 73 Idaho 152, 248 P.2d 540 (1952) (Givens, C.J.). None of these cases addresses the question whether one may reduce waste, then transfer the surplus to some new use. Later opinions make clear that an appropriator may not do this. *See, e.g., Fremont-Madison Irr. Dist. & Mitigation Grp. v. Idaho Ground Water Appropriators, Inc.*, 129 Idaho 454, 926 P.2d 1301 (1996) (Schroeder, J).

[541] One principle governing waste water is that an irrigator "is not bound to maintain conditions giving rise to the waste of water from any particular part of its system for the benefit of individuals who may have been making use of the waste." Wells A. Hutchins, *The Idaho Law of Water Rights*, 5 Idaho L. Rev. 1, 100 (1968).

Notably, the right to recapture and reuse waste water does not override other principles of water law, such as the rule against enlargement. In *United States v. Haga*, 276 F. 41 (Dist. Idaho 1921), the federal court suggested that the beneficial use of the conserved waste or seepage must occur within the same lands for which the water originally was appropriated.[542] This limitation—that recaptured waste or seepage water may be used only on the original lands—reinforces Idaho's anti-enlargement policy. Allowing a water user to make more complete use of water under his or her water right within the licensed or decreed place of use, and for the licensed or decreed purpose, promotes efficiency and the full beneficial use of water under the right; doing so logically has been seen by Idaho courts as fully within the original right. Obviously, however, the limitation to the original land and purpose of use sharply constrains the right to recapture and reuse. Notably, the farmer is not free to use that recaptured water to bring new lands under cultivation.

This rule against enlargement was articulated again by the Idaho Supreme Court in *Fremont-Madison Irr. Dist. & Mitigation Grp. v. Idaho Ground Water Appropriators, Inc.*, 129 Idaho 454, 926 P.2d 1301 (1996) (Schroeder, J). It was reinforced a few years later in *A&B Irr. Dist. v. Aberdeen-American Falls Ground Water District*, 141 Idaho 746, 118 P.3d 78 (2005) (Schroeder, C.J.). In the 2005 opinion, the Court ruled that "A&B may use the [reclaimed waste] water on its original appropriated lots." *A&B*, 141 Idaho at 752, 118 P.3d at 84.[543] But it may not rely "on an unappropriated source, that of recaptured drain and/or waste water to irrigate its additional acres." *Id*. The *A&B* Court not only emphasized this point, but went beyond it to state that an excess of waste water obligates the appropriator to diminish its diversion to reduce the waste:

> As the Ground Water Users and the State appropriately note, should A&B find itself in the unique situation of having more excess drain and/or waste water than it can reuse on its appropriated properties, Idaho water law requires the district to diminish its diversion. Reclamation Act of June 17, 1902, ch. 1093, § 8, 32 Stat. 388, 390.

[542] The court referred only to the beneficial uses on the "project" lands, which in that case included a federal irrigation project in the Boise River Basin.

[543] The central dispute in the *A&B* case concerned 2,363 acres the irrigation district was irrigating but which were in excess of the water right's licensed acreage. The district explained that the acres were irrigated with waste water originating from both the district's ground water delivery system and natural runoff, and argued that it should be allowed to do this because it "owned" the waste water. The plaintiffs, who were junior ground water users, asserted that these additional acres were illegal enlargements and that a water right to irrigate them could be recognized, if at all, only under Idaho's amnesty statute, Idaho Code § 42-1426, in which case the right would have to take a subordinated priority tied to the 1994 date the statute was passed. This had been the essential ruling in *Fremont-Madison*. Indeed, the amnesty statute itself explains the Legislature's recognition that enlargements arose "through water conservation and other means" that allow more acres to be irrigated with the same diversion. Reducing or recapturing waste water is a classic example of water conservation.

A&B, 141 Idaho at 752, 118 P.3d at 84. [544]

Thus, if recapture and onsite reuse proves so effective that less water is required to accomplish the licensed or decreed beneficial use, the user may be required to reduce his or her diversion accordingly. However, as discussed below, the user typically retains the right to cease the recapture and revert to the prior regime.

The *A&B* Court took an exacting approach in its discussion of recaptured drain or seepage water which again emphasizes that this water cannot serve new lands without a new water right. The irrigation district had contended that the "source" of water to irrigate the extra acres is waste water, and not ground water under the district's original water right (even though the waste water originated primarily from the ground water supply). Although the Idaho Supreme Court ultimately rejected this and agreed with the district court that the source was the district's original ground water source, it did entertain the question of what would happen had it viewed the source as simply "waste water" not originating from the district's licensed diversion. It found that, if that were the case, the water user would be required to obtain a new water right by appropriation of the waste water:

> A&B's additional 2,363.1 acres neither qualifies as an enlargement or for amnesty under I.C. § 42-1426 based upon a finding that the water source is recaptured drain and/or waste water. A&B is not seeking to expand the number of acres it irrigates with original ground water under right no. 36-02080. Rather, it relies on an unappropriated source, that of recaptured drain and/or waste water to irrigate its additional acres. This is in violation of the mandatory water permit requirements. Idaho Code § 42-229 (2003). Treating the water as something other than ground water, A&B must seek a new water right for this water source prior to any further use on the 2,363.1 acres.

A&B, 141 Idaho at 751-52, 118 P.3d at 83-84.

In a footnote, the Court held that the waste water did not qualify as "private water" and therefore "appropriation under the mandatory permit scheme is the only method by which this water can now be put to beneficial use." *A&B*, 141 Idaho at 752 n.1, 118 P.3d at 84 n.1. Ultimately, the Court found that the district's source was water diverted under its original ground water right (although recaptured on the surface as seepage or waste), and that the irrigation district therefore did qualify for the amnesty. Accordingly, the district was able to continue irrigating the enlarged acres, but was required to accept the subordination condition on the new water right for them.

Provisions of Idaho's water code other than the amnesty provision discussed above also are consistent with the non-enlargement principle when it comes to an appropriator's collection and use of

[544] The reference to the Reclamation Act, presumably, is intended to embrace Congress' recognition that beneficial use of water is "the basis, the measure and the limit" of a water right. See discussion in section 4.D at page 39.

Printed 6/23/2023 9:09 AM

waste water arising from his irrigation practices. An Idaho statute authorizes the construction of wells by a person owning irrigation works "for the sole purpose of recovering ground water resulting from irrigation under such irrigation works for further use . . . on lands to which the established water rights of the parties constructing the wells are appurtenant." Idaho Code § 42-228.[545] In other words, this statutory pronouncement on the recapture of waste or seepage water expressly restricts the use of the recaptured water to the original place of use—that is, enlargements are not allowed. Likewise, Idaho's transfer statute expressly prohibits enlargements as a result of any transfer. Idaho Code § 42-222(1).

In summary, although the earlier cases authorizing an appropriator's recapture and reuse of waste water[546] did not expressly address the enlargement issue, it now has been addressed, and in clear terms. If additional lands or other uses are to be added to a water right through the recapture of waste water, a new water right will be necessary.

The author of this section offers this additional commentary. It would seem that the *A&B* decision was unnecessarily preoccupied with an obscure semantical question about the "source" of the water—distinguishing ground water from waste water. The decision got to the right place in the end, essentially saying that it does not matter what you call it. The author suggests that the Court's holding may be articulated as follows:

The original appropriator may recapture and reuse its own waste water (derived from its own water right, recaptured before it reaches the public water supply) if and only if he or she applies the recaptured waste water to lands or uses within the scope of the original right. If someone else (a third party) wishes to capture and use that same waste water after it reaches the public water supply (e.g., in a drain that the third party may legally access), he or she must appropriate that waste water. If the original appropriator wishes to recapture and reuse the same waste water for use outside the ambit of the original right (i.e., on expanded acreage), he or she has two choices: (1) obtain a new, junior appropriation for the new acres or (2) fit under the amnesty statute, if one can, and accept subordination to April 12, 1994 under the amnesty statute (Idaho Code § 42-1426). In A&B's case, the district ended up with the second option.

C. There is no right to compel another appropriator to continue discharging waste water.

There are instances in which a third person may make a new appropriation of waste water generated by another or even by the same user.[547] However, waste water loses its characterization as

[545]This statute allows shallow ground water wells to recapture seepage originating from the surface irrigation of a parcel, roughly equivalent to a seepage ditch at the end of a field from which the farmer pumps water back to fully irrigate the parcel.

[546] E.g., *Sebern v. Moore*, 44 Idaho 410, 258 P. 176 (1927); *Application of Boyer,* 73 Idaho 152, 248 P.2d 540 (1952) (Givens, C.J.); *Hidden Springs Trout Ranch v. Hagerman Water Users, Inc.*, 101 Idaho 677, 619 P.2d 1130 (1980).

[547] In *Sebern v. Moore*, 44 Idaho 410, 258 P. 176 (1927) (Varian, J.), the Court confirmed the basic right to appropriate waste and seepage water made available as a by-product of the diversions of other appropriators.

such when released back to the public water supply. Thereafter, it is subject to appropriation (and available to satisfy prior appropriations) just like any other public water.

In either case, an important caveat is that the appropriator (whether of waste water or of water whose supply is enhanced by waste water) has no guarantee that the waste water will continue to be available. An irrigator "is not bound to maintain conditions giving rise to the waste of water from any particular part of its system for the benefit of individuals who may have been making use of the waste." Wells A. Hutchins, *The Idaho Law of Water Rights*, 5 Idaho L. Rev. 1, 100 (1968).

For instance, the original appropriator who generates the waste water could cease diverting altogether so as to leave the new appropriator without a water source. Likewise, the original appropriator might alter his or her operation to reduce the amount of waste water generated (e.g., by ditch lining). Finally, as noted, the original appropriator may recapture the waste water for use within the scope of his or her water right.

Indeed, in *Sebern*, the waste water appropriator was allowed to re-establish his diversion of waste water after a waste ditch was relocated by another appropriator. The Court added the now-familiar caveat, however, that the waste water appropriation is "subject to the right of the owner [that is, the person generating the waste water] to cease wasting it, or in good faith to change the place or manner of wasting it, or to recapture it, so long as he applies it to a beneficial use." *Sebern*, 44 Idaho at 418, 258 P. at 178. This is significant given that in a change or transfer application, the prior appropriator is <u>not</u> allowed to make any change (even in good faith) that would injure a junior.

In 1956, the Idaho Supreme Court held that a neighbor could not obtain a waste water appropriation that essentially compelled the original appropriator to continue to discharge waste water:

> It is a rule long recognized that a landowner cannot acquire a prescriptive right to the continued flow of waste or seepage water from the land of another, that is, seepage water or waste water running from one's land to that of another need not be continued and it may be intercepted and taken by such owner at any time and used on the land to which it is appurtenant.

Thompson v. Bingham, 78 Idaho 305, 308, 302 P.2d 948, 949 (1956) (Keeton, J.) (citing cases in Utah and Colorado) ().

In *Hidden Springs Trout Ranch v. Hagerman Water Users, Inc.*, 101 Idaho 677, 619 P.2d 1130 (1980), the Idaho Supreme Court unanimously reaffirmed the principle that an appropriator of waste water may not compel the original diverter to continue the practices leading to the generation of the waste water.

"We conclude that surface waste and seepage water may be appropriated under the provisions of C. S. § 5562, subject to the right of the owner to cease wasting it, or in good faith to change the place or manner of wasting it, or to recapture it, so long as he applies it to a beneficial use." *Sebern*, 44 Idaho at 418, 258 P. at 178. (Prior to this decision, there was some thought that appropriations might be limited to water naturally occurring.) See also, *A&B*, 141 Idaho at 752, 118 P.3d at 84 (an appropriation of "recaptured drain and/or waste water" requires compliance with the mandatory permitting requirements).

> No appropriator of waste water should be able to compel any other appropriator to continue the waste of water which benefits the former. *Crawford v. Inglin*, 44 Idaho 663, 258 P. 541 (1927). While the waste of the original appropriator is not to be encouraged, the recognition of a right in a third person to enforce the continuation of waste will not result in more efficient uses of water.

Hidden Springs, 101 Idaho at 681, 619 P.2d at 1134. The *Hidden Springs* Court emphasized that it makes no difference whether the waste water arises before the use (from a leaky canal) or after the use (from post-irrigation tail water, for example). The original appropriator may at any time cease the practice giving rise to the waste water, even to the detriment of those who hold valid water rights in that waste water (subject, of course, to the limitations as to non-enlargement and beneficial use as described in *A&B Irr. Dist. v. Aberdeen-American Falls Ground Water District*, 141 Idaho 746, 752, 118 P.3d 78, 84 (2005) (Schroeder, C.J.)).

Thus, the original appropriator is free to abandon or modify the activity producing the waste water. For example, an irrigator is free to replace a leaky ditch with a pipeline or otherwise improve the efficiency of his or her application. After the improvement is made, less water is applied to the field and/or less water escapes along the conveyance. As a result, the neighboring hydrology may be affected and water available to serve other water rights could be reduced. Holders of those rights, however, have no legal basis to object to such efficiency improvements by their neighbors.

These legal principles pertaining to waste water have been followed in the Snake River Basin Adjudication ("SRBA"). Special Master Terry Dolan reiterated these principles in *Special Master's Report*, *In re SRBA,* Case No. 39576, Subcases 75-4471 and 75-10475 (Silver Creek Ranch Trust) at 4 and 6-7 (September 28, 2009). Similarly, in *In re: Janicek Properties, LLC, Memorandum Decision and Order on Motion for Summary Judgment, In re SRBA*, District Court of the Fifth Jud. Dist. of the State of Idaho, Subcase No. 63-27475 (May 2, 2008), the Bureau of Reclamation and its contracting irrigation district argued that they constructed a drain and could trace most or even all of the water in it to seepage and return flows from the district's irrigated lands. They contended that the drain was not a natural watercourse and that they should be deemed the owner of the drain and the water in it. Based on this reasoning, they asked the adjudication court to invalidate a farmer's 1951-priority licensed water right pursuant to which he pumped water from the drain to irrigate his crops. The Special Master rejected this challenge to the farmer's drain water right, ruling that, regardless of who constructs a drain, the water in it is "public water of the state of Idaho and subject to appropriation and beneficial use." *Janicek Properties*, slip op. at 6. The SRBA Court found that whether the drain is a natural watercourse "is immaterial—what matters is that the water is water of the state" and is subject to appropriation. *Id.* at 8.

Once water is released by the original appropriator and is beyond his or her control (whether that be to an artificial conveyance such as a drain or to a natural stream or aquifer), it becomes public water once again and subject to appropriation. Referring to such a source as "waste water" undoubtedly has led to some confusion over the years. Other than the caveat discussed above (that the new appropriator cannot complain if the waste water is no longer supplied), there is little to be gained in attempting to distinguish it from water occurring naturally. Even a constructed drain at times will carry natural runoff. Similarly, natural stream flows in agricultural areas nearly always contain some measure of

return flow and seepage, either those flowing to the stream as surface returns or those arriving through ground water discharge. The essential rule is simply that public waters are subject to appropriation regardless of their origin or whether they are found in drains or similar structures.

D. Reuse of municipal effluent.

The principles of recapture and reuse that were developed in the context of irrigation apply as well in the context of municipal wastewater. In short, a city may recapture and reuse effluent from its sewage treatment plant before it is released to a public water body. Likewise, irrigators or others who had come to rely on the prior discharge of that wastewater cannot complain when the city recaptures and reuses it.

Although the same general principles apply, there are important practical differences when it comes to municipal wastewater. Under Idaho law, municipal water rights are different from others in two important respects.

First, they do not have a fixed place of use. Instead, a municipal service area grows over time as does demand. Idaho Code § 42-202B(9). (See discussion in section 23.D(5) at page 346.) This moots the constraint applicable to irrigators and industrial users limiting the reuse to the original place of use (at least, without a transfer or a new appropriation). "This rule [limiting reuse to the original irrigated land] was changed for municipalities, without an adjustment period for those who had relied on the return flow, when the courts allowed municipalities to start consuming their sewage effluent through disposal methods that no longer sent it back to the stream as return flow." Robert E. Beck, *Municipal Water Priorities/Preferences in Times of Scarcity: The Impact of Urban Demand on Natural Resource Industries*, 56 Rocky Mtn. Min. L. Inst. § 7.02[4] (2010).

Second, municipal use encompasses a broad range of uses from low consumptive domestic uses to high consumptive uses by industries served by the municipal provider. This mix may change over time. Accordingly, the Department deems municipal water rights to be potentially 100 percent consumptive.[548] As a result, cities may recapture wastewater and reuse it for other municipal uses (such as watering parks, golf courses, or lawns) and such use is not deemed to be an enlargement.

While Idaho courts have not yet had occasion to address the issue, other state courts have consistently upheld the right of municipal providers to recapture and reuse municipal effluent and even, in some cases, to sell it to others.[549] The only limitation seems to be that the recapture occur before the

---

[548] *Transfer Processing Policies & Procedures* (Transfer Processing No. 24) p. 31 (revised Dec. 21, 2009) (reproduced in Appendix L). This section of IDWR's guidance addresses the disposal of dairy, industrial, and municipal wastewater. It notes that "the use of water [for such purposes] is considered fully consumptive."

[549] In addition, at least five states have adopted statutes regulating, facilitating, and encouraging the reuse of municipal effluent. Or. Rev. Stat. §§ 537.131, 537.132, 540.510; Cal. Water Code §§ 13551-13556; Nev. Rev. Stat. Ann. § 533.024; Wash. Rev. Code §§ 90.44.062 to 140; Utah Code Ann. §§ 73-3c-1 to 73-3c-8.

water reaches a public water body.[550] These principles have been confirmed in informal guidance from the Idaho Department of Water Resources.[551]

A city's right to recapture and reuse municipal effluent was recognized in *Reynolds v. City of Roswell*, 654 P.2d 537 (N.M. 1982). This case dealt with a water system on the former Walker Air Force Base, all of which had been acquired by the city. The city filed an application to add additional points of diversion and change the place of use, the effect of which would be to integrate the original air force water right into the city's municipal system. Prior to the application, the city (and the Air Force before that) sold some of the sewage effluent associated with the air base to farmers and to a golf course and discharged the rest into the Hondo River. The State Engineer approved the change application but added a condition requiring the city to continue to discharge into the river at the same ratio as under prior practice. "The State Engineer's conditions required that the city either continue selling treated effluent to the farmers east of the City and to the Roswell Country Club or to continue discharging treated effluent directly into the Hondo River." *City of Roswell*, 654 P.2d at 538. The city

---

[550] Perhaps a city could engage in an aquifer storage and recovery project employing treated effluent. Doing so would require affirmative steps to measure and control the stored water, as well as the acquisition of corresponding water rights and/or approval of a mitigation plan. See discussion in section 22.C at page 320.

[551] "You confirmed my understanding that a city may recapture and reuse its municipal effluent and apply it to other municipal uses within its growing service area, and that doing so does not cause legal injury to other water uses. You also confirmed that, if required to meet environmental regulations, treatment utilizing an infiltration basin would be viewed as being within the existing municipal use. You also confirmed that the uses could be modified over time. For example, as conditions change and demand grows, the City could put less water into treatment of effluent by infiltration and use some or all of the effluent to serve new customers (e.g., for lawn or open space irrigation). Finally, you confirmed that these uses would not require a transfer—assuming that the reuse of the effluent was required in order to satisfy environmental requirements." Letter from Christopher H. Meyer to Garrick L. Baxter and Jeff Peppersack (May 24, 2011) and response from Garrick L. Baxter (May 26, 2011) (edits from reply are reflected in quotation).

"This responds to your letter of August 18, 2011 requesting confirmation that the City of McCall ("City") has authority to land apply its municipal effluent to lands located beyond the city limits but within the City's service area. I have reviewed your letter with the staff of the Idaho Department of Water Resources ("IDWR") and am able to confirm that on the issue of whether municipal reuse of waste water comes within the original use of the municipal right, your analysis is consistent with current IDWR policy. Waste water treatment necessary to meet adopted state water quality quality requirements is considered by IDWR as part of the use authorized under a municipal right so long as the treatment process complies with the best management practices required by the Idaho Department of Environmental Quality, the U.S. Environmental Protection Agency, or other state or federal agency having regulatory jurisdiction. For new uses of municipal wastewater that are not necessary to meet water quality requirements, an application for permit to appropriate water should be files as required by Idaho Code § 42-202." Letter from Garrick L. Baxter to Christopher H. Meyer (Sept. 7, 2011). The September 7, 2011 letter went on to say that, under the 1996 Municipal Water Rights Act, the land application could occur outside the boundaries of the city so long as "the constructed water delivery system for the area outside the city limits shares a common water distribution system with lands located within the corporate limits." The city limits issue, however, is mooted by S.B. 608 (Idaho Code § 42-201(8)) enacted in 2012.

EXHIBIT C
Page No. 291 of 761

challenged the condition, contending that it should be allowed to recapture and reuse the effluent in its municipal system if and when it saw fit. The Wyoming Supreme Court sided with the city. It affirmed the district court's ruling that "[t]he City of Roswell's sewage effluent is private water which the City may use or dispose of as it wishes." *City of Roswell*, 654 P.2d at 538.

The court limited its ruling, however, noting that the recapture must occur before the city loses control of the effluent:

> The City readily acknowledges, and we agree, that once the effluent actually reaches a water course or underground reservoir [i.e., an aquifer], the City has lost control over the water and cannot recapture it. That is what the courts state in the cases relied upon by the State Engineer. *See Brantley v. Carlsbad Irr. Dist.*, 92 N.M. 280, 587 P.2d 427 (1978); *Kelley v. Carlsbad Irrigation District*, 76 N.M. 466, 415 P.2d 849 (1966); *State v. King*, 63 N.M. 425, 321 P.2d 200 (1958); *Rio Grande Reservoir and Ditch Co. v. Wagon Wheel Gap Improvement Co.*, 68 Colo. 437, 191 P. 129 (1920).
>
> We stress that the specific legal issues on appeal in this case do not concern the recapture of water which has escaped into and have become commingled with the natural public waters, whether surface or underground. The issue here is whether Roswell may take the sewage effluent before it is discharged as waste or drainage water and reuse it for municipal purposes.

Reynolds, 654 P.2d at 540-41.

In reaching its decision, the *Reynolds* Court quoted at length from a 1925 decision by the Wyoming Supreme Court directly addressing the right of a city to reuse its wastewater to extinction:

> It is not strange that we are unable to find any cases considering the right of a city to dispose of its unpurified sewage for irrigation purposes. Most of the controversies with respect to sewage that have gotten into the courts concern the rights of those who claim that in disposing of its sewage the city is guilty of maintaining a nuisance. In this case both the plaintiff and defendant are satisfied, for the present at least, and in fact insist, that the city discharge its sewage in such a way and at such place as will permit them to use it. It is well known that the disposition of sewage is one of the important problems that embarrass municipalities. In order to dispose of it without injury to others, a city may often be confronted with the necessity of choosing between several different plans, and in the selection of the plan to be followed we think it should be permitted to exercise a wide discretion. In determining how it will make a proper disposition of that which may be termed a potential nuisance, we think the city should not be hampered by a rule that would always require the sewage to be treated as waste or surplus

> waters. Sewage is something which the city has on its hands, and which must be disposed of in such a way that it will not cause damage to others. It would often be considered the height of efficiency if it could be disposed of in some other manner than by discharging it into a stream. Even in this state, where the conservation of water for irrigation is so important, we would not care to hold that in disposing of sewage the city could not adopt some means that would completely consume it.

Wyoming Hereford Ranch v. Hammond Packing Co., 236 P. 764, 772 (Wyo. 1925) (emphasis added). This 1925 decision continues to be cited and quoted for its bedrock principles.

In *Wyoming Hereford*, the City of Cheyenne contracted with a packing company for the disposal of the city's sewage effluent, which had previously been discharged into a creek. Under the contract it was delivered to the packing company "in such a way and at such place as will permit [the packing company] to use it." *Wyoming Hereford*, 236 P. at 772. The court ruled that whether this was permissible depended on whether the sewage effluent was delivered directly to the new use or via a public stream. There were two sewage lines in this case. Under the contract, one of them (the sanitary sewer east of Lake Minnehaha) delivered water straight to a ditch on land owned by the packing company. The other (the sanitary truck line) discharged into Crow Creek where it flows across the lands of the packing company. The court upheld the city's right to recapture and convey to the packing company with respect to the first but not with respect to the second. Once the water "becomes commingled with the waters of the stream" it is no longer the city's to recapture. *Wyoming Hereford*, 236 P. at 773. This limitation on the right to recapture is consistent with that in *Reynolds*, discussed above, and *City of San Marcos v. Texas Comm'n on Envtl. Quality*, 128 S.W.3d (Texas Ct. App. 2004), discussed below. Where water is delivered straight to the new use, the court perceived no problem:

> It might, we think, be diverted to waste places, or to any chosen place where it would not become a nuisance, without any consideration of the demands of water users who might be benefited by its disposition in some other manner. In providing such a place, the city might acquire the right to discharge the sewage on the lands of any person willing to suffer such a use of his lands, and we see no reason why this right might not be gained by the city in consideration of the landowner's right to use or dispose of the sewage in any lawful way. From these views with reference to the city's rights, it follows that the sewage deposited from the so-called "sewer east of Lake Minnehaha" should not be considered as a part of the public waters of the state subject to the rights of the appropriators from Crow creek. It is our opinion, therefore, that the plaintiff, as an appropriator of waters of Crow creek, has no right to question the contract between the city and the defendant in so far as it provided for the discharge and use of sewage from the sewer line last mentioned.

Wyoming Hereford, 236 P. at 772-73.

This Wyoming case, in turn, was relied on by the Arizona Supreme Court in reaching a similar conclusion confirming the right to recapture municipal effluent in that state. *Arizona Public Service Co. v. Long*, 773 P.2d 988 (Ariz. 1989).[552] In the Arizona case, holders of junior downstream irrigation rights had come to rely on effluent discharged by Phoenix and other cities. They sued to stop the cities from selling that effluent to a utility that would use it for cooling water at a nuclear power plant. The Arizona Supreme Court upheld the cities' right to do so, holding that they could put their sewage effluent to any reasonable use that would allow them to maximize its use and its economic value. The Arizona Court of Appeals confirmed these principles in *Arizona Water Co. v. City of Bisbee*, 836 P.2d 389 (Ariz. Ct. App. 1991), a case involving a city's sale of effluent to Phelps Dodge for use in copper leaching operations.[553]

In *Barrack v. City of Lafayette*, 829 P.2d 424 (Colo. Ct. App. 1992), the Colorado Court of Appeals released the City of Lafayette from liability for no longer providing effluent water under a contract with plaintiffs when environmental regulations made that delivery illegal. In so ruling, the court ruled that plaintiffs' procedural due process was not violated because they had no property interest in the effluent.

In *City of San Marcos v. Texas Comm'n on Envtl. Quality*, 128 S.W.3d (Texas Ct. App. 2004), the Texas Court of Appeals found that the City of San Marcos did not have the right to recapture its wastewater effluent in a river three miles downstream of the sewage treatment plant. The city sought to recapture the water, treat it, pipe it back to the city, and add it to its municipal supply. The purpose of leaving it in the river for so long was to allow the effluent to be diluted with cleaner river water, thus reducing the cost of treatment after recapture. In rejecting the plan, the court concluded that the character of the water changed once the city released it to the river, whereupon it became public water. "By intentionally discharging its effluent into the river, where it eventually commingles with the State's water, the City effectively abandons its control over the identifying characteristics of its property. This physical reality suggests that the City is voluntarily and intentionally abandoning its ownership rights over the effluent." *San Marcos*, 128 S.W.3d at 277. By clear implication, however, the city would have been allowed to recapture and reuse its wastewater if it had done so before returning it to the river. Indeed, as the court noted, that was exactly what the city's opponents said: "If

---

[552] This important case is discussed in Ginette Chapman, Note, *From Toilet to Tap: The Growing Use of Reclaimed Water and the Legal System's Response*, 47 Ariz. L. Rev. 773 (2005), and 2 Robert E. Beck, *Waters and Water Rights* § 13.04 (2000).

[553] The *Arizona Public Service* Court rejected the reasoning found in an early Colorado "en decision in which two justices dissented and one did not participate." *Arizona Public Service*, 773 P.2d at 993. The case was *Pulaski Irrigation Co. v. City of Trinidad*, 203 P. 681 (Colo. 1922). *Pulaski* held that the City of Trinidad was required to return its purified waste water to the stream, unless the cost of purification was too high. "Thus, *Pulaski* appears to state that water may be reused or otherwise disposed of but only if it is uneconomical to return it to the common supply." James W. Johnson, et al., *Reuse of Water: Policy Conflicts and New Directions*, 38 Rocky Mtn. Min. L. Inst. § 23 (1992).

the City wants to reuse its wastewater, it should use it directly rather than unnecessarily mixing it with the pure river water." *San Marcos*, 128 S.W.3d at 267.[554]

In *City of Aurora v. N. Colorado Water Conservancy Dist.*, 236 P.3d 1222 (Colo. 2010), the Court examined a contract for reuse of wastewater between the Conservancy District and the City of Aurora. The Court focused on the contract details without questioning the right of a municipal water provider to enter into a contract authorizing the city to reuse water collected in the city's sewer system.

E. Land application of municipal or industrial wastewater

(1) IDEQ permit

Certain land applications of effluent require a permit from the Idaho Department of Environmental Quality, pursuant to the Department's Recycled Water Rules (formerly Wastewater—Land Application Rules) at IDAPA 58.01.17. A discussion of these permitting requirements is beyond the scope of this Handbook.

(2) Background

In recent years "land application" of waste water has become increasingly common. This refers to the disposal of wastewater from industrial processes or municipal sewage effluent by applying it to land to irrigate crops or grasses. Typically, the untreated waste water is applied directly to crops (with little or no pre-treatment), though it is often mixed with clean (or at least irrigation-quality) water to dilute it.[555] The basic goal is to use natural processes to eliminate pollutants in the waste water and, at least to a large degree, consume the water. At the risk of oversimplification, the pollutants in the industrial or municipal wastewater (such as phosphorus or other nutrients) are broken down and/or taken up by the plants and thereby kept out of soils and water. In some cases, valuable crops are produced. In other cases, the application irrigates grasses or other plants of little or no economic value, which are mowed and discarded.[556]

The law on this subject is premised in large part on the general principles of recapture and reuse discussed above. In addition, IDWR has issued specific guidance on the subject of land application. Nearly all of it, however, is in the context of land application of <u>industrial</u> wastewater. Two guidance

[554] Texas, by the way, is the only western state that applies a rule of capture (rather than the prior appropriation doctrine) to ground water. (The City's water supply, and hence its effluent, was based entirely on ground water.) The court discussed the rule of capture at some length, but it does not seem that the outcome would be any different had the prior appropriation doctrine applied instead.

[555] In one project (now proposed in Gooding County) waste water would be treated, before irrigation, to remove all pollutants. Biosolids removed from the treated waste water would be metered back in to the clean water before being applied to crops. This technologically sophisticated approach is very different from the typical land application project.

[556] In some cases, crops or cut grasses may be removed from the immediate watershed to prevent their up-taken nutrients from entering the water system.

EXHIBIT C
Page No. 295 of 761

documents were issued by the Department in 1996. Phil Rassier, Chief Counsel, *IDWR Memorandum: Land Application of Industrial Effluent* (Sept. 5, 1996); Norm Young, IDWR, *Administrator's Memorandum – Application Processing No. 61* (Sept. 27, 1996). (These are reproduced under Appendix N.) This guidance has be updated and modified to some extent by a broader guidance document, *Transfer Processing Policies & Procedures* (Transfer Processing No. 24) (revised Dec. 21, 2009) (reproduced under Appendix L.) Note footnote 1 on page 3 of Transfer Proceeding No. 24, which expressly overrides certain guidance in Application Processing No, 61.

This raises the question whether the discharger must obtain a new water right or a change in water right to apply the waste water to the land. In other words, should the land application be viewed simply as part of the original industrial or municipal water right (requiring no transfer)? Or should the land application be viewed as a new beneficial use that requires a new water right or a change in the original industrial water right? Likewise, will a change in place of use be required? Will a new water right be required for the water used to dilute the waste water?

The answers to the last two questions are not difficult. First, if the land application falls outside the originally described place of use, then a change in place of use will be required. Second, a water right for the make-up water (i.e., water used to dilute the effluent before land application) will be required, just like any other use of water. The original industrial water right could serve this purpose, if the land application is close enough to be physically supplied by it, and the additional quantity is available under the right. Or it might be obtained from another source (e.g., a new appropriation or a transfer of an irrigation water right).

The trickier question is whether the land application use falls within the original place of use authorized for the water right. According to the Department's 1996 guidance, the answer depends on whether the land application is "mandated" by environmental requirements, or is being undertaken for the independent purpose of producing crops. This is discussed in more detail below.

(3) Required land treatment

Let us suppose that an existing industrial facility with an existing industrial water right decides to switch its disposal strategy to land application. IDWR has announced that land application of wastewater by the industrial facility will be considered part of the industrial use (hence a beneficial use) if it is mandated by environmental requirements and is consistent with best management practices established by the State.

This discussion assumes that the owner of the industrial water right is authorized to consume 100 percent of the water. If that is not the case (that is, if the owner is obligated to return a certain portion of the water diverted to a natural source as return flow), then none of the discussion below applies.

This discussion also assumes that the water user does not relinquish physical control over the water resource in accomplishing the land application. In other words, the wastewater from the industrial use should be delivered directly (e.g., through a pipe) to the industrial use. If the wastewater

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

is allowed to reenter the public domain, there is a strong argument that it is no longer part of the original water use. In this case, it could be recaptured, via a separate water right with a junior priority.

If the land use application involves the cultivation of crops or any other new beneficial use, a change in nature of use (and presumably place of use) must be sought by the water right holder and approved by IDWR. (If the original use was municipal use, no change would be needed, because such uses fall within the included "related purposes" in the definition of municipal uses.) If the land application does not entail the cultivation of crops or otherwise produce value, the land application will be deemed part of the original industrial purpose.[557] Even so, the land application may require approval by the Department of a change in place of use, if the land application does not occur on the industrial site. Thus, the requirement of a change application may be avoided only where the new treatment method is within the original place of use and entails no new beneficial use.

The Department's guidance states that consumptive use can increase up to the amount determined to be consistent with the original water right, but diversion rate, annual volume diverted, and period of use cannot change. Thus, if the industrial user initially had the right to use and reuse the water to exhaustion, but was not actually doing so, the user may switch to land application. If, on the other hand, the original water right was expressly or implicitly restricted to its prior consumptive use, then it cannot be changed to expand the consumptive use; in this case a new water right must be obtained for the land application.

(4) Optional land treatment

The discussion above was premised on the assumption that land application (or some other form of treatment) is required to meet environmental regulations (and, therefore, is "part of" the industrial process). Suppose, on the other hand, that land application is not required to meet water quality requirements, but is merely convenient or economical. In this case, the Department has said it will view the cultivation as a separate use, requiring a separate appropriation of water.

Although the Administrator's Memorandum does not address this, the new water right presumably could be obtained by filing for a junior "waste water" right at the point of discharge from the industrial facility.

(5) Mixing water

If additional fresh water is required to dilute the waste water, the fresh water must be obtained pursuant to a water right. If the existing industrial right allows additional pumping (without exceeding

[557] In many instances, even though there is income from the sale of crops, the overall farming operation may be unprofitable or negligibly profitable. In other words, the economic purpose of the operation is not to make money farming, but to dispose of the contaminants. The Department's guidance does not address whether such minimal, incidental economic benefit would be treated as creating a "new beneficial use." Until the situation is clarified, however, it is safer to assume that the Department will treat this as a change in use.

the right's established rate and volume), it may be used for this purpose. Otherwise, the operator will have to obtain another water right by appropriation or transfer for this purpose.

(6) Land application where land has existing water right

The 2009 version of Transfer Processing Memorandum No. 24 includes new provisions reflecting a more liberal approach to land application by the Department. Specifically, it provides (in several places) that no transfer application is required "for a proposed change in the place of use under a water right for uses such as industrial, dairy, or confined animal feeding operations that would allow land application of wastewater from that use or change the location of lands used for application of wastewater, when there is a full existing water right for irrigation of the place of use receiving wastewater." *Transfer Processing Memo No. 24* § 2 at page 7.

(7) Where industrial user relies on municipal water

The Administrator's 1996 Memorandum is based on the assumption that the industrial user holds its own industrial water right. The Memorandum then addressed the issue of when the land application could be viewed as "part of" the original industrial right.

The memorandum does not address the situation where the industrial user purchases water from a municipal provider. (In this case, the municipal provider is the water right holder.) In this circumstance, can the land application be viewed as "part of" the municipal right?

Municipal purposes are broadly defined in Idaho.[558] On the other hand, municipal uses do not ordinarily include crop irrigation. Does that mean they cannot be part of a municipal right, where the economics allow municipal water to be used for crop irrigation?

A strong argument can be made that <u>any</u> beneficial use made by a customer of a legitimate municipal provider, with the approval of the provider, is a municipal use. Under this theory, it should not matter whether the land application were "required" or "optional." Moreover, under this theory, there would be no need to obtain a change in place of use (assuming the new land application use physically occurred within the municipal provider's broadly described service area).

On the other hand, the industrial user may choose to file for a <u>new</u> appropriation in its own name.[559] This would eliminate any uncertainty regarding use of the right for irrigation purposes, and create a valuable property right and asset.

---

[558] Idaho Code § 42-202B(6) (definition of "municipal purposes"). This broad statutory definition is consistent with case law across the West.

[559] A waste water appropriation will not be allowed, if there is no release of control of the water back into the natural environment. However, the industrial user may obtain a new water right that piggy-backs the original municipal right and adds an additional use (but with a junior priority).

(8) Land application of municipal effluent by cities pursuant to water rights

In 2012, the Idaho Legislature amended the water code to allow land application and other disposal undertaken pursuant to environmental requirements to occur without a water right. That is discussed in section 19.F at page 300. This section addresses the law prior to that amendment. This section is also applicable to the extent that the municipality or similar entity elects to undertake land application pursuant to a water right (in order to protect the right) or where Idaho Code § 42-201(8) is for some reason not applicable.

Very few cases, and none in Idaho, deal with land application of municipal effluent. (One that does, from Wyoming, is the *Wyoming Hereford* case discussed above.) Likewise, the guidance discussed above is focused on land application by industrial users. The 1996 guidance is expressly limited to land application of industrial wastewater. The 2009 *Transfer Memo* mentions municipal effluent only in one place:

> Disposal of Waste Water. An application for transfer filed to provide for the disposal of wastewater, by land application, resulting from use of water under non-irrigation uses such as a dairy or other confined animal feeding operation, or "municipal" or "industrial" water rights where the use of water is considered to be fully consumptive, is not considered an enlargement of the commercial, municipal, or industrial water right. While not an enlargement of the water right, such use of wastewater must not injure other water rights (see Application Processing Memorandum No. 61 as revised under Section 1 of this memorandum) and must comply with the best management practices required by the Idaho Department of Environmental Quality, the U.S. Environmental Protection Agency, or other state or federal agency having regulatory jurisdiction.

Transfer Processing Policies & Procedures (Transfer Processing No. 24) § 5d(9) at page 31 (revised Dec. 21, 2009) (reproduced in Appendix L). This confirms that, because municipal uses are 100 percent consumptive, land application does not constitute an illegal enlargement of the water right. However, the statement is in the context of a discussion of transfer applications. This raises the question of whether a transfer is required at all.

Arguably, no transfer should be required for land application of municipal effluent, so long as the land application is within the municipal service area and so long as the land application is deemed part of the municipal use. Moreover, the requirement in paragraph 3 on page 3 of the 1996 Rassier memorandum (saying that a transfer is required for land application on cultivated fields) has been overridden by the 2009 version of Transfer Processing Memorandum No. 24, which provides that no transfer is required if the land application occurs on lands that were previously cultivated under another water right. In other words, so long as no new land is brought under cultivation, it us unnecessary to determine whether the land application falls within the previously authorized municipal uses.

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

Another complication for land application of municipal effluent is that, unlike industrial effluent, it cannot be assumed that all of the water physically derives from the original diversion. Municipal effluent may contain other sources of water, such as storm water or water from domestic wells with their own water rights. The situation is further complicated if the municipality or sewer district operating the sewage collection system was not itself the supplier of municipal water. In such a case, it may be appropriate to think about this as entailing an appropriation of water or, in the case of recapture of water from domestic wells, an appropriation of waste water.

Such has occurred in the past. Phil Rassier's 1996 legal memorandum notes the precedent of issuing "waste water permits" (Nos. 29-7431 and 29-7437) to the City of Pocatello and the J.R. Simplot Company, respectively, in connection with land application of the city's effluent. Phil Rassier, Chief Counsel, *IDWR Memorandum: Land Application of Industrial Effluent* at page 3 (Sept. 5, 1996). This would appear, however, to predate the Department's current thinking that the land application use may be viewed as a part of the original right.

F. 2012 statute (H.B. 608): A separate water right or transfer not required where wastewater is reused or disposed of in order to comply with environmental requirements.

In 2012, the Idaho Legislature enacted H.B. 608, 2012 Idaho Sess. Laws, ch. 218 (codified at Idaho Code §§ 42-201(8), 42-221(P)). The legislation was prompted by concerns of the City of McCall (which sought the legislation) that its land application of effluent might require a new water right. In communications with the Department, the City determined that no new water right (or change in its municipal water rights) was required to land apply effluent derived from its own municipal water rights outside of the city limits. The problem was that the City's sewage treatment plant was treating both the City's own wastewater and sewage from collected by a nearby sewage district serving unincorporated areas.

In order to resolve uncertainty with respect to the need for a water right to land apply the sewage from the sewage district, the City worked with IDWR and the Idaho Water Users Association to develop legislation clarifying that no water right is required when a governmental entity engages in land application or other measures to dispose of effluent pursuant to environmental regulatory requirements.

The legislation provides:

> Notwithstanding the provisions of subsection (2) of this section [which requires a water right for all diversions], a municipality or municipal provider as defined in section 42-202B, Idaho Code, a sewer district as defined in section 42-3202, Idaho Code, or a regional public entity operating a publicly owned treatment works shall not be required to obtain a water right for the collection, treatment, storage or disposal of effluent from a publicly owned treatment works or other system for the collection of sewage or stormwater where such collection, treatment,

> storage or disposal, including land application, is employed in response to state or federal regulatory requirements. If land application is to take place on lands not identified as a place of use for an existing irrigation water right, the municipal provider or sewer district shall provide the department of water resources with notice describing the location of the land application, or any change therein, prior to land application taking place. The notice shall be upon forms furnished by the department of water resources and shall provide all required information.

Idaho Code § 42-202(8).[560] Idaho Code § 42-221(P) sets the fee for filing a notice of land application.[561]

This section is contained in the same part of the water code that exempts certain other uses from the requirement to obtain a water right. (For example, a water right is not required to fight an existing fire. Idaho Code § 42-201(3)(a).) The basic premise is that if a municipality, sewer district, or similar entity is engaged in land application or some other treatment or disposal strategy in order to comply with environmental regulations, the entity is not required to obtain a water right. This is analogous to fighting a fire. (It is something they must do, not something they wish to do.) This legislation makes clear that no water right is required, even if some beneficial use (such as growing crops) is entailed. The legislation also makes clear that if a municipality stops directing its effluent to a stream and instead directs it to a land application or other treatment or disposal use, water users downstream who had come to rely on that effluent have no legal complaint.

This legislation does not preclude a municipality from obtaining a water right for its land application or other use. It simply says that it is not required to obtain a right. As a practical matter, there is not likely to be any consequence to not having a water right. Without a water right, the municipality may not "call" for the water to be delivered to its land application. But that is probably the least of the city's concerns. The practical fact is that the sewage effluent will be there.

For reasons discussed above, this legislation is not necessary for a city that is land applying water traceable to its own municipal water rights and connected via a common water distribution system. Cities have the right to use and reuse their water rights to extinction. However, the legislation would make a difference in the following situations:

(1) Sometimes the entity undertaking the land application does not have a municipal water right. For example, a sewer district typically does not provide municipal water. Likewise, some cities (such as McCall) land apply treated sewage that is collected from outside the city's municipal water service

---

[560] This legislation was recommended for passage unanimously by both germane committees, and adopted by unanimous vote in both the House and Senate.

[561] The Idaho Department of Water Resources sought and obtained language requiring the municipality to notify it of land application. This way, the Department is able to reconcile satellite imagery showing irrigation with information about municipal land application not undertaken pursuant to a water right.

area and thus cannot be traced to a municipal water right. In other situations (such as the City of Boise), a city may provide wastewater treatment, but is not in the business of providing municipal water.

(2) Sometimes the land application occurs at a location outside the city limits that is not physically plumbed to the city's municipal water treatment system. For example, it may rely on delivery via an irrigation district's canal system. There is uncertainty as to whether this is covered by the "service area" description in the 1996 Municipal Water Rights Act.

Although the legislation was drafted to address a question involving land application of effluent, the statute's language was broadly crafted to encompass the "collection, treatment, storage or disposal [of effluent], including land application." In 2021, the Department ruled on a petition for a declaratory ruling addressing whether H.B. 608's language means that neither the City of Nampa nor Pioneer Irrigation District is required to obtain a new water right in connection with a reuse project approved by IDEQ that entails the delivery of the city's treated wastewater to a canal operated by the irrigation district.

20. MORATORIUMS

The Department is authorized to suspend processing of permits and applications for new water rights upon a determination that such action is necessary to protect existing water rights, including the state's minimum stream flow rights.[562] From time to time since 1989 the Department has acted under this authority to impose moratoriums on the appropriation of new water rights.[563] Some of these orders remain in effect, substantially restricting new appropriations in significant portions of the state.

The discussion in this chapter traces the history of the 1992 Moratorium Order originally covering the entire Snake Plain Basin. (Appendix K contains a detailed summary of these moratoriums as well as copies of the orders and other documents.) The reader is referred to IDWR's web site for information on additional specialized moratoriums, including the Twin Falls Geothermal GWMA Moratoriums, the Salmon and Clearwater Basins Moratorium, the Big Lost River Drainage Moratorium, the Mud Lake Area Moratorium and the Wilderness Water Rights Moratorium. Key moratoriums, and a summary chart, are set out under Appendix K. Some, but not all of the Department's moratorium orders are listed on the Department's web site (www.idwr.idaho.gov).

Although the statute authorizes the Department to halt processing of both new applications and permits, the Department has never suspended the processing of issued permits. Instead, the moratoriums have been limited to the processing of applications for permit. Holders of existing permits, licenses, and beneficial use rights are unaffected. Likewise, transfers of existing rights are unaffected.

These moratoriums apply within defined geographic areas based on hydrological boundaries. They are based on a determination by the Director that the area is fully appropriated and that any new water rights are likely to impair other uses and interfere with the administration of water rights generally.

Due to an extended drought beginning in 1986, the Director issued the first large-scale moratorium in 1992.[564] It prohibited the issuance of new permits for consumptive use of both ground

---

[562] Idaho Code § 42-1805(7); IDAPA 37.03.08.055. The Department's practice is to issue moratoriums by way of order, without public hearing or comment.

[563] In 1980, the Department issued a memorandum expressing its view that there is no surface water available for appropriation during the irrigation on the Boise River upstream of Lucky Peak Reservoir. See Appendix K. That memorandum remains in effect as an expression of the Department's viewpoint. However, it does not have operative effect as a moratorium order. In other words, an application for a new appropriation could still be filed and processed, but the applicant should be aware of the Department's predisposition regarding the unavailability of additional water for appropriation.

[564] *In the Matter of Applications for Permits for Diversion and Use of Surface and Ground Water Within the Snake River Basin Upstream from the USGS Gauge on the Snake River Near Weiser* (IDWR Moratorium Order, May 15, 1992). (See Appendix K.) Two previous orders, affecting the Big Lost River drainage and the Mud Lake area, issued in 1989 and 1990 respectively, were subsumed within this order.

and surface water in the Snake River basin upstream from Weiser, Idaho, covering a large portion of southern Idaho.

The moratorium was amended on January 6, 1993 to eliminate the "non-trust water area" (an area in the southeast of Idaho, mostly outside of the ESPA in the vicinity of American Falls Reservoir, where ground water is tributary above the Milner Dam).[565] The non-trust water area was then made subject to a separate five-year moratorium,[566] which has since expired.[567]

The 1992 moratorium was amended again on April 30, 1993, limiting its applicability to the Boise River Drainage Area and the Eastern Snake Plain Area (still, very substantial areas).[568] The Eastern Snake Plain Area is defined as the trust water area on the Snake River upstream of the King Hill gage.

In 1994, the Legislature adopted a statute preventing the Director from removing that portion of the April 1993 amended moratorium applicable to the Eastern Snake Plain Aquifer prior to December 31, 1997.[569] That prohibition has now expired, but the moratorium remains in effect.

The moratorium was modified again in 1995 to largely exempt the Boise River drainage area.[570] Shortly thereafter, however, the Department issued an "Administrator's Memorandum" which

---

[565] *In the Matter of Applications for Permits for Diversion and use of Surface and Ground Water Within the Snake River Basin Upstream from the USGS Gauge on the Snake River Near Weiser* (IDWR Moratorium Order, Jan. 6, 1993) (the first of two moratorium orders issued on this day). (See Appendix K.)

[566] *In the Matter of Applications for Permits for Diversion and Use of Surface and Ground Water Within the Snake River Basin Upstream from Milner Dam* (IDWR Moratorium Order, Jan. 6, 1993) (the second of two moratorium orders issued on this day). (See Appendix K.)

[567] "This moratorium shall be in effect on and after its entry and shall remain in effect until December 31, 1997." Order at ¶ 1. However, paragraph 9 of the Order contemplated that the Director would issue an order affirmatively ending the moratorium, which action never occurred. For some time after 1997, an internal debate occurred within the Department as to whether the moratorium remained in effect and at least one order recognized its continuing effect. More recently, the Department has concluded that the moratorium has indeed expired. Despite the expiration, however, the Department views the non-trust water area as fully appropriated (with the exception of occasional spills over Milner dam) and is unlikely to approve new appropriation applications in the non-trust water area. *Conversation between Shelley Keen (Manager, Water Right Permits Section) and Christopher H. Meyer* (May 18, 2009).

[568] *In the Matter of Applications for Permits for the Diversion and Use of Surface and Ground Water Within the Eastern Snake River Plain Area and the Boise River Drainage Area* (IDWR Moratorium Order, Apr. 30, 1993). (See Appendix K.)

[569] 1994 Idaho Sess. Laws. ch. 449, § 1 (formerly codified at Idaho Code § 42-1806). (See Appendix K.)

[570] *In the Matter of Applications for Permits for the Diversion and Use of Surface and Ground Water Within the Boise River Drainage Area* (IDWR Moratorium Order, May 3, 1995). (See Appendix K.) Despite lifting the moratorium, the order imposed restrictions on the processing of new surface water applications for diversions from the Boise River upstream of the Star Bridge, unless mitigated to avoid injury. However, the

effectively re-imposed the moratorium on an informal basis, but only with respect to the Lower Boise River Basin below Lucky Peak Dam.[571]

In recognition of the fact that small domestic water users are exempt from statutory permit requirements, these moratoriums exempt such uses from their coverage.[572] The current moratoriums also authorize the Director to make special exceptions based on the public interest or a determination that the particular appropriation will have no effect on other users.

Moratoriums are issued on a summary basis.[573] That is, the Director does not engage in a public hearing or contested case process before issuing the moratorium. However, a moratorium may be challenged after issuance.[574] To date, no one has challenged either the Director's authority to issue moratoriums or the propriety of any specific moratorium.

---

effect was simply to limit new appropriations to flood water, which would be the case anyway. Thus, the practical effect was to eliminate the moratorium as to the Boise River Drainage Area.

[571] Norman C. Young, IDWR, *Administrator's Memorandum – Application Processing No. 59* (June 20, 1996). (Reproduced in Appendix K.)

[572] The moratorium does not reference the definition of domestic uses in section 42-111 (or any other definition). Thus, it is not clear whether or not the use of the term "domestic" in those moratoriums is intended to pick up the nuances under the statute discussed in section 7.F at page 89.

21. THE "TWO RIVERS" CONCEPT ON IDAHO'S SNAKE RIVER

A. Separate administration generally

Ordinarily, water sources that are hydraulically interconnected are administered as a single source. For example, a river and its upstream tributaries are ordinarily treated as a single source, even though diversions from that river may be separated by tens or hundreds miles. Likewise, surface water and tributary ground water are administered conjunctively as a single source. However, in some instances two tributaries (or even different parts of the same river) may be administered separately, as if they were two unrelated bodies of water.

This may come about through the institutionalization of historical practices and understandings that may not reflect hydrologic reality—or may reflect only some of it (such as the facts concerning surface water flows, but not ground water). In some instances, separate administration simply institutionalizes a legitimate "futile call" situation. An example would be where it has been shown that closing headgates on an upstream tributary will not deliver surface water to diversion points on the downstream river because the tributary sinks before reaching the river. Portions of the Little Lost River system near Howe, Idaho are administered in this way. In a 2004 delivery call situation, the IDWR Director issued an order finding that, due to "extremely high losses" in both the river channel and the senior users' ditch, certain upstream junior diversions from the Big Lost River would not be curtailed because doing so would not deliver water to the downstream seniors.[575]

In the case of an actual futile call, water administration effectively separates hydraulically connected sources; this is a well-established rule that is supported by both hydrologic reality and the legal mandate against waste of the water resource. In other situations, separate administration of hydraulically connected sources might be more a legal fiction, an accepted custom, or a political compromise. In these cases, one might argue that separate administration is inconsistent with property rights and entitlements under the prior appropriation doctrine and the state constitution. After all, it inherently (and perhaps unconstitutionally) results in changing the set of "winners" and "losers" from what would be the case under normal administration. No one has ever tested this in Idaho.[576]

B. The administration of the Snake River above and below Milner Dam

Idaho has its own notable example of separate administration that plainly falls into the second of the two categories discussed above: The "Two Rivers Concept" in the administration of water rights on the Snake River.

---

[575] *In the Matter of Determining a Futile Call for the Delivery of Surface Water in Water District No. 34, Big Lost River* (July 30, 2004) (citing Rules Governing Water Distribution in Water District No. 34, IDAPA 37.03.12.20.04)

[576] A challenge in Colorado failed, however. *Alamosa-La Jara Water Users Protection Assn. v. Gould,* 674 P.2d 914 (Colo. 1983). And a case can be made that separate administration is consistent with the no-injury rule, where separate administration simply reflects long-standing expectations. A. Lynne Krogh-Hampe, *Injury and Enlargement in Idaho Water Right Transfers,* 27 Idaho L. Rev. 249, 263 (1990).

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

The idea is that the Snake River should be viewed as two rivers. The first begins in the headwaters and continues to Milner Dam; the second begins immediately below Milner Dam and continues until it leaves Idaho. The basis for this fiction is the fact that virtually all of the Snake's water is diverted into a series of huge irrigation canals at or above Milner Dam. Thus, the river is seen as "starting over" below Milner, where it is fed by return flows, tributaries and springs.

Milner Dam, located several miles upstream of Twin Falls, Idaho, was constructed in 1905 to serve the Twin Falls South Side Project (operated by the Twin Falls Canal Company).[577] Today it also serves the North Side Canal, the Milner Low-Lift Canal, and the Milner-Gooding Canal. On occasion, virtually the entire flow of the Snake River is diverted into canals fed by the dam.

Return flows and springs—resulting from diversions at Milner and many more at other diversion facilities farther upstream on the Snake—quickly feed the river below the dam, allowing a whole new set of appropriations to be made downstream of Milner. The Two Rivers Concept reflects this unusual (and artificial) hydrological circumstance, and the practical reality that for a century people have viewed the source of below-Milner appropriations to be springs and ground water, rather than the river above Milner. Thus the concept emerged that water users below Milner should be allowed to call out only water users tributary to them, that is, water users on or tributary to the river below Milner.

The Two Rivers concept has its origins in actions of and positions taken by Idaho Power Company and the U.S. Bureau of Reclamation in the development of American Falls and other storage projects in the upper Snake.[578] The concept, though probably based on faulty legal premises,[579] was sufficiently solidified in practice that by the time Idaho Power filed its general protest in 1978 of all water rights interfering with its Swan Falls rights, it only called for curtailment of below-Milner rights.[580]

---

[577] Milner Dam was built at the western most point in the upper Snake at which significant amounts of water could be diverted from the river by gravity systems. The large canals on the north and south sides of the river at Milner divert under water rights carrying priorities ranging from 1900 to 1939.

[578] A detailed analysis of this concept is beyond the scope of this Handbook. For a more detailed discussion of the Two Rivers Concept, see Jeffrey C. Fereday & Michael C. Creamer, *Swan Falls in 3-D: A New Look at the Historical, Legal and Practical Dimensions of Idaho's Biggest Water Rights Controversy*, 28 Idaho L. Rev. 573, 589-94 (1992).

[579] Jeffrey C. Fereday & Michael C. Creamer, *Swan Falls in 3-D: A New Look at the Historical, Legal and Practical Dimensions of Idaho's Biggest Water Rights Controversy*, 28 Idaho L. Rev. 573, 591-92, n.82 (1992).

[580] Protest of Idaho Power Company to Applications for Permit to Divert and Consumptively Use Water, *In the Matter of Applications Filed for Water Diversions for Consumptive Use on the Surface and Subterranean Tributaries of the Snake River Between Milner Dam and Hells Canyon* (Dec. 30, 1977, filed with the Idaho Dept. of Water Resources Jan. 5, 1978). The relief sought by Idaho Power in the subsequent Swan Falls litigation was also limited to below Milner diverters. See discussion in of the Swan Falls controversy in section 11 at page 583.

Printed 6/23/2023 9:09 AM

The Two Rivers concept also has been institutionalized in Idaho's State Water Plan, which first recognized a zero instream flow at that point in 1976.[581] (This zero flow is a fiction. Flows have never been zero.[582]). What was described in earlier State Water Plans as an actual zero minimum instream flow is now more accurately described this way: "The exercise of water rights above Milner Dam has and may reduce flow at the dam to zero."[583]

The above/below Milner distinction also is recognized by the Water Supply Bank. (See discussion of the price difference for below-Milner rentals in section 5 beginning at page 507.) Likewise, storage rights from the above-Milner Palisades Reservoir placed in the tribal water bank operated by the Shoshone-Bannock Tribe pursuant to a 1990 settlement agreement may not be rented or delivered for use anywhere below Milner Dam.[584]

The most notable legal basis for the Two River concept is a statute adopted in 1985 implementing the *Swan Falls Agreement*. Note, however, that the statute in not limited in its application to Idaho Power's water rights. It applies to all affected water users. It provides in pertinent part:

> For the purposes of the determination and administration of rights to the use of the waters of the Snake river or its tributaries downstream of Milner dam, no portion of the waters of the Snake river or surface or ground water tributary to the Snake river upstream from Milner dam shall be considered.

---

[581] State Water Plan (Dec. 1976). The zero instream flow was not discussed in the text of the plan, but was simply reflected in a table showing river flows that will be "protected." The same table showed instream flows of 3,300 cfs at the Murphy gage and 4,750 cfs at the Weiser gage. The zero flow provision for Milner has been carried forward, with some modification in how it is described, through each subsequent State Water Plan.

[582] "Over the period from 1914 to about 1923, these diversions [at Milner Dam] had drastically reduced the average August flows past Milner from over 2,000 cfs to less than 100 cfs. Still, some water almost always passed American Falls, where Idaho Power had an early power plant, and Milner during the irrigation season. But the long list of senior natural flow appropriations on the Upper Snake River guaranteed that these amounts would be small in most years. From 1924 through the late 1970s the average August flows were as low as approximately fifty cfs in the irrigation season, and overall averages during that period were about 150 cfs." Jeffrey C. Fereday & Michael C. Creamer, *Swan Falls in 3-D: A New Look at the Historical, Legal and Practical Dimensions of Idaho's Biggest Ever Water Rights Controversy*, 28 Idaho L. Rev. 573, 590 (1991-92). Today, water flows at Milner are not really zero, despite the statutory zero instream flow. Some water is bypassed for hydropower generation at Milner. Additional water is bypassed in connection with the federal government's program of providing salmon "flushing" flows (See discussion in section 19 at page 689).

[583] It has been carried forward through the current State Water Plan, Policy 5B at 17 (Dec. 1996, ratified Mar. 1997) (reproduced under Appendix F).

[584] 1990 Fort Hall Indian Water Rights Agreement, By and Between the Shoshone-Bannock Tribes of the Fort Hall Indian Reservation, The State of Idaho, The United States, and Certain Idaho Water Users § 7.3.4(i) (1990).

Idaho Code § 42-203B(2). In other words, surface water users downstream of Milner may not call out either surface or ground water rights above Milner to satisfy their rights, regardless of relative priority.

This bifurcation of the Snake River adds some complexity and uncertainty to the task of moving water rights from above to below Milner. For instance, does Idaho Code section 42-203B(2) simply limit the scope of a call for Snake River water, or does it impair the ability to move water across the Milner threshold? One commentator has suggested it is the latter.[585] However, the authors suggest that this reads too much into the statute, particularly considering its Swan Falls context.

The better reading, and the one to which the Department subscribes,[586] is that the statute applies only in the context of the implementation of Idaho Power's subordination of its hydropower rights and the development of so-called "Trust Water." (See discussion in section 11.C at page 590.) This view is consistent with the Department's Trust Water Regulations.[587] It does not mean that water rights can never be moved past Milner.[588]

Thus, putting aside other legal obstacles (injury, etc.) and practical considerations (the ability to administer such a changed right), one should be able to purchase a ground or surface water right whose diversion point is located above Milner and whose return flows are tributary above Milner, and change the diversion point and return flow to a location below Milner. This, of course, would entail moving the water past Milner Dam. Such a transfer has never been sought before, so the issue has not been tested. Administration of such a right would require some adjustment's in the computerized water rights accounting programs used to administer rights above Milner Dam. However, there does not appear to be any sound practical or legal basis for objection to such a change, again, assuming other legal requirements are met.[589]

Implementing the Two River concept is further complicated by determining where to draw the line. The river is divided not on the basis of a water right's point of diversion (which is easy to pinpoint), but on whether its return flow is tributary above or below Milner. The Department's

---

[585] "Based on this statute, a change in point of diversion from the Snake River upstream from Milner Dam to a point of diversion downstream from Milner Dam should be treated as a new appropriation." A. Lynne Krogh-Hampe, *Injury and Enlargement in Idaho Water Right Transfers*, 27 Idaho L. Rev. 249, 263 (1990).

[586] Telephone conference between Phillip J. Rassier, Chief Deputy Attorney General for the Department, and Christopher H. Meyer (June 10, 2004).

[587] IDAPA 37.03.08.030.03(e). The rule recognizes section 42-203B(2) as serving to define the scope of Trust Water

[588] Indeed, such a reading would raise serious constitutional questions.

[589] This is a critical, and perhaps difficult, assumption. Under current conditions, many water rights above Milner are threatened by potential calls from surface users at the Milner diversion, not to mention Thousand Springs. Attempting to move one of these rights past Milner raises another set of problems not addressed in this discussion.

delineation of above-Milner and below-Milner ground water rights set out in its regulations.[590] This map places most of the Eastern Snake Plain in the "below-Milner" category.

This map may accurately reflect those areas where at least a part of the return flow is tributary below Milner. It ignores, however, the hydrological reality that ground water rights in the area are tributary partially above and partially below Milner. Thus, no ground water right in the Eastern Snake Plain Aquifer can be moved any significant distance without affecting flows both above and below Milner. Modern realities suggest that the time has come to dispense with the Two Rivers fiction, or at least limit it to the statutorily mandated call limitation in section 42-203B(2) and the moribund provisions on Trust Water.

22. AQUIFER ENHANCEMENT

A. The need for additional water storage options

Idaho's population is growing rapidly, and with it the demand for reliable public water supplies. At least in portions of the Treasure Valley, municipal providers are beginning to look to surface water to augment their historically reliable ground water supplies. At the same time, the acreage devoted to irrigated crops is static or declining in the Treasure Valley and other areas, suggesting that irrigation storage water should be more available for conversion to municipal and industrial uses. Idaho has some 12 million acre-feet of surface water storage reservoirs, virtually all of it devoted to agricultural irrigation. However, obtaining irrigation storage supplies for these new uses is not a straightforward process, and involves several political and institutional constraints. One example is the demand for storage water releases from these typically federally-owned reservoir facilities to address Endangered Species Act concerns.

As to the supply side—that is, building and finding water rights for more storage facilities—the reality is that most of the feasible above-ground storage projects in Idaho already have been constructed. In addition, large surface water storage projects face significant obstacles in obtaining necessary approvals, as exemplified by the Denver Water Board's inability to obtain federal Clean Water Act permitting to construct its proposed Two Forks Dam in the late 1980s. Present economic, social and environmental factors suggest that most new large-scale storage projects will remain infeasible for some time to come. Indeed, the Bureau of Reclamation, which built and operates many of the water storage projects in Idaho, has long since moved away from a primary focus on new water development projects in favor of a redirected focus on existing facilities management, demand-side management and water transfers.[591]

But that still does not relieve the need for municipal, commercial, and industrial users to obtain access to stored water. Even though these users increasingly will rely on former irrigation storage in existing reservoirs, a viable alternative is to use aquifers as storage reservoirs. This is not new, of course; aquifer storage is being used extensively in other more populous parts of the West. In comparison to surface storage facilities, aquifers can provide vast amounts of water storage with comparatively less planning, physical and environmental engineering, capital construction, and operation and maintenance costs than above-ground storage projects. As part of a comprehensive conjunctive management scheme, aquifer storage can be operated much the same as surface reservoirs—inject surface water into the aquifer when surpluses are available, store it in the aquifer, and then either pump it up as needed or, in the case of recharge to augment spring flows, simply allow it to discharge naturally to surface sources. As explained below, the Idaho Legislature has taken steps over the years to allow and encourage aquifer storage, and the common law of appropriation also is at home with the concept.

[591] *See*, U.S. Dept. of Interior, Bureau of Reclamation. Strategic Plan FY2000-2005.

Printed 6/23/2023 9:09 AM

The remainder of this section of the Handbook surveys the major statutory provisions pertaining to aquifer recharge in Idaho, and discusses some of the issues about recharge that have arisen in recent years.

B. Public betterment aquifer recharge ("PBAR")

(1) The evolution of Idaho's ground water recharge statutes: Idaho Code § 42-232; Idaho Code § 42-234; and Idaho Code §§ 42-4201 to 42-4231

Idaho's ground water appropriation statutes were first enacted in 1951. 1951 Idaho Sess. Laws, ch. 200. But statutes expressly addressing aquifer recharge[592] were not passed until 1978. (See discussion below.) Aquifer recharge originally was a narrow concept—only "recharge districts" or specified "pilot projects" could make diversions to recharge, and then only pursuant to the application, permit and license process. The Legislature later modified the relevant statutes to allow anyone to engage in aquifer recharge.

The 1978 Idaho ground water recharge statute, 1978 Idaho Sess. Laws, ch. 366 (codified as amended at Idaho Code § 42-234), ratified and encouraged a "pilot project to recharge ground water basins in the vicinity of St. Anthony and Rexburg," and recognized appropriation of water for recharge in this vicinity "as a beneficial use."[593] That same year, the Legislature authorized formation of a "ground water recharge district" in the Jerome-Gooding area and sanctioned the district's appropriation and subsequent underground storage of unappropriated waters of the Snake River and its tributaries. 1978 Idaho Sess. Laws, ch. 293 (codified at Idaho Code §§ 42-4201 to 42-4231). Water appropriated for recharge by the recharge district also was declared to be a beneficial use. That act also provided for the establishment of aquifer recharge districts. Idaho Code § 42-4202.

(2) Idaho's "public betterment aquifer recharge" statute

The intended beneficiaries of the projects authorized by the 1978 statutes and their subsequent amendments were to be ground water users and others[594] in the general area, perhaps simply the water

---

[592] In its most general sense, "aquifer recharge" refers to any planned project that intentionally places more water into an aquifer than otherwise would accrue either through natural processes or incidental to beneficial uses of the water. Department rules define "artificial ground water recharge" as "a deliberate and purposeful activity or project that is performed in accordance with Section 42-234(2), Idaho Code and that diverts, distributes, injects, stores or spreads water to areas from which such water will enter into and recharge a ground water source in an area having a common ground water supply." IDAPA 37.03.11.010.01.

[593] The reference in the 1978 statute to the pilot projects is no longer included in the statute.

[594] Projects located above Thousand Springs may benefit not only ground water users, but springs in the Hagerman area and surface flows in the Snake River below the springs. Furthermore, section 42-4201 states that, "[i]n view of the public betterment to be achieved by the completion of aquifer recharge projects, the legislature hereby declares that the appropriation and underground storage of water by the aquifer recharge district" authorized by the statute "shall constitute a beneficial use and hereby authorizes the department of

resource itself. For this reason, the authors refer to activities undertaken pursuant to these statutes as "public betterment aquifer recharge" ("PBAR"), the key mark of which is that no one obtains a new water right specifically to remove and use the water stored in the aquifer.[595] Rather, the new water introduced to an aquifer reinforces the natural resource that supports the community of existing ground water rights in the area. It is as if Mother Nature added the water for everyone's benefit. At that point, anyone with a valid water right may pump that water—in priority, of course—or may benefit from any resulting increases in stream flows that supply a surface diverter's water right.

These public betterment aquifer recharge projects are unlike other reservoir projects. A typical reservoir holds water for the benefit of specific water right holders. Thus, only the entity diverting and storing the water (or the entity's shareholders or beneficiaries) is entitled to take the stored water out for its own benefit. In contrast, a PBAR project has no particular identified beneficiaries other than the public resource itself or perhaps water right holders in the area generally. In other words, once the water has been added to the ground water supply, the recharging entity relinquishes control and the water becomes part of the public supply. Even though a PBAR diversion is for the general benefit, there is nothing in Idaho law requiring the operator to continue the practice.

For these reasons, PBAR projects are atypical in the West where ordinarily capital is invested by, and water is appropriated and diverted for the benefit of, the appropriator. Consequently, it was necessary for the Legislature to declare that ground water recharge is a beneficial use to confirm that unappropriated surface water can be appropriated and placed "in storage" for no purpose other than to make more water available in the public ground water supply for existing or future appropriators to take out according to their separate rights.

(3) Appropriations versus water right transfers for aquifer recharge

From their inception, the Idaho recharge statutes have expressly authorized the "appropriation and underground storage of water" and tied this authority to the Department's authority to issue permits and licenses in connection with recharge projects. It remains unclear whether the statutes actually contemplate using existing water rights for recharge purposes through a transfer or change proceeding. Certainly the original statutes could be read as allowing recharge only through appropriation of new water rights for this purpose. However, in 1995 and 1996 the Jerome-Gooding ground water recharge district in fact used rented storage water—i.e., an existing water right—in a recharge project carried out through the Snake River Water Bank with full legislative support and funding.[596] In the 2002 irrigation

---

water resources to issue a permit" for it. This language is part of the reason the authors refer to the Public Betterment Aquifer Recharge concept.

[595] There are several statutory references to "public betterment" in the context of aquifer recharge. For example: "In view of the public betterment to be achieved by the completion of aquifer recharge projects, the legislature hereby declares that the appropriation and underground storage of water by an aquifer recharge district hereinafter created for purposes of groundwater recharge shall constitute a beneficial use . . . ." 1982 Idaho Sess. Laws, ch. 204 (previously codified at Idaho Code § 42-4202(2)) (repealed in 2009).

[596] In 1994, the Legislature appropriated $75,000 to allow the Jerome-Gooding recharge district to acquire and deliver storage water for recharge through the North Side Canal Company conveyance system.

season, rented storage again was used in fulfillment of an interim agreement between certain ground and surface water users, with the water being placed in the North Side Canal Company's ditches for recharge purposes aimed at increasing the Eastern Snake Plain Aquifer and, by extension, the Thousand Springs outflow. So, presumably, a new water right or an existing water right, through transfer, could be used for recharge under the statute. However, no court has yet been asked to confirm this.

(4) Aquifer recharge as a designated beneficial use; allowing any entity to appropriate water for recharge

Importantly, the 1978 "recharge district" law declared that "the appropriation and underground storage of water by the aquifer recharge district hereinafter created . . . shall constitute a beneficial use" of water.[597] It also contained a separate provision declaring that recharge is a beneficial use and authorizing IDWR, without reference to who might apply, "to issue a permit for the appropriation and underground storage of unappropriated waters in an area of recharge."[598] Thus, any person or entity, not just recharge districts, could appropriate water for recharge. In 2009, the Legislature revised this to clarify that IDWR could issue both permits "and licenses" for recharge, "in compliance with other applicable Idaho law and the state water plan."[599]

One might ask why the Legislature thought it important to expressly recognize ground water recharge a beneficial use. The answer, as indicated above, may be that traditionally diversion of water into storage for its own sake may not be considered a beneficial use. It is only when water has been diverted to storage for some other specific beneficial use such as stock watering, recreation or aesthetic purposes, or for later diversion from storage for irrigation, commercial or municipal purposes, that the placement of water in storage has been deemed "beneficial" in the water law sense. Of course, the definition of beneficial use has never been seen as restricted to a precise list of purposes, and has evolved to meet changing needs; aquifer recharge understandably was not a concern or goal in the State's earlier decades. Nonetheless, aquifer recharge—at least in the PBAR context—arguably could have qualified for a water right only after the 1978 enactment, and then only in the hands of those entities specified in the statute.

In any event, the 1978 recharge district statute listed several reasons why aquifer recharge in the Jerome-Gooding area will "serve the interests of the public and advance the multiple use water policy of this state," including "sustaining and increasing the flow of springs in the general vicinity of the

---

[597] Idaho Code § 42-4201(2). The statutes now allow any person to appropriate water for aquifer recharge. *See also* Idaho Code § 42-234(2).

[598] Idaho Code § 42-234(2).

[599] 2009 Idaho Sess. Laws, ch. 242 (codified at Idaho Code § 42-234(2)). The 2009 amendment also repealed a highly controversial provision, inserted into section 42-234 in 1994, that made all recharge water rights subordinate to the water rights of "any privately-owned electrical generating company to appropriate waters in the reaches of the Snake River downstream from the Milner diversion for purposes of hydroelectric power generation."

Printed 6/23/2023 9:09 AM

Hagerman Valley" (i.e., the Thousand Springs area); increasing the water available for withdrawal from wells; "providing additional aquatic habitats" for wildlife; and "increasing and sustaining the flow of the Snake River during the summer months and in times of drought when additional flow is needed for the generation of hydroelectric power and the maintenance of water recreation facilities."[600] In 1982 the Legislature added a new section to the recharge district statute that made it possible for recharge districts to be formed in areas other than just the Jerome-Gooding area.[601] The 1982 amendment did not recite this list of benefits.

The 1994 amendments also removed all references to the St. Anthony-Rexburg pilot project and thereby transformed Idaho Code § 42-234 into a generalized approval of the acquisition of recharge water rights.

Finally, the 1994 amendments addressed the issue of "incidental recharge." In pertinent part, Idaho Code § 42-234, as amended in 1994 now provides that:

> (5) The legislature further recognizes that incidental ground water recharge benefits are often obtained from the diversion and use of water for various beneficial purposes. However, such incidental recharge may not be used as the basis for claim of a separate or expanded water right. Incidental recharge of aquifers which occurs as a result of water diversion and use that does not exceed the vested water right of water right holders is in the public interest. The values of such incidental recharge shall be considered in the management of the state's water resources.[602]

Subsection (5) disallows a claim for a separate water right or an expanded water right for incidental recharge, while acknowledging that recharge incident to the lawful diversion and use of a water right is "in the public interest." This at least implies that such incidental recharge, while not being recognized as an element of a water right, will not be prohibited.[603] The practical effects of the incidental recharge provision are two-fold: it precludes claims in water right adjudications that a water right originally developed for irrigation use also includes ground water recharge as a beneficial use

---

[600] 1978 Idaho Sess. Laws, ch. 293 (codified at Idaho Code § 42-4201(1)).

[601] 1982 Idaho Sess. Laws, ch. 204 (codified at Idaho Code §§ 42-4201A, *et seq*.).

[602] In 1994, the Legislature also passed Senate Concurrent Resolution 140 which recites, inter alia, that "artificial recharge of Idaho's ground water aquifers has been and continues to be a useful and productive utilization of Idaho's water and shall be encouraged wherever possible; . . . ." 1994 Idaho Sess. Laws, Sen. Con. Res. 140, at 1524.

[603] One question that arises under this statute is whether a third party benefiting from the recharge could use this provision to block an efficiency measure by, say, a canal owner that would reduce the incidental recharge.

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

element;[604] and it precluded assertions by surface water users of ownership of the incidental recharge resulting from their irrigation. At the same time, where an irrigation entity continues to divert the same amount into its canal system despite serving decreasing irrigated acres (which is the case in many urbanizing areas), this language provides at least a "public interest" argument that the diversions should be allowed to continue.

Arguably, because section 42-234(5) declares incidental recharge to be in the public interest, an appropriator seeking to increase the efficiency of his or her water use—and thus reduce recharge—might find this declaration an obstacle to doing so, at least if the beneficiaries of the incidental recharge complained. Such a ruling, however, presumably would collide with the Idaho Supreme Court's ruling in the *Hidden Springs* case, discussed above.

(1) Voidance, then partial reinstatement, of Idaho Power's Swan Falls subordination with respect to certain water rights acquired for aquifer recharge

Interestingly, the 1978 recharge district law included a provision stating that "the rights acquired by the aquifer recharge district pursuant to any permit and license were to be secondary to all prior perfected water rights, including those held by any privately-owned electrical generating company to appropriate waters in the reaches of the Snake River downstream from the Milner diversion for purposes of hydroelectric power generation."[605]

The first clause of this provision presumably was unnecessary since by definition any new appropriation, for aquifer recharge or otherwise, would be junior to all prior water rights. The second clause is more interesting, however. Because Idaho Power Company's Hell's Canyon dam complex held water rights that the Company had agreed to subordinate to upstream development as a condition of licensing by the Federal Energy Regulatory Commission ("FERC"), the second clause of the 1978 legislation may have been inserted in an attempt to override that subordination—that is, to give Idaho Power priority over water rights the recharge district might seek to divert to aquifer storage, and thus to nullify Idaho Power's existing FERC license subordination as to such rights.

Regardless of the intent and applicability of this original 1978 provision, in 1994 the Legislature substituted express language making it clear that at least the subordination of Idaho Power's water

---

[604] At the time, certain water users or water user organizations were concerned that either the Department or the SRBA Court would determine the annual volumes of water diverted under their water right claims for irrigation (in some instances up to sixteen acre-feet per acre per year to accommodate local customs of "sub-irrigation") were unreasonable, and that their claims might therefore be decreed for a lesser amount. One potential means of avoiding that result, given the 1978 recharge statute's declaration that recharge is a beneficial use, would have been to assert that the significant incidental recharge resulting from this irrigation method is an element of the water right with the same priority as the underlying irrigation right. Arguably this could have been done through the use of Idaho Code § 42-234 (recharge is a beneficial use) and Idaho Code § 42-1426 (allowing claims for enlargements of water rights occurring prior to November 19, 1987).

[605] 1978 Idaho Sess. Laws, ch. 293 (codified at Idaho Code § 42-4201(2)).

EXHIBIT C
Page No. 316 of 761

rights that occurred pursuant to the 1984 *Swan Falls Agreement*[606] would not apply with respect to water rights acquired for aquifer recharge. The 1994 statute amended section 42-234 to read:

> The rights acquired ~~by an aquifer recharge district or irrigation district~~ pursuant to any permit and license obtained as herein authorized shall be secondary to all prior perfected water rights, including those ~~held by any privately-owned electrical generating company to appropriate waters in the reaches of the Snake River downstream from the Milner diversion for purposes of hydroelectric power generation~~ water rights for power purposes that may otherwise be subordinated by contract entered into by the governor and Idaho power company on October 25, 1984, and ratified by the legislature pursuant to section 42-203B, Idaho Code.

1978 Idaho Sess. Laws, ch. 293 (codified at Idaho Code § 42-4201(2)).

By expressly addressing Idaho Power's Swan Falls subordination, the 1994 amendment could be read to imply that the Company's Hells Canyon FERC-subordinated rights remain subordinated to all subsequent upstream appropriations, regardless of the intended new beneficial use. But it specifically removed the subordination benefit provided by the *Swan Falls Agreement* when it comes to new permits or licenses for aquifer recharge. It is not clear what purpose the Legislature sought to achieve with this amendment, or whether, in doing so, it secured any consideration from Idaho Power.

It could be argued that the Legislature believed the amendment necessary to protect all past-Milner flows for hydroelectric power production. But this would be contrary to the *Swan Falls Agreement*. Likewise, it would be contrary to a 1986 amendment to Idaho Code § 42-203B, which remains a part of the statute and provides that "[f]or the purposes of the determination and administration of rights to the use of the waters of the Snake river or its tributaries downstream from Milner Dam, no portion of the waters of the Snake river or surface or ground water tributary to the Snake river upstream from Milner Dam shall be considered."[607] Read together, the non-subordination and separate administration provisions would appear to mean that the Legislature's voiding of the Swan Falls subordination with respect to recharge appropriations still does not permit Idaho Power to

---

[606] In 1984, Idaho Power Company and the State of Idaho entered into the *Swan Falls Agreement*. In that Agreement, Idaho Power agreed that its hydropower water rights, including the portion of its hydropower rights in excess of specified seasonal minimum flows at its Swan Falls plant were "subordinate to subsequent beneficial upstream uses upon approval of such uses by the State. . . ." This subordination was ratified by the Legislature in 1985 with amendments to the water appropriation statutes. *See, e.g.*, Idaho Code §§ 42-203B, 42-203C, and 42-203D. Neither the Agreement nor the legislation implementing it limited the types of future water rights that would be entitled to enjoy this subordination, so new water rights for recharge would be entitled to the Swan Falls subordination. For a discussion of the Swan Falls issue, see Jeffrey C. Fereday and Michael C. Creamer, *Swan Falls in 3-D: A New Look at the Historical, Legal, and Practical Dimensions of Idaho's Biggest Water Rights Controversy*, 28 Idaho L. Rev. 573 (1992).

[607] 1986 Idaho Sess. Laws, ch. 117.

call out a junior above-Milner recharge water right to fill Idaho Power's below-Milner hydropower rights.

When the Idaho Water Resource Board established a minimum flow of zero at Milner Dam, it was based on the premise that the Snake River is "fully appropriated upstream from Swan Falls except for trust water and occasional flood waters."[608] On this premise one also might assume that the 1994 amendment partially voiding the Swan Falls subordination gave little to Idaho Power since there would be limited opportunities for junior recharge appropriations anyway. However, in 1998, the Department of Water Resources issued an interim report that concluded that in most years, up to three hundred thousand acre-feet of surface water could be available in the upper Snake River (above Milner) to be used for managed aquifer recharge *provided the recharge was not subordinated to existing water rights held for power purposes by Idaho Power.*[609] The Department later concluded that if Idaho Power enforced the 1994 amendment partially removing its water right subordination, then recharge diversions could occur only once in about every fifty years.[610]

Thus, the Legislature's partial reversal of the Swan Falls subordination effected by the 1994 amendment to Idaho's aquifer recharge statutes—both the "recharge district" statute in section 42-1401 and the general authority to permit recharge projects in section 42-234—cast a cloud on PBAR projects, or at least on those that would rely on any permit or license acquired for recharge purposes. In addition to this cloud on above-Milner water rights appropriated for recharge, another provision in the recharge statute authorizes the IDWR Director to regulate (that is, to reduce) the amount of water diverted for a PBAR project, even when the water right is in priority.[611] This regulatory authority to override a recharge water right reflects a sharp departure from the fundamentals of the prior appropriation doctrine, and potentially undermines the value and integrity of PBAR projects.

In 2009, the Legislature removed the Swan Falls subordination reversal language from section 42-234, but left it in section 42-1401. The 2009 amendment also added to section 42-234 language that already exists in section 42-1401 (pertaining to recharge districts), including the provision that IDWR "may reduce" the amount allowed for diversion to recharge under a permit or license "even though there is sufficient water to supply the entire amount originally authorized by permit or license."[612]

(2) Summary of the public betterment aquifer recharge experience

The 1978 Legislature adopted a measure supporting the concept of recharge projects and their implementation by recharge districts on a limited basis.[613] In subsequent enactments it has expanded the authorization to allow any person, not just special districts, to appropriate water for recharge, and it has even appropriated funds to acquire and deliver water for recharge in the Jerome-Gooding area of south-central Idaho. Numerous studies and investigations into the ground water hydrology and recharge capabilities of various aquifers have been conducted. In addition to this authority and information, there appear to be increasing incentives to initiate aquifer recharge projects. So the question must be asked: Why have there not been more large-scale recharge projects undertaken in Idaho? Several reasons seem likely.

Aquifer recharge for its own sake (i.e., PBAR), has some inherent disincentives. The first is the relationship of cost and benefit. It presumably is difficult to justify the costs inherent in developing an aquifer recharge project—costs that will be borne by a specific, limited group of sponsors—where the benefits that might be realized are generalized, spread across poorly-defined areas, and are difficult to quantify. Absent significant declines in water levels that jeopardize the ability of ground water users to fill their rights,[614] or the immediate threat of curtailment to fill senior ground or surface water rights, investments in aquifer recharge to stabilize or increase water levels are not likely. In fact, the Idaho aquifer recharge projects that have been implemented on a consistent basis to date tend to be projects like those of the South West Irrigation District near Oakley, Idaho to stabilize water levels in the critical ground water areas within its own boundaries for the direct benefit of the District's ground water pumpers.

Before these potentially large investments will be made, those making the investments presumably will want some level of certainty that water will be available to divert to recharge. Uncertainty in this area of water law is heightened by the questions surrounding the 1994 legislative waiver of Idaho Power's Swan Falls subordination with respect to water rights the recharge district in Lincoln, Jerome, and Gooding Counties might acquire for recharge under Idaho Code 42-4201(2). However, all other recharge appropriations and transfers presumably will not have to contend with this impediment because it was removed from section 42-234(2) in 2009.

The physical and economic feasibility of aquifer recharge depends in large part on a delivery system that can put water where it will do the most good when it is most available. In many situations, this means using existing irrigation diversions, canals and laterals to divert and distribute recharge

---

[613] Idaho Code § 42-234(1) ("It is the policy of the state of Idaho to promote and encourage the optimum development and augmentation of the water resources of this state. The legislature deems it essential, therefore, that water projects designed to advance this policy be given maximum support.")

[614] A mass measurement of ground water levels in wells throughout the ESPA was conducted by the U.S. Geological Survey in 1980. When ESPA ground water levels were again measured in 2000, the Department of Water Resources found that over the ensuing twenty-years changes in water levels in most areas of the aquifer were insignificant, including many areas with substantial ground water development.

water through leakage. But even though surface water may be available in the stream, and in priority, to divert to aquifer recharge, there may not be sufficient capacity in these irrigation facilities to carry both irrigation water and recharge water.

As noted in the Department's 1999 Managed Recharge Feasibility Report for the ESPA, there are other institutional, environmental and land use issues that affect the feasibility of large-scale aquifer recharge. These include addressing the requirements of the federal Endangered Species Act, Clean Water Act and National Environmental Policy Act ("NEPA"), as well as requirements of various statutes, regulations and contracts controlling the use of U.S. Bureau of Reclamation facilities and storage water.[615] They also include federal, state and local land use regulations such as those governing use of lands controlled by the U.S. Forest Service or Bureau of Land Management. The Department's feasibility report concluded that for the ESPA, large-scale managed recharge appeared to be hydraulically and economically feasible, but also that institutional controls and environmental priorities create many uncertainties about overall feasibility. Some or all of these factors will come into play in any aquifer recharge project in Idaho.

C. Private Aquifer storage and recovery or "ASR" projects

(1) The difference between PBAR and ASR

The Legislature's various pronouncements about aquifer recharge do not address private aquifer storage and recovery ("ASR") projects, except to the extent that they do confirm that aquifer recharge is a beneficial use of water. Unlike the PBARs discussed above, which require some special treatment under the prior appropriation doctrine, ASR projects conceptually are very familiar—they simply are ordinary storage projects that have been moved underground.

Consequently, no special legislative authorization is required, and, indeed, the Legislature has as yet said nothing on the subject. More importantly, the unique legislative restrictions applicable to PBAR projects are inapplicable to ASR projects. What this means is that an entity seeking to undertake an ASR project should be able to obtain a water right (through appropriation or transfer) allowing the entity to divert water from some source (surface water, ground water or storage) and place the water into the aquifer without regard to the non-subordination provisions applicable to PBAR projects.

---

[615] At first blush, agreements, or amendments to agreements, to allow use of federal facilities to divert or carry water for aquifer recharge or to obtain needed rights-of-way on federal lands would appear to be straightforward tasks. However, as "federal actions" they would be subject to the environmental impact review required by NEPA. And, given the potential impacts on federally listed endangered species in the Columbia River Basin, and the existence of pending federal and tribal water right claims in the Snake River Basin, extensive consultation with the National Marine Fisheries Service and U.S. Fish and Wildlife Service under Section 7 of the Endangered Species Act and consultation and/or negotiation with the Tribes almost certainly would be required.

(2) Water diversions and ASR

What about the other end? Is a separate water right required to take the water out again?

In the limited ASR matters that have come before the Department it has required the project proponent to obtain a water right permit to recover water intentionally stored in an aquifer.[616]

Arguably, there is no legal requirement for obtaining a new water right to recover ground water once it has been lawfully placed into storage.[617] Once water has been diverted in priority and placed into aquifer storage, it should be available for withdrawal from the aquifer by the project sponsor without regard to priority. This seems consistent with the analogy to diversion from a surface reservoir. So long as the water remains under the appropriator's "control," the water is no longer public water, but rather has become private property. Provided that the water has been properly diverted, in priority, into storage in the first instance, and the water can thereafter be accounted for using an approved ground water model or other means, one could argue that the ASR proponent remains in constructive "control" of the water, in the same manner as the owner of an on-stream reservoir. Wells into which water can be injected can be constructed and used pursuant to rules implementing the statutes pertaining to Waste Disposal and Injection Wells, Idaho Code §§ 42-3901 through 42-3919; IDAPA 37.03.03.

The Department also attaches a priority date to aquifer storage recovery permits. This too seems antithetical to the entire purpose of an ASR project—to divert water to storage when it is available and draw upon it later without regard to priority when it is needed. The Department has obtained the same effect–in a roundabout way–through the inclusion of a condition in the water right approval that allows "out of priority" diversions of ground water to the extent that they are mitigated by ground water recharge activities. To the authors, this is a needless complication.

There is no magic in ASR projects. Like any reservoir, an ASR project typically does not create new water in the hydrologic system.[618] The issue is primarily one of timing—making water available when needed. In some cases, ASR projects may be employed because they improve the quality of water. In others, the project goal may simply be to make the water physically available in a different

---

[616] See discussion of Micron Technologies ASR project below.

[617] Typically, once water has been diverted into storage, it is for all practical purposes the appropriator's property, and may be diverted from storage as the appropriator deems necessary, provided the amounts diverted are reasonable and can be beneficially used. *See Washington Cnty. Irr. Dist. v. Talboy, supra* (although water diverted to storage no longer is public water, reservoir owner may not waste it); *City & Cnty. of Denver v. N. Colo. Water Conservancy Dist.*, 276 P.2d 992 (1954) (the "Blue River" case) (all water impounded must be put there only temporarily; otherwise its capture from the stream defeats beneficial use). For example, in Idaho, a storage right for a surface reservoir will note the priority of the right to divert water into storage (i.e., to capture water behind the dam), and also will identify the ultimate use(s) for which water may be released from the reservoir. However, reservoir releases of captured water are not subject to any priority constraint.

[618] The "hydrologic system" here being the interconnected surface and ground water source.

place. Except in the limited example of diversion of water from a foreign source into a closed ground water basin, no ASR project, increases the overall quantity of water in the system.

As with any reservoir, there must be a mechanism for determining what water within the reservoir belongs to the storage right older. In the case of a surface reservoir, that calculation is relatively simple. In the case of an underground reservoir, the technical computations may be more complex. The question of control over the water, and where it goes after it is injected into the subsurface, are matters of hydraulics and hydrogeology that need to be answered by an expert, preferably one who is using reliable monitoring wells and other data. In addition, proper well construction is essential. How much of the injected water will be available for recovery will depend on such analyses. Because water in aquifers moves according to geology and hydraulic head, there also will be questions of timing: will the water placed in storage still be present when the appropriator seeks to withdraw it? Thus, ASR projects raise questions not faced by surface storage owners, whose reservoirs are understood to fully capture and hold the water placed there, less seepage and evaporation (both of which generally can be calculated more accurately than movement of water underground).[619]

(3) Examples of ASR projects

The authors currently are aware of three ongoing projects that can be considered ASR projects: South West Irrigation District's program on the Oakley Fan aquifer; a small pilot program being carried out by United Water Idaho in Boise, and a program—also still in the pilot stage—being implemented by Micron Technology in the Southeast Boise Ground Water Management Area.

Southwest Irrigation District ("SWID"), which is served primarily by ground water in Cassia and eastern Twin Falls Counties south of Burley, Idaho, has applications pending for the use of several injection wells in an aquifer storage and recovery (or mitigation) project. The applications have been filed in connection with SWID's proposed mitigation plan it filed with IDWR in late 2009 in response to delivery calls affecting the Eastern Snake Plain Aquifer.

For a number of years, SWID has used surface water to recharge the aquifer underlying its members' lands, using a variety of infiltration and injection methods. These methods have included injection of surface water into the aquifer through some 13 wells installed beginning in 1991.[620] SWID annually has recharged approximately 3,900 acre-feet of surface water through these injection wells,

---

[619] The practitioner may wish to consult published papers or other literature in this field before implementing an ASR project. Two sources are: R. Pyne, *Groundwater Recharge and Wells, A Guide to Aquifer Storage Recovery*, Lewis Publishers (1995); and J.H. Peters, *et al.*, eds., *Artificial Recharge of Groundwater*, A.A. Balkema Publishers (1998).

[620] B. Higgs, *Groundwater Management Plan of Southwest Irrigation District* (Draft) at 5 and 19 (September 2001). The plan using these 13 wells is now being replaced by a larger plan involving 25 injection wells, all of which are awaiting permitting by IDWR. Permitting requires water quality monitoring of the injected water.

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

using diversions from Cottonwood Creek, Dry Creek, and Murtaugh Lake. It also maintains a constructed infiltration ditch about 8 miles in length.[621]

SWID's program is probably better described as a mitigation project, not an ASR program. As indicated above, SWID recently proposed a mitigation plan that further explains the program.[622]

In the Micron ASR project, the Department has required a permit to remove the water from the aquifer once it has been stored. The permit issued includes a 2001 priority date, and states that the permit is "subject to all prior water rights." Nevertheless, conditions of approval allow out-of-priority diversions to the extent that 1) the diversions are mitigated by ground water recharge activities and 2) the diversions do not injure senior rights through direct well interference. The Micron permit allows one hundred percent of the water injected into the aquifer to be diverted under the permit provided the diversion is in the same calendar year. To the extent water injected in any given year is not diverted in the same calendar year, recharge credits may be carried forward to subsequent years, subject to a ten percent reduction per year.[623] This system of accounting for recharge credits is based upon computer modeling of aquifer hydrology prepared by Micron's consultant and approved by the Department. It is logical that such accounting would be accomplished on a case-by-case basis.

Micron annually injects approximately 1,200 acre-feet of Boise River water into the Boise Fan Aquifer, where the Company's production wells are located. Before being injected, the river water is put through a sophisticated membrane water treatment facility capable of treating some 2 million gallons per day. The injected water exceeds (i.e., is cleaner than required by) drinking water standards. In addition to water quantity, water quality and temperature are important considerations. For example, Micron's ASR project employs river water to cool the warmer aquifer water to the temperature needed for the Company's manufacturing processes.

United Water Idaho is the municipal water provider for the City of Boise and surrounding areas. During the winter low-demand season, United Water is injecting drinking water pumped from elsewhere in its system into nine of its production wells and recovering it in the same year over several weeks during the period of peak municipal water demand in the summer. The purpose is not to enlarge production per se, but to improve the water quality available to each of these wells. So far it has proven successful.[624]

---

[621] Personal communication with Brian Higgs (October 22, 2009).

[622] Other entities on the ESPA in the past have injected water through wells. An example is A&B Irrigation District, which for many years injected wastewater from its project back into the aquifer through wells.

[623] Idaho Dep't of Water Resources, Permit to Appropriate Water No. 63-31183 (February 14, 2002).

[624] Personal Communication with Roger Dittus, United Water Idaho (October 12, 2009). The constituents subject to maximum contaminant levels (mcls) in the Boise area typically are arsenic, manganese, uranium, and ammonia. In addition, some wells are affected by dissolved solids, such as calcium carbonate, which cause problems with equipment.

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

Moreover, improving an aquifer's quality also usually increases its usefulness. Thus, an ASR project focused on the quality question can effectively augment supplies because it makes productive those wells that otherwise might be off-limits.

The Department issued United Water an injection well permit for each of the injection points, but did not require new diversion permits, presumably because there is no out-of-source water being brought to the system. The water being injected has been diverted originally pursuant to one or more of United Water's existing municipal water rights in the area and it is recovered pursuant to the water right associated with the injection well. The injection well was drilled originally in connection with the development of a municipal water right held by United Water. Hence, no new permit was required. Because the injected water is of drinking water quality, the project carries no additional treatment requirement.[625]

(4) Aquifer mitigation

"Aquifer mitigation" is used here to refer to a situation that arguably is the opposite side of the ASR coin. In this scenario a project sponsor adds a particular amount of water to an aquifer (or retires a particular amount of pumping) not for the public betterment, but rather to allow the sponsor to appropriate specified amounts of ground water right that otherwise would not be in priority. The project mitigates the junior right holder's depletion and maintains the status quo for senior pumpers using the aquifer or for tributary surface water rights. An example from Colorado is the project managed by Groundwater Appropriators of the South Platte ("GASP"), where pumpers divert flood flows and non-irrigation season from the river into leaky ditches and infiltration basins, carefully account for the amounts recharged, account for the timing of return flows of the recharged water to the South Platte River and then are entitled to pump their junior tributary wells according to a schedule that recognizes the mitigation to senior surface water rights provided by the recharge.

IDWR's Conjunctive Management Rules specifically list recharge as an appropriate mitigation device available to any appropriator facing water right administration. IDAPA 37.03.11.43.3.d.

In Idaho, the authors are aware of several mitigation proposals involving aquifer recharge that have allowed the Department to process applications to appropriate ground water despite the Department's current moratorium on processing new applications in the Boise Basin.

In one instance, the Department has approved a relatively small appropriation of ground water from the shallow aquifer for irrigation use where the applicant proposed to divert an existing surface

[625] The requirement that water injected be of drinking water quality and subject to a permit can be essential in these cases. Recently, the Idaho Federal District Court found criminal liability where a feedlot operator injected surface water into the Eastern Snake Plain Aquifer without permits. *United States v. King*, Case No. CR-08-002-E-BLW (D. Idaho 2009).

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

water right into infiltration basins near the well. The applicant provided measurements of the rate of infiltration to the aquifer from the basins and was authorized to divert the same volume from a well.[626]

The Department also has processed applications involving the appropriation of ground water exposed by the construction of ponds that intercept shallow ground water. The ponds are to be constructed for aesthetic purposes in residential and commercial subdivisions and no ground water was proposed to be diverted from the ponds. To account for the evaporative losses from the ponds, however, the applicants proposed to change the nature of use of natural flow water rights represented by their shares of stock in mutual irrigation ditch companies from irrigation to ground water recharge. Each share represented the right to receive up to 0.02 cfs of water per appurtenant acre within the development. One "share" was offered as mitigation for each acre of pond and an equivalent area of "dry up" (i.e., no future irrigation) was proposed to insure no net increase in consumptive use of water following the pond construction and transfer.[627] The transferred water rights were proposed to be diverted directly into one or more of the ponds as recharge to offset evaporative losses.

Typically, "mitigation" has meant the avoidance or offset of injury to senior water rights.[628] But in the above cases, there was no indication that pumping the small well or evaporation from the ponds

---

[626] The conditions imposed on the new right concerning recharge were as follows:

> The right holder shall mitigate the groundwater diversion authorized under this right by directing water diverted from the Boise River under existing water rights into unlined ponds and causing it to seep into the ground. The volume of water directed into the ponds for mitigation purposes shall equal or exceed the volume of groundwater diverted under this right each year. The ponds shall be modified and/or constructed and the seepage shall be quantified in accordance with the plan proposed [by the applicant's consultant]. If the proposed mitigation proves to be inadequate or cannot be maintained, the Director retains jurisdiction to require modifications to maintain sufficient recharge in order to offset diversion from the aquifer under this right. The Director retains jurisdiction to require measurement and reporting of the amount of surface water supplied to the ponds for mitigation purposes.

State of Idaho Dep't of Water Resources, Water Right No. 63-12092 (issued November 18, 1999).

[627] The assumption here is that the annual evaporative loss (consumptive use) of ground water per exposed surface acre is equivalent to the annual consumptive use attributable to the same acre due to irrigation. Hence the dry up of an acre of historical irrigation offsets the depletive effect of exposing one surface acre of ground water. Depending on the consumptive use values appropriate for evaporation and irrigation in the location where the mitigation is being proposed, the applicant could be required to provide more or less mitigation water.

[628] The Department's draft Water Management Rules define "mitigation" as "[t]he result of an action taken by or for the benefit of the holder of a junior priority water right to prevent injury to a senior priority water right, or to provide compensation acceptable to the holder of a senior priority water right for injury caused by the diversion and use of water under the junior priority water right." This is consistent with the use of the word in the context of a mitigation plan which is defined in the Department's Conjunctive Management Rules, IDAPA 37.03.11.010.15, as "a plan submitted by the holder(s) of a junior-priority ground water right and approved by the Director . . . that identifies actions and measures to prevent, or compensate holders of senior-

would interfere with water levels in neighboring wells. Nor was there any indication that they actually would cause injury to senior surface water rights, although that assumption is the basis for the Department's processing moratorium. Nor was the recharge proposed to benefit a specified senior water right or to avoid a delivery call. Rather, it was to have no net effect on the water system and water users in that system as a whole—much like the PBAR projects discussed previously. In its most simple terms, the mitigation was offered because it was a prerequisite to being able to have the permit application processed.

(5) Injection of spent geothermal water

Both to conserve the volume of a geothermal aquifer and maintain its heat energy, several holders of geothermal water rights inject the water from which varying amounts of heat has been extracted. The City of Boise's geothermal system is an example. The U.S. Department of Administration in Boise is another. The injection is carried out pursuant to a permit under the injection well statute (discussed below), but it provides no right to the injected water as such, and it is not considered aquifer storage.

---

priority water rights for, material injury caused by the diversion and use of water by the holders of junior-priority ground water rights within an area having a common ground water supply."

23. MUNICIPAL WATER RIGHTS AND RAFN

A. The growing communities doctrine—an exception to the anti-speculation rule

The prior appropriation doctrine, born during the frenzied settlement of the western states in the nineteenth century, embodies the entrepreneurial energy that characterized that era. It entrusts private initiative with the duty to efficiently allocate a public resource. Caution as to environmental and other public interest considerations was not grafted onto the doctrine for many decades.

From the start, however, there was a tension within the prior appropriation doctrine. While it embraces laissez faire capitalism, it eschews one of the driving forces of the capitalist market place—speculation. In other contexts, speculation (and the investment resources it brings to the table) is considered the engine of private development and one of the hallmarks of the American success story. In water law, however, speculation is seen as the enemy of beneficial use, which is elevated to the prior appropriation doctrine's most prominent position. Beneficial use is more important even than being first in time: The law condemns the water speculator while rewarding the farmer who actually applies water to the land, regardless of who got there first.

Why the hostility toward the speculator? Simple. Water is a public resource. A speculator is someone who seeks to appropriate water without having an immediate need for it in the hope of selling it later to someone who can put the water to work. Water law views the speculator harshly as someone who has contributed nothing and should not be allowed to profit by tying up a public resource. While our economic system embraces speculation in virtually every other aspect of the economy—from land to futures markets—we have always treated public resources differently. Thus, while speculation in privately owned real estate is allowed and even encouraged, the public domain, by and large, was not sold to the highest bidder but was doled out for free to homesteaders, miners, and others who actually put the land to work. The same is true for water. Once reduced to private ownership, however, both land and water may be bought and sold, and speculation is allowed to play its appropriate economic role of allocating the resource.

This tension—in which speculation is excluded from the marketplace, at least at the time of initial allocation—is important to understand in the context of municipal water rights and the special treatment accorded to municipal water providers.

In the early days, before permit systems were established in Idaho and most other Western states, a water right came into existence only by actual diversion to beneficial use.[629] The statutory

[629] "The procedure for appropriating water contained in the act of 1881, providing that an intending appropriator should post a notice at the point of diversion and record the same, was replaced in 1903 by the present procedure which places the regulation of appropriation of waters under the jurisdiction of [what is now Idaho Department of Water Resources]." Wells A. Hutchins, *The Idaho Law of Water Rights*, 5 Idaho L. Rev. 1, 21 (1968). Except for certain small domestic wells, the permit/license process is now mandatory in Idaho. Idaho Code §§ 42-103, 42-201 (for surface water diversions, effective May 19, 1971) and Idaho Code § 42-229 (for ground water diversions, effective March 25, 1963). Implementing regulations are found at IDAPA

permit system provided critical assurance to the developer of a new water right. Rather than engage in a risky race to develop a water supply, the user could obtain a water right permit in advance, which secured the quantity and priority of the water right sought. With permit in hand, the user then could obtain financing and proceed to construction of the diversion and delivery system with reasonable confidence that water would be available. Once the project was completed and in use, a license would be awarded with a priority date relating back to the date of the application for the permit. Idaho Code §§ 42-202, 42-219.

In Idaho, the user may spend up to five years getting from permit to license, with another five to ten-year extension upon a showing of need. Idaho Code §§ 42-204.[630] In specified (and very limited) circumstances, further extensions may be obtained.[631] In most cases, that has proven sufficient time to design, fund, and construct a water project, at least for the typical Idaho irrigation project.

37.03.08.035.01.a. (may not "commence the construction of any project works" until permit application has been approved).

[630] Idaho Code § 42-204 provides that "actual construction work and application of the water to full beneficial use shall be complete within a period of five (5) years from the date of [permit] approval. . . ." An extension of up to ten years is available for larger water right permits: "The time for completion of works and application of the water to full beneficial use under any permit involving the diversion of two (2) or more cubic feet per second or the development or cultivation of one hundred (100) or more acres of land may be extended by the director of the department of water resources upon application by the permittee for an additional period up to ten (10) years beyond the initial development deadline contained in the permit, or beyond a grant of extension pursuant to the provisions of subsection (1) of this section, provided the permittee establishes that the permittee has exercised reasonable diligence and that good cause exists for the requested extension." Idaho Code § 42-204(4). (This 10-year provision was added in 2013, 2013 Idaho Sess. Laws, ch. 82. It used to be just five years.)

An extension of unlimited duration is available for permits held by the United States or the Idaho Water Resource Board. Idaho Code § 42-204(5).

All others are eligible for one five-year extension: "In all other situations not governed by these provisions the department may grant one (1) extension of time, not exceeding five (5) years beyond the date originally set for completion of works and application of the water to full beneficial use, or beyond any grant of extension pursuant to the provisions of subsection (1) of this section, upon request for extension received on or before the date set for completion, provided good cause appears therefor." Idaho Code § 42-204(6).

Most practitioners find that the Department applies a lenient standard in determining good cause under this provision. Other provisions deal with extensions of time in connection with the submission of proof. Idaho Code §§ 42-218, 42-218(a).

[631] For example, further extensions may be provided for certain, specified permitting delays. Idaho Code § 42-204(1). An extension for up to 12 years is allowed for certain large irrigation projects. Idaho Code § 42-204(2). Extensions are allowed for large reservoir projects. Idaho Code § 42-204(3). Extensions are allowed for federal or Idaho Water Resource Board projects. Idaho Code § 42-204(5).

The system has not been entirely satisfactory, however, for cities and other municipal water providers.[632] Municipal providers shoulder an obligation unlike that of other water users. Cities and municipal water utilities are bound to serve all those customers who find it desirable to locate within their service area.[633] Municipal providers never know how many customers they will be obligated to serve in the future, but must serve them when they come. Thus, cities cannot wait for the future to unfold and simply hope that water may be obtained as needed. Although some uncertainty is inherent in growth projections, practical necessity demands that cities and utilities lay the foundation today to meet the water needs of the coming decades.

In short, water rights to serve these municipal systems generally must be acquired long before the systems are in operation at full capacity. The planning horizon for these endeavors typically is longer than the five to fifteen years allowed under Idaho's water licensing statute. Cities have argued that they should not be subject to such a limitation. By and large, courts and legislatures have agreed.

B. Development of the doctrine in Colorado

Special treatment for municipal providers was first recognized by the courts, with legislative enactments coming along more recently. The courts of Idaho and other Western states long ago recognized the unique obligations of municipalities and have treated them differently than other water users.

> Of course, as the West began to urbanize, the prohibition against speculation served as a barrier to planning and development of adequate municipal supplies to accommodate future needs. Most states eliminated this barrier by providing special protections for municipalities, allowing them to hold, or at least acquire rights to, water supplies for future use. But for everyone else, the requirement of actual beneficial use remained.

Janet C. Neuman, *Beneficial Use, Waste, and Forfeiture: The Inefficient Search for Efficiency in Western Water Use*, 28 Envtl. L. 919, 965 (1998) (footnote omitted).

As discussed in the next section, Idaho was the first state to recognize the principle of special treatment for municipal providers. Colorado was quick to follow, and the doctrine has been most

---

[632] The term "municipal provider" is a defined term in Idaho. Idaho Code § 42-202B(5). The term is also commonly used in Colorado. Most other western states refer to cities and public utilities that provide water to customers as "municipal water suppliers."

[633] "Public utilities have a duty to serve all customers within a service area, provided that the system as a whole can absorb the cost and still yield a reasonable rate of return. A leading California case extended the duty to serve to include a duty on water providers to acquire the necessary supplies to meet projected demands." A. Dan Tarlock & Sarah B. Van de Wetering, *Western Growth and Sustainable Water Use: If There Are No "Natural Limits," Should We Worry About Water Supplies?*, 27 Pub. Land and Res. L. Rev. 33, 59 (2006) (citing *Lurawka v. Spring Valley Water Co.*, 146 P. 640, 645-46 (Cal. 1915)).

thoroughly discussed by the courts of that state. The seminal exposition comes from the Colorado Supreme Court, writing in 1939:

> The concern of the city is to assure an adequate supply to the public which it serves. In establishing a beneficial use of water under such circumstances the factors are not as simple and are more numerous than the application of water to 160 acres of land for agricultural purposes. A specified tract of land does not increase in size, but populations do, and in short periods of time. With that flexibility in mind, it is not speculation but the highest prudence on the part of the city to obtain appropriations of water that will satisfy the needs resulting from a normal increase in population within a reasonable period of time.

City & Cnty. of Denver v. Sheriff, 96 P.2d 836, 841 (Colo. 1939) (emphasis added).

The "growing communities doctrine,"[634] as the teaching of *Sheriff* and its progeny has come to be known, recognizes that long-term planning by municipalities is prudent and necessary, and that the prior appropriation doctrine can accommodate the need for cities to hold water rights for long periods before they are put to use.

Subsequent decisions of the Colorado Supreme Court have reinforced the holding in *Sheriff*. "We cannot hold that a city more than others is entitled to [a] decree for water beyond its own needs. However, an appropriator has a reasonable time in which to effect his originally intended use as well as to complete his originally intended means of diversion, and when appropriations are sought by a growing city, regard should be given to its reasonably anticipated requirements." *City & Cnty. of Denver v. N. Colorado Water Conservancy Dist.* (the "*Blue River*" case), 276 P.2d 992, 997 (1954). "Courts should not intrude their own opinions to override the studied good-faith opinions of governmental agencies as to future needs of the public for facilities or commodities." *Metro. Suburban Water Users Ass'n v. Colorado River Water Conservation Dist.*, 365 P.2d 273, 289 (Colo. 1961). "The

[634] We use the phrase "growing communities doctrine" in reference to this body of the case law. The label has been employed by the Washington Supreme Court, *State of Washington, Dept. of Ecology v. Theodoratus*, 957 P.2d 1241 (Wash. 1998) (dissent) and by a number of commentators, e.g., Janis A. Carpenter, *Water for Growing Communities: Refining Tradition in the Pacific Northwest*, 27 Envtl. L. 127 (1997); Sandra Zellmer, *The Anti-Speculation Doctrine and its Implications for Collaborative Water Management*, 8 Nevada L. J. 994 (2008); A. Dan Tarlock, *The Progressive Growth Doctrine Meets Old and New Stresses on the West's Variable and Perhaps Shrinking Water Supplies*, 11 No. 2 ABA Water Resources Committee Newsletter 12 (2009); Lora Lucero and A. Dan Tarlock, *Water Supply and Urban Growth in New Mexico: Same Old, Same Old or a New Era*?, 42 Nat. Resources J. 803 (2003); A. Dan Tarlock & Sarah B. Van de Wetering, *Western Growth and Sustainable Water Use: If There Are No "Natural Limits," Should We Worry About Water Supplies?*, 27 Pub. Land and Res. L. Rev. 33 (2006). Although this shorthand description has not yet been employed by the Idaho Supreme Court, and differs somewhat from the "great and growing cities doctrine" which has taken hold in Colorado, we think it captures the idea. The doctrine plainly applies to all growing communities, large and small, not just to great cities. For instance, in *Village of Peck v. Denison*, 92 Idaho 747, 751, 450 P.2d 310, 314 (1969), the doctrine was applied to a community of 200 inhabitants.

Printed 6/23/2023 9:09 AM

Sheriff decision clearly counsels against a strict application of the anti-speculation doctrine to municipalities seeking to provide for the future needs of their constituents. . . . Thus under *Blue River*, a city may appropriate water for its future needs without violating the prohibition on speculation so long as the amount of the appropriation is in line with the city's 'reasonably anticipated requirements.'" *City of Thornton v. Bijou Irrigation Co.*, 926 P.2d 1, 37-38 (Colo. 1996).

C. Recognition of the doctrine in Idaho

This common law principle has long been recognized in Idaho.[635] Two Idaho cases and one federal case applying Idaho law have ruled squarely that cities may obtain water rights of sufficient quantity to meet future population growth. The first of these predated *Sheriff*.

In *City of Pocatello v. Murray*, 206 F. 72 (D. Idaho 1913), *aff'd, Murray v. City of Pocatello*, 214 F. 214 (9th Cir. 1914), the City of Pocatello granted a franchise to Murray and his associates to provide water to the city.[636] The city complained that while Murray had delivered some water from Mink Creek, he had not obtained the entire supply physically available in the creek. Applying Idaho law, the federal court found Murray indeed had failed to fulfill his contractual obligation. The court rejected Murray's argument that it was against public policy for the city to appropriate more water than was then needed. The court declared that the leeway accorded agricultural users "should and doubtless would, be applied with even greater liberality to the superior and more elastic needs of a growing municipality." *Murray*, 206 F. at 80.

In *Beus v. City of Soda Springs*, 62 Idaho 1, 107 P.2d 151 (1940) (Holden, J.), the Idaho Supreme Court upheld the city's right to purchase irrigation water rights and hold them for future municipal needs. The court went on to hold that such water need not be applied to irrigation in the meantime to avoid forfeiture.[637]

---

[635] Special treatment accorded to municipal providers in other western states is summarized in the discussion in section 23.I at page 379 and the table in section 23.I(14)(b) at page 395.

[636] The appeals court affirmed on the narrow basis of the construction of the municipal ordinance. However, the appeals court noted that one of the purposes of the water supply agreement between the city and defendants was to provide "as well for their future use." *Murray*, 214 F. at 220.

[637] In support of its decision, the Idaho court quoted from a Wyoming case, *Holt v. Cheyenne*, 137 P. 876 (Wyo. 1914):

> [T]he Supreme Court of Wyoming had before it . . . the identical question presented in this case. The court held: "A city's right to appropriate the waters of a stream is not limited to the needs of its citizens at the time of the adjudication of its rights, but is entitled to appropriate for the probable future demands of its population."
>
> The court then reviewed numerous authorities holding that property may be held by a municipality for its future growth and development without being subject to adverse claims of others, and then continues: "Such, we think, is the better reasoning, and is supported by the great weight of authority and to which

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

> A municipality may purchase lands, if that be necessary, to acquire water for its municipal needs, but is not required, after purchase, to irrigate the lands or cause the same to be irrigated, to avoid a loss of the water on a charge of abandonment. To require that would amount to nullifying the power granted to a municipality to acquire and hold water for future needs—an absolute necessity to the life and existence of a municipality.

Beus, 62 Idaho at 7, 107 P.2d at 154 (emphasis added).

In addition to the common law, the Court found support for special treatment of municipalities in Idaho statute.

> Finally, the view that a municipality may acquire and hold water for future needs seems to be placed beyond serious controversy by Section 49-1132, supra, which, among other things, provides that a municipal corporation has power to supply excess water to persons or corporations outside its corporate limits. If a municipality may only acquire water for the existing needs of its inhabitants-those residing within its corporate limits-there could be no excess water to sell outside the limits of a city.

Beus, 62 Idaho at 7, 107 P.2d at 154.[638]

In the case of *Village of Peck v. Denison*, 92 Idaho 747, 450 P.2d 310 (1969) (McQuade, J.), the court upheld the right of the village to obtain an unquantified water right for "all the flow" from a particular source. Whether the water was needed for current or future needs is somewhat unclear from the decision. Thus, the discussion of future needs is arguably dictum. In any event, the Court noted in a footnote:

> many courts have in later cases acceded, although a contrary doctrine has been announced in earlier decisions."

Beus, 62 Idaho at 6, 107 P.2d at 154 (this quotation, which *Beus* attributed to *Holt*, is actually from the headnote to *Holt*). The *Holt* court did state: "The city was not limited in the amount of its appropriation to the needs of its citizens at the time of the adjudication." *Holt*, 137 P. at 880. The court further stated that "the securing of water sufficient not alone for its present but such as may be necessary for its future inhabitants was and is within its governmental powers." *Holt*, 137 P. at 881.

[638] The referenced statute, Idaho Code § 49-1132, has been repealed. It may have been replaced by Idaho Code § 50-323, which was created in a comprehensive re-codification of municipal statutes in 1967. H.B. 41, 1967 Idaho Sess. L. ch. 429, § 20. However, this is difficult to trace, because the bill language is in an un-codified format. Nor does the legislative history of the 1967 act provide any information specific to this provision. In any event, an extraterritorial provision similar to that in the prior Idaho Code § 49-1132 is now found in the Idaho Revenue Bond Act, Idaho Code § 50-1030(a).

Idaho Code § 49-1132 may be traced back to 1901. 1901 Idaho Sess. L. ch. 41. However, the 1901 version does not contain the extra-territorial language.

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

> [A]lthough the Village of Peck became a municipality only after the events giving rise to this litigation, we would have found it difficult not to allow the appropriation of some excess water (had there been any in fact) under I.C. § 50-323 and its predecessors and *Beus v. City of Soda Springs*, 62 Idaho 1, 107 P.2d 151 (1940); see Hutchins, op. cit. at p. 44 (municipal use of water).

Village of Peck, 92 Idaho at 751, n.4, 450 P.2d at 314, n.4.

The court's reference in the quotation above is to an article published a year earlier by Wells Hutchins, the distinguished water law scholar, Wells A. Hutchins, *The Idaho Law of Water Rights*, 5 Idaho L. Rev. 1 (1968). Mr. Hutchins concluded that Idaho law does recognize water rights for future municipal growth:

> [A] city is not limited in the amount of its appropriation to the needs of its citizens at the time of adjudication of its water right, but may dispose of and apply the surplus water to beneficial use up to the amount of its application.

Hutchins, 5 Idaho L. Rev. at 44 n.211. The *Village of Peck* Court thus adopted Mr. Hutchins' observation. This shows that the Court viewed the doctrine has having a continuing vitality and a basis independent of the since repealed statute referenced in *Beus* (former Idaho Code § 49-1132, whose successor statute is discussed section 23.L(5) at page 411).

Thus, Idaho case law consistently has recognized and accommodated the special burdens on municipal water providers—providing them a measure of protection from the statutory forfeiture laws and common law abandonment principles.[639] As one commentator put it: "Therefore, when a municipal corporation acquires a water right, the city generally will not lose the water right due to nonuse." Lynne Krogh-Hampe, *Injury and Enlargement in Idaho Water Right Transfers*, 27 Idaho L. Rev. 249, 294 (1990). In the same vein, the Department's chief legal counsel noted: "The general law regarding the quantity of a municipal water right appears to be that a city may acquire a preferred right to store or appropriate more water than is immediately needed, thus allowing for growth of the city." Phil Rassier, Chief Counsel, *IDWR Memorandum: Municipal Water Rights – Statutory Background* at 1 (May 7, 1979) (reproduced in Appendix M).

D. The Municipal Water Rights Act of 1996

(1) Text of the statute (as amended)

In 1996, the Idaho Legislature codified the growing communities doctrine and established specific procedures and limitations governing a municipality's ability to acquire water rights (by

[639] These three Idaho cases on the Growing Communities Doctrine are analyzed by former Deputy Attorney General Philip Rassier in his Memorandum of May 7, 1979 (reproduced in Appendix M).

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

appropriation or transfer) for long-term growth. Municipal Water Rights Act of 1996 ("1996 Act" or the "Act").[640] Because the text of the Act is important, we set it out here in full (with subsequent amendments) for reference. The following reflects amendments through 2020:

Idaho Code § 42-202(2)	An application proposing an appropriation of water by a municipal provider for reasonably anticipated future needs shall be accompanied by sufficient information and documentation to establish that the applicant qualifies as a municipal provider and that the reasonably anticipated future needs, the service area and the planning horizon are consistent with the definitions and requirements specified in this chapter. The service area need not be described by legal description nor by description of every intended use in detail, but the area must be described with sufficient information to identify the general location where the water under the water right is to be used and the types and quantity of uses that generally will be made.
Idaho Code § 42-202(11)	Provided further, that water rights held by municipal providers prior to July 1, 1996, shall not be limited thereby.
Idaho Code § 42-202B(4)	"Municipality" means a city incorporated under section 50-102, Idaho Code, a county, or the state of Idaho acting through a department or institution.
Idaho Code § 42-202B(5)	"Municipal provider" means: (a) A municipality that provides water for municipal purposes to its residents and other users within its service area; (b) Any corporation or association holding a franchise to supply water for municipal purposes, or a political subdivision of the state of Idaho authorized to supply water for municipal purposes, and which does supply water, for municipal purposes to users within its service area; or (c) A corporation or association which supplies water for municipal purposes through a water system regulated by the state of Idaho as a "public water supply" as described in section 39-103(12), Idaho Code.
Idaho Code § 42-202B(6)	"Municipal purposes" refers to water for residential, commercial, industrial, irrigation of parks and open space, and related purposes, excluding use of water from geothermal sources for heating, which a municipal provider is entitled or obligated to supply to all those users within a service area, including those located outside the boundaries of a municipality served by a municipal provider.

[640] 1996 Idaho Sess. Laws, ch. 297 (codified as amended at Idaho Code §§ 42-202(2), 42-202(11), 42-202B, 42-217, 42-219(1), 42-219(2), 42-222(1), 42-223(2)). This list of codified sections excludes some minor "clean up" to other sections of the Water Code that were included in the 1996 Act. References to municipal providers are also found in Idaho Code §§ 43-335 and 43-338, dealing with the right of irrigation districts to lease water to municipal providers. These references were not part of the 1996 Act but came a year later. The text in the table has been updated to reflect amendments to the 1996 Act, most recently S.B. 1316 (2020 Idaho Sess. Laws, ch. 164) (providing for incremental licensing of RAFN rights).

Idaho Code § 42-202B(7)	"Planning horizon" refers to the length of time that the department determines is reasonable for a municipal provider to hold water rights to meet reasonably anticipated future needs. The length of the planning horizon may vary according to the needs of the particular municipal provider.
Idaho Code § 42-202B(8)	"Reasonably anticipated future needs" refers to future uses of water by a municipal provider for municipal purposes within a service area which, on the basis of population and other planning data, are reasonably expected to be required within the planning horizon of each municipality within the service area not inconsistent with comprehensive land use plans approved by each municipality. Reasonably anticipated future needs shall not include uses of water within areas overlapped by conflicting comprehensive land use plans.
Idaho Code § 42-202B(9)	"Service area" means that area within which a municipal provider is or becomes entitled or obligated to provide water for municipal purposes. For a municipality, the service area shall correspond to its corporate limits, or other recognized boundaries, including changes therein after the permit or license is issued. The service area for a municipality may also include areas outside its corporate limits, or other recognized boundaries, that are within the municipality's established planning area if the constructed delivery system for the area shares a common water distribution system with lands located within the corporate limits. For a municipal provider that is not a municipality, the service area shall correspond to the area that it is authorized or obligated to serve, including changes therein after the permit or license is issued.

Idaho Code § 42-204	. . . (3) The provisions of this subsection [setting a five-year development period] shall not apply to permits held by municipal providers for reasonably anticipated future needs. . . . (4) For permits held by municipal providers for reasonably anticipated future needs, the permit development period shall correspond to the planning horizon authorized by the permit, which may not be extended. During the permit development period, the municipal provider shall periodically submit to the department incremental statements of completion showing proof of beneficial use consistent with the provisions of section 42-217, Idaho Code. Each such incremental statement shall document the extent of application of water to beneficial use during the most recent reporting interval. Each incremental statement shall be prepared by a certified water rights examiner, unless the permit holder is not asserting any additional increment of beneficial use during that reporting interval. The department shall set and may later adjust the duration of any reporting interval for any permit, which shall be made a condition of the permit, to any duration not shorter than five (5) years. Sixty (60) days before the end of each reporting interval, the department shall forward a notice to the municipal provider by certified mail to its address of record specifying the date the incremental statement is due. Unless an extension of the deadline for the incremental statement is requested by the municipal provider prior to the deadline, and the extension is approved by the director upon a showing of good cause, failure to timely submit an incremental statement shall result in a lapse of that portion of the permit that has not previously been licensed or for which an incremental statement of completion showing proof of beneficial use has not been submitted. Such lapsed permit portion may be reinstated only in accordance with the provisions of section 42-218a, Idaho Code. For reasonably anticipated future needs permits existing on July 1, 2020, the department shall have one (1) year from July 1, 2020, either to issue a license, where proof already has been submitted, or to modify the permit to conform to the provisions of this section by establishing future reporting intervals for periodic proof statements, by establishing the date for the final proof statement corresponding with the end of the planning horizon authorized by the existing permit, and by updating approval conditions to clarify whether information that must be submitted with proof of beneficial use is due at each reporting interval or only with the final proof statement. . . . (6) Subject to the provisions for reinstatement as provided in section 42-218a, Idaho Code, a permit holder who fails to comply with the provisions of this section within the time or times specified shall be deemed to have relinquished all rights under its permit or, in the case of a permit held by a municipal provider for reasonably anticipated future needs, the permit holder shall be deemed to have relinquished all rights under any portion of the permit that has not previously been licensed or for which an incremental statement of completion showing proof of beneficial use has not been submitted.

Idaho Code § 42-217	(1) On or before the date set for the beneficial use of waters appropriated under the provisions of this chapter, or the date set for submission of an incremental statement of completion showing proof of beneficial use, the permit holder shall submit a statement on a form furnished by the department of water resources that the permit holder has used such water for the beneficial purpose allowed by the permit. The statement shall include: (a) The name and post office address of the permit holder; (b) The permit number; (c) A description of the extent of the use; (d) In the case of a municipal provider, a description of the current service area; (e) The source of the water used; and (f) Such other information as shall be required by the department's form. (2) Such written statement shall include fees as provided in subsection K. of section 42-221, Idaho Code, or a field examination report prepared by a certified water right examiner. For permits held by a municipal provider for reasonably anticipated future needs, such statements shall be provided in accordance with section 42-204(4), Idaho Code. (3) Upon receipt of such written statement and the fee as required in section 42-221, Idaho Code, the department shall examine, or cause to be examined: (a) The place where such water is diverted and used and, if the use is for irrigation, the area and location of the land irrigated and the nature of all the improvements which have been made as a direct result of such use. (b) The capacities of the ditches or canals or other means by which such water is conducted to such place of use and the quantity of water that has been beneficially applied for irrigation or other purposes. (4) The department or the person making such examination under the direction of the department shall prepare and file a report of the investigation: provided, that whenever an irrigation project is developed in the name of an association, company, corporation, irrigation district or the United States as provided in section 42-219, Idaho Code, proof of beneficial use shall be made by the permit holder. The lands upon which the water has been used need not be described by legal subdivisions, but may be described as provided in section 42-219, Idaho Code, and it shall only be necessary to show in such cases that the quantity of water beneficially applied for irrigation has been applied within the limits of the project.

Idaho Code § 42-218a	(1) A permit upon which the proof of beneficial use, or an incremental statement of completion showing proof of beneficial use, has not been submitted, or a request for extension of time has not been received on or before the date set for such proof or incremental statement, shall lapse and be of no further force nor effect. For a permit held by a municipal provider for reasonably anticipated future needs, such lapse shall not apply to any portion of the permit that has been previously licensed or for which an incremental statement of completion showing proof of beneficial use has been submitted. Notice of said lapsing shall be sent by the department to the permit holder at the address of record by regular mail. . . .
Idaho Code § 42-219	(1) Upon receipt by the department of water resources of all the evidence in relation to such final proof, it shall be the duty of the department to carefully examine the same, and if the department is satisfied that the law has been fully complied with and that the water is being used at the place claimed and for the purpose for which it was originally intended, the department shall issue to such user or users a license corresponding to the beneficial use. Such license shall state the name and post office address of such user, the purpose for which such water is used and the quantity of water that may be used, which in no case shall be an amount in excess of the amount that has been beneficially applied. For permits held by a municipal provider for reasonably anticipated future needs, a license may be issued incrementally for an amount corresponding to the beneficial use demonstrated to the satisfaction of the department in each incremental statement of completion showing proof of beneficial use submitted pursuant to section 42-204(4), Idaho Code, which amount, together with any previously licensed portion of said permit, shall not exceed the initial quantity authorized under the permit. The final incremental license at the end of the planning horizon shall be issued for an amount corresponding to the beneficial use. The director shall condition the license to prohibit any transfer of the place of use outside the service area, as defined in section 42-202B, Idaho Code, or to a new nature of use of amounts held for reasonably anticipated future needs together with such other conditions as the director may deem appropriate. (2) If such use is for irrigation, such license shall give a description, by legal subdivisions, of the land irrigated by such water, except that the general description of a place of use described in accordance with subsection (5) or (6) of this section may be described using a digital boundary, as defined in section 42-202B, Idaho Code. If the use is for municipal purposes, the license shall describe the service area as provided in section 42-202B(9), Idaho Code. . . .
Idaho Code § 42-222(1)	Any person, entitled to the use of water whether represented by license

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

	issued by the department of water resources, by claims to water rights by reason of diversion and application to a beneficial use as filed under the provisions of this chapter, or by decree of the court, who shall desire to change the point of diversion, place of use, period of use or nature of use of all or part of the water, under the right shall first make application to the department of water resources for approval of such change. Such application shall be upon forms furnished by the department and shall describe the right licensed, claimed or decreed which is to be changed and the changes which are proposed, and shall be accompanied by the statutory filing fee as in this chapter provided. Upon receipt of such application it shall be the duty of the director of the department of water resources to examine same, obtain any consent required in section 42-108, Idaho Code, and if otherwise proper to provide notice of the proposed change in a similar manner as applications under section 42-203A, Idaho Code. Such notice shall advise that anyone who desires to protest the proposed change shall file notice of protests with the department within ten (10) days of the last date of publication. Upon the receipt of any protest, accompanied by the statutory filing fee as provided in section 42-221, Idaho Code, it shall be the duty of the director of the department of water resources to investigate the same and to conduct a hearing thereon. He shall also advise the watermaster of the district in which such water is used of the proposed change and the watermaster shall notify the director of the department of water resources of his recommendation on the application, and the director of the department of water resources shall not finally determine the action on the application for change until he has received from such watermaster his recommendation thereof, which action of the watermaster shall be received and considered as other evidence. For applications proposing to change only the point of diversion or place of use of a water right in a manner that will not change the effect on the source for the right and any other hydraulically-connected sources from the effect resulting under the right as previously approved, and that will not affect the rights of other water users, the director of the department of water resources shall give only such notice to other users as he deems appropriate. When the nature of use of the water right is to be changed to municipal purposes and some or all of the right will be held by a municipal provider to serve reasonably anticipated future needs, the municipal provider shall provide to the department sufficient information and documentation to establish that the applicant qualifies as a municipal provider and that the reasonably anticipated future needs, the service area and the planning horizon are consistent with the definitions and requirements specified in this chapter. The service area need not be described by legal description nor by description of every intended use in detail, but the area must be described with sufficient information to identify the general location where the water under the water right is to be used and the types and quantity of uses that

	generally will be made. When a water right or a portion thereof to be changed is held by a municipal provider for municipal purposes, as defined in section 42-202B, Idaho Code, that portion of the right held for reasonably anticipated future needs at the time of the change shall not be changed to a place of use outside the service area, as defined in section 42-202B, Idaho Code, or to a new nature of use. The director of the department of water resources shall examine all the evidence and available information and shall approve the change in whole, or in part, or upon conditions, provided no other water rights are injured thereby, the change does not constitute an enlargement in use of the original right, the change is consistent with the conservation of water resources within the state of Idaho and is in the local public interest as defined in section 42-202B, Idaho Code, the change will not adversely affect the local economy of the watershed or local area within which the source of water for the proposed use originates, in the case where the place of use is outside of the watershed or local area where the source of water originates, and the new use is a beneficial use, which in the case of a municipal provider shall be satisfied if the water right is necessary to serve reasonably anticipated future needs as provided in this chapter. The director may consider consumptive use, as defined in section 42-202B, Idaho Code, as a factor in determining whether a proposed change would constitute an enlargement in use of the original water right. The director shall not approve a change in the nature of use from agricultural use where such change would significantly affect the agricultural base of the local area. The transfer of the right to the use of stored water for irrigation purposes shall not constitute an enlargement in use of the original right even though more acres may be irrigated, if no other water rights are injured thereby. A copy of the approved application for change shall be returned to the applicant and he shall be authorized upon receipt thereof to make the change and the original water right shall be presumed to have been amended by reason of such authorized change. In the event the director of the department of water resources determines that a proposed change shall not be approved as provided in this section, he shall deny the same and forward notice of such action to the applicant by certified mail, which decision shall be subject to judicial review as hereafter set forth. Provided however, minimum stream flow water rights may not be established under the local public interest criterion, and may only be established pursuant to chapter 15, title 42, Idaho Code.
Idaho Code § 42-223(2)	A water right held by a municipal provider to meet reasonably anticipated future needs shall be deemed to constitute beneficial use, and such rights shall not be lost or forfeited for nonuse unless the planning horizon specified in the license has expired and the quantity of water authorized for use under the license is no longer needed to meet reasonably anticipated future needs.

(2) The 1996 Act recognized the common law as its foundation

In enacting the Municipal Water Rights Act of 1996, the Legislature affirmed the growing community doctrine's role in Idaho water law, while placing clear sideboards on how it is to be applied. By requiring careful planning and full disclosure by those who seek future needs water rights, the statute establishes a cautious approach to the municipal water rights consistent with the objectives of maximum use and conservation of water resources.

In the law's statement of purpose, the Legislature recognized that it was not writing on a blank slate and specifically recognized and embraced the common law doctrine of special treatment for municipalities:

> The appropriation doctrine as applied throughout the western states provides flexibility for municipal providers to obtain and hold water rights needed to assure an adequate water supply for reasonably anticipated future needs. While this concept is recognized in Idaho case law, it should be further described in statutes in order to guide the actions of the Department of Water Resources, water users and the courts, and to assure that the use of this concept is appropriately controlled. The legislation seeks to define and limit the authority of municipal water providers to develop and hold water rights for reasonably anticipated future needs and to allow water to be supplied to expanding service areas. This statute addresses future licensing of water rights for municipal purposes (including those currently permitted) as well as future changes in water rights to municipal purposes. The statute does not address those licensed and decreed water rights now held by municipal providers, and the legislation intends no change in the common law with respect to such rights. Municipalities would be required to provide information to describe their service area, to establish a reasonable planning horizon, and to show that the water rights are necessary for reasonably anticipated future needs.

Statement of Purpose, R.S. 06104, which became S.B. 1535, enacted as the Municipal Water Rights Act of 1996, 1996 Idaho Sess. Laws, ch. 297.

The 1996 Act is more than a codification of the common law, however. It contains several new concepts and reflects a much more precise regulatory interpretation of the doctrine. The structure of the new approach is reflected in several newly defined terms of art, all contained in the following one-sentence summary of the statute: "Municipal providers" may secure water rights for "municipal purposes" of sufficient quantity to serve all "reasonably anticipated future needs" (aka "RAFN") within an expanding "service area" during a specified "planning horizon."

The following sections address each of these terms of art.

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

(3) Who is a municipal provider?

The term "municipal provider" is defined to include more than cities who provide water to their customers. Idaho Code § 42-202B(5). The Act defines four types of municipal provider: (1) cities, counties and the state, (2) water utilities, like United Water Idaho, (3) water and sewer districts, and (4) subdivision developers and homeowner associations. Each is discussed below.

(a) Cities, counties, and state

The first category of municipal provider is simply: "A municipality that provides water for municipal purposes to its residents and other users within its service area." Idaho Code § 42-202B(5)(a). The reference to "municipality" is somewhat broader than it sounds because that term is defined elsewhere to include cities, counties, and state entities. "'Municipality' means a city incorporated under section 50-102, Idaho Code, a county, or the state of Idaho acting through a department or institution." Idaho Code § 42-202B(4). Thus, for instance, a state university or state prison providing drinking water to students or prisoners would fall within the definition of "municipality" and, hence, "municipal provider." In another example, the Idaho Transportation Department has obtained a municipal water right under the Act to irrigate landscaping at the Bliss rest stop.[641] To the authors' knowledge, no county in Idaho provides municipal water. But a county would fall within this definition if it chose to do so.[642]

(b) Municipal water utilities

The second category is regulated utilities: "Any corporation or association holding a franchise to supply water for municipal purposes, or a political subdivision of the state of Idaho authorized to supply water for municipal purposes, and which does supply water, for municipal purposes to users within its service area." Idaho Code § 42-202B(5)(b). This would include large utilities such as United Water Idaho (which happens to be the largest municipal provider in the state) and small ones like Eagle Water Company serving portions of Eagle.

(c) Other political subdivisions (such as water and sewer districts)

The third category also includes "a political subdivision of the state of Idaho authorized to supply water for municipal purposes, and which does supply water, for municipal purposes to users within its service area." Idaho Code § 42-202B(5)(b) (the same subsection of the act includes both the

[641] This and other RAFN rights are identified in the table found in section 23.G at page 376.

[642] The term "municipality" is defined differently in other parts of the Idaho Code. For example: Idaho Code § 50-1702 defines municipality very broadly (to include such things as highway districts and sewer districts) in the context of local improvement districts. The term is also broadly defined in Idaho Code § 67-8702 (to include such things as school districts and special purpose districts) in the context of the Idaho Bond Bank. Idaho Code § 50-2018 defines municipality more narrowly (to include only cities, towns, and counties) in the context of urban renewal law. Another narrow definition is found in Idaho Code § 50-2702 (including only cities, towns, and counties) in the context of the municipal industrial development program.

second and third categories described here). This would include, for instance, water and sewer districts that provide municipal water to their customers.[643]

(d) Private developers and homeowners' associations

The fourth category includes private land developers and homeowner groups: "A corporation or association which supplies water for municipal purposes through a water system regulated by the state of Idaho as a 'public water supply' as described in section 39-103(12), Idaho Code." Idaho Code § 42-202B(5)(c). The definition of "public water supply" is quite broad. It includes small private residential water systems serving at least 15 connections or 25 individuals.[644]

The Department takes the position that in order to qualify as a municipal provider seeking a RAFN right, the applicant must already be providing municipal water to others. This conclusion is based not on the definition of municipal provider, but on another provision of the 1996 Act which states:

> An application proposing an appropriation of water by a municipal provider for reasonably anticipated future needs shall be accompanied by sufficient information and documentation to establish that the applicant qualifies as a municipal provider and that the reasonably anticipated future needs, the service area and the planning horizon are consistent with the definitions and requirements specified in this chapter. . . .

---

[643] There is no doubt that water and sewer districts are political subdivisions of the state. "The judges of election shall certify the returns of the election to the district court having jurisdiction. If a majority of the votes cast at said election are in favor of the organization, the district court shall declare the [water or sewer] district organized and give it a corporate name by which, in all proceedings, it shall thereafter be known, and designated the first board of directors elected, and thereupon the district shall be a governmental subdivision of the state of Idaho and a body corporate with all the powers of a public or quasi-municipal corporation." Idaho Code § 42-3207 (providing for the creation of water and sewer districts) (emphasis provided). See also, Idaho Code § 42-3218C (providing that subdistricts of water and sewer districts are political subdivisions). This is consistent with other broad definitions of political subdivision found throughout the Idaho Code. E.g., Idaho Code §§ 6-902(2), 7-1303(6), 12-117(6)(b), 44-2013(2)(a), 46-1002(4), 56-1402(5), 58-1102(c), 59-802(5); 63-3622*O*(2)(j), and 67-2809(2)(b)(i). Only a few definitions, which are not applicable here, provide a more restrictive scope. E.g., The Idaho Video Services Act, Idaho Code § 50-3002(12).

[644] This definition was amended in 2010, increasing the minimum number of service connections from 10 to 15. It now provides: "'Public water supply' or 'public drinking water system' means a system for the provision to the public of water for human consumption through pipes or other constructed conveyances, if such system has at least fifteen (15) service connections, regardless of the number of water sources or configuration of the distribution system, or regularly serves an average of at least twenty-five (25) individuals daily at least sixty (60) days out of the year. Such term includes any collection, treatment, storage and distribution facilities that are under the control of the operator of such system and used primarily in connection with such system, and any collection or pretreatment storage facilities not under such control that are used primarily in connection with such system. Such term does not include any special irrigation district." Idaho Code § 39-103(12).

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

Idaho Code § 42-202(2) (emphasis added).[645]

Focusing on the present tense of the verb "qualifies," the Director ruled that to obtain an appropriation for RAFN, the applicant must qualify as a municipal provider at the time of the application.[646] This ruling is now codified in the Department's guidance. Mat Weaver, *Memorandum – Application Processing No. 74, Permit Processing No. 20, License Processing No. 13, Transfer Processing No. 29*, at 5 (Mar. 16, 2015) (replacing Nov. 15, 2014 and Nov. 13, 2013 versions) ("*2015 Weaver Memo*") (reproduced in Appendix M).

What this means is that the applicant's expressed intent and demonstrated ability to provide municipal water is insufficient to presently "qualify" as a municipal provider. In order to obtain a RAFN right, the applicant already must be a municipal provider providing municipal water to someone else. This obviously presents a chicken and egg problem. The only way for a developer (or a newly formed water utility) to become a municipal provider is to serve its homeowners or customers solely with non-RAFN municipal rights.[647] Then, when seeking to expand its development or operation, the municipal provider may presently "qualify" as a municipal provider and therefore be able to apply for RAFN rights. It is unclear what public policy is advanced by this two-step process. The legislative history sheds no light on the matter, but the authors doubt that the drafters intended the statute to be read so narrowly. It would appear that the Department's adoption of this narrow reading of the Act (and reversal of prior precedent) reflects its anti-sprawl philosophy.

---

[645] Similar "qualification" language is found in Idaho Code § 42-222(1) applicable to transfers of existing water rights to municipal RAFN purposes.

[646] "The interim director interprets the verb [qualifies] to mean that the applicant must be a municipal provider as defined by Idaho Code 42-202B(5) at the time the application is considered by the Department." *In the Matter of Application to Appropriate Water No. 63-32573 in the Name of M3 Eagle LLC ("M3 Decision")*, at 9-10 (IDWR Amended Final Order, Jan. 25, 2010). This order was appealed, *M3 Eagle LLC v. Idaho Dep't of Water Resources*, Case No. CVOC1003180, Petition for Judicial Review (4th Dist. Idaho Feb. 19, 2010), but the case was settled and the appeal dismissed. The Department ruled that M3 Eagle LLC ("M3") did not qualify as a municipal provider because it was not then providing municipal water to others in Idaho. M3's parent company is an established developer and municipal provider in Arizona; this was its first project in Idaho. This was the first time the Department applied this qualification rule in this way. Indeed, the M3 decision departed from prior precedent. A RAFN water right was awarded by the Department to the developer of the Tamarack ski resort (then known as West Rock). *In the Matter of Application for Permit No. 65-22357 in the Name of West Rock Associates, LLC* (IDWR, Final Order, Dec. 20, 2002) (Conclusion of Law No. 5) (on appeal as of June 2011). Tamarack was a first-time developer, not an existing municipal provider. The Department said it was not bound by the Tamarack precedent because the qualification issue was not discussed in the Tamarack decision. *M3 Decision* at 12.

[647] This is doable because, under the Department's parsing of the Act, first-time developers may be deemed municipal providers for purposes of obtaining a non-RAFN water right even though they do not "qualify" as municipal providers eligible for future needs water rights.

To the authors' knowledge, this qualification issue has arisen only once, in the context of a private residential developer (M3 Eagle LLC, discussed in footnote 646 above). It is now addressed in IDWR's guidance on this topic:

> As set forth in M3 Eagle Final Amended Order (M3 Final Amended Order) a corporation or association seeking to qualify as a municipal provider under subsection c above for RAFN must qualify as a municipal provider at the time application is considered by the Department. In other words, at the time of application, the applicant must already supply water for municipal purposes through a water system that is regulated by the state of Idaho as a public water supply. It is insufficient for the applicant to merely be "*ready, willing and able*" to be a municipal provider once the permit is issued.

Mat Weaver, Memorandum – Application Processing No. 74, Permit Processing No. 20, License Processing No. 13, Transfer Processing No. 29, at 5 (Mar. 16, 2015) (italics original, footnote omitted) (replacing Nov. 15, 2014 and Nov. 13, 2013 versions) ("2015 Weaver Memo") (reproduced in Appendix M).

As a practical matter, it is this third category of municipal provider that is most likely to face this issue; existing cities and water utilities already are in the business of providing municipal water. Hence, qualification is not an issue for them. It is unclear why IDWR's guidance says that it is legally limited to subsection (c) municipal providers. It would seem that the principle would apply equally to all categories of municipal provider. Thus, if a new water utility were formed or if a county or city decided to get into the water supply business for the first time, one would think that it too would face the chicken and egg conundrum discussed above. That is, they cannot "qualify" as a municipal provider for RAFN purposes unless they already are a municipal provider. But that is not what the Department's guidance says.

(4) What are municipal purposes?

The term "municipal purposes" is broadly defined to include "residential, commercial, industrial, irrigation of parks and open space, and related purposes." Idaho Code § 42-202B(6) (definition of "municipal purposes"). This list was broadly drawn and is intended to serve as a catch-all for virtually any use that may arise within the provider's service area.[648]

The only use expressly excluded from municipal purposes is "water from geothermal sources for heating." Idaho Code § 42-202B(6) (definition of "municipal purposes"). However, geothermal water used for non-heat purposes (such as irrigation) does fall within the exclusion.

---

[648] A 1979 IDWR policy statement defined municipal use as including "domestic, irrigation, stockwater, fire protection, recreation, commercial, industrial, and any other water use incidental to the functioning of a city." Norman Young, *Administrator's Memorandum – Definition of Municipal* (Nov. 5, 1979). This list, like the one in the 1996 Act, was intended to embrace any use a municipal provider might be called upon to provide.

© 2023 GIVENS PURSLEY LLP
Printed 6/23/2023 9:09 AM

Departmental policy recognizes that treatment of municipal effluent that is mandated by environmental regulations falls within the definition of municipal purposes. This would include both land application and infiltration projects.[649]

(5) The flexible service area

The Act provides for substantial flexibility in the establishment of a "service area." Idaho Code § 42-202B(9). One of the basic elements of every water right is its place of use. For most water rights, the exact boundaries of the place of use (or larger "permissible place of use") must be identified, and any change in these boundaries requires that the water right holder seek departmental approval of a change in place of use.[650] This presents a problem in the case of traditional municipal water rights because the place of use changes as the city grows.

The Department has long recognized this special feature of a municipal water right, and allowed it to be described simply by reference to the "city limits" of the community or the licensed service area of a water utility. Norman Young, *Administrator's Memorandum – Definition of Municipal* (Nov. 5, 1979) (reproduced in Appendix M).

But what if a municipal provider serves customers outside the city limits? Prior departmental guidance limited the service area to a municipality's city limits. E.g., Norman Young, *Administrator's Memorandum – Definition of Municipal* (Nov. 5, 1979) (reproduced in Appendix M). This was never tested in court. In any event, this issue was resolved in the 1996 Act, which expressly expanded the scope of the service area.[651] Under the 1996 Act, a municipal provider's place of use is not limited to a city's corporate limits. A city may provide service outside of its city limits, if it is within the municipality's planning area[652] and the delivery system outside the city is physically connected to the city's delivery system inside the city.[653] Note that these limitations do not apply to municipal providers

---

[649] Personal communication between Jeff Peppersack and Garrick Baxter of IDWR and Christopher H. Meyer of Givens Pursley, May 16, 2011.

[650] In the case of irrigation rights, the water right must identify the place of use by "legal subdivisions"– that is, down to the forty acre "quarter-quarter" of a one-square-mile section. Idaho Code § 42-202(6).

[651] "'Service area' means that area within which a municipal provider is or becomes entitled or obligated to provide water for municipal purposes. For a municipality, the service area shall correspond to its corporate limits, or other recognized boundaries, including changes therein after the permit or license is issued. The service area for a municipality may also include areas outside its corporate limits, or other recognized boundaries, that are within the municipality's established planning area if the constructed delivery system for the area shares a common water distribution system with lands located within the corporate limits. For a municipal provider that is not a municipality, the service area shall correspond to the area that it is authorized or obligated to serve, including changes therein after the permit or license is issued." Idaho Code § 42-202B(9) (definition of "service area").
