

WATER DISTRICT 1
900 N. Skyline Dr. Suite A - Phone 525-7171
Idaho Falls, Idaho, 83402

MAY 7, 2002

Cool weather has slowed the snowmelt and runoff. As more canals turn on, we expect a few canals to use some storage before the peak runoff occurs.

Updated information on water right priorities being filled, reservoir and river flows can be accessed at either:

<http://www.idwr.state.id.us/info/dist01/main.htm>

<http://www.waterdistrict1.com>

Water District 1 requires water to be ordered at least 24 hours in advance. Most canals have been very good about complying with 24-hour notice. Some canal managers have asked about leaving water orders during evenings or weekends:

Call Water District 1 Office @ 525-7171 and let it ring until the answering machine answers. Hang on the line until after the greeting, then dial extension #2310. If you forget the extension, the message will direct you to press # for the directory. You can then enter Swank (79265) and you will be forwarded to Lyle's extension. Leave a message including the cfs amount, the day and time you wish to increase your diversion, and a phone number where you can be reached if we are unable to supply the water for your order.

Water District 1 is making a couple revisions to the water right accounting and storage allocation programs for the 2002 irrigation season. The first revision is to add two new USGS river gages (North and South Forks of the Teton River) to the accounting program. The additional gages will allow computation of Teton River natural flow and storage deliveries more accurately, alleviating some of the problems experienced last year when the Crosscut Canal was delivering storage to the Teton River but the accounting wasn't showing storage being distributed to diversions. A meeting to discuss the water right accounting with the Lower Teton River canals will be held at the Madison County Courthouse, Commissioner's Office, at 9:00 AM, Friday May 10, 2002.

The other revision, made to the storage allocation program, is to change the method of allocating storage to last-to-fill spaceholders. Last year, the American Falls last-to-fill space filled to 48%, however, spaceholders with last-to-fill space received allocations ranging from 29% to 100%. The new method will result in all last-to-fill spaceholders receiving the same allocation percentage. If you have any questions concerning these changes, please call Water District 1 at 525-7171.

Subject: Teton River Water Right Accounting

Bob and Pam,

Attached are two files you may want to add to your records concerning the accounting on the Teton River. The JPEG file illustrates the discharge measurements and reach gains I measured July 25, 2002 along sections of the North Fork (Reach 46). The WORD-file is a memo to Ron Carlson concerning the accounting of the Teton River; the changes we've made for this year (adding the two additional USGS gages), and the changes we've made to hand-computing return-flow storage credits for unmeasured gains. The measurements and memo were put together in response to the dispute we're currently having with the canals on the lower end of the Teton River North Fork. Historically, it's been assumed the unmeasured gains in the lower end of the North Fork reach were great enough to raise the priorities equal to the same as the priorities being delivered on the Henrys Fork. The cost of adding additional gauging appears to outweigh the benefits to the Water District. At the beginning of the year, the canals were told we weren't going to make the same assumptions we have made in the past, and devised a method to compute a more precise credit by summing the diversions below the North Fork gage and comparing it to the discharge at the head of the reach (If the diversions exceeded the discharge at the head of the North Fork, the two lower canals would get a storage credit for the difference).

We were prepared to have the canals shut-off recently. Their priority had been cut on the Teton River, according to the accounting program, and they had exhausted their storage supply. They requested a meeting with their attorney, so Ron and I met with the members of the canals at their attorney's office on Monday. They contend they should be regulated according to Henrys Fork priorities (as they have in the past). Ron, the attorney, and I agreed they should be regulated according to the natural flow available in their reach. However, we spent a lot of time on what defined a reach and the plausability of adding new gages and/or creating new reaches. It was agreed (at least for this year) that the gains below the North Fork gage could be measured by taking the difference between the total diversions and the discharge at the head of the North Fork as long as the North Fork headgates were regulated to allow only the minimal amount of water past the head for the delivery of natural flow and requested storage to downstream canals (the remainder would be sent down the South Fork). Originally, I had hoped this would be programmed into the accounting, but now it seems better to wait to see if this method will work.

MEMORANDUM

To: Ron Carlson, Watermaster, Water District #1
From: Tony Olenichak, Hydrologist, Water District #1
Date: July 26, 2002
Re: Teton River Water Right Accounting

In response to the inquiries concerning the water right accounting for the Teton River and the confusion between past and present procedures used to compute return-flow credits near the end of the river reach, I have outlined the current procedures used by Water District #1 to distribute water, the past procedures used, and some recommendations concerning the addition of new gages.

PREVIOUS METHOD FOR NATURAL FLOW COMPUTATION

Prior to 2002, the water right accounting program computed the natural flow available at the *USGS Teton River near St. Anthony* gage. The accounting program assumed zero reach-loss below the St. Anthony gage if diversions were less than the discharge measured at the gage. If the Teton River diversions below the St. Anthony gage exceeded the measured discharge, the difference (reach gain) was added to the available natural flow. All computed natural-flow and storage not used by diversions was assumed to return to the Henry's Fork.

The following equation was used to compute natural flow for the Teton River through 2001 irrigation season:

$$\begin{aligned}\text{Natural Flow} &= \text{Discharge at Teton River near St. Anthony gage} \\ &\quad - \text{Storage discharge at Crosscut at End gage} \\ &\quad + \text{Total Diversions above St. Anthony gage} \\ &\quad - \text{Exchange Wells above St. Anthony gage}\end{aligned}$$

For example, if the discharge at the St. Anthony gage was 400 cfs, the Crosscut Canal was contributing 100 cfs of storage, total diversions above the St. Anthony gage was 25 cfs, and the Canyon Creek exchange wells were adding 5 cfs, the natural flow available to diversions on the Teton River would have been 320 cfs ($400-100+25-5=320$). The accounting program would then distribute the 320 cfs of natural flow to diversions currently diverting water according to the earliest priorities. Once the 320 cfs was distributed to senior rights, the "last right filled" would be recorded, and the remaining diversions with junior priorities would be charged with diverting storage water.

If the total diversions below the St. Anthony gage were less than the actual flow measured at the St. Anthony gage (and I think this is almost always the case), then it was assumed there wasn't any gain or loss in the river reach and it was assumed any

undistributed water was returned to the Henry's Fork. For example, if the actual flow at the St. Anthony gage was 400 cfs (320 cfs natural flow + 80 cfs storage flow), and the total diversions below the St. Anthony gage were only 350 cfs, the accounting program would distribute 320 cfs of natural flow and 30 cfs of storage to diversions. It was assumed the remaining 50 cfs of storage was returning to the Henry's Fork.

This assumption was proved incorrect, as measured on a field inspection, September 26, 2001. The discharge at the St. Anthony gage was 358 cfs (54 cfs contributed from the Crosscut), the total diversions below the St. Anthony gage were only 170 cfs, but the Teton River channels were dry before reaching the Henry's Fork. The accounting program computed a natural flow of approximately 300 cfs available to diversions at the St. Anthony gage, distributed 170 cfs of natural flow to diversions, and assumed the remaining 188 cfs of natural flow and storage water were returning to the Henry's Fork. In reality, the diversions were diverting all the water physically available in the channel. The remaining 188 cfs were lost to the channel before reaching the Henry's Fork.

CURRENT METHOD FOR COMPUTING NATURAL FLOW

In order to correct the problems experienced on September 26, 2001 and improve the accounting of water delivery, two USGS river gages were added to the water right accounting program for the 2002 season: the South Fork below the Rexburg Irrigation Canal and the North Fork below the Splitter. The two added gages measure reach-losses between all three USGS gages, and allow for delivery of water physically available to diversions. Unlike the previous procedure, which computed the natural flow physically available at the St. Anthony gage (assuming no downstream channel losses), the new procedure computed natural flow and storage physically available to Teton River diversions.

The natural flow available to Teton River diversions is computed as follows:

$$\begin{aligned}\text{Natural Flow} = & \text{ Teton River discharge at South Fork gage} \\ & + \text{ Teton River discharge at North Fork gage} \\ & + \text{ Total Diversions above N. \& S. Fork gages} \\ & - \text{ Storage discharge at Crosscut at End gage} \\ & - \text{ Exchange Wells above N. \& S. Fork gages}\end{aligned}$$

For example, if the discharge at the South Fork gage is 0 cfs, the discharge at the North Fork gage is 370 cfs, the total diversions above the North and South Fork gages is 540 cfs, the discharge contributed by the Crosscut is 300 cfs, and the exchange well pumping is 120 cfs, the natural flow available to Teton River diversions would be 490 cfs ($0+370+540-300-120=490$). If the total Teton River diversions were 780 cfs, 490 cfs of natural flow would be distributed to senior priorities, and the remaining 290 cfs would be distributed as storage. Note: Since all the storage water from the Crosscut Canal was not distributed to diversions in this example, it is assumed that 10 cfs of storage returned to the Henry's Fork.

RETURN FLOW CREDITS

There usually isn't enough natural flow computed after the early part of the irrigation season to be distributed to water-right priorities held by the Roxana and Saurey-Sommers diversions located near the Mouth of the Teton River. As a result, most of the water they divert late in the irrigation season is charged as storage in the water right accounting program. However, the Roxana and Saurey-Sommers Canals have had their storage usage reduced by Water District #1 at the end of each year because an assumption was made many years ago that there were unmeasured gains in the Teton River below the Teton Island Feeder.

Rather than measuring the net reach-gain to be credited to the lower Teton River diversions, Water District #1 had assumed in the past there was an adequate gain in the North Fork that would result in increasing the natural flow enough to fill priorities equivalent to the water right priorities currently being filled on the Henrys Fork. At the end of the year, Water District #1 would hand-compute the storage used by the two canals, as if they had been on Henrys Fork priorities, compare the storage usage computed by the water right accounting program, and credit the canals with the difference between the two values. This storage credit given at the end of the year resulted in either reducing the Fremont-Madison storage carryover or reducing all other spaceholder storage carryover equal to the total amount of storage credit given to the canals.

It became obvious this method was flawed when the numbers were more closely examined in 2001. On September 26, 2001, there were 2 cfs of discharge observed in the North Fork below the Teton Island Feeder diversion. The river channel became dry downstream from the diversion. There weren't enough return-flows to keep the lower end of the North Fork channel flowing. However, the Roxana and Saurey-Sommers Canals would have been credited for return-flows during this time period if the discharge passing the North Fork gage had been increased using additional storage from the Crosscut Canal.

When the accounting procedures were changed beginning the 2002 season, Water District #1 held a meeting at the Madison County Courthouse and explained the new accounting procedures to Teton River water users. Additionally, it was explained that the previous method used to compute return-flow credits was no longer going to be used. However, the canals could still get a credit for return-flows if the sum of the total diversions below the North Fork gage exceeded the total discharge at the North Fork gage (including the additional water contributed from the Hoopes and Bott exchange wells, if any).

The argument of whether or not the Roxana and Saurey-Sommers Canals are receiving enough credit for the gains below the North Fork gage can be settled rather easily by simply managing the amount of water that goes past the North Fork gage. For example, if there is only enough natural flow in the Teton River to fill the senior priorities of the Teton Island Feeder up to 130 cfs, and the downstream canals have exhausted their

storage supply, then only 130 cfs should be delivered past the North Fork gage (only 110 cfs would be delivered past the gage if the Hoopes and Bott exchange wells were contributing 20 cfs). If the Teton Island Feeder diverts all 130 cfs and there is water available at the headgates of the Roxana and Saurey-Sommers, then there is a gain in the river-reach that will be credited to the canals when they divert the water.

If North Fork canals requested storage delivery, the amount of water released past the North Fork gage could be increased to the natural flow plus the requested storage. Once the requested amounts of storage were delivered to the canals, any gain of water that occurred could be credited to the Roxanna and Saury-Sommers Canals. For example, if the North Fork canals requested 100 cfs of storage water in addition to the 130 cfs of natural flow, 230 cfs could be released at the North Fork gage. If the total diversions below the gage exceed 230 cfs, the lower canals could be credited for the additional gain of water in the reach.

GAINS AND LOSSES BELOW NORTH FORK, TETON RIVER GAGE

The water right accounting program is unable to compute a precise reach-gain between the North Fork gage and the last diversion on the North Fork because there isn't a measuring gage at the end of the reach. Years ago, a gage was installed below the last diversion, however, the location is an unacceptable area for a rating-section due to water backed-up from the Henrys Fork during periods of high flow and checked-up flows forcing water into the Saurey-Sommers Canal during low-flow periods. There have been estimates of the discharges at this location, but I'm not sure how accurate the estimations have been because I haven't seen any measurements confirming the estimates.

On July 25, 2002, I made several measurements along the North Fork of the Teton River to get an idea of the magnitude (and locations) of the gains and losses of water. There was a 17 cfs loss for the reach beginning from the USGS North Fork gage to approximately one mile upstream from the Roxana Canal (approximately eight river miles). There was a 14 cfs gain from this point above the Roxana Canal to the Consolidated Farmers Siphon (approximately 2.5 river miles). Finally, there was a 17 cfs gain from the Consolidated Farmers Siphon to the Saurey-Summers Canal near the Mouth of the Teton River (approximately 4.5 river miles). The net reach-gain for the entire North Fork was 14 cfs.

I drove almost the entire length along the North Fork, except for the last four miles of the reach from the Consolidated Farmers Siphon to the Saurey-Summers Canal. It appeared to me that the discharge in the channel from the Teton Island Feeder Canal to just above the Roxana diversion would increase and decrease as the water moved through the channel gravels. There was very little surface water contributed to the channel from waste ditches along this section. The measurements showed a net 17 cfs loss in this section.

From approximately one mile upstream of the Roxana Canal to just below the Roxana Canal, there was a significant gain of 11 cfs. There was a small contribution of surface water from the Salem Union Canal waste (approximately one cfs), however, I think most of the gain was a result of the upstream channel losses reemerging to the surface. An additional 3 cfs of gain was measured from the Roxana Canal to the Island Ward Canal, nearly accounting for all the upstream losses.

A 17 cfs of gain occurred from the Island Ward Canal to the Saurey-Sommers Canal. Most of this gain can probably be attributed to water from the Consolidated Farmers Canal. There was a six cfs gain over a 200-yard section immediately below where the Consolidated Farmers Siphon crosses the Teton River. Additionally, there was a lateral from the Consolidated Farmers Canal that paralleled the river channel to irrigate the pasture along the south side of the river. I didn't measure the discharge in the lateral, but I estimate it was flowing approximately 10 cfs. Ross Clements, Consolidated Farmers Watermaster, says that he has observed over the years that the gain in this reach can largely be attributed to water from the Consolidated Farmers Canal and the raising of the water table as a result of the Island Ward Canal damming up the river to divert water.

Based on my measurements, Ross Clements statements, and the observations made on September 26, 2001, I suspect the gains from the Island Ward to the Saurey-Sommers Canal may fluctuate depending on the irrigation practices of the Consolidated Farmers and Island Ward Canals, and would largely be non-existent if both the Consolidated Farmers and Island Ward Canals were not diverting water.

CHANGING OR ADDING A GAGES TO THE NORTH FORK

Based on my July 25, 2002 measurements, if the North Fork Teton River gage were moved to below the Saurey-Sommers Canal, it would have resulted in adding a net 14 cfs North Fork reach-gain to the natural flow distributed to Teton River diversions on that day. This would have resulted in an additional 13 cfs of natural flow distributed to the Teton Island Feeder and 1 cfs of natural flow distributed to the Roxana Canal which both share the June 1, 1885 water right. The Saurey-Sommers Canal wouldn't have received any portion of the additional gain because of its junior natural-flow water right.

If one gage were added to the North Fork below the Saurey-Sommers Canal (in addition to the current gage at the head of the North Fork), the results would have been the same as described in the previous paragraph. The Teton Island Feeder would have a right to most of the reach gain with a small portion going to the Roxana Canal under the conditions that existed on July 25, 2002.

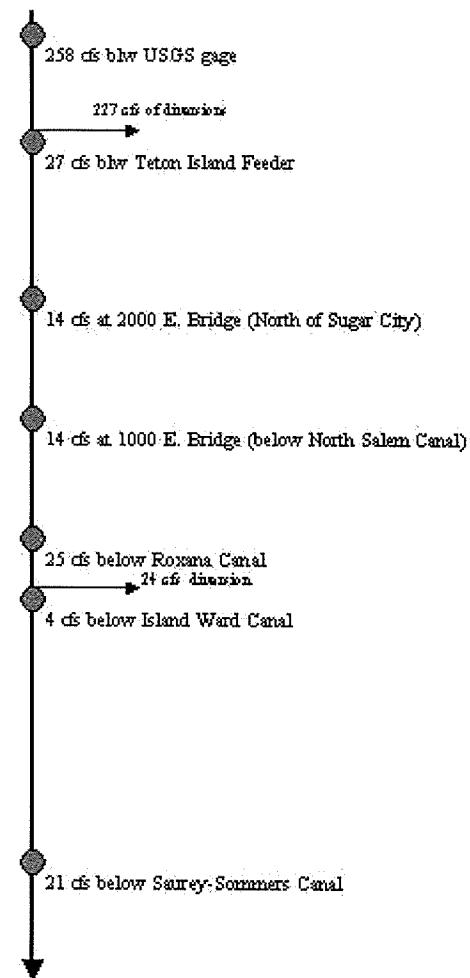

If two additional gages were added (one below the Roxana or Island Ward Canals, and one below the Saurey-Sommers Canal), the natural-flow delivery to canals upstream of the Island Ward Canal wouldn't have changed significantly from the current accounting, but an additional 17 cfs of reach-gain would be delivered as natural flow to the Saurey-Sommers Canal, splitting the priorities below the Island Ward Canal.

There are endless possible scenarios. For example, under the conditions that existed on September 26, 2001, it wouldn't have mattered if we had a river gage at every canal because there wasn't any reach gain that occurred below the Teton Island Feeder which had senior water rights to the natural flow. There's also the issue of determining the source of reach-gains as gages are added. For example, it appeared to me that the gains occurring immediately above the Roxana Canal were mostly due to the water in the upstream channel flowing beneath the gravels and then reappearing. Adding one or two gages to the North Fork will increase gauging costs, but won't necessarily benefit the canals at the end of the reach.

NORTH FORK TETON RIVER

Subject: Teton River Water Right Accounting

Pam,

I'm not sure the accounting program is computing the reach-gain on Reach 19 correctly. Could you take a look at the attached text file that has the accounting for July 21, 2002 from snkwra.rpt;91.

Correct me if I'm wrong, but I think the actual flow (outflow) for the reach should be computed by adding the S FORK TETON BLW REXBURG (0 cfs) plus the N FORK TETON BLW SPLITTER (367 cfs) plus the D BOTT exchange well (10 cfs) plus the C HOOPES exchange well (7 cfs) minus diversions 13055205 thru 13055295 (375 cfs total). This would result in a computed actual flow at the end of the reach of 9 cfs. However, the accounting program shows zero cfs for the actual flow for Reach 19.

The reach gain for Reach 19 would then be computed as the OUTFLOW (9 cfs) minus the INFLOW at the nr St. Anthony gage (720 CFS) plus diversions 13055030 thru 13055334 (752 cfs) minus CANYON CR LAT, B PARKINSON, V SCHWENDIMAN, M PARKINSON, D BOTT, C HOOPES, HOOPES BROS, RICKS, ECHO RANCH, ARD, HINK, and BROWN exchange wells (154 cfs). Note: The USBR exchange wells should not be in the Teton River reach-gain equation because they are physically located either on the Henry's Fork or downstream of all Teton River diversions. The net reach-gain would be equal to -113 cfs. The accounting program is showing a reach-gain of -127 cfs.

The difference between my computed numbers and the numbers shown on the accounting are small, however, I need to understand the formula programmed into the water right accounting. There are some grumblings from some of the canals concerning the daily accounting numbers and I want to make sure they are correct.

Also, could you make the most recent printable file of the fortran code available to me on our vax account. I think it's SNKWRA.FOR? The printed copy I currently have is a couple years old and it doesn't have the newer programming such as the new method to compute reach gains on the Teton River.

Thanks,
Tony

Base Run for Comparison

7/23/02 PPP

Reach Gains Teton River July 21, 2002

$$\text{Date} \quad \text{Reach} \quad \text{Outflow} = \text{Inflow} + \text{Div} - \text{Wells} = \text{Reach Gain}$$

7/18	19	(388+410) - 668 + 747 - 209 = -160
7/19	19	(408+424) - 716 + 775 - 209 = -150
7/20	19	(411+419) - 724 + 783 - 200 = -141
7/21	19	(367+375) - 720 + 747 - 209 = -182
4 day Average = -158 ✓		

7/18	20	834 - 293 - 0 = 541
7/19	20	782 - 198 - 0 = 584
7/20	20	757 - 161 - 0 = 596
7/21	20	794 - 177 - 6 = 617
4 day Average = 585 ✓		

WARNING! -

Bob doesn't believe diversions.

8-7-02

Minidoka to Milner. Diversions dropped
Flow out of Minidoka hasn't changed. Measure
Canals? Where is the water going?

If both Neely and Minidoka gage reading
high, then could cause the problems.

Find out when gaged. Cuttings out
to measure. Tony feels confident about
diversions. Tom Brenin measures. Is
shift in hydromet? ~~gage~~ should be measuring
every three weeks.

~~Is~~ Take loss out of natural flow?
We kicked it around earlier, but Karl
Said no. Loss goes to credit
to Twin Falls instead of natural flow.

Same pattern last year. Why didn't
it happen before? Drought years? Tony
will check diversions. We will check on
gaging.

-Phone call, Pam, Tony & Bob -

Pam,

Here are the Variable Shift correction table, showing our shift application to the record, and the Daily Values Table. If the table wraps, let me know and I'll pull a text file.

Subject: RE: Snake River near Minidoka Measurement

Pam,

Yes, the Twin Falls Field Office was able to make the measurement on Aug. 8. The measurement was rated FAIR, due to windy conditions, and the trend of the shifting was negative, as was the measurement that was made on July 15. The hydrographer noticed that there was probably an increase in aquatic growth, which would tend to raise the stage and affect the negative shifting by causing a slight backwater effect. After analysis, it was decided to use a -.10 ft shift to the rating table, which results in a reduction of the computed discharge. The negative shift has been prorated by variable stage from June 11, when no shift was found, to July 15. The shift is then held constant at -.10 ft from July 15 forward.

Both Snake River at Neeley and Snake River at Minidoka will be measured again on Aug. 16. I noticed that the VAX picked up this -.10 ft shift in their table at 0400 on Aug. 9.

The shift table is shown below:

Tom,

Do you have the results of this measurement yet?

Pam

Pam,

The Twin Falls office will be making a discharge measurement tomorrow, Aug. 9 at Snake River near Minidoka to check for any increased shifting.

Subject: Programming change for Egin Bench rights

Pam,

I think I found another error in the program that resulted from tinkering with temporary transfers over the last couple years. It pertains to the two Egin Canal rights. I may be partly or entirely responsible for this one because my water rights booklet is incorrect. The two Egin Canal rights are as follows:

01-0057 for 200 cfs with 04/25/1885 priority
01-0058 for 200 cfs with 03/01/1890 priority

The condition in the Rexburg Decree states, "After July 1st of each year the above rights are to be reduced to 15,000 inches (300 cfs) for 15 days, then restored to 20,000 inches (400 cfs) for 15 days, then reduced 15,000 inches (300 cfs) after August 1st each year for the balance of the season."

The accounting program, as currently written, reduces both of these rights by 50 cfs July 2nd-July 15th and after August 1st. The same is indicated in my water rights booklet, but I think it is incorrect according to Ron's and Dale Swensen's interpretation of the decree. I think the program was modified to do this in the last couple years. Prior to that, only the 03/01/1890 was being reduced by 100 cfs (the senior right never used to be reduced).

The lines following 328 in Section 29-2 of the accounting program should read:

IF (IVV.NE.3) GO TO 56
IF (LD.GE.183.AND.LD.LE.197) T(L)=T(L)-100
IF (LD.GE.213) T(L)=T(L)-100

Both Egin Canal water rights currently display a 3 in the fourth column of the .RTS file. The 04/25/1885 right should display a 0 instead of a 3. Only the 3/1/1890 right should be reduced by 100 cfs.

Also, I tried to check one of the St. Anthony Union rights. The right that I'm particularly interested in is the 6/29/1892 priority for 100 cfs. This water right has a 9 listed in the fourth column of the .RTS file. I assume this means that this water right can be filled no later than July 1st every year, but I couldn't decipher that from the programming code. Am I correct in assuming the program is doing this?

Let me know if you agree and when you'll be able to change the program. The Egin Canal people are anxious to know what the adjustment will be to their storage.

Thanks,
Tony

FROM: NORM YOUNG *Not*
RE: WATER DISTRICT 1 ACCOUNTING PROCEDURES
DATE: 10/3/2002

FILE COPY

I have had several discussions this year relating to the procedures used in the Water District 1 accounting program to determine and record water use through diversions having multiple rights with different owners. The water users involved are concerned that the procedures now used unfairly limit the amount of water available under their senior priority water rights. Apparently, the accounting procedure does not take into account which of the right holders from the diversion is calling for and using the water, but simply charges the water diversion to the oldest priority right diverting at the diversion.

The instances in which this procedure have been an issue this year involve water rights from surface water sources conditioned to limit the annual volume of water allowed to be diverted. However, the procedures presently used in the Water District 1 accounting program can have adverse, unintended consequences for the right holders even if the rights are not limited to an annual volume. These consequences include:

1. If the water diverted is first charged against the most senior priority right from the point of diversion, the annual volume limit can be quickly exhausted, forcing the holder of senior right to curtail his/her diversion or to begin using stored water.
2. Junior priority rights diverting at the point of diversion may not be shown as diverting and using water, thereby creating a record indicating abandonment or forfeiture of those rights.
3. The water charged to the senior right, if used by the holder of a junior priority right, would be an illegal use of water.

The Water District 1 procedures need to be revised to prevent water from being diverted, unless a right holder is calling for water under the right, or is calling for stored water allocated to the right holder, and to account for the water being diverted to the right holder calling for water. The changes need to be in place before the start of next season and, to the extent that data is available, should be applied to the season now ending.

- bl) 510.8 AF Indian/Bergman Reservoir storage minus 20.1 AF storage transfer to Boom Creek Pump minus 118.5 AF Island Park carryover reverted to Fremont-Madison.
- bm) 248.6 AF groundwater exchange pumping minus 74.7 AF Island Park carryover reverted to Fremont-Madison.
- bn) 600.0 AF storage transfer from Teton Island Feeder for groundwater exchange pumping minus 399.2 AF Island Park carryover reverted to Fremont-Madison.
- bo) 4,064.7 AF groundwater exchange well pumping minus 463.5 AF Island Park carryover reverted to Fremont-Madison.
- bp) 609.3 AF groundwater exchange well pumping minus 73.5 AF Island Park carryover reverted to Fremont-Madison.
- bq) Storage transfer to J Ricks Pump for groundwater exchange pumping.
- br) Storage transfer from Salem Union Canal.
- bs) 442.7 AF return flow correction minus 369.1 AF Island Park carryover reverted to Fremont-Madison.
- bt) 613.7 AF return flow correction minus 67.2 AF Island Park carryover reverted to Fremont-Madison.
- bu) Storage transfer from Anderson Canal.
- bv) Storage transfer from Idaho Canal.
- bw) Storage supplied for groundwater mitigation.
- bx) Storage transfer to Milner Irrigation (875.3 AF) and Twin Falls Canal (1,857.6 AF).
- by) 23,289.7 AF USBR groundwater exchange pumping plus 7,141.0 AF Island Park carryover reverted to Fremont-Madison minus 11,477.6 AF Henrys Fork excess storage use minus 239.1 AF adjustment to carryover for storage spilled past Milner.
- bz) Storage rental to City of Blackfoot.
- ca) 821.4 AF excess groundwater exchange pumping plus 390.4 AF Willow Creek correction minus 4,728.7 AF gain averaging adjustment minus 1,056.4 AF return flow corrections minus 510.8 AF Indian/Bergman Reservoir storage adjustment minus 9.0 AF storage adjustment to Hill-Pettinger Canal and L Hill pumps minus 5,386.6 AF of storage past Milner.

- v) 5000.0 AF storage transfer from Snake River Valley minus 11.5 AF adjustment to carryover for storage spilled past Milner.
- w) 5,267.3 AF supplied to Mitigation Inc. and 90.0 AF rental for Bruce Hansen.
- x) 245.0 AF storage transfer from Woodville Canal minus 185.1 AF adjustment to carryover for storage spilled past Milner.
- y) 2,443.1 AF storage transfer to Sand Creek minus 502.4 AF adjustment to carryover for storage spilled past Milner.
- z) 245.0 AF storage transfer to New Sweden minus 30.8 AF adjustment to carryover for storage spilled past Milner.
- aa) 15,059.2 AF supplied to Mitigation Inc., 1,000.0 AF supplied to Magic Valley Groundwater District, and 200.0 AF supplied to City of Blackfoot.
- ab) 5,000.0 AF storage exchange to Butte Market Lake and 529.3 AF adjustment to carryover for storage spilled past Milner.
- ac) Mitigation Inc. storage from various suppliers.
- ad) Storage transfer from Ft. Hall Michaud to Reservation Canal.
- ae) 4,000.0 AF storage transfer to Aberdeen Canal and 81.0 AF adjustment to carryover for storage spilled past Milner.
- af) 4,000.0 AF from Aberdeen Canal (2001 storage exchange) minus 6,000.0 AF to Aberdeen Canal (2002 storage exchange) minus 221.9 AF adjustment to carryover for storage spilled past Milner.
- ag) 13,000.0 AF from A & B Irrigation (2002 storage exchange) minus 7,000.0 AF to A & B Irrigation (2001 storage exchange) plus 12,000.0 AF from Falls Irrigation (2002 storage exchange) minus 15,000.0 AF to Falls Irrigation (2001 storage exchange) plus 6,000.0 AF from Peoples Canal (2002 storage exchange) minus 4,000.0 AF to Peoples Canal (2001 storage exchange) plus 4,000.0 AF from New Lavaside Canal (2002 storage exchange) minus 183.7 AF adjustment to carryover for storage spilled past Milner.
- ah) 887.1 AF supplied to Mitigation Inc. and 100.0 AF rental to City of Blackfoot.
- ai) 5973.5 AF storage transfer to Reservation Canal minus 83.5 AF adjustment to carryover for storage spilled past Milner.
- aj) 15,000.0 AF from Aberdeen Canal (2001 storage exchange) minus 12,000.0 AF to Aberdeen Canal (2002 storage exchange) minus 166.9 AF adjustment to carryover for storage spilled past Milner.
- ak) 2,651.3 groundwater mitigation minus 2,000.0 AF rental to Southwest Irrigation District.
- al) Minidoka Irrigation District storage transfer to various users and 3372.5 AF adjustment to carryover for storage spilled past Milner.
- am) Burley Irrigation District storage transfer to various users and 2,462.3 AF adjustment to carryover for storage spilled past Milner.
- an) 24,000.0 AF from Twin Falls Canal (2001 storage exchange) plus 19,200.0 AF from Northside Canal (2001 storage exchange) plus 7,000.0 AF from Aberdeen Canal (2001 storage exchange) minus 13,000.0 AF to Aberdeen Canal (2002 storage exchange) minus 15.1 AF storage transfer to Boy Scout Pump minus 996.9 AF adjustment to carryover for storage spilled past Milner.
- ao) 131.4 AF groundwater mitigation plus 1,000.0 AF rental for Southwest Irrigation District.
- ap) 875.3 AF storage transfer from Artesian Irrigation minus 484.1 AF adjustment to carryover for storage spilled past Milner.
- aq) 5,130.2 AF groundwater mitigation plus 8,000.0 AF rental for various groundwater districts.
- au) 19,200.0 AF to A & B Irrigation (2001 storage exchange) minus 526.2 AF (11.8%) of Minidoka Credit reach loss minus 4,414.7 AF adjustment to carryover for storage spilled past Milner.
- av) 14,189.4 AF groundwater mitigation plus 1,000.0 AF rental for Southwest Irrigation District.
- aw) 1,857.6 AF storage transfer from Artesian Irrigation minus 24,000.0 AF to A & B Irrigation (2001 storage exchange) minus 3,946.4 AF (88.2%) of Minidoka Credit reach loss minus 1,546.1 AF adjustment to carryover for storage spilled past Milner.
- ax) Island Park carryover reverted to Fremont-Madison Irrigation District.
- ay) 61.5 AF Island Park carryover reverted to Fremont-Madison and 1.8 AF adjustment to Palisades carryover for storage spilled past Milner.
- az) 1.0 AF Island Park carryover reverted to Fremont-Madison and 0.1 AF adjustment to Palisades carryover for storage spilled past Milner.
- ba) 95.6 AF Island Park carryover reverted to Fremont-Madison and 14.1 AF adjustment to Henrys Lake carryover for storage spilled past Milner.
- bb) 784.6 AF Island Park carryover reverted to Fremont-Madison and 140.2 AF adjustment to Henrys Lake carryover for storage spilled past Milner.
- bc) Fremont-Madison/USBR exchange well water distributed to various spaceholders.
- bd) 8.7 AF storage transfer to Jerry Harris and 2.7 AF adjustment to Henrys Lake carryover for storage spilled past Milner.
- be) 204.0 AF Island Park carryover reverted to Fremont-Madison and 68.6 AF adjustment to Henrys Lake carryover for storage spilled past Milner.
- bf) 99.4 AF Island Park carryover reverted to Fremont-Madison and 49.0 AF adjustment to Palisades carryover for storage spilled past Milner.
- bg) 1,194.5 AF Island Park carryover reverted to Fremont-Madison and 49.0 AF adjustment to Palisades carryover for storage spilled past Milner.
- bh) 19.4 AF Island Park carryover reverted to Fremont-Madison and 2.4 AF adjustment to Palisades carryover for storage spilled past Milner.
- bi) 1,610.8 AF Island Park carryover reverted to Fremont-Madison and 7.9 AF adjustment to Palisades carryover for storage spilled past Milner.
- bj) Groundwater exchange well pumping.
- bk) Storage transfer from Squirrel Creek Canal pumps.

FOOTNOTES

- a) Adjustment to system carryover for storage spilled past Milner.
- b) Storage transfer from A & B Irrigation to Boy Scout Pump.
- c) Storage transfer from M & M Cattle to Foster Agro.
- d) Groundwater mitigation storage.
- e) 760.5 AF groundwater exchange pumping minus 2089.9 AF storage transfer to Willow Creek minus 756.8 AF storage transfer to B. Foster minus 12.8 AF adjustment to carryover for storage spilled past Milner.
- f) 243.7 AF storage transfer to Foster Agro and 1.4 AF adjustment to carryover for storage spilled past Milner.
- g) 490.0 AF storage transfer to Clark & Edwards Canal and 71.1 AF adjustment to carryover for storage spilled past Milner.
- h) 25.0 AF storage transfer from Harrison Canal to Rudy Canal.
- i) 490.0 AF storage transfer from Enterprise Canal minus 400.0 AF storage transfer to Rigby Canal for Foster minus 2.0 AF adjustment to carryover for storage spilled past Milner.
- j) 13.6 AF groundwater mitigation minus 269.0 AF supplied to Mitigation Inc.
- k) 400.0 AF storage transfer from Clark & Edwards Canal minus 75.0 storage transfer to Parks & Lewisville Canal minus 9.9 AF adjustment to carryover for storage spilled past Milner.
- l) Storage transfer from Long Island Canal to White Island (240.0 AF), W. Dabell (139.0 AF), and N. Fullmer (76.8 AF).
- m) Carryover supplied to Mitigation Inc.
- n) 39.9 AF of groundwater mitigation minus 134.6 AF supplied to Mitigation Inc.
- o) Storage transfer to White Island (240.0 AF), W. Dabelle (139.0 AF), N. Fullmer (76.8 AF), and 6.0 AF adjustment to carryover for storage spilled past Milner.
- p) 35.0 groundwater mitigation minus 1,054.9 AF adjustment to carryover for storage spilled past Milner.
- q) 75.0 AF storage transfer from Rigby Canal minus 38.2 AF adjustment to carryover for storage spilled past Milner.
- r) Storage transfer to Sunnydell Canal from Lenroot Canal (200.0 AF) and L. Robinson (35.0 AF).
- s) 1,180.2 AF of groundwater exchange pumping minus 3.7 AF adjustment to carryover for storage spilled past Milner.
- t) 35.0 AF storage transfer to Sunnydell Canal minus 6.8 AF adjustment to carryover for storage spilled past Milner.
- u) Storage use correction for temporary natural flow transfer.

FOOTNOTES

- a) Adjustment to system carryover for storage spilled past Milner.
- b) Storage transfer from A & B Irrigation to Boy Scout Pump.
- c) Storage transfer from M & M Cattle to Foster Agro.
- d) Groundwater mitigation storage.
- e) 760.5 AF groundwater exchange pumping minus 2089.9 AF storage transfer to Willow Creek minus 756.8 AF storage transfer to B. Foster minus 12.8 AF adjustment to carryover for storage spilled past Milner.
- f) 243.7 AF storage transfer to Foster Agro and 1.4 AF adjustment to carryover for storage spilled past Milner.
- g) 490.0 AF storage transfer to Clark & Edwards Canal and 71.1 AF adjustment to carryover for storage spilled past Milner.
- h) 25.0 AF storage transfer from Harrison Canal to Rudy Canal.
- i) 490.0 AF storage transfer from Enterprise Canal minus 400.0 AF storage transfer to Rigby Canal for Foster minus 2.0 AF adjustment to carryover for storage spilled past Milner.
- j) 13.6 AF groundwater mitigation minus 269.0 AF supplied to Mitigation Inc.
- k) 400.0 AF storage transfer from Clark & Edwards Canal minus 75.0 storage transfer to Parks & Lewisville Canal minus 9.9 AF adjustment to carryover for storage spilled past Milner.
- l) Storage transfer from Long Island Canal to White Island (240.0 AF), W. Dabell (139.0 AF), and N. Fullmer (76.8 AF).
- m) Carryover supplied to Mitigation Inc.
- n) 39.9 AF of groundwater mitigation minus 134.6 AF supplied to Mitigation Inc.
- o) Storage transfer to White Island (240.0 AF), W. Dabell (139.0 AF), N. Fullmer (76.8 AF), and 6.0 AF adjustment to carryover for storage spilled past Milner.
- p) 35.0 groundwater mitigation minus 1,054.9 AF adjustment to carryover for storage spilled past Milner.
- q) 75.0 AF storage transfer from Rigby Canal minus 38.2 AF adjustment to carryover for storage spilled past Milner.
- r) Storage transfer to Sunnydell Canal from Lenroot Canal (200.0 AF) and L. Robinson (35.0 AF).
- s) 1,180.2 AF of groundwater exchange pumping minus 3.7 AF adjustment to carryover for storage spilled past Milner.
- t) 35.0 AF storage transfer to Sunnydell Canal minus 6.8 AF adjustment to carryover for storage spilled past Milner.
- u) Storage use correction for temporary natural flow transfer.

- v) 5000.0 AF storage transfer from Snake River Valley minus 11.5 AF adjustment to carryover for storage spilled past Milner.
- w) 5,267.3 AF supplied to Mitigation Inc. and 90.0 AF rental for Bruce Hansen.
- x) 245.0 AF storage transfer from Woodville Canal minus 185.1 AF adjustment to carryover for storage spilled past Milner.
- y) 2,443.1 AF storage transfer to Sand Creek minus 502.4 AF adjustment to carryover for storage spilled past Milner.
- z) 245.0 AF storage transfer to New Sweden minus 30.8 AF adjustment to carryover for storage spilled past Milner.
- aa) 15,059.2 AF supplied to Mitigation Inc., 1,000.0 AF supplied to Magic Valley Groundwater District, and 200.0 AF supplied to City of Blackfoot.
- ab) 5,000.0 AF storage exchange to Butte Market Lake and 529.3 AF adjustment to carryover for storage spilled past Milner.
- ac) Mitigation Inc. storage from various suppliers.
- ad) Storage transfer from Ft. Hall Michaud to Reservation Canal.
- ae) 4,000.0 AF storage transfer to Aberdeen Canal and 81.0 AF adjustment to carryover for storage spilled past Milner.
- af) 4,000.0 AF from Aberdeen Canal (2001 storage exchange) minus 6,000.0 AF to Aberdeen Canal (2002 storage exchange) minus 221.9 AF adjustment to carryover for storage spilled past Milner.
- ag) 13,000.0 AF from A & B Irrigation (2002 storage exchange) minus 7,000.0 AF to A & B Irrigation (2001 storage exchange) plus 12,000.0 AF from Falls Irrigation (2002 storage exchange) minus 15,000.0 AF to Falls Irrigation (2001 storage exchange) plus 6,000.0 AF from Peoples Canal (2002 storage exchange) minus 4,000.0 AF to Peoples Canal (2001 storage exchange) plus 4,000.0 AF from New Lavaside Canal (2002 storage exchange) minus 183.7 AF adjustment to carryover for storage spilled past Milner.
- ah) 887.1 AF supplied to Mitigation Inc. and 100.0 AF rental to City of Blackfoot.
- ai) 5973.5 AF storage transfer to Reservation Canal minus 83.5 AF adjustment to carryover for storage spilled past Milner.
- aj) 15,000.D AF from Aberdeen Canal (2001 storage exchange) minus 12,000.0 AF to Aberdeen Canal (2002 storage exchange) minus 166.9 AF adjustment to carryover for storage spilled past Milner.
- ak) 2,651.3 groundwater mitigation minus 2,000.0 AF rental to Southwest Irrigation District.
- al) Minidoka Irrigation District storage transfer to various users and 3372.5 AF adjustment to carryover for storage spilled past Milner.
- am) Burley Irrigation District storage transfer to various users and 2,462.3 AF adjustment to carryover for storage spilled past Milner.
- an) 24,000.0 AF from Twin Falls Canal (2001 storage exchange) plus 19,200.0 AF from Northside Canal (2001 storage exchange) plus 7,000.0 AF from Aberdeen Canal (2001 storage exchange) minus 13,000.0 AF to Aberdeen Canal (2002 storage exchange) minus 15.1 AF storage transfer to Boy Scout Pump minus 996.9 AF adjustment to carryover for storage spilled past Milner.
- ao) 131.4 AF groundwater mitigation plus 1,000.0 AF rental for Southwest Irrigation District.
- ap) 875.3 AF storage transfer from Artesian Irrigation minus 484.1 AF adjustment to carryover for storage spilled past Milner.
- aq) 5,130.2 AF groundwater mitigation plus 8,000.0 AF rental for various groundwater districts.
- au) 19,200.0 AF to A & B Irrigation (2001 storage exchange) minus 526.2 AF (11.8%) of Minidoka Credit reach loss minus 4,414.7 AF adjustment to carryover for storage spilled past Milner.
- av) 14,189.4 AF groundwater mitigation plus 1,000.0 AF rental for Southwest Irrigation District.
- aw) 1,857.6 AF storage transfer from Artesian Irrigation minus 24,000.0 AF to A & B Irrigation (2001 storage exchange) minus 3,946.4 AF (88.2%) of Minidoka Credit reach loss minus 1,546.1 AF adjustment to carryover for storage spilled past Milner.
- ax) Island Park carryover reverted to Fremont-Madison Irrigation District.
- ay) 61.5 AF Island Park carryover reverted to Fremont-Madison and 1.8 AF adjustment to Palisades carryover for storage spilled past Milner.
- az) 1.0 AF Island Park carryover reverted to Fremont-Madison and 0.1 AF adjustment to Palisades carryover for storage spilled past Milner.
- ba) 95.6 AF Island Park carryover reverted to Fremont-Madison and 14.1 AF adjustment to Henrys Lake carryover for storage spilled past Milner.
- bb) 784.6 AF Island Park carryover reverted to Fremont-Madison and 140.2 AF adjustment Henrys Lake carryover for storage spilled past Milner.
- bc) Fremont-Madison/USBR exchange well water distributed to various spaceholders.
- bd) 8.7 AF storage transfer to Jerry Harris and 2.7 AF adjustment to Henrys Lake carryover for storage spilled past Milner.
- be) 204.0 AF Island Park carryover reverted to Fremont-Madison and 68.6 AF adjustment to Henrys Lake carryover for storage spilled past Milner.
- bf) 99.4 AF Island Park carryover reverted to Fremont-Madison and 49.0 AF adjustment to Palisades carryover for storage spilled past Milner.
- bg) 1,194.5 AF Island Park carryover reverted to Fremont-Madison and 49.0 AF adjustment to Palisades carryover for storage spilled past Milner.
- bh) 19.4 AF Island Park carryover reverted to Fremont-Madison and 2.4 AF adjustment to Palisades carryover for storage spilled past Milner.
- bi) 1,610.8 AF Island Park carryover reverted to Fremont-Madison and 7.9 AF adjustment to Palisades carryover for storage spilled past Milner.
- bj) Groundwater exchange well pumping.
- bk) Storage transfer from Squirrel Creek Canal pumps.

- bl) 510.8 AF Indian/Bergman Reservoir storage minus 20.1 AF storage transfer to Boom Creek Pump minus 118.5 AF Island Park carryover reverted to Fremont-Madison.
- bm) 248.6 AF groundwater exchange pumping minus 74.7 AF Island Park carryover reverted to Fremont-Madison.
- bn) 600.0 AF storage transfer from Teton Island Feeder for groundwater exchange pumping minus 399.2 AF Island Park carryover reverted to Fremont-Madison.
- bo) 4,064.7 AF groundwater exchange well pumping minus 463.5 AF Island Park carryover reverted to Fremont-Madison.
- bp) 609.3 AF groundwater exchange well pumping minus 73.5 AF Island Park carryover reverted to Fremont-Madison.
- bq) Storage transfer to J Ricks Pump for groundwater exchange pumping.
- br) Storage transfer from Salem Union Canal.
- bs) 442.7 AF return flow correction minus 369.1 AF Island Park carryover reverted to Fremont-Madison.
- bt) 613.7 AF return flow correction minus 67.2 AF Island Park carryover reverted to Fremont-Madison.
- bu) Storage transfer from Anderson Canal.
- bv) Storage transfer from Idaho Canal.
- bw) Storage supplied for groundwater mitigation.
- bx) Storage transfer to Milner Irrigation (875.3 AF) and Twin Falls Canal (1,857.6 AF).
- by) 23,289.7 AF USBR groundwater exchange pumping plus 7,141.0 AF Island Park carryover reverted to Fremont-Madison minus 11,477.6 AF Henrys Fork excess storage use minus 239.1 AF adjustment to carryover for storage spilled past Milner.
- bz) Storage rental to City of Blackfoot.
- ca) 821.4 AF excess groundwater exchange pumping plus 390.4 AF Willow Creek correction minus 4,728.7 AF gain averaging adjustment minus 1,056.4 AF return flow corrections minus 510.8 AF Indian/Bergman Reservoir storage adjustment minus 9.0 AF storage adjustment to Hill-Pettinger Canal and L Hill pumps minus 5,386.6 AF of storage past Milner.

20030302
