

Model Calibration Update

December 2020

Stephen Hundt

Overview

The modeling process

After Reilly (2001) TWRI 3,B8

Our Parameters

Parameters: Introduction

$$q = K \frac{\Delta H}{L}$$

Model Parameters

Hydraulic Parameters
(~material properties)

Lumped Hydraulic(ish)
Parameters
(~material properties &
geometry)

Irrigation System Parameters:
Leakage and infiltration
estimation

| Parameter | Spatial Scale | # Parameters | |
|-------------------------------------|-------------------------------------|--------------|------------------|
| | | initial | expandable |
| Hydraulic Conductivity – horizontal | Grid: 1 every 5-10 cells * # layers | ~50 | easily to 400+ |
| Hydraulic Conductivity – vertical | Grid: 1 every 5-10 cells * # layers | ~50 | easily to 400+ |
| Storage Coefficient | Grid: 1 every 5-10 cells * # layers | ~50 | easily to 400+ |
| River conductance | Gaged river reaches | 2 | to gaged reaches |
| Drain conductance | Gaged drain -- | ~5 | 18 |
| Lowell conductance | Lake | 1 | - |
| NY Canal conductance | Canal | 1 | - |
| NY Canal leakage factor | Canal | 1 | - |
| Canal leakage factor | Irrigation entity | 1 | 70 |
| Canal leakage distribution factor | Irrigation entity | 1 | 70 |
| Irrigated lands infiltration factor | Irrigation entity | 1 | 70 |
| Semi-irrigated infiltration factor | Irrigation entity | 1 | 70 |
| Tributary underflow multiplier | 3 values | 3 | |
| ET multiplier | 1 value | 1 | - |

River Conductance

Parameter that alters
head-dependent flux
boundary

Alters flux into and out
of model

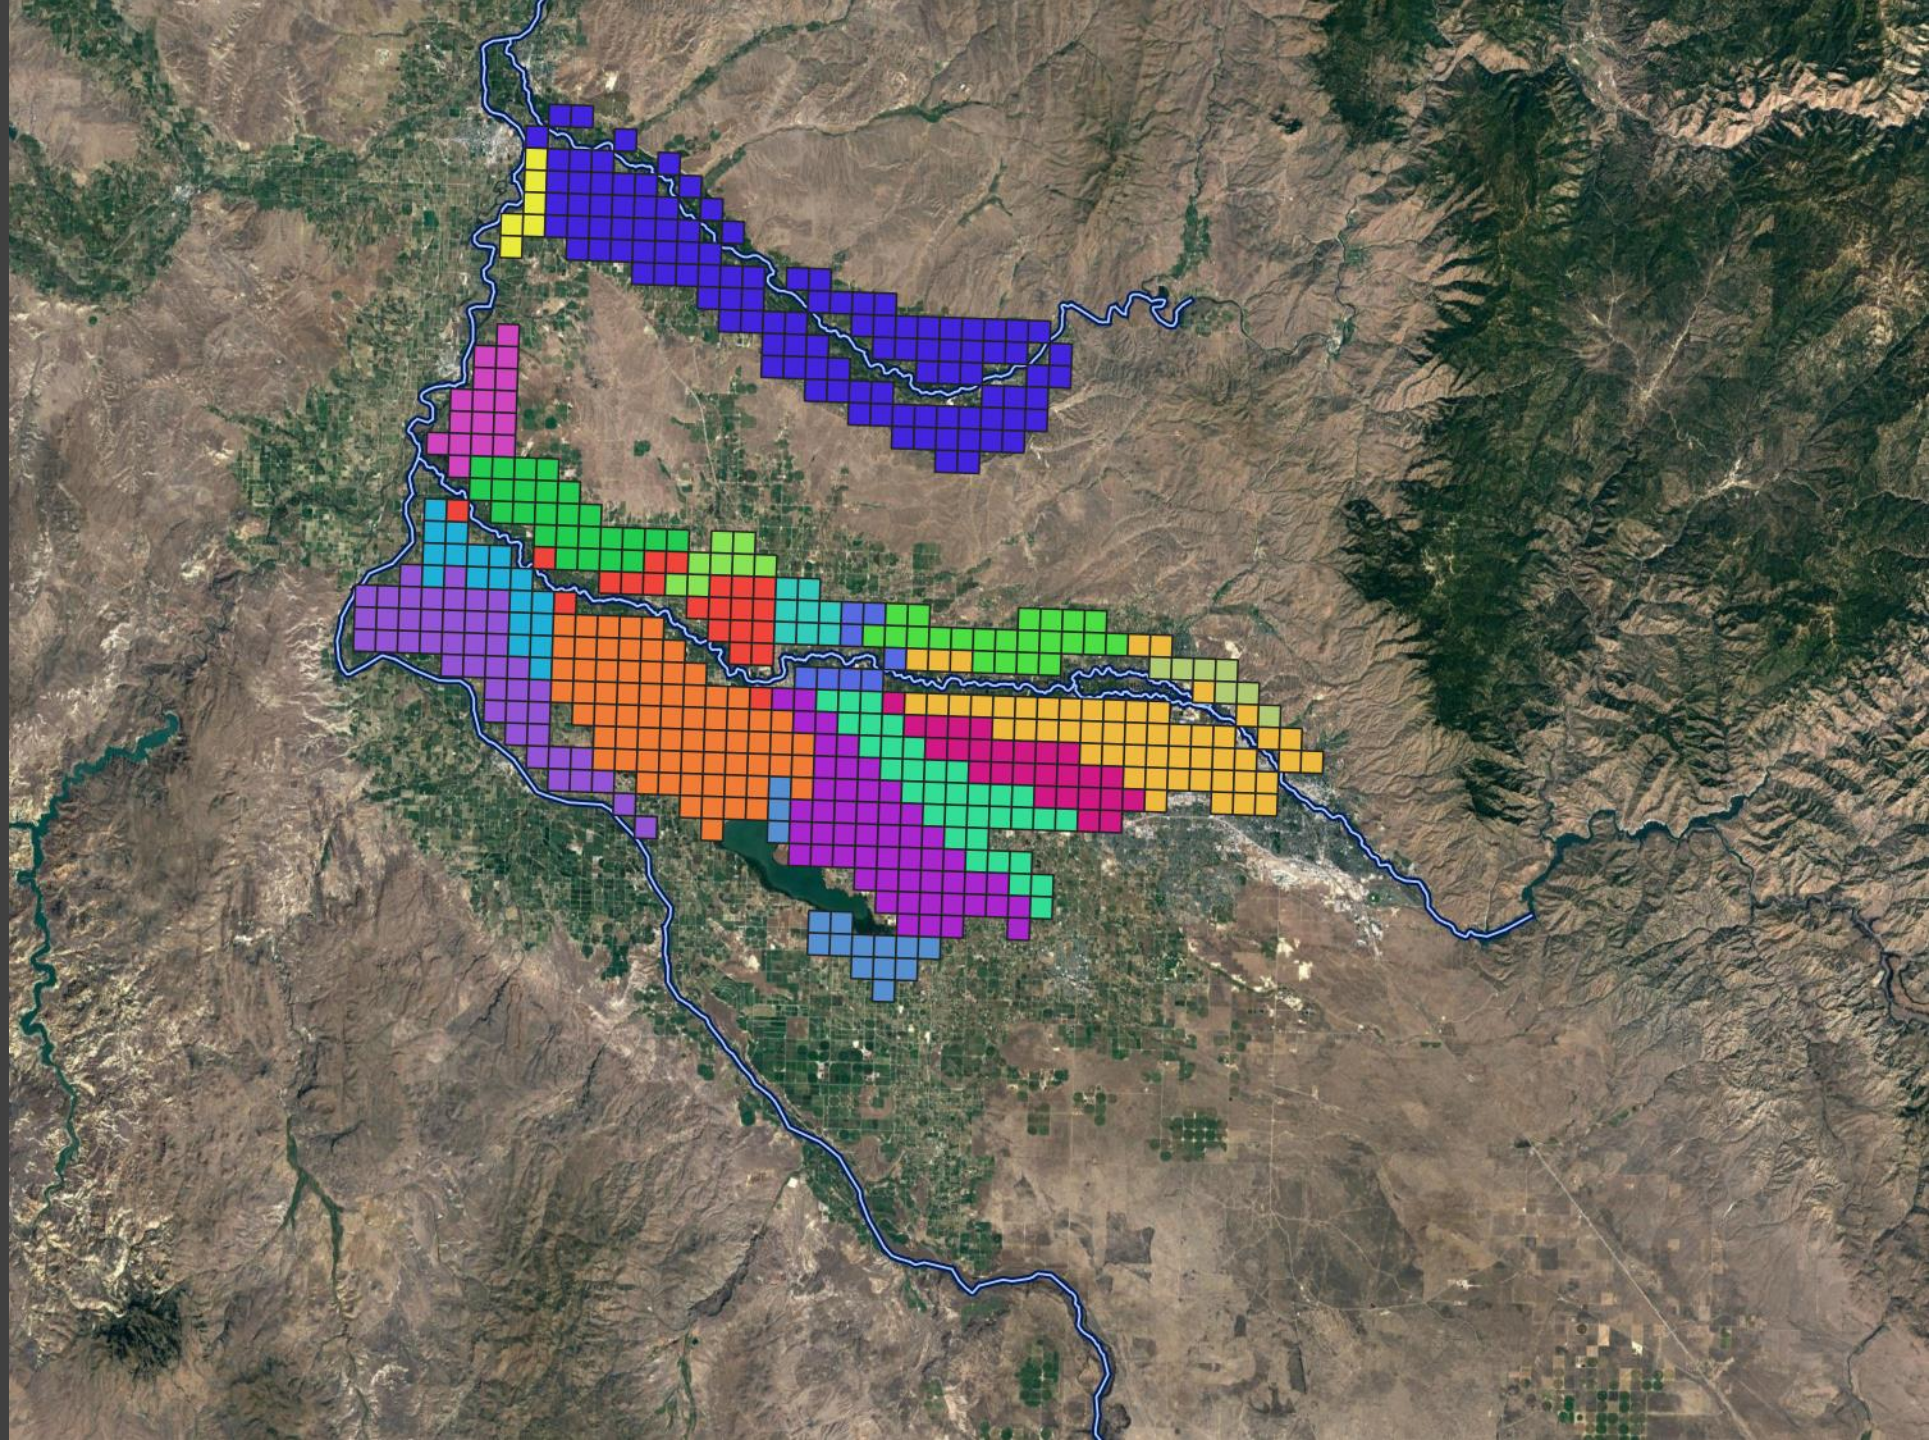

Drain Conductance

Parameter that alters
head-dependent flux
boundary

Alters flux out of model

Lake Conductance

Parameter that alters head-dependent flux boundary

Alters flux into and out of model

Lower NY Canal Conductance

Parameter that alters head-dependent flux boundary

Alters flux into and out of model

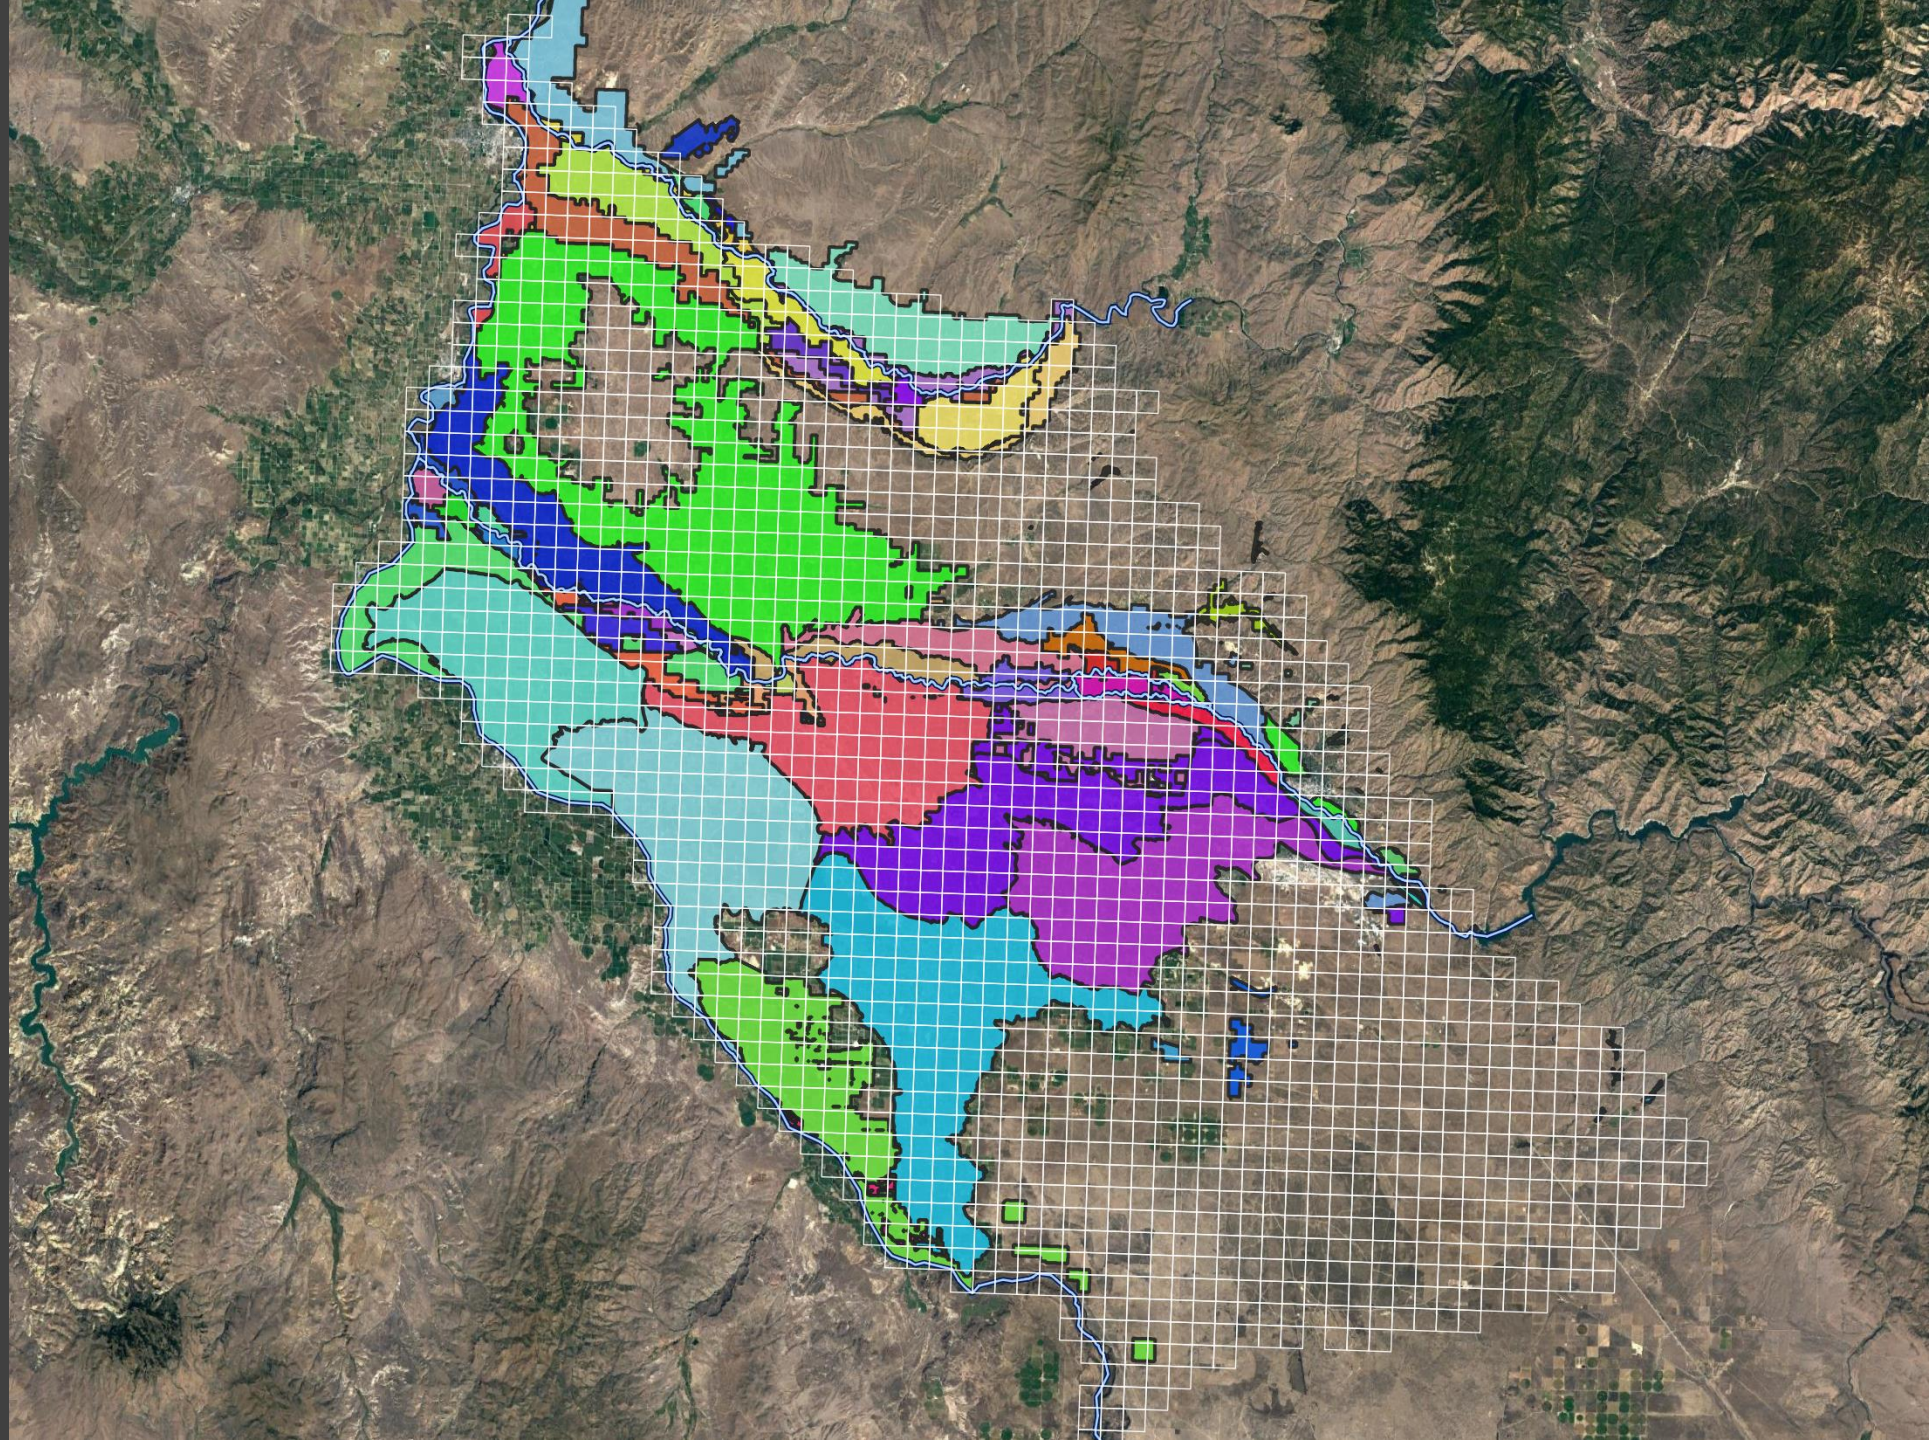

Upper NY Canal Leakage Factor

Alters specified flux into model

Irrigation Demand and Supply Parameters

Alters specified flux into and out of model

Tributary Underflow Factors

Alters specified flux into model

Hydraulic Parameters

Pilot Points

- Continuous variation in parameter values
- Limited # of adjustable parameters
- Geostatistical interpolation between adjustable 'pilot-point' parameters

Calibration Review: Why?

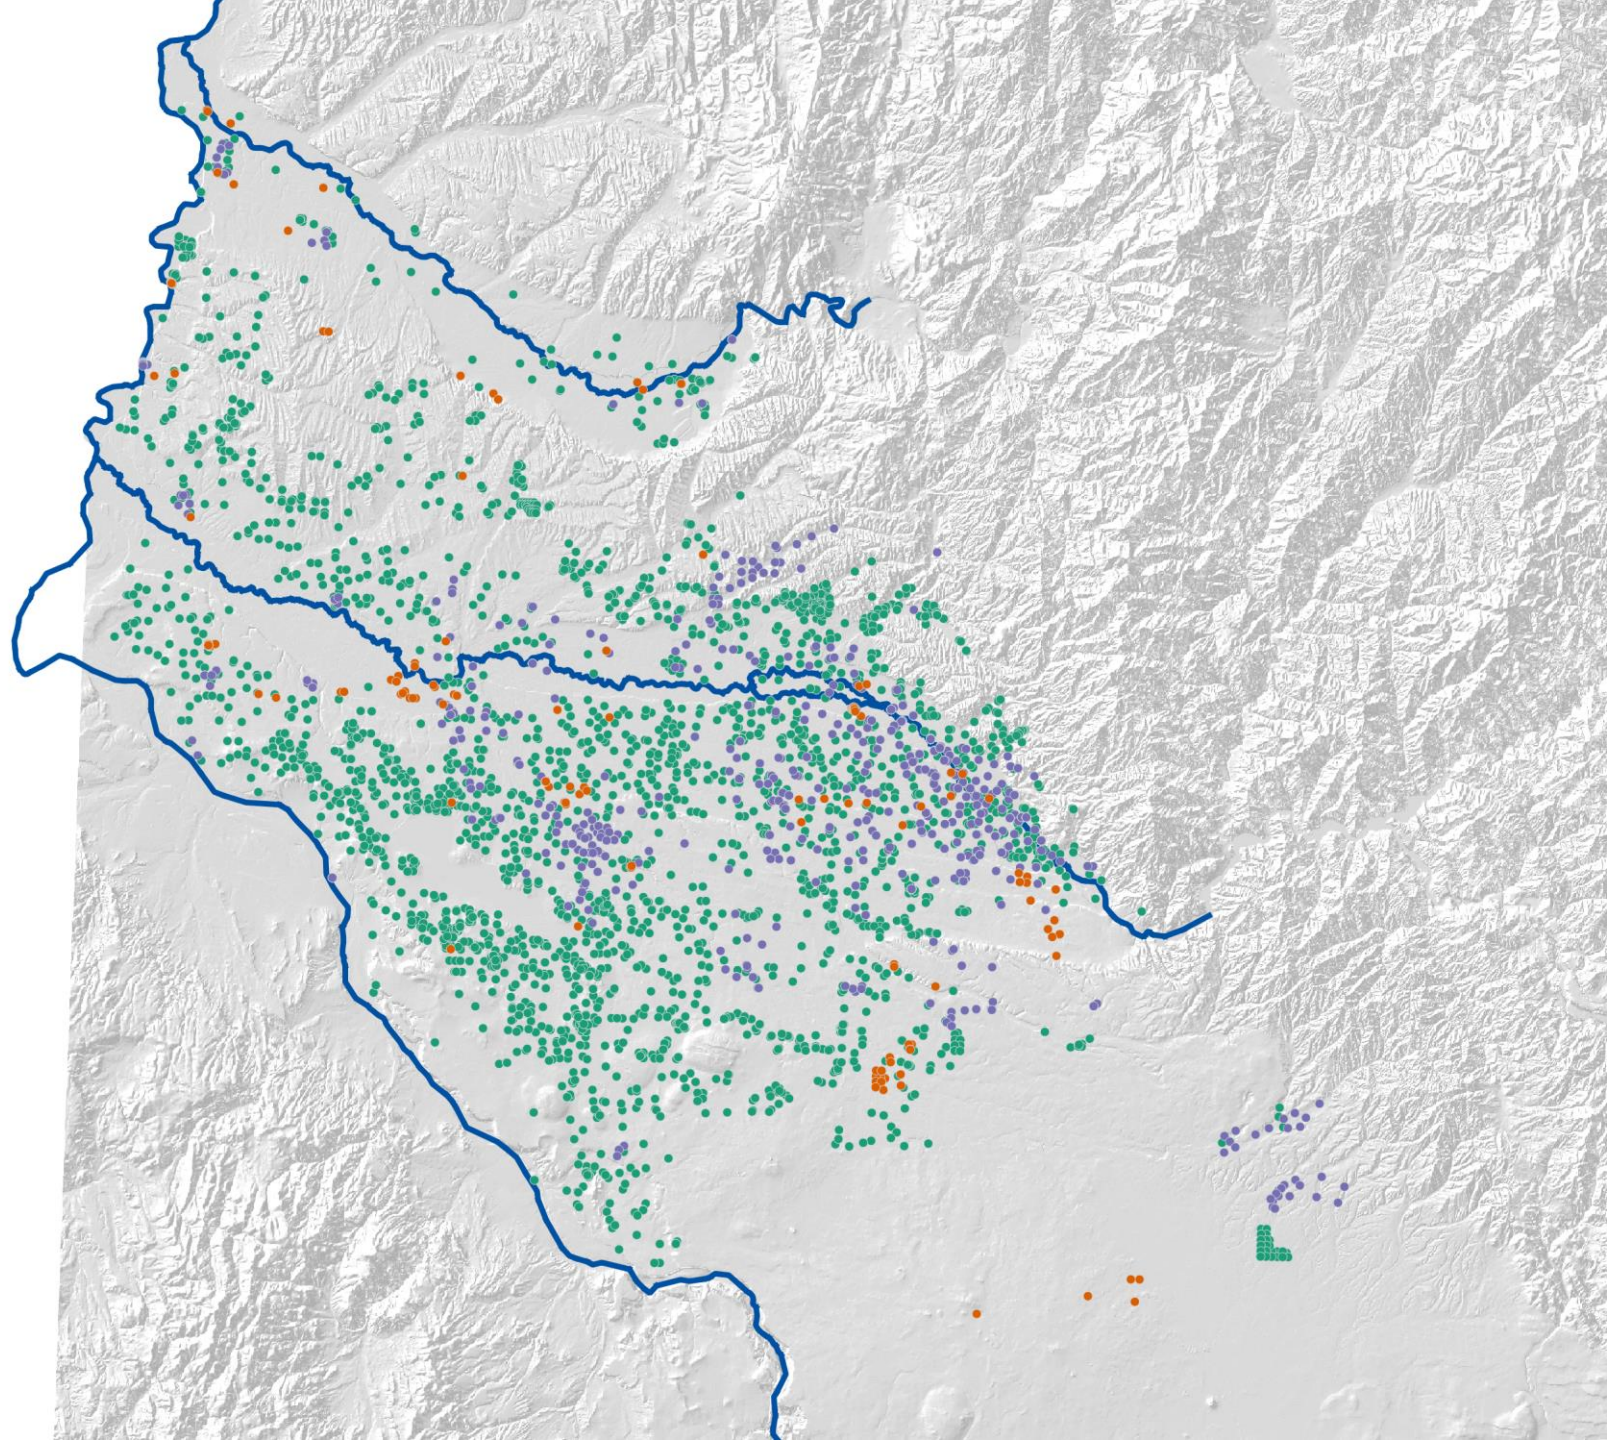

Unknown Material Properties

13. LITHOLOGIC LOG: (Describe repairs or abandonment) Water

| Bore Dia. | From | To | Remarks: Lithology, Water Quality & Temperature | Water | |
|-----------|------|------|---|-------|---|
| | | | | Y | N |
| 18" | 0' | 2' | brown top soil | | X |
| 18" | 2' | 4' | brown clay | | X |
| 18" | 4' | 27' | brown gravel | | X |
| 18" | 27' | 46' | brown clay | | X |
| 18" | 46' | 54' | brown sand & gravel | X | |
| 18" | 54' | 61' | brown clay | | X |
| 18" | 61' | 89' | brown sand & gravel | X | |
| 18" | 89' | 91' | brown sandy clay | | X |
| 18" | 91' | 98' | brown sand & gravel | X | |
| 18" | 98' | 108' | brown sand fine | X | |
| 18" | 108' | 114' | brown sand & clay strips | X | |
| 18" | 114' | 127' | brown sand fine | X | |
| 18" | 127' | 130' | brown clay | | X |
| 18" | 130' | 143' | brown sand & clay strips | X | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | RECEIVED | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Unknown Boundary Fluxes

Model Structural Error

Model represents a
process 'wrong'

Too simple?

Parameter
compensation of
model error

Parameter Values: 'Soft' Knowledge

Hydrogeologic Framework of the Treasure Valley and Surrounding Area, Idaho and Oregon

J.R. Bartolino, USGS, Idaho Water Science Center

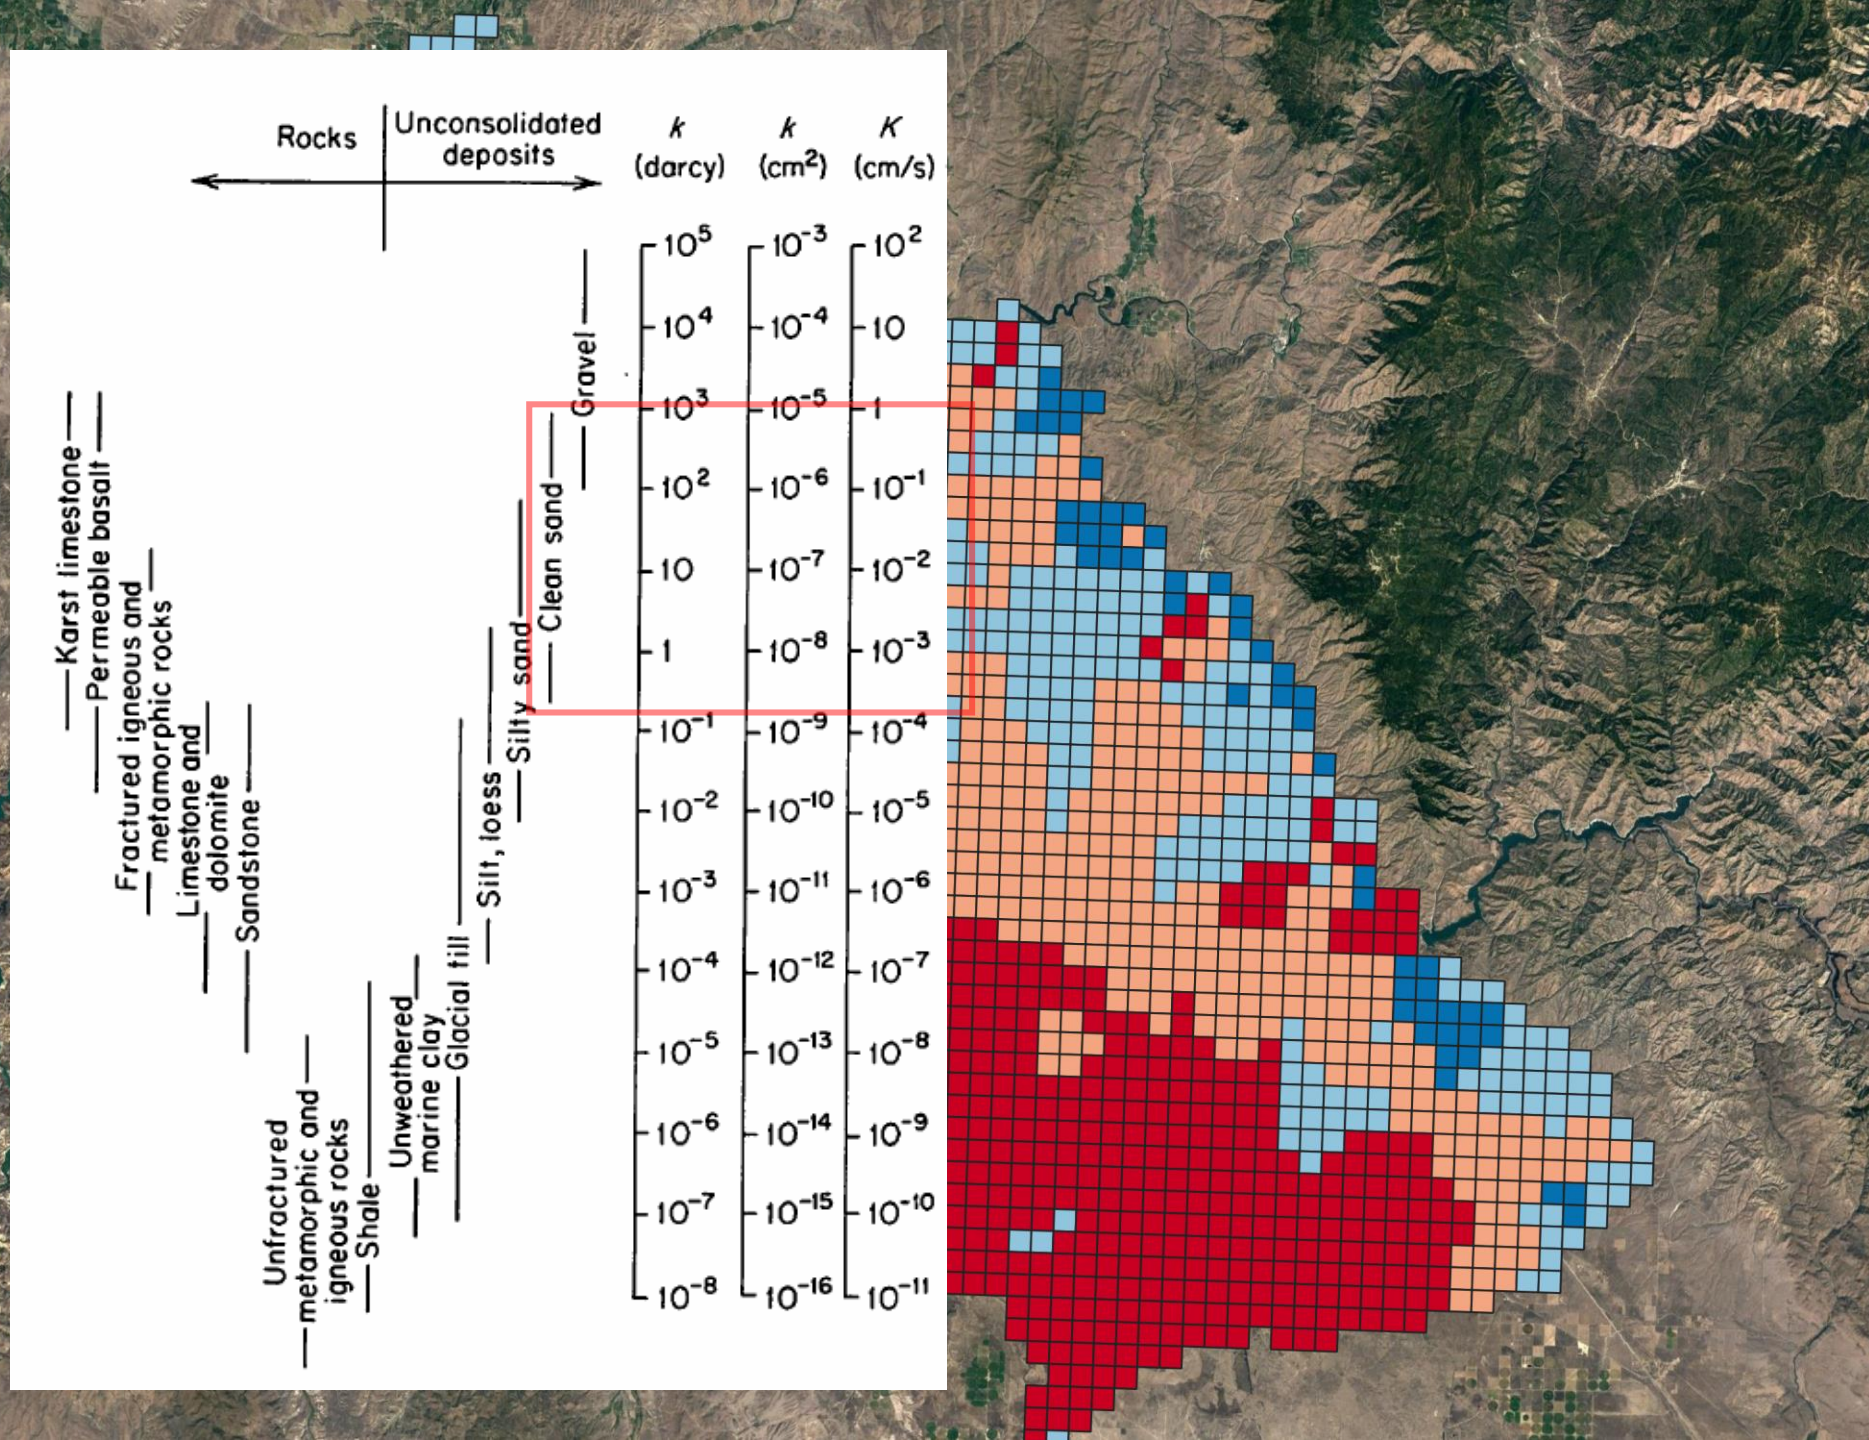

Lithology Mapped to Grid: Layer 1

Hydrogeologic unit

-  BAS: Basalt, undifferentiated: includes Pliocene-Pleistocene and Miocene basalts
-  CGF: Coarse-grained fluvial and alluvial deposits
-  FGL: Fine-grained lacustrine deposits
-  GRB: Granitic and rhyolitic bedrock

DISCLAIMER

The following are not *results!!!*

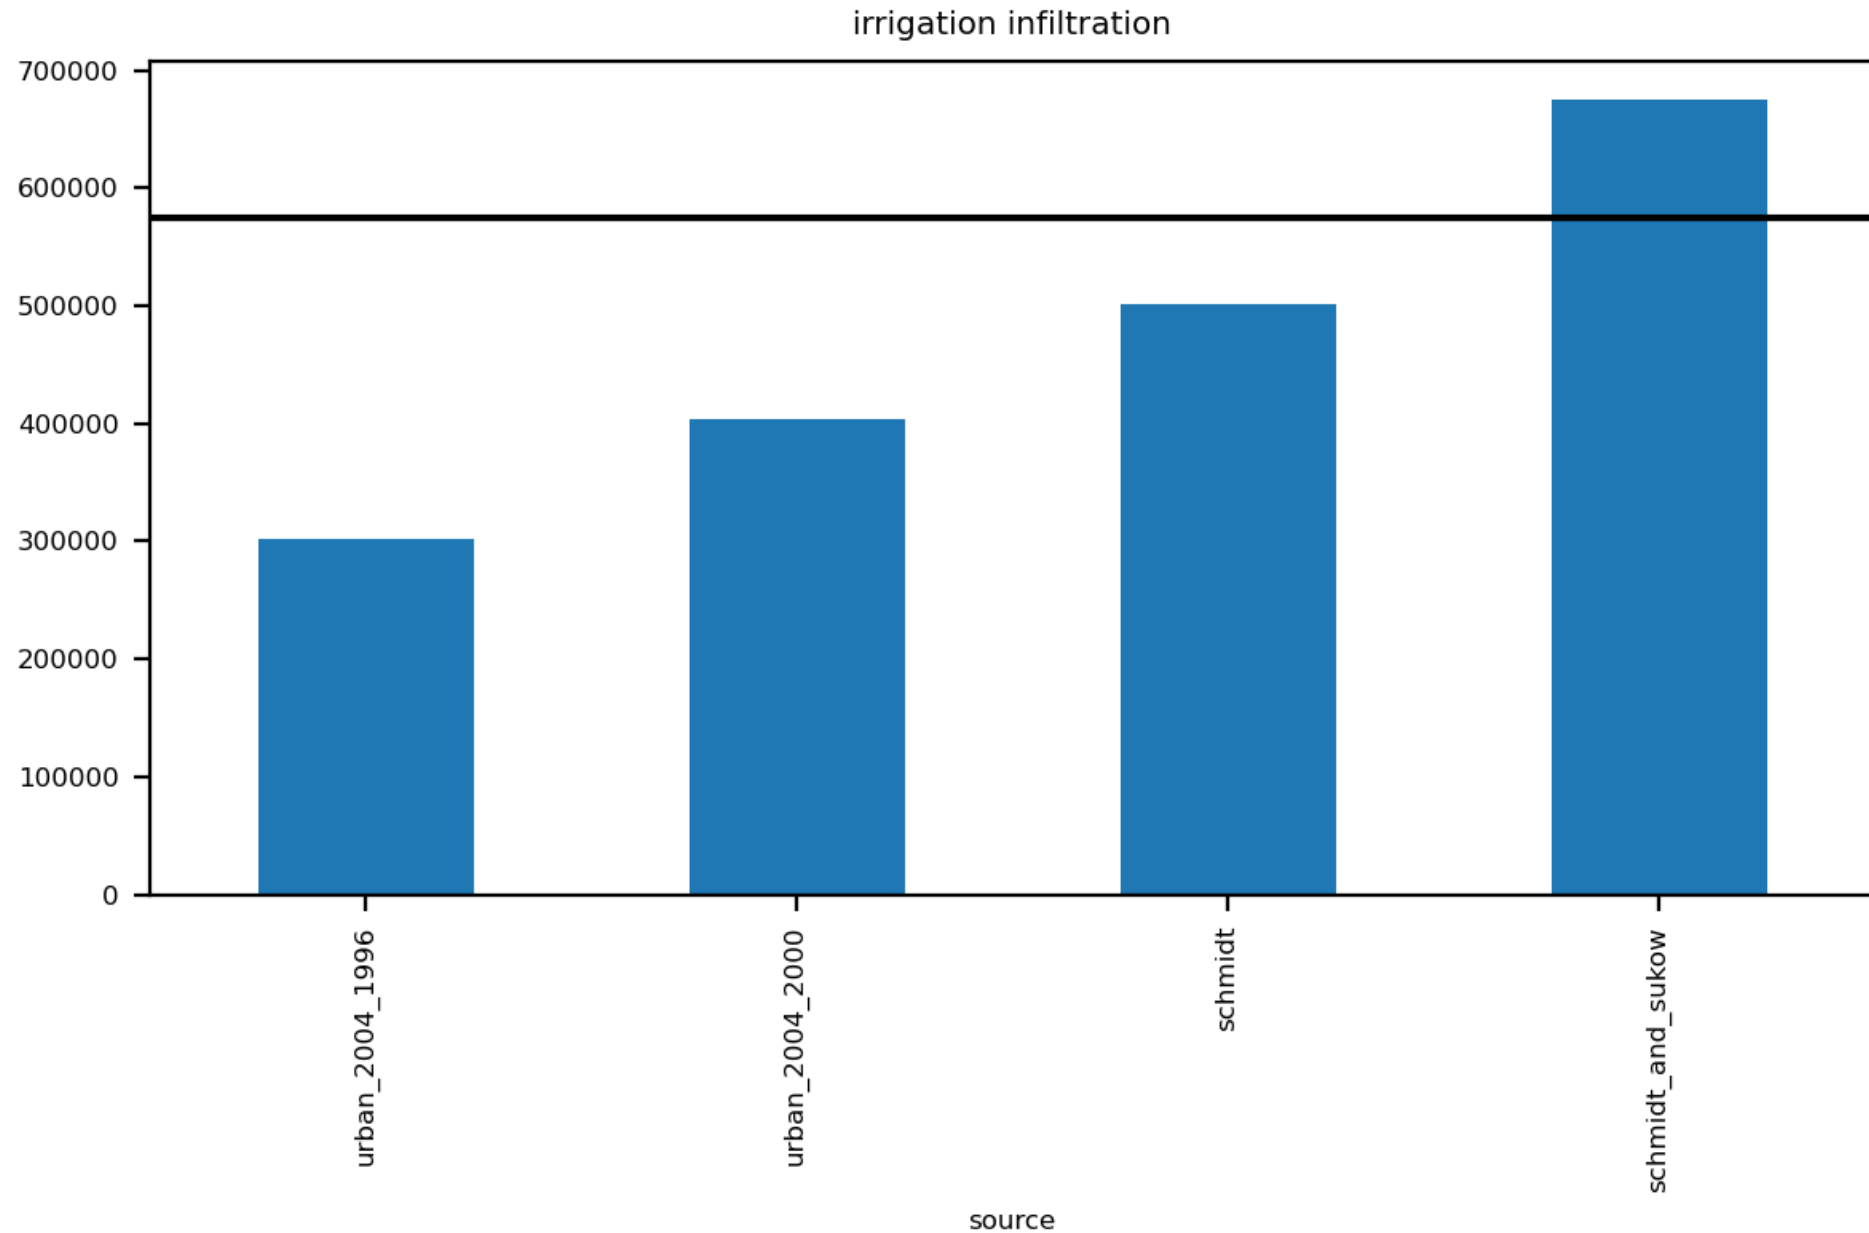

I am showing where the **unfinished** model currently stands, warts and all

Troubleshooting: Pre-Calibration (prior) plots

Parameter Limits

You can look at a bunch of combinations of *plausible* parameter values prior to calibration.

Can reveal where model will have trouble matching observations.

Sometimes called **'prior montecarlo'**
