

Dear Director Spackman,

I'm writing this letter in response to the request for the increased Snake River Basin curtailment area. I live in the Little Lost River drainage and it's been brought to our attention that the curtailment area is to be expanded to include our valleys water shed. The earlier curtailment area has been through many years of litigation and dispute. My disagreement with this new expansion lies with the following.

1. If our Districts water is to be included by the model, then how come all other Districts are not included. Such as the Little Wood District and the upper Portneuf District and others that have a direct link to the lower Snake River.
2. Our area seemed like it was included more out of convenience than scientific data.
3. If the model is to include all data to reach a conclusion of impact area, then how come all areas are not considered?

I believe a major decision such as the one you're faced with has to be made upon facts. Because of the modeling committees select few; I don't believe our Water District or Data was considered in make this expansion decision.

Thank you,

Rory Pancheri
