2018 Trail Creek Seepage Survey

Wood River MTAC

1/17/2019

2018
Trail Creek Seepage Survey

- Survey conducted on 11/06/2018 by D. Owsley and A. Wylie
- Lower 4 miles of Trail Creek
- No measurable diversions or returns.
- 7 measurement sites (same locations as 2017)
- Equipment: RDI Stream Pro ADCP
- Low/base flow conditions
- High quality data – 4 to 5.6% uncertainty
- Report is in development and will be posted to the IDWR website

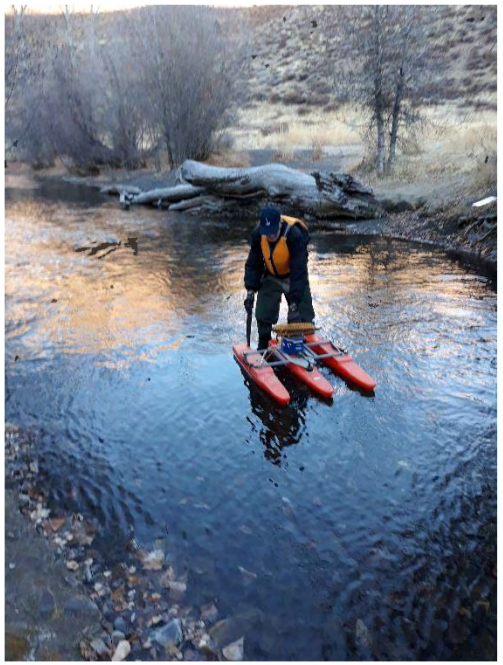
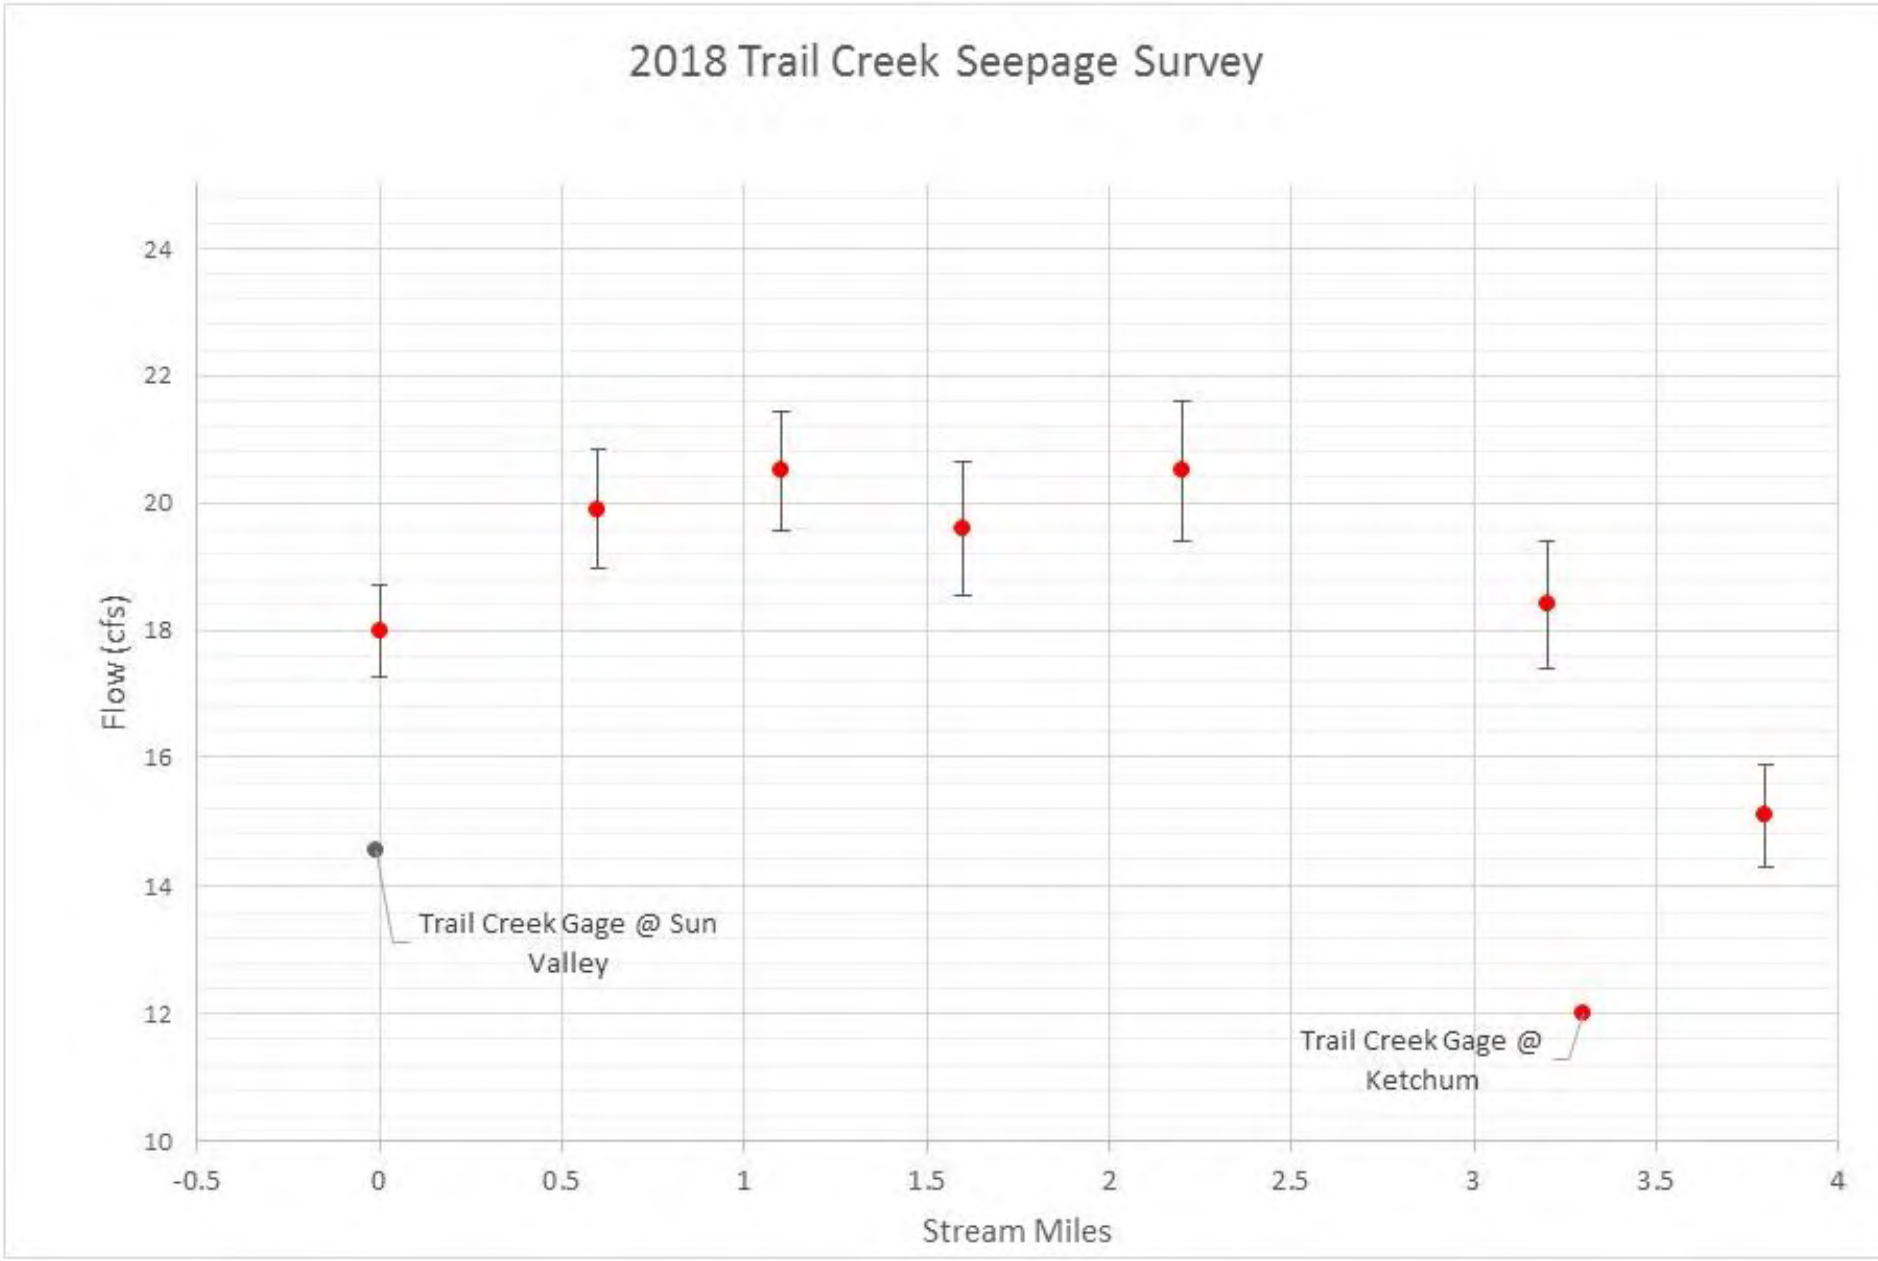
Trail Creek Diversions

USGS Gage Data

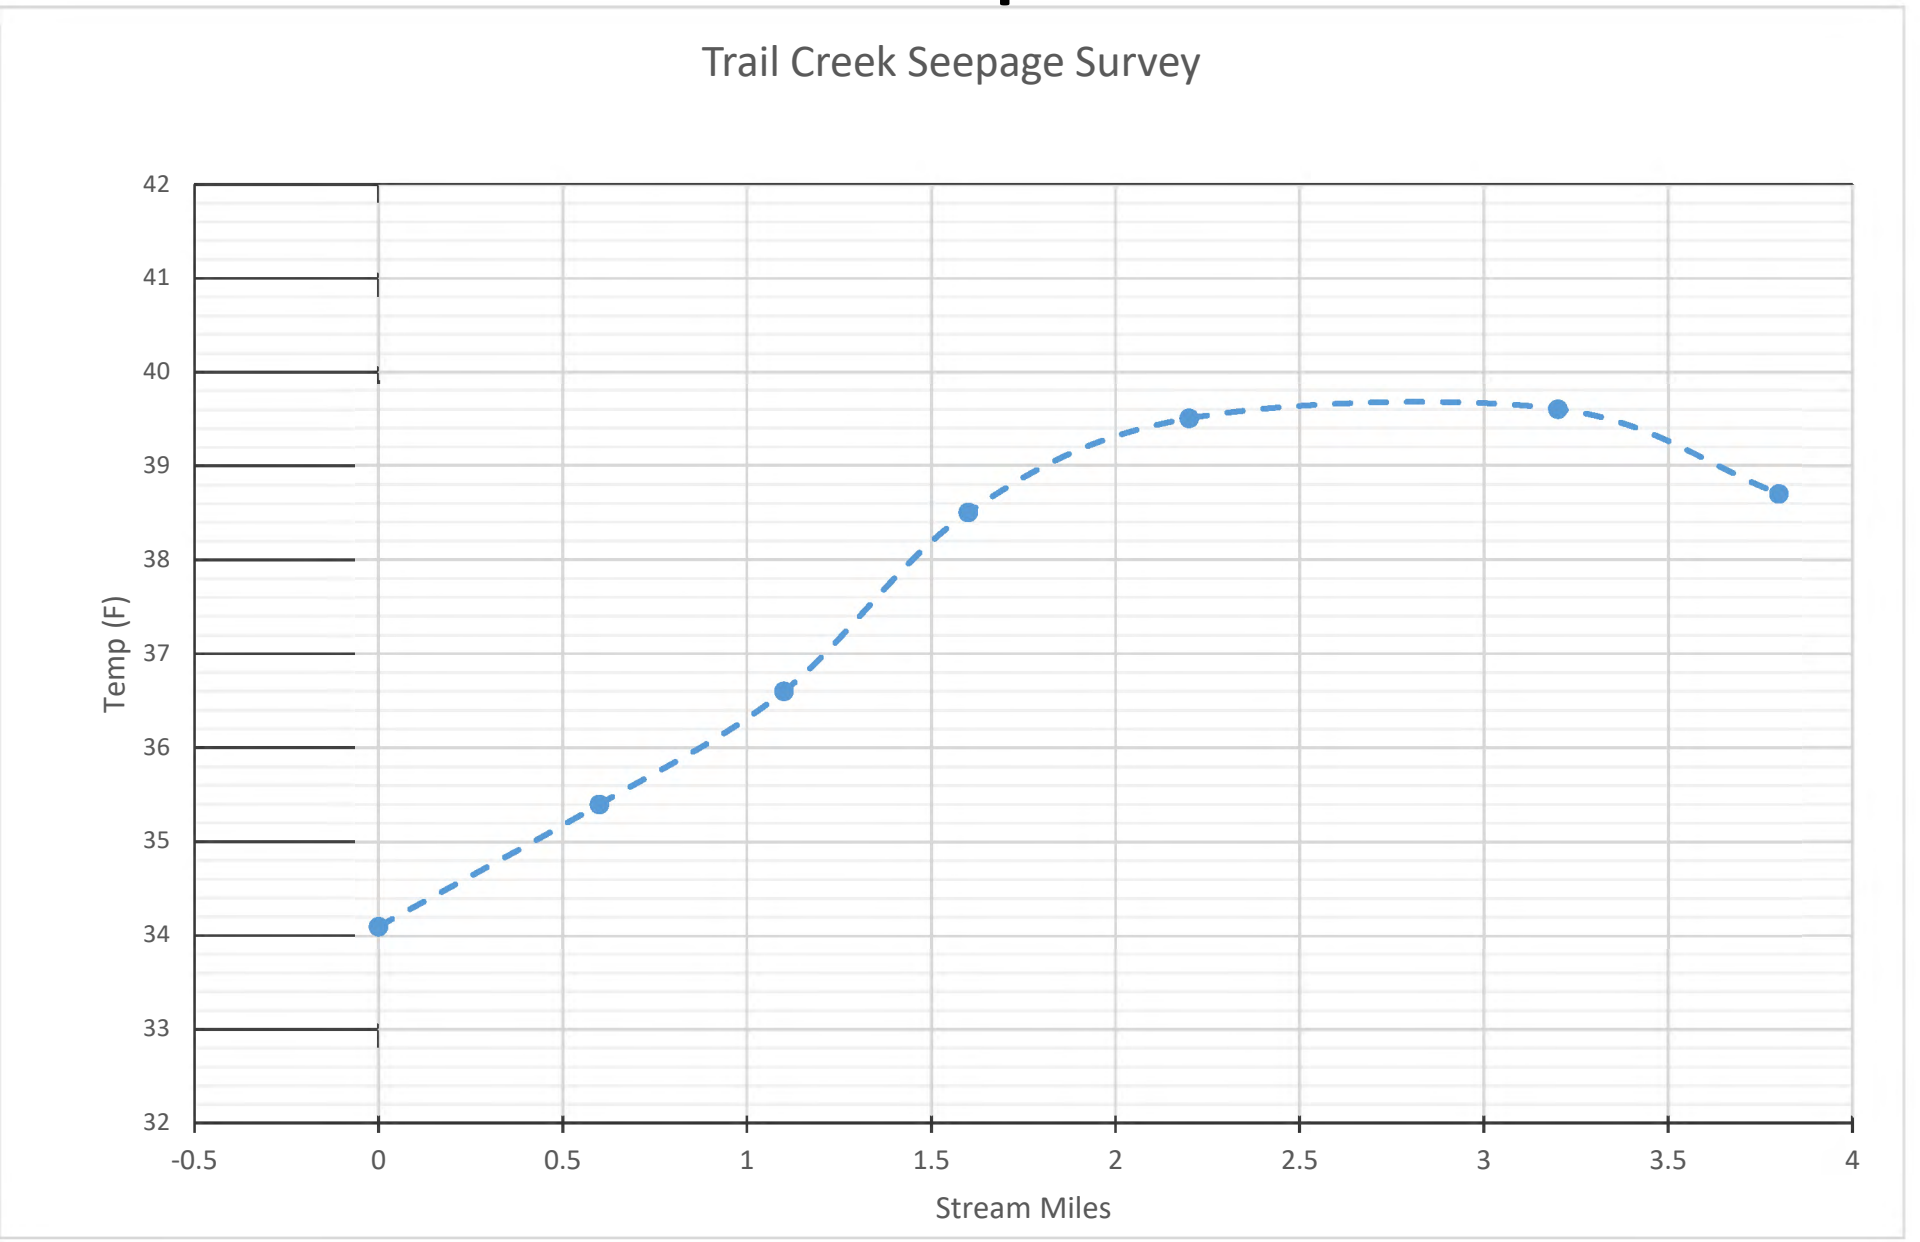
- USGS Gage Data
  - USGS Gage #13137300 near measurement #1
    - Q measured at 18.0 cfs
    - Gage flow reported at 14.0 to 15.1 cfs
  - USGS Gage #13137500 near measurement site #6
    - Average measured Q = 15.1 cfs
    - Gage flow reported at 12.0 cfs



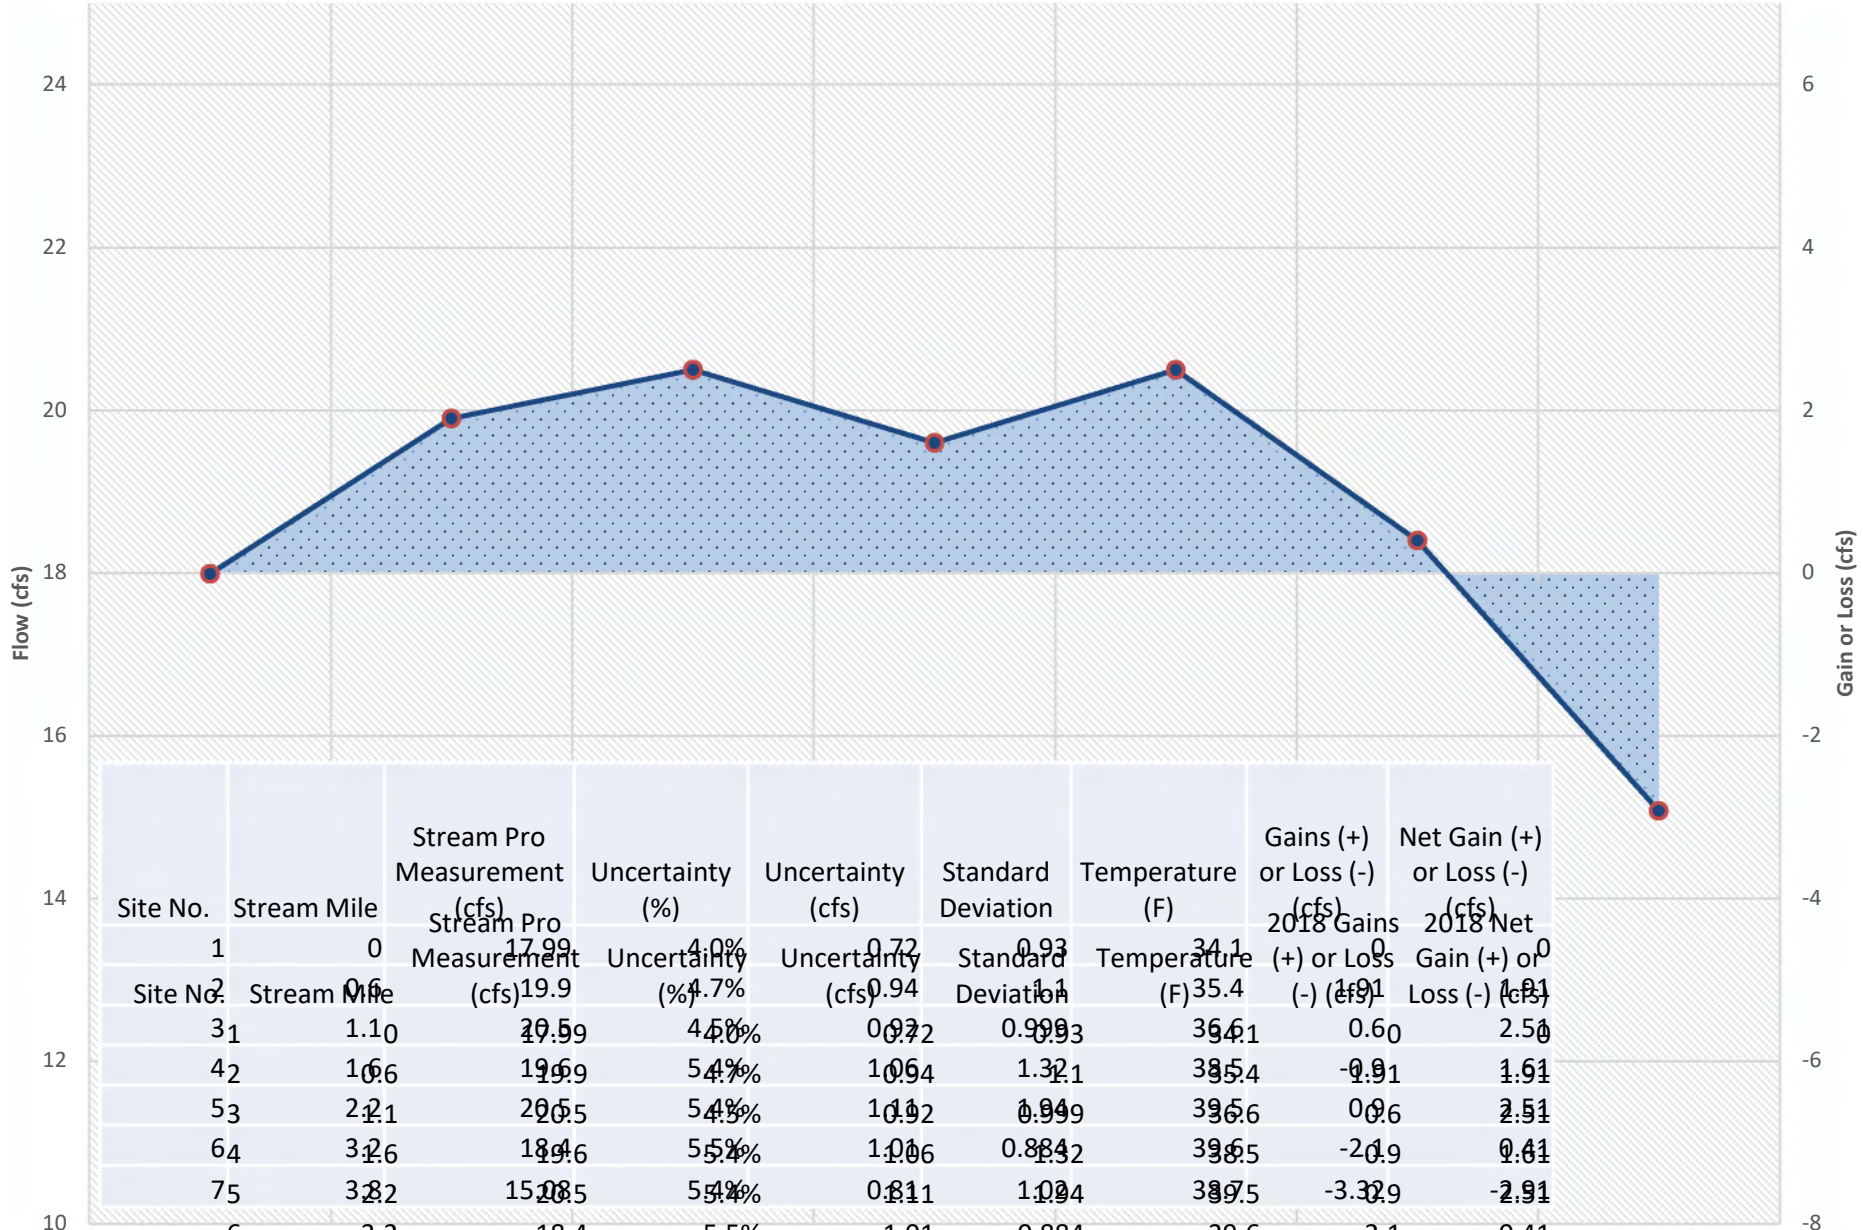
Trail Creek Flow Data



Trail Creek Temperature Data



2018 Trail Creek Seepage



Site No.	Stream Mile	Stream Pro Measurement (cfs)	Uncertainty (%)	Uncertainty (cfs)	Standard Deviation	Temperature (F)	Gains (+) or Loss (-) (cfs)	Net Gain (+) or Loss (-) (cfs)

Conclusions/Recommendations

- Uncertainties are generally within the gain/loss values.
- USGS data is provisional.
- **Continue with annual seepage runs on Trail Creek, preferably in early November**
