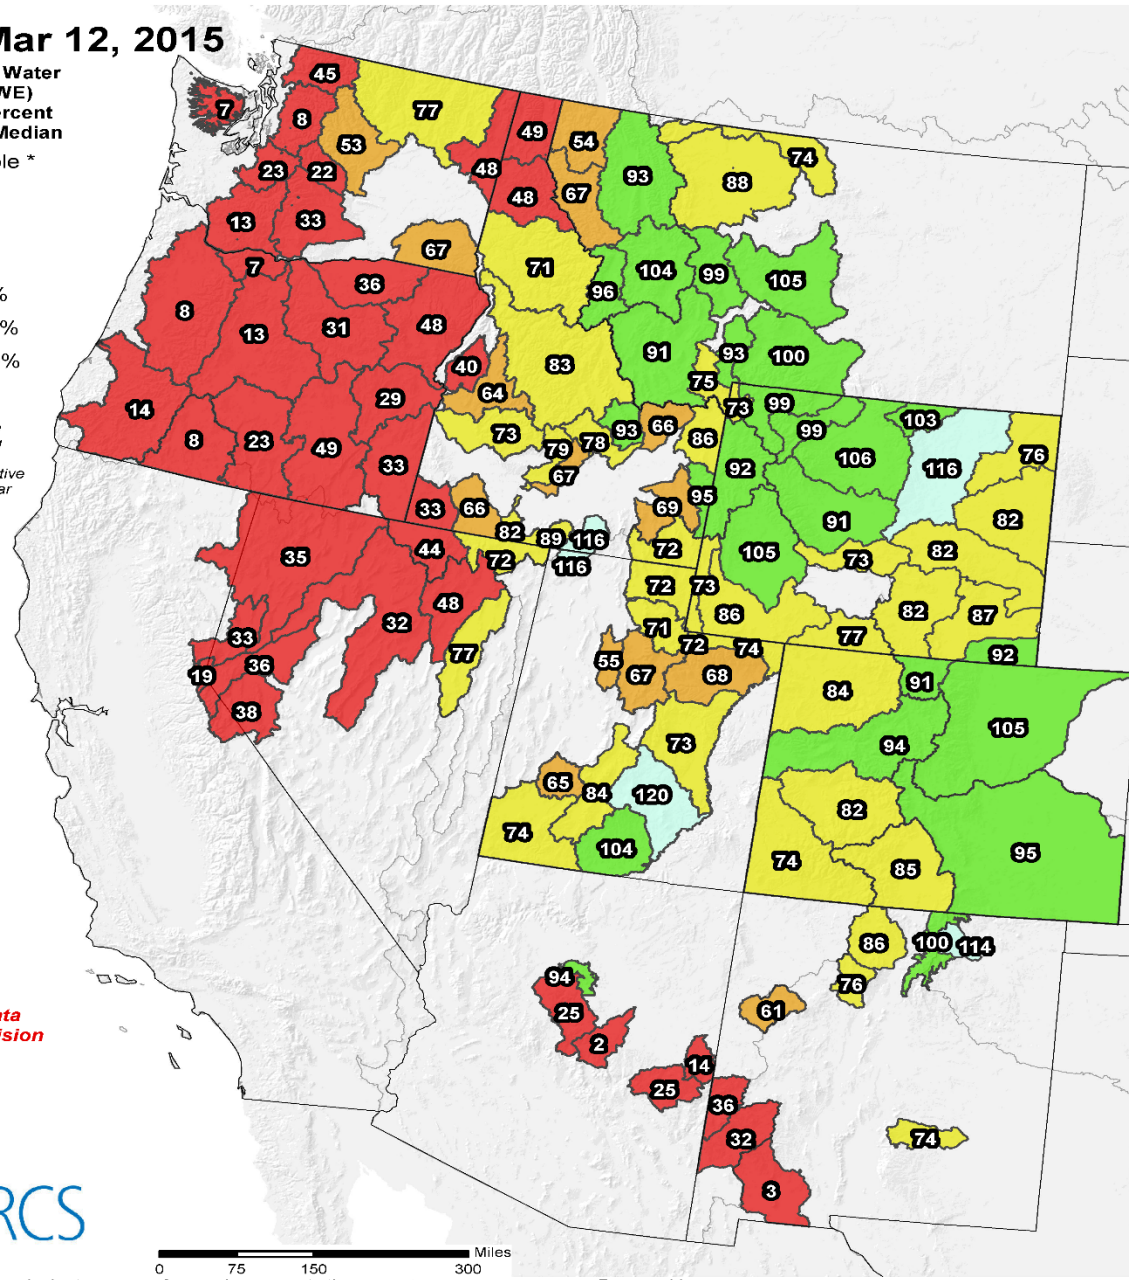
Westwide SNOTEL Current Snow Water Equivalent (SWE) % of Normal

Mar 12, 2015

Current Snow Water Equivalent (SWE) Basin-wide Percent of 1981-2010 Median

- unavailable *
- <50%
- 50 - 69%
- 70 - 89%
- 90 - 109%
- 110 - 129%
- 130 - 149%
- >= 150%

* *Data unavailable at time of posting or measurement is not representative at this time of year*



Provisional data subject to revision

USDA NRCS

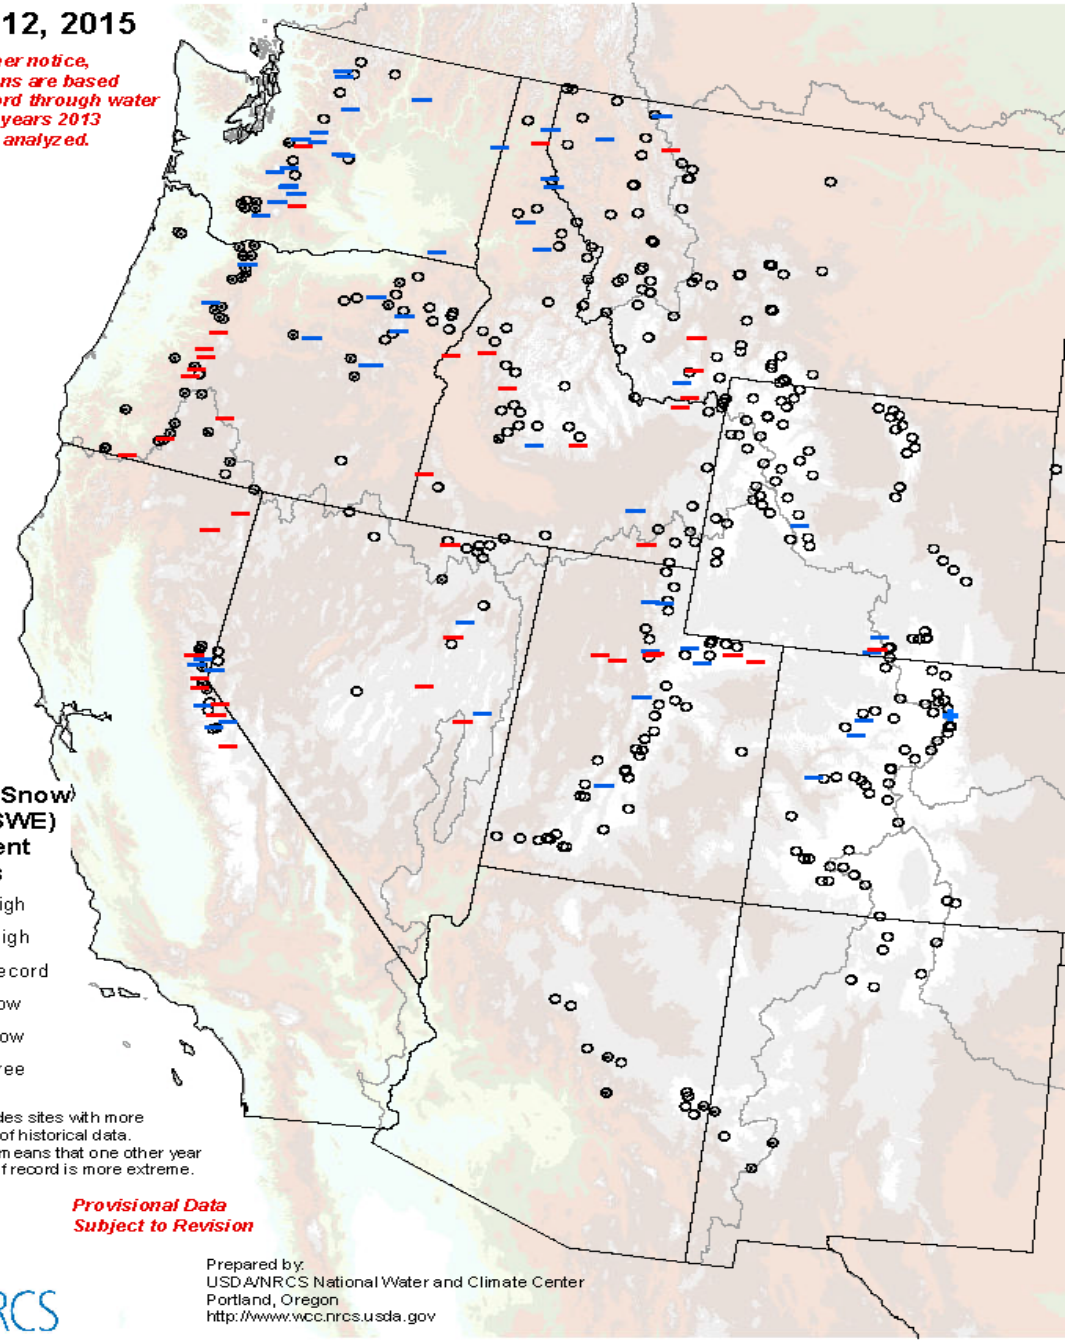
The snow water equivalent percent of normal represents the current snow water equivalent found at selected SNOTEL sites in or near the basin compared to the average value for those sites on this day. Data based on the first reading of the day (typically 00:00).

Prepared by:
USDA/NRCS National Water and Climate Center
Portland, Oregon
http://www.wcc.nrcs.usda.gov

SNOTEL Current Snow Water Equivalent (SWE) Records

Mar 12, 2015

NOTE: Until further notice, record calculations are based on period of record through water year 2012; water years 2013 and 2014 are not analyzed.



Current Snow Water (SWE) Equivalent Records

- New High
- Near High
- Non-Record
- New Low
- Near Low
- snow free

Analysis includes sites with more than 20 years of historical data.
"Near" record means that one other year of the period of record is more extreme.

Provisional Data Subject to Revision

USDA NRCS

Prepared by:
USDA/NRCS National Water and Climate Center
Portland, Oregon
http://www.wcc.nrcs.usda.gov

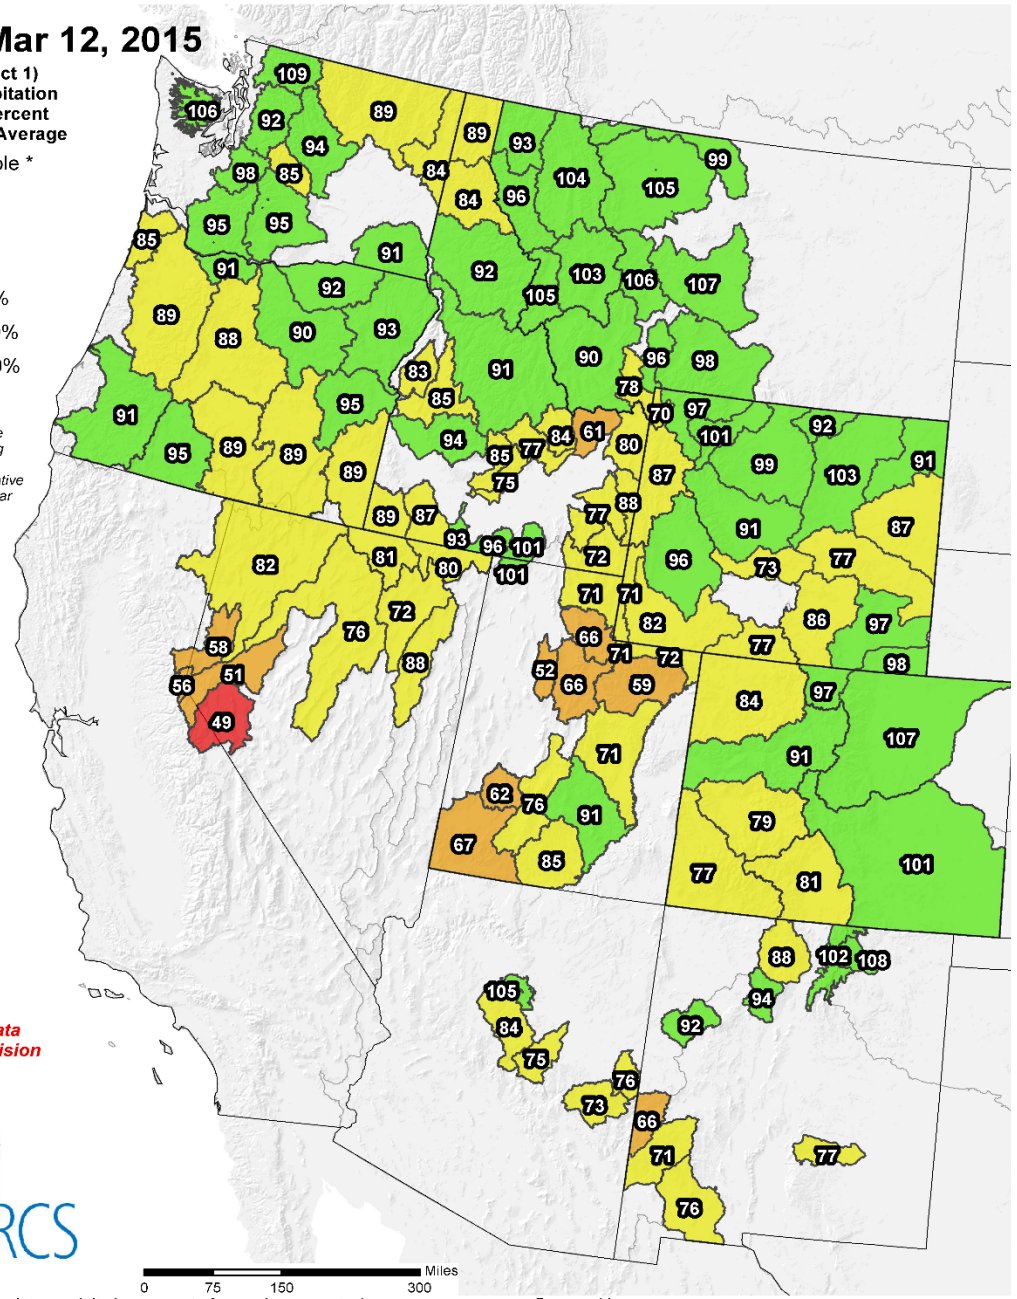
Westwide SNOTEL Water Year (Oct 1) to Date Precipitation % of Normal

Mar 12, 2015

Water Year (Oct 1) to Date Precipitation Basin-wide Percent of 1981-2010 Average

- unavailable *
- <50%
- 50 - 69%
- 70 - 89%
- 90 - 109%
- 110 - 129%
- 130 - 149%
- >= 150%

* *Data unavailable at time of posting or measurement is not representative at this time of year*



Provisional data subject to revision

USDA NRCS

The water year to date precipitation percent of normal represents the accumulated precipitation found at selected SNOTEL sites in or near the basin compared to the average value for those sites on this day. Data based on the first reading of the day (typically 00:00).

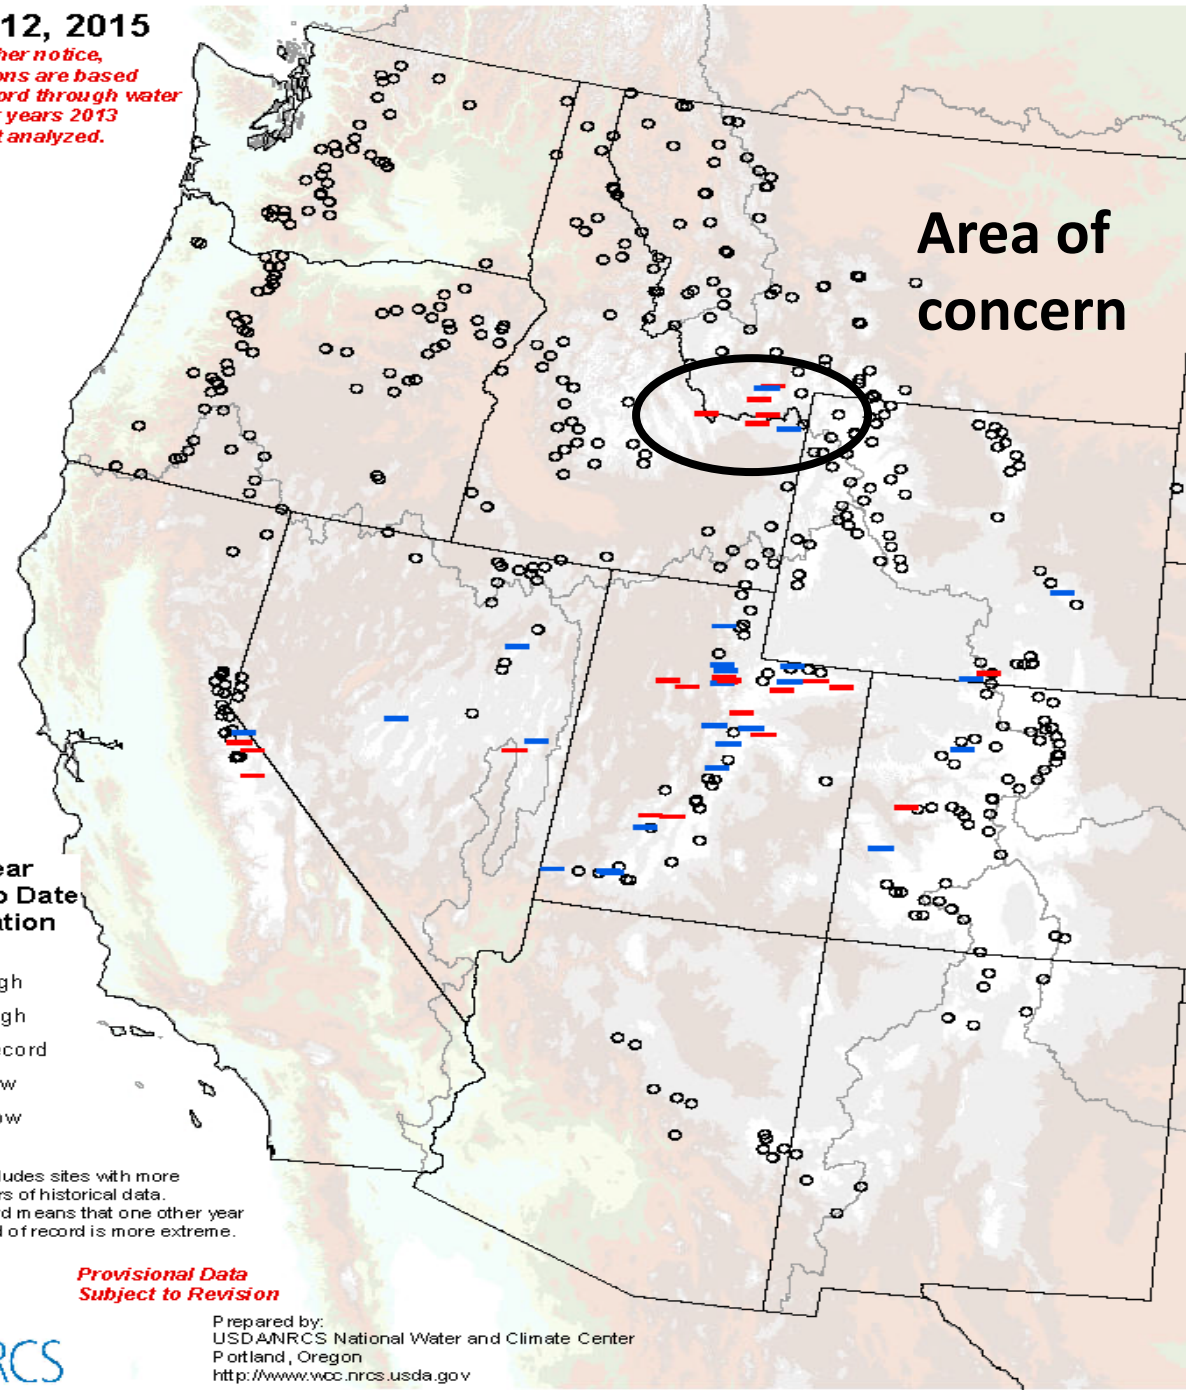
Prepared by:
USDA/NRCS National Water and Climate Center
Portland, Oregon
http://www.wcc.nrcs.usda.gov

SNOTEL Water Year (Oct 1) to Date Precipitation Records

Mar 12, 2015

NOTE: Until further notice, record calculations are based on period of record through water year 2012; water years 2013 and 2014 are not analyzed.

Area of concern



Water Year (Oct 1) to Date Precipitation Records

- New High
- Near High
- Non-Record
- New Low
- Near Low

Analysis includes sites with more than 20 years of historical data.
"Near" record means that one other year of the period of record is more extreme.

USDA NRCS

Provisional Data Subject to Revision

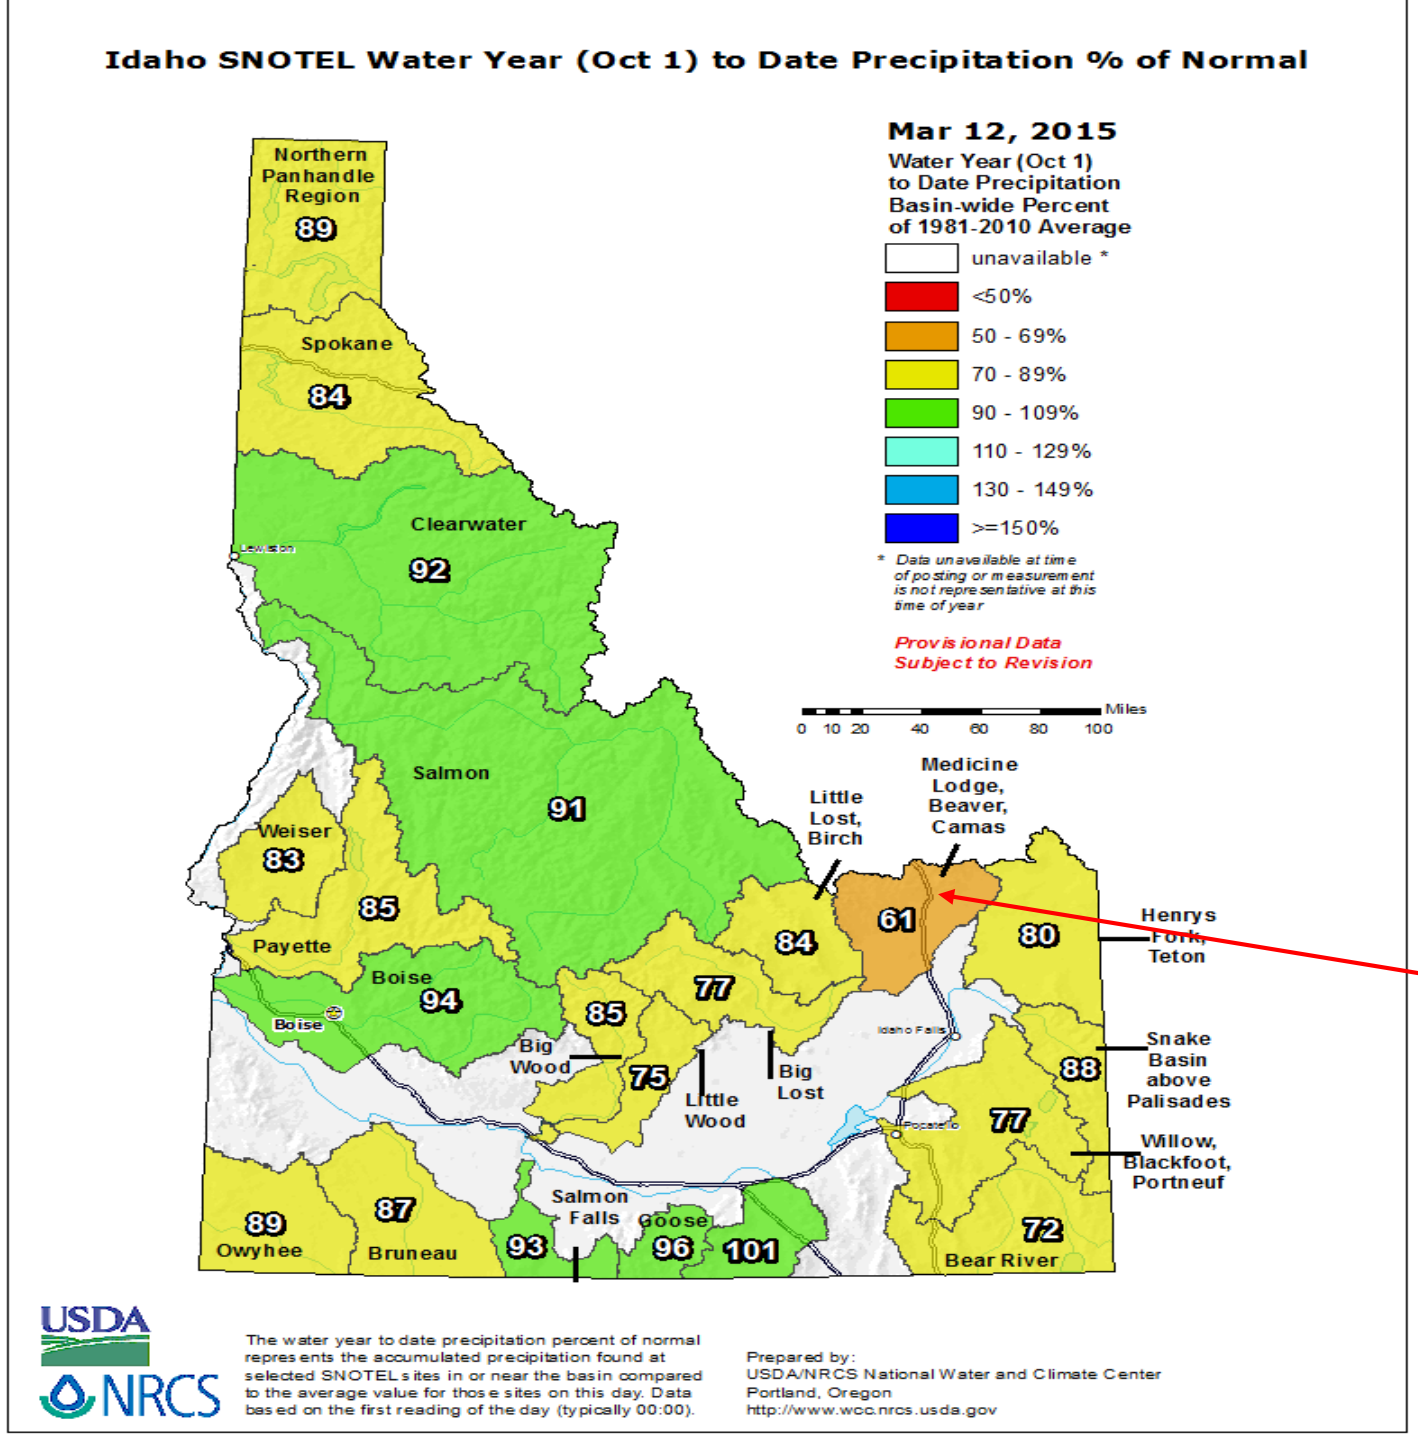
USDA/NRCS National Water and Climate Center
Portland, Oregon
http://www.wcc.nrcs.usda.gov



February Precipitation:

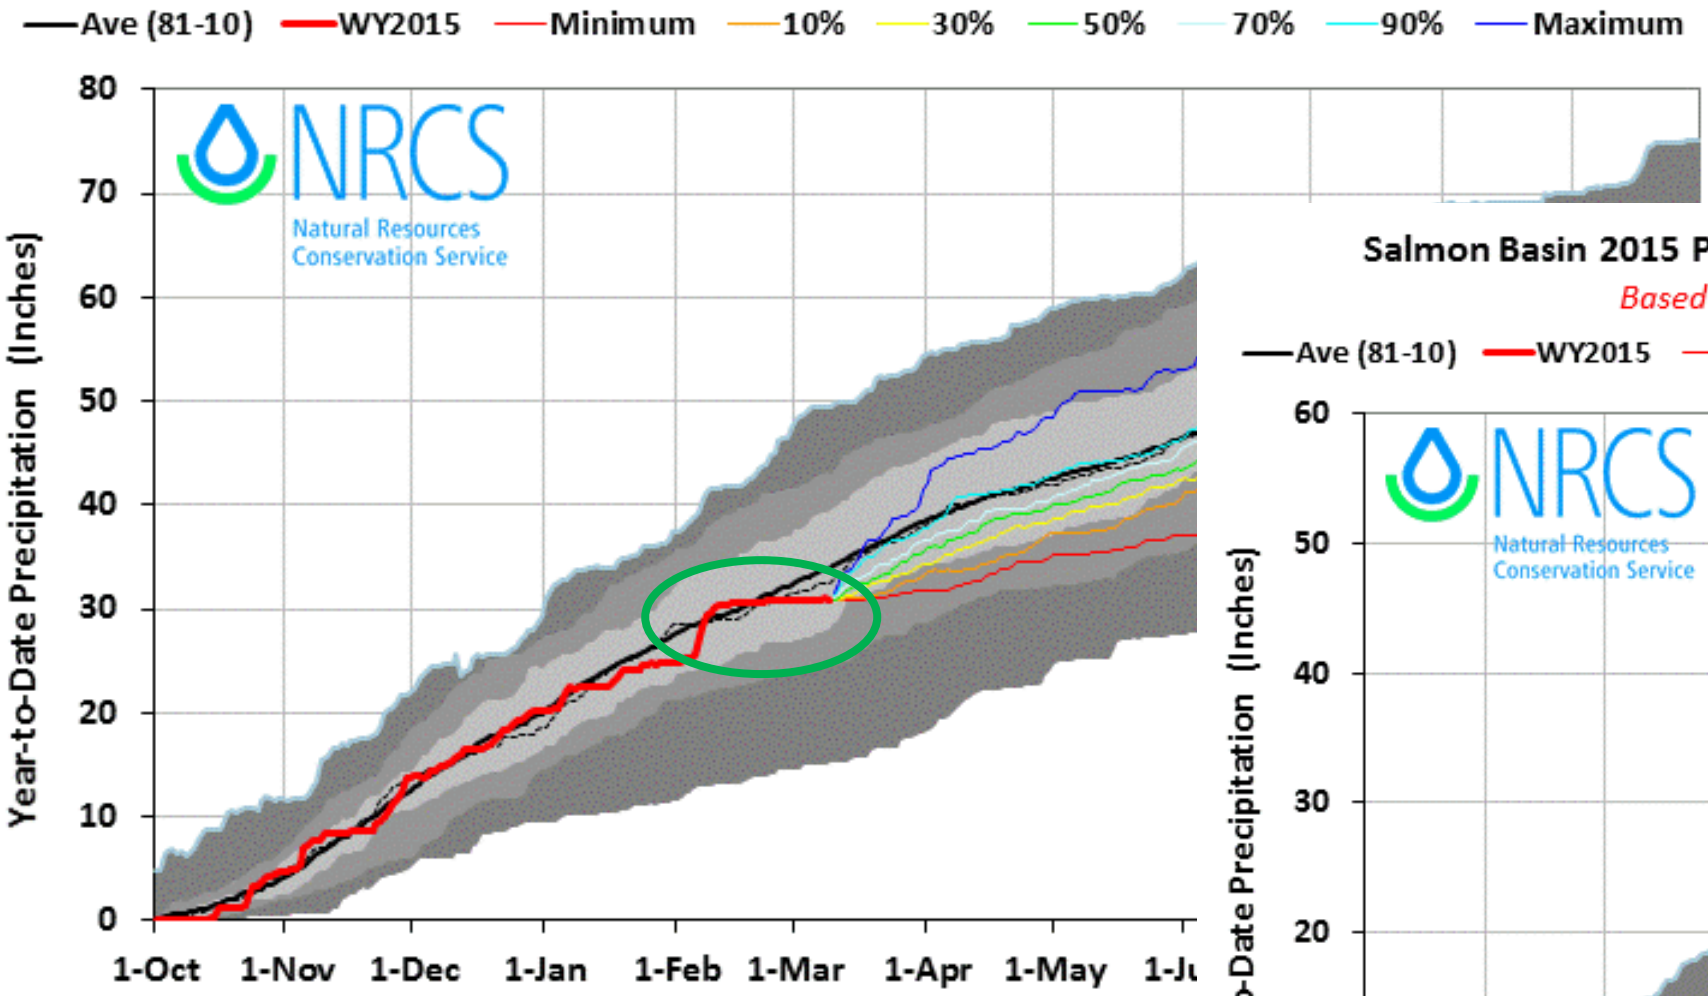
One Atmospheric River event brought 125% of average to the Panhandle, the 2 SNOTEL sites closest to the Canadian border received 200% of normal.

Rest of Idaho received 50-90% of average

Water year to date precipitation lowest total in Mud Lake area (Medicine Lodge, Beaver, Camas basins) was 56% of average on March 1 now 53%

Northern Panhandle Region 2015 Precipitation with Non-Exceedence Projections (8 sites)

Based on Provisional SNOTEL data as of Mar 09, 2015



Salmon Basin 2015 Precipitation with Non-Exceedence Projections (22

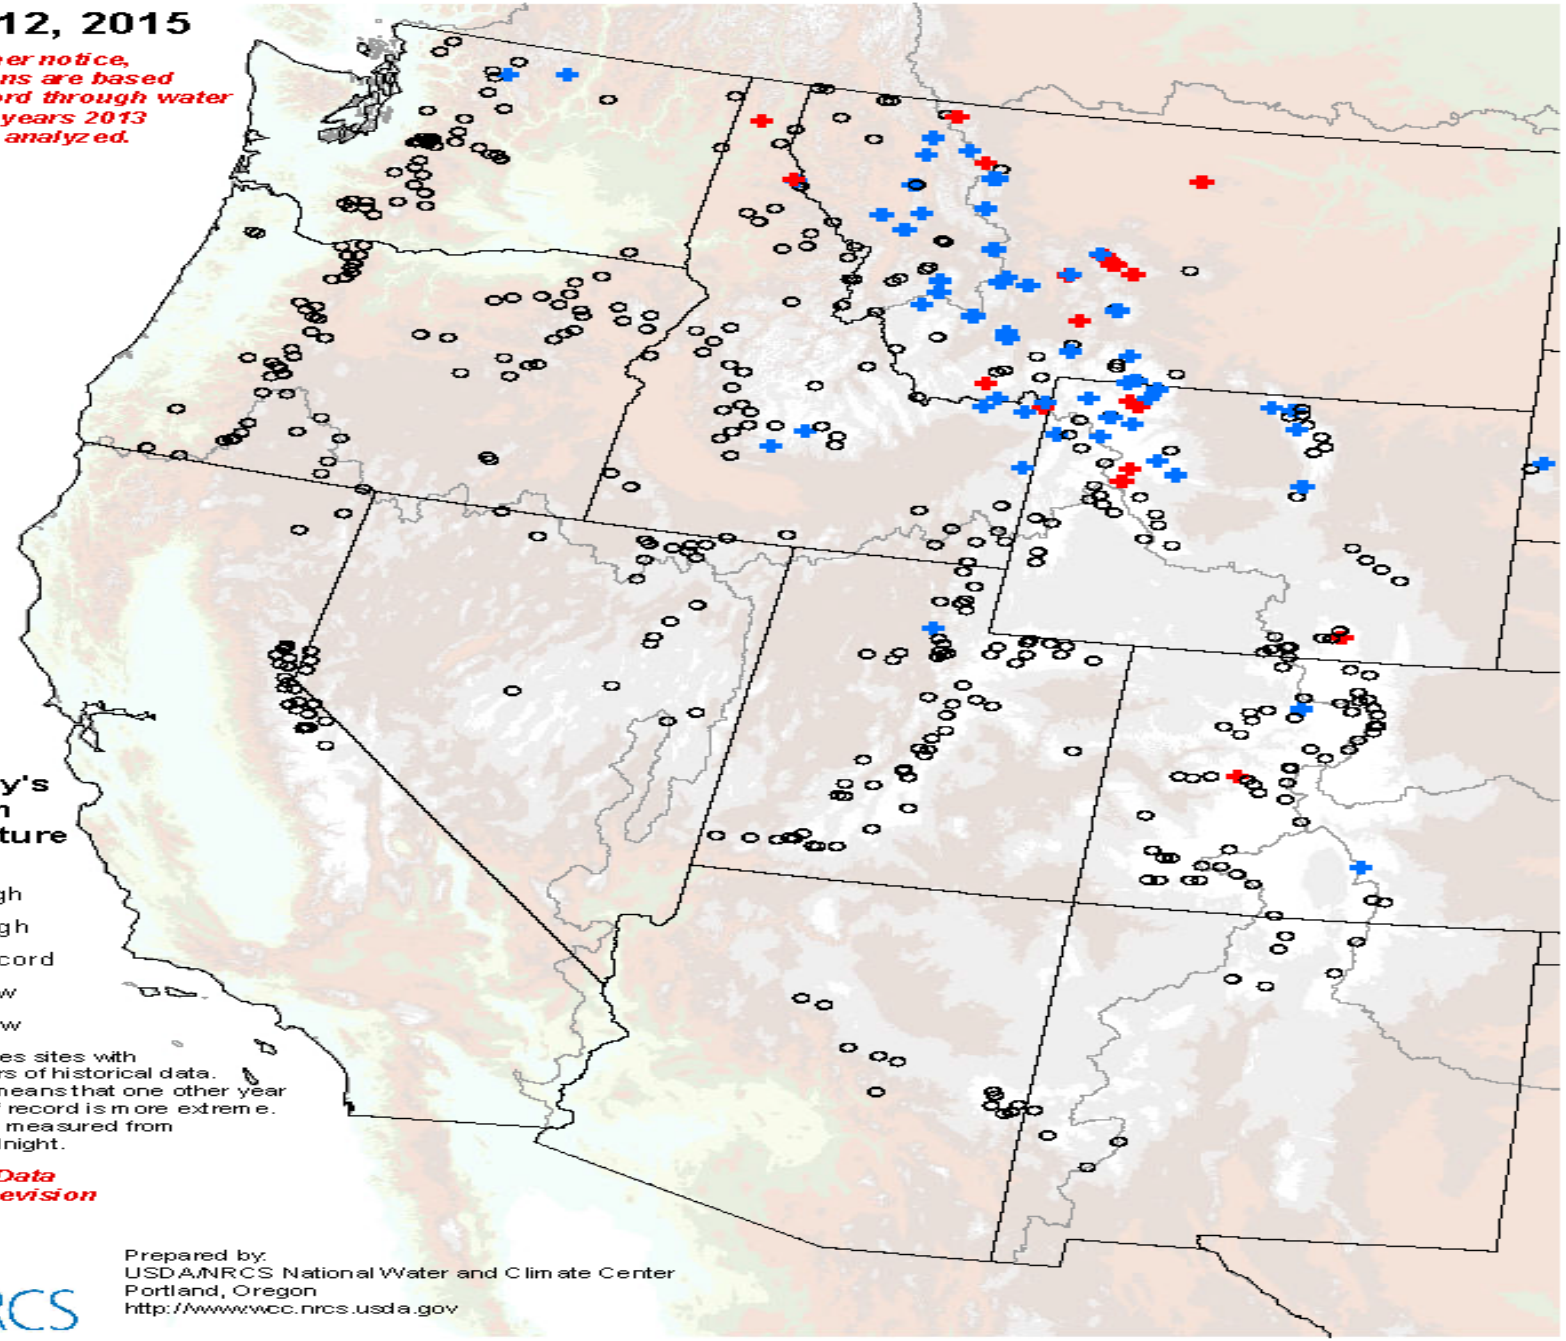
SNOTEL Yesterday's Maximum Temperature Records

Mar 12, 2015

NOTE: Until further notice, record calculations are based on period of record through water year 2012; water years 2013 and 2014 are not analyzed.



Yesterday's Maximum Temperature Records

- New High
- Near High
- Non Record
- New Low
- Near Low

Analysis includes sites with at least 15 years of historical data. "Near" record means that one other year of the period of record is more extreme. Temperature is measured from midnight to midnight.

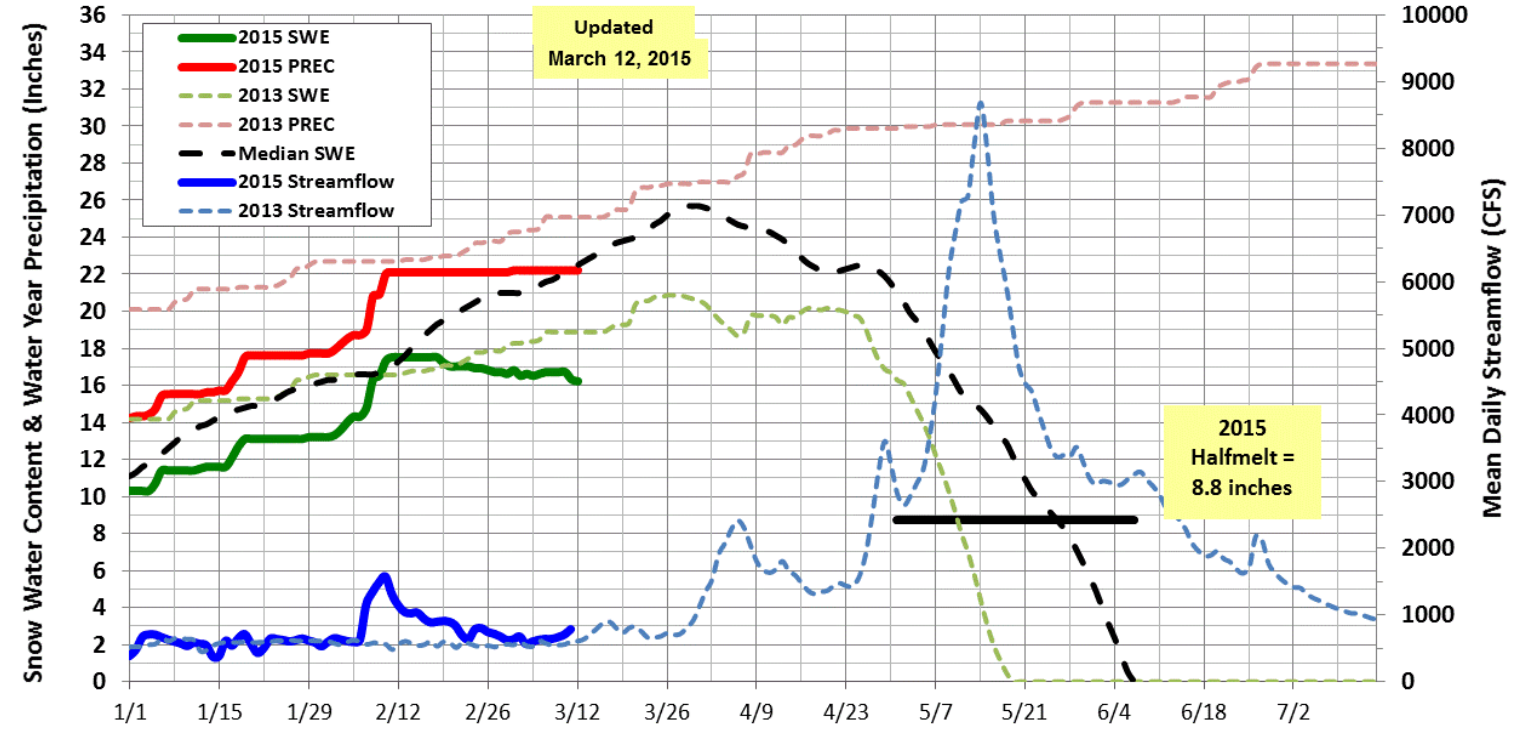
NRCS Natural Resources Conservation Service

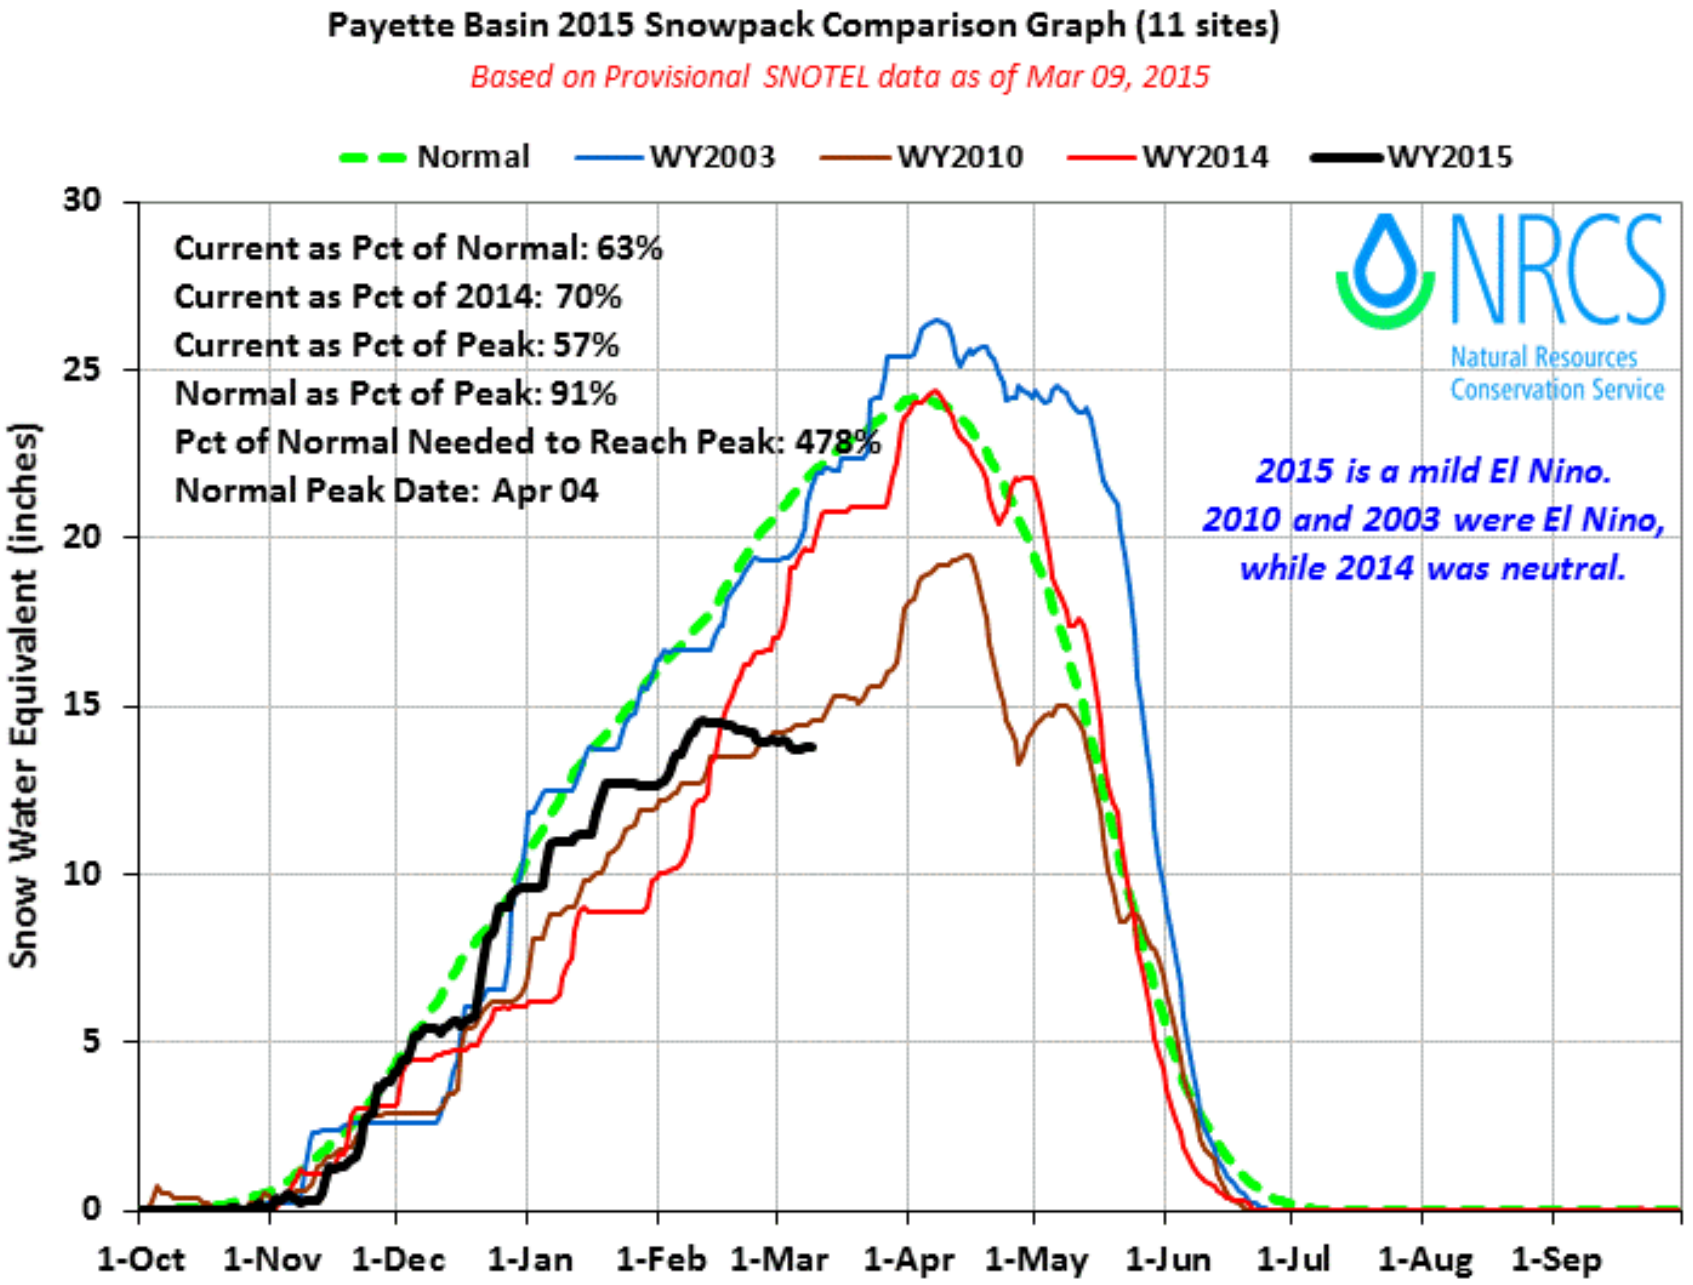
2015 is a mild El Nino. 2010 and 2003 were El Nino, while 2014 was neutral.

2015 & 2013 Banner Summit SNOTEL and MF Salmon River at MF Lodge

USDA NRCS United States Department of Agriculture Natural Resources Conservation Service

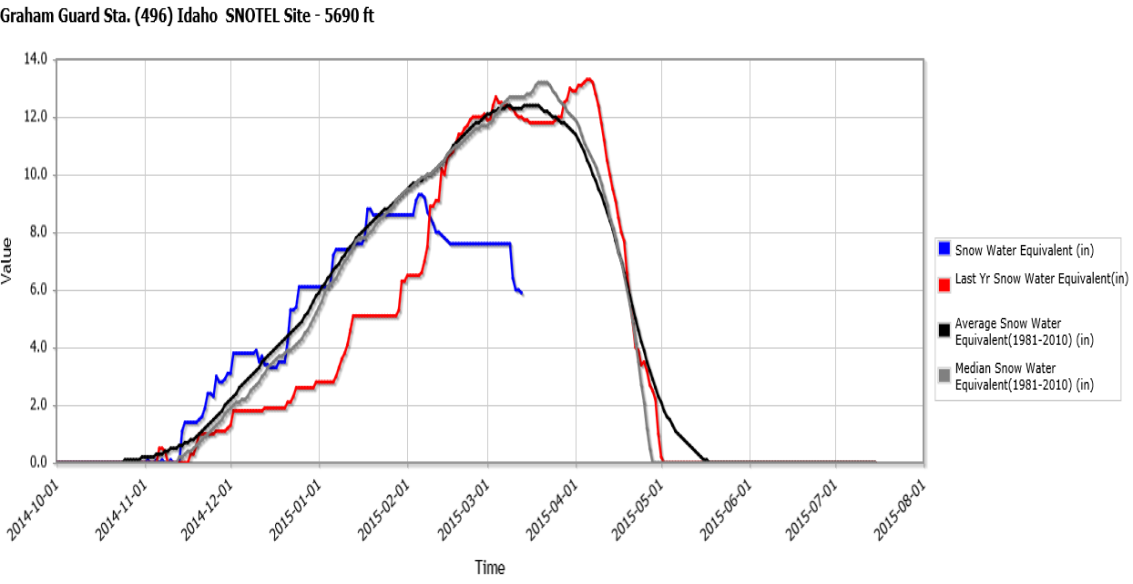


On average MF Salmon River experiences a snowmelt streamflow peak, or increase in flow, when Banner Summit SNOTEL is half-melted.

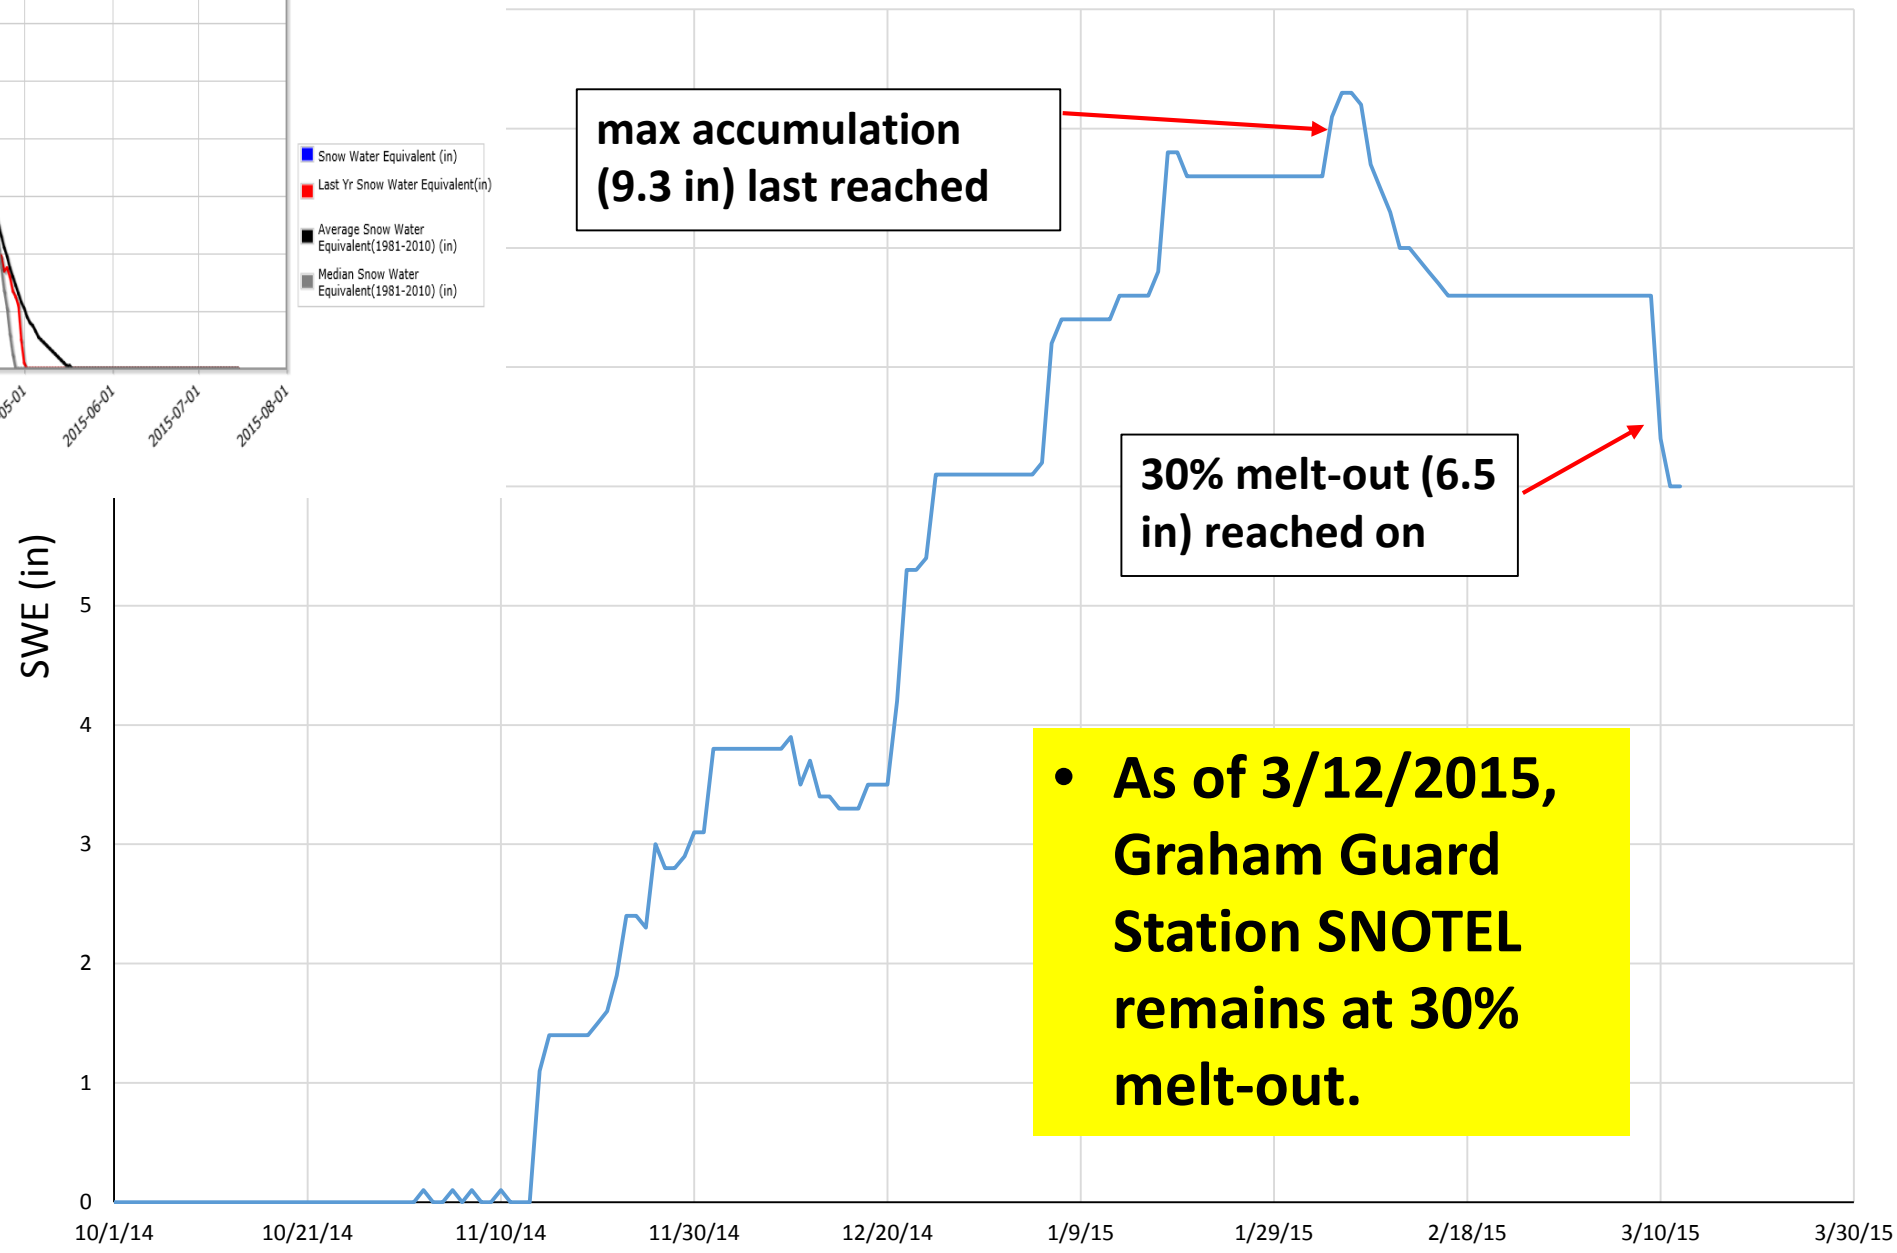


Following are Boise River Snow to Flow Analysis by BSU to help predict the peak snowmelt streamflow

Caution – it maybe challenging this year due to early melting that is occurring



Graham Guard Station SNOTEL site WY2015

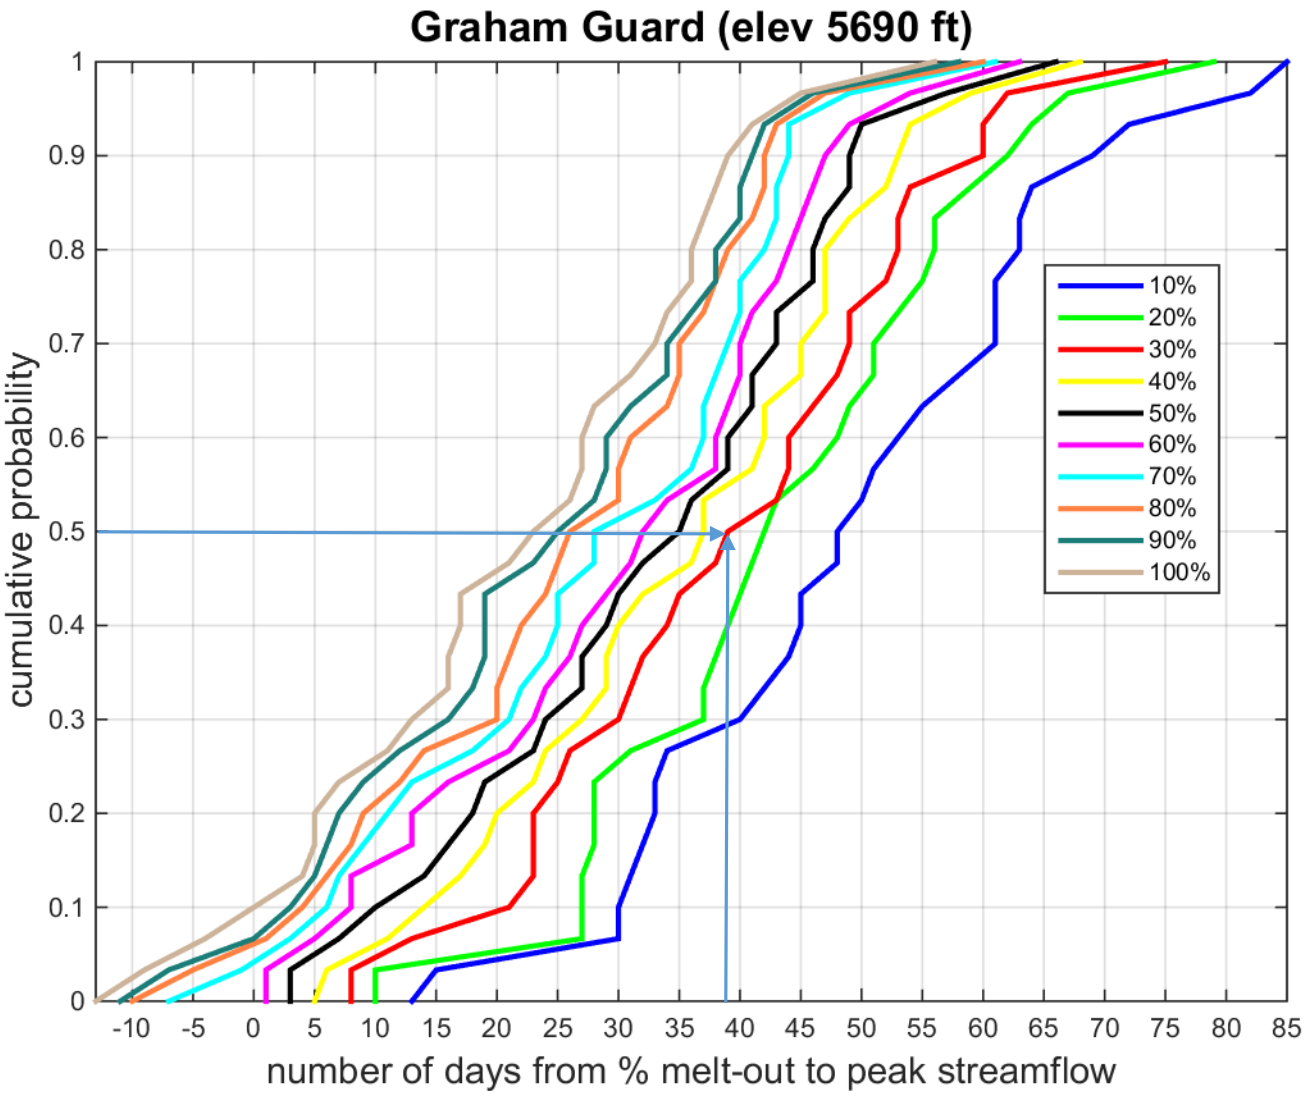


- **As of 3/12/2015, Graham Guard Station SNOTEL remains at 30% melt-out.**

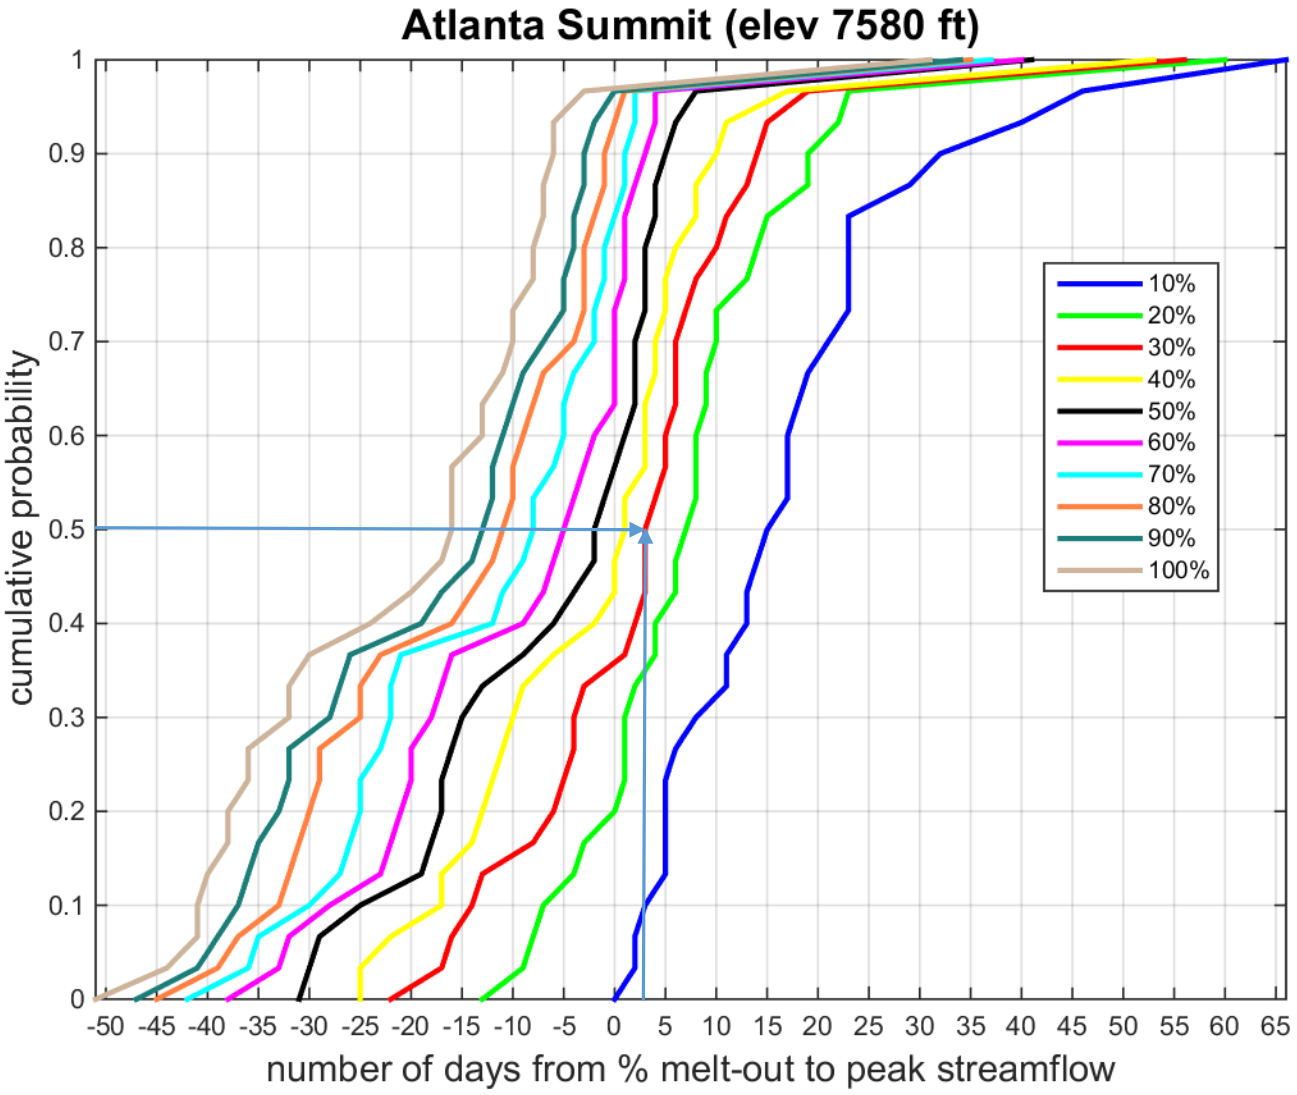
- **We are currently at 30% melt-out (70% of SWE remaining) at the Graham Guard SNOTEL site. The 30% melt-out probability curve is indicated by the RED line.**

- **The x-axis shows the number of days from each melt-out percent to peak streamflow.**

- **On average (50% probability), peak streamflow will occur within the next 39 days.**



- We often use the highest elevation SNOTEL sites for predictive purposes since these sites still have snow remaining at the time of peak streamflow.
- As of 3/12, Atlanta Summit, the highest elevation SNOTEL site, is at 99% of max accumulation (~1% melt-out).
- The probability graph for Atlanta Summit shows that on average (50% probability), peak streamflow occurs:
  - 3 days after reaching 30% melt-out (or 1 day after 40% melt-out)



- **We can use melt-out timing from the Graham Guard, the lower elevation SNOTEL site, to predict melt-out timing at Atlanta Summit.**

- **Graham Guard reached 30% melt-out on 3/10, we estimate Atlanta Summit will reach 30% melt-out on 4/15 (± 4 days).**

- **We can use this information in combination with the 30% melt-out probability curve for Atlanta Summit to estimate that there is a 50% probability that peak streamflow for the Boise River nr Twin Springs ID, will occur on or before 4/18 (± 4 days).**

Feb peak was rain on snow and not the snow melt peak
