IDWR / NORTH

From: Terry Kiefer, Twin Lakes property owner, water right holder and Chairman of Twin Lakes Water District #95C.

RE: NOTICE OF INTENT TO PARTICIPATE

I, Terry Kiefer, support the removal of the Watermaster WD#95C.

Starting the middle of July Laurin was aware more water was being released from the lake than inflow into the lake. He was told of inflow measurements and of the court decree at several Water District Meetings and at least one Flood Control Meeting.

At our August 29, 2016 Water Advisory Meeting, Laurin was the lone desending vote on the resolution to abide by the court decree that states when the lake level is below 10-4 and the Watermaster is activated the dam outflow will not exceed the tributary inflow. He said he did not agree with the 1989 court decree about inflow and outflow.

Laurin has been to the property owners residence on the creek that has the 1875 stockwater right and he is aware the water right holder is receiving more water than he should and is using the water for irrigation.

Because Laurin is releasing more water than he should, because the 1875 stockwater right is receiving more than .07CFS and using it for irrigation and because Laurin will not abide by the court decree, Laurin should be removed as Watermaster.
