When excellence is an obligation

	Page 1		Page 3
1	Official Report of Proceedings	1	over the changes as are indicated in the paper.
2	Before the Idaho Water Resources Board	2	After that, we will take the public testimony.
3		3	We'll close the public testimony. Then we'll open
4 5		4	it up for some brief questions and answers if you
6		5	have something on your mind that might be
7		6	bothering you.
8		7	So if you look at pages 2 and pages 3,
9		8	you'll find proposed draft changes of Policy 32.
10 11	HEARING OF THE IDAHO WATER RESOURCE BOARD		Going on to pages 4, 5, 6 and 7 is the proposed
11	ON STATE WATER PLAN POLICY 32	10	· · · · · · · · · · · · · · · · · · ·
12	ON OTHER PARTIES DAY TO ELLET		legislative package. Now, that particular section
	TRANSCRIPT OF AUDIOTAPED PROCEEDINGS	11	is devoted to what our legislators are now working
13		12	on in Boise. Policy 32 plays a very important
14	January 30, 1985, 2:00 p.m.	13	role in the development of that legislative
15 16	Burley, Idaho Before Board Members:	14	package. And it's very important to us that we
10	GENE GRAY, Chairman	15	hear what you have to say.
17	DON KRAMÉR	16	Now, if you look at the right-hand side on
	JIM SHAWVER	17	page 7, you'll see some actions that must be taken
18	DAVE RYDAUCH	18	by May 15th of 1985. And I'll just kind of read
19	WAYNE HAAS	19	down through those with you. Number one, the
20		20	"State Water Plan is to be amended." And that's
21		21	the purpose that we are in front of you today. We
22		22	want to hear your comments and things that you
23	Tuesca ilead has	23	think we should do, revise, change, delete,
24	Transcribed by Debora Ann Kreidler	24	whatever, of the proposed Policy 32.
25	CSR No. 754	25	No. 2, "the legislative package is to

	Page 5		Page 7
			<u>-</u>
1	Frank?	1	because the Idaho code sections refer to the
2	MR. SHERMAN: Thank you, Mr. Director.	2	proposed revisions do not exist. They do exist in
3	It gets a little bit complicated. There's	3	the form of the legislative package that the
4	an existing State Water Plan. There's the	4	negotiators put together, and are asking the
5	proposed revisions to one of the policies of the	5	legislature to pass.
6	plan. And there's the agreement itself. I'd like	6	Because these waters that are being held in
7	to go through the proposed revision very quickly	7	trust once belonged to Idaho Power, they are not
8	with you.	8	the unappropriated water from the State.
9	The existing Water Plan deals with water	9	Therefore, the State can put special criteria on
10	allocations in the Snake River Basin. It has to	10	anyone who wishes to use those waters. And that's
11	be changed for two reasons. Quite clearly, the	11	what at one time was called, quote, interest
12	agreement specifies changes to the State Water	12	criteria. It's hopefully going to be referred to
13	Plan that negotiators felt were necessary. But	13	as Idaho Code Section 42-203C. It's what's in the
14	there's another reason. And that is when the	14	agreement.
15	Idaho Supreme Court ruled that Idaho Power	15	This is where the discussion about the
16	Company, in an unsubordinated right to water at	16	family farm (unintelligible) hydropower, that kind
17	Swan Falls Dam, it made these allocations wrong,	17	of thing. Those are criteria for the State to let
18	because they were based on the idea that the State	18	someone else take this water that Idaho Power
19	protects Idaho policy water rights as low as they	19	claims for their own use. The Board acknowledges
20	wanted. But the whole plan stays around a flow of		that this, perhaps, is best established
21	3300 CFS. And that's what we gauged for Swan	21	(unintelligible). Should be part of Idaho code,
22	Falls Dam.	22	just the requirements for a person who applies for
23	Now, the compromise and negotiations,	23	unappropriated waters are in the Idaho Code.
24	whatever, specified that, as part of the tradeoffs	24	It's a little complex. We always talk about
25	between the State and Idaho Power Company, that	25	the Swan Falls problem that flows past
	Page 6		Page 8
1	the flow at the Murphy Gauge will be changed from	1	Murphy Gage. You have to realize that Idaho Power
2	3300 CFS to 3900 CFS in summertime, and 5600 CFS	2	has a claimed water right at all our hydro
3	in the wintertime. That's basically what Policy	3	
	The state of the s	3	facilities upstream at that point. When someone
4	32 Snake River Basin addresses. It addresses that	3 4	
4 5	•	:	facilities upstream at that point. When someone
	32 Snake River Basin addresses. It addresses that	4	facilities upstream at that point. When someone says there's only 600 CFS in the river
5	32 Snake River Basin addresses. It addresses that change. It also includes minimum flows for places	4 5 6	facilities upstream at that point. When someone says there's only 600 CFS in the river (unintelligible) divided it up between 3900, 3300,
5 6	32 Snake River Basin addresses. It addresses that change. It also includes minimum flows for places called Johnson's Bar and Lime Point. They're	4 5 6	facilities upstream at that point. When someone says there's only 600 CFS in the river (unintelligible) divided it up between 3900, 3300, 4500 it's actually been down to. That's true only
5 6 7	32 Snake River Basin addresses. It addresses that change. It also includes minimum flows for places called Johnson's Bar and Lime Point. They're below the Hells Canyon complex. Idaho Power. They can certainly use it as long as
 it's available to them. But they agree not to
 protest if the State wants other people to use
 that water providing they meet the laws in the
 State of Idaho, including the new criteria.
 Policy 32B, "domestic, commercial, municipal

Policy 32B, "domestic, commercial, municipa and industrial." The existing Water Plan when it made its allegations for specific uses in the basin set aside -- at that time we were talking in terms of acre feet, but it converts to about 144 CFS in water on average flow for municipal and industrial uses.

The proposed revision keeping the CFS designation as negotiators reached -- were used in reaching their common laws, we plan, or we suggest or we suggest at 150 cubic feet per second of water be set aside for domestic, commercial, municipal and industrial uses. You note we're including domestic as part of this. It's not too painful an inclusion, because a person who drinks water, his waste products generally don't leave the basin. So each treatment plant puts it back in the river or out on the land. The water budget for a human, basically, what he sweats is lost to the Snake River Basin ground water system and

the State pursuant to Policy 32A, less the amount of water set aside to be domestic, commercial, municipal and industrial use, shall be available for agricultural purposes."

Problem there, of course, is that a new agriculture use has to meet these new criteria the legislature's going to establish if they're going to get that water the State is holding in lieu of Idaho Power plan.

Policy 32D, Hydropower. It acknowledges that hydro-— use of water for generation of electricity is beneficial use. That's already law in the State of Idaho. What they do here, though, is say, "and that depletion of flows below the minimum average daily flow set forth in Policy 32 is not in public interest."

So what they're doing is part of the tradeoffs here is saying that we'll recognize that 3900 and 5600 are necessary. And it's in the public interest that that water is available to Idaho Power for power storage. We're taking some of the water away from them, but we're guaranteeing them water hopefully in perpetuity, saying it's not in public interest to know what (unintelligible) the minimum flow is.

Page 10

river system. The rest of it is bad. So the inclusion of domestic doesn't really amount to much.

If you want to get a feel for how much water is going to be set aside out of this water, right now in the basin we divert approximately 400 CFS in average. Going to set aside 150 CFS. You'll note that this policy very specifically says 150 CFS of consumptive use. Now, that 400 CFS that gets diverted, that part that's used to water people's lawns, keep the golf course green, some of that, most of that water probably is consumed. But the water that's used for cooling purposes, wash water, that water gets back in the system in a real consumptive use, very close management approach.

You need to know how much of the water anybody is diverting is actually consumptively used and lost to the system. So if you take 150 CFS consumptive use, that's pretty close to what's probably being consumptively used today by domestic, municipal, commercial and industrial use.

"Policy 32C, Agriculture. It is the policy of Idaho that appropriated water held in trust by

Page 12

Page 11

Now, the existing Water Plan will take the role that the rate -- if the legislature passes the (unintelligible) bill, (unintelligible) below that. So they get something new, and the State gets some of the water.

Policy 32E, Navigation. This is basically the same language that's in the existing Water Plan. And it says that, with these minimum flows, the State feels there's enough water in the river at all times to satisfy recreational interests and those commercial motives (unintelligible).

Agriculture Policy 32F. This again is a repeat of the language that's already in the State Water Plan. It does testify, however, that if a trout farmer or agriculturist wishes to process his product, that's a commercial or manufacturing type (unintelligible). Waters for that purposes should be accounted for in DCMI withdrawal allocation. And then says that the minimum flows established by the plan should supply water to the trout farming industry. That's because the water in the river below Milner Dam, at least in the low-flow periods of the year, is frequently mostly (unintelligible) Mountain Springs. Many of the fish cultures in the state (unintelligible).

If we're going to have 3900 going past Murphy Gage, we're going to have to have the water coming up Mountain Springs. Therefore, those guys would probably protect it to some degree. It does specify, as does the existing Water Plan, however, that a water right is not a guarantee of your need for diversion, and says you're entitled to the water as long as there's a legitimate way to get it. If the springs were to decline, some people, trout farmers, for example, may have to change the diversion works. In extreme case, someone might even (unintelligible). His water rights, priority date, he has water available to him. But his need

Policy 32G, Fish, Wildlife and Recreation. This one I think I'll read at least part of it, because it's a sore point for many individuals. "It is the policy of Idaho that the new minimum flow established under Policy 32E are sufficient and necessary to meet the minimum requirements for 20 aquatic life, fish and wildlife, and to provide water for recreation in the Snake River below Milner Dam."

for diversion would not necessarily be protected.

The Board has always acknowledged that 3300 CFS at Murphy was not optimum for fish and

Page 15

1 where somebody may dump into the river 2

(unintelligible) is a beneficial use of water. The person has -- waste waters are so bad you

4 can't meet the Federal and State requirements, you

shouldn't be dumping into the river. You should

6 change what you're doing. There are laws to make

7 this happen. We shouldn't take our good water and 8 mix it with bad water (unintelligible). This

9 policy is basically already in the existing Water 10

> Policy 321, New Storage. This policy is a direct outcome of the agreement. Negotiators spelled it out in the agreement and asked the Board to address the problem to include this language or very similar language in the State Water Plan. The Swan Policy really has two policies in it. See with the first one -- which may be easier to explain, but it may not be easier to picture it.

The first policy is that before new storage is developed in the basin above Murphy Gage, a determination should be made that we're making maximum use of the existing facilities in the system. It's hard to accept that in an area of the state where we can't meet water claims for

Page 14

Page 16

wildlife or aquatic life, but it is a minimum value to protect and retain some of the resources we know of. By raising that flow, they're saying it may be, perhaps, even that 3900 isn't optimum, but it will protect the minimum value that we need -- accept as sort of a lifestyle in Idaho. It is also the figure that the negotiators have asked the Board to adopt.

The Board has another mechanism for protecting fish and wildlife. And that's their end-stream (unintelligible) program. The Board is the only entity in the State who can appropriate the unappropriated waters of the state for end-stream values. And they've done that on many 14 of the tributaries (unintelligible) through system. It's a different mechanism. Over and between the two, the Board feels they can protect fish, wildlife and recreation values within the state.

Policy 32E -- no, H. I don't know why I said that. Policy 32H, Water Quality and Pollution Control. The Board feels that there are enough Federal and State regulations to protect the water quality in the State of Idaho. They do not feel that using good water to dilute bad water water in the river at this stage and we haven't for Idaho policy 8400 claim (unintelligible) that on October 1st, the water master chose 12,000 CFS or something along those lines over Milner Dam. And it goes on down the river.

It would be more beneficial to the State if that water were used rather than just dumped in the irrigation system. So the negotiators asked the Board and to the Board of Director to examine this problem. In fact, put the burden on the director to make determination as to whether maximum use is being made of the system. There are today unappropriated waters in the (unintelligible). I think it would be very hard for the director to say we need a new dam when there are nonappropriated waters in the system.

If you were asked today to approve the preparation of that water and then someone came in and ask for new construction, you might have a bit of problem reaching a decision. The things that the negotiators want the Board to look at are really legal institutional barriers to the use of this water which sits in the reservoir during irrigation season, then is dumped. There are a lot of barriers, a lot of legal barriers, some

₿

Page 17

State barriers, Federal barriers.

Federal barriers, one, person can only lease or sell his water from a Federal reservoir one year at a time. There's a provision in the Idaho law. There are rules and regulations for the water bank. Committee of nine uses that to move water around to some degree in the upper part of the basin. But dealing with water from a Federal reservoir, it can only be used one year at a time. Not very much incentive for someone who wants to come in and do something new, because, one, why would he risk his own money when he's only guaranteed water for one year, (Unintelligible) guaranteed water for one year. So that's a barrier to fair use, more efficient use of the water.

A second barrier is that if your water is stored in a nonl'ederal reservoir, you cannot make a profit on sale or lease of that water. What's the incentive for someone who's got water use one year in 10, or one year in 20, go out and try and sell it, if you can't make a profit? So those are two real barriers to trying to make more efficient use of the water in the already existing system.

Page 19

1 We're talking about a part of the state

We're talking about a part of the state
where we're really facing up to the fact we're
water short. And yet, there is water that doesn't
get put to economic uses. That's the first part
of the response.
The second part relates specifically to the

The second part relates specifically to the reach of river below Milner Dam and above the Murphy Gage. By the working agreement, everybody trades here and there. And one of the trades that Idaho Power wanted was protection for their wintertime operations. Two things that need to be protected, at least two I know of. Certainly, they have a ready market on the coast where some of these people (unintelligible).

The other is at wintertime is when they fill Brownlee Reservoir, the only storage reservoir really in the Hells Canyon common. So they wanted as much water assured to them during that period of operation as they could get. That's the reason for 5600 CFS in the wintertime,

What do negotiators agree to when the Board is supposed to include a State policy is that approval of new storage projects that would divert water from the main stem of the Snake River between Milner and Murphy during the period

Page 18

There are several barriers at the State level. A person can have a full natural flow right and full storage water right for the same piece of ground. But a person can't sell off his water if it would be a dissension in use. Your water right entitles you to put so much water in so much ground for agricultural purposes, for example. If you have more water than that, you can't sell it to another person that's going to consume it. Many potential sales get caught in this trap. It would require changing the State law.

The same thing sort of applies to all the rules and regulations for the water bank on Kutalris (phonetic). Person doesn't put his water to use where it's supposed to go once in five years, he can lose his water right.

five years, he can lose his water right.

There are plenty of reasons why this water sits in there year after year and it gets dumped. City of Pocatello, for example, has a water right to be used in emergency situations, which the only way they could use would be to throw (unintelligible) in the river tell the water master (unintelligible) try and catch it when it goes by. They'll never using that water.

Page 20

November 1st, March 31st, should be coupled with provisions that mitigate and impact such depletions we have on the generation of hydropower.

Mitigate, very specifically identified in the fine as lessening the impact. It doesn't mean that if you're going to take so many, someone wants to take so many, there could be water around for storage. He has to give Idaho Power a dollar value for that. It means he has to lessen the impact.

The rules and regulations for how it's going to be calculated will only be in place if the agreement ever gets through. It's going to be a complicated procedure. Quite honestly, each diversion project will probably be evaluated within the basin. You've got to calculate the mitigation. You have to know the details and the specifics of when the water's coming out and when it's coming back in, that kind of thing.

The last Policy 32J, Storage Water for Management Purposes. This is a policy that's not specifically called for in the agreement. When some of the things the agreement calls for makes this a record as a policy. As I said earlier,

б

Page 21

there are unappropriated waters in the system conceivably the State could acquire (unintelligible). If the Department is going to issue permits from the river and from the aquifer, and realize that the aquifer discharge is basically American Falls and Thousand Springs.

The key (unintelligible) point in terms of the whole Snake River is that Thousand Springs, if we start issuing permits on the aquifer and get below 3900 through an error on our part, we, the State, has no place to get water for the call. Idaho Power would bank, shutting off a pump (unintelligible) is not going to get the water at the Murphy Gage in any kind of reasonable time, it at all. It would eventually, but (unintelligible) measure of consequence of shutting off water (unintelligible). Of course, if we could shut one or two river people off, you'd see water on the way.

If the State had access to some water where — to be used when the State made a mistake, it would allow the managers and regulators to be less conservative in issuing water rights without having to fall back on, I would assume, the directors, if you are careful as he starts to

Page 23

Mr. Chairman, (unintelligible).

2 THE CHAIRMAN: Thank you, Mr. Sherman.

We'll start the formal public hearing

4 process. And the chair would first call Dr. Chuck
5 Brockway.

Thank you. State your name, address and telephone number. It would be most appreciated, Dr. Brockway.

DR. BROCKWAY: Chuck Brockway. I'm with the University of Idaho at Kimberly Research Station. And the telephone number is 423-4691.

Am I the only one signed up, Mr. Chairman, to speak?

THE CHAIRMAN: No, sir. We have one more. DR. BROCKWAY: A whole bunch of them. Good. Then I won't take the whole period.

THE CHAIRMAN: But if you would like to take the full hour --

DR. BROCKWAY: I would like to address some of the things that concern me regarding implementation of the proposed Policy 32. One of them deals with the 32B for DCMI allocations. It seems like, and maybe it's inevitable, that whenever a policy's changed, or new statutes adopted, it places additional burdens on the State

Page 22

Page 24

approach his 3900 maximum level. If he knows -if he makes a mistake, he's going to get the water
pretty quickly, then he may go ahead and issue
whatever he thinks is bis maximum level.

Now, this water would not necessarily -- if the State it could inquire. They're not going to sit idle. It could go to the water bank. Conceivably could be sold to Idaho Power. It would not have to sit idle. But it would be there if the State felt, through their own fault, they could not meet the terms of the agreement.

One thing that's not in the State Water Plan I'd like to just discuss, and then I'll shut up, the agreement is designed to protect the existing use. It states that if a person can prove he was making beneficial use of the water prior to the day of the signing of the agreement, he shall be protected. If in terms of dry years and the flow were not there naturally, the existing user would not be called upon by Idaho Power to be shut off to satisfy Idaho Power right. It would only be the person whose proof of use came after the signing of the agreement that Idaho Power would take action against if their right went out past the 3900 (unintelligible).

agencies for regulation and/or administration. This one seems to do that in that if we are allocating or proposing to allocate 150 CFS of consumptively used water, which could translate into anywhere from 150 to a thousand CFS of diverted water, depending on the percentage of the diversion which is deemed to be consumptively used.

The determination for all of the various DCMI uses of what is actually consumptively used is difficult, technically. I'm not sure that we have the kind of data to allow the director to make those kind of determinations, at least currently. There could be some problems with that kind of an evaluation of what is consumptively used for the DCMI uses. Maybe -- maybe the director feels differently about that, but I could see some problems that might arise there.

Another concern that I had was with 32I. And that was addressed by Frank. And that is the determination by the director of whether the upstream storage is currently on-line. We are making the maximum possible use of the existing storage. There has to be some criteria defined for what is meant by maximum possible use.

Page 25

That -- to me, that's another term like reasonable pumping level that has yet to be defined.

And technically, it's going to be difficult, 4 again, to evaluate whether you are talking about 5 optimal use to meet certain objectives, or some б other criteria for maximum possible use. It might 7 be well to put some of those criteria in the policy rather than leave it entirely up to the

Board and to the director. Another thing on Policy 321 that seems a difficult one to get over, and that's the mitigation aspect of wintertime storage between Milner and Murphy, and determination by the Board 13 of what is reasonable mitigation to decrease the impact on power rights within the Snake River.

16 If I'm reading the write-up under 32I, provision 2, it states that "there are no current proposals for new storage projects that would 19 divert Snake River water between the Milner and 20 Murphy gaging stations. I don't think that's 21 true. I think there are proposals that have been 22 on the books for 10 years that contemplate 23 wintertime storage on the Bruncau Desert by 24 pumping from the Snake River between Milner and 25 Murphy. So it may be that whoever wrote that

some liability under all cases for maintaining that minimum flow of 3900, because they have this pot, I'm not sure we need -- we want to do that within the agency.

That involves some legal implications, I think, that ought to be evaluated by the staff to see if the State would be incurring some kind of responsibilities or obligations that we don't want to have.

I think that's all, Mr. Chairman, that I have specifically on Policy 32. Lunderstand there will be an opportunity to at least ask questions on some of the other aspects of the agreement,

THE CHAIRMAN: Thank you, Dr. Brockway. In case we have some questions for board members, would you stand for them, please?

DR. BROCKWAY: You bet. THE CHAIRMAN: Mr. Nyerman? (Unintelligible).

MR. NYERMAN: I have one. On 32B, the domestic, commercial DCMI one, what would be your answer? You had some misgivings with it. But what would be your answer to changing this or bringing it around so it might be acceptable?

Page 26

should review that again,

The -- I agree wholcheartedly with the intent here to really evaluate how the water bank and those provisions can be made more flexible to get better use of the storage facilities that we have on-line, and to help evaluate the needs for new storage in the system. That should have been done a long time ago. And perhaps now this could be the impetus to do it.

In relation to Policy 32J, stored water for management purposes, I'm not sure that's a good deal from this standpoint. One of the rationale is to allow the State, then, to mitigate a mistake in management, perhaps. If we make a mistake and 14 that flow goes below 3900, we just reach in the sugar bowl and make it up. That would give the director some flexibility. It could also induce the director to be a little lax in management in that he wouldn't have a strict line to adhere to if he had someplace or some way to bail him out.

The other problem is where are you going to get the money to buy the storage? Are you going to take that out of the adjudication fund? 24 Storage is not inexpensive. And whether the State needs to get into that, and to assume, perhaps,

Page 28

Page 27

DR. BROCKWAY: Well, I think maybe it's acceptable to a more knowledgeable person. In other words, if you ask me to -- well, let's go back to the aquaculture portion here, where it's going to be the policy, perhaps, to charge the processing part of water use for aquaculture to DCMI allegations. Well, if you asked me what is the consumptive portion of water for cleaning and washing fish as a percentage of that total diversion requirement, I don't know. And I don't know who knows.

The other aspect is, well, for heating or for cooling purposes, if you're talking about power plants or whatever, we can certainly measure the consumptive use under prototype situations, but a lot of times it's difficult to estimate consumptive use as a percentage of diversion for those kind of uses. At the least, implementation of this portion of the policy would take considerable research to determine what these values arc. And maybe the staff has done that. I don't know. But I see some problems with making those determinations.

Let me give you an example. I was involved with assisting a water permit holder in evaluating

	Page 29		Page 31
1	his needs consumptively in an industrial	1	I wanted to touch on.
2	recreational complex where he had a truck washing	2	THE CHAIRMAN: Thank you, Mr. McDaniels.
3	facility, a car washing facility, and a swimming	3	Is there any questions, Mr. Kramer?
4	pool, and a couple of laundry mats, those kind of	4	MR. KRAMER; No.
5	things which would fit in the DCMI allocation.	5	THE CHAIRMAN: Mr. Rydalch?
6	How much of the diversion for a laundromat	6	MR. RYDALCH: No.
7	is consumptively used? How about a swimming pool?	7	THE CHAIRMAN: Mr. Shawver?
8	You can make estimates, but whether we have good	6	MR. SHAWVER: No.
9	data on all of those, I'm not sure.	9	THE CHAIRMAN: Okay, Thank you.
10	MR. NYERMAN: Maybe we can get the money for	10	Is there anyone else who at this time would
11	the research to get these answers the same place	11	like to testify?
12	we can get the money to hay it over in	12	Okay. We'll close the official testimony.
13	(unintelligible).	13	And we will open it up for questions and answers.
14	DR. BROCKWAY: That could be. 1'd vote for	14	Who's first?
15	that.	15	Dr. Brockway.
16	MR. NYERMAN: If you have some thoughts or	16	DR. BROCKWAY: I have a question regarding
17	something on 32B that you might write down for us	17	what Exhibit 3 and that deals with the part of

SHERMAN: And I'm not saying that's relation (unintelligible) that water's always going to be there. Because, as a ground water man, I always point out that if that flow is Thousand Springs discharge, what's happened at Thousand Springs in the last thirty years. It is sure that Thousand Springs has trickled down in
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	flows have been winter and summer. MR. SHERMAN: You're asking me (unintelligible) it gives me an embarrassing question, because I don't know what historic low in the wintertime is. I think it's around 6100, some number fairly high, well above 56. In fact, the compromised values would sort of fall between historic low and what was what the (unintelligible) was. UNIDENTIFIED VOICE: What was that figure, please? MR. SHERMAN: 6100 CFS. UNIDENTIFIED VOICE: How many? MR. SHERMAN: 61. UNIDENTIFIED VOICE: 61. MR. STIERMAN: The summertime flow has beer as low as 4500 CFS on a daily average. And that's Greeway Catholic (phonetic). No one trying to do it on Isa Canyon's (phonetic) flows. Anything modern day, you have to wait you have a good	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	The lowest it's over been at Murphy on a one-day average 4500. (Unintelligible). MR. SHERMAN: That's fine. It could really happen. Two different times. It happened in 1981, I think, and it happened back, if you run a computer model back of current development, back in the thirties. I think it happened once in the sixties on the computer model. UNIDENTIFIED VOICE: It happened in '61 or '62. MR. SHERMAN: And I'm not saying that's relation (unintelligible) that water's always going to be there. Because, as a ground water man, I always point out that if that flow is Thousand Springs discharge, what's happened at Thousand Springs in the last thirty years. It is sure that Thousand Springs has trickled down in thirty years. But there should be — because
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	flows have been winter and summer. MR. SHERMAN: You're asking me (unintelligible) it gives me an embarrassing question, because I don't know what historic low in the wintertime is. I think it's around 6100, some number fairly high, well above 56. In fact, the compromised values would sort of fall between historic low and what was what the (unintelligible) was. UNIDENTIFIED VOICE: What was that figure, please? MR. SHERMAN: 6100 CFS. UNIDENTIFIED VOICE: How many? MR. SHERMAN: 61. UNIDENTIFIED VOICE: 61. MR. SHERMAN: The summertime flow has beer as low as 4500 CFS on a daily average. And that's Greeway Catholic (phonetic). No one trying to do it on Isa Canyon's (phonetic) flows. Anything modern day, you have to wait you have a good day before you take any action. So daily average	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	The lowest it's over been at Murphy on a one-day average 4500. (Unintelligible). MR. SHERMAN: That's fine. It could really happen. Two different times. It happened in 1981, I think, and it happened back, if you run a computer model back of current development, back in the thirties. I think it happened once in the sixties on the computer model. UNIDENTIFIED VOICE: It happened in '61 or '62. MR. SHERMAN: And I'm not saying that's relation (unintelligible) that water's always going to be there. Because, as a ground water man, I always point out that if that flow is Thousand Springs discharge, what's happened at Thousand Springs in the last thirty years. It is sure that Thousand Springs has trickled down in thirty years. But there should be — because we've never been below 4500, there should be some
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	flows have been winter and summer. MR. SHERMAN: You're asking me (unintelligible) it gives me an embarrassing question, because I don't know what historic low in the wintertime is. I think it's around 6100, some number fairly high, well above 56. In fact, the compromised values would sort of fall between historic low and what was what the (unintelligible) was. UNIDENTIFIED VOICE: What was that figure, please? MR. SHERMAN: 6100 CFS. UNIDENTIFIED VOICE: How many? MR. SHERMAN: 61. UNIDENTIFIED VOICE: 61. MR. SHERMAN: The summertime flow has beer as low as 4500 CFS on a daily average. And that's Greeway Catholic (phonetic). No one trying to do it on Isa Canyon's (phonetic) flows. Anything modern day, you have to wait you have a good day before you take any action. So daily average is the number we're talking about here in Boise.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	The lowest it's over been at Murphy on a one-day average 4500. (Unintelligible). MR. SHERMAN: That's fine. It could really happen. Two different times. It happened in 1981, I think, and it happened back, if you run a computer model back of current development, back in the thirties. I think it happened once in the sixties on the computer model. UNIDENTIFIED VOICE: It happened in '61 or '62. MR. SHERMAN: And I'm not saying that's relation (unintelligible) that water's always going to be there. Because, as a ground water man, I always point out that if that flow is Thousand Springs discharge, what's happened at Thousand Springs in the last thirty years. It is sure that Thousand Springs has trickled down in thirty years. But there should be — because we've never been below 4500, there should be some room to play.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	flows have been winter and summer. MR. SHERMAN: You're asking me (unintelligible) it gives me an embarrassing question, because I don't know what historic low in the wintertime is. I think it's around 6100, some number fairly high, well above 56. In fact, the compromised values would sort of fall between historic low and what was what the (unintelligible) was. UNIDENTIFIED VOICE: What was that figure, please? MR. SHERMAN: 6100 CFS. UNIDENTIFIED VOICE: How many? MR. SHERMAN: 61. UNIDENTIFIED VOICE: 61. MR. SHERMAN: The summertime flow has beer as low as 4500 CFS on a daily average. And that's Greeway Catholic (phonetic). No one trying to do it on Isa Canyon's (phonetic) flows. Anything modern day, you have to wait you have a good day before you take any action. So daily average is the number we're talking about here in Boise. UNIDENTIFIED VOICE: Over what period of	2 3 4 5 6 7 8 9 10 1 12 13 14 15 16 17 18 19 21 22 3	The lowest it's over been at Murphy on a one-day average 4500. (Unintelligible). MR. SHERMAN: That's fine. It could really happen. Two different times. It happened in 1981, I think, and it happened back, if you run a computer model back of current development, back in the thirties. It is sure that Thousand Springs has trickled down in thirty years. But there should be — because we've never been below 4500, there should be some

	Page 37		Page 39
1	anybody who's got a water right that's younger	1	to fill that 3900?
2	than the signing of the agreement	2	MR. SHERMAN: If the person has screwed up
3	UNIDENTIFIED VOICE: That includes the wells	3	on his water before the agreement was signed, we
4	up through there?	4	can't touch him under the terms of the agreement.
5	MR. SHERMAN: Absolutely. That's why I'd	5	JOE: Wells included.
6	like to see us have the storage water that Dr.	6	MR. SHERMAN: Wells included.
7	Brockway suggested may be a problem, because	7	MR. KRAMER: Mr. Chairman.
В	shutting off the wells up through here doesn't do	8	THE CHAIRMAN: Mr. Kramer.
9	us a bit of good in terms of our flows. But	9	MR. KRAMER: Let's talk a little bit about
10	according to State law, the director would have to	10	what Dr. Brockway mentioned about the off-stream
11	shut off everybody junior, whether they were	11	storage that has been on the books for 10 years
12	ground water pump or water systems.	12	between Milner and Murphy. A little pilgrim
13	THE CHAIRMAN: Dr. Brockway,	13	project, I think, was filed on years ago. And
14	DR. BROCKWAY: I'd just like to comment on	14	they have a plan to pump water out of the Murphy
15	that.	15	area to an off-stream storage. And right here it
16	Isn't it true that he would have to shut	16	says "no water will be pumped out."
17	them off only if he could show they were impacting	17	Where does that project stand? And do they
18	the current deficiency?	18	have any more right than a person that is fighting
19	MR. SHERMAN: Yes.	19	today on that particular water? Can you answer
20	DR. BROCKWAY; Which would be obviously hard	•	that?
21	to do in the aquifer.	21	UNIDENTIFIED VOICE: 30, 40 grams is 48. I
22	MR. SHERMAN: Right, Yeah, but I think	22	have to apologize. There's a mistake on the
23	well, I don't think it would. I couldn't show the	23	photostat. We wrote that and they were looked at,
24	individual ones, but I think I could show a trend	24	And there's a pretty good reason why we didn't
25	in decline in spring. And that's you show that	25	what we struggled with that is the negotiators who
	Page 38		Page 40
1	Page 38 absent the ability to shut the well off right now	1	Page 40 put the compromise agreement together couldn't

We hate to see the whole thing go down too slowly. Calculation mitigation for an off-stream wintertime storage in one relatively
2 3 4 5 6 7 8 9	absent the ability to shut the well off right now and have an effect, I'd have to say you can never (unintelligible). Because, that could then might reoccur itself. By law, you've got to protect 3900. That's why I'm not proving right now is I have to protect the power company water bill. So in order to make sure 3900 doesn't violate, I've got the manifest system to make sure it doesn't. So instead of	2 3 4 5 6 7 8 9	put the compromise agreement together couldn't agree on how to calculate communication. The Board approached the negotiators with some proposal items (unintelligible), and we couldn't agree to that. So we said, please, delay this problem. We hate to see the whole thing go down too slowly. Calculation mitigation for an off-stream wintertime storage in one relatively small (unintelligible). So we haven't really done
2 3 4 5 6 7 8 9	absent the ability to shut the well off right now and have an effect, I'd have to say you can never (unintelligible). Because, that could then might reoccur itself. By law, you've got to protect 3900. That's why I'm not proving right now is I have to protect the power company water bill. So in order to make sure 3900 doesn't violate, I've got the manifest system to make sure it doesn't. So instead of saying we've got 600 CFS to appropriate, I'm	2 3 4 5 6 7 8 9	put the compromise agreement together couldn't agree on how to calculate communication. The Board approached the negotiators with some proposal items (unintelligible), and we couldn't agree to that. So we said, please, delay this problem. We hate to see the whole thing go down too slowly. Calculation mitigation for an off-stream wintertime storage in one relatively small (unintelligible). So we haven't really done a good job on that one, but there's some reasons
2 3 4 5 6 7 8 9 10	absent the ability to shut the well off right now and have an effect, I'd have to say you can never (unintelligible). Because, that could then might reoccur itself. By law, you've got to protect 3900. That's why I'm not proving right now is I have to protect the power company water bill. So in order to make sure 3900 doesn't violate, I've got the manifest system to make sure it doesn't. So instead of saying we've got 600 CFS to appropriate, I'm really going to have to be substantially less than	2 3 4 5 6 7 8 9 10	put the compromise agreement together couldn't agree on how to calculate communication. The Board approached the negotiators with some proposal items (unintelligible), and we couldn't agree to that. So we said, please, delay this problem. We hate to see the whole thing go down too slowly. Calculation mitigation for an off-stream wintertime storage in one relatively small (unintelligible). So we haven't really done a good job on that one, but there's some reasons for that.
2 3 4 5 6 7 8 9 10 11 12	absent the ability to shut the well off right now and have an effect, I'd have to say you can never (unintelligible). Because, that could then might reoccur itself. By law, you've got to protect 3900. That's why I'm not proving right now is I have to protect the power company water bill. So in order to make sure 3900 doesn't violate, I've got the manifest system to make sure it doesn't. So instead of saying we've got 600 CFS to appropriate, I'm really going to have to be substantially less than that to make dang sure we go farther than 3900.	2 3 4 5 6 7 8 9 10 11 12	put the compromise agreement together couldn't agree on how to calculate communication. The Board approached the negotiators with some proposal items (unintelligible), and we couldn't agree to that. So we said, please, delay this problem. We hate to see the whole thing go down too slowly. Calculation mitigation for an off-stream wintertime storage in one relatively small (unintelligible). So we haven't really done a good job on that one, but there's some reasons for that. In terms of little pilgrim, where they
2 3 4 5 6 7 8 9 10 11 12 13	absent the ability to shut the well off right now and have an effect, I'd have to say you can never (unintelligible). Because, that could then might reoccur itself. By law, you've got to protect 3900. That's why I'm not proving right now is I have to protect the power company water bill. So in order to make sure 3900 doesn't violate, I've got the manifest system to make sure it doesn't. So instead of saying we've got 600 CFS to appropriate, I'm really going to have to be substantially less than that to make dang sure we go farther than 3900. That's why we've said if you've got some	2 3 4 5 6 7 8 9 10 11 12 13	put the compromise agreement together couldn't agree on how to calculate communication. The Board approached the negotiators with some proposal items (unintelligible), and we couldn't agree to that. So we said, please, delay this problem. We hate to see the whole thing go down too slowly. Calculation mitigation for an off-stream wintertime storage in one relatively small (unintelligible). So we haven't really done a good job on that one, but there's some reasons for that. In terms of little pilgrim, where they stand, they stand, as far as I can tell, with any
2 3 4 5 6 7 8 9 10 11 12 13 14	absent the ability to shut the well off right now and have an effect, I'd have to say you can never (unintelligible). Because, that could then might reoccur itself. By law, you've got to protect 3900. That's why I'm not proving right now is I have to protect the power company water bill. So in order to make sure 3900 doesn't violate, I've got the manifest system to make sure it doesn't. 1 and the water (unintelligible) judge 2 (unintelligible),

UNIDENTIFIED VOICE; Dr. Brockway, I have a question. We've heard some concern on Policy 32 item, referring to storage. We also see a trend in the State of Idaho -- and let's just take agriculture and set it aside, because it is the backbone of Southern Idaho, and it needs to be protected, obviously. But we do have changing demands on water. And with that, no doubt, we'll have changing water laws within the State of Idaho. Do you see a problem with new storage when

it comes to future recreational uses, fishery uses, wildlife uses, ct cetera? 'Cause, we are hearing a lot of comments in that direction as we're coming (unintelligible). DR. BROCKWAY: Well, there will be problems | 18

with new storage. Those problems won't be problems to everybody. They won't be problems to the irrigating people. But they'll be problems to fish, recreation and wildlife. I think we need to take another good hard look at new storage in the upper Snake system. I think there's potential for additional storage that can be managed and revised

help.

Because I commented on the State buying storage and using it as a slush fund, that doesn't mean I'm not saying that it shouldn't be for storage value. I think there should. My comment is I don't think that the State ought to be in the position of owning storage as a buffer for many.

Page 43

THE CHAIRMAN: Mr. Dunn?

MR. DUNN: I'd like to, on Chuck's comment, one of the things we're looking at in terms of owning new storages or owning some allocated storage, wherever it's at, is if the Board, the State own that, and they're able to pay for that to lease to the power company for power sampling, and then we get to the point where development has occurred and we are in jeopardy of violating the 3900, and have to make revisions.

One of the thoughts is that the new appropriators would end up paying (unintelligible) fee to pay for that water use. If you're going to use water that will cause the 3900 to get in trouble, the people that are doing that ought to pay for storage, because nobody's -- even you -nobody knows exactly what happens when you take water out of that aquifer. You have to make some

Page 42

better management of the total resource.

It will be more difficult now to implement any new storage because of the competing concerns that we didn't have 30 years ago and 40 years ago. But I really believe that we need to look harder at the new storage as a procedure for helping us optimize the use of the total water resource.

And that needs to be coupled with aquifer storage and regulations and management as well. We can't just manage the surface waters of the State, or the surface waters of the Snake River and neglect the aquifer systems that are intimately related with the river systems. And we need to do that. And we need to have, in my opinion, better data and better tools to do it with.

That's why I asked the question about the hydrologic studies and economic studies funding that, to me, are the backbone of providing the ability for the department to make evaluations of how beneficial this new storage, how can you better manage the aquifer river system and not global all 3900. There are some things you can do, management-wise, with the river to regulate it and to keep the 3900 there. And new storage would i Page 44

assumptions. You make the assumptions that the guys appropriating it know there are some (unintelligible), and knows the risk of their being wrong and you've got to pay in the future.

That's some of the things we're tooking at in terms of (unintelligible).

UNIDENTIFIED VOICE: Well, if you got into the storage business, I would say that's an equitable way to (unintelligible), if you got into the business.

I don't know. It certainly is not traditional for the State of Idaho. That doesn't mean it shouldn't be looked at pretty close.

UNIDENTIFIED VOICE: The problem is that nobody can go out and buy a couple acre feet at a time. You've got to go out and buy a chunk of the reservoir and just, you know, get it. So somebody's got to be the catalyst, be it the State or whomever. Somebody's got to buy a chunk so people can buy bits and pieces of it.

UNIDENTIFIED VOICE: What happens, though? Can we get down -- you know, we're right in the brink there, 3900, and whoops, we made a mistake. And for three years or five years, whatever, the projected flow is only 3700. So that means you've

got to draw on that storage. And maybe if we overshot too far, you've got to draw on it perpetually. It no longer becomes a buffer. It becomes hard-wired in the system.

Would you manage any different if you had that?

UNIDENTIFIED VOICE: Certainly, You end up? cutting people off. I mean, the water supply is a finite number. You make the best estimate you can. You can't say, well, we can't make a decision if we don't have all the data. That's not the way life operates. You take the best data you have. You make the best decision you can. And if you're wrong, you're wrong. You have to go back and correct it. Then, you know, given all the variables, the chances of being exactly right are nil.

It's like in Congress, people make a projection, it's probably going to be wrong, but you may be close. And that's about all you can do in that is hope we get close enough that we've got some kind of commission to compensate for it. You know, without any storage, don't look for 600. We'll have some lesser number, I can guarantee it. We don't dare get to exactly 600 based on our

Page 47

1 more water for fish, more water for recreation.

2 It's high time that those people start putting up

3 the bucks if we're going to build storage, because 4

those are the people that are doing the yelling. 5 So we may have an easier time to build storage

than we've had up until now. It's going to be

6 7 tough for agriculture to build anymore storage.

DR, BROCKWAY: Mr. Chairman?

THE CHAIRMAN; Dr. Brockway.

DR. BROCKWAY: Well, I think you'll find that certainly the demands are greater from a wider segment of the populus than they ever have been. I think you'll also find, if you look at the record, that those who cry the loudest have the least money.

I don't call it that will continue forever, but that's historically the way it's been. And so you may have a lot of people crying, but not willing to really share the load like the agriculture has in the past. I don't know.

UNIDENTIFIED VOICE: All right. That could bc. Of course, the farmers that going broke's doing a lot of crying.

Gene?

THE CHAIRMAN: Yes, Mr. Haas.

Page 46

estimates of depletion. We need to stretch it out or you shorten it up.

UNIDENTIFIED VOICE: Well, Mr. Dunn, wouldn't it be in the public interest to have other upstream storages. Dr. Brockway talks about covering mismanagement of water. But it would appear to me that if somehow, through the process, we actually did mismanage water, that's not going to be done on purpose. It may be because of the state of the art at the time that caused it. But wouldn't it be in public interest to have other new storages just to cover those contingencies?

MR, KRAMER: Mr. Chairman?

THE CHAIRMAN: Mr. Kramer, MR. KRAMER: Jeff, don't you think that it might be easier to build new storage once you get everyone involved? Problem with the storages we have built up until now, it's been agriculture and power. And they're the only two that have put the bucks in to build the storage. Any storage that's going to be built from now on, I think everybody will participate in. Therefore, there will be more people that owns the water. And maybe there 23 will be a bigger buffer.

We hear as we go up and down here, we want

Page 48

1 MR. HAAS: Chuck, on your comment about

2 major consumptive use on -- for DCMI, I agree with 3

you on all of the difficulties. It seems to me

4 that the only alternative to that is to not have

an allocation. Is that what you were suggesting,

that there not be an allocation, specific

allocation made to DCM1?

DR. BROCKWAY: Well --

MR. HAAS: Seems to me you have two choices.

Either you allocate or you don't. If you

allocate, you have to measure something or try your best.

Were you suggesting no allocation?

DR. BROCKWAY: I don't think I'm saying you shouldn't have some sort of allocation. I don't know how you came up with the 150 CFS.

MR. HAAS: It was in part of the agreement package, negotiators --

UNIDENTIFIED VOICE: That means some lawyers put it together.

DR. BROCKWAY: Well, how that worked doesn't matter. Certainly the State could have gotten the policy of a certain amount of designated consumptive use required for DCMI. My problem is, through regulation, the determination of -- a guy

comes in with an application for a water right or 2 for permit and he says I want to divert 4 CFS for 3 my fish processing group subsequently. What 4 guidelines would we use to determine what part of 5 that 150 CFS consumptively allocated that guy's 6 going to use. 7

MR. HAAS: Well, I'm not disagreeing at all, Chuck. And I guess we would use the best guess we

DR. BROCKWAY: Whatever you've got, yeah. UNIDENTIFIED VOICE: Whatever the university 11

MR. HAAS: Well, I think our choice, you know, either -- forgetting whether it's 150 or the number. I think that's not important. But you're saying that -- I'm not sure what your testimony is there, I guess. I agree with the difficulty, but doesn't seem to me like you have a choice. Either you make an allocation, or you don't. If you make an allocation, then you have to some way try to measure something,

The alternative to make an allocation is to say there will be no allocation for any types of uses. And whoever gets there first, fine. And when the director thinks the total is close enough Page 51

MR. DUNN: It's totally defenseless. That the problem is that we get into a situation where everybody wants a finite -- exact finite answer. And you don't have that. And if we look at the maximum transpiration, we made decisions on water supplies based on evaporative transpiration. You can blame critically, because, as you know, it's not right, it's wrong. (Unintelligible) But at the time, it was the best we had. And you make the dang decision, right or wrong, the best you got. As you get more information, you change it.

You come in with DCMI, and you get down to the last second foot as we know it. And the guy only gets one. He doesn't get two. It's defensible unless he can show that we're wrong up to that point. And it's one person's word, I guess, against the other.

But absent precise data, you use the best thing you can -- you got. And that's -- some assume (unintelligible) tries to redo that all the time, the allocations (unintelligible). But, again, it's the reason you need some kind of cushion. With 150 out saved for DCMI, on the other side of the pendant you're down to 450 now for the other consumptive use. You know, you've

Page 50

Page 52

to -- where we're getting the 3900, we shut it

DR. BROCKWAY: Let me pose a question, then, in opposition to the allocation procedure.

MR. HAAS: Okay. DR. BROCKWAY: Let's suppose that I'm the 1201th guy that comes in to the Board with an application for some kind of commercial water use. And I come in and I need 2 CFS and you say, no, you can only have one CFS, because we've determined that that's all you need. But low and behold, after you add up all the figures, that comes out to 151 CFS. And so you deny the permit. On what basis can you really make that stick as

In the defense, to set up an arbitrary allocation for specific uses when everybody in the state's supposed to have equal opportunity for diversion and use - beneficial use of water.

compared with an irrigator or with some other

THE CHAIRMAN: Mr. Haas, do you have anything else?

23 MR. HAAS: I'm not going to answer that when 24 the director's here to handle it. 25

THE CHAIRMAN: Mr. Dunn.

got to be more careful as you start -- as I start to allocate that. Better data we get, better decision we make. We continue the way we are now, you're going to get some pretty raw decisions. 150, we're going to be careful that we don't allow everything to be seen through (unintelligible).

But beyond that, let's assume that we go into just a hellacious development in this state of nonagriculture, just DCMI. And all of a sudden, we're using that all up. Well, we haven't got -- used up the 450 yet. The answer to that then is for the Board, in addressing the Water Plan to say, well, we reserved 150 for DCMI, but obviously, we were wrong. We've got more use for that kind of water than we anticipated, and we're going to raise it to 200, and reduce the other one to 400, because that's -- it's said in policy. It's not set (unintelligible). Change the allocation (unintelligible). That's the advantage of having it as a policy for the State so you know what we're following and we can see how the thing progresses over time.

UNIDENTIFIED VOICE: Boy, if one thing to keep in mind also, that by law, the State Water Plan has to be updated on a five-year basis. So

it seems they're not written in blood.

Mr. Chairman?

THE CHAIRMAN: Yes, Mr. Sherl.

MR. SHERL: I'd like Frank to help me explain something to Elmor's concerns here that we agree with the -- change the Water Plan, Policy 32, no problems. Legislature gets in a fight. They never get anything done. Are we saying we

8 9 won't have a changed Water Plan if that happens, 10

Frank?

23

24

25

MR. SHERMAN: It's very likely. Your next board meeting is not scheduled until early March. If you can't read the legislature by then, maybe you shouldn't be on the Board. Maybe the legislature will be so deadlocked you can reach a decision that way too.

The other thing that happens, of course, is with passing of the addition of last November, the Water Board no longer has the real final say in the State Water Plan. They can adopt 3900, and the legislature isn't making any moves to implement the agreement, the legislature can change it back to 3300 like that.

24 So people might ask the question why is the 25 Board going to all the trouble coming out for

one, Mr. Chairman. I don't know if I could do a good job of it.

Page 55

Page 56

The agreement in no way changes beneficial use requirements that are already in place. Now, what's exploring the maximum use of stored water, for example, may duly show that State law as it exists today is actually at a disincentive to the water efficient user. And as that thing gets flushed out -- and I say the Board has accepted the responsibility of trying to at least look at the scoreboard.

As that gets flushed out, it may be possible that we can see changes in the law which really -as I said earlier, as an example, the person who -- well, this would be a different example. But if a person is now diverting five acre -- feet per acre and he figured out he only needs three, those two acre feet are really part of his water right there. He can't sell them to somebody else and put it on new ground, because that's expanding the number of acres being irrigated with that same use of water.

And that's one of the laws that -- it sounds easy to change, but it really isn't. That's sort of a guaranty about how things work in the system.

Page 54

But it's one that should be looked at and will be

public hearings, and we held information hearings and all the rest. That's because the Board still

3 is responsible for forming the policy with the

State. Legislature now can review and change the

5 Water Plan. The Board even -- feels even more 6 strongly that they need public input to the Water

Plan. So it's less likely that the legislature

8 will change the plan.

> But if they adopt the 39/56 and the agreement's not going anyplace, I feel fairly confident the legislature would change that back to 33. And, in fact, the Board themselves could change it back, but it would be faster if the legislature would do it. They do it in one day. The Board would probably hold some more public hearings.

16 17 THE CHAIRMAN: Thank you, Frank. 18 UNIDENTIFIED VOICE: Mr. Chairman?

19

THE CHAIRMAN: Yes, sir. UNIDENTIFIED VOICE: There's a lot said about everybody giving all they can and that. But there's nothing said about beneficial use and the proof of beneficial use and the efficient user. I wonder why that's not been addressed.

UNIDENTIFIED VOICE: I think I'll try that

looked at. We're always caught, at the

3 Department, at least, between how you encourage

4 more efficient use of water if there's no profit 5 or return to the end user farm.

We see all these sudden pivots going in, and we know they're energy efficient, they're water efficient. The reason they're going in is because they're labor efficient, not water efficient or energy efficient.

And I think the agreement and these changes in the Water Plan which reflect the agreement were specific to a problem at Swan Falls. And the intent was to resolve as many problems in the whole basin as it could. They don't pretend to solve the problem the Board's been worrying about for two years on how do you manage the groundwater resources in the state most effectively. They don't solve the barriers to efficient use of water. It does answer, at least, about the stored water issue.

THE CHAIRMAN: Go ahead.

23 UNIDENTIFIED VOICE: I had concern too about 24 a lot of generators that are going in at Beature Dam (phonetic). They can be more efficient. And

does that need licensing based on kilowatts -- the water generates so many kilowatts? Or can they expand their kilowatts and -- by their efficiency?

UNIDENTHIED VOICE: I think you've got a two-pronged question here. And I'll try and answer it. And maybe the director can scream at me if I don't satisfy you.

In terms of generating power with existing water, you're going to a nonconsumptive use of water. If a ditch company, an irrigation district, whatever, were to run that water through the generator rather than putting it on the lands. that is not what their original water right was for. And they'd be jeopardizing that water right by not putting it on the ground (unintelligible) use (unintelligible).

UNIDENTIFIED VOICE: And if I become more 17 efficient on my water right and utilize the whole right for a year, they could say, well, you can't prove the beneficial use of that water, and you don't need it anymore.

UNIDENTIFIED VOICE: That, unfortunately, is 22 100 percent correct.

24 UNIDENTIFIED VOICE: And that's existing 25 water. That doesn't have anything to do with

1 stand on that?

UNIDENTIFIED VOICE: It's true that particularly the Payette is the example. And it's frequently slighted when there was some 9,000 water rights. It was down to 10 or 11 court cases, and adjudication work will be finished.

Why should they be asked to help pay for it? Let's start out with why is the adjudication at this time going to start at Lewiston? To bring in federal government to participate in the State adjudication in the State courts, you have to do a system adjudication. Negotiators and lawyers over the State feel there's no question that if you start at Lewiston and include the Clear Water and Salmon Rivers, you're doing a systems adjudication.

I think the hope would be that we can negotiate with the federal government and Indian tribes, and perhaps start the adjudication at Swan Falls, a more realistic point in terms of the water rights controversy from the south. If that were to happen, Payette people would be out of the picture.

Why should they pay if they're included? Historically, adjudications have been done at the

Page 58

Page 60

Page 59

this, but --

UNIDENTIFIED VOICE: But if I wanted to get out from that, the Water Board here in this area, they protect the inefficient user and he's running water off adjacent land. And they're not doing anything about that. And they say, well, you become efficient. And all that money you spent to get efficient, we'll reward you with a bale of hay.

UNIDENTIFIED VOICE: And that's true. What 10 Brian said was existing State law may not be the best there is in the world. But the Swan Falls agreement can't address that. It's not intended to address that. And I think that's something we need as a State to look at in the future is what we're going to do with their water rights. You can't solve it with the Swan Falls agreement.

THE CHAIRMAN: Yes, sir.

UNIDENTIFIED VOICE: I understand there's something in the river basin, tributaries to the Snake River in western Idaho where they have already recently adjudicated their water. These people are objecting to having to help pay for

adjudication all over again. Where do we stand on that? Where do they general expense of the State. The Payette adjudication was paid with the general funds money. The water users in that area contributed no money towards adjudication, per se.

This Swan Falls agreement, the Snake River Basin adjudication is so large and so complicated, that it shouldn't be paid out of State general funds unless we stretched it out over 40 or 50 years instead of the 10 directly (unintelligible) optimistically estimated.

They're going to get the benefit of the adjudication. They're going to be incorporated into the whole basin-wide picture. Their rights are going to be quantified along with everyone else in the basin. In terms of what they would have to do except help support the adjudication in their part of the state, they won't have to do anything. That Court decree will be incorporated into the new Court decree. They got a free adjudication. They don't want to pay now to help solve a major regional picture of the problem.

UNIDENTIFIED VOICE: And they won't. They won't being paying. Payette, with the (unintelligible) and the two general adjudications (unintelligible). And the statutes that have been

	Page 61		Page 63
1	drafted does not provide for them to pay for those	1	UNIDENTIFIED VOICE: It's the general
2	adjudications.	2	adjudications.

Page 65 Page 67 started, that the lands that were presently being 1 quality in that the only kind of places you can 2 2 irrigated will be considered to have the same get big volumes of water down in the ground is 3 3 priority as the original adjudication. We won't basically where you dump (unintelligible) salt. A 4. worry about when they came in. That will, I 4 lot of salt does (unintelligible) filtering and 5 5 think, take care of the question of whether a purifying. The river (unintelligible). 6 6 canal company has a water rights of -- some arc The people down in Oakley are certainly 7 7 1890, and some are 1892, and some are 1896. And looking very hard at artificial recharge. They're 8 8 you got a whole array of priority dates. If the in the fortunate situation -- or unfortunate 9 9 original decree said 1890, we'll look at how much situation they've drawn water levels so down, you 10 10 irrigating's done, and that's what the right would can hardly put the pump in there. 11 11 be. Right or wrong, that's what the law would UNIDENTIFIED VOICE: (Unintelligible) last 12 12 say. spring. 13 THE CHAIRMAN: Joc, did you have a question? 13 UNIDENTIFIED VOICE: They're fortunate in 14 14 JOE; Yeah, I was wondering what ever the sense they have probably pretty good cone and 15 15 happened to that here a few years ago that's depression underneath their property. If they can 16 get it in there, it's not going to get out, 16 talking about recharging the aquifer. I never 17 heard no more about it. Doesn't surprise me. I 17 because they're drawing water in all the richest 18 just heard about it once. 18 parts. So they -- it takes a real unusual set of 19 19 THE CHAIRMAN: Dr. Brockway -circumstances before it becomes economically 20 20 JOE: I was kind of hopes they'd fill it up, attractive. 21 21 so they'd come out and move that bump. THE CHAIRMAN: Mr. Dunn. 22 22 MR. DUNN: I'd like to ask Chuck Brockway DR. BROCKWAY: It's more involved 23 for his comments on the natural or at least 23 (unintelligible) about the technique 24 24 (unintelligible) because he's been working with semi-natural recharge that's occurring on 25 25 those people. In fact, that spring, the first Egin Bench (phonetic), and what he thinks the Page 66 Page 68 pilot test was done out in the Jerome area there. 1 effect would be on the State plan if that were 1 2 And data was collected on how fast water would gd 2 halted, in other words, if that converts to 3 into the ground, where it wanted to travel to. 3 sprinkler irrigation as opposed to precedent. 4 THE CHAIRMAN: Dr. Brockway? 4 Some water quality data was going because there 5 DR. BROCKWAY: Well, the Egin Bench. 5 are lots of barriers that seem to be 6 6 (unintelligible) to this kind of operation. But (Whereupon, Tape 2 concludes.) 7 7 we anticipate water will be going in the ground 8 8 out there next year. But -- this year, now, I'm sorry. We're in '85. This year again. 9 9 10 10 In terms of why we see more artificial 11 recharge in the State and in some parts 11 12 12 (unintelligible), you have to realize that once 13 13 that water goes in the ground, the person who's 14 14 putting it there loses control over it. You can spend a lot of money putting water in the ground 15 15 and not get any of it back, except from local 16 16 17 reduction (unintelligible) perhaps. 17 18 19 Now, a project that's been going on is 19 funded to a large degree by the trout farm 19 20 20 industry. And they're concerned about the water that comes out of Fountain Springs. They know 21 21 22 22 that water gots in the ground, at least no less is 23 23 going to come out (unintelligible). So they are 24 24 willing to support in that sense. 25 There's some real barriers in terms of water 25
