

Treasure Valley Water Level Maps

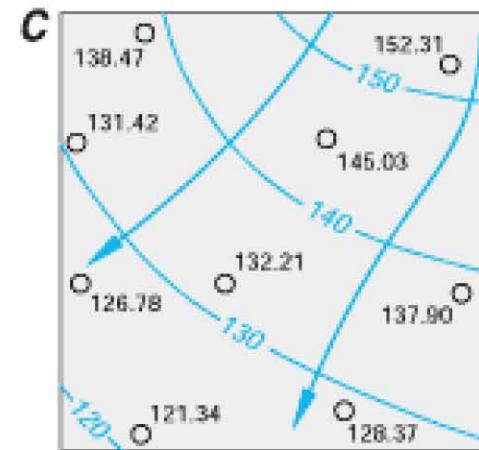

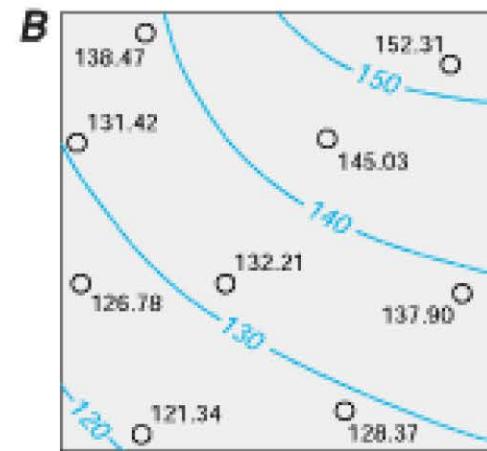

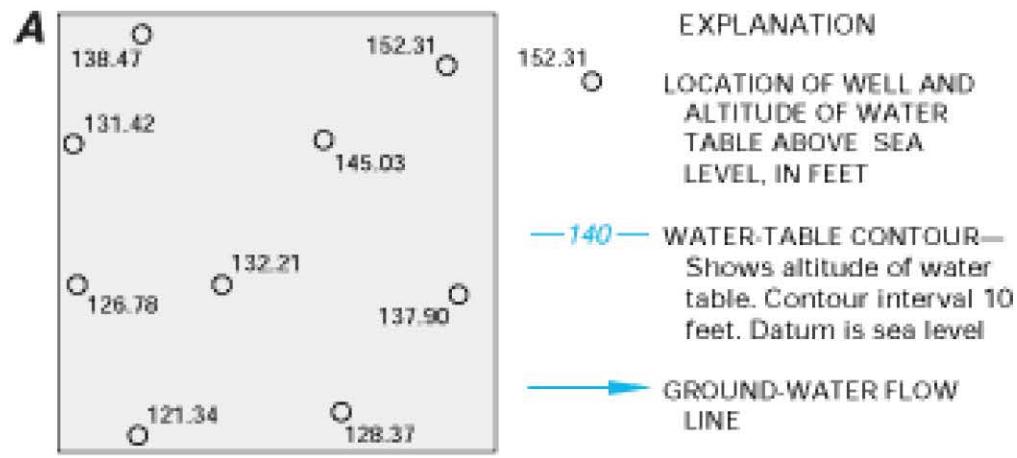

Presented by Alex Moody

TV MTAC Dec. 3rd, 2020

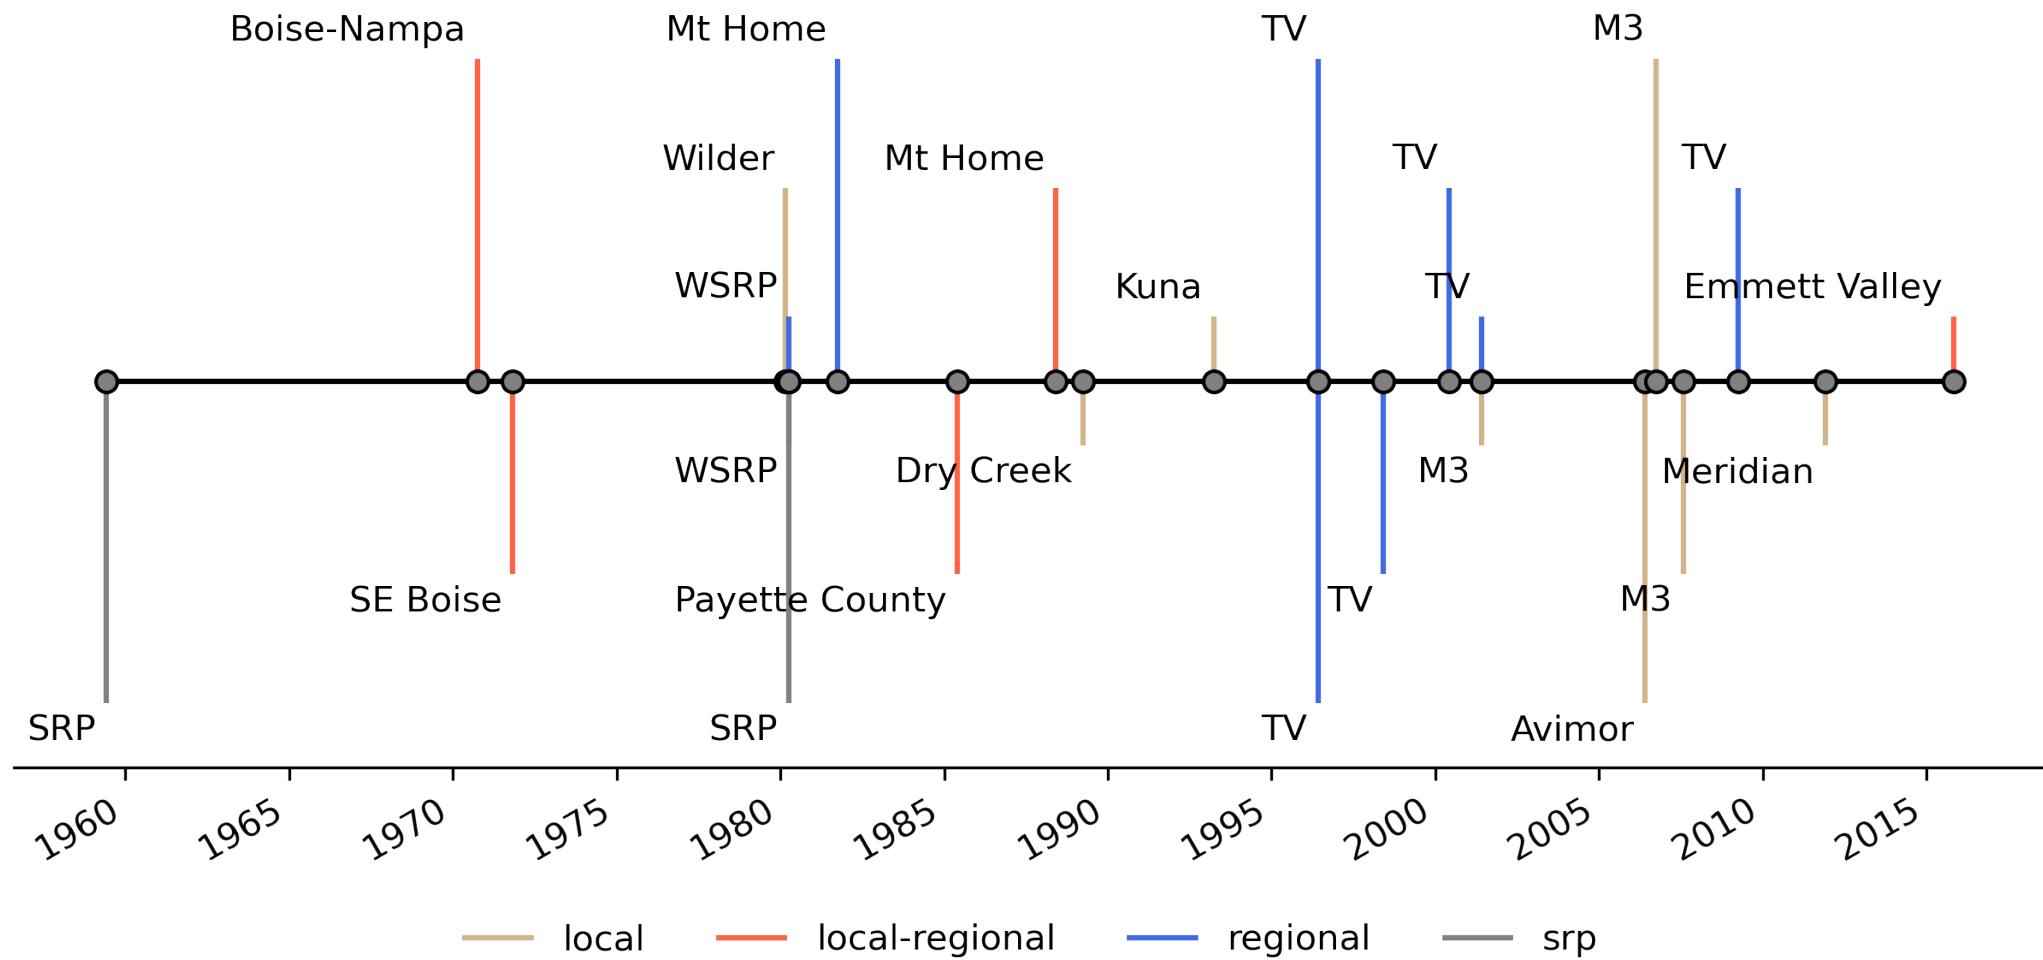

Ground water level mapping

- Approximation of water table/potentiometric surface
 - horizontal ground water flow direction (perpendicular to equipotentials)
 - hydraulic gradient
- Snapshot in time: Must use roughly simultaneous measurements
 - Levels respond to varying discharge/recharge patterns
- Data
 - Water levels, well altitudes
 - Elevations of hydrologically connected surface water features

Timeline of prior contouring work

Dion, 1972

EXPLANATION

— 2480 —

Water-level contour

Shows altitude of the water table
in shallow aquifers, Oct. 1970
Dashed where approximately located

Contour interval 20 feet
Datum is mean sea level

○ Observation well

● 4N-W-35e001

Well with long-term hydrograph
and well number
(see fig. 14)

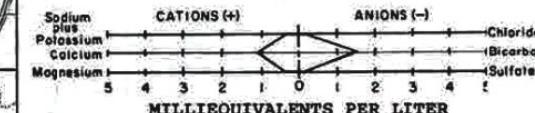

● 4N-E-4bbcl

Well with standard chemical
analysis, Aug. 1970
and well number

— A — A' Line of hydrogeologic section
(see figs. 10, 11 and 12)

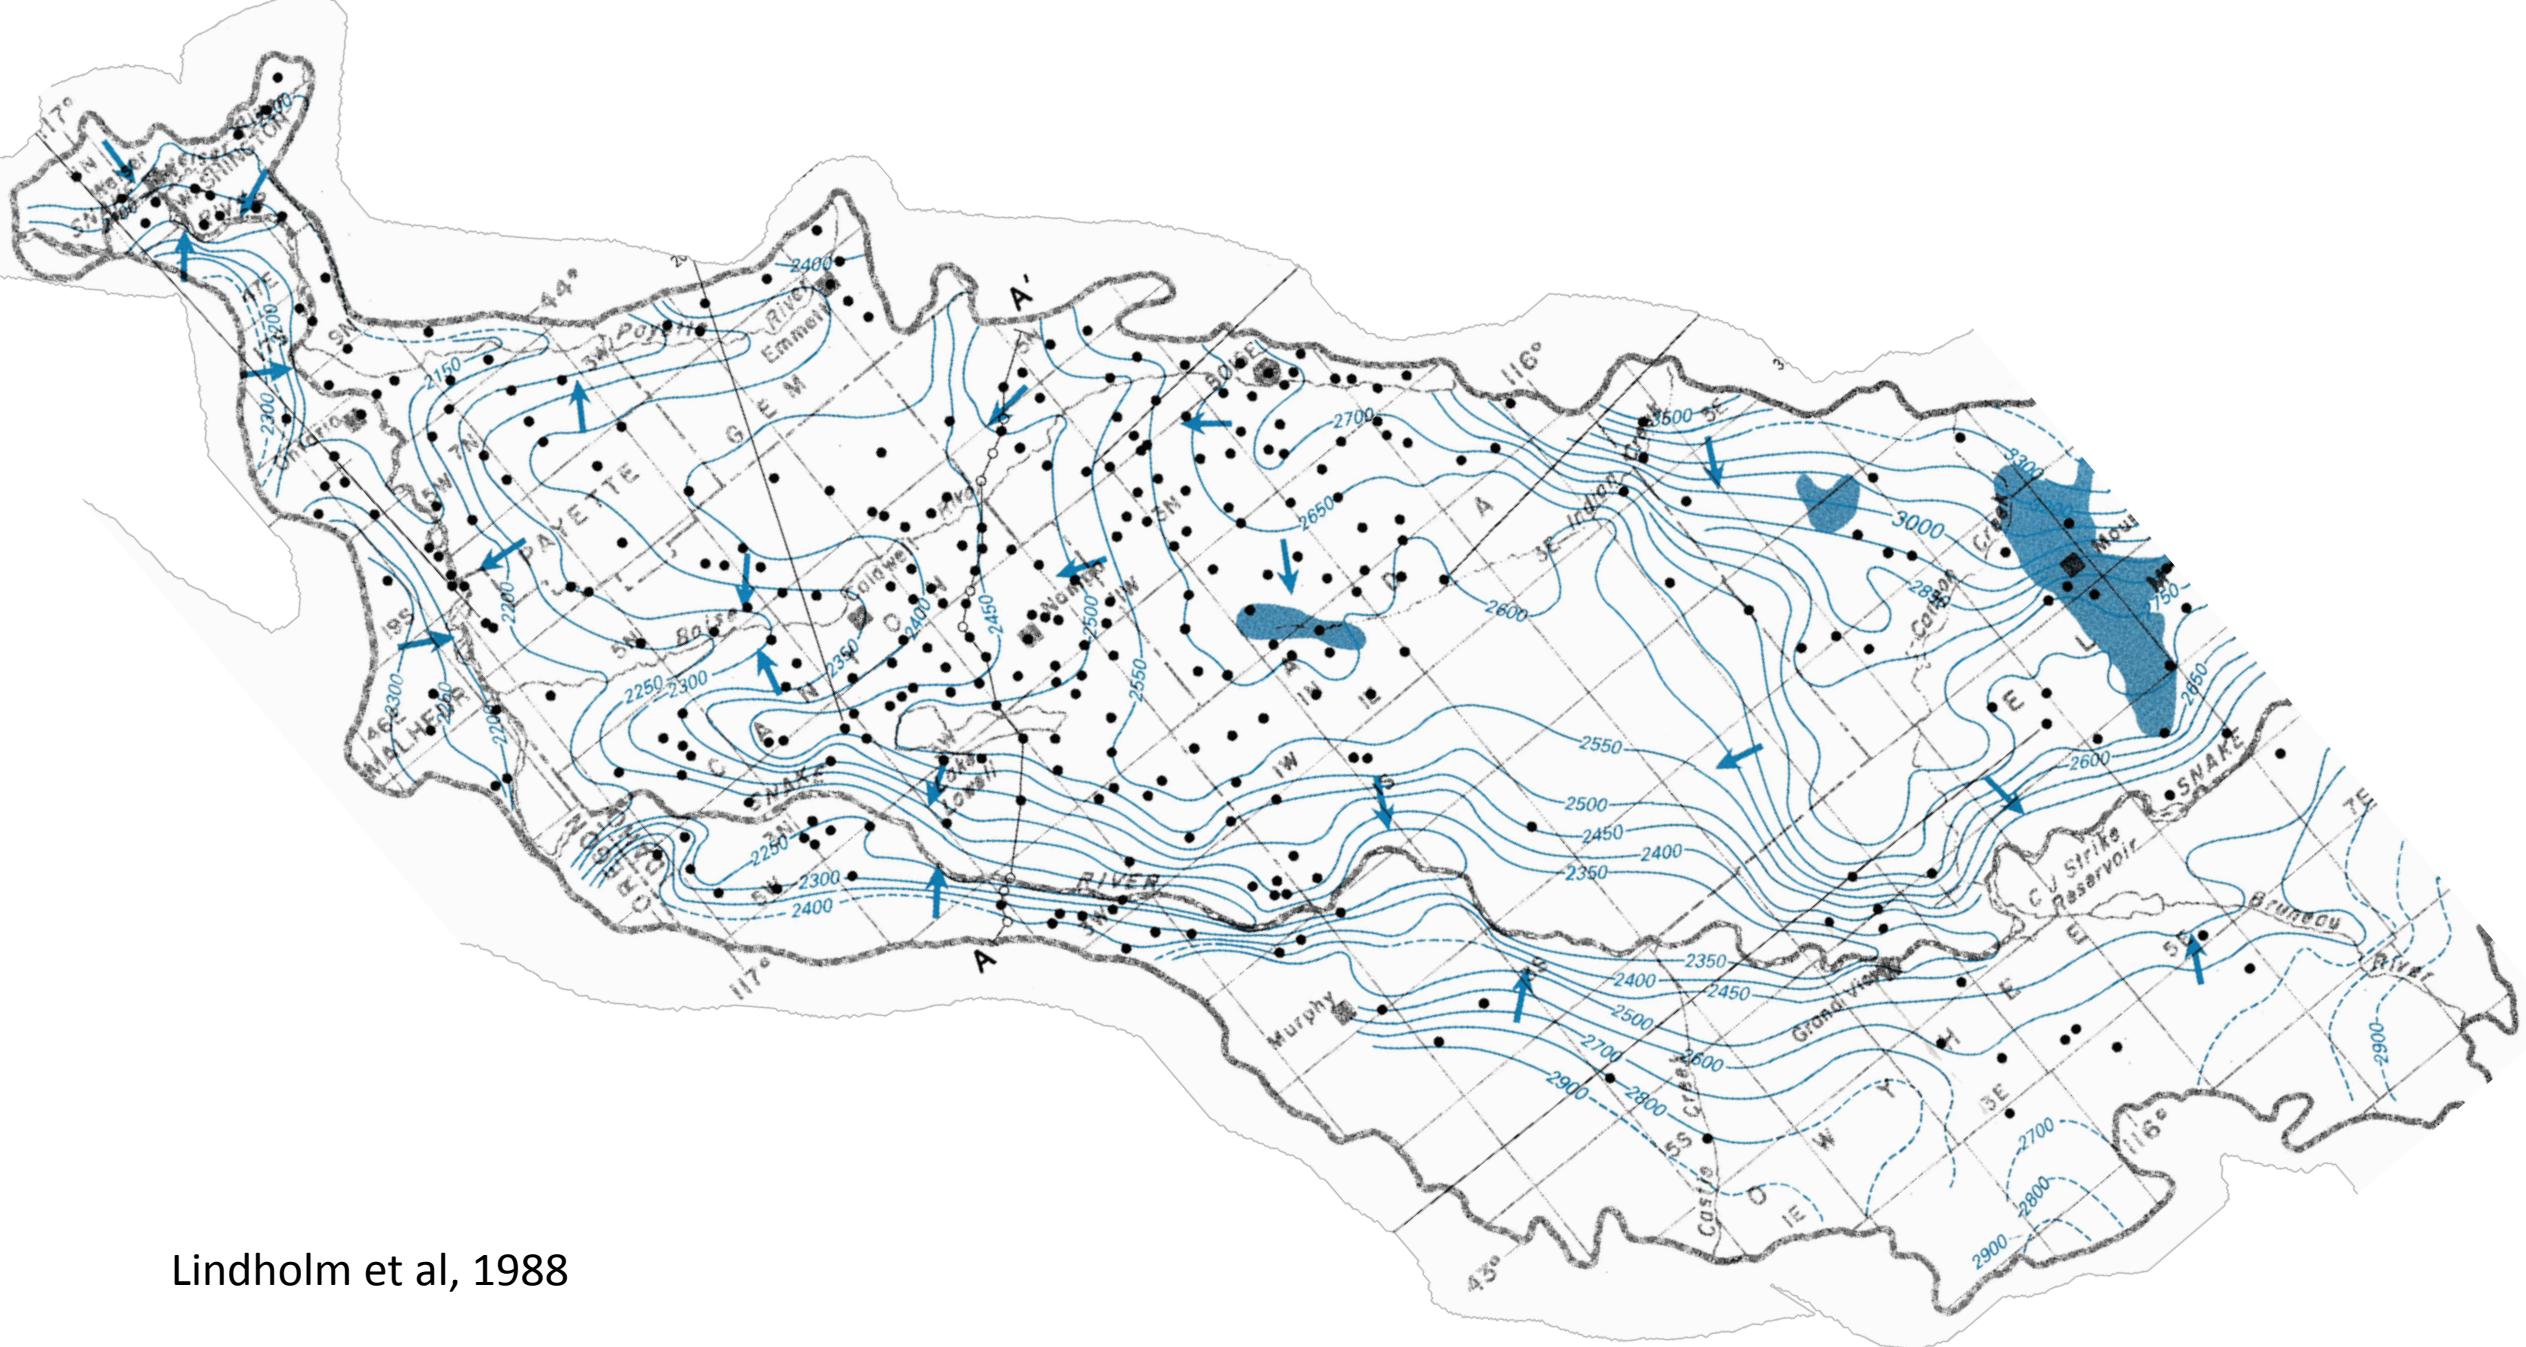

▲ Location of selected discharge
(drain) measurement

PATTERN DIAGRAM

● Deep well used for geologic control only

← Arrow indicates general direction of
ground-water flow

Lindholm et al, 1988

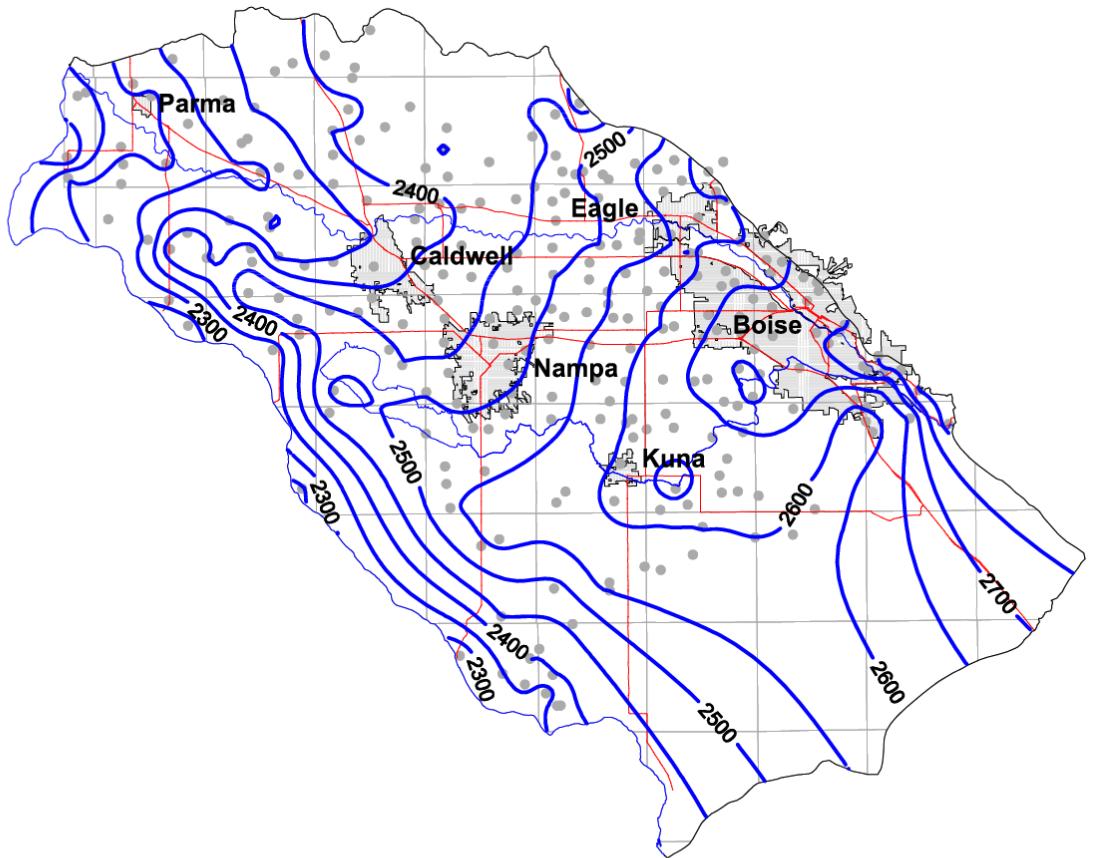

Figure E-7: Spring 1998, shallow zone (259 wells).

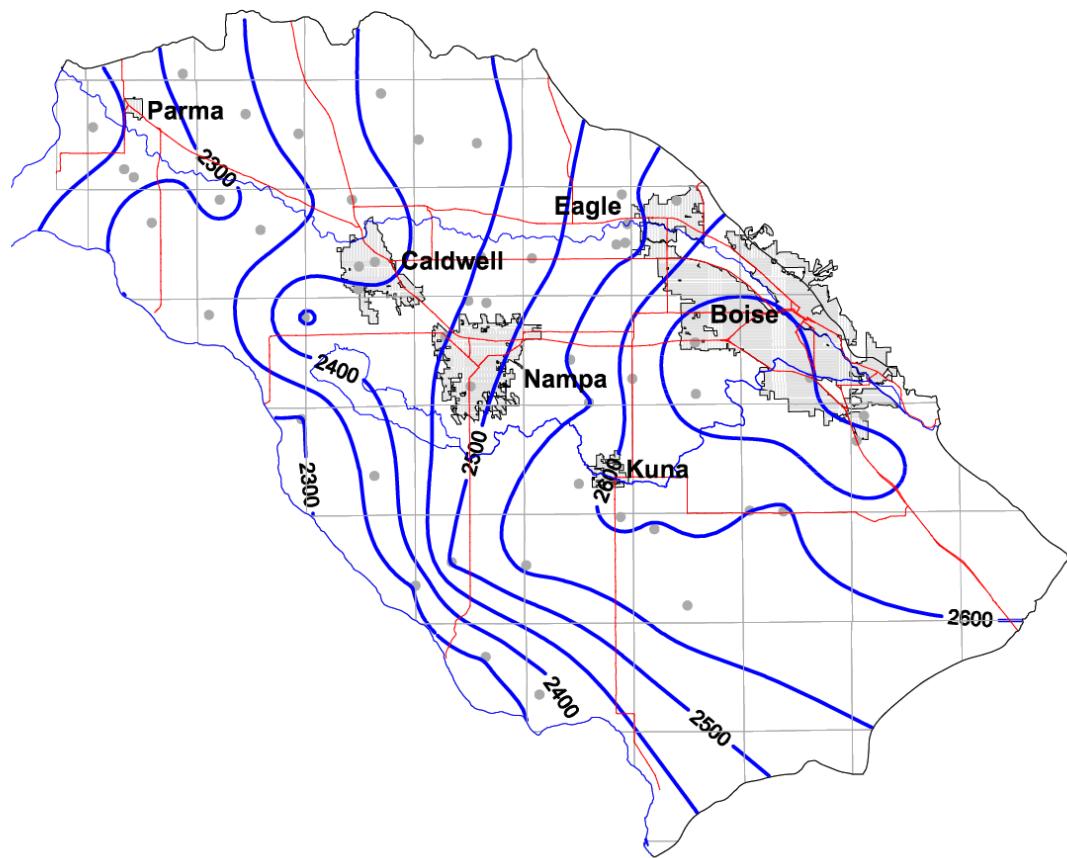

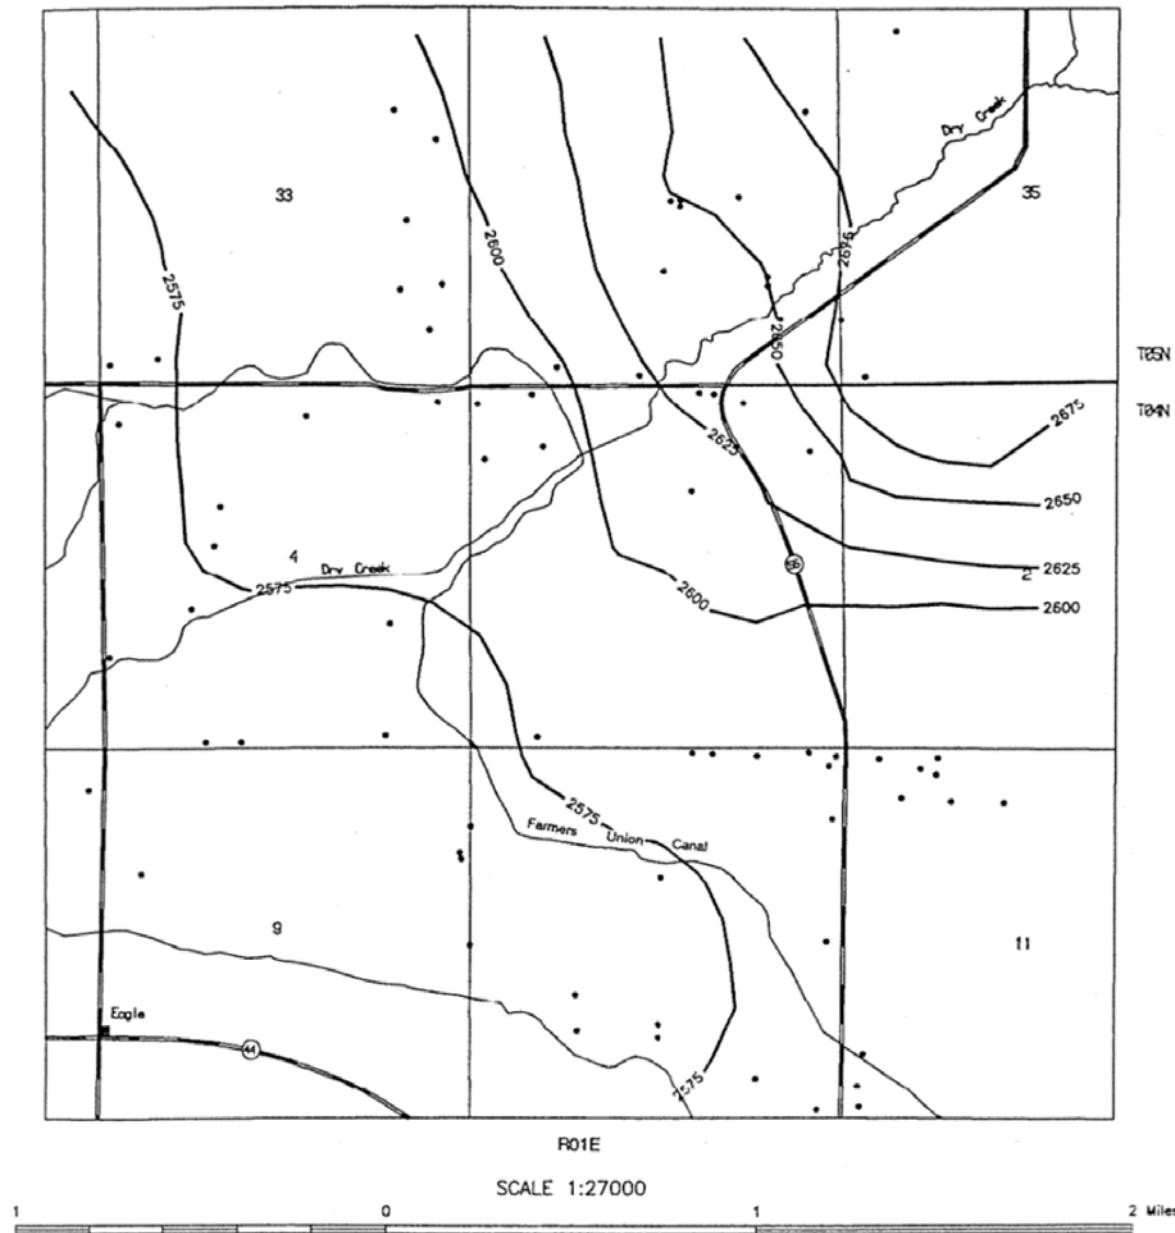

Figure E-8: Spring 1998, intermediate zone (50 wells).

DRY CREEK AREA

Baker, 1991

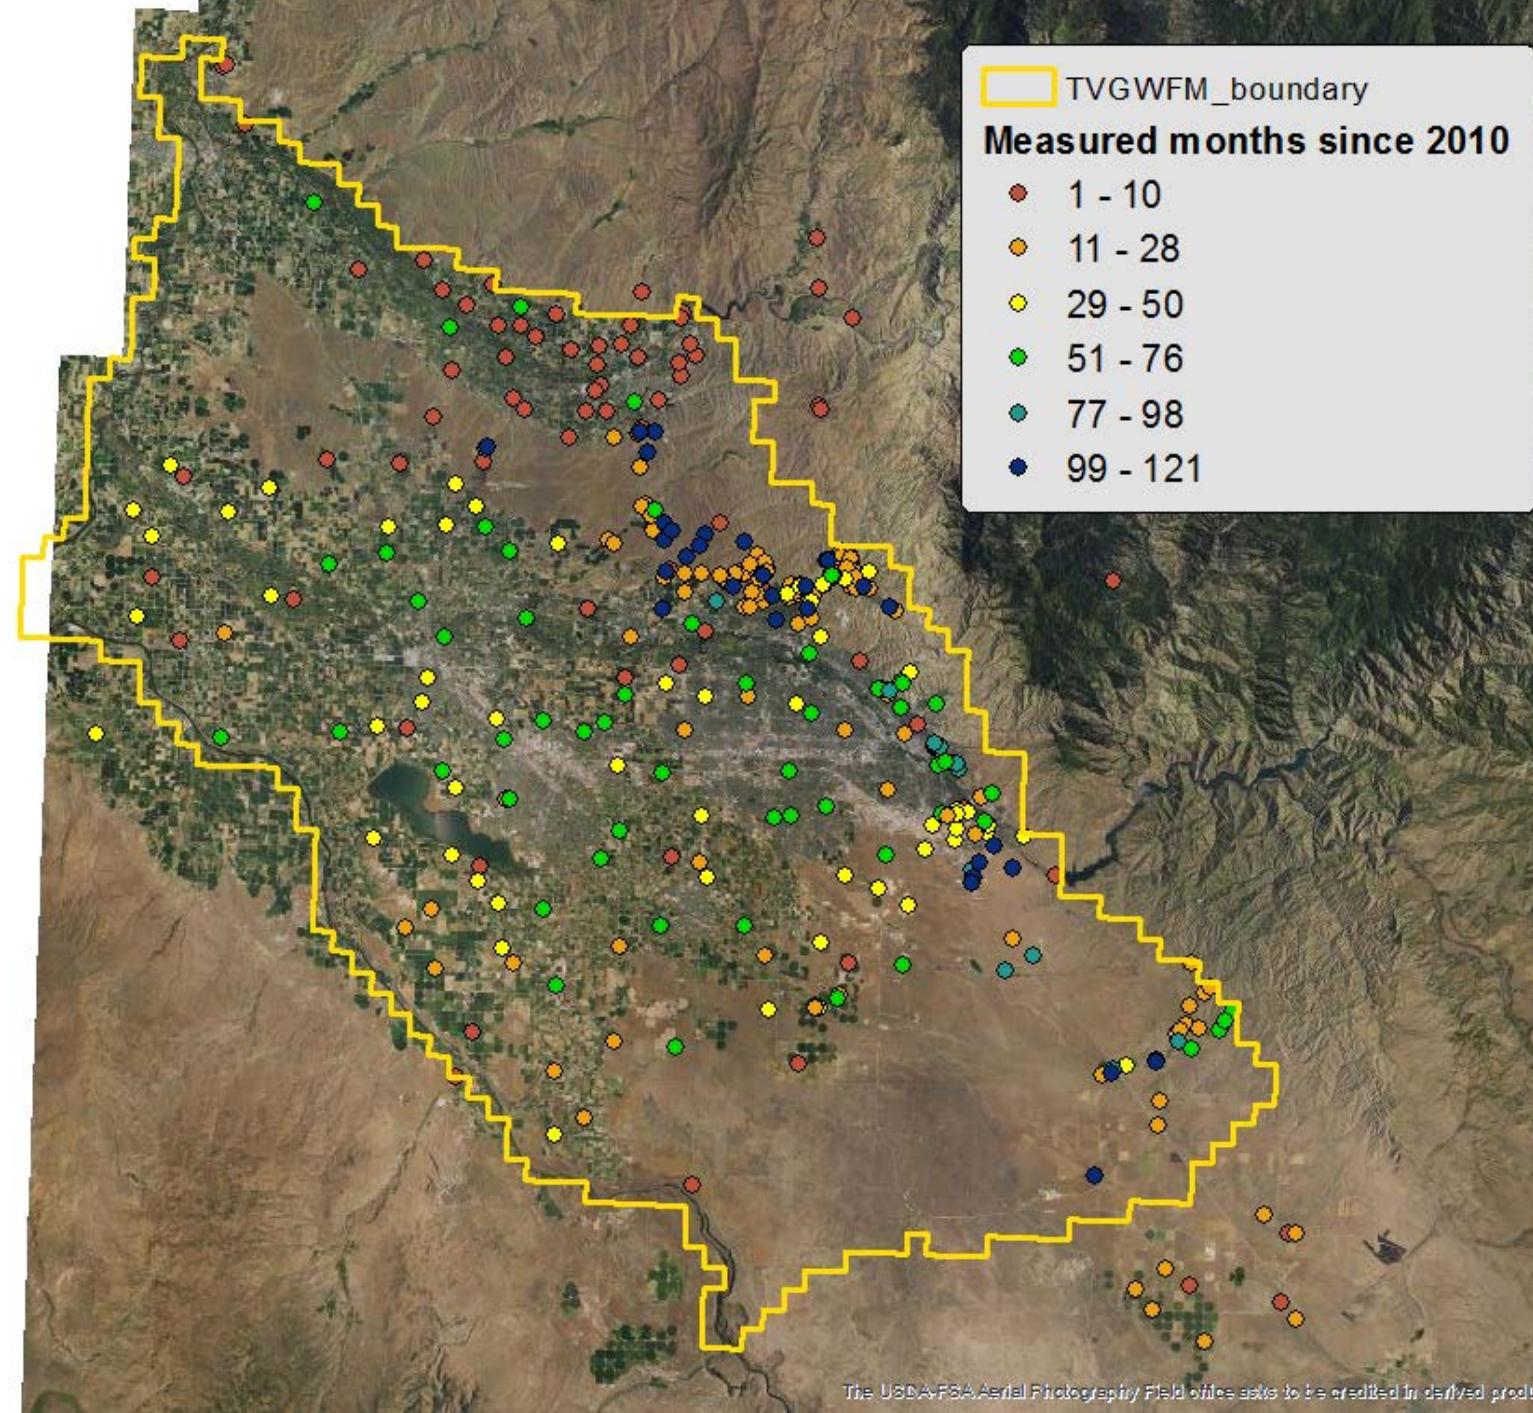

Figure 8. GENERALIZED POTENTIOMETRIC SURFACE MAP, SPRING 1989

Creating updated water level maps

- Frequency: how many and when
- Layering (shallow, shallow – deep, according to model layers): well construction
- Purpose

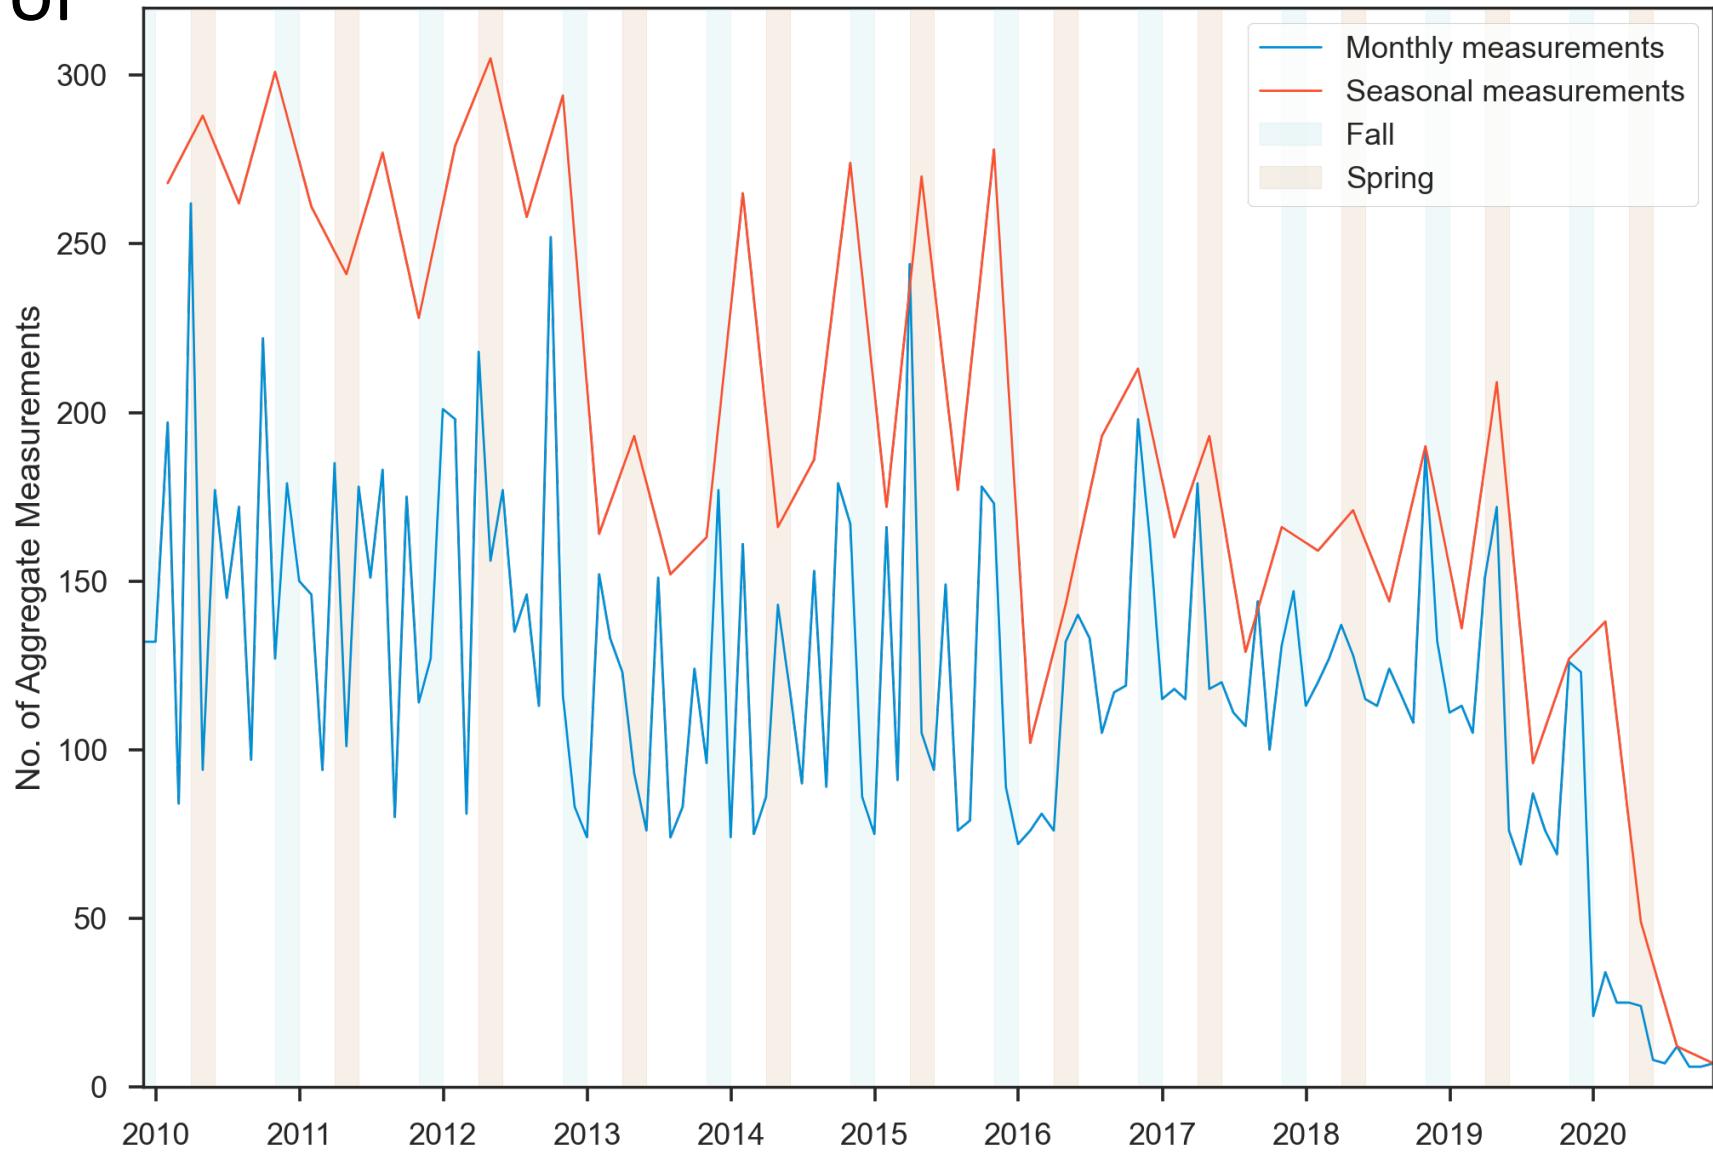

Recent TV Data for Contouring

- 409 wells measured since 2010
- 144 transducers (2x daily measurements)
- Some large spatial gaps

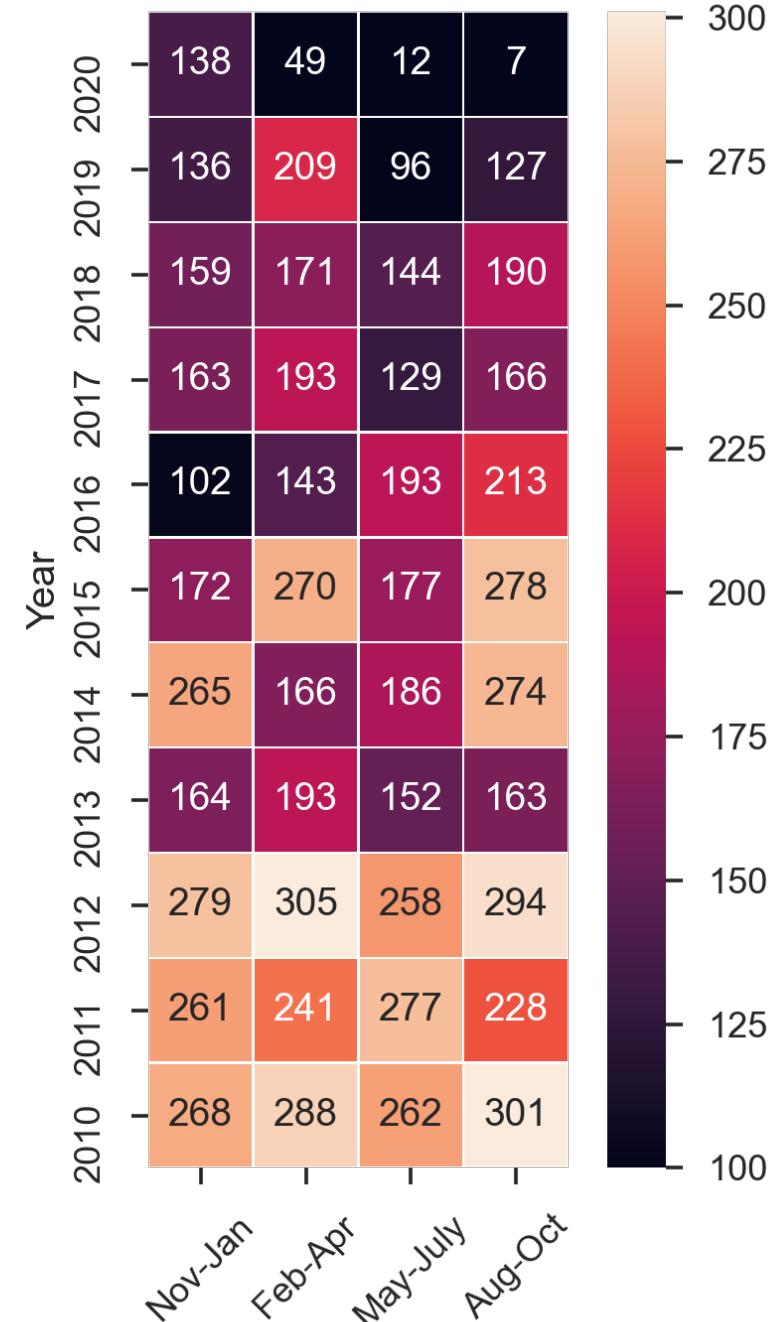

Recent TV Data for Contouring

- Measurements occur year round
- Try to target time with minimal pumping influence (late fall, early spring)

Recent TV Data for Contouring

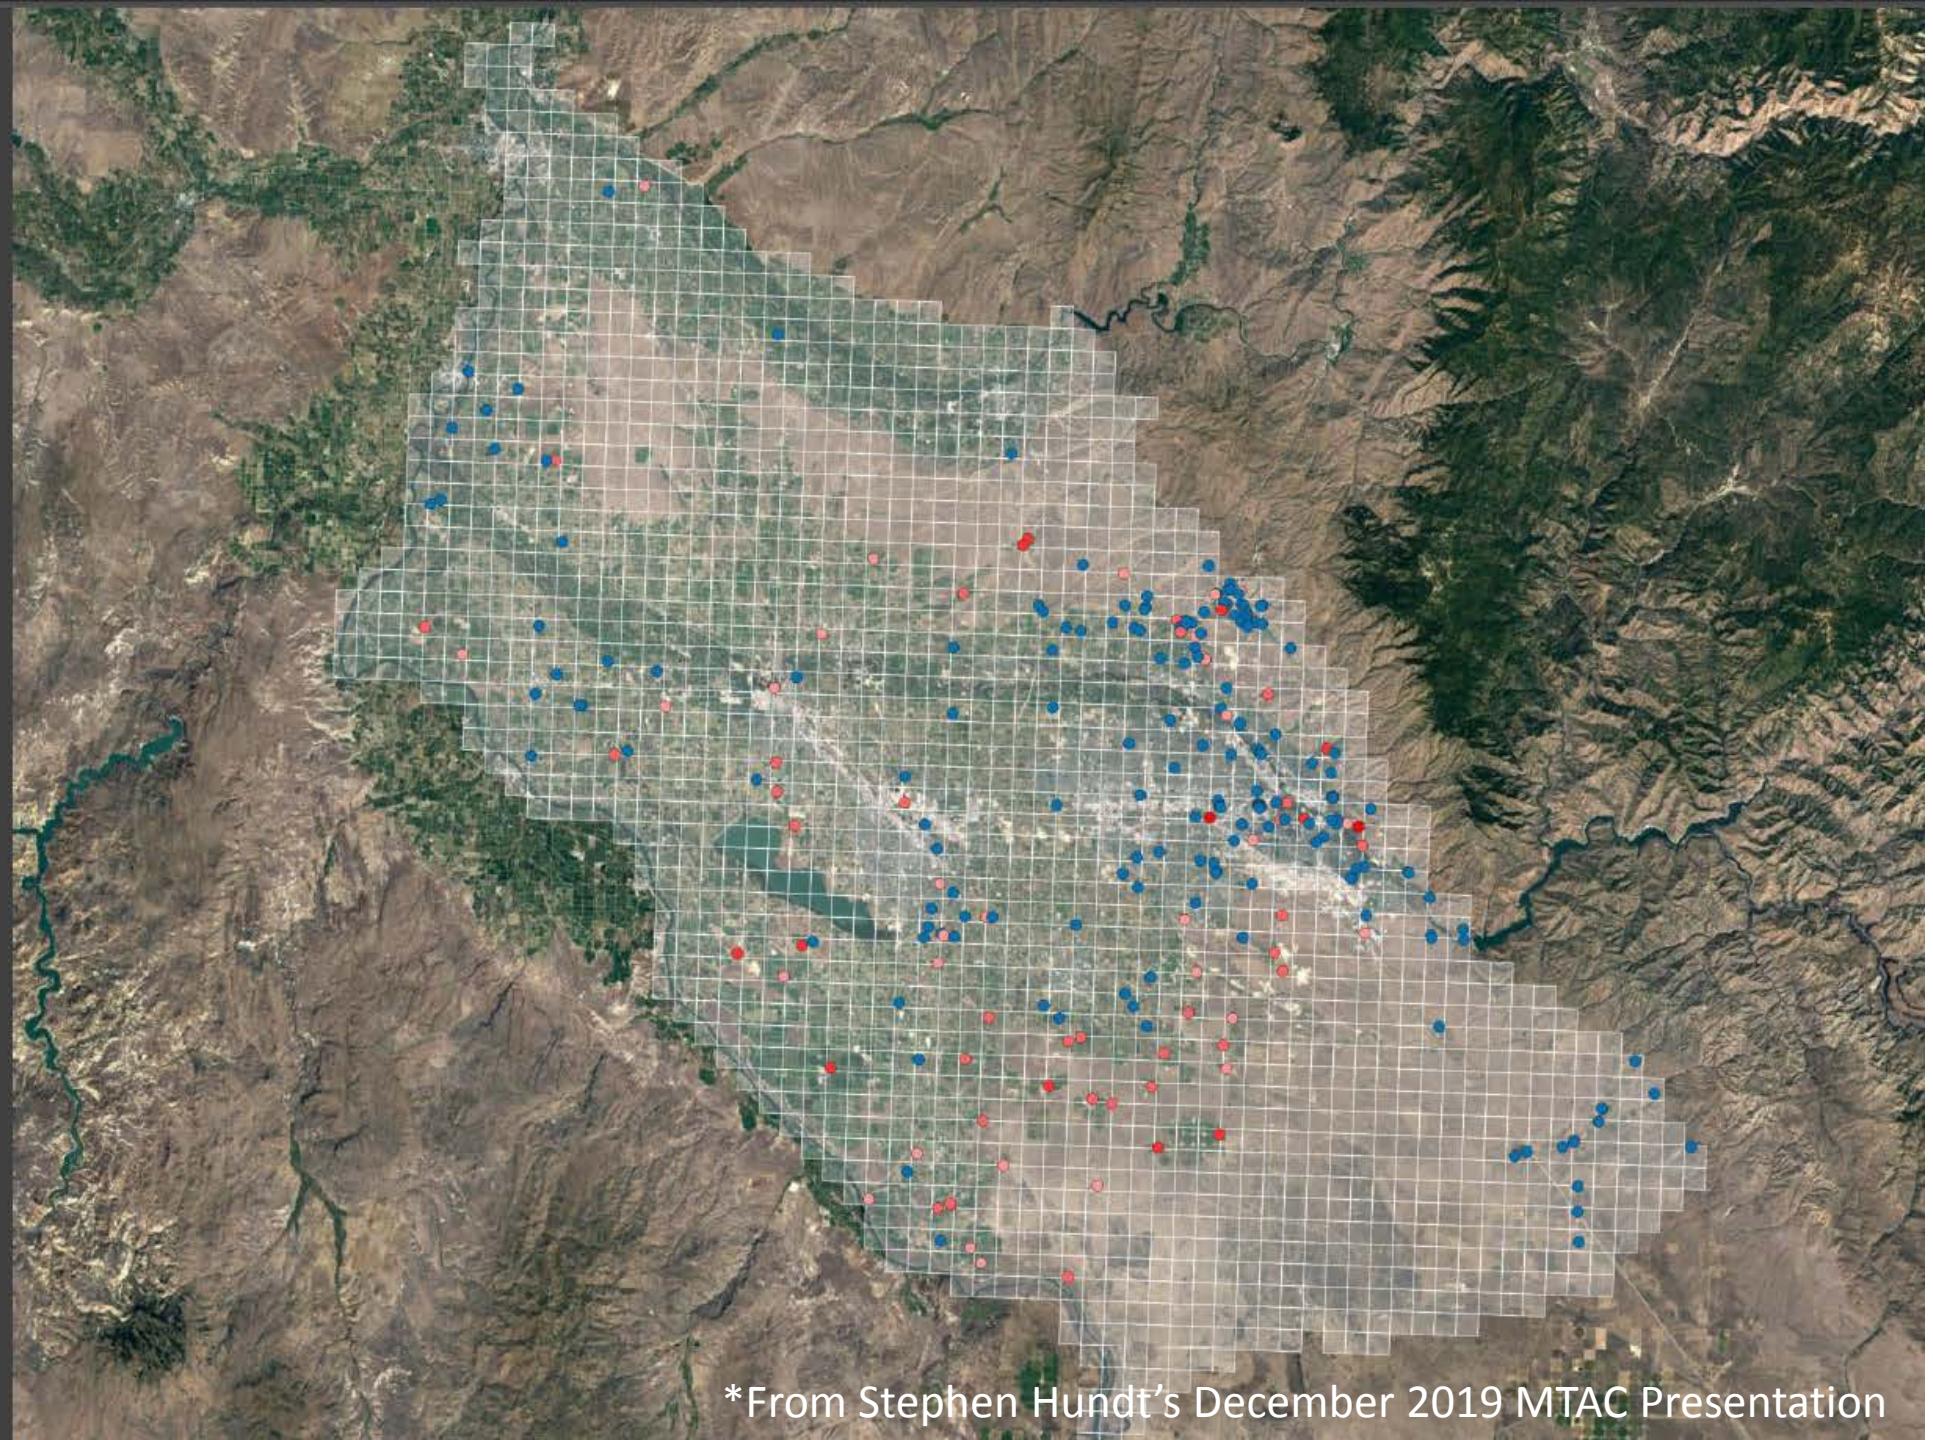

- Measurements occur year round
- Try to target time with minimal pumping influence (late fall, early spring)
- Wells with at least one measurement in a given season

Suggestions

- 2 Layers: shallow, deep
- Every 5 years
 - 2010 (average), 2015 (follows dry years), 2020
 - Adjust based on data density
- Payette River valley will be excluded most years due to low monitoring well density.
- More? Less?
